Progress continued in the development of synthetic fertilizer materials, especially in the fixation of atmospheric nitrogen. The trend in the industry was definitely toward the use of the direct synthetic process. The nitrogen fixation industry in the United States increased its capacity with the result, according to the Bureau of Chemistry and Soils, that it had become a thoroughly established and functioning producer of cheap nitrogen. The *Report of the Chief of the Bureau of Chemistry and Soils* for 1931 stated that probably the most important of the recent developments in fertilizer manufacture was the direct use of synthetic ammonia in fertilizer mixtures containing superphosphate. Continued progress was made in elucidating the factors that influence and determine the activity of catalytic substances in nitrogen fixation and in determining the mechanism by which ammonia catalysts function. The conditions for the synthesis of urea from ammonia and carbon dioxide were established and progress was made in the recovery of unconverted carbon dioxide and ammonia from the urea formed. Information of both scientific and industrial importance accumulated on the effects of various poisons on the platinum catalysts used in ammonia oxidation for the production of nitrate fertilizers.

Information also continued to accumulate as to how and under what conditions light can be utilized to radically modify and activate gaseous nitrogen. The supply of nitrogen produced by industrial processes continued to be but a small part of that constantly being fixed in the soil by natural agencies. Progress was made in elucidating the chemical mechanism by which lower forms of plant life in the soil are able to utilize and fix inert nitrogen gas, it being demonstrated by the Bureau of Chemistry and Soils that the first step in the process is brought about by an enzyme known as azotase. While the United States was still dependent in considerable measure upon imports for its nitrogen supply, the nitrogen fixation industry advanced to the point at which the United States would suffer only slight and temporary inconvenience if all imports of nitrogenous materials were stopped at any time according to the Bureau of Chemistry and Soils.

Agriculture continued to be the largest user of nitrogen and led also in the variety of forms used. The growth of the world's fixed nitrogen industry was even less marked in some quarters than during the previous year. Japan and the Netherlands, however, increased facilities for the production of ammonium sulphate whereas Germany curtailed the production of ammonium sulphate and expanded the production facilities for

synthetic nitrates to meet new export agreements, with France in particular. Countries formerly importing nitrogen became exporters and old established exporting nations lost trade in markets now served by home industries according to the Bureau of Foreign and Domestic Commerce. An attempt to erect a cartel of the European-Chilean producers failed. Imports of ammonium sulphate into both Germany and the United States showed appreciable gains during the year. An important factor affecting nitrogen imports was the attempt of certain synthetic nitrogen-producing countries to restrict importation through the imposition of tariffs and import licensing decrees. The most serious loss in the German position occurred in the sale of calcium nitrate and certain other synthetic nitrogenous products including urea.

An appreciable decrease occurred in potash sales during the early months of 1931, German and French exports especially being curtailed according to the U. S. Bureau of Foreign and Domestic Commerce. Potash imports into the leading fertilizer consuming countries registered sharp declines. Both the United States and Poland placed increased supplies of potash on world markets, the former exporting double the quantity of potassium chloride during the first eight months of 1931 than was shipped during the first eight months of 1930 and the latter tripling the quantity exported.

New important potash deposits were discovered in the Karaliuk district in Russia and the Russian potash industry planned an expansion to an annual production of one million tons. American agriculture was still largely dependent on foreign sources for potash. Although the domestic production for the year was essentially the same as for the preceding year and amounted to less than 20 per cent of the requirements of the country, several developments of the industry were initiated. The plant of the largest producer was in process of expansion and a new potash mine was opened in New Mexico which already was producing crude potash salt suitable for direct use as fertilizer. The crude salt is water soluble and adapted to refining by the simple methods used in the European potash industry. According to the Bureau of Chemistry and Soils the combined outputs of this mine and of the enlarged California plant, using natural potash borax brine, will go a long way toward meeting the needs of the country for potash.

Progress continued in the development of wet extraction methods of recovering potash from minerals such as alunite, a process having been perfected for the elimination of some of the impurities such as silica. Progress also continued in the development of blast furnace processes for the volatilization of potash from various minerals such as leucite. Electrical precipitation was used successfully in this method for the recovery of the potash salts evolved as finely divided particles in the furnace gases. The entire practicability of the method was indicated particularly when the furnacing of the leucite is combined with that of phosphate rock to yield both phosphoric acid and potash.

Other potash bearing minerals such as the greensands of New Jersey, Delaware, Maryland, and Texas and the shales of Georgia showed promise as sources of agricultural potash, the former on acid extraction yielding iron and

aluminum salts and absorptive silica as useful by-products.

The principal fertilizer consuming nations except the United States continued to import all or a large portion of their phosphate requirements. Production and exports of phosphates from the principal producing nations underwent a steady decrease during the year especially those from the United States, the Pacific Islands, the North African countries and Poland, and prices suffered a decline. The production of superphosphate in New Zealand developed steadily, however, and a large superphosphate plant was opened in Canada. The production and consumption of superphosphate in the United States during 1931 were considerably less than during 1930 although phosphoric acid continued to represent an item of expense in American fertilizer practice almost as great as nitrogen. Efforts were continued to develop methods for more economically converting phosphate-bearing minerals into suitable available fertilizer materials with the conservation of important by-products.

Studies of the complete chemical composition of the various grades and types of phosphate rock were completed by the Bureau of Chemistry and Soils and a basis thus provided for this work. The furnace extraction methods used in potash manufacture were applied successfully with minor variations to the production of phosphoric acid, thereby permitting the economical utilization of low grade phosphate rock for the production of highly concentrated materials. Critical studies were continued of methods for determining the various elements in phosphate rock and several improved methods, particularly for the determination of fluorine, were developed. Information of a fundamental character continued to accumulate on the chemical constitution, preparation, and properties of the complex calcium phosphate present in phosphate rock, bone, and superphosphates that have been treated with relatively large quantities of ammonia.

Additional evidence was secured of the probable feasibility of using dilute phosphoric acid and of mixtures of phosphoric acid and sulphuric acid in the manufacture of concentrated superphosphates. Fluosilicate by-products of phosphate production continued to offer possibilities as substitutes for arsenic compounds in the manufacture of insecticides.

Interest continued in the development of new and concentrated fertilizer materials, the more important of the recent developments being the direct use of synthetic ammonia in fertilizer mixtures containing superphosphates. The use of free ammonia in the manufacture of fertilizer mixtures has the advantage that it greatly improves the mechanical condition of the mixture, prevents rotting of the bags, and reduces freight and handling charges. About 100 fertilizer plants in the United States were equipped to use either anhydrous or aqua-ammonia directly in the ammoniation of superphosphate.

Work was continued on the preparation of potassium nitrate by treating solid potassium chloride with oxides of nitrogen. The U. S. Department of Agriculture and the State Agricultural Experiment Stations continued the experimental comparison of concentrated fertilizers with fertilizers of ordinary strength. The development of special fertilizer distributing machines and methods adapted to the concentrated

materials also continued and a method of measuring the drillability of fertilizers was perfected which permits the more accurate calibration of fertilizer distributors by manufacturers. The Bureau of Chemistry and Soils also demonstrated that at least 10 per cent saving in fertilizer can be realized by uniform distribution in the field. Marked improvements took place in the technique of chemical analysis for fertilizer control. A strong desire and need for greater uniformity in the enforcement of fertilizer control laws developed, and the fertilizer control officials of eight northeastern States agreed on a uniform method of procedure in the registration of fertilizers and administration of fertilizer laws.

Fertilizer consumption in the United States during 1931 was estimated at approximately 6,000,000 tons or 25 per cent less than during 1930. The United States was again below European countries in the profitable use of fertilizers. According to the Bureau of Foreign and Domestic Commerce, Germany, the United States, and France, in the order named were the leading world consumers. These countries and Italy, Japan, Spain, the Netherlands, Great Britain, Poland, and Belgium accounted for 80 per cent of the world consumption. Expressed on an average basis of fertilizer used on each acre of arable land, the Netherlands, Belgium, and Germany, in the order named, were the chief users of fertilizers, the United States being outranked by a dozen European countries, Japan and Egypt.

**BIBLIOGRAPHY.** Sources of information regarding progress in the production and use of fertilizers are numerous. Current progress is recorded in *The Fertilizer Review* published by the National Fertilizer Association at Washington, D. C., and in *The American Fertilizer* published in Philadelphia, Pa. Statistics of the fertilizer trade and industry are found in reports of the Bureau of Foreign and Domestic Commerce, especially in the weekly *Commerce Reports*, and of the Census Bureau of the Department of Commerce. Other publications of interest are *Fertilizer Facts* published by the National Fertilizer Association (Washington, D. C., 1931), *New Fertilizer Materials* by A. R. Merz, U. S. Department of Agriculture Circular No. 185, Washington, D. C., 1931), *Added Recovery by Hydraulic Sizing of Fine Material in the Land Pebble Phosphate District of Florida*, by R. G. O'Meara, U. S. Department of Interior, Bureau of Mines (Washington, D. C., 1931), *Flotation of Low Grade Phosphate Ores*, U. S. Department of Interior, Bureau of Mines Circular No. 3105 (Washington, D. C., 1931), and G. W. Stocking, *The Potash Industry, A Study in State Control* (New York, 1930).

**FUJI, fējē, ISLANDS.** A British Crown Colony, comprising a group of about 250 islands in the South Pacific, of which some 80 are inhabited.

Area, 7083 square miles; population on Dec. 31, 1929, including Rotuma, estimated at 180,005 (157,266 in 1921). Of the 1929 population, 91,711 were Fijians, 73,121 East Indians, 3281 half-castes, 4726 Europeans, 1464 Chinese, and 5632 of other races. The capital, Suva, on the south coast of Viti Levu, had 1741 inhabitants in 1921.

Bananas, coconuts, maize, sugar cane, tobacco, rice, pineapples, cotton, and timber are the principal products. Trade in 1930 showed the effects of the world economic depression. Imports were valued at \$5,933,160, compared with \$7,147,000 in 1929, and exports at \$7,224,446, compared with \$8,642,894 in 1929. Of the 1930 imports, Australia supplied 37 per cent; United Kingdom, 29 per cent; New Zealand, 9 per cent; and the United States, 8 per cent. Revenue in 1929 amounted to £677,944 and expenditure to £642,124. The public debt on Dec. 31, 1929, stood at £846,632. Steamers entering the ports in 1929 numbered 178 of 696,171 tons. A private narrow-gauge railway runs from Tavua 120 miles to Sigatoka. Construction of a trans-insular road on the island of Vitilevu between Tailevu and Lau at a cost of \$457,450 was authorized in 1930. Executive power is vested in a governor, assisted by an executive council and by a legislative council consisting of partly nominated and partly elected European, Indian, and native members. The Governor is also High Commissioner for the British islands of the western Pacific. Governor in 1931, Sir Murchison Fletcher (appointed 1928).

**FINANCIAL REVIEW.** The year 1931 in financial history, was notable as a period of remarkable, even unprecedented, changes. The disturbances consequent upon the World War had been regarded by many as having run their course before 1925, and the years subsequent to that date were often characterized as a "new era," in which economic laws had been altered or, as some put it, "suspended." The result had been financial conduct of a dangerous sort, accompanied by banking mismanagement which disregarded the familiar canons of commercial bank operation, with inflation and overtrading as a consequence. When collapse came, in 1929, it was asserted, both by banking and political authorities, that the depression consequent upon the break-down would not last long; but would be shortly overcome, and would be followed by new prosperity. Of course, these predictions were conditioned upon the maintenance of the existing monetary and financial machinery without further interruption to its functioning, and particularly upon the continuation of the various countries of the world in much the same general state of sloveny that had been attained since the war—particularly with an avoidance of any renewal of their currency difficulties.

The year 1931 brought an overturning of all these expectations and theories; and involved in its development, the collapse of two of the leading nations—Germany and Great Britain (from the financial standpoint), while in many others financial and banking conditions took an alarming turn. As has been usual in similar circumstances, during past years, these changes

**THE ANNALIST WEIGHTED AVERAGE OF 33 INDUSTRIAL STOCKS**  
 Prior to January, 1930, the Axe-Houghton Weighted Average of 20 Industrial Stocks

were of a nature to affect most profoundly the financial situation, and the financial institutions of the various countries, while, of course, exerting an important reflex effect upon commercial and business institutions, and gradually extending itself throughout every branch of trade and commercial occupation. The decline of the year, although thus conspicuously financial in nature, had come gradually to influence every branch of business. During the 12 months, the average of business activity, as shown by various indexes, fell off by about one-fourth of its total at the opening of the year, and tended generally, to approximate something like two-thirds of normal; although, in some specially-depressed branches such as steel, mill activity was as low as one-third, while in others such as textile production it was as high as three-fourths. Financially, the volume of sales of stocks held up moderately; but this was due to the heavy disposal of holdings in times of semi-panic, and the steady short selling that went on throughout the year, and so tended to swell the returns.

**STOCK EXCHANGE ACTIVITY.** Total transactions on the New York Stock Exchange for the year 1931, reached a total of 576,921,426 shares as against sales in 1930 amounting to 810,626,276 and in 1929, 1,124,990,980. Total bond sales, on the other hand, amounted to \$3,075,347,100 as against \$2,779,009,350 a year earlier, and \$3,020,316,700 in 1929. The number of days on which remarkable turnover occurred was smaller than usual, yet there were several periods in which the average daily turnover reached approximately 3,000,000 shares daily for as much as a week at a time.

Much of the selling, however, as in the preceding year, was for the purpose of realizing; so that it was not profitable to financial houses. In fact, the number of retirements from business on the New York Stock Exchange, was of record-breaking proportions, with several failures of substantial size, while the value of a seat, although never as low as during the preceding year, was at the close of the twelfth month, only about \$125,000.

Three general periods of stock trading history during the year may be recognized. The first covered practically the first five months of the year; and was, on the whole, a period of moderate revival in business activity, with improving indications in many directions. These conditions were succeeded by a short period of doubt, with conflicting tendencies, and some effort to support the market against the bad news from Germany. President Hoover's call for a moratorium in favor of Germany led to the bidding up of stocks. This preliminary movement was followed by the real second movement of the year, a partial collapse, which lasted until the opening of October; and was succeeded by effort at recovery, centring around the establishment of the National Credit Corporation by a group of leading bankers. This then led into a decisive downward movement, which continued with little intermission until the close of the year, when new readjustments were attempted.

Ever since the opening of the panic, there had been strong belief on the part of many that a time might shortly arrive at which security prices would turn upward, and that at that moment there would be opportunity to purchase heavily, and thus insure profits for the future. On various occasions, not a few were of opinion that such a moment had actually arrived, and hence the disposition at such times to buy freely of stocks. During the first of the periods just referred to, there was much purchasing of this description; and on the whole considerable warrant for it, had not international conditions proven so unfavorable. But the breakdown of Germany, the appearance of dangerous bank failures on a large scale both in that country and in Austria, and the development of hazardous prospects throughout Europe, altered the outlook materially, and brought about a new attitude of mind.

During the second period, which opened at midyear, the hopefulness that grew out of the belief that a moratorium would save Germany from disaster, was rudely shattered; and was followed by gradual development of difficulties in Great Britain, partly the result of the heavy advances that had been made to German banks by British financiers, partly the outcome of conditions in Britain herself which had long been coming to a head and which now threatened the collapse of the financial machinery of the state. The result was the decision of Britain to suspend, for the present, the exportation of gold—a step which was tantamount to the abandonment of the gold standard of value. This step not only inflicted immense losses upon all foreigners who had funds in Great Britain, since sterling at once sank by about 20 per cent of its value, and later suffered a much larger recession, but it also caused an impairment of confidence which steadily spread throughout all the more important countries of the world.

In the United States, the consequence was a decisive selling of stocks on a large scale, which was gradually accompanied by selling from all over the world. Prices receded regularly and markedly; and, when it appeared later in the summer, that foreigners were drawing away their gold holdings in the United States, alarm naturally developed among many classes. The withdrawals grew to the proportions of a "run" on Federal Reserve banks, in which foreigners withdrew, during a period of about six weeks, between the latter part of September and the

end of October, some \$714,000,000 in gold, while domestic hoarding of currency (and often of gold) began to increase, and reached by the middle of autumn proportions generally represented by estimates of about \$1,000,000,000 or higher. Meantime, bonds, which had been strong throughout the early part of the year, owing to the demand that came from former stockholders, who had shifted their investments into bond form, began to suffer after midyear. By autumn, bond values had lost a substantial fraction of their former amount, and by the beginning of November, they were in many cases from 40 to 60 per cent below their values of the spring. During the third and last period of the year, from the opening of October onward, heavy selling, hoarding, and tax-realization combined to bring prices to the lowest levels of the period, with an average value for 50 selected stocks which had fallen from 173.07 on February 24 to 87.61 on December 17, while bonds, which had ruled at 85.80 in January were 59.85 in December (average of 40 high grade bonds).

The banks which had opened the year with a definite policy of security loan reduction had continued this plan during the early months of 1931; and before July had brought the level of such security loans well toward the level which most authorities had been disposed to think of as "normal." As bank failures, however, tended to increase; and, as the securities they owned were thrown upon the market, along with issues which had been held as protection for loans, the reduction of security loans became more rapid, and during the second half of the year the volume of brokers' loans was steadily cut until it reached a level not above \$600,000,000 during the last two weeks of December—an amount lower by far than any that had been noted for many years, even prior to the period of official reports on that topic.

At the same time, the total of security loans to all persons was reduced by about \$1,000,000,000 to approximately \$5,600,000,000 at the close of the year (reporting member banks) or about the same level that had existed in 1926. The fact that the banks, however, increased their investments by about \$600,000,000 during the year, indicated that a part of the gain made by the liquidation of security loans had been cancelled, and that the banks thus continued in a partly "frozen" condition.

Meantime, the speculative use of bank credit for supporting the prices of commodities had been reduced. Commodity prices had continued their downward drive, and at the close of the year few of them had shown any recovery. There had been, during the autumn, a short period of feverish up-swing, in wheat and other grains, and in silver, due to obscure causes, but partly, it would seem, the outgrowth of threatened war in the Orient. During that time, some indications of advance in speculation had occurred, but in the main banks had begun to manifest an almost morbid desire to maintain themselves in a liquid condition; and had been disposed to refrain from any such new commitments. The year, in these circumstances, certainly witnessed, on the whole, a reduction in the quantity of goods held in store on bank credit, and a corresponding improvement in the situation of the banks as affected by speculation in goods.

**NEW ISSUES.** With the market in turmoil and with investors generally uncertain as to what to

expect, there was little favorable opportunity for the placement of new capital obligations. Accordingly, the new issue business at times sank away to little or nothing, the trade being mostly in necessary renewals and refundings or in state, government, or other public bonds which could be assured an exceptional market.

The accompanying table affords a compilation of the outstanding facts in the situation.

there was a slow general movement of the metal into the country. During the early months of the year, this continued but at midyear it was thought necessary by Federal authorities with considerable reluctance to establish a large credit in favor of the German Reichsbank, and this was later followed by a still larger credit on behalf of the Bank of England. The two, taken together, offset, in large measure, any tendencies

SUMMARY OF NEW FINANCING  
[Exclusive of refunding issues. In millions of dollars]

Year and month	Total, domestic and foreign	Domestic issues <sup>a</sup>				Foreign issues <sup>b</sup>

<sup>b</sup> Issues publicly offered; annual totals are as finally reported by Department of Commerce; monthly figures are as compiled currently and are subject to revision.

<sup>c</sup> Includes issues of Federal land banks and Federal intermediate credit banks, not shown separately.

<sup>d</sup> Includes Treasury issues (exclusive of refunding) as follows: March, \$408,925,000; April, \$425,404,000; June, \$310,826,000; August, \$80,042,000; September, \$483,872,000; October, \$779,000.

**MOVEMENT OF GOLD.** Although the foreign balance of the United States had fallen off materially, as international trade declined during the years 1930 and 1931, it was at all times favorable up to the later months of 1931, and there was never any reason for an outward movement of gold. Excessively low discount rates established by Federal Reserve Banks and maintained by them until the late autumn of 1931, tended to keep gold from flowing to the United States, yet

to the shipment of gold to the United States for the purpose of building up investment balances in that country, and gold importation came practically to a stop after midyear.

Doubt and lack of confidence soon led to a slow withdrawal of the metal, which deepened soon after the determination of Great Britain to suspend the export of gold. Many foreign holders commenced to withdraw their balances, and as a result a sharp outward movement set in. This

ANALYSIS OF CHANGES IN MONETARY GOLD STOCK  
[From Federal Reserve Bulletin]

Month	Gold stock at end of month	Increase in stock during month	Analysis of changes		Domestic production, etc. <sup>b</sup>
			Net gold import	Net release from ear- mark <sup>a</sup>	
1931—January	4,843	49.4	34.4	11.0	3.1

<sup>a</sup> Gold released from earmark at Federal reserve banks less gold placed under earmark.

<sup>b</sup> This figure, derived from preceding columns, represents the excess of domestic production over nonmonetary consumption of gold—chiefly consumption in the arts. In any given month, however, it may be predominantly affected by the fact that on the final day of the month (a) gold bullion or foreign gold coin recently imported may not yet have reached a reserve bank or the Treasury, and (b) gold bullion recently withdrawn from stock for export may not yet have been actually exported. The figures are subject to certain unavoidable inaccuracies in official reports of gold imports and exports.

<sup>c</sup> \$15,649,000 of gold bullion imported on Apr. 30 from France was not purchased by the New York Assay Office until May 1.

<sup>d</sup> Preliminary figures.

movement eventually increased to so large an extent that, toward the latter part of October, it settled down to the proportions of a run, foreign investors selling their securities and withdrawing the proceeds in gold. These sales having failed to cause suspension, the run gradually decreased in intensity, and there was a recovery of gold. See GOLD.

An understanding was arrived at by the Federal Reserve authorities with the Bank of France whereby that institution ceased its calls for gold and agreed to reinvest its balances to a large extent, with adequate collateral security. The consequence was a suspension of the outward gold movement to Europe at least in the main. At the same time, threatened war in the Orient led to large shipments of gold from Japan to the United States, to form a base for the establishment of war material purchases and credits. During the later months of the year, the fears of a suspension of the gold standard in the United States were temporarily dissipated, and gold resumed its net inward movement with results as shown in the table on page 304.

**INTERNATIONAL BALANCE.** The balance of trade between the United States and other countries had been seriously disturbed ever since the coming on of the panic of 1929, but had on the whole been able to maintain itself with a surplus so far as the United States was concerned, although both imports and exports had greatly fallen. As the year advanced the absence of foreign trade financing whether for import or export naturally tended to interfere very seriously with shipment of American goods to other countries. Many such

countries had relied largely upon the support of American banks in their purchases of the goods of the United States and as the decline of long term financing was followed by withdrawal of credits the trade soon came to be almost without support. The selling of long-term foreign bonds had become impossible at a much earlier date and the trade was thus left without support, except such as remained from unexpended balances of foreign credits. Only two or three of the South American countries retained their banking connections and were able to continue a normal state of trade relationship with the United States. In these circumstances it was inevitable as the year advanced, that there should have been a falling off of transactions so that the volume of business passing between the United States and other nations was continuously reduced.

The export returns of the United States, by months, for three years compare as follows (000 omitted):

	1931	1930	1929
January .....	\$ 249,598	\$ 410,849	\$ 488,023
February .....	224,346	348,852	441,751
March .....	235,901	360,549	489,851
April .....	215,077	331,732	425,264
May .....	203,970	320,034	385,013
June .....	187,077	294,701	398,186
July .....	180,725	266,761	402,861

Total .....	\$2,090,107	\$3,060,908	\$4,899,861

Low level was reached toward the end of the year, when the previously favorable balance was at least temporarily reversed becoming unfavorable and with an apparent prospect of continued unsettlement, due to the circumstance that so many countries had by that time quite definitely put into effect policies of trade discrimination against the United States. The reprint, on pages 305 and 306, of the United States international balance sheet, published by the Department of Commerce, furnishes the same review of the situation for the year preceding that had been supplied from the same source in former years.

**FOREIGN EXCHANGE.** The situation in foreign exchange showed little of very great moment during the early months of the year as is indicated by the accompanying table. As spring advanced, however, anxiety began to be felt with regard to the stability of certain currencies and this anxiety began to be rather acute from early in June onward. A good deal of support was furnished to the currencies of various countries, however, and before things had gone far in the way of depreciation they were quickly brought back again. After the first of July, however, conditions naturally changed. The German mark tended to fall off as a result of the moratorium although the strict measures of control of foreign exchange adopted by the Reichsbank quickly restored a technically stable condition. Great Britain's giving up of the gold standard during September after a vigorous struggle to support the exchange at par by means of large credits obtained both in the United States and in France brought a shift from a gold to a paper standard, with corresponding depreciation of values continuous from then on to the close of the year. Low point was reached early in December with a figure of about \$3.25 after which there was an increase on a small scale to a closing figure in the neighborhood of \$3.45. In South American exchange great fluctuations were witnessed, due to the fact that several South American countries found it necessary to repudiate their bonds and in some cases to take measures equivalent to the suspension of the gold standard. In all eight countries, including those of Europe as well as South America, surrendered the gold basis while Japan late in the year forbade the export of gold. The result was to make exchange quotations upon all of these countries unstable and at times highly irregular. The latter part of the year showed little or no progress toward any better condition.

**COMMODITY PRICES.** The weakness of commodity prices during the year 1930, was continued during 1931, and toward the close of the period seemed to have reached its extreme. During the

late weeks of the autumn, there had been a flurry of advance in grains and in silver which seemed likely to have force sufficient to carry the whole price level in these ranges of goods to something like a normal basis. The flurry was, however, short lived and there was no definite resumption of it, although from time to time some sporadic advances were observable. There was no indication of any influence exerted on the part of credit, with regard to the raising or strengthening of the general level of values, but conditions appeared to rest largely upon factors of supply and demand, save in so far as there might be occasional success in bringing about an effective limitation of output. In these circumstances, the general level of wholesale prices receded until at the close of 1931 it stood, according to the best commercial computations at about 95.9 or 4 points below the 1913 figure. This was a drop of 16.9 per cent or nearly as large as the 18.9 per cent decline of 1930. Since the panic the recession had been fully 36½ per cent. Prices of wheat and other agricultural products were exceptionally low running to 74½ cents per bushel (No. 2 red) against 97½ cents a year earlier, while corn was 52½ cents against 81½ cents. Cotton was 6.55 cents per pound against 10 cents at the end of 1930, while family beef which was \$14.50—\$17 at the close of the year—a figure materially better than at midyear—was thus off some 25 per cent on the average from the closing price of \$20 for 1930. Pork which had been \$28.50 was off in about the same proportion as had been true of beef. See **BUSINESS REVIEW**.

**MONEY RATES.** Money rates were less excitable and irregular during the year 1931 than had been the case for some time past. The Federal Reserve System maintained the low rate of 1½ per cent for rediscounts of all classes throughout the forepart of the year; and changed it only as a consequence of the autumn outflow of gold. The advance to 3½ per cent which occurred during the late autumn did not affect conditions very directly. Open market rates in New York City were quiet, varying from 1½ to 3 per cent at the close of the year while rates for bankers acceptances were quiet and steady varying as usual with the buying rates at Federal Reserve Banks, which, as already stated, altered but little except for the one considerable advance in the autumn quarter. Business rates the country over underwent only a slight change from time to time and such changes were after all nominal; the real problem of borrowing being to induce the banks to make advances under any circumstances. When such advances were in fact made, the rate of interest was usually fixed at a conventional standardized figure which reflected little consequence or influence of the actual difficulty of obtaining accommodation.

In the investment field there was continuation of the great price shrinkage that had already taken place in 1930. The almost continuous downward drive after July brought securities to levels not far above one half or in not a few cases, one third of the prices they had borne at the end of 1930 and the loss was particularly severe in bonds even (at the close of the twelvemonth) affecting Liberty Loan issues. Changes thus occurring probably reflected belief in the probability of dividend reductions or suspensions and the high nominal yield represented by old dividend and interest rates applied to the new quotation levels was thus, of course, fictitious so far as its

being regarded as a measure of rates of yield was concerned. See BANKS AND BANKING; BUSINESS REVIEW; PUBLIC FINANCE; UNITED STATES; and articles on leading countries under *Finance and History*.

**FINE ARTS.** See ART MUSEUMS; LITERATURE, ENGLISH AND AMERICAN; PAINTING; SCULPTURE.

**FINLAND.** An independent republic of Europe, bounded on the east by the Union of Soviet Socialist Republics, on the north by the Arctic Ocean and Norway, on the west by Sweden and the Gulf of Bothnia, and on the south by the Gulf of Finland. Formerly a grand duchy of the Russian Empire, it was declared independent Dec. 6, 1917, and became a republic under the constitutional law of July 17, 1919. Capital, Helsinki (Helsingfors).

**AREA AND POPULATION.** Finland has a land area of 132,597 square miles and a population estimated at 3,634,047 in 1929, as compared with 3,364,807 at the census of 1920. The urban population is estimated at 16 per cent of the total. From 1925 to 1929, births averaged 76,856 annually, and deaths, 49,990, the respective rates per 1000 of population being 21.5 and 14. Emigration in 1929 totaled 6383. The chief cities, with the estimated population in 1930, are: Helsinki (Helsingfors), 235,223 (197,848 in 1920); Turku (Åbo), 63,617; Tampere (Tammerfors), 53,187; and Viipuri (Viborg), 59,368. Of the 1920 population, 2,754,228 spoke Finnish, 340,963 Swedish, 4806 Russian, 2378 German, and 1603 Laponic. Finnish and Swedish are both official languages, Swedish names being given above in parentheses. The population is overwhelmingly Lutheran in religion.

**EDUCATION.** Only 1 per cent of the population over 15 years of age were illiterate in 1920. In 1928-29, there were 351,689 pupils in primary schools, 47,839 in secondary schools, and 5170 in the universities. Enrollment in the three universities in 1930 was: Helsinki, 5126; Turku (Åbo), 411 in the Finnish and 222 in the Swedish university.

**PRODUCTION.** About 65 per cent of the population gain a livelihood from the cultivation of 5,411,000 acres, or 6.4 per cent of the total area. Soil and climate combine to make Finland unsuited for agriculture. In 1929, there were 2,879,000 acres of permanent meadows and pasture, 17,000 acres of orchard and shrubs, and 76,553,000 acres of forests and waste land. The forests, chiefly pine and spruce, constitute the chief source of industrial wealth, covering three-fourths of the total area; 40 per cent of the forest area is state owned. The value of Finnish crops in 1930 was estimated at \$100,800,000, compared with \$126,000,000 in 1929. Production of the chief crops in 1930 was: Wheat, 1,189,000 bushels (1,095,000 in 1929); rye, 14,104,000 bushels (10,999,000); barley, 6,223,000 bushels (6,168,000); oats, 41,458,000 bushels (37,968,000); potatoes, 28,856,000 bushels (28,858,000); flax fibre, 3,527,000 pounds (3,527,000); hay, 2,733,000 metric tons (2,448,000). Dairying is important. In 1929, there were 1,902,600 cattle, 1,130,000 sheep, 426,000 swine, and 394,850 horses; the output of butter was 54,409,000 pounds, and of cheese, 10,298,000 pounds.

Lumber production in 1930 was reduced 25 per cent owing to poor export markets, and sales declined to 907,000 standards from 1,207,000 standards during 1929. The value of all indus-

trial production was officially estimated at \$302,400,000 in 1930, as against \$327,600,000 in 1929 and a yearly average of \$207,045,000 for the period 1921-25. The chief industries, in order of the value of production in 1929, were woodworking, paper, food and drink, machinery and shipbuilding, textiles, leather, clay and stone, light and power. The 1930 production of chemical pulp was 696,000 metric tons (624,131 in 1929) and of paper, 320,000 metric tons. While industry was relatively depressed during 1931, conditions were not as bad as in many European countries. There were 12,176 unemployed at the end of September, 1931, compared with 9336 on Dec. 31, 1930.

**COMMERCE.** Imports and exports both declined about 10 per cent in quantity in 1930, but the value declines from the 1929 totals were 25 and 16 per cent, respectively, resulting in the first export surplus since 1925. Imports were valued at 5,247,904,000 Finnish marks (\$132,247,000) and exports at 5,398,336,000 marks (\$136,038,000), compared with 1929 imports of 7,001,413,000 marks (\$176,436,000) and exports of 6,429,734,000 marks (\$162,029,000). The value of paper exports remained unchanged, but that of the other leading export commodities—sawn timber, plywood, chemical pulp, mechanical pulp, and cardboard—declined. Machinery, iron and steel, chemicals and medicines, wheat flour, coffee, sugar, coal and coke, and oil products were the chief imports. Germany continued as the chief source of supply, furnishing 36.9 per cent of all imports, as against 13.6 per cent from the United Kingdom and 12.2 per cent from the United States. The United Kingdom took 39 per cent of all exports, while Germany took 12.4 per cent and the United States 7.6 per cent. Preliminary figures for 1931 placed exports at 4,455,500,000 marks and imports at 3,458,000,000 marks, giving a favorable trade balance of nearly 1,000,000,000 marks.

**FINANCE.** The state accounts for 1930 closed with a deficit of 340,600,000 marks, covered from cash reserves which were thus reduced to 312,500,000 marks. Ordinary receipts were lower than in 1929, in spite of higher customs collections due to tariff increases, and ordinary expenditures increased by nearly 200,000,000 marks. No new long-term loans were negotiated, but a short-term loan of 300,000,000 marks was floated in the United States in July, 1930. Ordinary receipts and expenditures were estimated in the budget at 4,372,000,000 and 3,797,000,000 marks, respectively, for 1930 and at 4,294,000,000 and 3,823,000,000 marks, respectively, for 1931. Revenues during 1931 failed to reach estimates and the preliminary 1932 budget estimates were sharply reduced, total ordinary and extraordinary revenues being calculated at 2,648,800,000 marks (4,400,900,000 marks in 1931).

According to the Finnish Treasury, the net state debt on Dec. 31, 1930, was 3,057,100,000 Finnish marks (\$77,039,000), of which \$68,037,000 was held externally, including \$8,604,000 due the United States government. The net debt at the end of 1929 was \$89,400,000. The unit of currency is the markka, or Finnish mark, which was revalued at \$0.0252 on Jan. 1, 1926.

**COMMUNICATIONS.** Railway lines in operation during 1930 aggregated 3195 miles, of which all except about 200 miles were government owned. In that year the government railways carried 21,252,000 passengers (23,716,000 in 1929) and

8,574,000 metric tons of freight (10,707,000 in 1929), earning gross receipts of 789,747,000 marks (\$19,902,000), as against 879,248,000 marks (\$22,157,000) in 1929. There were (1930) about 29,337 miles of highway, including 18,956 miles of gravel and 20 miles of macadam roads. The telegraph system and a small part of the telephone system (22,828 miles of wire in 1929) belong to the state. During 1930, 6775 vessels, of 4,442,000 net registered tons, entered Finnish ports, and 6831 vessels, of 4,376,000 tons, cleared.

NAVY. See NAVAL PROGRESS.

GOVERNMENT. Executive power is vested in a president elected for six years by 300 electors, who are chosen by direct election in the same manner as members of the Diet. Legislative power is exercised by the Diet (single chamber) in conjunction with the President. The latter governs through Ministers appointed by him, his decisions being taken in the Council of State of 10 Ministers, who are responsible to the Diet. Members of the Diet are elected for three years by a direct vote of all citizens over the age of 24. The composition of the Diet following the elections of Oct. 1 and 2, 1930, was: Social-Democrats, 66; Agrarians, 59; Finnish Coalition party, 42; Swedish People's party, 21; Finnish Progressive party, 11; Small Farmers' party, 1. President at the beginning of 1931, Dr. Lauri Kristian Relander, elected Feb. 16, 1925, for a six-year term. The conservative Cabinet, formed July 4, 1930, through a coalition of the Finnish Coalition, Agrarian, Finnish Progressive, and Swedish People's parties, was headed by Pehr Evind Svinhufvud.

### HISTORY

The Lapuan movement to eradicate communism from Finland was brought to a successful climax in 1931, with the election of Premier Svinhufvud as President. Thereafter the attention of the country was once more focused upon the prohibition controversy. A national referendum held Dec. 29 and 30, 1931, showed an overwhelming majority in favor of repeal of the prohibition law.

THE PRESIDENTIAL ELECTION. The anti-Communist (Lapuan) movement of 1930, which forced the resignation of the Kallio Cabinet, the dissolution of the Diet, and the adoption of drastic anti-Communist measures by the bourgeois majority in the new Diet, had increased the authority of the President by conferring upon him wide emergency powers. With the approach of the expiration of President Relander's term, the country plunged into an exceedingly bitter campaign to elect his successor. The Lapuan, bourgeois, and conservative forces nominated Premier Svinhufvud, a national hero who had played a dominant rôle in Finnish history under Czarist rule, as conservative leader during the civil war of 1918, and as dictator-regent previous to the establishment of the republic. The candidate of the Progressives and Social-Democrats was the Progressive leader and former President K. J. Stahlberg, a personality with great moral prestige.

In the balloting for an electoral college of 300 members on Jan. 16, 1931, the Socialists secured 90 electors, the Agrarians 69, the Finnish Coalition 64, the Progressives 52, and the Swedish People's party 25. By comparison with the October, 1930, elections to the Diet, the Agrarians and Socialists lost about 10 per cent

of their followers, the Swedish party lost 2 per cent, and the Lapuan movement barely maintained its strength. The Progressives, on the other hand, registered decided gains, a result attributed to Stahlberg's prestige among all classes. The vote for President taken in the electoral college on February 16 gave Svinhufvud 151 ballots to 149 for Stahlberg, with the Agrarian, Coalition, and Swedish party delegates voting almost unanimously for the winner. Svinhufvud resigned as Premier on March 1 and assumed the Presidency. The Premiership was filled on March 20 by J. E. Sunila (Agrarian), who retained six members of the Svinhufvud Ministry and distributed the remaining Cabinet portfolios among four Coalitionists, two Swedish party members, and one Progressive. The Sunila Cabinet controlled 133 out of the 200 seats in the Diet.

Meanwhile the Lapuan movement, which had been organized on a purely political and religious basis, had joined forces with the so-called "Finnish lock" movement, for the economic eradication of communism. Throughout 1931 they maintained pressure upon the Government to repress Communist activities and upon employers and others to discharge Communist employees and to boycott the businesses of known Communists. Information furnished by Estonian authorities led to the discovery of a subterranean Communist organization in Helsingfors in June, the arrest of seven alleged Communists, including the chief organizer in Finland, and the seizure of documents relating to Communist propaganda in Finland. On July 15, the Supreme Court of Appeals reversed the conviction of Gen. M. Wallenius, former Chief of the Army General Staff, who had been sentenced to three years in prison and dismissed from the army for his part in the kidnaping of former President Stahlberg in 1930. The sentence of Colonel Kuussaari, an associate of Wallenius also imprisoned for three years, was reduced to one year. As General Wallenius made a full confession of his guilt previous to his trial in 1930, the Supreme Court's decision that the case against him had not been proved aroused much unfavorable comment.

REPEAL OF PROHIBITION. The rising tide of opposition to Finland's prohibition law induced the Government on Jan. 27, 1931, to appoint the Björkenheim Committee, of eight members, to investigate the problem and propose any changes in the existing law considered desirable. The committee had scarcely begun its study when a mass petition signed by about 118,000 women and demanding repeal of the law was presented to the President. The prohibition forces in the Diet showed definite disintegration during the spring session and on April 14 a law was passed raising the alcoholic content of beer to 2.84 per cent (by volume). Great public excitement and an unprecedented demand were reported when the new beer was placed on sale early in May. The Diet also removed all penalties for drunkenness, except in cases resulting in public annoyance.

While Finnish coast guards were battling an unusual invasion of rum runners from the nearby Baltic states, the sentiment for repeal was furthered by publication of a number of official or semi-official statements. The Ministry of Interior reported that convictions for intoxication had risen from 21,253 in 1920 to 79,400 in 1929. The Federation of Finnish Judges on September 8, the Minister of Interior on September 17, and

finally the Cabinet on December 3 assailed prohibition on the ground that it had effected none of the expected changes in the nation's habits and, on the contrary, had encouraged disrespect and violation of the laws. The Cabinet statement mentioned the increase in drunkenness and in crimes of violence, called attention to the building up of a special criminal class, declared that prohibition had had unfavorable financial effects, and asserted that the taxation of liquor was necessary to balance the budget.

Meanwhile the Cabinet had been faced with the threat of a Lapuan *coup d'état* (November 28) growing out of the prohibition debate. The Lapuan movement was alleged to have been bought over by the liquor and industrial interests and induced to espouse the anti-prohibitionist cause, even at the cost of a violent overturn of the Government. The Cabinet met the situation on December 3 by calling for a nation-wide referendum on December 29 and 30, a bill to that effect being passed by the Diet with only 14 dissenting votes on December 12. The campaign was marked by bitter charges and counter-charges and the breaking of many party lines. Out of an electorate of about 1,700,000, a total of 774,487 voted in the referendum, 337,418 votes being cast by women. For repeal of prohibition, the vote was 546,332, or 70.6 per cent of the total vote cast; for continuing the prohibition law, 217,208, or 28 per cent; for modification, 10,947, or 1.4 per cent. Of the total women's vote, 226,820, or 67.2 per cent, favored outright repeal. The wet vote was highest in the cities and lowest in the country districts, where prohibitionist strength had always centred. See PROHIBITION.

The Cabinet had previously announced that it would convene an extraordinary session of the Diet in January, 1932, to enact repeal legislation, in the event of an anti-prohibitionist victory. The report of the Björkenheim Committee, submitted late in 1931, advocated 3.2 per cent beer and 12 per cent wines, and a system of local option providing for the restriction of manufacture or sale of alcoholic beverages but not the limitation of importation for home consumption. It further urged the establishment of a single company to control the liquor traffic on behalf of the Government.

**ECONOMICS AND FINANCE.** The financial crisis which shook Germany and Central Europe during the summer and forced Great Britain to abandon the gold standard in September had wide repercussions in Finland and the other Scandinavian countries. The Bank of Finland did not join with the central banks of Norway, Sweden, and Denmark in their efforts to maintain the parity of currency. Despite the statement of the Governor of the Bank of Finland on September 28 that Finland would be able to maintain the mark on a stable basis, the Bank was forced to raise the discount rate from 6 to 7.5 per cent on October 1. On October 12 the rate was again raised to 9 per cent and at the same time the gold standard was abandoned. During this period the Finnish mark had depreciated about 25 per cent with relation to United States currency, and since 60 per cent of the country's foreign obligations were payable in dollars, the burden of servicing the foreign debt was increased to an extent which threatened a budget deficit for 1932. The Diet convened in special session October 19 to confirm the Bank of Finland's action in suspending gold redemption, to enact

amendments to the Bank's regulations, and to pass financial legislation calculated to balance the budget. Tariff increases, expected to add \$3,000,000 to the Government's income during 1932, were made effective November 14.

**RELATIONS WITH RUSSIA.** Relations between the Governments of Finland and the Soviet Union became definitely strained during 1931. A series of sharp notes was exchanged, commencing on May 17. The Finnish notes protested the alleged mass deportations from Ingria of peasants of Finnish origin and the persecution of Finnish minorities in Karelia. The Soviet notes called attention to the anti-Soviet (Lapuan) campaign in Finland, alleged military activities along the border, the expulsion of Finnish communists into the Soviet Union, the alleged obstruction and persecution of Soviet trade and diplomatic representatives in Finland, and the propaganda in certain Finnish circles for the annexation of the Finnish sections of Ingria and Karelia. Neither Government obtained a satisfactory response to its protests and the final Soviet note of June 23 placed responsibility for the consequences of the anti-Soviet campaign in Finland upon the Finnish government. See KARELIA; UNION OF SOVIET SOCIALIST REPUBLICS, under *History*.

**FIRE INSURANCE.** See INSURANCE; FIRE PROTECTION.

**FIRE PROTECTION.** The function of the public fire department, originally solely fire extinguishment, gradually was being extended to include fire prevention activities. In 1921 fire prevention bureaus were maintained in the fire departments of only about 20 of the larger cities of the United States. Since its inception in 1924, the field engineering service of the National Fire Protection Association had consistently advocated the development of fire prevention work in public fire departments, and at the close of 1931 there were at least 70 cities that maintained a division of the fire department for the purpose of preventing fires by eliminating unnecessary accumulations of combustible material and other conditions that create a fire hazard. In addition to the cities that maintain organized fire prevention bureaus, some fire prevention inspection work was to be found in the great majority of municipal fire departments.

The effect of this increasing fire prevention activity was clearly registered in 1931 for the first time. The estimates of the United States fire loss for that year showed a substantial reduction from 1930. A variety of factors may be responsible for offsetting the usual effect of business depression upon the fire loss, and it is probable that no single factor should receive all the credit. The deflation of commodity values, with consequent decrease in the money loss for a fire of the same physical magnitude and decreased inventories, are doubtless significant factors. The most important factor, however, was probably the vigilance of fire protection authorities. The capable fire chief knows the danger spots and can concentrate the efforts of his fire prevention bureau upon them. Experience shows that with uniformed inspectors going through a property at frequent intervals, the fire that the chief has feared seldom occurs.

With an efficient arson squad investigating every fire that is in any way suspicious, the would-be incendiary realizes the futility of attempting this crime. The conspicuous results in

The occupancies involved were about equally divided between mercantile establishments (wholesale and retail), industrial plants and miscellaneous occupancies.

Occupancy	No. of fires	Estimated loss
Mercantile Establishments	12	\$ 4,617,000
Wholesale	6	\$2,004,000
Retail	6	1,713,000
Industrial Plants	12	4,628,000
Miscellaneous Occupancies	16	13,843,000
Armory	1	5,000,000
Ship under construction	1	2,000,000
Railway shops	2	1,750,000
Apartment buildings	2	750,000
Piers and wharves	1	750,000
Resort hotels	2	718,000
College building	1	625,000
Horse show	1	500,000
High school	1	500,000
School under construction	1	400,000
Church	1	300,000
Penitentiary	1	300,000
Dwelling	1	250,000
Conflagrations	3	2,300,000
Total	43	\$25,388,000

**LARGE LOSS FIRES, 1931.** During the year 1931 there were 43 fires involving a loss estimated at \$250,000 or more as compared with 68 such fires during the previous year. Every section of the country showed a decrease in large loss fires, except the Southern States, where the number increased from seven in 1930 to eleven in 1931, and in the Rocky Mountain area which reported one fire in 1931 and none in 1930. The location of these fires is shown on the accompanying map.

**PRIVATE FIRE PROTECTION.** Owing to the decrease in the usual industrial and mercantile expansion, private fire protection did not show normal development during 1931. However, the year was marked by the completion of the largest automatic sprinkler installation in the world, that protecting the wharves and warehouses of the New Orleans Waterfront. After a long period in which the fire loss in this small area averaged over \$1,000,000 annually, this inherently hazardous property is now amply safeguarded. See **INSURANCE**.

**FISH COMMITTEE.** See **COMMUNISM**.

**FISHES.** See **ZOOLOGY**.

**FISK, EUGENE LYMAN.** An American physician and co-founder of the Life Extension Institute, died in Dresden, Germany, July 5, 1931. He was born in Brooklyn, N. Y., Jan. 1, 1867. On graduation from the medical college of New York University in 1888, he became connected with the medical department of the Equitable Life Assurance Society of the United States. In 1898 he was appointed medical director of the Provident Savings Life Association and in 1910 of the Postal Life Insurance Company. On the organization of the Life Extension Institute in 1913 he was made medical head and late vice president. In collaboration with Irving Fisher he wrote *How to Live* (1915) and *Health for the Soldier and Sailor* (1918). He was also the author of *Alcohol: Its Relation to Human Efficiency and Longevity* (1916); *Health Building and Life Extension* (1923); and *How to Make the Periodic Health Examination* (1927).

**FISK UNIVERSITY.** A coeducational institution for colored people in Nashville, Tenn., founded in 1866. It consists of a liberal arts

college, a music school, and a graduate department. The total enrollment of 449 for the autumn of 1931 included 166 men and 283 women. The faculty numbered 46, and there were 44 administrative officers and assistants. The productive endowment for 1930-31 was \$1,509,014, and the total income was \$348,281. The library contained approximately 35,000 volumes. Thomas Elsa Jones, Ph.D., was president; A. A. Taylor, A.M., dean; and Jesse F. Beals, treasurer.

**FITZPATRICK, SIR (JAMES) PERCY.** A South African statesman, died in Cape Town, Jan. 25, 1931. He was born in King William's Town, July 24, 1862, and received his education at St. Gregory's College, Downside, England. In 1884 he returned to South Africa, following the discovery of gold in the Transvaal, and in 1891 accompanied Randolph Churchill on an expedition through Mashonaland. The following year he became associated with the mining corporation of H. Eckstein & Co. in Johannesburg, being chosen a partner in 1898 and being elected president of the Witwatersrand Chamber of Mines in 1902. He was also chosen honorary secretary of the Reform Committee, which pressed the demand of the Uitlanders in the Transvaal for the franchise and for the redress of grievances restricting their privileges imposed by the Boers. Following the defeat and capture of Dr. Jameson, leader of the famous raid of December, 1895, he was arrested, imprisoned, and later released only on giving his pledge to the British Government that he would abstain from active politics. After the Boer War he was requested by Lord Milner to assist in the formation of the Union of South Africa, and in 1910 was elected a member for Pretoria East in the South African Parliament, holding that seat until 1920. His publications include *Through Mashonaland with Pick and Pen* (1892); *The Outspan* (1898); *The Transvaal from Within* (1899); and *Jock of the Bushveld* (1907).

**FIVE-YEAR PLAN.** See **UNION OF SOVIET SOCIALIST REPUBLICS**.

**FLANDERS.** See **BELGIUM** under *History*.

**FLATWORMS.** See **ZOOLOGY**.

**FLAX.** The flaxseed production in 1931-32 of 14 countries reporting to the International Institute of Agriculture was estimated at 116,909,000 bushels, which was 0.5 per cent below the yield of 117,500,000 bushels in 1930-31 and 3.9 per cent below the average annual yield for the five years 1925-26 to 1929-30. Crops of important countries not including the United States were India 15,120,000 bushels, Canada 2,847,000 bushels, Poland 1,968,000, Lithuania 1,107,000 bushels and Latvia 582,000 bushels. The production reported for Lithuania and Latvia included the yield of hemp seed. The Canadian crop was 35.3 per cent below the yield of 1930 and 37.5 per cent below the average annual yield for the five-year period mentioned. Argentina, the leading flaxseed producing country south of the equator as well as of the world, reported a yield of 70,265,000 bushels for the crop year 1930-31 as compared with an average of 73,391,000 bushels for each of the five preceding years. The area sown for the Argentine crop of 1931-32 was reported as 8,640,000 acres, which was 15 per cent above the acreage of the preceding crop year and nearly 25 per cent above the five-year average; estimated production (1931-1932) 82,674,000 bushels. For the Soviet Republics the average

annual yield for the five-year period was 23,670,000 bushels and the acreage 4,267,000.

The flaxseed production of the United States in 1931 was estimated by the Department of Agriculture at 11,018,000 bushels as compared with 21,240,000 bushels in 1930 and 15,910,000 bushels in 1929. The area harvested in the three years was 2,313,000, 3,732,000 and 3,047,000 acres respectively. Severe drought in the summer of 1931 reduced both acreage and yield. In North Dakota, South Dakota, and Montana only about half the acreage planted was harvested and the average yield for the whole country was only 4.8 bushels per acre while in 1930 it was 5.7 bushels, and in 1929 5.2 bushels. In spite of the low yield the average farm price on Dec. 1, 1931, was only \$1.202 per bushel and the total value of the crop on this basis only \$13,243,000 as against \$29,684,000, the total value of the preceding crop. The four leading States among the ten States reporting flaxseed production and their yields were given as follows: Minnesota 6,027,000 bushels, North Dakota 3,521,000 bushels, South Dakota 462,000 bushels, and Kansas 336,000 bushels. In acreage North Dakota ranked first with 1,006,000 acres followed by Minnesota with 861,000 acres, South Dakota with 185,000 acres, and Montana with 144,000 acres.

During the fiscal year ended June 30, 1931, the United States exported 129,000 tons of linseed oil cake, 7 tons of linseed oil cake meal, and 1,298,000 pounds of linseed oil and imported 7,813,000 bushels of flaxseed, 256,000 pounds of linseed oil and 22,646,000 pounds of linseed oil cake and meal.

Estimates of flax fibre production published by the International Institute of Agriculture placed the yields of the nine countries reporting materially below the yields of 1930 and with the exception of Bulgaria at much below the five-year average. The leading flax fibre producing countries and their yields were reported as follows: Poland 66,139,000 pounds, Belgium 19,156,000 pounds, Estonia 13,008,000 pounds, Germany 11,684,000 pounds, Czechoslovakia 8,344,000 pounds and the Netherlands 8,234,000 pounds. Austria reported a yield of 10,935,000 pounds of dried flax straw and Lithuania 51,765,000 pounds and Latvia 33,056,000 pounds of flax and hemp fibre.

**FLEMISH AUTONOMY MOVEMENT.** See BELGIUM under *History*.

**FLEMISH LANGUAGE DISPUTE.** See BELGIUM under *History*; also PHILOLOGY, MODERN.

**FLIES.** See ENTOMOLOGY, ECONOMIC.

**FLOOD AND FLOOD PROTECTION.** In contrast with the great floods of recent years 1931 will pass into history, at least in America, as a year of unusually low stream flow. Until the last few days of the year not a single important flood had been recorded by the U. S. Weather Bureau. In spite of the fact, however, that the almost unprecedented drought had reduced the flow of the Mississippi to a point approaching the zero datum established in 1864 (only once, in 1910, had the water level been below this datum) the upper delta region, particularly the Tallahatchie River valley, experienced heavy rains, resembling cloud-bursts, in late December. The crest of the flood thus produced was predicted for December 28 and flood warnings were issued in the affected area. It was estimated that some 75,000 acres would be inundated in southern Tallahatchie Co., Miss., and several towns were menaced

by possible failure of levees and by backwater from the Tallahatchie and Coldwater Rivers.

#### LOSSES BY FLOOD IN THE UNITED STATES DURING THE YEAR 1931

<i>Drainage</i>	<i>Reported losses</i>	<i>Lives</i>
Atlantic .....	\$1,081,000	1
Gulf (except Mississippi River) ..	176,100	..
Mississippi (except Ohio River) ..	991,625*	..
Ohio .....	1,000	8
Great Lakes .....	..	..
Pacific .....	598,000	2
Interior (i. e., Great Basin) ...	25,000	..
Total .....	\$2,867,725	6

\* Probably about 75 per cent of actual.

† Losses which may be caused by the floods in the lower Mississippi Valley which are listed below are not included above:

Yazoo River (in Mississippi) which reached flood Dec. 23, 1931; Black River (in Arkansas) which reached flood Dec. 31, 1931; St. Francis River (in Missouri) which reached flood Dec. 31, 1931; Ouachita River (in Louisiana) which reached flood Dec. 25, 1931; Atchafalaya River (in Louisiana) which reached flood Dec. 27, 1931; Tallahatchie River (in Mississippi) which reached flood Dec. 15, 1931.

While America was thus in general suffering from wide-spread drought and while there was only this unfortunate flood in the Mississippi to be recorded, China experienced one of the worst floods on record. During July and August a flood exceeding the high record of 1870 caused great damage, loss of life, and suffering in the Hankow area. In this city and its suburbs many public utilities were forced to cease operations and the collapse of the big Chiakow dike, protecting the city's western suburbs, resulted in the flooding of the principal native industrial district, including big flour, cotton, and silk mills. See CHINA under *History*.

In Great Britain work had been commenced on a \$3,650,000 project for the improvement of the channels of the River Lee in the Stratford district, to relieve flooding and aid navigation. There are many important drainage and flood works in England, among which the historic drainage of the Great Level of the Fens by the Dutchman Vermuyden during the seventeenth century is a landmark in reclamation history. The new work is comparatively small in size but indicates the increasing interest throughout the world in flood protection undertakings.

During 1931 an impasse predicted in the 1930 YEAR BOOK was reached in connection with the greatest of all flood projects—the protection of the Mississippi Valley. Although the flood-control plan covering the Mississippi work was enacted in 1928 a complete reconsideration of the plan was to be one of the major problems facing Congress in 1932.

As previously noted the so-called Jadwin plan involved an improved and strengthened channel for ordinary floods with provisions for discharging part of the waters of extraordinary floods through special floodways, in particular those in the Boeuf and the Atchafalaya basins. The basic economic assumption made in this plan was that there would be no cost for flood damages in these floodway areas.

General Lytle Brown, who, as Chief of Engineers, had inherited this great problem, approved in general the Jadwin plan. He advocated, however, the construction of permanent control works, concrete weirs or spillways, to control the discharge of flood of waters into the Boeuf and

Atchafalaya floodways, instead of General Jadwin's much disputed "fuse plug" levees. General Brown was also keenly alive to the economic problems involved and was convinced that the state of development of the Boeuf and Atchafalaya basins was not such as to justify such costly plans as those proposed by the Louisiana Board of Engineers for totally preventing flooding in these areas.

In the meantime, the claim of the landowners in the proposed floodway areas, that the Federal Government had no right deliberately to route flood waters through these areas without compensating the landowners, had been upheld by both the U. S. District Court and the Circuit Court of Appeals. This action stopped work on these projects.

On Jan. 4, 1932, the Supreme Court was to undertake a review of the case and in particular of the necessity of the government acquiring property or flowage rights in these basins, which incidentally have always been subject to flooding under high water conditions. It was believed that the Supreme Court would make a complete study of the legal phases of the flood control act and that much will be done to remove the legal uncertainties now connected with and holding up the construction of the Mississippi works. A decision in these matters, however, will not relieve Congress of the necessity of making the intentions of the act clear. Congress will have to declare the purpose of the act, whether partial control or the complete protection of the Mississippi Valley is to be secured, and it must furthermore determine whether the costs shall be borne by the nation or divided between the nation and States involved. Until this is done there can be no progress in the construction of flood works on the Mississippi. In short, the act of 1928, as was suspected by many observers, was not a final solution of the Mississippi problem.

One other matter of flood interest should be noted. The United States, although one of the youngest nations, had secured more data on stream flow and water supply than was available in any other country. Steps to economize in government expenditures, however, were going to result in the curtailment of stream flow observations. The War Department no longer was to assist the U. S. Geological Survey in their efforts to determine the country's water resources. This means that the maintenance of some 654 stream-gaging stations, established three years previously under a programme of the U. S. Corps of Engineers, was in doubt. Definite provisions had been made for only 120 stations and only further support by the States, a very uncertain factor, would prevent the discontinuance of many of these important records.

CALIFORNIA. In northern California the completion of the Hogan Dam (137 ft. high) marked the advent of the first flood-control structure on the north Pacific Coast. Voters at a special election on September 15 approved a flood control project for the American River, which will protect the city of Sacramento and a large area north and east. The Los Angeles County Flood Control District completed (See DAMS) the Big Tujunga Dam, the first of four flood control and conservation structures which are planned. This dam controls flood peaks and permits the complete absorption of flood waters, into ground storage and flow, by spreading grounds. Following the abandonment of the San Gabriel Dam site studies were

made of other possible sites and also of a flexible type of dam. Funds were available but plans had been delayed by the San Gabriel difficulty and by uncertainties in connection with the storage of water from the Colorado to be carried by the new aqueduct.

RIO GRANDE. The New Mexican project, a four-year \$13,000,000 work, for flood control, drainage, and irrigation, was started in March, 1930. Although about one-fifth of this sum was expended in 1931, it was necessary as the year closed to reduce forces due to the failure of loan agreements and the exhaustion of funds. In December, 1930, the U. S. Government was asked to undertake the completion of the lower Rio Grande flood control work in Texas. The Commissioners of Hidalgo Co. offered to turn over without reimbursement the works as they stand and it was expected that Cameron Co. would join in this move.

FLORIDA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,488,211; in 1920, 968,470. According to origin, the population of 1930 contained 976,148 native whites, 59,057 foreign-born whites, 431,828 Negroes, 587 Indians and small groups of other origin. Of the 599,010 persons in the State having gainful occupations, 133,648 engaging in agriculture formed the largest group. The manufacturing and mechanical industrial group numbered 128,739, including 30,082 in the building industry; in trade, 92,460; domestic and personal service, 99,985; transportation, 54,148; professional service, 40,145.

Among the cities, Jacksonville, with 129,549, had the largest population in 1930; in 1920 it had 91,558. Miami had 110,637 (1930), 29,571 (1920); Tampa, 101,161 (1930), 51,608 (1920); St. Petersburg, 40,425 (1930), 14,237 (1920). Tallahassee, the capital, had 10,700 (1930), 5637 (1920).

AGRICULTURE. The following table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Oranges	1931	.....	15,000,000*	\$25,500,000
	1930	.....	19,000,000*	36,100,000
Grapefruit	1931	.....	11,000,000*	15,400,000
	1930	.....	16,000,000*	28,800,000
Corn	1931	674,000	5,729,000	3,036,000
	1930	648,000	5,832,000	5,249,000
Potatoes	1931	28,000	3,640,000	4,004,000
	1930	32,000	2,560,000	4,786,000
Sweet potatoes	1931	21,000	1,638,000	1,147,000
	1930	19,000	1,520,000	1,444,000
Cotton	1931	114,000	43,000*	.....
	1930	120,000	50,000*	.....
Peanuts	1931	297,000	172,260,000*	3,790,000
	1930	251,000	140,560,000*	4,638,000

\* Boxes.    † Bales.    ° Pounds.

MINERAL PRODUCTION. The mining of phosphate rock, the predominant feature of the State's mineral industry and the line in which Florida led the States of the Union and was the majority producer, was unusually active in 1930. The total produced exceeded that of 1929 in point of value as well as of quantity. For 1929, the latest year as to which figures by States were available, Florida's production of phosphate rock was 3,088,298 long tons, and for 1928, 2,883,446; in value, \$9,901,074 for 1929 and \$9,424,022 for 1928. There was a growing production of zircon or zirconium ores, which attained as early as 1927 a yearly total value of \$364,000; the statistics for later years were withheld.

Stone, of chiefly low grades, quarried in 1929 to the value of \$1,688,224, and clay products, raw clay, sand and gravel furnished the bulk of the remainder of the mineral total. The total value of the mineral products of the State was \$14,803,606 for 1929; for 1928, \$15,227,123.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$17,629,758 (of which \$5,272,427 was for local education); for interest on debt, \$679,471; for permanent improvements, \$7,530,827; total, \$25,840,056 (of which \$8,334,436 was for highways, \$1,422,160 being for maintenance and \$6,912,276 for construction). Revenues were \$26,297,749. Of these, property and special taxes furnished 29.9 per cent; departmental earnings and compensation to the State for officers' services, 7.8; sale of licenses, 54.1 (in which was included a gasoline sale tax that produced \$8,764,806). Funded debt outstanding on June 30, 1930, totaled \$189,000, which did not include a contingent or special-assessment debt of \$11,744,686, incurred on account of the project for draining the Everglades. On an assessed valuation of \$613,720,306 the State levied in the year ad-valorem taxes of \$8,761,400.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 represented the number of the State's manufacturing establishments as 2214, or 16 per cent above the number for 1927. These employed 64,936 wage earners, an increase of 6.1 per cent. The manufacturing wages paid in 1929 totaled \$54,061,968, which was not quite 4 per cent more than had been paid in 1927. Materials used in manufacture, plus fuel and purchased electricity, cost in 1929, \$97,102,524, or 6.7 per cent more than in 1927. The manufactured product of 1929 was valued at \$232,912,161, or 6.5 more than for 1927. Value added to materials, etc., by manufacture was reckoned for 1929 at \$135,809,737. Tampa, leading as to number and total pay of wage earners, had 241 manufacturing establishments, 13,182 wage earners, wage payments of \$13,883,453 and a product of \$53,289,196. Jacksonville, leading as to value of product, had 209 establishments, 6231 wage earners, wage payments of \$7,182,170 and a product of \$55,178,183.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 5665.69. Additional line put in operation in the course of the year preceding totaled 12.12 miles, but 32.87 miles of line were abandoned. No building of new line or trackage in 1931 was reported.

**EDUCATION.** As reported in December, 1931, the school-age population of the State was 460,181, and there were enrolled in the public schools 346,434 pupils. Of these, 301,298 were in common schools or elementary grades, and 45,136 were in high-school grades. For the year 1929-30, the expenditures for public-school education were: current expenses, \$13,419,351; all payments, \$25,003,234. Salaries of teachers by the month averaged \$113.80. By classes they averaged: for white male teachers, \$169.20; white women teachers, \$115.80; Negro men teachers, \$84.20; Negro women teachers, \$61.60. An enactment of the Legislature in 1931 made eight months the minimum yearly period of free instruction in both high and elementary schools.

Appropriation was made, also, to augment the county-school fund.

**LEGISLATION.** The Legislature met in regular session in January and, after the expiration of its constitutional limit of 60 days, was twice immediately reassembled in extraordinary session by Governor Carlton. It carried out a great amount of fiscal and financial legislation needful to restore revenues and aid public credit. The State millage tax was sharply reduced to the rate of 4½ mills, as against a levy of 14½ mills for 1930. Considerable retrenchment was effected in the biennial appropriation bill for the operation of the State government, which carried a total of only \$14,126,000. New revenue was provided from many sources. The tax on sales of gasoline was raised to 7 cents a gallon, from 6 cents, to yield an estimated additional \$2,225,000. A State levy on intangibles was enacted, from which \$500,000 a year was expected. A stamp tax placed on documents was to yield another \$1,000,000. Other fiscal enactments and their anticipated yields were: utilities tax, \$700,000; tax on corporate franchises, \$500,000; taxes on chain stores and merchandise stock, \$500,000 to \$750,000; mileage tax on busses and automobile trucks, \$100,000. An inheritance tax, of uncertain yield, was also enacted, in amended form, after Governor Carlton had vetoed the first measure to this end, doubting its conformity with the Federal act. The voters approved in the previous November a constitutional change to permit inheritance taxation. The measure was to give the State the Federal allowance on death duties collected.

Over the Governor's veto was enacted a bill to permit horse racing and betting at horse races under the pari-mutuel system, with 3 per cent of the wagers and 15 per cent of the admittance receipts accruing to the State. It was required that bonds to be issued by a municipality be approved by referendum. Proceeds of the gasoline tax were reallocated, 3 cents of the receipts by the gallon to go to the State Road Department and 3 cents to counties, proportionately to their relative areas and expenditures on highways. State salaries were generally reduced by from 5 to 15 per cent. A measure was passed to permit the gradual payment of delinquent taxes by installments over a period of 5 years. The office of State Auditor was abolished and its functions were distributed between the Governor and the Comptroller.

**POLITICAL AND OTHER EVENTS.** Because the Mediterranean fruit fly was judged to have been eradicated, the State Commissioner of Agriculture terminated the permission that had been given to citrus growers to use arsenical fruit sprays. The State courts tended to uphold the validity of defaulted bonds of State subdivisions as against the property in such subdivisions. Notably the State Supreme Court held valid the claims of a bondholders' committee as to the \$3,532,000 issue of Coral Gables. A start was made on Federal work to continue the reclamation of the Everglades at a cost of \$9,000,000 by the construction of levees and canals for flood control and navigation. The initial work was done on the Caloosahatchee River near Fort Myers. A movement was set under way to have Congress create a National Park in the Everglades for the preservation of birds, animals, and fishes there found.

**OFFICERS.** Governor, Doyle E. Carlton; Secretary of State, R. A. Gray; Attorney-General, Cary D. Landis; Comptroller, Ernest Amos; State Treasurer, W. V. Knott; State Superintendent of Public Instruction, W. S. Cawthon; Commissioner of Agriculture, Nathan Mayo.

**JUDICIARY.** Supreme Court: Chief Justice, Rivers Buford; Associate Justices, W. H. Ellis, James B. Whitfield, Armstead Brown, Glenn Terrell, Fred H. Davis.

**FLORIDA, UNIVERSITY OF.** A State institution of higher education for men in Gainesville, Fla., founded in 1905. In the autumn of 1931 the registration totaled 2445, distributed as follows: Arts and sciences, 567; commerce and journalism, 564; engineering, 353; education, 293; agriculture, 216; law, 202; graduate, 129; architecture, 68; and pharmacy, 53. The registration for the summer session of 1931 was 638 men and 892 women. The faculty numbered 165. The cost of operating and maintenance was \$2,330,276; the annual endowment was \$315,488. The library contained 90,000 volumes. President, John James Tigert, LL.J.

**FLORIDA STATE COLLEGE FOR WOMEN.** An institution for the higher education of women in Tallahassee, Fla., founded in 1905. The enrollment for the autumn of 1931 was 1691, distributed as follows. Graduate school, 12; college of arts and sciences, 628; school of education, 787; school of home economics, 198, school of music, 66. The enrollment for the summer session was 913. The faculty numbered 163 members. The income from endowment for the year was \$6150; State appropriations amounted to \$639,197. There were 41,238 volumes in the college library. President, Edward Conradi, Ph.D.

**FOOD AND NUTRITION.** **FOOD PRICES.** *United States.*—The index number for wholesale prices of foods reported by the Bureau of Labor Statistics, U. S. Department of Labor (*Mo. Labor Rev.*, vol. 33, no. 6, p. 235) was 72.6 for October, 1931, as compared with 88.6 for October, 1930, (1926 = 100). Among the principal food groups meat again showed the greatest percentage decline, the index number falling from 96.7 to 71.1. The index number for milk and dairy products fell from 98.7 to 86.4 and for other foods from 79.8 to 67.7. The wholesale purchasing power of the 1926 dollar was \$1.377 for all foods, \$1.157 for milk and dairy products, \$1.406 for meats, and \$1.477 for other foods. *Bradstreet's* food index number based on the wholesale prices per pound of 31 articles of food was \$1.97 for the

week ended December 26, as compared with \$2.47 for the week ended Dec. 27, 1930.

The combined retail prices of 42 articles of food, as reported by the Bureau of Labor Statistics (*Mo. Labor Rev.*, vol. 33, no. 6, p. 226), were 17.5 per cent lower on Oct. 15, 1931, than on Oct. 15, 1930, with substantial decreases in practically every item. The decreases in meats varied from 12 to 23 per cent, milk and dairy products from 11 to 21 per cent, vegetables from 11 to 42 per cent, fruits from 3 to 44 per cent, and cereals and cereal products from 4 to 23 per cent. Strictly fresh eggs were 15 per cent, sugar 3, tea 2, and coffee 18 per cent lower. The combined index number for all of the articles included was 119.1 as compared with 144.4 for the preceding year.

The even greater downward trend in food prices in the United States in 1931 than in 1930 emphasized the truth of the statement noted in the 1930 report that food prices reflect in large measure the fluctuations in business activity and the buying power of the consumer. Until business shows a marked upward trend it is to be expected that food prices will remain low. In a talk given in November to potato growers in Florida, L. H. Bean of the Bureau of Agricultural Economics, U. S. Department of Agriculture, stated that while the trend of commodity prices during the next five or ten years could not be clearly foreseen, many believed that the factors making for a declining price level were stronger than those tending in the opposition direction.

The chart on page 318, prepared by the Bureau of Agricultural Economics, shows the general trend in the wholesale price index for foods and in the wholesale prices received for a single commodity, early potatoes in Virginia, from 1867 to the present time. The curves for these two items showed a downward trend for 30 years after the Civil War, followed by a fairly level period until the World War, then an abrupt rise to the 1920 peak, followed by the decline to the present low level. The prices of other farm products show the same trend, fluctuating from year to year with the size of crops and changes in demand condition, but following the general commodity price levels as affected by business conditions.

*Other countries.* The general trend of retail food prices throughout the world may be seen from the accompanying table compiled from data reported by the Bureau of Labor Statistics (*Prices, Wholesale and Retail*, November, 1931). The index numbers, constructed by the various national statistical offices, were based on the prices of a number of articles of food weighted according to different standards, but unless otherwise noted referable to a 1914 basis of 100. These

INDEX NUMBERS OF RETAIL FOOD PRICES IN THE UNITED STATES AND OTHER COUNTRIES  
[1914 = 100]

Year and month	United States *	Canada *	Belgium	Czechoslovakia	Finland	France <sup>b</sup> (Paris)	Germany

\* 1918 = 100. <sup>b</sup> In gold.

WEIGHTED AVERAGE FARM PRICE OF EARLY WHITE POTATOES IN VIRGINIA AND WHOLESALE PRICE INDEX OF FOODS, 1867 TO 1930

Prices received for early potatoes tended downward for 80 years after the Civil War as did the general commodity price level, then rose to a peak in 1920 and have declined since then. The yearly fluctuations are due usually to changes in the crop and at times to changes in demand conditions.

index numbers likewise are found to show marked decreases for all countries.

**EMERGENCY FOOD RELIEF AND CHILD HEALTH.** The increasing amount of unemployment and resulting poverty during the year created emergency problems of food relief. Realizing this the President's Organization on Unemployment Relief, in cooperation with national welfare and scientific organizations, issued fundamental recommendations urging that wherever possible children of needy families be provided with proper food in their homes and that enough be allowed for the entire family.

For distribution among needy families and use by emergency relief agencies pamphlets on emergency nutrition and food at low cost, written by well-known nutrition authorities, were published by the American Child Health Association. Pamphlets and leaflets along the same line were issued jointly by the Children's Bureau of the U. S. Department of Labor and the Bureau of Home Economics of the U. S. Department of Agriculture. All of these publications emphasized the importance, particularly in childhood, of the protective foods—milk, fruits, and vegetables. It was considered absolutely essential that every child should have one pint of milk, one vegetable, and one fruit a day, with plenty of bread, cereals, and other energy and body-building foods. For every child under two years of age a daily allowance of two teaspoonfuls of cod-liver oil was recommended, not as an additional safeguard but as an imperative necessity.

In order to get the most for the money spent for food, the general recommendation was made that a family with children should spend one-fourth of every food dollar for milk, one-fifth for vegetables, one-fifth for bread, cereals, and legumes, one-fifth for fats and sugars, and the rest for eggs, cheese, meat or fish, and accessory articles.

**FOOD SELECTION AND EXPENDITURE.** In times of

prosperity the chief concern in regard to food selection is the adequacy of the diet with cost a minor consideration. In periods of economic depression, however, it becomes a matter of paramount importance, as pointed out in the various food emergency publications, to select food wisely from the standpoint of cost as well as nutritive value. A study by Muse and Gillum (*Vermont Agr. Expt. Sta. Bul. 327*) of household account books kept during 1928-30 by 50 farm women in Vermont showed that the total food costs averaged \$101 per man a year, or 45 cents a day. No diet costing under 40 cents a day was adequate in all respects and only two adequate diets cost as much as 50 cents. The average cost of the 19 diets considered fully adequate was 52 cents.

Somewhat lower costs were reported by McKay and Brown (*Ohio Agr. Expt. Sta. Bul. 492*) in a similar but more extensive investigation of food selection and expenditures by Ohio farm families. The average money values of the diets analyzed for three consecutive years, 1926-28, were \$134, \$121, and \$120 per man per year. The average expenditures for each of the principal food groups in percentage of the total cost were remarkably constant from year to year for milk and cream, bread and cereals, and fats, sugars, and other foods, which averaged 16, about 11, and 22 per cent, respectively, of the total expenditures. The other two groups—meat and protein-rich foods and fruits and vegetables—showed greater fluctuations, the percentage spent for one decreasing as the other increased.

In this Ohio study there were 18 families from which accounts were secured for the three consecutive years. The diets of 11 of these families were considered adequate or more than adequate in the averages for the entire period. The principal differences between the adequate and inadequate diets were in the two groups which in general showed the greatest fluctuations, the adequate

diets containing a lower percentage of meat and protein-rich foods and a higher percentage of fruits and vegetables than the inadequate.

The money values of the inadequate diets ranged from 34 to 50 cents, with an average of 41 cents, per man per day as compared with a range of from 22 to 51 cents, and an average of 31 cents, per man per day for the seven diets which were considered inadequate in some respects. The wide range in cost in both adequate and inadequate diets suggests the probability that slight changes in the spending plan would have made possible the selection of adequate diets at no greater average cost than that of the inadequate diets.

General improvement during the past 15 years in the habits of food selection by New York City families of low income was shown by Gillett and Rice (*Influence of Education on the Food Habits of Some New York City Families*) in a comparison of foods purchased by about 100 low income families in 1928 with those reported in a comparable study made in 1914-15. The earlier study, by Sherman and Gillett, was the basis of the well-known simple rule proposed by Sherman of dividing the food dollar roughly into fifths for each of the five principal food groups. This rule was used in the food instruction given by the Nutrition Bureau of the New York Association for Improving the Condition of the Poor under whose auspices both of these dietary studies were carried out. Each study included a few families which had been receiving instructions on the essentials of a proper diet and a much greater number which had received no direct instruction. The percentage expenditures of the uninstructed families in the 1928 study approached the standard far more closely than did the corresponding group in the earlier study, showing a decided increase in the expenditure for fruits and vegetables and decrease in that for meat and fish. The expenditure for milk and cheese, although greater than in the earlier study, was still slightly below the standard.

The expenditures for food of the families which had received some instruction were very close to the standards set. That the improvement in food selection did not involve any greater total expenditure for food, but on the contrary a lower expenditure, was shown by the fact that the average cost of foods purchased by the uninfluenced families receiving the poorer diet was 60 cents, and of the influenced families receiving the better diet only 53 cents per man per day.

**INFANT FEEDING.** Although it is well known that cow's milk varies widely in composition and that it can be enriched in certain constituents by proper feeding, it has generally been assumed until fairly recently that human milk is always of good quality and the best possible food for infants. With the discovery of the vitamins, it became recognized that the primary cause of infantile beriberi in the Philippines was the deficiency in breast milk of the antineuritic vitamin B. As shown in a paper by Albert (*Philippine J. Sci.*, vol. 45, p. 297) there has been a steady decrease in the incidence of infantile beriberi in the Philippines subsequent to the discovery that it is a deficiency disease curable by antineuritic vitamin concentrates such as tikitiki.

Attention was called in the 1930 report to an extensive investigation which was being conducted in Detroit on women who were superior milk producers of the Mother's Milk Bureau of that

city. An extension of this investigation by Macy and associates (*Am. J. Diseases Children*, vol. 42, p. 569) to the composition of the milk produced by these women during the first and last halves of the nursing period showed that as nursing progresses the milk becomes much richer in fat, protein, casein-nitrogen, total solids, and phosphorus. These findings are of practical significance. A small weak baby unable to nurse for more than a few minutes might benefit by having the first portion of milk removed before it was allowed to nurse. At the other extreme the fact that eczema, which develops in some vigorous, breast-fed babies, has been cleared up by shortening the nursing period, thus permitting the baby to get only the first and more dilute portion of the milk, suggests that the skin condition had been caused by the richness of the milk, probably in fat.

Samples of milk produced by three of these superior milk producers were tested by McCosh, Macy, and Hunscher (*J. Biol. Chem.*, vol. 90, p. 1) for their content of the vitamin B complex before and after yeast had been added to the diet of these women in 10-gram daily amounts. The vitamin potency of the milk varied with the different subjects and appeared to be inversely proportional to the quantity of milk secreted. Yeast improved the quality of the milk.

Much attention has been paid in recent years to the quality of cow's milk used for infant feeding and to the possibilities of enriching it in certain constituents by suitable feeding of the dairy cattle. The discovery of Hill (*Utah Agr. Expt. Sta. Bul.* 227) that there is a great variation in breed and in individual cows in the character of the curd of the milk produced and that for infant feeding soft curd milk is greatly to be preferred has been taken up by milk distributing organizations and soft curd milk was or was soon to be available in several cities in 20 States.

The principal vitamin deficiencies in cow's milk are in vitamins B ( $B_1$ ), C, and D. It is the general practice to give orange or tomato juice to artificially fed babies to provide vitamin C, and it has become common, though not universal, hospital practice to supply some supplementary source of vitamin B. The relative efficiency for this purpose of extracts of wheat germ and brewer's yeast was tested by Hoobler (*J. Am. Med. Assoc.*, vol. 96, p. 675) on approximately 125 babies in a children's hospital in Detroit, with the conclusion that brewer's yeast concentrate or powdered yeast was more effective than the wheat germ extract.

The feasibility of enriching cow's milk with vitamin D by feeding the cows irradiated yeast received clinical support from Hess and associates (*J. Am. Med. Assoc.*, vol. 97, p. 370) who reported the prevention and cure of rickets in a large number of babies from 1½ to 6 months of age receiving no other source of the antirachitic vitamin than milk from cows which had been fed irradiated dried brewer's yeast. Hess was of the opinion that this method of supplying vitamin D to babies is promising from a clinical point of view in that it functions automatically in the diet, relieving the physician of dependence on the coöperation of the mother.

**NUTRITION AND GROWTH OF CHILDREN.** The changes which had taken place in the past few years in theories concerning the proper feeding of children were well illustrated by a comparison of a Department of Agriculture bulletin entitled

*Food for Children* (U. S. Dept. Agr., Farmers' Bul. 1674), published during the year, with the previous edition published 15 years earlier. Less emphasis was placed in the revised edition upon milk and more upon a carefully chosen variety of foods, although it was stated that "every child should have at least a pint of milk a day" and that "many child nutrition specialists recommend a quart a day to insure sufficient calcium during the years of rapid growth." Rather more emphasis was placed than formerly upon using a considerable part of the milk allowance in the preparation of a variety of dishes in place of milk as a beverage, in which form the child's appetite for solid foods may be impaired.

Increased knowledge of vitamin values led to the recommendation of two servings each day of vegetables in addition to potatoes and two of fruits instead of one vegetable and one fruit as recommended in the earlier edition. Egg yolk and liver received more emphasis on account of their high content of iron. The chief difference in the suggested menus was in the much greater variety in the supper or evening meal. In planning the midday dinner and evening supper for children the slogan "one menu for all" was followed by careful selection and slight adjustments in the menus for adults. Greater attention was paid than formerly to variety in meals, and to flavor, color, texture, and consistency of foods and food combinations, in recognition of the psychological value of variety and attractiveness in helping to influence the desire to eat.

Many pediatricians who had to struggle with what had been aptly called the "hunger strike" in children were of the opinion that insistence upon a quart of milk a day has been the cause of loss of appetite and failure to eat on the part of some children, particularly those of the so-called linear type (tall and thin). Lucas and Pryor (*Am. J. Diseases Children*, vol. 41, p. 249) found that the diets of children of this type who were suffering from anorexia, or refusal to eat, were generally very high in fat. As the first step in correcting diets of this type they recommended substituting for the accepted quart of milk a day a quart of fruit juices. In general, diets of low residue, low fat, and high vitamin content were recommended, with insistence on abundant rest.

An illustration of the beneficial effects of rest and regularity in habits upon the health and growth of young children was afforded by monthly growth records, covering a total of three years, obtained by McKay and Brown (*Ohio Agr. Expt. Sta. Bul.* 482) for a large number of pre-school children. These records showed a decided tendency to greater gains in weight during the summer than the winter—both in the averages of large groups and in the individual records. There were several children, however, who gained more during the winter than the summer. Nearly all of these children had been in nursery schools during the winter with supervised recreation and rest, while in the summer their afternoon naps were shortened or given up entirely. This suggests that with general environmental conditions as good in winter as in summer the rate of growth during the winter season would be equal to that of the summer season.

**TRACE ELEMENTS IN NUTRITION.** The term "trace elements" was coming into use to designate certain inorganic elements which occur in such small quantities in food materials as to require sensitive methods for their quantitative deter-

mination, but which are recognized as just as essential to nutrition as the better-known constituents occurring in much larger quantities.

One of these trace elements is iron, which has long been recognized as essential for blood formation and regeneration. Within the past two or three years it has been quite definitely proved that traces of copper are necessary as supplements to iron in the treatment of nutritional anemia readily produced in young rats by feeding them nothing but milk. Investigations carried on by Mendenhall (*Wisconsin Agr. Expt. Sta. Bul.* 420) indicated that certain secondary anemias in babies also respond to treatment with iron and copper salts. Lewis (*J. Am. Med. Assoc.*, vol. 96, p. 1135) reported that in a group of 34 children suffering from secondary anemia there was much more rapid improvement after treatment with iron salts had been supplemented with suitable doses of a copper salt. In the experience of Parsons, however (*J. Am. Med. Assoc.*, vol. 97, p. 973), cases of simple nutritional anemia which did not respond to iron therapy and a varied diet were not benefited by copper supplements. Since the iron salts used always contained traces of copper this does not necessarily disprove the theory that copper is essential as a supplement to iron.

Many such cases of anemia would probably have been prevented by proper feeding. A good method of testing the efficacy of different foods as sources of iron and copper in favorable proportions is to produce anemia in young rats by feeding them nothing but milk and then to supplement the milk with known quantities of the food to be tested. Sorghum and sugar cane sirups and turnip greens, all familiar articles of diet in the South, were found by Sheets and associates (*Mississippi Agr. Expt. Sta. Rpt.* 1930, p. 23) to be quite effective in this respect. Oysters were found by Levine and associates (*J. Nutrition*, vol. 4, p. 469) to be effective. An editorial comment (*J. Am. Med. Assoc.*, vol. 97, p. 1970) states that this discovery will probably be followed by other comparable discoveries. "making the administration of copper a gustatory delight rather than the mere ingestion of 'a dose of medicine.'"

Manganese is another trace element which may have an important, though as yet not fully understood, function in nutrition. Calculations by Hodges and Peterson (*J. Am. Dietetic Assoc.*, vol. 7, p. 6) of the manganese, copper, and iron content of serving portions of foods entering into menus recommended by a well-known authority on food selection showed that cereals were the chief contributors of manganese, vegetables and cereals of iron, and fruits important sources of all three elements in these diets. The quantities of these three elements in a diet recommended as suitable for a child three or four years old were 0.8 mg. of manganese, 4.5 mg. of iron, and 0.03 mg. of copper—traces only in comparison with other constituents of the diet.

A striking illustration of the harmful effects of another trace element, fluorine, was afforded during the year by the announcement by Smith and coworkers (*Arizona Agri. Expt. Sta. Tech. Bul.* 32) that mottled enamel, a disfiguring and destructive condition of the teeth endemic in certain sections of the country, had been traced quite definitely to excess fluorine in the drinking water of the afflicted communities, although the

amount present in the water of localities in which the condition was endemic did not exceed 7.5 milligrams per liter.

**FOOTBALL.** The University of Southern California and the Tulane University elevens were probably the most powerful football teams in the country in 1931—a season in which the strength was remarkably well distributed and in which no one really outstanding team was conspicuous. Both the students from Los Angeles and those from the bayous of Louisiana were extraordinarily powerful and the question of definite superiority was scheduled to be settled New Year's Day in Pasadena. Tulane swept through the South like a veritable typhoon, winning all its games, and earning laurels by soundly beating a University of Georgia eleven that has defeated Yale and New York University, two of the East's best. Southern California ran into a snare in the first game of the season, September 26, when St. Mary's from San Francisco won by the margin of a single touchdown. After that the Los Angeles Trojans began to move with power and at the end of the season St. Mary's had fallen from its high estate and the previous triumph was considered an early season gesture rather than a serious obstacle in the path of U. S. C.'s claim to national supremacy.

Southern California visited Notre Dame, Ind., November 21, and defeated Notre Dame University in football. The Notre Dame team, swept along by the spirit of Knute Rockne (q.v.), coach, who died in a tragic airplane accident over Kansas in March, had marched through early season opponents in much the same manner it had done when Rockne was alive. At the end of the third quarter, at Notre Dame, November 21, Notre Dame was leading, 14 to 0, but the Trojans, with gigantic man power, sparkled in the fourth quarter and won out, 16 to 14. This game was probably the most sensational and important of the entire season,—a season that continued into winter by the playing of numerous post-season games for the benefit of the unemployed. This game meant the setting of the Notre Dame sun, but many were surprised the following week when an Army team, that had been defeated by Pittsburgh (which had been beaten badly by Notre Dame) outplayed Notre Dame completely at New York.

With the Army near the peak followed Yale, tied by Dartmouth and Army but lone conqueror of Harvard in turn victor over Army. Pittsburgh, smarting under that Notre Dame defeat probably, was the strongest team in the East at the end, despite the unbeaten record of Bucknell. Bucknell was tied three times, however, and earned most of its reputation by a 14-13 triumph over strong Fordham in New York. New York University and Columbia were other strong Eastern teams with Holy Cross not far behind.

All the glory, however, went to the Pacific Coast. California was good, and Stanford, defeated in its own territory, traveled across the

continent to down Dartmouth at Boston. The University of Oregon eleven also took the long journey and defeated New York University, in one of the most amazing upsets of the season. As N. Y. U. was considered among the leaders in the East, it is interesting to note that Southern California defeated Oregon, 53 to 0.

The Big Ten title ended in dispute between Northwestern and Purdue; Tulane, Georgia, Tennessee (conqueror of New York University in a charity game played in December) and Kentucky were all good in the South; Southern Methodist stood out in the Southwest (S. M. U. was downed by St. Mary's when it invaded the Pacific Coast); the University of Nebraska captured title honors in the Big Six Conference; the University of Utah retained the Rocky Mountain Conference championship; Drake, badly beaten by Notre Dame and Fordham in outside games, won the Missouri Valley title; Williams defeated Wesleyan and Amherst for the Little Three crown; and the University of Chattanooga captured laurels in the Southern Intercollegiate A. A.

Death was a familiar word in connection with the game of football in 1931. Forty youths died of causes attributed to the sport. Many of these deaths laid at football's door were not really the result of the game but of poor care of injury or illness. The deaths, it is safe to say, were about the same in number as in former years, but the fact that two of the men who died were from major colleges brought the matter into public discussion. Richard Brinsley Sheridan, end on the Army team, was fatally hurt in the Yale game at New Haven in October and never regained consciousness. He died two days later. Cornelius Murphy, Fordham University tackle, received concussion of the brain in the Bucknell game, and died twelve days later when a blood clot that had formed broke. Changes in the game were recommended from all sides and the rule-makers discussed the game seriously when they met in New York, December 30 and 31. At the Coaches' Association meeting and at the meeting of the National Collegiate A. A., the discussion was mainly about the deaths and injuries of the season and there was every likelihood that some changes would be advocated by the rules committee in an effort to minimize danger.

As a general rule football suffered from the depression, most of the colleges reported decreased gate receipts totals, but the depreciation was not large and the game continued to draw huge crowds, whenever a good game was scheduled. Two colleges announced their figures publicly at the close of the season, New York University reporting a total receipt of \$500,000 and Southern California estimated that \$1,300,000 would cover its income from football.

The scores of some important games follow:

Southern California, 16—Notre Dame, 14; Yale, 3—Harvard, 0; Fordham, 0—New York University, 0; Pennsylvania, 3—Lafayette, 0; Alabama, 9—Kentucky, 7; Williams, 33—Amherst, 7; Pittsburgh, 26—Army, 0; Harvard, 14—Army, 13; Holy Cross, 7—Boston College, 6; Colgate, 13—Brown, 7; California, 6—Stanford, 0; Yale, 27—Chicago, 0; Columbia, 19—Dartmouth, 6; Cornell, 13—Columbia, 0; Dartmouth, 14—Cornell, 0; Cornell, 7—Pennsylvania, 0; Stanford, 32—Dartmouth, 6; Harvard, 35—Texas, 7; Notre Dame, 0—Northwestern, 0; Purdue, 7—Northwestern, 0; Pittsburgh, 40—Nebraska, 0; Yale, 51—Princeton, 14; St. Mary's, 7—Southern Methodist, 2; Notre Dame, 49—Pennsylvania, 0; Notre Dame, 25—Pittsburgh, 12; Tulane, 20—Georgia, 7; Tulane, 28—Washington State, 14; Georgia, 7—New York University, 6; Fordham, 6—Holy Cross, 6; Holy Cross, 33—Brown, 0.

**FOOTE, JOHN A.** An American physician, died in Washington, D. C., Apr. 11, 1931. He was born in Archbald, Pa., June 9, 1874, and was graduated with the M.D. degree from Georgetown University in 1906. In addition to his practice in Washington, he was assistant professor of therapeutics and materia medica at the Georgetown University medical school (1906-08), assistant professor of anatomy (1908-10), associate professor of therapeutics and pharmacology (1911-17), associate professor of clinical medicine and diseases of children (1917-20), professor of diseases of children (after 1920), and dean of the faculty of medicine (after 1929).

He was also pediatricist to the Providence and Children's Hospitals and consulting pediatricist to the Foundling and Gallinger Hospitals. During the World War he was member of a subcommittee of the General Medical Board of the Council of National Defense and was also lecturer on social hygiene for the Bureau of Training Camp Activities and the U. S. Public Health Service. He was president of the Association of American Teachers of Diseases of Children during 1922-24, and was official delegate from the United States to the Pan-American Child Welfare Congress in Havana, Cuba, in 1927 and to the International Congress of Pediatrics in Stockholm, Sweden, in 1930. His works include *Essentials of Materia Medica and Therapeutics* (1910); *Diseases of the New Born* (1925); and *Diseases of Bones and Joints in Children* (1926).

**FORAGE CROPS.** See HAY; ALFALFA.

**FORAIN, FÔRÂN, JEAN LOUIS.** A French caricaturist, died in Paris, July 11, 1931. He was born in Reims, Oct. 23, 1852, and studied for a short time under Gérôme at the École des Beaux-Arts, but was largely self-taught, receiving his chief inspiration from Manet and Degas. His first drawing appeared in *La Cravache* in 1876, and he later contributed to *Le Figaro*, *Le Rire*, *Le Courrier Français*, *L'Écho de Paris*, *La Vie Parisienne*, and other periodicals. Many of these drawings were republished in album form under the titles *La Comédie parisienne* (1892), *Le Temps difficiles* (1893), and *Doux pays* (1897). At the time of the Dreyfus agitation in 1898 he founded, with Caran d'Ache, the anti-Semitic periodical, *Le Fils du Psst*. Among the best of his lithographs are "The Strike," "Le Cabinet Particulier," "At the Folies-Bergère," and "Papa's Pictures," while his most noted etchings include "The Prodigal Son," "Mlle. Mere," and "The Prisoner and His Child."

As a caricaturist Forain carried on the tradition of Daumier, becoming an unsurpassed master of elimination and suggestion. His satire, though restricted in innuendo, penetrated to the very heart of the social, political, and judicial life of Paris, which he caricatured with refined but caustic wit. During the World War his weekly cartoons in *L'Opinion* were notable, and later he executed an important series of etchings in which he gave a graphic description of the human misery which war causes. He was a member of the Académie des Beaux-Arts, president of the jury of painting of the Société Nationale des Beaux-Arts, and president of the Société des Dessinateurs humoristes.

**FORDHAM UNIVERSITY.** A Roman Catholic institution for higher education, under the Society of Jesus, at Fordham, New York City, founded as St. John's College in 1841. It is the

largest Roman Catholic educational institution in the United States. The enrollment for 1931-32 totaled 8754 students, including 1236 in the teachers' college and 652 in the graduate school, and a distribution among the other colleges as follows: Law, 1071; St. John's College, 1392; downtown college, 839; business administration, 284; pharmacy, 358; social service, 486; extension, 600; preparatory school, 525. The registration for the summer session of 1931 was 1251. The schools of law, business administration, and sociology and social science, and the graduate school and teachers college are at 233 Broadway, New York City; the other departments are at Fordham. There were 384 faculty members. The endowment fund amounted to \$486,000. There were 110,000 volumes in the library. President, the Rev. Aloysius J. Hogan, S.J., Ph.D.

**FORECASTING.** See METEOROLOGY.

**FOREIGN EXCHANGE.** See FINANCIAL REVIEW.

**FOREST FIRES.** See FORESTRY.

**FORESTRY.** Beset by the overdevelopment of the sawmill industry in the Pacific Northwest, the demoralization of markets and the general business instability, the lumber industry suffered a disastrous year in 1931. Lumber reached the lowest prices in many years and even at reasonable prices did not sell satisfactorily. In response to solicitations on the part of the lumber industry and other forestry interests, President Hoover appointed a Timber Conservation Board made up of prominent leaders such as Robert P. Lamont, Chairman; Arthur M. Hyde, Secretary of Agriculture; Ray Lyman Wilbur, Secretary of the Interior; John C. Merriam, President of the Carnegie Institution; Charles L. Pack, President of the American Tree Association; John H. Kirby, representing the soft wood lumber manufacturing interests; and John W. Blodgett, representing the timberland owning interests; to study the problems thoroughly and prepare recommendations. The members served without compensation, gladly contributing their services to help aid in the restoration of an important national industry. The first report of the board was issued on July 1 and contained recommendations for a drastic reduction in the lumber output until the surplus stocks were utilized.

An optimistic note was struck in the general forestry situation when the people of New York State in face of the generally difficult business situation voted a large expenditure for the purchase of additional units to be added to the already immense State forest holdings. There appeared to be no question in the people's mind of the intrinsic worth of the forest.

**THE NATIONAL FORESTS.** According to the Report of the Forester of the U. S. Department of Agriculture, the net area of the national forests was increased by 696,870 acres during the year ended June 30, 1931, making a grand total of 100,787,687 acres in these properties. The policy of purchasing land on the watersheds of important streams was continued and forest lands were purchased in States hitherto not represented. The income from the national forest properties was greatly reduced during the year due to a great decline in sales of timber from 1,488,096,000 board feet in 1930 to 1,052,616,000 board feet in 1931, a drop due in part to lesser demands and in part to a definite policy of reduction formulated by the United States Gov-

ernment to lessen competition with private owners and manufacturers. Grazing receipts, on the other hand, showed a slight increase in 1931, indicating the stability of this enterprise.

In addition to conserving timber, protecting watersheds and furnishing grazing, the national forests were recognized as an ever increasing factor in the recreational activities of the people, particularly so as national forest areas are purchased in the Eastern States near the great population centres. The Forest Service estimated that more than 31 million visitors entered the national forests in 1930. A total of 4238 miles of roads and 8611 miles of trails were constructed during the twelve months ended June 30, 1931, to facilitate the freer use of the national forests and, incidentally, to aid in their fire protection. The development of water power facilities within the national forests was also encouraged by leasing rights to various commercial enterprises.

**LUMBER TRADE.** The unfavorable international trade in lumber and lumber products in 1931 was indicated by figures presented in the U. S. Department of Commerce monthly summary of foreign commerce covering the ten months ended October 31 and corrected to Nov. 25, 1931. Exports of naval stores, gums and resins declined from \$19,546,899 in 1930 to \$12,327,388 in 1931; unmanufactured wood decreased in value from \$8,522,618 to \$5,708,871; sawmill products from \$69,287,256 to \$39,023,852; wood manufactures from \$25,761,372 to 16,518,124; paper and manufactures from \$26,257,038 to \$19,130,046. At the same time imports also show important losses in value, unmanufactured wood from \$10,943,307 in 1930 to \$6,044,384 in 1931; sawmill products from \$31,120,816 in 1930 to \$17,453,767 in 1931; wood manufactures from \$7,263,717 in 1930 to \$4,381,173 in 1931; paper base stock from \$90,963,742 in 1930 to \$62,387,884 in 1931; paper and manufactures from \$109,492,512 in 1930 to \$94,114,816 in 1931.

**FOREST FIRES.** The U. S. Forest Service, reporting for the period up to October 10, stated that a total of 584,000 acres of the national forests had burned over in 1931 as compared with an annual average of 594,000 acres for the five preceding years. In the eastern United States the fire losses were small as compared with 1930, a year of unprecedented drought. However, in Idaho and Montana moisture shortage was a serious factor but fortunately wind movement was lower than usual and lightning caused fires were fewer in number.

The development of specialized equipment such as portable pumps and the extension of the forest road system contributed materially to the control of fires. One State, Connecticut, commenced a programme of dividing the forest area into units of not more than 500 acres by the construction of fire trails. Obviously such a programme was impossible in the larger States of the South and West, but did at least forecast a hopeful future when annual losses running into millions of burned over acres will be no longer possible. Improved knowledge, better training of the workers and more effective equipment were combining slowly to diminish the tremendous forest fire hazard.

**INSECTS AND DISEASES.** Vast areas, difficult terrain and lack of roads all combined to make the fighting of pests exceedingly difficult in the forests even when the methods of control were

well established. Blister rust, present in the great western white pine region of the Northwest, may be controlled by the eradication of wild currant and gooseberry bushes, but obviously the clearing of weed plants from a million and one-half acres constitutes a truly Herculean task. Chestnut blight continued its rapid sweep of the Southern Appalachian forests, eliminating therefrom the chestnut as completely as would fire. Unfortunately no remedy is known for this pest and no hope is held for the chestnut. Bark beetles occurred in epidemic numbers at certain points in the white pine forests of Idaho, Montana and Wyoming but were successfully combated by the felling of the infested trees and the burning of the bark.

The discovery in Ohio of four elm trees infected with the serious European malady known as the Dutch elm disease caused considerable worry among foresters and other friends of the American elm. The seriousness of the disease is indicated by its behavior in Europe where it had become extremely destructive to elms, destroying their beauty and in some cases causing their death. It appeared hopeful that the early discovery of the disease in the United States might preclude its spread.

**FORESTRY RESEARCH.** With approximately 21,000,000 acres of cut-over lands in the Great Lakes area producing only low quality aspen, the U. S. Forest Service studied the situation and found that aspen stands may be converted into potentially valuable forest by underplanting the aspen with white pine and white spruce. Norway pine did not thrive, apparently because of an inability to endure the shading of the aspens. Investigations in the western white pine region showed the necessity of slash disposal following logging. Where more than 10 per cent of the soil was covered with slash, reproduction was inadequate to insure fully stocked stands. Studies in the Pacific Northwest Douglas fir region revealed the fact that seed of this valuable species probably does not live more than one year after it falls and that seed may be scattered as much as 1000 feet away from the parent tree. Studies of white pine growth in Wisconsin and in New England showed practically the same rates of growth in both localities. On average quality sites, white pine yielded at the rate of 10,500 board feet per acre at 40 years and 36,500 board feet at 60 years.

Erosion studies conducted by the U. S. Forest Service and the University of Wisconsin showed the necessity of forest growth and limited grazing on slopes of more than 25 per cent gradient and the advisability of plowing slopes of more than 15 per cent gradient only at rare intervals if at all. In Utah the U. S. Forest Service discovered that the scanty vegetation on the watersheds was an important factor in determining the degree of injury caused by floods. The runoff from partly denuded slopes was both rapid and destructive.

The Forest Products Laboratory of the U. S. Forest Service continued its important work in the utilization of odd sized and inferior lumber and in the most efficient use of good lumber. The results of studies in California led to the recommendation that it is not profitable to saw lumber from western yellow pine or sugar pine logs 14 inches or less in diameter. In the case of white fir the minimum profitable diameter was 20 inches and for incense cedar 13 inches.

Pulping experiments indicated that Douglas fir should prove a desirable source of paper pulp. Slash pine from the Southern States was found a potentially valuable source of paper.

**MISCELLANEOUS.** On February 4, the Connecticut Legislature appropriated \$100,000 for improvement work in the State forests and parks as a measure of relief for the unemployed. As a result, useless trees were weeded out, much fire wood was obtained, fire lines were established and over 800 acres of seedlings were planted, a worthy example for other States and municipalities in which unemployment was a trying problem.

Duke University Forest School and the School of Forestry of the University of Idaho were elected to membership in the International Union of Forest Research Organizations, making a total of eight American forest institutions to be so honored. A contract was let for the construction at Madison, Wisconsin, of a Forest Products Laboratory Building to cost approximately one million dollars and to be equipped with dry kilns, controlled temperature chambers and other refinements necessary to the conduct of effective research. As evidence that despite the economic situation, business carried on in 1931, one trade journal reports that as an advertising feature a single train of 117 cars of high grade redwood lumber left California for the eastern markets.

Measurements of the famed General Sherman sequoia tree in Sequoia National Park showed it to be 272 feet in height, 88 feet in circumference at the base and to contain over 600,000 board feet of lumber. The General Sherman tree and its neighbor, the General Grant, are believed to be the oldest living things on earth, their age being estimated between 4000 and 5000 years. Under the protection of the Federal government, these trees will be carefully protected.

**BIBLIOGRAPHY.** In addition to the extensive number of articles appearing in magazines, journals and as bulletins, a considerable number of books on forestry appeared during the year. Among these are: T. Gill, *The Tropical Forests of the Caribbean* (Baltimore); C. R. Heck, *Handbuch der Freien Durchforstung* (Stuttgart); E. F. Hubert, *An Outline of Forest Pathology* (New York); A. Jacquot, *Sylviculture* (Paris); E. Maxwell, *Afforestation in Southern Lands* (London); H. Wodera, *Über den Forstlichen Wirtschaftsplan und Seine Grundlagen* (Vienna); T. S. Woolsey, *Riding the Chuck Line* (New Haven).

**FORMOSA or TAIWAN.** An island about 75 miles off the southern coast of China, ceded by China to Japan on June 2, 1895. The area is 13,840 square miles, including the adjacent Hokoto (Pescadores) islands, with an area of 48 square miles, and other small islands. The population at the census of 1930 was 4,594,161 (3,993,408 in 1925). The 1930 population included about 210,000 Japanese, 130,000 aborigines, and 40,000 foreigners. Taihoku, the capital, had 205,613 inhabitants in 1920. Other leading towns were Tainan, 87,930; Keelung, 68,649; and Kagi, 47,894. In 1928-29, there were 132 primary schools for Japanese, with 28,872 pupils, and 575 schools for natives, with 223,687 pupils. The University of Formosa was opened in 1928. Japanese is the official language, but the native population, for the most part, speaks a Chinese (Amoy) dialect.

Rice, tea, sugar, and various fruits are the chief agricultural products, but the island produces in commercial quantities nearly every tropical and subtropical product. It supplies all of the world's Oolong tea and nearly all of the natural camphor. Indigo, hemp, sweet potatoes, cereals, and peanuts are other crops. Production of the chief crops was: Rice, 36,579,134 bushels (1930); tea, 7,137,000 pounds (1929); raw sugar, 774,700 metric tons (1929-30). Much of Formosa is heavily forested with camphor and other valuable trees. The total value of mineral production during 1928 was 16,513,301 yen (1 yen exchanged at \$0.464 in 1928). Gold, copper, silver, sulphur, petroleum, and coal are the principal minerals worked. Manufacturing is confined mainly to the making or refining of flour, sugar, tobacco products, oil, iron-work, glass, bricks, and soap. The manufacture and sale of opium, alcohol, salt, sake, camphor, and tobacco products are government monopolies. In June, 1931, a \$22,800,000 loan was negotiated in New York to finance construction of a 100,000-kilowatt hydroelectric plant at Lake Jitsugetsutan in the centre of Formosa. When completed, the project will be the largest in the Far East and will supply electric current to all Formosa.

Trade is chiefly with Japan. In 1929, when exports totaled \$125,343,000 and imports \$94,464,000, 87.8 per cent of all exports went to Japan proper and 68.5 per cent of all imports came from the same place. China, the Netherland East Indies, Hong Kong, and the United States were the other principal customers. The budget estimates for the fiscal year ended Mar. 31, 1931, balanced at 111,446,000 yen (about \$58,547,000), including both ordinary and extraordinary accounts. Actual returns for 1929-30 showed total receipts of 150,241,000 yen (\$74,895,000) and total expenditures of 122,296,000 yen (\$60,964,000). The public debt outstanding on Mar. 31, 1930, was about 117,098,000 yen (\$58,373,000). In 1930, there were 549 miles of Government railway lines, a number of private (plantation) railway lines, about 2500 miles of highways suitable for motor traffic, and 759 miles of telegraph and 2060 miles of telephone wire.

The civil government of the island is administered by a Japanese governor-general, supported by a force of Japanese police. To guard the settled areas against inroads of the still unsubdued aborigines in the northern mountains, a frontier zone of over 300 miles has been established, of which about 230 miles are protected by charged barbed wire. Governor-General in 1931, Eizo Ishizuka. See JAPAN.

**FOSSILS.** See GEOLOGY; ZOÖLOGY.

**FOSTER, SIR GEORGE EULAS.** A Canadian statesman, died in Ottawa, Ont., Dec. 30, 1931. He was born in Carleton Co., N. B., Sept. 3, 1847, and was graduated from the University of New Brunswick in 1868, later studying at the universities of Edinburgh and Heidelberg. After several years of teaching in Grand Falls and Fredericton, N. B., he was appointed in 1872 professor of classics at the University of New Brunswick. He resigned his professorship in 1879, and after two years spent in lecturing on temperance in Canada and the United States, he entered politics and was returned in 1882 to the Dominion House of Commons as a Liberal-Conservative from King's Co., New Brunswick. In 1885 he

entered Sir John A. Macdonald's cabinet as Minister of Marine and Fisheries. In this office he was called upon to prepare the case for Canada to be presented to the joint commission in Washington, which had been appointed to settle the long-standing dispute over the deep-sea fisheries. His brief for Canada was an able presentation and left its impress on the Bayard-Chamberlain Treaty of 1888.

In 1889 Foster became Minister of Finance and continued to hold this portfolio in the succeeding cabinets of Sir J. J. C. Abbott, Sir John Thompson, and Sir Mackenzie Bowell until 1896. In 1896-1900 he represented York Co., New Brunswick, in the House of Commons, and from 1904 to 1921 sat for North Toronto, Ontario. He visited the West Indies in the interest of improved trade between Canada and those islands in 1890, was a delegate to the first intercolonial conference at Ottawa in 1892, and in 1895 supported a resolution in the House of Commons for the extension of the Dominion franchise to women. In 1903, on the invitation of Joseph Chamberlain, he delivered a series of public speeches in Great Britain in support of imperial trade preference. He was also a strong supporter of adequate protection for Canadian industries and the development of Canada by railway and steamship facilities. In 1911 he became Minister of Trade and Commerce in the cabinet of Robert Laird Borden, and continued in this office until his appointment to the Senate of Canada in 1921.

Foster was Canadian representative during 1912-17 on the Dominions Royal Commission, appointed to inquire into the resources and commerce of the United Kingdom and Overseas Dominions. In 1916 he was made a member of the Privy Council of Great Britain and Ireland, and was one of the four representatives of the British government at the economic conference of the Allies held in Paris in June, of that year. He represented Canada at the Paris Peace Conference in 1919 and was head of the Canadian delegation to the first Assembly of the League of Nations in Geneva in 1920, being elected a vice president of the League on that occasion. He also attended the League's seventh and ninth Assemblies (1926 and 1928) in the same capacity. He was created a Knight Commander of St. Michael and St. George in 1914 and a Knight of the Grand Cross of St. Michael and St. George in 1918.

**FOUNDATIONS.** The year 1931 apparently was lacking in the construction of any bridge or building foundations of unusual interest. In New York City, the centre in recent years of some of the most remarkable foundation constructions ever attempted, the depressed condition of building greatly reduced such construction. Attention was centred largely on three operations.

Work in the block between Wall and Pine Streets and Broadway and Nassau Street resulted in the first great difficulty encountered in the recent rapid extension in the use of non-pneumatic methods. This trend was noted in recent YEAR BOOKS and attention called to the danger involved in such construction. In excavating in the open for new construction on this block the settlement of an adjacent building was such as to endanger its stability, and it was condemned and tenants have been forced to vacate.

Two great constructions on West Street, the Hudson River water front, were of interest

largely because of their size. The foundations of the new New York Central R. R. Terminal Warehouses, which will cover three city blocks, were being put down by the combination of the open dredging process with pneumatic closing, which was so successfully used on the Hackensack River Crossing, described in the 1930 YEAR BOOK. Circular steel forms were used in making concrete caissons, which were added to as excavation with clamshell buckets, in the space enclosed, caused them to sink. The final closing and sealing of these caissons to rock was done under air pressure and they were then filled with concrete to form solid piers.

In the Inland Terminal construction of the Port of New York Authority, further north on the West Side, an ingenious adaptation of the sheeting methods employed on the Houston Street subway were being employed. At this point some of the water bearing fine red sand, known locally as "bull's liver," was encountered. Steel H-beams were driven vertically to support horizontal "breast boards," and the excavation was carried down in a series of levels or berms permitting a progressive shoring of the work and the gradual unwatering of the material.

**BIBLIOGRAPHY.** The publication by the Columbia University Press of *Underpinning* by E. A. Prentis and L. White marked the first important work on this subject and contains many valuable notes from the wide experience in this field of these engineers. See BRIDGES.

**FOUNDATIONS, EDUCATIONAL.** See EDUCATION IN THE UNITED STATES; UNIVERSITIES AND COLLEGES; BROOKINGS INSTITUTION; CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING; ROCKEFELLER FOUNDATION; RUSSELL SAGE FOUNDATION; UNEMPLOYMENT.

**FOWL, FOWL DISEASES.** See LIVESTOCK; VETERINARY MEDICINE.

**FRANCE.** A republic of western Europe, whose land frontiers are bounded by Belgium, Luxemburg, Germany, Switzerland, and Italy on the north and east and by Spain on the south. Capital, Paris.

**AREA AND POPULATION.** The acquisition of Alsace-Lorraine as a result of the World War increased the area of France from 207,054 to 212,659 square miles (see ALSACE-LORRAINE). The population (census of March, 1931) was 41,834,923, as compared with 40,743,897 at the census of 1926 and 39,209,518 at the census of 1921. Slightly more than half of the population was rural in 1931. In the same year there were 2,890,923 foreigners in the country (2,295,642 in 1921). In 1929, for the first time since the World War, the French death rate exceeded the birth rate. Deaths numbered 741,104 and births 728,540, or a net loss in population of 12,564. In 1930 the normal excess of births was restored. Births numbered 748,911 and deaths 649,125, or an excess of births of 99,786. Marriages in 1930 totaled 342,098, as against 333,841 in 1929, while divorces numbered 20,409, as against 19,353 in the previous year.

According to the preliminary returns received from the 1931 national census, greater Paris had 4,474,357 inhabitants, of whom 2,891,020 were in the city proper and 1,583,337 in the suburbs. The total population was 305,218 greater than in 1926, and the population of Paris proper compared with 2,871,429 in 1926 and 2,906,472 in 1921. Other cities with a population of more than 200,000 at the 1931 census,

with 1926 figures in parentheses, were: Marseilles, 800,881 (652,196); Lyons, 579,763 (570,840); Bordeaux, 262,990 (256,026); Nice, 219,549 (184,441); Lille, 201,569 (201,921).

**EDUCATION.** Elementary education is free and compulsory between the ages of 6 and 13. The school system is centralized and divided into primary, secondary, and superior classes, all under the administrative direction of the Superior Council of 52 members, which acts in collaboration with a consultative committee and the Minister of Education. Nearly 10 per cent of the 1928 conscripts were unable to write. In the school year 1929-30, there were 3691 infant schools with 369,290 pupils (of which 3146 schools with 336,588 pupils were public) and 80,224 primary schools with 4,358,887 pupils (of which 68,437 schools with 3,515,123 pupils were public). In addition, there were 531 higher elementary schools, with 79,667 pupils on Nov. 15, 1929. For secondary education, there were in November, 1929, 360 schools for boys, with 119,311 pupils, and 205 schools for girls, with 54,788 pupils. The 17 free universities in France had a total of 66,961 students on July 31, 1929, of which 17,381 were studying law, 14,574 medicine, 14,090 sciences, 15,060 letters, 4955 pharmacy, and 301 theology. Various other institutions provide technical and professional instruction.

**AGRICULTURE.** Although industry is important, agriculture is the bulwark of the French national economy. About 41 per cent of the working population is engaged in agriculture, as compared with 36 per cent in Denmark, 31 per cent in Germany, and 7 per cent in Great Britain. The land is more widely distributed among peasant proprietors than in any country in Europe, there being about 5,500,000 farm owners, with an average holding of 24 acres. At the census of 1928, 54,755,528 acres, or 41 per cent of the total rural area, were devoted to crops; in addition, there were 28,193,889 acres of permanent meadow and pasture, 2,328,450 acres of orchards and vineyards, 25,830,407 acres of woodland, and 11,281,033 acres of waste land. Despite her large farm production, France is obliged to import cereals and colonial produce; there is normally a considerable surplus of wine, dairy products, fruits, and vegetables for export. The 1930 crop yields were much smaller than the abnormally large harvest of 1929, as shown in the accompanying table from the *Commerce Yearbook* for 1931.

FRENCH CROPS: AREA AND PRODUCTION

Crop	Area (thousands of acres)		Production †	
	1929	1930	1929	1930

\* Unit, metric ton.

† Seasons ended following year.

‡ Unit, gallon of wine.

§ Unit, pound.

¶ Unit, gallon of oil.

† Thousands of units—bushels except as indicated.

Livestock in 1929 included 15,005,080 cattle, 10,415,010 sheep, 6,016,940 swine, 2,936,020 horses, 1,372,200 goats, 249,700 asses, and 166,280 mules. Silk culture is extensively carried on; the 1929 production totaled 2,515,000 kilograms, valued at 43,374,000 francs (1 franc equals \$0.0392 at par).

**MINING.** France controls great iron ore deposits in Alsace-Lorraine, but is obliged to depend upon Germany for part of her coal supplies. The bauxite deposits are estimated at 60,000,000 metric tons, sufficient to last 100 years at the 1930 rate of production. The consumption of coal in 1930 aggregated 87,000,000 metric tons, of which 53,880,000 tons were mined in France (53,736,000 tons in 1929); consumption in 1929 was 90,200,000 tons. The output of other leading mineral products in metric tons in 1930, with 1929 figures in parentheses, was: Coke, 4,678,000 (4,764,000); briquets, 4,409,000 (4,632,866); pig iron, 10,098,000 (10,452,000); steel (ingots and castings), 9,402,000 (9,664,000); iron and steel (finished products), 6,598,000 (6,762,000); iron ore, 48,821,000 (51,024,000); iron pyrites, 198,000 (194,000); potash (K<sub>2</sub>O content), 507,000 (493,000); bauxite, 538,000 (643,000).

The index figure for the average monthly metallurgical production, calculated on a base of 100 for 1913, stood at 129 for 1929, 125 for 1930, and 103 for the month of August, 1931.

**MANUFACTURES.** Up to the spring of 1931, France was less affected than any other leading European country by the world economic depression. The decline in general economic activity (to April, 1931) was only about 10 per cent. The general index of industrial production showed a steady decline during the remainder of the year, however; the figure representing the average monthly output (calculated on a base of 100 for 1928) fell from 110 for both 1929 and 1930 to 95 for August, 1931. France in the autumn of 1931 was face to face with an economic depression only less severe than that experienced in Germany and Great Britain. The number of unemployed workmen in September, 1931, was officially given as 38,524, as compared with 964 in August, 1930. Responsible labor leaders, however, estimated the number at nearer 600,000; in addition, several million workers were employed only part time.

Statistics of manufacturing production in 1929 and 1930 are shown in the accompanying table.

MANUFACTURING PRODUCTION OF FRANCE

Product	1929		1930	
	1929	1930	1929	1930
Silk (conditioned at Lyon) .1,000 lbs.	12,487	10,661		
Wool (conditioned at Roubaix-Tourcoing) .....	220,425	204,049		
Wool (conditioned at Mazamet) .do...	57,196	52,328		
Cotton consumption* .....	790,611	795,529		
Cotton cloth .....	1,423			
Artificial silk .....	17,237	18,870		
Boots and shoes (estimated) 1,000 pairs	80,000			
Alcohol .....	66,615			
Vessels launched .....	81,607	100,917		

\* Including waste.

For industrial conditions during 1931, see under *History*.

French cotton mills in 1929 reported 11,754,000 spindles and 208,200 looms, the number of operatives being 212,160. There were in the same year 110 sugar mills, employing 28,550 workers, and producing 815,861 metric tons of refined

sugar (1928-29). The alcohol output (1928) was 47,360,000 gallons.

**COMMERCE.** The adverse foreign trade balance of 9,514,717,000 francs (about \$372,977,000) registered in the calendar year 1930 was the largest in French history. Imports were valued at 52,344,369,000 francs and exports at 42,829,652,000 francs, as compared with imports of 58,220,022,000 francs and exports of 50,139,151,000 francs in 1929. The decline in imports by value in 1930 was accordingly 5,876,253,000 francs, or about 10 per cent, and in exports, 7,309,499,000 francs, or about 15 per cent. Imports fell off faster than exports during the first eight months of 1930, but thereafter the visible balance of trade became more unfavorable with each succeeding month. By volume, however, imports increased about 2 per cent and exports decreased about 8 per cent, compared with 1929.

A reduction of 1,353,172,000 francs, or about 10 per cent, in imports of foodstuffs was explained by the excellent French wheat crop of 1929. While the volume of all raw-material imports increased 3 per cent, the value shrank 17 per cent. Purchases of foreign manufactured articles, however, increased 1,302,021,000 francs, or 13 per cent, in value over 1929. The chief export loss was registered in manufactures, which were valued at 4,535,379,000 francs less than for the previous year. Raw material exports fell off by 2,577,572,000 francs and exports of foodstuffs by 196,548,000 francs. Imports, by principal categories, were divided as follows: Manufactures, 11,230,791,000 francs; raw materials, 20,299,328,000 francs; foodstuffs, 11,814,250,000 francs. Exports were divided into: Manufactures, 26,957,684,000 francs; raw materials, 9,990,600,000 francs; foodstuffs, 5,881,368,000 francs. The increase in French foreign trade since 1913 on a quantity basis was shown by the fact that the 1930 imports were 37.5 per cent higher than in 1913, and exports were 64 per cent greater. During 1931, French imports totaled 42,190,000,000 francs (about \$1,654,200,000), a decrease from 1930 of 10,145,000,000 francs (about \$397,680,000), according to preliminary figures. Exports totaled 30,421,000,000 francs (about \$1,192,500,000), a decline of 12,409,000,000 francs (about \$486,433,000). The 1931 imports were divided by categories as follows: Foodstuffs, 4,285,000,000 francs; raw materials, 7,180,000,000; manufactures, 18,956,000,000. Exports included: Foodstuffs, 13,999,000,000 francs; raw materials, 19,038,000,000; manufactures, 9,163,000,000.

Germany replaced the United States as the leading source of French imports in 1930, supplying goods valued at 7,908,075,000 francs, as compared with 6,249,291,000 francs by the United States, 5,241,291,000 francs by the United Kingdom, 4,161,916,000 francs by Belgium, 1,518,393,000 francs by Italy, and 1,508,135,000 by Spain. French exports went principally to the United Kingdom (6,839,003,000 francs), Belgium (5,439,938,000), Germany (4,153,932,000), Switzerland (3,096,570,000), United States (2,435,523,000), Italy (1,679,803,000), and Spain (1,130,611,000).

Revenue from the tourist trade, which plays an important rôle in offsetting the adverse merchandise trade balance, was estimated to have declined from about 8,000,000,000 francs in 1929 to 6,000,000,000 francs in 1930 and to about 4,500,000,000 francs during the year 1931.

**FINANCE.** At the close of the fiscal year ended Mar. 31, 1931, total receipts amounted to 45,681,000,000 francs; but this figure was not final, as receipts continued to be collected for some time after the end of the fiscal year. In spite of important reductions in tax rates, by the law of Apr. 26, 1930, collections were satisfactory, exceeding the budget estimates for the period. Nevertheless, a deficit of more than 2,641,000,000 francs (about \$103,000,000) was reported in preliminary returns, owing to supplementary credits voted after adoption of the budget law. The budget estimates for the year placed revenues at 50,465,000,000 francs (about \$1,977,000,000) and expenditures at 50,398,000,000 (\$1,974,000,000). For the fiscal year 1931-32, a deficit of between 2,550,000,000 francs (about \$100,000,000) and 5,102,000,000 francs (\$200,000,000) was forecast; the budget estimates had anticipated revenues of 50,643,000,000 francs (\$1,985,000,000) and expenditures of 50,640,000,000 francs (\$1,985,000,000).

On Mar. 31, 1930, the French internal debt stood at 279,873,514,855 francs. The foreign debt included \$3,900,000,000 owed to the United States government (\$3,865,000,000 on Jan. 1, 1931), £771,500,000 owed to the British Treasury, a commercial debt due United States bankers aggregating \$261,669,050, and Argentine bank credits totaling 8,220,000 pesos (1 Argentine gold peso equaled \$0.9648 at par). The gold reserve of the Bank of France increased from about 54,109,000,000 francs at the beginning of 1931 to about 68,863,000,000 francs on Dec. 31, 1931.

**SHIPPING.** Vessels in the foreign trade entering French ports in 1930 numbered 32,312 of 60,990,809 tons (32,071 of 58,091,343 tons in 1929) and vessels clearing numbered 25,684 of 51,051,611 tons (25,961 of 49,192,613 tons in 1929). Marseilles, Havre, Cherbourg, Bordeaux, Boulogne, Dunkirk, and Rouen were the leading ports. The shipping traffic of the port of Havre increased from 10,921,000 tons in 1920 to 20,410,000 tons in 1930. Improvements to the port were under way in 1931. The French mercantile marine in 1928 had a gross tonnage of 3,441,000. In July, 1931, the Government was forced to assist the French Line, which had been hard hit by the World depression. See under *History*.

**INTERNAL COMMUNICATIONS.** France's railway mileage, totaling about 26,177 miles in 1930, is divided among seven systems, the largest (5665 miles) being operated by the state. The other six systems are owned by the state and leased to private companies. New railway construction authorized for 1931 and 1932 aggregated 759 miles. By April, 1931, 1041 miles of line were electrified and projects planned or under way were expected to increase the total to 1743 miles. Total operating receipts of the seven railway systems in 1930 amounted to 15,399,576,000 francs, as compared with 15,533,433,000 francs in 1929. The highway mileage in 1930 aggregated 405,028 miles, of which 22,369 miles were macadam and 380,173 miles were improved earth, sand, clay, or gravel roads. There were about 6800 miles of navigable waterways. Five subsidized and one unsubsidized air-transportation companies operated regular services over about 20,000 miles of lines within France and beyond its borders at the beginning of 1931. During 1930, planes on the six lines flew about 6,126,000 miles, transported 28,938 passengers,

3,600,000 pounds of freight, and 440,000 pounds of mail. An all-French air line from Marseilles to Saigon, French Indo-China, was opened in January, 1931. The operating deficit of the state railways was about 2,944,000,000 francs in 1931 and 1,894,000,000 francs in 1930.

**ARMY AND NAVY.** See **MILITARY PROGRESS; NAVAL PROGRESS.**

**GOVERNMENT.** The French Constitution vests executive power in the President of the Republic and the Ministry, and legislative power in the Chamber of Deputies and the Senate. The legislative branch has steadily encroached upon the prerogatives of the executive, however, and the President wields little influence in executive matters, which are decided by members of the Ministry directly responsible to Parliament. The President is elected for seven years by an absolute majority of votes in the Senate and Chamber of Deputies, and selects his cabinet ordinarily from among the members of both bodies. The Senate is made up of 314 members not less than 40 years of age and elected by an electoral college for nine years, one-third retiring every three years; the Chamber of Deputies is made up of 612 members elected by direct popular manhood suffrage for four years. The composition of the Chamber elected Apr. 22-29, 1928, was as follows: Communists, 16; Democrats, 22; Independent Radicals, 64; Left Republican Democrats, 34; Socialists, 104; Radicals and Radical Socialists, 110; Republican Socialists and French Socialists, 46; Republicans of the Left, 94; Democratic Republican Union, 110; Conservatives, 12. President at the beginning of 1931, Gaston Doumergue, who was succeeded on June 13, 1931, by Paul Doumer. For the election of President Doumer and for the composition of the Laval Ministry formed Jan. 27, 1931, see below under *History*.

### HISTORY

**INTERNAL DEVELOPMENTS.** France's rôle on the international stage during 1931 largely overshadowed her domestic problems. Yet developments in this field were important, as well as explanatory of events in the international arena. Foremost of these was the overthrow of the Steeg Cabinet on Jan. 22, 1931, just 11 days after the opening of Parliament and somewhat more than a month after the formation of the Ministry on Dec. 13, 1930. The Steeg Ministry was defeated 293 to 283 in the Chamber of Deputies on an inconsequential issue which served to confirm the delicate balance between the forces of the Left and Right. The Steeg Government had been formed of the parties of the Left and Centre, with the Left overwhelmingly predominant. The new Cabinet formed January 27 by Senator Pierre Laval—the twentieth since Clemenceau's defeat on Jan. 17, 1920—was composed of the Right and Centre parties. Aristide Briand remained at his post in the Foreign Office, although the Laval Cabinet was nationalist, in contrast to the Steeg Ministry, which was considered in closer sympathy with Briand's policy of international coöperation.

Briand's position in the Laval Cabinet was decidedly anomalous, providing the major source of controversy between the parties of the Right and Left throughout the year. His policies were those of the Left, but the Socialist and Radical-Socialist parties repeatedly voted against the Cabinet because they felt that Briand was out

of his place and lending unmerited support to reactionary groups. On the other hand the Right majority supported Briand's policies, although distasteful to them, because his participation in the Ministry was essential to its continuance in office. The situation was all the more paradoxical because of the overshadowing importance which French foreign policy, particularly toward Germany, assumed during the year. As the country anxiously watched developments across the Rhine, the Left parties in the Chamber stressed the need of peace and disarmament, while the Right saw in the Austro-German customs union proposal, the Stahlhelm demonstration at Breslau May 30, and the continual gains of the Hitlerites in German elections reasons for a firmer attitude toward Germany and increased preparedness. Yet repeatedly in May and June, when Briand was under attack, the parties voted in opposition to their convictions. In each case, however, the Cabinet was sustained by majorities ranging from 35 to 76 votes.

This abnormal alignment of the political parties was evidenced, although not quite so strongly, in the Presidential election of May 13, in which Paul Doumer, President of the Senate, was elected on the second ballot by the Chamber of Deputies and the Senate voting jointly as a National Assembly. Briand had entered the Presidential race on May 11, with little enthusiasm, after 50 Senators and Deputies had invited him to run. The contest immediately narrowed to a struggle between Briand, supported by the Radical Socialists and the Socialists, and Doumer, who was championed by the parties of the Right and the Nationalists, even though he was a member of the Left group of the Senate. In the first ballot, Briand received only 401 votes to Doumer's 442. He immediately withdrew, and on the second ballot Doumer polled 504 votes to 334 cast for Senator Marraud. Many interpreted Briand's defeat as a victory for the Right and a repudiation of the Foreign Minister's conciliatory policies. On the other hand, *Le Temps*, the semi-official government newspaper, and other experienced observers maintained that Briand's policy was not an issue and that Doumer's election was to be explained on the ground that he more nearly represented the traditional bourgeois virtues deemed desirable in the President.

Briand offered his resignation from the Cabinet, but it was not accepted. And upon his return on May 22 from Geneva, where he represented France as president of the European Union Commission and at the discussion of the Austro-German customs union before the League Council, he was prevailed upon to remain in the Cabinet.

The weakness of the Laval Ministry was again demonstrated during the winter sessions of Parliament, which opened November 12. On the first day M. Laval survived a vote of confidence in the Chamber by a margin of 39 votes, the issue involving the Government's proposal to approve an increase in railway fares without a full debate by the Chamber. On December 17, his majority was cut to nine in a vote on an electoral bill to suppress the second ballot in elections when any candidates obtained 40 per cent of the total votes. The following day, he won a majority of 59, when the Socialists and other Left parties sought to increase state aid to the unemployed. These trials of strength were symptomatic of

the increased tension in parliamentary circles due to the approach of the national elections, scheduled for the spring of 1932, at which the entire Chamber of Deputies was to be replaced. Party feeling was further excited by the increasing rigor of the economic depression, and by the disquieting aspect of French foreign relations.

The abandonment of the gold standard by Great Britain, Japan, and other countries served as a decided barrier to French exports and as a stimulus to imports from abroad. French industry suffered another heavy blow through the imposition of protective tariffs by Great Britain. During 1931 foreign trade showed an unfavorable balance of \$471,000,000, compared with \$373,000,000 in 1930.

Unemployment was increasing at the rate of 10 per cent weekly. The registered unemployed on December 5 reached 104,000, a record figure, while the total unemployed were estimated variously at from 300,000 to 1,000,000. A \$200,000,000 deficit was forecast for the French railways. To meet the situation, the Cabinet on December 5 secured the passage of a law appropriating \$140,000,000 for public works. It was estimated that this sum would keep 100,000 persons at work in many different trades for at least a year. In order to defend France "from a veritable swamping of our markets by foreign products," the Government adopted a policy of imposing quotas on certain imports, restricting imports from various countries, and levying surtaxes on imports from Great Britain and other countries whose currencies had depreciated. This policy aroused energetic protests from Great Britain, Denmark, Norway, Belgium, and Rumania, while Canada and Lithuania abrogated their trade agreements with France and the commercial treaty with Italy was likewise denounced.

The Government completed its programme on December 23, the day before the termination of the extraordinary session, of Parliament, by pushing through bills authorizing aid to both the French Line and the Bank of France. A credit of \$12,000,000 was extended to the French Line (*Compagnie Générale Transatlantique*) to save it from bankruptcy. At the same time the Government assumed ownership of a majority of the shares of the company and the right to appoint a majority of the board of directors. The Bank of France was forced to take a loss of 2,500,000,000 francs through the decline in the value of its sterling holdings following the abandonment of the gold standard by Great Britain in September. The steady decline of its shares on the Bourse induced the Government to cover the Bank's sterling losses by giving it a Treasury bond of equal value. The bill provided that the Government sinking fund would exchange other negotiable bonds for the Treasury bond. Repayment was to be made partly by the Bank itself and partly by a government budgetary annuity.

**RESULT OF THE NEGOTIATIONS.** After ten days of discussion, during which France refused to consider any proposals involving possible abrogation of the unconditional annuities under the Young Plan, the German government on November 19 asked the Bank for International Settlements to convoke a special advisory committee, provided for under the Hague agreements of January, 1930. The advisory committee convened at Basel December 7 to study Germany's capacity for the resumption of reparation payments (see **REPARATIONS AND WAR DEBTS**). In the mean-

time, however, Premier Laval had stated France's policy before the French Chamber of Deputies November 26 as follows:

"We will accept no new reparations arrangement except for the period of the economic depression; we will accept no reduction on what is due us, save in proportion as a reduction is granted to us on the war debts; and we will not consent to giving German private debts priority over reparations."

On the question of Germany's private debts, M. Laval took a stand in direct opposition to the British policy expressed a few days earlier of giving precedence to private obligations. Despite the conflict of interest between the two countries on this point, and with regard to monetary policy, France and Great Britain toward the end of December appeared to have reached an agreement for joint action on reparations and war debt. It was indicated that at the Reparations Conference called for January, 1932, they would seek a temporary rather than a permanent solution of the German situation, retaining the principle of the Young Plan. Both countries were moved to joint action by the hostility to debt cancellation evidenced during December in the United States Congress. The French press thereafter reflected much hostility to the American position.

The text of the draft treaty of non-aggression, between France and the Soviet Union, published in Paris, December 21, also aroused much criticism. If ratified, the treaty would pledge both Governments to refrain from acts of aggression or recourse to war against each other, to remain neutral in case either country was attacked by a third, to remain outside of any agreement for an international commercial boycott against the other party, to abstain from propaganda and subversive activity against each other, and to establish a system of mutual conciliation.

**THE OUSTRIC AFFAIR.** The investigation into the collapse of the Oustrie Bank in 1930, which swept away about 1,500,000,000 francs in small savings, continued throughout most of 1931. On February 14, the Parliamentary Commission appointed to inquire into the relations of members of Parliament with the bank, recommended to the Chamber that the case be examined by the Senate, sitting as a High Court of Justice. The commission also recommended the trial by the Senate of Raoul Peret, former minister of Justice in the Tardieu Ministry; Senator René Besnard, former Ambassador to Rome; and of Albert Favre and Gaston Vidal, former Under-Secretaries and former Deputies, on charges of having allowed Oustrie to use their influence to further his financial speculations in exchange for large retainers.

The recommendations were adopted by the Chamber March 25 and the Senate on April 2 constituted itself a High Court, fixing May 19 as the date of trial. The spectacular trial ended with the acquittal of all four defendants on July 23, although the verdict censured some of their acts as "deplorable."

**ELECTORAL TRENDS.** In general, the local elections held throughout France on October 18 and the cantonal elections of October 25 showed a moderate trend toward the Left Centre rather than toward the Right. The Communists and Socialists on the extreme Left and the nationalist candidates on the extreme Right were the heaviest losers, while the Radicals registered the

greatest gains. In Alsace the autonomist movement showed its strength, electing a majority of the general council of the Department of Bas-Rhin as well as an autonomist Deputy, M. Roos, from Strasbourg. The Communists, Autonomists, and Catholics of Alsace combined under the banner of the Popular Union to oppose the regular parties.

FRANCE AND THE EUROPEAN CRISIS. The triumph of French diplomacy in 1931 may be attributed directly to the financial reforms inaugurated by Premier Poincaré in 1926, the stabilization of the franc in 1928, the subsequent phenomenal inflow of gold into the vaults of the Bank of France, and the rapid increase of liquid French capital to a total estimated at 100,000,000,000 francs (about \$3,920,000,000). The gold stock increased from \$1,160,000,000 in June, 1928, to \$2,382,000,000 on Aug. 20, 1931, a total exceeded only by the gold stock of the United States. In its later stages, the gold influx was accompanied by an unhealthy restriction of credit, abnormally high prices, and an increasing budget deficit. But in the struggle to retain French political supremacy, which opened in a new and more serious phase with the announcement of the Austro-German customs union proposal on March 21, the large French gold and capital surplus played a decisive rôle.

To the French, the customs union proposal was the first step toward the political union of Germany and Austria, which had been prohibited by the peace treaties. It was regarded as the culmination of a long series of incidents which pointed toward the alliance of Germany, Russia, Italy, and the dismembered states of Central Europe in an anti-treaty bloc, determined to end French domination of the continent. To a large extent, the German government had abandoned Stresemann's policy of peace and was continually pressing France for additional concessions.

Mussolini during 1930 had aligned Italy with the agitation for treaty revision and was building up a series of alliances with the enemy states of Austria, Hungary, Bulgaria, and Turkey. Both Germany and Italy had concluded important trade agreements with Russia and Russia had supported the German disarmament demand before the Preparatory Commission on Disarmament at Geneva. On June 24, 1931, the Russo-German neutrality treaty of 1926 was renewed. The French also envisaged the possibility that Italy, Rumania, Hungary, and other Central European states might accept the invitation to enter the Austro-German customs union and thus be drawn into the orbit of Germany.

The general revulsion from Briand's policies of moderation and conciliation caused by the customs union announcement was heightened by the Hoover moratorium proposal of June 20 (see REPARATIONS; GERMANY and the UNITED STATES under *History*). To France, President Hoover's proposal for a year's postponement of reparation and war-debt payments seemed an effort to aid Germany in sabotaging the Young Plan. Accordingly France held up the acceptance of the moratorium until much of its calculated psychological effect was lost. Her final acceptance of it was conditioned upon the retention of the Young Plan in principle through the continuance of German unconditional annuity pay-

ments, these annuities being reloaned to the German railroads through the Bank for International Settlements.

The French counter-attack assumed two forms—one economic and the other financial. An economic programme to offset the Austro-German customs union proposal was introduced in the Commission on European Union at Geneva May 16. It envisaged the gradual coördination of the European economic structure preparatory to the general reduction of tariffs (for details of the plan, see UNITED STATES OF EUROPE). However, the financial offensive, made possible through the close collaboration of French financial interests with the Foreign Office, proved much more effective.

The virtual closing of the long-term loan market due to the depression and the consistently unfavorable trade balances of many European nations had forced them to turn to Paris for short-term credits. This increasing accumulation of short-term credits, subject to withdrawal at will, made the financial structures of the respective countries more and more vulnerable to attack. The announcement of the Austro-German customs union proposal was followed by the immediate withdrawal of French and other short-term credits from both Vienna and Berlin. It was charged that the French credits were withdrawn for political purposes, although the increasing uncertainty introduced into the European situation by the customs union project probably justified their withdrawal on financial grounds. Whatever the motive, the withdrawals contributed powerfully to the development of severe financial crises in both countries (see GERMANY and AUSTRIA under *History*). In June, Austria tried to raise a \$21,000,000 loan in France to bolster the tottering *Credit-Anstalt*, an Austrian private bank controlling 80 per cent of Austrian industry. The French government refused to participate in such a loan unless it was negotiated under the Auspices of the League of Nations. French bankers offered to advance the money, it was reported, but on condition that the customs union proposal was abandoned and that Austria submit once more to international financial control. Austria then appealed to Great Britain, and the Bank of England on June 17 advanced an unconditional interim credit of \$21,000,000. The British intervention was not relished in Paris, and the subsequent withdrawal of French credits from London, which aided in precipitating the financial crisis there, appeared to have a retaliatory aspect (see GREAT BRITAIN under *History*).

On July 9, the German government was forced to approach the French for a \$400,000,000 loan to stem the tide of the financial crisis. Dr. Hans Luther of the Reichsbank was informed that the French Government would participate in such a credit only when Germany abandoned the customs union, terminated work on her "pocket battleships," and prevented further hostile demonstrations by the German private military organizations.

In the meantime, France was binding her allies of the Little Entente more closely to her by the extension of large loans. French bankers furnished the major part of a \$50,000,000 loan to Rumania concluded in Paris March 11. On April 23, a similar loan of \$50,000,000 to Czechoslovakia was provisionally negotiated at the same time that Foreign Minister Beneš of Czecho-

slovakia was vigorously attacking the Austro-German customs union proposal in the Czechoslovak Chamber of Deputies. In April, also, was concluded the \$40,000,000 private loan to a French-Polish syndicate for the construction of the Polish railway line from Kattowice in Upper Silesia to Gdynia (see POLAND under *History*). And on May 8, French banks advanced the larger part of a \$42,000,000 loan to Yugoslavia for the stabilization of the Yugoslav currency and the construction of public works. Hungary's agitation for revision of treaty boundaries was scotched by the extension on August 14 of a \$25,000,000 loan raised mostly in Paris (see HUNGARY under *History*). In August, French prestige was further enhanced by French participation in two Franco-American credits to Great Britain of \$250,000,000 and \$400,000,000, respectively. It was considered significant that in the same month Mussolini's public addresses assumed a markedly peaceful tone, in contrast with his belligerent utterances of the previous year. The collapse of the British Labor Government, which had been opposed to the French disarmament thesis, and the inauguration of negotiations with the Soviet Union for a non-aggression pact and a commercial agreement, also served to strengthen French influence.

The full extent of the French victory was made plain on September 2, when both Germany and Austria formally renounced the customs union proposal. Three days later the World Court ruled that the proposal was illegal, the matter having been referred to the Court for a decision by the League Council in May. (See WORLD COURT.) France proved more approachable after these developments, and on October 22 offered a \$8,500,000 credit for the support of the Austrian National Bank. The Vienna correspondent of the *New York Times* summarized the situation on September 9 as follows:

Under the dark sky of the financial crisis and in the face of the overwhelming power it has given France to damn or save her victims, an uneasy peace has fallen over Southeastern Europe, a "pax Gallica," as the newspapers have been quick to name it.

The German government, too, was forced to swallow a rebuff and turn again to Paris for aid in securing a \$500,000,000 long-term loan, which was considered essential to stabilize Germany's financial position. On July 18, Chancellor Brüning and Foreign Minister Curtius arrived in Paris and opened loan negotiations. They were informed, according to reliable but unconfirmed reports, that France was prepared to advance the major part of the loan in return for a pledge from Germany to abandon for ten years all attacks upon the Treaty of Versailles. Brüning refused these terms, knowing that to accept meant his overthrow at home. At the Seven-Power Conference at London (July 20-23) the same thing happened. France cut off Germany from the hoped-for British and American aid by refusing to share in any financial programme. On September 27-28, Premier Laval and Foreign Minister Briand returned the visit of the German statesmen, receiving a hearty welcome in Berlin. But the results achieved were meagre (see GERMANY under *History*). The Germans still refused to accept the French political demands, and no loan was forthcoming; instead preliminary steps toward economic collaboration were taken in the hope that they would lead to the solution of the various political problems.

FRANCE AND THE UNITED STATES. With Germany beaten but still unwilling to make terms, and with Great Britain fully absorbed in the task of national reconstruction, French power was capable of being challenged only by the United States. French and American policies differed on the most important issues—the rehabilitation of Germany, disarmament, war debts, and reparations. In the financial war between France and Germany, President Hoover had intervened on the side of Germany with his moratorium proposal. The United States favored disarmament but opposed the French demand for security through a pledge of assistance in case of attack. A growing sentiment in the United States favored the revision of the Versailles Treaty and the cancellation of both war debts and reparations. Furthermore, the collapse of the pound sterling had left France and the United States as the two great financial powers still on the gold standard and the withdrawal of credits and gold supplies from one to another threatened to further upset the international financial structure.

It was to discuss these issues that Premier Laval visited the United States (October 22-27) on the invitation of Secretary of State Stimson. Recalling Franco-American disagreements at numerous preceding conferences, and particularly at the Washington Naval Conference of 1922, the French public watched Laval depart for America with considerable nervousness. He returned amid the acclamations of virtually all party groups, for the Premier had won important concessions from President Hoover without impairing Franco-American goodwill. A joint statement by Premier Laval and President Hoover and subsequent announcements by Laval indicated that the Washington government had agreed: (1) not to exert pressure on France to disarm until after "the organization on a firm foundation of permanent peace"; (2) that any new action with regard to German reparation payments should be inaugurated by the European powers concerned and within the framework of the Young Plan; (3) that Washington would not again take the initiative in the inter-Allied debt question, but would reexamine the question if the European powers agreed to reduce German reparations. Thus France obtained *carte blanche* to assume the initiative and responsibility for bringing order out of the European chaos, together with the promise of limited American collaboration in the ultimate reduction or annulment of war debts (see UNITED STATES under *History*).

Previous to his departure for America, Premier Laval had sounded out the attitude of the British government through conversations in Paris with Lord Reading, Foreign Secretary in the temporary National Government. Upon his return he immediately resumed negotiations with Germany in an effort to achieve a general political and financial settlement.

FRANCO-ITALIAN NAVAL RIVALRY. With the expiration on Dec. 1, 1930, of the Franco-Italian naval building truce (see 1930 YEAR BOOK), negotiations for a permanent settlement of the naval controversy were renewed. In February, 1931, the negotiations reached an *impasse*, whereupon Foreign Secretary Arthur Henderson sent R. L. Craigie of the British Foreign Office to Paris in an effort to harmonize the positions of France, Italy, and Great Britain. Mr. Hen-

derson's intervention was prompted by the fact that the 1931-32 French naval budget totaled about \$123,000,000, of which \$39,000,000 was for new construction including a 23,000-ton battleship to offset the German "pocket" battleship, the *Erzatz-Preussen*. It seemed certain that if France proceeded to build the battleship, there would be a new armament race between the three countries, thus causing the annulment of the London Naval Treaty of 1930.

On February 23, the British Foreign Secretary commenced a hurried trip to Paris and Rome, where he carried negotiations with Foreign Ministers Briand and Grandi to an apparently successful end. An official *communiqué* of March 1 announced the conclusion of an agreement, which was published by the three Foreign Offices on March 11. As interpreted by the British and Italian governments, the "bases of agreement" thus reached provided for stabilization of the French and Italian fleets for the period 1931-36. No new cruisers or lighter vessels were to be built, both countries were to be at liberty to construct two 23,000-ton battleships, armed with 12-inch guns, to offset the two new German cruisers constructed or authorized, and France was to be allowed a total submarine tonnage of 81,989, as against 52,700 tons for each of the other four signatories of the Treaty of London. The French, however, interpreted the bases of agreement as giving them in addition the right to commence the replacement of their over-age naval vessels before the termination of the agreement in 1936. The announcement of the Austro-German customs union proposal on March 21 served to stiffen the French attitude and a fundamental rift was revealed when the naval experts of the three powers met in London to transform the provisional agreement into definitive form. There was a discrepancy of some 66,000 tons in cruisers between the French and Italian interpretations. The committee continued its endeavors until April 22, when an exchange of notes between France on the one hand and Great Britain and Italy on the other, in which the other powers rejected the French proposals, brought this phase of the negotiations to an unsuccessful end.

Efforts to reach a new agreement were immediately begun, facilitated by the fact that neither France nor Italy put into effect their new building programmes. The French programme for 1931-32 encountered unexpected opposition in the Chamber when the debate on the measure opened June 18. The credits asked for were finally voted by the Chamber, 417 to 161, with the proviso that determination of the tonnage and characteristics of the capital ship asked for would be reserved until a later date. On July 2, however, the Senate reversed the decision of the House, approving by 165 to 131 the navy's plea for the construction of a battleship as soon as possible. The naval building programme, as approved, was estimated to cost \$160,000,000.

An important step bearing upon the subsequent negotiations was the proposal of Foreign Minister Grandi of Italy before the League Assembly September 8 for "a suspension of the execution of the new armament programmes until after the disarmament conference" scheduled for February, 1932. France, Poland, and Japan joined in opposing Signor Grandi's original proposal, but an amended agreement was reached under which the Assembly asked all governments to signify by November 1 whether they are willing

to enter an agreement to "refrain from any measure involving an increase in armaments." Both France and Italy accepted the amended proposal. See ITALY and GREAT BRITAIN under *History*; also DISARMAMENT; LEAGUE OF NATIONS.

DISARMAMENT MEMORANDUM. The French disarmament thesis was reaffirmed more strongly than ever before in a memorandum of July 21 to the League of Nations, prepared in response to the request of the Council for data on existing armaments of the various Powers. The document emphasized that further reduction in armaments must depend upon definite guarantees of security, or in other words, upon a binding agreement on the part of all states to support by force of arms a country which is the victim of unprovoked aggression. The French view was restated that unless such aid could be counted upon, each state must determine its own measures of self-defense, based upon its geographical situation and the "special risks" to which it is exposed. Furthermore the note gave warning that France would be obliged to increase her armaments in case Germany or Italy attempted to modify the Treaty of Versailles "in the name of theoretical equality." See DISARMAMENT.

OTHER EVENTS. Other developments of the year included an increase in French tariff rates on October 1 designed to protect the French market from the competition of products from Great Britain and other countries with depreciated currencies. Plans were carried forward for a railway line across the Sahara connecting Algeria with the Niger River and French West Africa. In April, President Doumergue visited Tunis to celebrate the fiftieth anniversary of the establishment of the French protectorate there. The increasing native opposition met by French colonial authorities in French Indo-China continued to arouse concern and in September Minister of Colonies Paul Reynaud left Paris for a tour of the Far Eastern possession. A textile strike in the vicinity of Roubaix and Tourcoing from May 18 to July 5 was marked by severe rioting on June 12 and 13 as a result of Communist agitation. On June 14, the excursion steamer *St. Philibert* capsized in a hurricane off the mouth of the Loire, drowning about 440 passengers. The death of ex-President Armand Fallières (q.v.) at the age of 90, occurred June 22. For the International Colonial Exposition at Paris, see EXPOSITIONS; also DISARMAMENT, AUSTRIA under *History*.

FRANKEL, LEE KAUFER. An American insurance official, died in Paris, France, July 25, 1931. He was born in Philadelphia, Pa., Aug. 13, 1867, and was graduated from the University of Pennsylvania with the B.S. degree in 1887 and received the Ph.D. degree in 1891. He was an instructor in chemistry at the University of Pennsylvania from 1888 to 1893 and practiced as a consulting chemist in Philadelphia from 1893 to 1899. He then devoted himself to welfare work, being manager of the United Hebrew Charities in New York City from 1899 to 1908 and special investigator for the Russell Sage Foundation in 1908. In 1909 he became associ-

ated with the Metropolitan Life Insurance Company as manager of the industrial department, and at the time of his death was second vice president of that organization in charge of the welfare department. He had served as a member of the Ellis Island Commission (1903), as commissioner of the New York State Board of Charities, and as welfare director of the U. S. Post Office Department (1921-22).

He was also a past president of the New York State Conference on Charities and Correction (1917) and of the American Public Health Association (1919), chairman of the National Health Council (1923-25), and vice president of the National Conference of Social Work (1923-24). In addition to numerous papers on welfare work and health promotion, he wrote *Workingmen's Insurance in Europe* (1911); *The Human Factor in Industry* (1920); *The Health of the Worker* (1924); and *Encyclopedia of Health* (1925).

**FRENCH, DANIEL CHESTER.** An American sculptor, died near Stockbridge, Mass., Oct. 7, 1931. He was born in Exeter, N. H., Apr. 20, 1850. After studying for a year at the Massachusetts Institute of Technology, he decided to become a sculptor, attending Dr. William Rimmer's lectures on anatomy in Boston and in 1869 working for a short time in the studio of John Quincy Adams Ward. At the age of 23 he made for the town of Concord, Mass., the "Minute Man," which was unveiled on the centenary of the Battle of Lexington and Concord Apr. 19, 1875, and which bore the promise of his future distinction. He then spent a year in Florence with the American sculptor, Thomas Ball, and in 1876 opened a studio in Washington.

From 1878 to 1887 he made Boston and Concord his headquarters, after which he settled in New York City. During this period he made frequent visits to Paris, but although he absorbed whatever appealed to him most, he did not seem to come directly under the influence of any one French master. His genius was peculiarly American and combined singular beauty of technique with poetry, grace, and plastic charm. From the first the sculptural compactness of his groups and the play of light and shade were particularly admirable. His "John Harvard" (1882) in Cambridge, Mass., was in the severe, simple style of the "Minute Man." His busts of Emerson and Alcott also followed his early style of firm, close modeling and were characterized by the lofty intellectual quality which he so often showed in his portraitures. The marble statue of Gen. Lewis Cass in the rotunda of the Capitol in Washington was more loosely handled than the two former works but depicted strength. In the Gallaudet Monument in Washington, showing Dr. Thomas H. Gallaudet and his first deaf-mute pupil, he introduced the element of pathos which became so familiar in his later work. This was especially true of the relief "Death and the Sculptor," which he designed for the tomb of the sculptor Martin Milmore in the Forest Hills Cemetery, Boston, and which received a medal of honor at the Paris Salon in 1922.

Of the large amount of decorative sculpture which was done by French, or under his direction, at the Columbian Exposition in Chicago in 1893, the most noteworthy were the many

groups with animals, done in collaboration with Edward Potter, his former pupil, who later modeled the horses for his equestrian statues. The great gilded "Statue of the Republic," which he placed in the Court of Honor, was one of the most striking colossal statues of recent times. With the assistance of Potter he modeled the bronze equestrian statue of General Grant in Fairmount Park, Philadelphia (1899); that of General Washington (1900), presented by an association of American women to the French nation and now in the Place d'Jéna, Paris; and that of Gen. Joseph Hooker in the State House Grounds, Boston (1903). He also designed the monument to John Boyle O'Reilly in the Back Bay Fens of Boston (1895); the statues of Thomas Starr King in San Francisco (1890) and Rufus Choate in the Boston Court House (1898); the Alice Freeman Palmer Memorial at Wellesley College (1909); a "Mourning Victory" for the Melvin Memorial in Sleepy Hollow Cemetery, Concord, Mass. (1910); the statue of Gen. James Oglethorpe in Savannah, Ga. (1910); the Marshall Field Memorial in Graceland Cemetery, Chicago (1911); the seated figure of Emerson, Concord Library (1912); a statue of Abraham Lincoln in the Capitol grounds, Lincoln, Neb. (1912); the colossal marble "Lincoln" in the Lincoln Memorial, Washington (1919); and a statue of Lafayette at Lafayette College, Easton, Pa. (1922). His versatility was still further displayed in the two statues, "History" and Herodotus," for the Congressional Library in Washington; "Alma Mater" (1903), in front of the Columbia University Library; the fine bronze doors of the Boston Public Library, in low relief (1904); the "Continents"—Europe, Asia, Africa, and America—in front of the New York Custom House (1906); the ideal marble statue "Memory" (1911) in the Metropolitan Museum of Art, New York City, his finest female nude; the Du Pont fountain in Washington (1922); and the 1st Division War Memorial in Washington (1924).

French received numerous distinctions, being elected a member of the National Academy of Design, the American Academy of Arts and Letters, and the Accademia di San Luca in Rome. He was also honorary president of the National Sculpture Society and a trustee of the Metropolitan Museum of Art, New York City. In 1910 he was made a Chevalier of the French Legion of Honor and in 1920 was chosen one of the foreign associates of the Académie des Beaux-Arts of the Institut de France. He received a medal of honor at the Paris Exposition in 1900 and the Panama-Pacific Exposition in 1915, and a gold medal of honor from the National Institute of Arts and Letters in 1918. From 1910 to 1915 he was a member of the National Commission of Fine Arts, serving also as its chairman for three years. At the time of his death he was dean of American sculptors.

**FRENCH ACADEMY.** See ACADEMY, FRENCH.

**FRENCH CONGO.** See FRENCH EQUATORIAL AFRICA.

**FRENCH EQUATORIAL AFRICA.** A French possession in Africa on the Atlantic coast between the territories of the Belgian Congo and British Cameroon. Area, 912,049 square miles; population, according to the census of 1926, 3,127,707, of whom 2502 were Eu-

ropeans. The possession comprises the four colonies of Gabun, Middle Congo, Ubangi-Shari, and Chad. Brazzaville, with 4000 inhabitants, is the capital. In 1929 there were 52 native schools, with 3490 pupils, and 74 private missionary schools, with 7029 pupils.

Equatorial Africa is very rich in natural resources, for the most part undeveloped. Tropical forests extend 300,000 square miles to the Gabun coast and contain valuable timber. Palm oil and wild caoutchouc are the principal commercial products. Coffee, cacao, and cotton are raised to some extent. Copper, zinc, and lead are to be found and considerable quantities of ivory are exported. In 1928 imports were valued at 227,650,279 francs and exports at 151,318,963 francs. The general budget for the four colonies balanced at 73,160,000 francs in 1931 and at 54,500,000 francs in 1930 (1 franc equals \$0.0392 at par). A governor-general has general supervision, but each colony is locally governed by a lieutenant-governor, aided by an administrative council. Governor-General in 1931, Rafael Antonetti, appointed in July, 1924.

**FRENCH GUIANA, gè-ä-nä.** A French colony and penal settlement on the northeast coast of South America. Area, about 34,740 square miles; population at the census of 1926, 47,341. Cayenne, a seaport, with 13,936 inhabitants in 1926, is the capital. The population figures do not include the number in the penal settlement of Maroni, in which there were 4000 prisoners in 1929, the floating population of miners, French officials, or native tribes. The extensive forests are rich in timber. Only about 7900 acres are devoted to agriculture, the chief crops being sugar, rice, maize, coffee, and cacao. The chief occupation is placer mining for gold. Other minerals produced are silver, iron, and phosphates. The total imports in 1929 were valued at 50,251,978 francs and exports at 32,121,717 francs (1 franc equals \$0.0392 at par). The principal articles of export were gold, rosewood essence, various timbers, phosphates, cacao, balata, and hides. The budget for 1930 balanced at 16,370,965 francs. The colony is under a governor who is aided by a privy council and by a council-general elected by French citizens in Guiana, and is represented in the French Parliament by one deputy. M. Bouge, former administrator of Mahé, succeeded M. Siadoux as Governor of Guiana in June, 1931. He was expected to reform conditions in the penal settlement, escaped convicts having caused considerable embarrassment to the authorities of neighboring colonies. A legal dispute arose with Trinidad (q.v.) during the year over the surrender of fugitives and was referred by the British colony to the Privy Council at London. Plans to extend French control into the interior were laid by Governor Bouge during 1931. Colonial troops led by officers with African and Indo-China experience were to establish outposts in the bush and Annamite laborers were imported to build roads and cantonments.

**FRENCH GUINEA, glin'i.** A French colony on the west coast of Africa between Portuguese Guinea and the British colony of Sierra Leone. Area, 89,436 square miles; population, estimated in 1929 at 2,220,267, including 1496 Europeans (1389 French). Capital, Conakry. Imports (1929) were valued at 115,382,466 francs; exports at 60,040,268 francs. The 1930 budget fixed expenditures at 49,452,000 francs (1 franc

equals \$0.0392 at par). A railway runs from Conakry on the coast to the Niger at Kourassa and thence to Kankan, a total of 412 miles. The colony is under the Governor-General of French West Africa. Lieut.-Governor in 1931, J. L. G. Poiret. See FRENCH WEST AFRICA.

**FRENCH INDIA.** The name given to the group of five French dependencies in India, of which the chief is Pondichéry. Area, about 196 square miles; estimated population in 1930, 288,546, divided among the five dependencies as follows: Pondichéry, 185,479; Karikal, 59,800; Chandernagor, 20,397; Mahé, 12,113; Yanam, 4757. French residents numbered about 1035. Capital, Pondichéry. Paddy (rice), ground-nuts, and manioc are the chief crops. Imports, in 1929 totaled about 18,687,000 francs; exports, 270,990,000 francs (1 franc equals \$0.0392 at par). Receipts of the government in 1930 were 2,811,825 rupees; expenditures, 2,451,450 rupees; public debt, 120,000 francs. The rupee is equivalent to about \$0.36. The governor is assisted by an elective general council and French India is represented in the French Parliament by one Senator and one Deputy. Governor in 1931, Adrien Juvanon, appointed in 1930.

**FRENCH INDO-CHINA.** A French possession in southeastern Asia, comprising the colony of Cochin-China; the protectorates of Annam, Cambodia, Tongking (Tonkin), and Laos; and Kwangchow (Kwang Chau Wan), which was leased from China in 1898. Capital, Hanoi, in Tongking.

**AREA AND POPULATION.** Bounded on the west by Siam and Burma and on the north by China, French Indo-China has a total area of 284,900 square miles and a population (1926 census) of 20,698,042, divided as follows:

FRENCH INDO-CHINA: AREA AND POPULATION

Division	Capital	Area (sq. miles)	Population (1926 census)
Cochin China	Saigon . . . . .	24,700	4,119,832
Cambodia	Phnôm-Penh . .	67,800	2,535,178
Annam	Huê . . . . .	58,000	5,580,974
Tongking	Hanoi . . . . .	44,700	7,401,912
Laos	Vientiane . . .	89,400	855,146
Kwangchow	Fort Bayard . .	800	205,000
Total . . . . .		284,900	20,698,042

Of the total population in 1926, only 24,000 were Europeans. The estimated population of the chief cities in 1926 were: Saigon, 143,167; Cholon (Cochin China), 198,713; Hanoi, 103,235; Phnôm-Penh, 81,712; Huê, 60,611; Binh-Dinh (Annam), 147,199; Vientiane, 28,000.

**PRODUCTION.** Agriculture, mining, and fishing are the principal industries. The territory tributary to Saigon is one of the great rice-growing regions of the world; the rice crop of the entire country in 1930 was about 1,500,000 metric tons, of which 1,058,000 tons were exported. The exportable rice surplus in 1931 was estimated at 1,700,000 metric tons. The price of rice per 100 kilos (220 pounds), however, had fallen from \$4.67 on Jan. 1, 1930, to \$2.94 on Jan. 1, 1931. As the rice crop normally accounts for about 65 per cent of the total value of exports, the price decline resulted in severe economic depression. Rubber, sugar, cinnamon, and tea are other farm products, while the minerals exploited are coal, phosphates, zinc, antimony, tin, wolfram, graphite, and lead. Rubber exports in 1930 totaled

7738 metric tons (8700 in 1929). The total value of mineral production in 1928 was 18,460,000 piasters (\$9,245,000). In 1930, the output of coal and lignite was 1,955,000 metric tons; of zinc, 15,900 metric tons; tin, 1017 metric tons; phosphate rock, 30,300 metric tons. For production, etc., of the individual colonies, see articles on each.

**COMMERCE.** All the states of French Indo-China were united in a Customs union in 1887. In 1929, total exports amounted to 2,611,700,000 francs (\$102,379,000) and total imports to 2,602,800,000 francs (\$102,030,000). France supplied 46.2 per cent of all imports and purchased 22.1 per cent of the exports. In 1930, exports to France were valued at 526,059,000 francs (692,002,000 francs in 1929) and imports from France totaled 896,313,000 francs (1,013,278,000 francs in 1929). During the first half of 1931, exports to all countries dropped 50 per cent and imports declined 30 per cent in value, as compared with the same period of 1930. Rice, crude rubber, coal, fish and shrimps, and corn are the leading exports and cotton fabrics, metal manufactures, machinery and apparatus, silk fabrics, and kerosene are the leading imports.

**FINANCE.** There is a general budget for Indo-China and a separate budget for each of the component states. The ordinary general budget for 1930 balanced at 96,380,000 piasters (the piaster was stabilized at \$0.392 on May 31, 1930), the extraordinary budget totaling an additional 6,236,000 piasters. Opium, alcohol, and salt are state monopolies. The 1930 budget included a contribution of 11,891,000 piasters to France, representing a share in the cost of military and naval expenses. The public debt at the end of 1929 amounted to 353,494,000 French francs (\$13,857,000) and 6,646,000 piasters (\$2,605,000). The Bank of Indo-China is the leading financial institution.

**COMMUNICATIONS.** There were 1488 miles of railway line in 1929, all government-owned but leased in part to private operators. The total highway mileage in 1931 was reported at 19,931 miles, of which 8890 miles were paved, and 6209 miles were graded and passable for more than six months of the year. About \$3,630,000 was spent on highway construction in 1929. In 1929, a total of 1492 vessels in the overseas trade aggregating 4,527,867 tons entered the ports of French Indo-China and 1491 of 4,530,401 tons departed. The first air mail on regular service from France to Indo-China arrived at Saigon on Jan. 27, 1931, the trip from Marseilles occupying the scheduled time of 10 days. The telegraph and telephone system is owned by the Government.

**GOVERNMENT.** The central government is headed by a governor-general, assisted by a secretary-general, a government council, and a grand council for economic affairs. A French resident-superior administers the affairs of each of the states, except Cochinchina, which is administered by a governor. Governor-General in 1931, Pierre Pasquier, appointed Aug. 22, 1928.

**HISTORY.** The political unrest in French Indo-China arising from the Nationalist movement was aggravated in 1931 by a severe economic depression and intensive Communist propaganda. An armed uprising occurred in Northern Annam on May 1, according to a statement by the French Minister of Colonies. Bands carrying Soviet insignia attacked native outposts but were repulsed with the loss of 175 men. Later in the month it

was reported that terrorist bands in Tongking had killed 49 persons, and mutilated and tortured scores of native officials and others in sympathy with the French régime. On June 2, Minister of Colonies Reynaud disclosed details of an alleged Communist plot for a general uprising in Indo-China to the Colonies Commission of the French Chamber of Deputies. Immediately afterward, Governor-General Pasquier returned hurriedly to Hanoi from Paris, with instructions for energetic military, political, and economic measures. The Minister of Colonies made a tour of French Indo-China in the autumn of 1931. See FRANCE under *History*.

**FRENCH IVORY COAST.** See IVORY COAST.

**FRENCH LANGUAGE.** See PHILOLOGY, MODERN.

**FRENCH LITERATURE.** The great event in France—outside of politics—was the impressive "Exposition coloniale" which was bound to leave its mark in literature. See EXPOSITIONS. André Maurois told the life of the Marshal Lyautey, the organizer of the Exposition and the glorious soldier of "Greater France"; Albert Sarraut, former governor of Indo-China, gave out a remarkable volume *Servitude et Grandeur coloniales*; and the librairie Hachette in a series "Toutes nos colonies" succeeded in getting books from some of the foremost writers of exotic literature (e.g., Djibouti, *Au seuil de l'Orient*). The *Lettres du Soudan* by the late Général Mangin came out in good time; and Saint Floris was awarded the "Grand prix de littérature coloniale." The enumeration of fine books along these lines would lead us far; let us only pick out a few titles: M. and A. Leblond, *L'île enchantée*, *La Réunion*, Jean Dorsenne, *Le bateau ivre*, and *La femme des îles*, H. Bordeaux, *Un printemps au Maroc*. A curious volume of poetry was *Tam-Tam de mes nuits, poésie nocturne de la brousse*, by Bala.

Several books came out in France in answer to Duhamel's *Scènes de la vie future* which had been published in 1930 and aroused much feeling in that country. In the first place Duhamel himself gave some explanations of what he meant, in the first pages of his *Géographie cordiale de l'Europe*, explanations which in some cases sound like apologies. (In the other parts of the book the author deals with Holland, Greece, and Finland.) Then we had *L'Amérique inattendue* by André Maurois, Mme. Cazamian, *L'autre Amérique* and H. de Ziegler, *Monde occidental, Poésie de l'Amérique*.

Among other topics of discussion during the year, one of the most interesting was whether the after-war period in literature was over, or whether we were still in the hands of writers who could not keep the warlike attitude from their ways of thinking. As if spontaneously, from various sides, the debate opened in November in *La Vie*, *Nouvelle Revue Française*, *L'étudiant catholique*, *Le Correspondant*. One of the best contributions was made by Denys Saurat in *Nouvelle Revue Française* in reviewing the book of Crémieux, *Inquiétude et Reconstruction*; D. Saurat admires much the sincerity of the post war writers, but claims that after "raison classique," "sentiment romantique," and "sensational moderne," we see a return to a new humanism (not in the American sense of the word, however). Of less importance—but rather fiercer in tone—was the quarrel raised by M. Thérive of *Le Temps* about the originality of

French Romanticism—M. Thérive opposes the objective views of Tronchon's volumes on *Romantisme et Préromantisme* to what he violently attacks as prejudiced views on romanticism as presented in Professor Raynaud's book *Le romantisme et ses origines anglo-germaniques* (see *Le Temps*, Mar. 6, 1931, and also YEAR BOOK for 1930).

Another fierce quarrel was brought about by M. Grasset, the well-known publisher who wrote a severe article on "Feu le Prix Goncourt" (*Nouvelles littéraires*, October 31), saying that the "Prix Goncourt" had entirely failed in its mission, that all that was sought was to favor undeserving and discontented authors, and that some good journalists could do more to bring before the interested public really good literature. Ajalbert, one of the Goncourt Academy, retorted and the fight continued through the year. Finally a very personal controversy was aired by the publication of the *Souvenirs 1895-1918*, by Mme. Georgette Leblanc, for many years the muse and good angel of Maeterlinck, and who was repaid by deep ingratitude on the part of her great poet.

POETRY. Long out of print *Les amours jaunes* by Tristan Corbière—which show no little analogy with certain supermodern poetry—were republished (by Messein). At the same time Gérard d'Houville (wife of H. de Rénier, and daughter of Hérédia) offered a collection of her charming poems with vignettes by Latour, *Les poésies de Gérard d'Houville*; she sings, like Comtesse de Noailles, the joy of living and the horror of death; there are stanzas on the aspirations for an after life, others that exalt the virtue of suffering, and there are poems of travels.

Molière made fun of poets who put in sonnets Roman history; but here, in 1931, Emmanuel de Monteorin in *Trize siècles de monarchie française* devotes 30 sonnets to a rapid perusal of French history, while A. Bouyssy in *En marge de Quicherat* picks out 165 episodes of the life of Joan of Arc and makes 165 sonnets out of them. Jules Supervielle takes advantage of the vogue conquered by him of late in the realm of poetry to publish two collections of short pieces reminiscent of Baudelaire's *Poèmes en prose*: *L'Enfant de la haute mer*, and *Le bœuf et l'âne*—criticism has not been so enthusiastic. Louis Braquier, in *Eau douce pour navires*, offered poems collected during travels in far distant seas; he is a disciple of the unanimists and has some of their mannerisms. Let us further mention *Aux caprices de l'heure*, verses written by a sergeant of the colonial army, Henri Viale, during his wanderings with the army, sometimes realistic, sometimes abstract. From Tristan Derème came *Les compliments en vers de Putachon*.

More again was heard from the Dadaists, or as they call themselves now the "Surréalistes": Tristan Zara, who started the movement during the War, published in various periodicals fragments of what is claimed to be a grand poem, *Homme approximatif*, and a special collection, *Arbre des voyageurs*; he persists in considering incoherency as the very essence of poetry. But few, so far, have given a more consistent illustration of the theory than André Breton and Paul Eluard; together they published *L'Immaculée conception*, in which one will find more obscenity than theology indeed; they are trying

to find the form of thought most remote from normal, which is of course insanity; in other words, they offer what they call the style of a demented man; a benevolent critic has called the piece, entitled "Essai de simulation de la paralysie générale," "the most beautiful" of the volume, adding that "n'est pas fou qui veut."

A worthy disciple of those early representatives of Dadaism is Charles Plisnier, in *Prière aux mains coupées* (ed. "Ecrivains réunis"). It must be well understood that much of this dadaist poetry is written in prose called "poetic." An indisputably talented admirer of the dadaist method, in as far as it means giving up systematic thought and indulging in free reverie, is Francis de Miomandre; in his *Samsara* one will find a really beautiful *rêverie orientale* on the theme of the ever recurrent cycle of human events which are in themselves of no importance whatsoever: "Ce monde de rosée n'est qu'un monde de rosée, mais tout de même . . ." If surrealism is capable of inspiring poetry of any value, here is a sample. Some have thought that there were resemblances between the surrealist poetry in France and the negro mysticism, thus the *Cahiers du Sud* had published in October and November, 1930, translations of what they call "Sermons nègres."

Just opposite this incoherent language were the advocates of the superintellectual literature and poetry advocated by the famous Valéry. One of his most successful imitators was Gilbert Trolliet, who in his *Vie extrême* offered verses that have so much thought packed in them that a very serious study is required to grasp the meanings. Thus:

Mourir où ta chair accroupie  
Creuse le vent, bombe la mer,  
Où tes yeux peuplent un désert  
De jouissance endolorie.

Quite a number of "Prix" were awarded to poets: The most important, although not in money, was the Prix Moreas (3000 francs) which went to Marcel Omy, owner of a bookstore in Nice and contributor to the *Mercure de France*; he was rewarded for *Visage inconnu*, and *La vie est à ce prix*. The Maison de poésie presented the "Prix Petitdidier" (12,000 francs) to Victor E. Michelet, for *La Porte d'Or, Esprit merveilleux* and *Introduction à la vie ardente*; the "Prix Blémont" (5000 francs) to Louis Pize, for *Roses de septembre*. A prize of 5000 francs was also awarded to the Belgian poet Jules Sottiaux, for a collection *Sambre et Meuse*. The "Prix Verhaeren"—for a Belgian—went to Carlo Brune for *Fruits de cendres*, and *Collines que j'aimais*. The reader may be interested in an *Anthologie des jeunes écrivains belges*, published 1931 in Louvain. In La Rochelle a group of young poets started a little review of their own *Le Départ*.

THEATRE. A great many plays, several successes, but none a tremendous success. Perhaps the greatest was, at the very beginning of the year, *Le jour*, by Bernstein, a French *Hamlet*; a son suspecting that the second husband of his mother is not innocent of the death of his father—but all this presented in modern style with allusions to all sorts of psychological subtleties. Early in the year also, the staging of *David Golden* (the great novel success of 1930, by Irène Nemirovski) proved a complete failure. The long run of André Pascal's *Le grand patron* was a surprise

to many; for the author (really Baron Henri de Rothschild, the patron of the Théâtre Pigalle, see former YEAR BOOKS) was really an amateur when it comes to writing a play: A physician marries after sixty, and tries hard to satisfy an expensive wife; he lets himself be entangled in a none too honest fashion of making money out of one of his scientific discoveries; things look very ominous when the award of the Nobel Prize saves the situation at the eleventh hour. With less success Drieu de la Rochelle, in *L'eau fraîche*, treats a similar subject, a scientist who first refuses to turn into material profit his discoveries, but for the love of a woman his scholarly pride yields; the woman, who had married a rich man in the meanwhile, returns to him; both live, but hardly happily, having given up their early aspirations.

Leopold Marchand's comedy *Balthazar* tells the story of an apparently very congenial fellow who is not received with open arms when he is introduced to society; but, on learning that he is wealthy, things change for him; then some physician pronounces him not quite normal, and every one again turns his back on him; when it turns out that it was really the physician who was not normal in his own mind and a new attitude is taken again, Balthazar is disgusted and he says so. *La belle amour*, by the same dramatist, shows a woman using her feminine charms to subdue men—not a very original subject. In J.-V. Pellerin's *Terrain vague* a modern business man is driven almost insane by the intense life he has to lead to face his problems, and by the noise of typewriters, telegraph-ticking, messenger boys, etc.; he falls into a dream in which he sees before him the good days when he was not the victim of modern life; an old man, Reason, induces him to change his life.

One of the best runs of the season was Laurent Doillet's *Bourrachon* (the author was unknown before and died by accident after witnessing his success). Bourrachon stands with extreme patience many misfortunes that assail him, and this good nature is his best ally, everything ends none too badly; of course, many of his troubles come from love affairs. A rather unpleasant play by Amiel, one of the successful playwrights of recent years, is *Décalage*: a supposedly very up-to-date lady wants to analyze exactly the various pleasant things that she can get from love, so she allows 50 per cent for physical pleasure with a young man of 25, and 50 per cent of mental enjoyment with a more mature gentleman of 50—finally, however, the man of 50 is given up. This leads us to J. Lenormand, the man who tried for years to acclimatize theories associated with Freudism on the French stage; in *Les trois chambres Pierre*, a playwright has an agreement with his wife that, for his profession(!), he may need marital freedom; in the first act, his room is in the middle, that of his wife to the right and that of . . . Rose on the left. He takes to the left. The wife takes her life: in the second part of the play, Rose is on the right, and a new young girl on the left, and Pierre again takes to the left.

*La grande expérience*, by Karguel and Tirard, depicting the vicissitudes of a "soul" of a good friend who was dying and which a great biologist grafts onto his own son who was of vicious disposition, reminds one of the story by Balzac,

*Melmoth*. Less fantastic is the play by Descaves and d'Ivernois, *La tuile d'argent*, the "tuile" (colloquial for *mishap*) is a fortune unexpectedly inherited and which turns out to bring calamities at every turn. *Poupette* is a light play taken by José Germain from a story by M. Prevost; an old bachelor is beguiled by the charms of a very young girl; she, however, loves another and the old bachelor finally withdraws from the contest. Claude Puget's *La ligne du cœur* had a considerable run, being a witty play on a commonplace theme, several triangle stories amusingly interwoven.

Roger Martin du Gard (author of *Jean Barois*, of *Père Leleu* and *La gonfle*) tried his hand at the unpleasant theme which was treated in Bourdet's *Captive*, except that the abnormal person, *Le taciturne*, is a man instead of a woman. Another name with a great halo is Giraudoux who once more takes the medium of the stage to impart what he has to say: *Judith*, in three acts, is treated in the author's gently cynical style; Bethulie is besieged, the rabbis suggest to Judith to go and kill for the great glory of God the enemy chief Holofernes; fond of adventures, she goes and kills the man, but not for the sake of patriotism, but out of love, because she does not want him to live after having loved her; when she returns, the rabbis succeed in persuading the people that it was all an act of salvation by God; Judith agrees to remain silent.

Not so very different in spirit is Sacha Guitry; in his *Franz Hals*—his seventy-second play—he shows a painter who professes such an admiration for Franz Hals that he throws his own wife into the arms of his idol against her own wish. A. Fabre-Luce, known so far as a keen historian, was lured by another sort of fame; his *Richard* is a man without means who wants to marry a woman who only considers riches; he goes to America gets a huge fortune, but loses it again; but as he is still considered a rich man, he achieves his end. More interesting as a moral situation is Lemonnier's *Le Sacrement*; the daughter of an apostate, now a professor of history, is willing to marry the son of a fanatic Catholic; the father of the girl finally yields, not to God, however, but to an intriguing archbishop.

Romain Coolus was severely taken to task for his attempt at a moralizing play called *Mad*; a man, at the retiring age and having toiled many years to bring up his family, finds rejuvenation in a new love; his daughter learns of it, looks up the woman in the case, makes her give up the father; then she marries the young man who had introduced her to the woman in the case. More cheerful and less embarrassed with ethics was *La banque Nemo*, by Verneuil, which tells with zest a story not unsimilar to *Topaze*; a young bank clerk who becomes the director of the institution. The year finished on a great success, *Fanny*, by Pagnol, the author of *Topaze*: *Fanny* is a continuation of the amusing *Marius* (1929), the boy in the harbor of Marseilles who leaves his fiancée on account of his terrible longing for the sea. Fanny then marries Panisse who adopts the child, and when Marius returns he is told that Panisse is going to remain the husband: all this is treated in the same humorous and humane vein as *Marius*.

A number of plays, with characters borrowed from history or literature, were presented: J. J.

Brousson and R. Escholier, in *La conversion de Figaro*, give a continuation to Beaumarchais's trilogy; the valet Figaro is converted to autocracy and becomes the right hand of Talleyrand; critics were at odds to appreciate the play. Maurice Rostand in *Monseigneur de Létorièr* tries a rehabilitation of Louis XV; François Porché, whose last play had been a *Jeanne d'Aro*, makes an attempt to present an impartial *Tzar Lénine*; Léon Treich and Paul de Mont give a satirical picture of the French parliament and the frequent changes of ministry, in *Palais Bourbon*. The *Affaire Dreyfus* which was written by two German authors, H. Reifisch and Herzog, and played with success in Germany was adapted for the French stage by Jacques Richépin; but with scant success. Bernard Zimmer under the title *Beau Danube rouge* stages, in ten tableaux, the red episode of Bela Kun; St. George de Bouhélier revives a figure of the French Revolution in *Le sang de Danton*, while Maurice Rostand and Pierre Mortier make a play on the curious figure of *Général Boulanger*, the man who had to choose between service to his country and love, who chose love, but ended by committing suicide on the tomb of his mistress.

The new Théâtre Pigalle, said to be the best equipped theatre in Paris, if not in the world (see previous YEAR BOOK), had more success this second year with *Donogoo-Tanka*, originally a film scenario by Jules Romains, now worked into a play; then, with *Stève Passeur's La Chatne*, three very gloomy acts from which one would infer that the earth is inhabited by monsters only.

The "Compagnie des quinze," which was an outcome of the efforts of Jacques Copeau to renew the stage, took over for several months the Vieux Colombier theatre, and offered three plays by André Obey, one a *Noé* rather original but much criticized by some, a *Viol de Lucrece* which was supposed to be an adaptation of Shakespeare, and in December *Bataille de la Marne*, a sort of allegorical evocation which like the previous performances was both praised and copiously ridiculed. The *Bataille de la Marne* was awarded the substantial "Prix Brieux," destined to a play with lofty inspiration.

The dean of the playwrights of the comic vein, Tristan Bernard, at last realized his dream and had his own theatre, in which he gave among others *Le sauvage*,—by which was meant not the savage of Rousseau, but a man who was born shy and developed a pessimistic mind.

Among the "reprises" of the year, two deserve mention on account of the success obtained: Paul Raynal's *Maitre de son cœur* (this time given at the "Théâtre Français") and Francis de Croisset's *Pierre ou Jack*.

Here may be mentioned two books on the Russian stage, *Mon théâtre à Moscou*, by Henriette Pascal, the French actress who for a while was allowed to establish in the land of the Soviets a French theatre for children in which she gave often fairy stories, but she was later stopped; the other by Mme. Nina Gourfinkle, *Le Théâtre russe contemporain*. Before the end of the year, Lugne Poë, the well-known theatrical manager gave in book form his *Mémoires* which had appeared serially, under the title *Acrobaties ou le sot du tremplin*.

FICTION. Here are, first, the novels which were awarded valuable prizes: The "Grand Prix lit-

éraire" of the French Academy went to a man who was mostly a novelist, Raymond Escholier, author of *Catégorie*, and this year of *Herbe d'amour* (scene in Ariège). The "Grand Prix du roman," also of the French Academy, to Henri Pourrat, who with *La Tour du Levant* ended his delightful series of four stories of Gaspard, the free and sympathetic vagabond of Auvergne. Late December is the great season for these awards, and the following were announced; "Prix Goncourt," Jean Fayard (the son of the publisher) for his novel *Mal d'amour*, a psychological study of after-war youth who has treated love too lightly, while perhaps it had been taken too seriously before. (Fayard had attracted attention eight years previously with *Oxford et Margaret*, written after his stay as a student at Oxford.) The "Prix Femina" went to Antoine de Saint-Exupéry, the French "Lindbergh," who after having served as postal pilot in Africa (Casablanca-Dankar line), then in South America, then again in Africa, wrote first *Nord-Midi*, and now *Vol de nuit*, hailed by the press as the real aviation novel. The "Prix Renaudot" went to Ph. Hériat, for *L'innocent*, a story of a somewhat morbid nature reminding of Chateaubriand's *René*; it was the first book by this author who is well known, however, on the stage and on the screen.

The "Prix du premier roman" to Mme. Nabert-Neis for *La cavalier de la mer*. The "Prix de littérature régionale" to Maurice Pottecher, the founder of the famous open-air theatre of Bus-sang, 35 years ago. The "Prix de littérature sportive," to Henry Decoin, for *J. E. M. et Quinze rounds*. The "Prix Interallié" to Pierre Bost, for *Le scandale*. The "Prix de la Renaissance" to Joseph Peyré, for *L'escadron blanc*. One of the most discussed was the "Prix du roman populiste," which went to Eugène Dabit for *Hôtel du nord*—with much regret that it could not be given to Henriette Waltz too, author of *Cœur de ma rue*. Against expectations this "littérature populiste" seemed to hold its own. It had been launched two years previously by a manifest of Léon Lemonnier (pub. by *Le centaure*, 157 Boul. St. Germain), and a volume on this "roman populiste" by the same author came out in 1931: they want "la vérité sans romanesque," being particularly anxious to be distinguished from Zolaism of old: "Nous en avons assez de la littérature snob"; and "Nous croyons que le peuple offre une matière romanesque très riche et à peu près neuve."

They succeeded in winning over to their camp André Thérive, who has since become the literary critic of *Le Temps*, and who himself wrote two "populist" novels, *Sans âme* and *Le charbon ardent*. Other novels of that school that made hits were: Lemonnier's *Les destins sont solitaires*; Louis Chaffurin, *Pique-puce*; Louis Guillaux, *Maison du peuple*; and especially Cécile Lothe's *La petite fille aux mains sales* (1930).

To pick out from the flood of novels of the year those that are more deserving is no easy task. Here are some that received most praise: Jacques Chardonne, *Olaire*, a woman who considers that her own happiness lies entirely in her husband's happiness, a theme which although odd in our days is strongly brought out. J. Kessel, *Le coup de grâce*; after three years this author comes again before the public with a novel; the theme is that of a chief in Beirut, who is worshipped by one sergeant until the

latter discovers that the magnificent officer is like wax in the hands of a woman—who happens to be his own mistress; then he despises his former idol, but finally kills the woman. J. Schlumberger, the financier of the *Nouvelle Revue Française*, in his *Saint Saturnin* (the name of a domain) pictures a man who is seriously unbalanced in his old age, and who threatens, by his senile acts, the prosperity of his family. Georges Lecomte, of the French Academy, in *Forces d'amour*, shows the hard struggle between evil forces in society and sound elements—the latter finally triumphing. The same may be said of P. Bourget's *La rechute*; once more this author admirably states the reasonings of modern ethics, but only to show how misleading they really are. R. Bazin echoes the same views in *Magnificat*, the story of an ecclesiastical vocation prompted by the war: the Church alone can solve the social problems, "the social question is a religious question."

We remain among Academicians with Abel Hermant, who, in *Lincoln de pourpre*, ridicules snobs who believe they have buried the old human love in a "crimson shroud"; and also Henry Bordeaux, who in *Murder Party* borrows the plot of his novel from the well-known American parlor game, but the game turns out to be a case of a real murder. Thierry Sandre in *Monseigneur Jules* has a "Topaze" case in a novel: a very humble man who rises to a very high social position. Henri Duvernois in two novels of a rather different nature develops a theme familiar with him, viz. that woman is a combination of kindness and of cruelty; rather amusing is his story of *La poule* (the "poule" being a father blessed with five daughters who finally find their mates); and rather clever is the story of two sisters who look so much alike that odd and sometimes embarrassing confusions are brought about: *Les Sœurs Hortensias*. The "éternel féminin" is further discussed by E. Pérochon, who created a sister to his famous Nène—*Marie-Rose Méchain*, an honest, pure girl, who lives in a mean and heartless bourgeois milieu, undergoes the most painful experiences, and finally finds some relief in devoting her life to the education of an orphan; by André Cortis in *Soledad*—a mother and her daughter desire the same man, and neither shall have him; by Serge de Chessin (a new name in literature) whose *Sora* draws a picture of three Swedish girls, all of the modern type; in two novels by women very unkind to their own sex: *Le maléfice*, by Margerite Jouve, and *L'Ennemie intime*, by Marcel Tinayre—the latter one of the best novels of the year.

Germaine Acremant continues to hold up to ridicule the provincial women in *Une petite qui voit grand*. One of the most painful, but powerful of these novels dealing with psychology of women is Auguste Bailly's *Le figuier maudit*; the title is sufficient indication of the sort of women he describes. Jean Vignaud's *Le huitième péché* attracted quite a little attention; it is a case of "narcissism," i.e. the sin of physical self adoration in an actress. J. H. Roemy, aîné, in *Helgør du Fleuve bleu* depicts love in prehistoric man (as he had done in *Vamirch*); while Miriam Harry in *Amina, ma colombe* has another of her oriental love stories; Cl. Farrère, in *Le chef* tells the old story of a woman of high birth who is fascinated by an energetic communistic leader, the Portuguese Vasco Ortiago; and Nicolas Ségur in *La chair* discusses a puz-

zling case of modernistic love; the Belgian Franz Hellens publishes *Le rendez-vous dans une église*. Several modern "Renés" are offered: Pierre Bost, *Le scandale*, the most successful of those novels of discontented souls (mentioned above); Marcel Aymé, *Le vaurien*—"vaurien" because he does not fit in the milieu; Drieu de la Rochelle, *Le feu-follet*, the melancholy soul of the 1920; and Ph. Hériat, *L'innocent* (mentioned above).

One of the most popular novels of the end of the year, and suggested by many for one of the great literary prizes, was *L'escalier*, by Jean Pallu (a newcomer): the story of a globe trotter, having won and lost a fortune abroad, then coming back to Lyon, his native town, which he longed to see again; but, after having puzzled every one by his ways and talks, he disappears, having tasted too much again of the sedate life of most of us. P. Istrati gives another of his novels of the "sans patrie" in the Near East, *Taatsa-Minnka*. Constantin Weyer also continues to offer what his public had liked: *Napoléon Laronde* is a story of the woods of Canada. Blaise Cendrars keeps his faithful public with stories of tramps in the two hemispheres, this year it is *Rhum ou l'aventure de Jean Galmont*. Maurice Dekobra in *L'Ange aux pieds fourchus* tells the story of the son of an American millionaire, who gives up his millions and finds his destiny in saving from moral wreckage a beautiful Mexican woman. Maurice Larrouy has a new sea novel *Les sept sacrements*. R. Dieudonné has a sport novel *Frangins*; J. Jolinon, *Marie Bourgogne*, a peasant novel; H. Béraud, *Les lurons de Sabolas*, a provincial novel.

The reader who has seen previous YEAR BOOKS will see for himself that, thus, most of the novelists of prominence keep sounding each one his special note; he would see the same in many other cases, all of which, of course, space does not allow us to bring up. Let us end with a few novels of a more original character, M. Genevoix, *Rhœa*, the novel of a cat; Pierre Hamp, *Laine*, in which we are told all about textile industry in that special manner that has brought fame to the author; Colette Yver's *Vincent ou la solitude*, the story of a man ill of tuberculosis, and in this book Mme. Yver tells us of the sanatorium she herself has established at Passy-Praz-Coutant.

Two novels were what they call in France "romans judiciaires," one very painful and exciting, *La maison du quai*, by Gaston Chérau, of the Académie Goncourt, the other *Est-il sage, est-il fou?* by Leon Bopp with a keen analysis of what must be called a lie: A woman is accused of having assassinated a banker, her lover, to get his fortune; she is acquitted; but she admits to a friend that she drove the poor man to suicide by her intentionally exasperating behavior.

Our last group is of novels dealing with themes belonging, some more some less, to the realm of the mysterious or of the infinitely subtle: André Maurois in his *Pescor d'âmes* describes a scientific experiment as indicated by the title; Robert Poulet, in *Handji*, shows two men in love with an imaginary woman, and in *Le Trottoir* a man in love with what does not really exist in a woman; André Malvil in *La grande ourse* gives the story of a conversion and of a man haunted by the idea of death; he had lived an absurd life which caused the death of the woman

he loved and he now worshiped her after death like Auguste Comte Cl. de Vaux; M. Magre in *Sang de Toulouse* paints the courteous and Platonic, although passionate, love of the twelfth century; Julien Green in *L'autre sommeil* asks whether what we consider life is real or whether it is not during our sleep that we lead a real life; Pierre Descaves and Etienne Gril in *Hans le fossoyeur* wrote a striking novel placed in Bavaria in which the horrid—morally horrid specially—reaches terrible depth; Mme. Dominique André in *Le baiser froid* reminds one by her perverse stories of some of the tales which made Rachilde famous years ago; Pierre Herbart in *Le Rôdeur* presents a man of the type of Duhamel's *Salavin*, out of place in this world, really quite insane but not enough to be locked in, using drugs, finally a complete human wreck and dying a strange death; Jean Cassou in *Comme une grande image* also depicts beings who cannot live in our conventional world; the hero of the story goes to Africa as a missionary, but he does not quite know himself whether he worships God or love.

**SHORT STORIES.** Some of the best collections of short stories are: Cl. Farrère, *Sharâ la Sultane* (the first story is a reconstitution of the sultana of the Arabian Nights); H. Duvernois, *Jeanne*; Guy Chantepleure, *Le cœur désire*; G. Chéreau, *Les cercles du printemps*; M. Prévoist, *L'Américain* (title of the first novel of a South American); René Benjamin, *La dernière nuit*, (some harrowing stories of the French Revolution); Franz Hellens, the young Belgian novelist, *Les filles du désir*.

**VARIOUS ITEMS.** The beginning of the year 1931 was marked by a remarkable little crop of war books, all of them showing plainly, each in its own way, that the time had come when ideas of narrow partisanship had gone for ever. One of the most successful and impressive was Florian Parmentier's *La mort casquée ou La paix à l'ombre de la guerre*, which revives the remembrance of the great sufferings; another also with a novel intrigue woven into it was Gaston Baudouin's *Les centurions* which stresses the psychological analysis; André Thérive mixes a good deal of irony in what are for him very realistic souvenirs in *Noir et Or*; finally a new edition, not censored, was given of one of the most striking of the war books in 1917, Albert Erlanger's *La légion étrangère*. Later in the year appeared Tocaben's *Virilité*, and G. Chevalier's *La peur*, both stressing the "Barbussian" attitude, of the soldier who sees the atrociousness of war and denies any trace of heroism in the war.

Albert Jamet gives *La Guerre vue par un paysan*; and very pathetic is Fernand Lequenne's *Ici reposent des enfants*—the stories of children having spent their early years in the heavy atmosphere of the invaded provinces. Two volumes are intended as pacifist propaganda, one an abridged edition of N. Cru's *Du témoignage*, and V. Margueritte, *La patrie humaine*. On the stage was seen *Fraternité* by Girard and Fleuret. Perhaps here would be the place to mention P. Mac-Orlan's *La Bandera*, an account of the Spanish Foreign Legion.

Exotism or travel books continued numerous. Duhamel took advantage of his *Géographie cordiale* to qualify his harsh statements on America; H. Béraud gave his observations on *Émeutes en Espagne*; Abel Bonnard wrote on *Rome*; J.

de Lacretelle on Greece in *Demi-Dieu*; Ossendowski on the world of the Tropics in *Esclaves du soleil*; G. Oudard on Louisiana in *Vieille Amérique*; M. Dekobra on *Hollywood aux cent-mille sourires*, and Fabre-Luce on *A quoi rêve le monde*. The latter author indulges in considerable philosophical discussions of the destinies of the world. More attention, however, was paid to the striking *Regards sur le monde* by Paul Valéry (the Bertrand Russell of France). Let us not forget *Aujourd'hui* by the globe-trotter Blaise Cendrars.

Of a different inspiration are Fr. Mauriac's *Souffrances et bonheur du chrétien*, and the tale of conversion by René Schwob in *Moi Juif*. Francis Carco writes on social questions in *Prisons de femmes*, and J. Cocteau in *Opium*. Ch. Oulmont discusses *M. Jourdain, école du snobisme*; and G. Bernanos *La grande peur des bien pensants*. Under the heading of *Mémoires* we had: Pierre Mille, *Mes trônes et mes dominations* (interesting peoples he met in his traveling); Paul Morand *Dix-neuf Cent* (reviving the generation of 30 years ago); H. Duvernois, *Apprentis-sages* (how he became a writer); and the memoirs of the great fashionable tailor, Paul Poiret, *En habillant l'époque*.

Some of the best biographies follow: Maurois, *Lyautey*, and *Tourgueneff*; Stéphane Zweig, *Fouché*; G. Monly, *Vie prodigieuse de Victorien Sardou*; B. Faÿ, *Franklin* (his Washington had not appeared in French yet). Very notable was Bainville's *Napoléon*. Here may be added Armand Praviel's *Le secret de la Brinvilliers*. In the collection "Les nuits": Kessel, *Les nuits de Sibérie*; M. Harry, *Les nuits de Jérusalem*; Ch. Maurras, *Les nuits de Provence*. In coll. "La femme à la page," Henriette Charasson, *La mère*.

**HISTORY OF LITERATURE AND CRITICISM.** While the much heralded *Grammaire de l'Académie* by A. Hermant was not published at the end of the year, the two first installments of the new (8th) edition of the *Dictionnaire de l'Académie Française* were (the first edition was of 1694); there will be eight installments due each May and November.

The interest in medieval literature, so great for many years, seemed decidedly to give way before more modern topics; except an *Anthologie des Troubadours*, by André Berry, with excellent translations, there were no publications that might interest outside of scholarly circles. From the XVth century on, we list the following: Faguet, *Histoire de la poésie française de la Renaissance au Romantisme* (vol. v, posthumous); Pierre Jourdan, *Marie d'Angoulême, reine de Navarre* (2 volumes); and Jean Platard, *Agrippa d'Aubigné, une figure de premier plan*; Saint-Simon, *Mémoires* (vols. 42 and 43 of the great coll. "Grands écrivains de France," they are the tables of contents and indexes); Lanson, *Le Marquis de Vauvenargues*; Diderot, several volumes of most important *Lettres inédites* published by Barbelon; Paul Chapounière, *Voltaire chez les Calvinistes*; Pierre Trahard, *Maîtres de la sensibilité au XVIII<sup>e</sup> siècle*; Henri Pourrat, *Le bosquet pastoral* (esp. Florian and Bernardin de Saint-Pierre); Paul Van Tieghem, second vol. of his *Préromantisme*; Henri Tronchon, *Romantisme et Préromantisme*; Mlle. Engel, *Littérature alpestre en France et en Angleterre au XVIII<sup>e</sup> et XIX<sup>e</sup> siècles*; a collective publication on *Vie parisienne à l'époque romantique* (lectures at the Musée Carnavalet by such authori-

ties as Funck-Brentano, Bidou, Mme. Pailleron, etc.); Henry Bérenger, *Chateaubriand* (coll. "Figures du passé"); Mme. Pailleron, *Mme. de Staël* (coll. "Les romantiques"); Comtesse Jehan de Pange (descendant of Mme. de Staël), *Monsieur de Staël*; Marguerite-Henri Rosier, *Vie de Charles Nodier*; A. Thibaudet, *Stendhal*; Valléry-Radot, *Lamennais ou le prêtre malgré lui*; Fréjaville, *Méditations de Lamartine* (coll. "Grands événements"); V. A. Summers, *Orientalisme de Vigny*; Milatchich (a Serbian), *Le Théâtre de Balzac* (2 vols.); Dr. René Laforgue, *L'écho de Baudelaire*, étude psychologique (in which will be seen what happens when physicians try to become literary critics); Villiers de l'Isle Adam, *Œuvres complètes* published by *Mercure de France*.

There were also three books on Zola: by Marcel Bastillat, by Bertrand de Jouvenel, and by his own daughter, Mme. Denise Leblond (*E. Z. Raconté par sa fille*); then a volume on *L'assomoir*, by Duffaux ("Grands événements litt."); A. Bailly, *Mueterlinck* (coll. "Visages contemporains"), said to be an answer to Mme. Georgette Lablanc's *Souvenirs, 1895-1918*; Dumesnil, *En route by Huysmans* (coll. "Grands événements litt."); Gilbert de Voisins, *François de Curel*; Jean de Cours, *Vielé-Griffin, vie et œuvres*; R. de Billy, *Marcel Proust*; Mme. Israël, *Jules Romains*; Jean Larnac, *Ctesse de Noailles*; Valéry Larbaud, *Paul Valéry*; Eug. Marsan, *Instances* (literary impressions showing that the prejudice against Romanticism is not dead everywhere yet). Let us also mention *Les conventions du théâtre bourgeois 1887-1914*, by Clifford Bissel of the University of California; and *Cent ans de littérature en Belgique*, by G. Doutrepont.

LITERARY EVENTS. Various "Prix littéraires" have been recorded above; there remains only to note the "Prix Lasserre" of 10,000 francs awarded to Jean Royère, founder in 1905 of *La Phalange* which gives an excellent idea of the evolution of poetical taste in France since that year; he is also the author of a recent book on *Mallarmé*. Without much enthusiasm the centenaries of *Marion de Lorme*, and of V. Sardou and of "Joseph prudhomme" were commemorated.

Among the dead were: Claude Anet, author of *Ariane, jeune fille russe*; Ch. Géniaux, author of *Passion d'Armelle Louanais*, the playwright Nozière; Kr. Nyrop, the great philologist; the critic Gaston Deschamps; Professor Le Breton, of the Sorbonne. There were elected to the French Academy: Général Weygand (the seat of Joffre) and Pierre Benoit (seat of Porto-Riche). An "Académie féminine des Lettres" was inaugurated in April, and expected to offer a "Prix Wailly" (the name of the lady who gave the foundation).

FRENCH PAINTING. See ART EXHIBITIONS.

FRENCH SOMALI (sō-mī'lē) COAST, or FRENCH SOMALILAND. A French colony in East Africa on the Gulf of Aden between Italian Eritrea and British Somaliland. Estimated area, 5790 square miles; estimated population in 1928, 85,778, including about 550 Europeans. The port of Djibouti (population, 9414 in 1928) is the capital. The coast fisheries, salt mines, and inland trade are the chief sources of livelihood. Trade in 1927, most of it in transit to or from Ethiopia (q.v.) consisted of: Imports, 467,751,000 francs; exports, 513,383,000 francs (1 franc

equals \$0.0392 at par). In the same year 556 steamers of 2,452,764 tons entered the ports. There is a railway from Djibouti to Addis Ababa, the Ethiopian capital, a distance of 485 miles. The local budget for 1928 balanced at 13,002,000 francs. The colony is under a governor assisted by an administrative council. Governor in 1931, M. Chapon-Baissac (appointed in 1924).

FRENCH SUDAN. A French colony forming part of French West Africa. Area, estimated at 300,331 square miles; population, estimated at 2,632,618 in 1927. The capital is Bamako, with 17,184 inhabitants. Imports in 1929 amounted to 74,599,909 francs; exports, 75,499,350 francs (1 franc equalled \$0.0392 at par). The 1930 budget balanced at 74,263,000 francs. There is a railway connection with the coast over a line of 760 miles in length. The government is administered by a lieutenant-governor under the governor-general of FRENCH WEST AFRICA (q.v.).

FRENCH WEST AFRICA. An African colonial possession of France, comprising the Atlantic coast colonies of Mauritania, Senegal, French Guinea, and the Ivory Coast, Dahomey on the Gulf of Guinea, and the interior colonies of French Sudan, Upper Volta, and the Territory of the Niger.

AREA AND POPULATION. It includes the river basin of the Senegal, nearly all the upper and middle Niger Basin, the basin of a large number of rivers emptying into the Gulf of Guinea, and the southern part of the Sahara region. Area, 1,247,191 square miles; population in 1926, 13,541,611, as compared with a total area of all the French protectorates and mandated territories of 3,958,626 square miles and a total population of 55,631,184. The European population totaled 15,399 (11,099 French). The area and population of the respective colonies in 1926 were: Senegal, 74,112 square miles and 1,318,287 inhabitants; French Guinea, 89,436 and 2,095,988; Ivory Coast, 121,590 and 1,724,545; Dahomey, 41,302 and 979,609; French Sudan, 360,331 and 2,634,982; Upper Volta, 142,820 and 3,240,147; Mauritania, 347,400 and 289,184; Niger Territory, 463,200 and 1,218,717. Dakar, the capital, forming with its surroundings suburbs a separate administrative district, had a population of 40,152. The Ouolofs in Senegal, the Mandingos in the Sudan, the Mossi in Upper Volta, and the Kroumen on the Ivory Coast are the leading tribes.

EDUCATION. In 1928-29, there were 567 public elementary, higher primary, and technical schools, with 39,252 pupils; 63 private schools, with 6478 pupils; and three higher technical schools and 2 Lycées, with a total of 701 students. Expenditure on education was 20,394,675 francs.

PRODUCTION, ETC. Cacao and cotton, with a production of 16,347 and 4120 tons, respectively, in 1929, and ground-nuts are the principal agricultural products, others being palm kernels, palm oil, guins, and crude rubber. Hardwoods and hides are also produced, together with such native crops as millet, maize, rice. Stock raising is extensively carried on. Imports in 1929 were valued at 1,532,476,857 francs and exports at 1,328,286,117 francs (1 franc equals \$0.0392 at par). France supplied 741,783,373 francs of the imports and took 677,611,993 francs of the exports. The budget for 1930 balanced at a total of 1,000,809,284 francs, of which 319,019,000 francs constituted the general budget for French

West Africa, 515,306,284 francs the aggregate of local budgets, and 166,484,000 francs the supplementary budgets. Railway lines in operation in 1930 aggregated 1957 miles, with 557 miles under construction. There were 14,386 miles of telegraph line. A total of 22,898 vessels of 20,777,081 tons entered and cleared the ports in 1929.

**GOVERNMENT.** A governor-general, assisted by a council, administers the entire territory from Dakar. Each colony is under a lieutenant-governor subordinate to the governor-general. A military force of 16,600 men, including 3000 Europeans, is maintained in peace time. Governor-general in 1931, M. J. Brévié, appointed 1930. See **SENEGAL**, **IVORY COAST**, **FRENCH GUINEA**, **DAHOMY**, **FRENCH SUDAN**, **UPPER VOLTA**, and **NIGER**.

**FREUDIAN STUDIES.** See **PSYCHOLOGY**.

**FRICK COLLECTIONS.** See **ART MUSEUMS**.

**FRIEDSAM COLLECTION.** See **ART MUSEUMS**.

**FRIENDLY ISLANDS.** See **TONGA**.

**FRIENDS, RELIGIOUS SOCIETY OF.** A mystical religious sect which originated in England in the middle of the seventeenth century. The founder of the society was George Fox who visited America in 1672. The first Yearly Meeting in the United States was held in Newport, R. I., in 1661 and has been continued under the name of New England Yearly Meeting. Others established within the next 40 years were the Baltimore, Philadelphia, New York, and North Carolina Yearly Meetings; they are composed of quarterly and monthly meetings having one or more congregations. In the nineteenth century other meetings were formed as migration moved westward.

**FIVE YEARS' MEETING.** In 1902 the largest body of the Religious Society of Friends, known as the Orthodox Group, organized the Five Years' Meeting. This organization meets as a delegate body every five years and in 1931 consisted of 12 yearly meetings, with a membership of approximately 80,000. Its headquarters are in Richmond, Ind. The work of the various departments, such as missions, peace, prohibition and public morals, religious education, is under the direction of executive committees and secretaries of boards. The Five Years' Meeting also maintains seven colleges for higher education: Earlham in Richmond, Ind.; Penn in Oskaaloosa, Iowa; Guilford in Guilford, N. C.; Wilmington in Wilmington, Ohio; Whittier in Whittier, Calif.; Nebraska Central in Central City, Nebr.; and Friends University in Wichita, Kans. Haverford College in Haverford, Pa., is maintained by the Philadelphia Yearly Meeting and Pacific College in Newberg, Ore., by the Oregon Yearly Meeting. The latter bodies, however, and the Ohio Yearly Meeting are not a part of the Five Years' Meeting. In 1931 the membership of the Oregon Yearly Meeting was 3172; of the Ohio Yearly Meeting, 5594; and of the Philadelphia Yearly Meeting (Orthodox), 4705. *The American Friend*, a weekly religious journal, is published at headquarters, as is also literature for the Bible schools of the Five Years' Meeting.

**LIBERAL BRANCH.** This branch was formed in 1827 as the result of a separation which centred around the doctrinal issues of the day and with which the name of Elias Hicks is associated. The Liberal Branch includes seven Yearly Meet-

ings federated in the Friends' General Conference which meets in even numbered years and conducts work in religious education, social service, and advancement of Friends' principles. The society emphasizes the freedom of the individual to follow the voice of God in his own soul rather than any individual or church authority. The membership in 1931 was 16,586, and there were 134 meetings. Publications include the weekly periodical, *Friends' Intelligencer*, and a monthly magazine for children, *Scattered Seeds*. The society conducts several secondary schools, and Swarthmore College in Swarthmore, Pa., was founded by it.

**FROMKES, MAURICE.** An American painter, died in Paris, France, Sept. 17, 1931. He was born in Poland Feb. 19, 1872, and was brought to the United States at the age of eight. He studied painting at Cooper Union and at the National Academy of Design. During his travels in Italy in 1904 he painted a portrait of Raphael, Cardinal Merry del Val, then Papal Secretary of State, which was hung in the Vatican. Among his other portraits were those of Sir Edward Elgar, the British composer, and Maurice Renaud, the French dramatic tenor. During 1920-24 he traveled in Spain where he won high praise for his pictures of Spanish subjects and was invited to exhibit at the National Museum of Modern Art in Madrid.

His later works include: "Madonna of the Road" in the permanent exhibition of the National Museum of Modern Art, Madrid; "Jacinto and Her Family" in the Albright Gallery, Buffalo; "A Spanish Mother" in the Rhode Island School of Design, Providence; "Little Carmen of the Hills" in the Duncan Phillips Memorial Gallery, Washington, D. C.; and "Adoration of Pepito" at the Randolph-Macon Women's College, Lynchburg, Va. He also was represented at the Delgado Museum and the H. Sophie Newcomb College for Women, New Orleans, La. Among the awards which he received were the Isidor portrait prize of the Salmagundi Club of New York (1908) and diploma of honor at the International Exposition of Fine Arts, Bordeaux, France (1927). He was elected an associate member of the National Academy of Design in 1927.

**GAMBIA.** A British Crown colony and protectorate on the West African coast, bounded on all land sides by the French colony of Senegal (q.v.). Area of the colony, 4 square miles; population, about 10,000 in 1921. Capital, Bathurst (population 1927 in 1921). In 1929 imports totaled £617,852; exports, £844,760; revenue, £235,265; expenditure, £289,506. A total of 565 vessels of 1,280,888 tons entered and cleared in 1929. The governor is assisted by an executive

council and a nominated legislative council containing an unofficial element. Governor in 1931, Herbert R. Palmer, appointed in 1930.

**GANDHI, MOHANDAS KARAMCHAND.** See INDIA under *History*.

#### **GARBAGE AND REFUSE DISPOSAL.**

Incineration as a means of final disposal of municipal garbage and refuse continued to gain, although reduction of garbage alone for the recovery of fertilizer base was still practiced in a number of large cities while feeding to hogs was a common method of disposal. The bulk of garbage and refuse produced by American cities large and small was still disposed of by dumping on land and covering with ashes or clean earth ("sanitary fill") or by more or less indiscriminate dumping with little attempt to keep the dumps in a sanitary condition. Dumping at sea, resumed by New York City as an emergency measure in 1919 after having been abandoned for many years, was enjoined by an order of the United States Supreme Court late in 1931 hastening the city's programme for building a sufficient number of incinerators to consume all the garbage and refuse of the city. The suit was brought by the State of New Jersey to protect its many seaside resorts from alleged nuisance caused by the casting up of garbage and refuse on the beaches and the spoiling of adjacent waters used for bathing purposes. The court upheld New Jersey's contention that a nuisance was being created. The master who took evidence in the case advised that all dumping at sea be stopped by June 1, 1933. This, he reported, would require the construction of 14 incinerators in addition to the 22 already in use in various parts of New York City. Preliminary steps to build four of the additional incinerators, each with a capacity of 750 tons, were taken by the city authorities late in the year. The estimated cost of the 14 incinerators is about \$17,000,000, not including the purchase of sites. Completion of the city's programme by June 1, 1933, would give sufficient incinerator capacity, it is estimated, to last until 1945.

An innovation in preparing plans for garbage and refuse incinerators was introduced during the year in the District of Columbia and resulted in material reduction in bids for the construction of two proposed incinerators. General practice in the past had been for municipalities to invite bids on general plans and specifications and require each bidder to submit detailed plans. In accordance with this practice, the District of Columbia employed a prominent consulting engineer to draw up general plans and specifications for two incinerators. After receipt of bids under these general plans, the Comptroller General of the United States ruled that it would be illegal to award a contract where bidders submitted their own plans, leaving the award officer to decide whether or not the plans conformed with the specifications drawn by the consulting engineer. Thereupon the District offices directed the consulting engineer to prepare detailed plans and complete specifications so that each bidder would base his price on identical design and contract conditions. This threw the bidding open to general contractors as well as to concerns engaged in building incinerators and largely increased the number of bids. Under the changed conditions, the lowest bid for the 425-ton incinerator, complete with buildings but not includ-

ing the site, was \$321,000 compared with the earlier bid of \$399,000 while for the 170-ton incinerator the lowest bid was \$169,000 compared with \$181,000. Both of these lowest bids were from general contractors. These incinerators will not burn garbage but will take paper and rubbish.

In Canada the city of Montreal was carrying out a programme for the construction of three incinerators, each with a capacity of 300 tons. One of these was completed in 1930 at a cost of \$320,000 and the second in 1931 at a cost of \$400,000. The second plant is erected on the site of an incinerator built in 1894 and destroyed by fire in 1920. Construction of the third incinerator was still in the early project stage.

A recently published German book on refuse disposal was Popp, *Die Festen Stadtischen Abfallstoffe* (Munich).

**GARDENS.** See HORTICULTURE.

**GARMENT TRADES.** See STRIKES AND LOCKOUTS.

**GARRETSON, AUSTIN BRUCE.** An American labor leader, died in Cedar Rapids, Iowa, Feb. 27, 1931. He was born in Winteret, Iowa, Sept. 14, 1856. After serving as a conductor on various railroads until 1889, he became vice president of the Order of Railway Conductors, and in 1906 was elected president. He also became president of the mutual-benefit department of the order, editor-in-chief of the *Railway Conductor*, and a member of the executive committee of the National Civic Federation. During 1912-15 he was a member of the Federal Commission on Industrial Relations. He was one of the leaders of the threatened railroad strike of 1913, which was successfully arbitrated, and in 1916 helped to avert a nation-wide strike when Congress was forced to pass the eight-hour bill, acceptable to President Wilson and to the representatives of the four railroad brotherhoods.

**GARVAN SCHOLARSHIP.** See UNIVERSITIES AND COLLEGES.

**GAS, ILLUMINATING AND FUEL.** Notwithstanding the decline in revenues during the year 1931, statistics of the Gas Business in the U. S. indicated growth and expansion, particularly in the number of domestic consumers, the number of communities served, and the general enlargement and improvement of service. According to the preliminary estimates of the American Gas Association's Statistical Department, revenues from manufactured gas in 1931 aggregated about \$441,900,000. This was a decrease of 2.8 per cent from 1930 figures, and total sales of manufactured gas to consumers registered a decline of about 2.5 per cent, but an outstanding exception to the general trend was a marked increase shown in the use of gas for house-heating purposes which amounted to 22,200,000,000 cu. ft. In 1930, sales of manufactured gas for house-heating purposes were 18,600,000,000 cu. ft., an increase of nearly 20 per cent. The natural gas sales for domestic and commercial purposes suffered a relatively small decline amounting to less than 2 per cent, although such sales for industrial purposes registered a decline of about 15 per cent. In addition to the decline in ordinary industrial sales, the amount of natural gas used for non-utility purposes, including the manufacture of carbon black and that consumed in oil and gas field operations, declined approximately 28 per cent, with the result that the entire consumption of natural gas for all purposes during

1931 was estimated at about 20 per cent under the corresponding figure for 1930. Many large communities in the United States formerly served with manufactured gas, by 1931 were being supplied with natural gas alone or a mixture of the two gases.

More than \$300,000,000, however, was invested in 1931 in the construction of long-distance natural gas pipelines, and this expenditure mostly for pipe averted a much greater loss in the iron and steel industries. The largest of the pipeline projects completed or in progress during 1930 was the Texas-Chicago pipeline of the Cities Service, Middle West Utilities, Standard Oil of New Jersey and Texas Corporation group extending 960 miles from the Texas Panhandle to the city limits of Chicago, completed September 1 at an estimated cost of \$75,000,000. About the same time at a cost of nearly \$40,000,000 the Texas-Indiana pipeline of the Columbia Gas and Electric and the Missouri-Kansas Pipe Line Company extending 857 miles from the Texas Panhandle to Muncie, Ind., was completed.

There was also built during the year at a cost of \$30,000,000, the 219-mile Northern Natural Gas pipeline owned by the United Light and Power, North American Light and Power, and Lone Star Gas Companies, running from Kansas to Mason City, Iowa, with spurs to Sioux City, Iowa, and Omaha, Nebraska, including connecting lines and a connecting trunk to the Texas Panhandle. Plans were prepared calling for extension of this system to Minneapolis and St. Paul from Mason City, Iowa, into South Dakota from Sioux City and elsewhere. The Kentucky-Pennsylvania pipeline of the Columbia Gas and Electric and the Standard Oil of New Jersey, extending nearly 500 miles via West Virginia, Virginia, and Maryland was completed November 15 at a cost of about \$15,000,000. See GAS, NATURAL.

The American Gas Association, in 1920, adopted a five-year programme of Association activities, prepared by a committee of executives headed by George B. Cortelyou, president of the Consolidated Gas Company of New York. This plan was adhered to consistently and the association in 1931 entered upon a revised plan of activities for the second five-year period.

During the year, the National Bureau of Standards issued Circular C 394, "Design of Gas Burner for Domestic Use," which gave general information regarding the action of, and most favorable design for burners of the type commonly employed in domestic and some industrial applications.

**GAS, NATURAL.** The total production of natural gas in the United States during 1930 amounted to 1,943,421,000,000 cubic feet, an increase over 1929 of 25,827,000,000 cubic feet, or 1.3 per cent. This total does not include the quantity of gas blown into the air in flush oil fields. Although the natural gas industry in 1930 fell far short of repeating the expansion of 1929, it established a new high production record. The 1930 production represented a creditable showing in view of the curtailment in the production of crude petroleum. Exports of natural gas to Canada and Mexico in 1930 amounted to 1,798,000,000 cubic feet, a material increase over the previous year. This resulted chiefly from increased deliveries to Mexico following the completion of the pipeline from the Jennings field in Texas to Monterrey. During

the year, 21,000,000 cubic feet of natural gas were piped into Montana from Canada.

The quantity of gas treated for the recovery of natural gasoline in 1930 amounted to 2,088,788,000,000 cubic feet, or 107 per cent of the quantity produced and delivered to consumers. The average prices of natural gas at the wells continued to decline and in 1930 amounted to 7.6 cents per thousand cubic feet as compared with an average of 8.2 cents in 1929. This decline in natural gas prices at the wells was reflected in the prices paid by the largest users, the industrial consumers, who paid an average of 11.3 cents in 1930 as compared with 12.2 cents in 1929.

Texas, the leading natural gas producing State in 1929, strengthened its hold on first place in 1930 when its output was 517,880,000,000 cubic feet, an increase over the previous year of 11 per cent. This gain was due principally to increased output from the Panhandle, the starting point for the majority of the large pipeline systems which originate in the State. Production in Oklahoma, the second-ranking State, showed a small decrease in 1930 as the decline in output of the Seminole district exceeded the gain in the Oklahoma City field. California also reported a slight decline in natural gas production in 1930; this resulted chiefly from the natural decline of the oil fields and the small number of new discoveries. Production in Louisiana increased in 1930 as an aftermath to the expansion of pipeline systems originating in the Monroe and Richland fields. Some of the States reported material declines in output of natural gas in 1930; the most notable were West Virginia and Pennsylvania, which ranked fifth and sixth, respectively. Production in Michigan in 1930 was less than half the 1929 total, evidence of the rapid decline of the Muskegon field and the failure of drilling to uncover other sources of supply.

Because of the curtailment in drilling, the number of gas discoveries in 1930 undoubtedly fell below the 1929 total. However, the number of gas wells completed was practically the same for the two years—2866 in 1930 as compared with 2870 in 1929. The total initial production of the 1930 completions probably constituted a new record as an increasing proportion of the wells was drilled with the object of establishing a gas reserve to insure the operation of the various large pipeline systems. The possibilities of Kentucky as an important source of supply were seriously considered and the number of gas wells brought in during 1930 was practically double the 1929 completions. A substantial gas reserve was set up in the Hugoton field of southwest Kansas through the completion of approximately 80 wells in 1930. This field was to be used principally as a supplementary source of supply for several of the pipeline systems running north from the Texas Panhandle. The Jackson field of Mississippi came in for considerable development work in 1930 and a number of very large wells were completed. This reserve was to be used to supply the pipeline system running into Alabama and Georgia. The completion of comparatively large wells near Tioga, Pa., and Dundee, N. Y., in 1930, greatly increased interest in the possibility of pipeline supplying New York City and some of the industrial centres of New England with natural gas.

The total consumption of natural gas, computed by deducting exports to Canada and Mexico from the total of production and imports, amounted in 1930 to 1,941,644,000,000 cubic feet, an increase over 1929 of 1.3 per cent. Of the total consumption, 1,565,237,000,000 cubic feet, or 80 per cent, was consumed for industrial purposes, and 376,407,000,000 cubic feet, or 20 per cent, was utilized by domestic and commercial consumers. The number of domestic consumers of natural gas showed a material increase in 1930, although the gain was much less than that experienced in 1929. The number of domestic consumers in 1930 amounted to 5,448,000, an increase over 1929 of 350,000, or 7 per cent. Beginning with 1930, the classification of domestic consumers was divided into two classes, namely, the strictly domestic or home users, and commercial consumers, such as stores and shops. The number of strictly domestic users amounted to 5,095,500, the number of commercial consumers totaled 352,680, a ratio of about 14 to 1. The average consumption per domestic consumer continued to fall off and for 1930 amounted to 69,100 cubic feet as compared with 70,600 cubic feet in 1929. On the basis of the prevailing prices, each domestic customer paid an average of \$4.39 for natural gas in 1930, as compared with an average of \$4.38 in 1929. The increased cost in the face of a drop in the total used resulted from an increase in the average price. The gas burned by domestic and commercial consumers in 1930 had a total value of \$239,173,000, or an average of 63.5 cents per thousand cubic feet. This average price, the highest so far recorded, represented an increase of 1.5 cents over 1929. The strictly domestic users paid an average of 67.4 cents per thousand cubic feet in 1930, as compared with an average of 46.8 cents for the commercial consumers. The highest price recorded for the strictly domestic users in 1930 was \$1.417 per thousand cubic feet paid by consumers in Georgia; the lowest was \$0.446 per thousand, paid by Wyoming consumers.

The approximate number of producing gas wells, as of December 31, 1930, totaled 55,020, an increase over the previous year of 1475. The total number of gas wells completed in 1930 amounted to 2866, which indicates that there were about 1400 gas wells abandoned during the year.

The largest single interstate movement of gas, in a total of 380,600,000,000 cubic feet, was again that from West Virginia to Ohio, although the movement from Oklahoma to Kansas was almost as large. Other important interstate deliveries were those from Kansas to Missouri, from Kentucky to West Virginia, from Louisiana to Arkansas and Texas, from Texas to Colorado and Oklahoma, and from West Virginia to Pennsylvania. Louisiana and West Virginia have large quantities of excess gas over and above their consumption, hence the large interstate movement from these States.

**GAUTHIER-VILLARS, HENRY** (pseudonym, WILLY). French novelist, critic, and dramatist, died in Paris, Jan. 12, 1931. He was born in Villers-sur-Orge Aug. 10, 1859, and attended the lycée Condorcet. He was the first hus-

band of Mme. Gabrielle Colette with whom, under the name Colette-Willy, he collaborated between 1900 and 1903 in writing *Claudine à l'école*, *Claudine à Paris* (dramatized 1902), *Claudine en ménage*, and *Claudine s'en va*. He was also well-known as a music critic, contributing chiefly to the *Écho de Paris*. Among his works are: *Revue de sonnets* (1878); *Essais sur Marck Twain et sur les Parnassiens* (1882); *Noirées perdues* (1894); *Maitresse d'esthète* (1897); *Le Mariage de Louis XV* (1900); *Jeu de prince* (1906); *La Tournée du petit duc* (1908); *Le petit Roi de la forêt* (play, 1914); and *Do dièze* (1918).

**GAUVAIN, gô'vân', AUGUSTE.** A French journalist, died in Pau Apr. 18, 1931. He was born in Vesoul Oct. 6, 1851, and was educated in law at the University of Paris and at the École des Sciences Politiques. From 1887 to 1891 he was editorial secretary of the *Journal du droit international privé*; from 1893 to 1903, general secretary to the European Commission on the Danube; and from 1904 to 1908, French secretary to the Central Office of International Transport. In 1908 he became foreign editor of the powerful and conservative *Journal des Débats*. A member of the Academy of Moral and Political Sciences, Gauvain was a prolific writer on questions of current politics. His works include: *Les Origines de la guerre européenne* (1915); *L'Europe avant la guerre* (1917); *L'Afrique grecque* (1917); *La Question yougo-slave* (1918); *L'Encerclement de l'Allemagne* (1919); and *L'Europe au jour le jour*, beginning with the Bosnian crisis of 1908-09 and including the treaties of 1919 (14 vols., six of which were crowned by the Institute, 1917-23). Gauvain also wrote Books i and iii of the ninth volume of the *Histoire contemporaine de France* and frequently contributed to the French periodical press.

**GEOGRAPHICAL SOCIETY, AMERICAN.**

The oldest geographical society in the United States, founded in 1852, "to collect and disseminate geographical information by discussion, lectures, and publications; to establish in the chief city of the United States a place where may be obtained accurate information concerning every part of the globe; and to encourage such exploring expeditions as seem likely to result in valuable discoveries in geography and related sciences." Within recent years the society has taken an active part in the encouragement of exploration, the scientific work of Sir Hubert Wilkins in the Arctic and Antarctic and of Rear Admiral Richard E. Byrd in the Antarctic having been carried out under its auspices.

During 1931 the Shippee-Johnson Peruvian Expedition, sponsored by the society, photographed from the air the deep valley of the Colca River and studied the people and institutions of the valley, mapped the Chimu Valley, and discovered and photographed in the Santa Valley the remains of what appears to be a great defensive wall, believed to be a part of the Chimu fortifications against Inca invaders. During July and August Dr. Alexander Forbes of Harvard University carried out an expedition to Labrador in cooperation with Sir Wilfred Grenfell. This expedition, known as

the Grenfell Northern Labrador Expedition, was sponsored by the society, and O. M. Miller of the society's staff was topographer and in charge of surveys.

The society's periodical is the *Geographical Review*, a quarterly, in which appear original articles and notes dealing with exploration and geographical research and reviews of the more significant geographical books. The maps, books, and pamphlets issued by the society fall into six series: *Research Series*, comprising specialized monographs; *Special Publications*, having a more general appeal; *Library Series*, devoted primarily to the collections of the society; *Outing Series*, including trampers' guides entitled *The Palisades Interstate Park* and *New York Walk Book*; a map of Hispanic America published in conformity with the International Millionth Map of the World and accompanied by geographical monographs (this map will consist of 100 sheets, of which almost 50 have been completed); and *Oriental Explorations and Studies*, comprising six volumes on the explorations of Prof. Alois Musil in northern Arabia.

The society maintains a geographical library and sponsors six regular lectures annually by distinguished explorers or geographers. Contributions to the development of geographical science and exploration are recognized in the society's election to honorary and corresponding memberships and in the bestowal of medals. The David Livingstone Centenary Medal for scientific achievement in the field of geography of the southern hemisphere was awarded during 1931 to Capt. Hjalmar Riiser-Larsen for his work in the Antarctic on the *Norvegia* expedition in 1929-30. The Charles P. Daly Medal for valuable or distinguished geographical services was awarded in 1931 to Maj. Gunnar Isachsen, director of the Maritime Museum, Oslo, for his contribution to our knowledge of the polar regions. The president of the society in 1931 was John H. Finley, LL.D., and the director was Isaiah Bowman, Ph.D. Headquarters are at Broadway and 156th Street, New York City.

**GEOGRAPHIC SOCIETY, NATIONAL.** An organization for "the increase and diffusion of geographic knowledge," founded in 1888. During 1931 the Venezuela-Brazil expedition, under the leadership of Ernest G. Holt, returned from the region between Venezuela and Brazil with a comprehensive amount of scientific material and data. Working in conjunction with the official engineering party of the Venezuela-Brazil Boundary Commission, which had been marking the boundary between the two countries, they traveled up the Orinoco, through the Casiquiare Canal, and to the waters of the Amazon. During the 10-month period of this year's work 3000 specimens of birds were collected, and hundreds of mammals and plants brought back. A large number of photographs recording geographic features long disputed, scenic beauties, and types of natives were made. Of the more than 1000 birds presented by the society to the U. S. National Museum, it was estimated that 50 per cent were new to the collection. A grant of \$25,000 from its research fund was made by the society to the Citroën-Haardt Trans-Asiatic expedition. A study was made of the customs of obscure tribes, and the geography, archaeology, geology, zoölogy, and plant life of the territory traversed. One of the two units of the expedition was accompanied by Dr. Maynard Owen Williams

of the society's staff. The main unit operated from Beirut, through the Pamirs, and the other from Peiping, with Sinkiang as its common objective. On April 4 the Pamir unit left Beirut with a caravan of seven band-driven, tractor-type cars of special construction. It reached Bagdad in 12 days and a week later arrived at Teheran. It came to Kabul June 9, and June 24 reached Srinagar, by way of the famous Khyber Pass. At Srinagar word was received that almost unprecedented floods had undermined the bridges and destroyed the trail in so many places that it would be impossible to get the entire caravan through. Although no wheeled vehicle ever had passed over the road to Gilgit, two of the seven tractors pushed forward and reached there on August 4. News was received of the entire obliteration of the trail in the high Himalayas in so many places that the two tractors were left, and the journey to Sinkiang made afoot over the 15,000-foot Kilik Pass and the slightly lower Wakhjir Pass into northern Afghanistan. The Pamir unit united with the China unit, which had come inland from Peiping, at Kashgar. See EXPLORATION.

As a contribution to the George Washington Bicentennial, the society plotted the travels of the Father of His Country from the first surveying trip beyond the Blue Ridge in 1748 to his last journey to Philadelphia in 1798, and under a joint resolution of Congress cooperated with the U. S. Bicentennial Commission in the publication of a map showing these travels and a paper describing them. Washington's journeyings carried him from the vicinity of Lake Erie in Pennsylvania to the neighborhood of Point Pleasant, W. Va., and Gallipolis, Ohio, and from Savannah, Ga., to Kittery, Me., and Crown Point, N. Y.—a larger area in the United States than had been visited by any other official of that day.

The society also published the first photograph made that shows laterally the curvature of the earth. As aerial photographer of the National Geographic Society's Latin American Air Survey, Capt. Albert W. Stevens, U. S. Air Corps, photographed the Andes, including Mount Aconcagua, with a camera having a 20-inch focus and an infra-red filter, at a distance of 287 miles from an elevation of 21,000 feet. With this filter the snow-capped Andes became perfectly distinct in the photograph, although not visible to the photographer. So extensive was the mileage of the horizon within the camera's range, that the curvature of the earth clearly appears. It appears along as well as across the line of sight, for although Aconcagua is higher than the camera, the sensible horizon is much above it on account of the fact that the curvature of the earth is 54,900 feet in 287 miles, whereas Mount Aconcagua is only 23,098 feet high.

The Hubbard Gold Medal, the highest honor in the gift of the society, was awarded to Dr. Roy Chapman Andrews for the extraordinary work done in his series of expeditions in Central Asia. Fossils of prehistoric animals unearthed have carried knowledge of terrestrial life back to millions of years ago. The work of the society during the year, in the realization of its chartered object of diffusing geographic knowledge, continued along the lines of previous years. The geographic background of current events was covered by bulletins, issued to more than 550 larger daily newspapers and also to 1200 smaller dailies and weeklies. More than 40,000 school teachers

used the weekly bulletins issued as an aid in the preparation of their courses in geography. The map of Illinois was published, and maps of the Antarctic and Ohio were in preparation. The chief activity of the society continued to be the publication of the *National Geographic Magazine*, which is distributed to the 1,200,000 members of the society.

**GEOGRAPHY.** See EXPLORATION; POLAR RESEARCH; ANTHROPOLOGY.

**GEOLOGICAL SOCIETY OF AMERICA.** See GEOLOGY.

**GEOLOGY.** The literature of geology continued its growth throughout the year 1931 unabated. Many meetings and discussions were held while the professional journals and the Federal and State surveys continued to circulate the results of studies in new fields and problems, or those of old problems reexamined. The activity was so great and the character and scope of the results so varied that it is only possible to review briefly a few of the more important features.

All sciences have "border line" problems whose elucidation depends upon the correlated work of two or more separate branches of science. Geology has many such problems. It impinges upon the fields of chemistry, physics, biology, meteorology, geography, and astronomy. Some of these "border line" subjects have reached the status of separate sciences, namely geophysics, oceanography, and volcanology, but are most clearly related to geology and depend upon the joint work of different sciences.

The National Research Council was showing itself eminently fitted to the task of surveying these overlapping fields. Some of its bulletins, mentioned below, illustrate splendidly the results of such cooperation. Another impetus to co-ordinated work was furnished this year by the future 16th session of the International Geological Congress which was to be held in the United States in the spring of 1933. Many committees, under the direction of the U. S. Geological Survey, were preparing guide books and reports on the geology of various districts in the United States. Closely connected with this, a new geological map of the United States was being prepared. In this manner an immense amount of formerly scattered information soon would become available in concise form.

**SOCIETIES.** *The Geological Society of America* held its 43d annual meeting in Toronto, Can., at the University of Toronto on Dec. 29 to 31, 1930. Professor Alfred C. Lane was elected President for 1931. The third award of the Penrose Medal in recognition of eminent research in pure geology was made to François Antoine Alfred Lacroix of France, a corresponding member of the Society. In the enforced absence of the recipient the medal was received by M. C. Rocherau de la Sablière, the French consul at Toronto. The late Dr. R. A. F. Penrose, Jr. (q.v.), retiring president, delivered his presidential address on "Geology as an Agent in Human Welfare." The author's own abstract of the address follows:

From the earliest times in human history the economic and industrial activities of man have been changing the natural features of the earth's surface in many different ways and much has been written on this subject. The opposite effect, however, that is, the influence of the earth on man, has received much less attention; and yet from primitive times it has been active.

It is the intention therefore to note here the action of geologic phenomena on man throughout the ages in which he has existed. These influences may be either beneficial or detrimental to his welfare; they may ad-

vance his physical and mental development and his grasp on life, or they may form obstacles in his progress which at times may threaten his very existence. Though periods of slow development and even times of retrogression have occurred in human history, yet throughout the ages as a whole the change, especially in mentality, has been forward, and indicates that man has been able to adapt himself to such surroundings as he has had to meet.

The effect of geology on primitive man of the Stone Age had a marked influence in providing him with shelter in the way of caves and with flint and other minerals and rocks from which he wrought his weapons and other utensils. The cliff dwellers in the southwestern part of America were in a certain way cave men, but whereas the men of the Stone Age lived in remote antiquity the cliff dwellers thrived at comparatively recent times.

Volcanic action has always had a marked effect on man and his destiny. It has generally been of a tragic character, but often its after-effects have been beneficial to human welfare.

The influence of earthquakes as a geologic agent affecting man is very marked, both by the great destruction of life and property and by the mental effect of shock and terror which deeply impresses itself on the minds of those who survive.

The migrations of man have been notably affected by geologic action which has accumulated alluvial deposits along the courses of rivers and in the form of deltas at their mouths. Great agricultural prosperity has frequently marked the development of large communities in such alluvial areas, yet the same districts have often been the scenes of great disasters when they were inundated by overflowing river waters.

The mineral products of the earth have probably been of more material benefit to mankind than any other single influence. The use of flint in primitive times, followed by the use of copper, bronze and iron, together with that of other metals and alloys, have produced great and rapid advances in human progress. Moreover the natural fuels, soils, springs, water supplies and water powers, as well as many other geologic objects, are of great importance to mankind.

As geology becomes developed to a still greater fullness it will teach the world profound lessons in the evolution of the highest products of life, which will have a surpassing influence on human knowledge.

Dr. Penrose also pointed out that, while geology was the last of the great fields of research in natural history to be developed, being, until the beginning of the last century "hardly recognized as more than the vague conception of a few dreamers," it demands attention now as the "basis of all human knowledge of natural history."

*The Paleontological Society of America, The Mineralogical Society of America, and The Society of Economic Geologists* held their annual meetings at the same time and place. The retiring president of each society delivered his presidential address at a joint session with the Geological Society. Abstracts of these addresses follow.

The topic chosen by Sydney H. Ball, President of the Society of Economic Geologists, was "Historical Notes on Gem Mining." This address was published in *Economic Geology*, November, 1931. It includes three tables, the first of which dates the order in which some 115 precious and decorative stones became known to man, the second catalogues the 59 varieties used by the American Indian, and the third gives a chronology of gem mining.

The announcement of the award of the Penrose Medal of the Society of Economic Geologists, to David White of Washington, D. C., was made during these meetings.

Professor H. E. Merwin, retiring president of the Mineralogical Society lectured on "Some Associations of Ore Minerals." Professor Merwin considered mineral associations with respect to (1) the temperature gradient downwards from the Earth's surface, (2) the depth, which represents an environmental pressure at which the mineral forming process is active, (3) the gas or

vapor pressure of the gas or liquid from which the mineral is depositing.

The relations of these conditions may be considered here under two cases, the first of which will be commented upon before the second is mentioned. In the first case the temperature gradient is so low that at any depth a liquid in the rock has a vapor pressure less than the environmental pressure. This pressure has at maximum the pressure of rock load plus the strength of the rocks, and at minimum, the pressure of the superincumbent liquid plus gas-column plus the resistance to movement of this column.

Water filling the pores of rocks near the surface may be supposed to extend downward into increasingly hotter rocks. As temperatures increase downward more rock material enters into solution with the water until at a depth, liquid and rock merge, and thus lose their identities in a magma.

If there could be realized a continuous supercapillary column of liquid grading in concentration from the surface downward to magmatic depths, the difference between the weight of the column and of a similar column of rock would lead to upward movement of the liquid column. A tendency toward such movement must exist in vertical openings in rocks, but movement is scarcely realized ordinarily on account of frictional resistance, except in larger openings and their direct connections. With respect to suddenly opened vacuous fractures, liquid would be potentially explosive. Liquid magma bursting into such a fracture might solidify so as to preserve vesicles formed during the sudden relief of pressure. More liquids thus intruded would deposit some crystals immediately on the walls of the fracture and then slowly build toward the middle of a crystalline filling, leaving a residuum increasingly hydrous. Upward transfer of this residuum might continue temporarily.

One general mineral association which may be referred to the environment just described is the granite pegmatite. These intrusive bodies have compositions and structures which have led to the conception that they have been derived from a residuum or from successive residua of cooling granitic magma. These residua become increasingly hydrous, and enriched in a variety of compounds which, because of high mutual solubility or slight original concentration, have remained in solution until cooled by intrusion as detailed above. Re-opening of the fissures after periods of cooling has allowed successive invasions of liquids, each in general presumably cooler than the preceding, and thus in a state of saturation ready to deposit new compounds, or to dissolve or react with and replace existing minerals. Both Schaller and Hess have presented much evidence for a replacement sequence of potash, soda, lithia.

As president of the Paleontological Society Professor W. H. Twenlofel spoke on "Environment in Sedimentation and Stratigraphy." He stated that organisms differ so greatly in their sensitivity to environment and depend upon one another in such an intricate and interlocking fashion that it is doubtful if any large part of the problem involved is understood for any single environment. The study of sedimentary environment should be emphasized since

The results are extremely important for stratigraphy as organisms appear and disappear in the rocks of the geologic column without, as yet, adequate explanation as to what were the causative factors for such appearance and disappearance.

**OTHER PAPERS.** Professor R. T. Chamberlin of the University of Chicago took exception to the notion prevalent among scientists that the earth's rocky crust can be subdivided from the surface downward into a zone of fracture, several miles deep, in which rock deformation under stress takes place by breaking; and a zone of flow below that, where, due to enormous pressures and high temperature, rocks flow like hot tar. He cited examples of old tombstones which are found to have been notably bent in the course of time. This bending takes place without a break, that is, true flowage occurs. On the other hand earthquakes, due to sudden breakage or fracture of rocks, appear to originate at depths as great as 30 miles. So the zones of fracture and flow overlap to such a degree as to render the distinction

useless. He suggested instead, the terms "zone of cavities" and "zone of continuity." The presence of open cracks where the pressure is not enough to close them tightly, tends to facilitate deformation especially by flow. In the zone of continuity rock fracture does not occur but shearing does. The new terms are based on structure and seem less likely to lead to faulty ideas.

Ralph W. Chaney, of the University of California, told of finding remains of the foliage, cones, and wood of a species of *Sequoia* very similar to the great trees of California in rocks of Tertiary age on Saint Lawrence Island in lat. 63° 30' N., approximately 50 miles from Asia and 100 miles from North America. Other tree types occur here also which are found both in Asia and North America in rocks of the same age and give evidence of the continuity of the redwood forests of North America into Asia at that time.

Chester A. Reeds of the American Museum of Natural History, New York, spoke of the earthquake data which had been assembled for the years 1899 to 1923 and plotted on a world map. During this period there occurred 1783 earthquakes of sufficient intensity to be recorded on seismographs more than one halfway around the world from the seat of the disturbance. The map shows that the points of origin of these earthquakes are mostly confined to two great circles,—one circum-Mediterranean and one circum-Pacific. These are apparently the major zones along which the present great strains within the earth are being relieved.

E. M. Kindle spoke about the "Sea-Bottom samples from the Cabot Strait Earthquake Zone." He considered the characters of the sediments which indicate that the materials were transported from Greenland and other northern regions by floating ice, though a part may represent current transported material derived from glacial drift deposits originally spread out upon the seaward edge of the continental shelf. He concurred with the generally expressed view that the earthquake causing movement took place along two great faults parallel to the axis of the submarine extension of Cabot Strait, but stated also that these movements cannot explain the series of ten breaks in one cable at intervals of five to ten miles, nor the north-south progression of the breaks with thirteen hours elapsed between the first and last. He accounted for these facts by the slumping and sliding of the saturated, soft sediments on the sea floor when sapped by tidal currents along the newly formed fault scarps.

The American Institute of Mining and Metallurgical Engineers held its New York meeting on Feb. 16 to 19, 1931. Several important papers were read and discussed in the Mining Geology division. In a paper entitled "Zonal Relations of the Lodes of the Sumpter Quadrangle," D. F. Hewett of Washington, D. C., gave the results of his recent study of this relatively old mining district in eastern Oregon.

Another important paper read was "Occurrence of Petroleum in North America," by Sydney Powers of the Amerada Petroleum Corporation of Tulsa, Oklahoma. This considers the distribution by fields, the development of those fields, the origin and accumulation of oil, and finally describes the different regions.

Lewis A. Smith, Washington, D. C., presented a comprehensive survey of chromite mining and

resources the world over in "World Production and Resources of Chromite." W. H. Newhouse spoke on "Some Relations of Ore Deposits to Folded Rocks," and gave evidence that indicated that epigenetic ore deposits favor anticlines or upwarped structures as loci of deposition in much the same manner as does petroleum. The discussion which this stimulated indicated that most of the geologists present, while admitting some degree of structural control, were opposed to his conclusion.

In the division of Non Metallic Minerals, H. Hughes, Washington, D. C., reviewed the great advance that had been made in the development of light weight concrete in a paper entitled "The Scope of the Light Weight Aggregate Industry."

OTHER PUBLICATIONS. *The Kaolin Minerals*, by Clarence S. Ross and Paul F. Kerr (U. S. Geological Survey Professional Paper, 165-E, 1931). The clay minerals have long defied the ordinary methods of study with the result that our knowledge concerning them has been vague. The study, of which this paper is one of the results, was undertaken a few years ago by the application of X-ray analyses, chemical analysis, optical studies, and measurements of the temperatures of dehydration on carefully selected and purified materials.

"Retrogressive Metamorphism and Phyllonization," is discussed by E. B. Knopf (*Am. Jour. Sci.* January, 1931). This brief review which consists first in a critical examination and exposition of the recent European writing upon the subject and then the application of those methods to American areas of metamorphic rocks is one of the most important contributions to metamorphic geology to appear in English. It traces the development of the conception of zones, equilibrium facies, and grades in metamorphism and points out how the recognition of disequilibrium facies and retrogressive metamorphism opened up a totally new and particularly illuminating field of scientific investigation.

A metamorphic rock of the phyllite type may be either on the threshold of its metamorphic history, in which case it is one of the first steps in progressive metamorphism, or it may have been degraded from a higher stage, that is, it may be formed by the mylonitization of a previously existing biotite gneiss or schist under such conditions that new typomorphic minerals, such as chlorite, form from the older ones. Such a rock is a diaphorite that has undergone retrogressive metamorphism or diaphthoresis. A similar rock may be formed by the crushing of a granite, in which case it has not retrogressed since it was not previously metamorphic. It is then a phyllite mylonite or phyllonite.

"Criteria of Age Relations of Minerals," by E. S. Bastin, L. C. Graton, W. Lindgren, N. H. Newhouse, G. M. Schwartz, and M. N. Short (*Economic Geology*, October, 1931). This paper is the result of the deliberations of the subcommittee of the National Research Council on Mineral Paragenesis. It is a critical discussion of the criteria which can be used in deciphering the paragenesis of ores.

"Textures Due to Unmixing of Solid Solutions," G. M. Schwartz (*Economic Geology*, November, 1931). By one of the co-authors of the above, this paper is another contribution from the National Research Council. The writer distinguishes between graphic textures resulting from eutectic deposition together with the eutectoid or solid

solution equivalent, and crystallographic intergrowths formed by the unmixing of solid solutions along a curve of decreasing solubility.

*Physics of the Earth's Crust*, by the Committee on Volcanology of the National Research Council (Washington, 1931). The first four of a series of nine bulletins designed to give a clear statement of progress in these special fields and indicate those problems now under attack. *I. Volcanology* (Bull. 77), includes an introduction by Arthur L. Day and the formulation of a comprehensive answer to the question, "What is a Volcano?" by three different authors. *II. Figure of the Earth* (Bull. 78), a series of special papers on selected topics which are undergoing study at present. Some of the chapters are: Tidal Theory, Tidal Friction, Earth Tides, Isostasy, Variations in Latitude, On Some of the Greater Problems of Physical Geology. *III. Meteorology* (Bull. 79), takes meteorology through its development from the crude weather lore of savages to the compiled records of the modern science. *IV. The Age of the Earth* (Bull. 80), evaluates the evidence concerning the age of the earth furnished by geology, paleontology, radioactivity, and astronomy. The method based on the radioactivity of certain minerals appears to be the best and this also "dates" certain rocks that contain those minerals. The earth's age is given as approximately 2000 million years. The 500 million years elapsed since the beginning of the Cambrian period agrees well with the evidence of geology.

*The Iron Ores of the Kiruna Type, Geological Distribution, Geological Characters, and Origin*, by Per Geijer (Stockholm, 1931). This important paper embraces all those iron ores that are closely comparable in their geologic features to those at Kiruna. These are magnetite (rarely hematite) ores closely connected with intermediate or moderately siliceous igneous rocks that have usually solidified as surface flows or shallow intrusions.

"Further Studies in the Amphibole Group," by A. N. Winchell (*Am. Mineralogist*, June, 1931). This paper discusses the relation between variations in the optic properties and composition of members of the amphibole group on the basis of the newly established fact that water cannot be neglected in the amphibole molecule and that, therefore, the same molecules are not found in amphibole as in pyroxene. Those of the amphibole group are more complicated.

Two other papers, namely "Magnesian Amphibole from the Dry Melt: A Correction," and "The Role of Water in Tremolite," by Bowen & Posnjak (*Am. Journal Science*, September, 1931) confirm these findings and conclude that there is no reason for doubting the essentially hydrous character of amphibole. It cannot form from a dry melt and when dehydrated it forms pyroxene and silicon dioxide.

"Structural Study of the Adirondack Anorthosite, a Structural Study of the Problem of Magmatic Differentiation," by Robert Balk (*Sonderdruck Aus. Min. & Pet. Mitt.* Bd. 41, 1931). An important paper by the first geologist to map the central and eastern Adirondack, N. Y. region as a unit. It attacks the puzzling questions concerning the age relations of the rocks, their differentiation and emplacement, from the structural point of view. The flow movements and the direction and dynamics of the magma currents are analyzed and the differentiation is shown to be largely a function of mechanical principles.

"The Adirondack Magmatic Stem," A. F. Budington, (*Journal of Geology*, April-May, 1931). The author considers the problem of the origin of the anorthosites and of the syenitic and granitic rocks with which they are associated and the genetic connections between them.

"Structural Geology, Conception Bay Region, and Wabana Iron Ore Deposits of Newfoundland," by A. O. Hayes (*Econ. Geol.*, January, 1931). This is a restudy of the details of the structure of an important mining region which suggests that the recoverable deposits of iron ore within the limits of submarine mining underlie an area of about seventy square miles. If the average amount of ore in the present mines extends over this area a reserve of 2,500,000,000 tons is indicated.

*Microscopic Determination of the Ore Minerals*, by M. N. Short (U. S. Geological Survey Bulletin, 825, 1931). The most thorough and up-to-date treatise on the technique of preparation of specimens, photography, and the recognition of minerals by etch reactions, physical properties, observation in polarized light, and microchemical method. The determinative tables are based upon the resistance of minerals to scratching by a needle. Only two classes are recognized, namely *hard* and *soft*. Minerals falling under either of these are then subdivided by etch tests and reaction to polarized light.

"Insoluble Residues as a Guide in Stratigraphic Studies," by H. S. McQueen (*Biennial Report of the State Geologist of Mo.*, 1931). This paper indicates an important means of stratigraphic correlation over wide areas which has already been applied with great success.

*Geology of the Capital District*, by R. Ruedeman (N. Y. State Museum Bull. 285, 1930). This is a valuable contribution to the geology of an important region. The "Hudson River Formation" is shown to embrace five lower Cambrian and nine Ordovician formations. The Rensselaer grit is the only geologic unit in that region whose age is still unsolved. Ruedeman thinks that it is a partial correlate of the upper Devonian of the Catskills. Schuchert (*Am. Jour. Sci.*, July, 1931, p. 87—a review of this bull.) demurs at this and considers it a likely member of the Ordovician sequence.

"The Analysis of Cyrtolite for Lead and Uranium," by O. B. Muench (*Am. Jour. Sci.*, April, 1931). This paper describes the results obtained from this mineral in the pegmatites of Bedford, New York. Adolph Knopf, in an introduction to the article, points out that the lead-uranium ratio indicates an age of 380 million years which is almost identical with that obtained from Hillebrand's analysis of the uraninite from Branchville, Conn. Both of these pegmatites appear to have been intruded during the late Ordovician.

*The Permian of Mongolia, Natural History of Central Asia*, vol. iv, by Amadeus W. Grabau (published by the Am. Museum of Nat. Hist., 1931). This new contribution to Eurasian geology contains an introductory chapter by C. P. Berkey and F. K. Morris, who describe the general geology of the region. The rest of the volume, by Grabau, describes the marine invertebrate fauna of the Jisu Honguer Permian and discusses its relation to other carboniferous and Permian formations of Eurasia.

*The Glacial Geology of Connecticut*, by R. F. Flint (*Conn. Geol. & Nat. Hist. Survey*, Bull. 47, Hartford, 1930). The result of an intensive three-year study of the glacial geology of the

State. It contains a large, folded map of Connecticut (scale 1:125,000) which shows the distribution of all the deposits and the spillways that controlled the various lake and terrace levels.

"Thickness of the Ice in Greenland," by William Bowie (*Am. Jour. Sci.*, May, 1931). Presents a translation of part of the chapter entitled "*Eisdickenmessungen*," by E. Serge from the report of the "Deutsche Inlands-Expedition nach Grönland Sommer 1929," which shows that as the ice increases in thickness from 330 meters near the shore to 1220 meters towards the interior the elevation of bed rock above sea level decreases from 640 meters to 370 meters. If this really shows that the ice does not constitute an overload on the earth's crust under Greenland but that the crust has been pressed down to maintain equilibrium the investigation is of great importance to isostatic theory. Dr. Bowie suggests the importance of making gravity observations in the region.

"Isostasy from the Geological Point of View," by R. T. Chamberlin (*Jour. of Geol.*, vol. 39, no. 1, 1931). This is an important consideration of isostasy in its relation to other known geological processes. Concludes that mountain making is primarily independent of isostasy and in direct opposition to it. Isostasy is a "restrainer" which tends to preserve and restore the balance disturbed by other forces. Its part is secondary and subordinate.

"A Theory of Appalachian Geomorphic Evolution," by Douglas Johnson (*Jour. of Geol.*, vol. 39, no. 6, 1931). Explains the extended development of the southeast drainage across the Appalachian structural belt as the result of the superposition of this drainage system from an ancient coastal plain cover which extended from 125 to 200 miles northwest of the present inner margin of the Atlantic coastal plain and rested on the Fall Zone Peneplain—a much older surface than the Schooley or Kittatiny erosion surface.

*New Books: A General Index of The Journal of Geology* (Chicago University Press, 1930). *General Stratigraphy*, by J. W. Gregory and B. H. Barrett (London, 1931). A brief presentation of principles and a review of the stratigraphy of all continents. *Physiography of the Western United States*, by N. M. Fenneman, (N. Y., 1931). Present summaries of the regional geology of the Western United States from the Geomorphologic point of view. The first half of a book intended to cover the whole country. *Geology of Petroleum*, by W. H. Emmons (2d ed., N. Y., 1931). A new text which is really a reference book on petroleum geology with innumerable references. *The Japanese Earthquake of 1923*, by C. Davison (London, 1931). Deals with the earthquake as it affected man and as a geological phenomena.

*Earth Features and Their Meaning*, by W. H. Hobbs (N. Y., 1931). A revision of a well known and useful text. *The Study of Rocks*, by S. J. Shand (London, 1931). Deals largely with igneous rocks. Summarizes schemes of classification and emphasizes author's scheme based upon principle of "saturation." The chapters on metamorphic rocks embody some of the latest material on this subject. *Plant Life Through the Ages*, by A. C. Seward (N. Y., 1931). Outlines the succession of ancient floras and links them to the geological development of

the Earth. A general survey of a field that has been little touched upon. *A Manual of Determinative Mineralogy*, with tables, by J. Volney Lewis, revised by A. C. Hawkins. This is a fourth edition revised and brought up-to-date.

*A Practical Handbook of Water Supply*, by F. Dixey (London, 1931). An elementary treatise full of interesting notes and practical suggestions intended to help the inexperienced homesteader, missionary, etc., to develop a small water supply. *Strukturbericht, 1913-1928*, by Von. P. Ewald and C. Hermann (Leipzig: Akademische Verlagsgeschaft m. b. H., 1931). A compilation of the vast amount of data concerning the new crystallography which began to replace the older, purely descriptive science in 1913, when the X-ray was first used in crystal analysis. *Determination of the Opaque Minerals*, by C. M. Farnham (N. Y., 1931). A complete revision of "Davy and Farnham" with the results of examination in polarized light added to the determinative scheme. *Field Geology*, by F. H. Lahee (N. Y., 1931). An up-to-date revision. The third edition of an important book with three new chapters that deal with airplane mapping, subsurface geological surveying, and geophysical surveying. *The Coal Fields of the United States*. General introduction by M. R. Campbell; Ohio, by J. A. Browncker (U. S. Geol. Survey Prof. Paper 100, Dec., 1930). A result of the systematic study of coal lands and coal resources begun by the U. S. Geol. Survey in 1905.

*A Descriptive Petrography of the Igneous Rocks*, vol. i. Introduction, Textures, Classification, and Glossary by A. Johannsen (Chicago University Press, 1931). A first volume which leads one through the intricacies of classification, structure, and texture of igneous rocks. Assembles an important collection of photographs of structures and textures. *Volcanoes*, by G. W. Tyrrell (The Home University Library). An authoritative semi-popular presentation of the structure, origin, distribution, and types of volcanoes. *Outlines of Paleontology*, by H. H. Swinnerton (London, 2d ed., 1931). *The Physical Chemistry of the Magmatic Differentiation of Igneous Rocks*, III, 2d half, by J. H. L. Vogt (Oslo, 1931). *Proceedings of the Fourth Pacific Science Congress*, Java, 1929, Batavia-Bandoeng, 1930. In four volumes: 1. General Reports on Oceanography; 2. a & b, Physical Papers; 3. Biological Papers; 4. Agricultural Papers. Vol. 2, parts a & b, contains many papers on volcanology, diastrophism, petrology and other geological and closely related topics.

**GEORGETOWN UNIVERSITY.** A Roman Catholic institution of higher education for men in Washington, D. C., founded in 1789. In the autumn of 1931, 2435 students were enrolled. The faculty numbered 544. The Riggs Memorial Library contained 175,350 volumes; the Hirst Library, 11,421 volumes; and the individual libraries maintained by the professional schools, many additional volumes. Copley Hall, affording dormitory accommodations for 187 students, was completed in January, 1931. In September, 1931, the graduate department of the school of foreign service was moved from down-town Washington to the campus at Georgetown. President, the Rev. Coleman Nivels, S.J., Ph.D., and D.D.

**GEORGE WASHINGTON BICENTENNIAL CELEBRATION.** See CELEBRATIONS.

**GEORGE WASHINGTON BRIDGE.** See BRIDGES.

**GEORGE WASHINGTON UNIVERSITY.** THE. A nonsectarian institution of higher learning for men and women in Washington, D. C., founded in 1821. The enrollment for the first semester of 1931-32 was 6128. The faculty numbered 450. The endowment amounted to \$1,485,197, from which the income for 1931 was \$73,071. The total income from all sources was \$1,491,195. The university library, comprising the general library, the various departmental and seminar libraries, the medical library, and the law library, contained more than 92,000 volumes. A complete reorganization of the school of medicine was entered upon in the fall of 1931, looking toward the development of graduate work and research in the field of public health. The university also erected a temporary addition to its school of medicine and hospital, pending the realization of its plans for a great medical centre in Washington. President, Cloyd Heck Marvin, Ph.D., LL.D.

**GEORGIA.** POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,908,506; in 1920, 2,895,832. The chief elements of the population as grouped by origin were: Native white, 1,823,057 (1930), 1,672,928 (1920); foreign-born white, 13,917 (1930), 16,186 (1920); Negro, 1,071,125 (1930), 1,206,365 (1920). Though the number of the Negro inhabitants had diminished between 1920 and 1930, and though the number of the native whites had risen, the Negroes still constituted in 1930 a majority of the population of 47 of the 161 counties.

Atlanta, the capital and the most populous city, had 270,366 inhabitants (1930); 200,616 (1920). Savannah, 85,024 (1930), 83,252 (1920); Augusta, 60,342 (1930), 52,548 (1920); Macon, 53,829 (1930), 52,995 (1920).

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton ....	1931	3,440,000	1,395,000*	.....
	1930	3,863,000	1,593,000*	.....
Corn .....	1931	3,672,000	36,720,000	\$16,891,000
	1930	3,432,000	36,036,000	80,991,000
Tobacco ...	1931	84,000	59,640,000*	4,056,000
	1930	114,000	104,538,000*	10,787,000
Peanuts ...	1931	723,000	477,180,000*	7,158,000
	1930	575,000	373,750,000*	12,334,000
Sweet potatoes .	1931	91,000	4,550,000	2,958,000
	1930	79,000	6,320,000	4,740,000
Hay, tame .	1931	675,000	360,000*	3,600,000
	1930	521,000	312,000*	4,961,000
Peaches ...	1931	.....	9,134,000	5,024,000
	1930	.....	5,500,000	6,325,000
Oats .....	1931	332,000	7,968,000	3,665,000
	1930	246,000	5,043,000	3,732,000
Potatoes ..	1931	18,000	1,224,000	1,163,000
	1930	15,000	1,065,000	1,438,000

\* Bales.    † Pounds.    • Tons.

**MINERAL PRODUCTION.** The quarries of the State, producing stone of high average grade, provided in 1929 somewhat less than one-half of the total value of minerals produced. There were quarried, in 1929, 977,910 short tons of stone, as against 1,028,060 tons in 1928. The total value of the State's mineral production was \$15,294,103 for 1929; for 1928, \$14,740,431.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 represented the number of the State's manufacturing establishments

as 4178, or nearly 25 per cent in excess of that for 1927. The wage earners in manufactories numbered 158,280 in 1929, which was but 2.7 per cent more than in 1927. Wages paid in 1929 aggregated \$109,551,586, an increase of 1.3 per cent. Materials used in manufacture, plus fuel and purchased electricity, cost \$430,026,560, or 19.4 per cent above the 1927 total. The manufactured product of 1929 was valued at \$718,602,596, and exceeded that of 1927 by 17.8 per cent. Above the cost of materials, fuel and electricity the value added by manufacture was estimated at \$228,576,036.

**FINANCE.** State expenditures in the year ended Dec. 31, 1930, as reported by the U. S. Department of commerce, were: for maintaining and operating governmental departments, \$20,497,103 (of which \$6,918,714 was for local education); for interest on debt, \$392,252; for permanent improvements, \$12,861,533; total, \$33,753,305 (of which \$15,792,310 was for highways, \$3,843,765 being for maintenance and \$12,308,545 for construction). Revenues were \$35,637,622. Of these, property and especial taxes furnished 22.2 per cent; departmental earnings and compensation to the State for officers' services, 5.0; sale of licenses, 56.6 (in which was included a gasoline sale tax that produced \$11,206,392). Funded debt outstanding on Dec. 31, 1930, totaled \$7,387,202. Net of sinking-fund assets, the debt was \$7,283,702. On an assessed valuation of \$1,303,459,972 the State collected in the year ad valorem taxes of \$6,517,299.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 6671.50. No line had been added to the total in the year preceding, and 90.76 miles of line had been abandoned. No building of new line or trackage in 1931 was reported.

**EDUCATION.** For the academic year 1929-30, the number of persons of school age in the State was reckoned as 867,995. There were enrolled in the public schools 723,005 pupils. Of these, 622,174 were in common schools or elementary grades; 91,116 in high schools; and 9715 in evening schools. The year's current expenditures for public-school education totaled \$17,040,605. The yearly salaries of the teachers averaged \$604.84. A committee to revise the State's school laws was created by the General Assembly of 1931, and provision was made for substantial State payments on account of aid to the public schools.

**CHARITIES AND CORRECTIONS.** Under the plan for the reorganization of the State government enacted in 1931, to go into effect on Jan. 1, 1932, the eleemosynary institutions of the State, except for two, were placed under a Board of Control, consisting of 12 members, the Governor being a member *ex officio*, another member being chosen for the State at large and the remainder representing one Congressional district each. The existing Board of Public Welfare went out of existence concurrently with the entry of the new Board. The Department of Public Welfare, however, retained its legal function to supervise county jails, almshouses, and private institutions for the care of children and other dependents, as well as duties with regard to juvenile courts and the care of the poor. The institutions placed under the care of the Board of Control were: State Hospital (insane), Milledgeville; State Tuberculosis Sanatorium, Alto; Training School for Mental Defectives, Gracewood; State Train-

ing School for Boys, Milledgeville; State Training School for Girls, Atlanta; School for the Blind, Macon; School for the Deaf, Cave Springs; Old Soldiers' Home, Atlanta.

**LEGISLATION.** The General Assembly was twice convened, first in a special session lasting 80 days and ending on March 24; and again in the regular 60-day session which began on June 25. Hardman, the outgoing governor, called the special session with a view to correcting before the end of his term the deficiency of State revenue for the maintenance of institutions. He advocated a measure to allow the State to discount for cash the rental revenues of the Western and Atlantic R. R. Co. that were to accrue to the State, for the period of ten years ahead. A measure to this end was passed but was vetoed by Governor Hardman as not in accordance with his view of a suitable arrangement.

The special session brought aid to the State finances by the enactment of a series of tax measures. One of these, a new income-tax act, provided upon personal incomes rates running from 1 up to 5 per cent and upon corporate incomes 4 per cent. The tax on chain stores was repealed. The retail sales of cigarettes were taxed at the rate of 20 per cent of the retail price, or double the old rate, and tax stamps were required to be affixed. Motor carriers were regulated as to size, weight, capacity and speed, and a mileage tax was imposed on them, with the option, to the payer, of a flat annual payment. Powdered milk was taxed at 5 cents a pound and its use in public eating places was required to be placarded. A State Budget Commission was created. The fiscal acts of the session were expected to yield upward of \$2,000,000 a year.

The subsequent, regular session was held in the term of the incoming Governor Russell. It enacted a measure satisfactory to him, for the discounting of the Western and Atlantic R. R. rentals for a total of eight years. A reorganization act was passed, in accordance with the views of the commission that Governor Hardman had appointed to study the subject. It reduced the number of elective officials, thus giving the State a short ballot, and merged or coordinated numerous State organizations. Its expected effect was to reduce State expenditure by some \$500,000 a year.

The State was redistricted into 10 districts, in place of the previous 12, for the election of Federal Representatives.

**POLITICAL AND OTHER EVENTS.** A seat in the House of Representatives, for the Savannah district, made vacant by the death of Charles G. Edwards, was virtually filled when Homer C. Parker obtained the Democratic nomination in a primary election held on August 25. The act of 1931 for the regulation of motor carriers was attacked on the ground that the text of the measure had been improperly changed in course of passage. Later some of the motor carriers endeavored to get a writ to prevent the collection of the tax on them, on the ground that the bill was confiscatory and discriminating. The Fulton County Superior Court held the act valid in a decision of July 13. The efforts of the State to require motor carriers of other States to obey the law led to antagonism in other States, including a threat from Indiana to make reprisals against trucks, registered in the State of Georgia, found on the roads of the State of Indiana.

Fulton and Campbell counties were merged by proclamation of Governor Hardman on May 6, in conformity with a popular vote in the two counties, taken in April, in favor of the consolidation. The combined county was to be known as Fulton County and was to come into being on January 1, 1932.

In Atlanta a Grand Jury investigation of city contracts, for which the *Atlanta Constitution* had started a campaign at the close of 1929, was at last held early in 1931, and 53 indictments for bribery, corruption, defrauding the city or tampering with juries were found. Contracts for a new Post Office Building at Spring, Hunter, and Forsyth streets, to cost about \$3,000,000, were awarded during the summer. A 534-acre airport on the northern side of the city, to cost an estimated \$613,000, was projected. The question whether the city should change in spring to summer or daylight-saving time was submitted by the city council, by act of July 8, to subsequent popular vote.

**OFFICERS.** Governor, Richard B. Russell, Jr.; Secretary of State, John B. Wilson; Attorney-General, George M. Napier; Treasurer, W. J. Speer; Auditor, Tom Wisdom; Comptroller-General, W. B. Harrison; Superintendent of Education, M. L. Duggan; Commissioner of Agriculture, Eugene Talmage; Commissioner of Commerce and Labor, H. M. Stanley.

**JUDICIARY.** Supreme Court: Chief Justice, Richard B. Russell; Assistant Justices, Marcus W. Beck, Samuel C. Atkinson, H. Warner Hill, S. Price Gilbert, James K. Hines.

**GEORGIA, UNIVERSITY OF.** A State institution of higher education for men and women in Athens, Ga., chartered in 1785 and opened in 1801. The enrollment in the 1931 summer session was 2360 and for the autumn term, 1869. The faculty numbered 145. The productive funds of the university amounted to \$425,000, and the income for the year from the State and other sources was \$400,000. The library contained 64,000 volumes. President, Charles M. Snelling, Sc.D.

**GEORGIA (GEORGIAN SOCIALIST SOVIET REPUBLIC).** Proclaimed a soviet republic on Feb. 25, 1921, Georgia united with Armenia and Azerbaijan on Jan. 16, 1923, to form the Transcaucasian Socialist Federated Soviet Republic (q.v.). It occupies western and central Transcaucasia and with an area of 26,381 square miles had a population of 2,660,963 at the census of 1926. Capital, Tiflis (population, 293,000). See **UNION OF SOVIET SOCIALIST REPUBLICS**.

**GEORGIA SCHOOL OF TECHNOLOGY.** An institution for the scientific and technical education of men in Atlanta, Ga., founded in 1888. The enrollment for the autumn of 1931 was 1923, while that in the summer session was 540. The faculty numbered 160. The endowment amounted to \$420,000, and the income from appropriations and fees, to \$650,000. There were 30,000 volumes in the library. In 1931 Cloudman Dormitory was erected at a cost of \$100,000. President, Marion Luther Brittain, LL.D.

**GERMAN ART EXHIBITIONS.** See **ART EXHIBITIONS**.

**GERMANIC LANGUAGES.** See **PHILOLOGY, MODERN**.

**GERMAN LITERATURE.** The trend of German literature during the year 1931 reflected the chaotic state of the people's soul. The generation that grew up with and since the World War

saw its path strewn with the débris of political ideals and social standards discarded in the sudden debacle of the Empire and stumbled over the idols of the fathers which lay shattered by the roadside. With very few exceptions the books written by the youth of contemporary Germany sound a morbid pessimism or show futile efforts at finding a pilot to lead them out of the spiritual gloom that had settled over the country. Literary activity seems to be greater than ever before, but the quality of the works produced does not reach that of the pre-war period. No doubt the political unrest and the economic depression are the primal causes of this decline. With the stabilization of the country's finances and the suppression of the sword-rattling spirit of certain parties the genius of Germany will give birth to worthy successors of such writers as Gerhart Hauptmann, Arthur Schnitzler, Hugo von Hofmannsthal, and others whose works belong to the world's literature.

**FICTION.** The fiction produced by the younger writers is mostly devoted to the presentation of segments of contemporary life as seen through their individual attitude towards the world. Their number is alarmingly large, but some of them show skill in striking a timely note in the monster chorus of voices clamoring for expression. Among them are Johannes Wolf with *Frauen zwischen gestern und heute*, a study of transition types; Hans von Sinsheimer with *Peter Unglaub*, an actor's life of symbolic significance; Franz Illing with *Utopolis*, a communist view of future society; and the novels dealing with the problem of man and machine, such as Heinrich Lersch's *Hammerschläge*; Dierck Seeburg's *Der Metallstreit*; and Walter Eidlitz's *Zodiak*. Echoes of the War vibrate in Cuno Hofer's allegorical epic *Jan. 9.*; Emil Belzner's *Marschieren nicht trauern*; Hanns Johst's epiphany on the vanishing aristocracy: *So gehn sie hin*; Leonard Schrickel's imaginary diary of an exiled prince: *Entthronung*; Hans Fallada's *Bauern, Bonzen und Bomben*; Friedrich Frcksa's *Kaufmannskinder*. Hans Natonek's *Gold regiert die Welt* shows the influence of Wassermann and Heinrich Mann; Walter von Hollander's *Die Angst zu lieben*, a picture of the old middle class, the West front and the Berlin proletariat; Rudolf Borchardt's short stories, *Das Hoffnungslose Geschlecht*; and Erich Kastner's *Fabian*, the story of a moralist, rich in ideas, with touches of satire, but a sympathetic attitude towards the German youth of to-day.

Outstanding among the stories of the older writers are Clara Viebig's historical *Prinzen, Prälaten und Sansculotten*; Enrika Handel-Mazetti's *Frau Marie*, a novel of the time of August of Saxony; Otto Stoessl's *Das Haus Erath*, relating the decline of the German middle class in the manner of the Forsythe Saga; Jacob Schaffner's *Die Predigt der Marienburg*; Gustav Frenssen's *Der Brennende Baum*; Hermann Stegemann's *Das Kind Eva*; Max Brod's *Das Jahr der Entscheidung*; Rudolf Hans Bartsch's *Der grosse und der kleine Klaus*; and Rudolf Greinz's *Dämon Weib*.

Semi-biographical novels of interest are Kasim Edschmid's *Lord Byron*, and Carl Müller-Rastatt's life of the eighteenth century poet *Gunther*. But the last book published by Arthur Schnitzler before his death, *Traum und Schicksal*; Helene Böhlau's *Föhn* with the underlying idea that tumultuous times forge the people's

heart; Jacob Wassermann's *Etsel Andergast*, which suggests a sequel to *Der Fall Mauritzius*; and above all Heinrich Mann's two-volume novel *Das Kaiserreich*, picturing pre-war Germany with his deep understanding and uncompromising veracity, rank highest in the year's output of fiction.

Outstanding among the latest novels are Gustav Renker's story of two musicians, father and son: *Symphonie und Jazz*; two stories of the youth of our time: Ernst Erich Roth's *Die Mietskaserne* and Hans Gerhard Weiss's *Was wird aus Benjamin*; also Arnold Ulitz's stories based on his experiences as teacher: *Die Unmündigen*; and Josef Ponten's *Rhein und Wolga*, a chapter in the history of the German peoples migrations. Arthur Schnitzler's posthumous *Flucht in die Finsternis* is a psychiatric story told with such detail that critics are asking: Is this art?

DRAMA. The plays of the year show a tendency towards far-fetched, bizarre subjects. The craze to present classical or even Biblical subjects in modern spirit and garb, not unknown to America, had reached Germany, one of the most glaring examples being Julius Martin Becker's *Die Nacht der Könige*, a travesty rather than version of the Nativity, in which the three wise men are an Ex-General, an American millionaire, and a poet, who renounce their privileges in favor of a child born in a stable as the result of an automobile accident! Of different character is E. Dietzen-schmidt's Judas tragedy *Mutter Gottes* with its impressive subtle atmosphere. Hermann Heinz Ortner produced the second part of his *Sebastian Legende* and Paul Ernst a *Kassandra*. Robert Ziersch's *Berufung des Bettlers Gregory* proved a powerful play about a peasant czar inspired by humanitarian ideals. Sigmar Graff's *Die einsame Tat* dealt with the death of the popular playwright Kotzebue who in 1830 was for political reasons shot by the student Sand.

Hans Süßmann's *Haus Rothschild* is significant for its impartial portrayal of the miscellaneous characters involved; but Eugen Geissler's *Dreimal Waterloo*, though clever, is a superficial picture of political conditions in Paris in 1870. Emil Ludwig's *Versailles* is also by no means unbiased. Erwin Guido Kolbenheyer's *Jagt hinein Mensch!* is a ghastly arraignment of competition in modern business life. An interesting play was presented by Edith Mikleleitis Winkelmann: *Rembrandt*.

Ernst Toller and Hermann Kesten have collaborated on a five-act play: *Wunder in Amerika*, dealing with Mary Baker Eddy. Ernst Lissauer's *Aufbruch des Goldes* is a curious play of modern finance, more especially the gold standard; Rudolf Stern's *Die Gottlosen*, a four-act play of the conflict between the believing old and the unbelieving young generation.

POETRY. With the exception of Albert Sergel, whose name is familiar to readers of German verse, and Paul Zech, who made his début in the first years of the War, the poets of 1931 are all newcomers. Sergel's new verse is entitled *Saat und Ernte*. Erich Kästner's *Ein Mann gibt Auskunft* betrays its modernistic tendency by the title. Other new poetry came from Otto Heuschele, *Die Ausfahrt*; Ernst Jocker, *Wandlungen*; Felix Witmer, *Sänge von Lieben und Sterben*; Hans Friedrich Blanck, *Erwartung*; and Hermann Wilhelm Weissenborn, *Das Tor der Toten*.

LITERATURE. ESSAYS and treatises on literary subjects were as numerous as ever, ranging from

Aloys Schafer's contribution to Nibelungen research, *Und dennoch die Nibelungenfrage gelöst*, to Friedrich von der Leyen's record of German poetry from 1925 to 1930, entitled *Die Forderung des Tages*. Shakespeare-literature was increased by E. Landau's character-study: *Shakspeare-Mysterium*, Ernst Fleischer's *Dichter und Jurist*, Christian Gaehde's *Shakspeare und seine Zeit*, Dr. Karl Sonnenschein's *Der Mensch und sein Werk*, Peter Alvor's *Die Shakspearefrage und das Ben Jonson Problem*, and Susanne Türk's *Shakspeare und Montaigne*. Goethe literature dwindled to two volumes: the *Year Book* of the Kippenberg Goethe-Gesellschaft and Ernst Franz's *Goethe als religiöser Denker*.

The drama enlisted the attention of critics, among them Dr. Wilhelm Knevel's *Das moderne Drama, Darstellung, Deutung, Wertung*; Ferdinand Gregori, *Das gesprochene Wort*; Maria Piper, *Die Schauspielkunst der Japaner*; Richard Elsner, *Das deutsche Drama in Geschichte und Gegenwart*; Julius Bab, *Das Theater im Lichte der Soziologie*; S. Nestripke, *Geschichte der Volksbühne*, etc.

Walter Leiden published a selection in three parts from Nietzsche's writings. Rudolf K. Goldschmidt's *Der kluge Zeitgenosse* contains a warning to critics and consolation to their victims. L. O. Kestenberg discusses the timely problem of *Kunst und Technik*. Robert Ander has written a *Bücherkunde zur neuen deutschen Literaturgeschichte* which is more than a reference book. One of the most valuable volumes of essays is Heinrich Mann's *Ucist und Tat*, in which he pays tribute to Stendhal, Hugo, Flaubert, George Sand, Anatole France, and other French writers as representatives of the sociological novel.

BIOGRAPHY. One of the most interesting among the biographies of the year is *Marie d'Agoult*, condensed from the memoirs of that remarkable woman, who as Comtesse d'Agoult was the mother of Franz Liszt's children and under the pseudonym Daniel Stern wrote the best history of the February Revolution of France. The introduction is by Siegfried Wagner. Count Du Moulin-Eckart published the second volume of the life of Cosima Wagner under the title *Die Herrin von Bayreuth*; Heinrich Scholz, *Richard Wagner und Mathilde Meier*; and Hans Reissiger, *Unruhige Geister*, a record of Wagner's youth. Victor Walther's *Mathilde* is a contribution to Heine biography.

One of the outstanding biographical works is *Mein Leben im Kampf um die soziale Entwicklung Deutschlands* by the famous jurist and economist Lujo Brentano. A book of still wider interest is Stefan Zweig's *Die Heilung durch den Geist* in which with penetrative insight he portrays Mesmer, Mary Baker Eddy and Sigmund Freud.

HISTORY. A new volume in Egon Friedell's *Kulturgeschichte der Neuzeit* deals with Romanism and Liberalism, Imperialism, and Impressionism. A new volume in the *Propyläen-Weltgeschichte* is entitled *Das Erwachen der Menschheit*. Gert Buchheit has written a history of the popes: *Das Papsttum*. Ricarda Huch has written a history of the German revolution of the nineteenth century, *Alte und neue Götter*. Wilhelm Dibelius published his *England* shortly before his death. E. Muss and C. C. Borchling have written a history of that sturdy North German tribe; the *Frisians*. Hermann Müller Franke's *Die November Revolution* can serve as sequel to the memoirs of Prince Max von Baden. Famous trials are discussed by Bruno Weil in *Glück und*

*Elend des General Boulanger and Der Prozess des Hauptmanns Dreyfus.*

MISCELLANEOUS. Among the philosophical works of the year the more important are: Dr. Otto Fränkl's *Die Anthroposophie Rudolf Steiners*; Dr. Ernst Bergmann's *Erkenntnisgeist und Muttergeist*, a sociology of the sexes; Wilhelm Dilthey's *Weltanschauungsmythen*; and Max Dessoir's *Vom Jenseits der Seele*, a critical estimate of occultism. Of great interest are Coudenhove-Kalergi's *Los vom Materialismus*, Oswald Spengler's *Der Mensch und die Technik*, Hugo von Hofmannsthal's *Die Berührung der Sphären*, Rainer Maria Rilke's *Stimmen der Freude*, Friedrich List's *Der tragische Deutsche*, and Ricarda Huch's *Deutsche Tradition*.

Other works of divers content are H. Schuch and R. Sohlmann's *Nobel: Dynamit, Petroleum und Pacifismus*; Frank Kleinbrod's *Die Übermechanik des Lebens*; and Julius Schultz's *Die Maschinentheorie des Lebens*; Gottfried Baum's *Facit der Perspektive*; Paul Kraunhals's *Das organische Weltbild*; Paul Wertheimer's *Welt und Weltenspiegel*, reflections on life, world, and woman; Fedor Vargin's *Das unbewusste Europa*, a psychoanalysis of European politics; Alfred Kleinberger's *Die europäische Kultur der Neuzeit*; Friedrich Sieburg's *Gott in Frankreich*, tracing the evolution of the national character of the country and its position in the world to-day; Anton Valentin's *Stresemann, das Werden einer Staatsidee*; and Arthur Feiler's timely *Das Experiment des Bolschewismus*.

Among the numerous travel books Leopold von Schlözer's *Auf Capri* is written in the form of conversations with a keen observer. Otto Willi Ulrich's *Im Lande der Affen und Papageien* contains sprightly descriptions of Brazil, and America is represented by Rudolf Hensel's *Die neue Welt* and *Kleine Liebe zu Amerika* by Manfred Hausmann, a not uncritical lover of the country. Fritz Schillmann's *Florenz und die Kultur Toskana's* and Oskar Schuerer's *Prag*, tracing the history, culture and art of the interesting old city, are books for students rather than tourists.

TRANSLATIONS. Among the numerous authors who have been presented to German readers in translations are Unamuno, Hamsun, Jules Romains, Alain Fournier, Ramon de la Serna, Valerie Marcu, Ibáñez, Gorki, Sven Adelon, Clemenceau, Sir Edward Parry, Sir James Jeans, etc. American authors represented in German garb are John Dewey, Henry Ford, Du Bois Heyward, Ellen Glasgow, Edith Wharton, etc.

**GERMANY.** A federal republic of central Europe, constituted after the abdication of Emperor William II on Nov. 9, 1918, and organized under the Constitution adopted July 31, 1919, by the National Assembly at Weimar; formerly the German Empire. It is bounded on the north by the Baltic Sea, Denmark, and the North Sea; on the west by the Netherlands, Belgium, Luxembourg, and France; on the east by Lithuania and Poland, whose Danzig corridor isolates East Prussia from the rest of Germany; and on the south by Switzerland, Austria, and Czechoslovakia. The German Empire consisted of 25 Federal States and the Imperial Reichsland; the Federal Republic consists of 17 republics. Capital, Berlin.

**AREA AND POPULATION.** At the census of Oct. 8, 1919, the area of the Republic, including the Saar Valley, was 182,213 square miles and the population, 59,852,682, of whom 28,496,419 were

## AREA AND POPULATION

‡ Excluding the Saar.

males and 31,356,263 females, as compared with 57,798,427 in 1910. The accompanying table from the *Statesman's Year Book* for 1931 gives area and population according to the census of June 18, 1925. The estimated population in 1929 was 64,036,000, excluding the Saar Basin, with 770,030 inhabitants in 1927.

Cities of over 500,000 population at the census of 1925 were: Berlin, 4,024,154; Hamburg, 1,079,126; Cologne, 700,222; Munich, 685,036; Leipzig, 679,159; Essen, 629,564; Dresden, 619,157; Breslau, 599,770; Frankfurt-on-Main, 540,115; Dortmund, 525,837. A marked decline in migration from country districts to the large cities and a drastic falling off in the birth rate attracted the attention of German sociologists in 1930 and 1931. In 1930, 50,000 more persons left the principal cities of Prussia than came to them from the rural districts. As the excess of births over deaths in these cities for the year was but 43,228, they lost some 7000 inhabitants. Berlin's population on Mar. 1, 1931, was estimated by the Prussian Statistical Bureau at 4,329,000, as against 4,348,000 on the same date of 1930.

Authorities estimated that a continuation of the 1930 ratio of births to deaths would reduce the German population to about 45,000,000 by the third quarter of this century. Births in 1930 totaled 1,128,076, or 20,630 less than in 1929, despite the fact that the number of married women under 45 years of age was 120,000 greater in 1930 than in the previous year. The number of persons of marriageable age was larger in 1930 than in 1929, but marriages declined by 27,133 to a total of 562,298. Deaths during the period 1926-30 amounted to an average of 749,553 annually.

**EDUCATION.** Elementary education is compulsory between the ages of 6 and 14. According to the school census of 1926-27, there were 52,825 public elementary schools, with 6,661,794 pupils; 572 private schools, with 36,991 pupils; 1550 *Mittelschulen*, with 259,300 pupils; and 2278 secondary schools, with 582,950 students (excluding 22,632 students in "preparatory")

schools). There were also 10 technical high schools, with 22,014 students in 1929, and numerous vocational and normal schools, besides 23 universities.

**AGRICULTURE.** Agriculturally, Germany is one of the most productive countries of Europe. Official returns for June, 1928, placed the arable land at 51,450,000 acres, with an additional 20,227,330 acres devoted to grass, meadows, and pasture, and 203,505 acres to vineyards. Of the cultivated area, about 61 per cent is sown to grain and legumes and 21 per cent to potatoes, sugar beets, and cattle turnips. Small farms predominate in the west and south; large estates in the northeast. The average size of individual farms is about 29 acres, compared with about 145 acres in the United States. The area and production of the chief crops in 1929 and 1930 are shown in the accompanying table from the 1931 *Commerce Yearbook*.

#### GERMAN CROPS: AREA AND PRODUCTION

• Unit, pound.

• Unit, gallon of wine.

• Thousands of units—bushels except as indicated.

**MINING.** Prussia supplies the great bulk of the minerals raised in Germany, the chief mining areas being in the districts of Westphalia, Rhenish Prussia, and Silesia (coal and iron), Central Germany (brown coal), the Harz (iron and copper ore), and the Westerwald (iron ore). In 1925 there were 2942 mines in Germany, employing 808,593 persons. Primary horse power directly applied in mining operations was 1,416,750 in 1925 and 1,104,673 in 1907; the horse power of electric motors was 1,672,915 in 1925 and 244,903 in 1907. Blast furnaces in operation in 1929 numbered 182.

Mineral production declined substantially in 1930, compared with 1929, as shown in the accompanying table of mineral and industrial production from the 1931 *Commerce Year Book*. In 1931, still greater declines were registered. Preliminary returns placed pig iron production at 6,063,042 metric tons and crude steel production at 8,291,250 metric tons.

**MANUFACTURING.** The Ruhr is the chief centre of the steel industry and of iron production; other metallurgical areas are in the Lower Rhine, Westphalia, Upper Silesia, Hanover, Bavaria, and Saxony. Germany's share of the world chemical production shrank to 16.5 per cent in 1927 from 24 per cent in 1913. Other leading manufacturing lines are the electrical, textile, beet sugar, potash, glass, porcelain, paper, earthenware, clock, wood ware, and brewing industries. The industrial census of June 16, 1925, showed

#### GERMANY'S MINERAL AND INDUSTRIAL OUTPUT

Product	1928	1929	1930
Coal . . . . . 1,000 metric tons	150,861	168,441	142,698

\* From black coal

• Metal content of ore.

• Includes linters.

1,852,737 industrial establishments, employing 12,704,135 workpeople. Taking the monthly average of industrial production in 1929 as 100, the index of average monthly production in 1930 was 82.4, and in the first quarter of 1931, 68.6. Production figures for some of the leading industries in 1929 and 1930, are shown in the accompanying table on mineral and industrial production.

The production of both pig iron and raw steel in 1930 was considerably below that of 1929. Foreign sales of iron and steel products were 18.6 per cent less than in 1929, while imports of these products into Germany declined by 310,644 tons to 1,140,388 tons.

Of the 33,000,000 Germans engaged in earning a living in 1931, it was estimated that every seven were supporting, in addition to their own families, one idle worker plus his family. Employment conditions in the first six months of 1931 showed a seasonal improvement greater than in 1930, the number of unemployed declining from about 4,384,000 on Dec. 31, 1930, to 3,902,000 on June 30, 1931, and then rising to about 5,666,000 on Dec. 31, 1931.

**COMMERCE.** Beginning with the middle of 1929, Germany not only maintained a favorable balance of trade, but also gradually increased the surplus of exports. Total 1930 imports, including gold and silver, were valued at 10,854,000,000 marks, or about 22 per cent below the 1929 figure of 14,027,000,000 marks. Exports declined in value to 12,656,000,000 marks, including reparation deliveries in kind, as compared with 14,215,000,000 marks in 1929, a decrease of about 13 per cent. On this basis, the favorable balance of trade in 1930 was 1,802,000,000 marks, as against a debit balance of 188,000,000 marks in the previous year. Both imports and exports declined in 1931, according to preliminary figures, but the favorable balance of trade increased. In terms of marks, imports amounted to 6,727,000,000, exports to 9,598,600,000, and the surplus of exports to about 2,870,600,000 marks, including reparation deliveries in kind.

Both import and export prices declined sharply during 1930, but the relatively greater slump in prices of raw material imports reacted to Germany's advantage. In 1930, 28.4 per cent of the total value of imports for consumption (including gold and silver) was represented by foodstuffs, beverages, and live animals; 50.6 per cent by raw materials and semi-manufactures; 16.5

per cent by manufactured goods; and 4.5 per cent by specie and bullion. The corresponding proportions for exports of German products (including deliveries on account of reparations) were 4.4, 19.5, 71.8, and 4.3 per cent, respectively.

The United States retained its predominant position as the leading source of German imports in 1930, although the value of shipments declined to 1,306,800,000 marks from 1,790,400,000 marks in 1929. The other chief sources of imports, in order of importance, were the United Kingdom, the Netherlands, France, Italy, Czechoslovakia, Belgium (including Luxemburg), Sweden, and Austria. German purchases from all these countries declined in value in 1930. The principal export markets, in order of importance, were the United Kingdom, the Netherlands, France, the United States, Belgium and Luxemburg, Czechoslovakia, Sweden, Italy, and Austria.

**FINANCE.** The federal budget for the fiscal year ended Mar. 31, 1931, was based upon the anticipated balancing of revenues and expenditures at 12,079,100,000 marks. Actual returns showed a deficit of 1,249,600,000 marks (about \$297,400,000). Expenditures were 12,526,500,000 marks, or 447,400,000 marks in excess of the estimate, while revenues were 11,276,900,000 marks, or 802,200,000 less than estimated. Included in expenditures were 1,707,900,000 marks for reparation payments, about 800,000,000 marks for amortization and repayment of debt, and 771,700,000 marks to cover the deficit from the preceding fiscal year.

In the budget for the 1931-32 fiscal year, revenue and expenditure were estimated to balance at 10,653,834,000 marks. The budget was modified by the emergency decrees of June 5, 1931 (see below under *History*), and by other developments of the year. The federal government's ordinary financial operations resulted in a deficit of 446,000,000 marks in 1929-30 and of 601,000,000 marks in 1928-29; in 1927-28 there was a surplus of 124,000,000 marks.

The indebtedness of the Federal Government on Mar. 31, 1931, not including reparation payments fixed at about 37,000,000,000 gold marks (\$9,000,000,000) by the Young Plan, amounted to 11,313,000,000 marks, of which 6,615,000,000 marks comprised new borrowings. Of the new borrowings, 1,997,000,000 marks represented medium and short term loans. The total debt, exclusive of reparation, on Mar. 31, 1930, was 11,321,400,000 marks. The indebtedness of the German states and large cities on Mar. 31, 1931, totaled 6,754,000,000 marks, of which 3,410,000,000 marks was in long term and 3,344,000,000 marks in short term loans.

The gold reichsmark was established as the monetary unit of the Republic on Oct. 11, 1924, and was identical in value (\$0.2382 at par) with the gold mark, which virtually disappeared from circulation soon after the World War. The term "mark" is accordingly used interchangeably in this article to designate both reichsmark and mark.

**RAILWAYS.** The state-owned German railway system in 1930 had a total of 48,164 miles of trackage and 33,443 miles of line. Of the line mileage, 32,472 miles were steam and 971 miles electrically operated. Operating receipts for the calendar year 1930 amounted to 4,570,317,000 marks (5,353,834,000 marks in 1929), while operating expenditures were 4,090,353,000 marks (4,493,496,000 marks in 1929).

The final surplus totaled 104,080,000 marks. Passengers carried in 1930 numbered 1,829,300,000 (1,980,300,000 in 1929) and freight declined by 18.5 per cent to 354,354,000 metric tons (436,010,000 tons in 1929). Preliminary returns for Government railway operations in 1931 showed a deficit equivalent to \$120,000,000.

**SHIPPING.** According to Lloyd's Register of Shipping, the German mercantile marine on June 30, 1930, totaled 4,229,235 registered gross tons, as compared with 5,459,296 tons in 1914, and 4,092,552 tons on June 30, 1929. During the calendar year 1930, 53,541 merchant vessels aggregating 22,025,000 net tons passed through the Kaiser Wilhelm (Kiel) Canal. In 1929, a total of 75,584 vessels of 42,146,093 tons entered German ports, exclusive of deep-sea fishing vessels, and 85,518 vessels of 45,872,189 tons cleared. See articles on SHIPBUILDING and SHIPPING, MERCHANT.

**OTHER COMMUNICATIONS.** Inland waterways in 1929 extended 7653 miles, of which 1426 miles were canals, and transported 110,669,000 tons of goods. The inland fleet consisted of 19,429 vessels of 6,747,624 tons. Highways totaled 217,479 miles, of which 74,564 miles were macadam. Civil air lines in 1930 reported an airplane mileage of 6,719,000 miles (6,475,000 in 1929).

For ARMY and NAVY, see discussions in the articles MILITARY PROGRESS and NAVAL PROGRESS.

**GOVERNMENT.** Under the Constitution of the Republic adopted July 31, 1919, and promulgated Aug. 11, 1919, executive power is vested in the President elected by the people for seven years, and in a ministry appointed by him and responsible to the Reichstag, or lower house of Parliament. Legislative power is vested in the Reichstag, consisting of 577 members (following election of Sept. 14, 1930), who are elected by universal, equal, direct, secret franchise of male and female voters, on the principle of proportional representation; and in a federal council, the Reichsrat, consisting of 66 members. The consent of the Reichsrat is required to all bills before their introduction into the Reichstag, but the latter body may pass a bill over the heads of the former by a two-thirds vote. The composition of the Reichstag following the election of Sept. 14, 1930, was: Social Democrats, 143; National Socialists (Hitler party), 107; Communists, 77; Centre (Roman Catholic party), 68; German National People's party, 41; People's party, 30; Economic party, 23; Christian Peasants, 22; Bavarian People's party, 19; State party, 14; Christian Socialists (Protestant), 14; German Peasants, 6; People's National Union, 6; Conservative People's, 4; Hanoverian party, 3; total, 577.

The Cabinet appointed Mar. 30, 1930, included: Chancellor, Dr. Heinrich Brüning (Centre); Minister for Foreign Affairs, Dr. Julius Curtius (German People's party); Transport, Theodor von Guérard (Centre); Economic Affairs, Dr. Trendelenburg; Justice, Dr. K. Joel; Defense, Lieut.-Gen. Wilhelm Groener; Finance, Hermann Robert Dietrich (German Democratic party); Posts, Dr. G. Schaetzel (Bavarian People's party); Agriculture, Herr M. Schiele (German Nationalist); Labor, Dr. Adam Stegerwald (Centre); Home Affairs, Dr. Joseph Wirth (Centre); Minister without Portfolio, Herr G. Trevisan (People's Conservative party). President in 1931, Field Marshal Paul von Hinden-

burg (Independent), who assumed office May 12, 1925, for the term to expire on May 12, 1932.

### HISTORY

A financial crisis rivaling in magnitude the disastrous period of deflation in 1923 overshadowed all other developments in Germany during 1931. The crisis represented the cumulative effects of the two decades of German and European history since the outbreak of the World War. The more obvious causes were outlined by Prof. Sidney B. Fay of Harvard University as follows:

(1) The exhaustion of German capital, and economic and social dislocation resulting from the World War; (2) the burden imposed by reparation payments; (3) excessive public expenditures and recurring budget deficits; (4) borrowing abroad; and (5) uncertainty as to Germany's political stability and financial solvency.

These factors were primarily economic, but two political events loomed large in the immediate background of the storm—the menace to peace seen in the sensational National Socialist (Hitlerite) and Communist gains in the Reichstag elections of September, 1930, and the abortive Austro-German customs union proposal of Mar. 21, 1931.

The internal situation at the opening of 1931 was one of mixed promise and gloom. The unemployed had increased to 4,750,000, or nearly one-quarter of Germany's normal laboring army of about 20,000,000. The Nazi (National Socialist) agitation for the repudiation of parliamentary government, the peace treaties, and the Young Plan raged throughout the country. Bloody riots between Nazis and Communists or between Nazis and members of the Social Democratic *Reichsbanner* were of daily occurrence. On the other hand, the situation had been somewhat stabilized through the continuance in office of Chancellor Brüning's minority government, with Social Democratic support. For the first time, also, the government faced the hard facts of the financial situation and launched energetic measures to balance the budget. Its prestige was enhanced by Foreign Minister Curtius's successful pleading of the case of the German minority in Polish Upper Silesia before the League of Nations Council in January. (See LEAGUE OF NATIONS.)

No such alarming demonstrations as those of the previous autumn accompanied the reconvening of the Reichstag on February 3, following the Christmas recess. Hitlerite and Communist motions of no-confidence in the government were defeated by 293 votes to 221 on February 7. Obstructionist tactics were then resorted to by the Opposition and on February 9 the Reichstag was forced to amend its rules of procedure so as to eliminate delay. The vote was 303 to 0. The Nazis and the Hugenberg Nationalists, in protest against this "tyranny of the majority," boycotted the Reichstag for the balance of the session, which closed March 26. Confronted by the Communists only, the government was able to put through its budget (see under *Finance* above) and other measures in relative tranquillity.

Incorporated in the budget, which totaled 10,653,000,000 marks (about \$2,540,000,000), was a first appropriation of 2,000,000,000 marks to inaugurate a seven-year programme of social and economic relief for the hard-pressed agricultural districts of eastern Germany. The budget

also carried two appropriations each of about \$5,000,000 to complete the cruiser, *Ersatz Preussen*—the famous "pocket battleship"—and to commence construction of a sister ship. The Social Democrats had voted down similar credits a year earlier. Now they were confronted with the choice of changing their stand or of overthrowing the Cabinet and precipitating a new election, in which they stood to lose ground. Accordingly they agreed not to vote against the cruiser credits, provided the funds were raised through a surtax on incomes above \$5000.

The Cabinet's general financial programme and a period of comparative political quiet restored foreign confidence and provided the much needed opportunity for business recovery. In the first four months of the year, according to the mid-year review of the *Reichs-Kredit-Gesellschaft*, the business depression lost momentum in those commodities which were the first to feel the recession.

**AUSTRO-GERMAN CUSTOMS UNION.** Probably the primary cause of the "unsettlement" in Europe and of the subsequent financial crisis was the sudden announcement on March 21 of tentative plans for an Austro-German customs union. "It becomes increasingly clear that the Austro-German customs proposal constituted a first-class diplomatic blunder," wrote Dr. R. L. Buell in September. "This proposal served to stiffen French nationalism, to precipitate the financial crisis in Europe, to diminish the prospects for disarmament and to reduce the prestige of the Permanent (World) Court."

The essence of the plan was the elimination of export and import duties on commodity traffic between the two countries. Its ostensible purpose was the stimulation of industry and of general prosperity in both countries through the free interchange of goods, an objective which the League of Nations and various European agencies had sought unsuccessfully to promote on a continental or regional scale. To the other countries of Europe, however, the customs union presented a totally different aspect. France and her allies of the Little Entente (q.v.) saw in it the first step toward *Anschluss*, or the political union of Germany and Austria, and the overthrow of the European structure erected by the peace treaties. Italy was alarmed at the prospect of a greater Germany facing her own frontier. Rumania and Yugoslavia, both allies of France, and Hungary appeared not unwilling to join the customs union in order to find free markets for their surplus agricultural products. The British and other governments, while not overly antagonistic to the customs union idea in itself, were angered at being presented with a virtual *fait accompli*.

The dangers inherent in the political union of Austria and Germany had long been foreseen by the Allied nations. They sought to block it by a clause in the peace treaties stipulating that the independence of Austria should be inalienable except with the consent of the League Council. Again, in connection with the League's reconstruction programme of 1922, Austria had been forced to agree that it would assume no economic engagement "calculated directly or indirectly to compromise" its independence. Both Germany and Austria maintained that Austria's independence would be in no way infringed upon by the customs union. France, Italy, and Czechoslovakia declared the proposal an open violation of Austria's treaty obligations.

To secure a judicial settlement of the dispute Foreign Secretary Arthur Henderson of Great Britain, with the consent of Dr. Curtius, brought the customs union proposal before the May meeting of the League Council. The Council referred it to the World Court, which on September 5 declared by a vote of 8 to 7 that the proposal was illegal. Dividing along what appeared to be political lines, the judges ruled that the customs union violated Austria's promise of 1922, incorporated in what is technically known as the Geneva Protocol No. I. See **WORLD COURT**.

Three days previous to the Court's decision, the Austrian and German foreign ministers formally renounced the customs union before the European Union Commission at Geneva. Their action was an admission of defeat at the hands of France in a political struggle, the outcome of which was determined by French gold.

**THE FINANCIAL CRISIS.** Withdrawal of foreign short-term credits from Germany precipitated the financial crisis. These withdrawals commenced immediately following the customs union announcement. They grew in volume as successive shocks undermined the confidence of foreign investors in Germany's continued solvency. It is probable that French credits were called home for political reasons. But they formed only a small part of the withdrawals, the total French short-term credits in Germany amounting to about 300,000,000 marks, as compared with 1,800,000,000 marks from Great Britain, 1,500,000,000 marks from the United States, 750,000,000 marks from Switzerland, and 500,000,000 marks from Holland.

Continued heavy expenditures for unemployment relief and the decline in tax receipts made it evident early in May that the emergency measures introduced the previous December would not suffice to balance the budget. Despite Chancellor Brüning's denials, there were persistent rumors during May that the Government would be obliged to declare a moratorium on the postponable part of the Young Plan annuities. Uneasiness was increased by the great military demonstration of 150,000 members of the German veterans' Steel Helmet League (*Stahlhelm*) at Breslau in East Prussia May 30. Facing the Polish frontier 35 miles away, the veterans swore never to rest until territory lost to Poland as a result of the World War was restored.

On June 3, more than 1400 industrial leaders of Western Germany urged Chancellor Brüning to declare a dictatorship in order to meet energetically the impending crisis. Two days later Chancellor Brüning and Foreign Minister Curtius arrived in London for the "Chequers Conversations." What had been intended for a discussion of the disarmament problem, became primarily a plea for a British loan to meet the increasing drain on the Reich's gold reserves. The Germans failed to get a loan, but succeeded in drawing British and American attention to Germany's financial plight. It proved to be publicity of the wrong kind; the withdrawal of foreign funds increased. On June 6, the Brüning Cabinet issued new emergency financial decrees, made necessary by the decline of tax receipts some \$117,800,000 below estimates.

The decrees were accompanied by an official *communiqué*, which announced "openly before all the world that we have reached the limit of the sacrifices we are able to lay on our people." The economic recovery of Germany and of the world

was declared to depend upon "alleviation from the unbearable reparations obligations."

By June 12, withdrawals from the Reichsbank in gold and foreign exchange were averaging 150,000,000 marks daily and the bank had lost one-quarter of its reserves since June 1. On June 13, the Reichsbank's discount rate was raised from 5 to 7 per cent. The financial crisis took an even more serious turn when the intervention of the Austrian Government and an emergency loan of \$21,000,000 from the Bank of England was required to stave off the collapse of the *Credit-Anstalt* (Agricultural Credit Bank) of Austria. At about the same time the Austrian State Bank was in serious danger (see **AUSTRIA** under *History*). Fear that leading German banks were in equally desperate straits led to a further "flight from the mark" of not only foreign but private German funds. It appeared as though Germany's financial system, and with it the economic order in Central Europe, was on the point of cracking. President Hindenburg took the unprecedented course of calling an urgent appeal for help to President Hoover. The latter, however, had already decided to act.

**THE HOOVER MORATORIUM.** At this crucial time (June 20) came President Hoover's proposal for "the postponement during one year of all payments on inter-governmental debts, reparations, and relief debts, both principal and interest." The proposal seemed for a time to give a much-needed psychological stimulus to Germany and to the world. But it did not become effective until July 6, when the assent of France was obtained. In the meantime, the flight of capital from Germany continued. On June 24, the Reichsbank secured a \$100,000,000 short-term credit from the Federal Reserve Board of the United States, the Bank of England, the Bank of France, and the Bank for International Settlements. By July 2, \$76,320,000 of this fund had been used up, and the Reichsbank was obliged to draw on a \$50,000,000 credit maintained in New York by its subsidiary, the Gold Discount Bank of Berlin.

The adoption of the Hoover moratorium proposal freed Germany of the necessity of paying her reparation bill of \$394,400,000 for the year beginning July 1, 1931. See **REPARATIONS** AND **WAR DEBTS**. Inauguration of the moratorium brought no let-up in the demands upon the German banking system. To halt further withdrawals from the Reichsbank, a group of 1000 German industrial and financial leaders on July 7 organized a syndicate and advanced a security guarantee equivalent to \$119,000,000 to the Gold Discount Bank. Dr. Hans Luther, president of the Reichsbank, made a hurried airplane trip to Paris and London on July 9 in a hurried search for a \$400,000,000 credit. In London, he found the British Government engaged in trying to check the further depletion of the Bank of England's gold reserves, and with no money to spare. In Paris, he was informed that financial assistance could be obtained only on condition the German Government dropped the Austro-German customs union proposal, stopped construction of the new cruiser, accepted the Polish-German frontier as fixed by the Versailles treaty, and prevented further anti-French demonstrations by nationalist and veterans organizations.

With Dr. Luther's failure, runs on German banks increased. The exchange value of the mark fell to its lowest point since 1924. And on July 13 one of the largest German private banks—

*Darmstädter und Nationalbank*—closed its doors. The Government then intervened, closing all the banks for two days and the stock exchanges for an indefinite period. The Reichsbank was the only financial institution left open, and it refused to sell foreign exchange. Drastic emergency decrees were issued to check inflation and to prevent Germans from converting marks into foreign currency.

The \$100,000,000 obtained from the International Bank, the British and French central banks, and the American Federal Reserve Board was renewed July 15, but without perceptible effect. On that date it was estimated that withdrawals of short-term credits from Germany since the middle of May totaled \$500,000,000; since September, 1930, the total was about \$900,000,000. In advance of the reopening of the banks (July 16), the Chancellor assumed dictatorial control of finances. Foreign exchange transactions were placed in control of the Reichsbank and that institution raised its discount rate to 10 per cent. Anticipated runs on the banks failed to develop, due primarily to Government precautions and the assurance that the Reich would guarantee full payment to depositors in the *Darmstädter und Nationalbank*.

Continued withdrawal of foreign credits, however, made it evident that the financial situation could be stabilized only through a long-term loan of at least \$500,000,000. The success of such a loan depended on the participation of France. Negotiations for a rapprochement between France and Germany, which would make possible French financial collaboration, were accordingly inaugurated through the good offices of Secretary of State Stimson (United States) and Foreign Secretary Henderson (Great Britain), who called on Premier Laval in Paris July 16. Two days later Chancellor Brüning and Foreign Minister Curtius arrived in the French capital. Two days of conference served to lay the basis for further negotiation at London.

From Paris, the attention of the German people switched to London, where on July 20 was convened the Seven-Power Conference to consider the financial crisis in Germany and Central Europe. The conference, which was attended by Secretaries Stimson and Mellon as official American representatives, adjourned three days later. The official *communiqué* stated that the participating powers recommended: (1) Extension of the \$100,000,000 credit of the central and International banks for three months at its maturity August 16; (2) that the various governments recommend to their bankers the maintenance of existing short-term credits to Germany; (3) the establishment by the International Bank of a committee to inquire into the immediate credit needs of Germany.

The principal benefit derived by Germany from the Seven-Power Conference was the subsequent pressure by the governments represented upon their bankers to prevent undue withdrawals of further short-term credits from the Reich. The amount of short-term credits retained in Germany as a result of this recommendation was roughly estimated at about \$1,200,000,000. The flight from the mark was thus gradually checked in time to prevent the collapse of the German banking system.

The emergency restrictions on the banks were removed August 5 and the *Darmstädter und Nationalbank* was reopened without undue dis-

turbance. Chancellor Brüning and Foreign Minister Curtius on August 6-8 visited Premier Mussolini in Rome. They discussed the financial crisis and returned home with an agreement for the outright purchase by Italy of German coal ordinarily delivered as reparations in kind, the shipments of which would have been suspended by the reparation moratorium. The Government gained courage, also, with the failure on August 9 of the referendum on the dissolution of the Prussian Diet (see PRUSSIA under History). The overthrow of the Socialist-Centrist-Democratic régime in Prussia would have inevitably resulted in the collapse of the Brüning Government and the establishment of a reactionary administration for the Reich. The Reichsbank signalized the lessening of the emergency on August 11 by reducing the rediscount rate from 15 to 10 per cent.

THE WIGGIN REPORT. The bankers' committee appointed by the International Bank at the request of the Seven-Power Conference to study the credit needs of Germany made its report August 19. It was headed by an American, Albert H. Wiggin of the Chase National Bank. The Wiggin committee announced that a long-term loan was essential to German recovery. A long-term loan was declared out of the question, however, until the political relations of Germany and the other European powers were established on a basis of mutual confidence and German reparation payments were reduced to a point where they would not "imperil the maintenance of her financial stability." The report was considered an important aid to the German propaganda for the further reduction or elimination of reparations, as well as an appeal for international action to reduce tariffs and war debt payments. On the same day (August 19) a consortium of Germany's foreign creditors, meeting at Basel, signed an agreement to prolong for six months about \$1,200,000,000 of short-term credits.

FRANCO-GERMAN RAPPROCHEMENT. The negotiations of July toward the reconciliation of the political requirements of France with the financial requirements of Germany bore limited fruit in September. Paying a historic visit to the German capital (September 27-28), Premier Laval and Foreign Minister Briand reached an agreement with the German leaders for the creation of a mixed Franco-German commission designed to promote effective economic collaboration as a prelude to the solution of their political problems. Large Paris crowds cheered for peace as the French officials departed for Berlin. In the German capital they were warmly greeted by great throngs shouting "No more war!" United German patriotic organizations, however, protested against the reception of the French statesmen as guests of the nation and Hitlerites and Nationalists took no part in the welcoming demonstration. The much-desired French loan was not forthcoming.

THE TREND TOWARD EXTREMISM. While the Brüning Government was meeting with a measure of success in its negotiations with France, internal developments threatened to nullify any permanent reconciliation of the two nations. A steady drift of voters from the moderate bourgeois parties to the Hitlerites and Nationalists and from the Social Democrats to the Communists was evidenced in elections held during the year in the states of Brunswick, Schaumburg-

Chancellor of the German Reich

Lippe, and Hamburg and in various municipal and provincial elections. The Hamburg election was held September 27, while the French statesmen were in Berlin. While the Social Democratic strength in the Diet slumped from 60 to 46, the National Socialists (Hitlerites) captured 43 seats and the Communists 35. The shift in sentiment was attributed chiefly to the economic crisis.

**BRÜNING'S NEW CABINET.** A week before the Reichstag convened, Foreign Minister Curtius resigned (October 7), precipitating a general reorganization of the Cabinet. The failure of the Austro-German Customs Union proposal had undermined Dr. Curtius's prestige and there was strong pressure from industrialists and other conservative elements for drastic measures to stabilize the political and financial situation. In the new Ministry, which Chancellor Brüning presented to the newly assembled Reichstag on October 13, he himself took over the Ministry of Foreign Affairs, while the Ministries of Interior and Defense were both placed under Gen. Wilhelm Groener, a non-party man and a close friend of President Hindenburg. The only new member of the Cabinet was Professor Hermann Warmbold (non-party), politically an unknown quantity, who became Minister of Economy. The other members were: Finance, Dr. Hermann Dietrich (Democratic party); Labor, Dr. Adam Stegerwald (Centrist); Communications, Dr. George Schaetzel (Bavarian People's party); Transportation, Dr. Gottfried Treviraunus (Conservative People's party); Justice, Dr. Curt Joel (non-party); and Food and Agriculture, Dr. Martin Schiele (Nationalist).

On October 16, after four days' debate, the Reichstag gave the new Brüning government a vote of confidence with a majority of 25, its main support coming from the Social Democrats, Centrists, and small moderate groups. For the first time since February, 1931, the Nazis (National Socialists) and Nationalists appeared in Parliament. Upon the Government's victory, however, they once more boycotted the Reichstag, which shortly afterward adjourned to Feb. 23, 1932. Dr. Hans Schlange-Schoeninger (Agrarian) became Minister for Eastern Relief on November 7. The Brüning government, continuing to rule by decree, placed in effect on December 9 laws establishing a virtual economic dictatorship. These decrees called for drastic and far-reaching interference with the machinery of capitalistic society and affected the daily life of the average citizen to a degree unknown elsewhere than in the Soviet Union. They were calculated to complete the deflation process, to strengthen the industrial competitive position of Germany in domestic and foreign markets, to balance the Federal, provincial, and municipal finances, to assure the stability of the currency, maintain internal security, and strengthen the German position in the pending negotiations for settlement of the private debt and reparations problems.

**HITLERITE MENACE GROWS.** The political measures were called forth largely as a result of the growing activity of the Nazis and Hitler's repeated challenge of the Government's authority. Great Nazi demonstrations, accompanied by street rows and denunciations of the Ministry, were held at Bad Harzburg October 11 and at Brunswick October 18. Communal elections in Dessau October 25 and provincial elections in Schwerin November 2 and in Hessen November

15 resulted in heavy Hitlerite and Communist gains. These victories emboldened Hitler to give a series of sensational interviews with foreign correspondents in Berlin, which served to stiffen French policy toward the Reich and in general furthered foreign alarm concerning the immediate future in Germany. On December 6 in Berlin, Hitler announced that there would be no Nazi "march on Berlin," as he would be swept into power legally at the next election. He reiterated that Germany under his control would pay no more reparations, but said that he would respect all private commercial debts owed by Germans abroad.

**REPARATION AND DEBT SETTLEMENTS RE-OPENED.** Following lengthy Franco-German negotiations, the German government on November 20 requested the Bank for International Settlements to convene the advisory committee provided for under the Young Plan to make a full inquiry into Germany's capacity to continue reparation payments upon expiration of the Hoover moratorium in July, 1932. In these negotiations, the German representatives asked that the advisory committee be authorized to go beyond the Young Plan and consider the unconditional reparation annuities; also that private debts be given priority over reparation payments in order to protect German credit abroad. The French, however, rejected these proposals. The German note of November 20 pointed out that the situation had completely changed since the establishment of the Young Plan, due to the world depression. It asked that the advisory committee examine Germany's problem in its entirety, taking into account "especially that the question of Germany's private indebtedness must be newly regulated in good time before the end of February, 1932," when the "standstill" agreement would terminate. The Bank of International Settlements acted promptly, spurred by symptoms of a new financial crisis in Germany. The advisory committee was convened in Basel December 7. The report of the 11 experts forming the committee, made public December 24, indirectly recommended the reduction of reparation payments and immediate steps to aid the German government in stabilizing its currency. The committee warned that new disasters would take place if an adjustment "to the existing troubled situation of the world" was not made soon. (See REPARATIONS AND WAR DEBTS for details of the Basel Committee's report.) Upon the initiative of Premier MacDonald of Great Britain a conference of the powers to reconsider the reparation and war debts questions was called for early in 1932.

Meanwhile officials of American, British, French, Dutch, and Swiss banks had met in Berlin December 11 with a German committee representing both banks and industry to discuss means of liquidating the \$2,500,000,000 of foreign short-term credits held in Germany under the "standstill" agreement. Albert H. Wiggin of the Chase National Bank attended as representative of 100 American banks having investments in Germany. It was brought out that from the autumn of 1930 to Dec. 31, 1931, German interests repaid 5,000,000,000 reichsmarks (\$1,190,000,000) of foreign short-term credits. There remained in Germany 4,420,000,000 reichsmarks (\$1,051,960,000) of similar credits, with which the negotiations were concerned. These conversations were proceeding at the end of the year.

Economic and political developments in several other fields marked the last months of 1931. On October 26, Foreign Minister Grandi of Italy paid a formal visit to Berlin and discussed the general economic and political situation with Chancellor Brüning. It was reported that the policies of the German and Italian governments were in substantial agreement on most issues. The action of the National government in Great Britain in departing from the traditional British policy of free trade dealt a severe blow to German foreign trade. The Reich prepared to take "defensive" measures; on December 1 President von Hindenburg authorized the Government by decree to change import duty rates and to put into effect bilateral tariff agreements with foreign nations without the consent of the Reichstag. Meanwhile the Franco-German joint economic commission had organized into sub-commissions, whose preliminary deliberations, concluded at Paris early in December, aroused considerable hope in Germany of profitable economic collaboration with France. On December 23 a protocol for the stabilization and extension of German-Soviet trade relations was signed in Berlin.

**OTHER DEVELOPMENTS.** The financial crisis provided a stimulus to the abandonment by the States of the costly and anachronistic system of intra-Federal diplomatic representation. Bavaria in 1931 joined Prussia in abolishing its Embassy in Berlin and the eleven States still maintaining Ministers in the diplomatic corps at Berlin were expected to follow suit. On May 14, the City of Berlin elected Dr. Heinrich Sahm, for 10 years president of the Free City of Danzig, as mayor to succeed Dr. Gustav Boess. Dr. Boess had been forced to retire 19 months earlier in connection with charges of inefficiency and graft.

The Reich entered into commercial agreements with Russia early in April and with Rumania on June 26. The first provided for the advance of credits totaling some 300,000,000 marks to the Soviet Union in exchange for industrial orders. The second granted tariff reductions of 50 to 60 per cent on Rumanian corn and barley in return for Rumania's reduction of tariff rates on some 300 manufactured articles imported chiefly from Germany. On September 8, Germany announced the purchase on credit of 7,200,000 bushels of hard winter wheat from the 1930 harvest stores of the Federal Farm Board of the United States.

**GIBRALTAR.** A British Crown colony consisting of a small peninsula on the southwest coast of Spain. The Rock of Gibraltar commands the entrance to the Mediterranean Sea. Area, 1½ square miles; population, at the census of 1921, 20,638, of whom 2932 were military and 546 naval men. The civil population on Jan. 1,

1930, was estimated at 15,647, with 1152 aliens. In 1929, 4833 vessels of 8,135,377 tons entered the port, which is a British naval base. Cables connect with the Continent, with eastern Mediterranean ports, and with England. Gibraltar is under a governor who is also commander-in-chief. He is assisted by an executive council, established in 1922. Governor in 1931, General Sir Alexander J. Godley, appointed October, 1928.

**GIDDINGS, gîd'dîngz, FRANKLIN HENRY.** An American sociologist, died in Scarsdale, N. Y., June 11, 1931. He was born in Sherman, Conn., Mar. 23, 1855. On graduation from Union College in 1877, he engaged in journalism, writing on politics and economics for the *Springfield Republican* and the *Springfield Daily Union*. In 1888 he was appointed lecturer on political science at Bryn Mawr College, where he was subsequently advanced to the professorship of political science. In 1894 he became professor of sociology at Columbia University and in 1906 professor of sociology and history of civilization, retiring as professor emeritus in 1928.

The working principle by which he sought to explain the fundamental sociological phenomena, or problem of social causation, was psychical in its nature. In his earlier works he called it "consciousness of kind"; in the *Inductive Sociology*, "like response to like stimuli" or "like-mindedness"; and still later, "collective response to the same stimulus or similar stimuli." In this explanation he differed radically from those of his contemporaries who sought to explain sociological facts in terms of the environment—the utility of association and division of labor. Among his works are *The Modern Distributive Process* (with J. B. Clark, 1888); *The Theory of Sociology* (1894); *The Principles of Sociology* (1896); *The Theory of Socialization* (1897); *The Elements of Sociology* (1898); *Democracy and Empire* (1900); *Inductive Sociology* (1901); and *Descriptive and Historical Sociology* (1906). He later published: *The Western Hemisphere in the World of Tomorrow* (1915); *The Responsible State* (1918); *Studies in the Theory of Human Society* (1922); *The Scientific Study of Human Society* (1924); and *The Mighty Medicine—Superstition and Its Antidote* (1929). He also edited the *Annals of the American Academy of Political and Social Science* during 1890-94, and for many years was a member of the editorial staff of the *Independent*.

**GIRL SCOUTS.** A nonsectarian movement for girls from 10 to 18, started in Savannah, Ga., in 1912 by Mrs. Juliette Low and adapted from the Scouting programme begun in England in 1907 by Lord Baden-Powell. It is a leisure-time programme which supplements the work of the church, the home, and the school, and encourages girls to learn and practice the cultural and domestic arts that were part of the old-fashioned home's training. To that it adds the love of outdoors and the cult of the physical courage which was the distinguishing mark of the pioneer.

The working membership unit of the Girl Scouts is the troop, consisting of from 8 to 32 members. This, in turn, is divided into patrols, consisting of from four to eight girls in each

patrol. The adult leader of the troop is known as the captain. There are three ranks in Girl Scouting: Tenderfoot; second class; and first class. The requirements for these and for some 50 proficiency badges are described in the *Girl Scout Handbook*. In each community women interested in the movement are organized as local councils, community committees, or troop committees to help support and develop the local Girl Scout activities.

The active, paid-up memberships in the Girl Scouts as of Oct. 31, 1931, totaled 264,883, inclusive of Brownies (girls between 7 and 10) and leaders. In 1931, training courses for leaders were given in four national schools. In addition there were 24 two-week courses in local camps and about 40 in colleges and universities.

The official organ for girls is *The American Girl Magazine*, and for leaders, *The Girl Scout Leader*, each a monthly publication. The officers elected at the national convention held in Buffalo, N. Y., Oct. 14-17, 1931, were: Honorary president, Mrs. Herbert Hoover; chairman of the board of directors, Mrs. Nicholas F. Brady; president, Mrs. Frederick Edey; secretary, Mrs. Julius H. Barnes; treasurer, Mrs. Edgar Rickard. Miss Josephine Schain is national director. National headquarters are at 670 Lexington Avenue, New York City.

**GLACIERS.** See EXPLORATION under *North America*.

**GLENNAVY, JAMES HENRY MUSSEN CAMPBELL, FIRST BARON.** An Irish jurist, died in Dublin, Mar. 22, 1931. He was born in Terenure, Co. Dublin, Apr. 4, 1851, and was educated at Trinity College, Dublin. Admitted to the bar in 1878, he became Queen's Counsel in 1890, bench-er of King's Inns in 1894, and bench-er of Gray's Inn in 1901. From 1898 to 1900 he was Unionist member of Parliament for St. Stephen's Green division of the City of Dublin, and from 1903 to 1916 for Dublin University. He served as Solicitor-General of Ireland from 1901 to 1905, Attorney-General in 1905 and again in 1916, Lord Chief Justice from 1916 to 1918, and Lord Chancellor of Ireland from 1918 to 1921. Following his resignation from the latter office, he became chairman of the Irish Free State Senate. He had also acted as vice chancellor of Dublin University after 1919. A baronetcy was bestowed on him in 1916, and in 1921 he was created Baron Glenavy of Milltown.

**GOEBEL, gö'bel, JULIUS.** An American Germanic scholar, died in Winnetka, Ill., Mar. 27, 1931. He was born in Frankfort-on-Main, Germany, May 23, 1857, and was educated at the universities of Leipzig and Tübingen. He came to the United States in 1882, and from 1885 to 1888 was an instructor in German at the Johns Hopkins University. He then became professor of Germanic philology and literature at Leland Stanford (1892-1905), lecturer on Germanic philology at Harvard (1905-08), and professor of Germanic languages at the University of Illinois (1908-26). He wrote *Über die Zukunft unseres Volkes in Amerika* (1883), *Über tragische Schuld und Sühne* (1884), *Gedichte* (1895), *Das Deutschtum in den Vereinigten Staaten* (1904), and *Der Kampf um deutsche Kultur in Amerika* (1914).

**GOLD.** The mining of gold was one industry in 1931 which the existing depression and disturbed economic and political conditions did not restrict. With gold at a premium in many countries

and with reduced costs for labor and supplies and also with unemployment general, the gold miners took up the working of deposits with considerable vigor. The world output for 1931 was estimated at 21,000,000 ounces as compared with 20,160,135 ounces valued at \$416,751,523 in 1930, and if this estimate was verified by the final statistics it would be the greatest amount since 1916, when 22,031,000 ounces were produced. The largest producer of gold is the Union of South Africa, where the Transvaal, Cape Colony, and Natal in 1930 accounted for 10,717,163 fine ounces valued at \$221,526,636, while in 1931 the preliminary estimate was 10,874,145 ounces. Next came Canada with 2,107,073 ounces valued at \$43,557,064 in 1930, and the United States with 2,100,395 ounces valued at \$43,419,018. The Union of Soviet Socialist Republics was the only other country in 1930 with a production approximating or exceeding 1,000,000 ounces.

The Director of the Bureau of the Mint, with the cooperation of the Bureau of Mines, issued the following statement of the preliminary estimate of refinery production of gold in the United States during the calendar year 1931:

**PRODUCTION OF GOLD IN THE UNITED STATES IN 1931**

(Equivalent value per fine ounce, \$20.67+)

States	Ounces	Gold Value
Alaska .....	451,126	\$ 9,325,600
Alabama .....	29	600
Arizona .....	136,272	2,817,000
California .....	510,235	10,547,500
Colorado .....	228,064	4,714,500
Georgia .....	77	1,600
Idaho .....	17,642	364,700
Montana .....	46,711	965,600
Nevada .....	137,748	2,847,400
New Mexico .....	28,856	596,500
North Carolina .....	223	4,600
Oregon .....	14,561	301,000
Pennsylvania .....	242	5,000
South Carolina .....	24	500
South Dakota .....	432,772	8,946,200
Tennessee .....	499	10,300
Utah .....	189,438	3,791,900
Washington .....	3,328	68,800
Wyoming .....	44	900
Philippine Islands .....	174,000	3,596,900
<b>Total .....</b>	<b>2,365,881</b>	<b>48,907,100</b>

Comparison with 1930 production indicated an increase in 1931 of \$2,755,300 in gold, and with the year of largest production, 1915, when gold amounted to \$101,035,700 gave a reduction of \$52,128,600. Prospectors and small gold producers in the United States in 1931 were given aid by the Director of the Mint, who temporarily lowered the regulation amount of \$100 to 2 ounces (about \$40) and over of gold that would be accepted at the different United States Mints and assay offices.

Canada again held second place among the gold-producing countries of the world in 1931, with a production estimated at 2,679,728 fine ounces, valued at \$55,394,892. Ontario in 1931 had an output of 2,084,959 ounces, of which 1,054,017 ounces came from Kirkland Lake and 962,688 ounces from the Porcupine district, producing 78 per cent of the total gold mined in Canada. The tonnage of gold ore milled in Ontario during 1931 was 5,006,522 compared with 3,946,623 in 1930, giving a production of bullion valued at \$42,696,453 as compared with \$35,518,862 in 1930. Quebec had an output of 303,300 ounces, as against 141,

747 ounces in 1930, and British Columbia was third with 153,934 ounces as against 164,331 ounces in 1930. Manitoba produced 100,510 ounces in 1931, as compared with 23,189 ounces in 1930.

Canada shipped gold bullion amounting to \$31,737,899 to the United States during 1931 and began such exports during June, when \$15,585,643 was shipped, the largest monthly total of the year. By way of contrast, no gold bullion was shipped during 1930, but Canada exported \$22,312,005 raw gold that year, all excepting \$8466 of which went to the United States. Canada shipped gold bullion in 1931 to Newfoundland, to the amount of \$150,000, bringing Canada's total exports for the year up to \$31,887,899. Canada also shipped \$17,682,563 raw gold. The United States received \$16,745,196 and Great Britain \$937,307. Combined shipments of gold bullion and raw gold totaled \$49,570,459.

In 1931 the gold output of South Africa was estimated at 10,874,145 ounces valued at \$45,772,843, of which the Rand accounted for 10,355,181 ounces valued at \$43,868,907, and the outlying districts for 518,964 ounces valued at \$1,903,936.

While the present article deals more with production than with economics, it is appropriate here to refer to the important changes in the gold holdings of the principal countries which took place during 1931. At the end of 1930 the Director of the U. S. Mint estimated the total gold stock of the world at \$11,522,579,000. During 1931 there were losses of \$290,000,000 in gold by Germany; \$130,000,000 by the United Kingdom; and \$135,000,000 by the United States. On the other hand, there were gains of \$600,000,000 for France, \$310,000,000 for Switzerland; \$195,000,000 for the Netherlands; and \$170,000,000 for Belgium. As a result of these changes the United States had \$4,461,000,000 in monetary gold at the end of the year, while the reserves of other countries included \$588,000,000 for the United Kingdom, \$2,699,000,000 for France, \$234,000,000 for Germany, \$355,000,000 for Belgium, \$206,000,000 for Italy, \$361,000,000 for the Netherlands and \$444,000,000 for Switzerland.

The change in position of the monetary supplies of gold in the United States was due mainly to the following shipments by months as follows (000 omitted):

## UNITED STATES GOLD IMPORTS AND EXPORTS

1931	Imports	Exports
January .....	\$ 34,426	\$ 54
February .....	16,156	14
March .....	25,671	26
April .....	49,543	27
May .....	50,258	628
June .....	63,887	39
July .....	20,497	1,009
August .....	57,539	39
September .....	49,240	28,708
October .....	60,907	398,604
November .....	94,430	4,994
December .....	89,509	32,651
Total .....	\$612,119	\$466,794

See FINANCIAL REVIEW for movement of gold, also METALLURGY.

**GOLD COAST.** A British African colony, extending 334 miles along the Gulf of Guinea between the French Ivory Coast and Togoland; comprising, in addition to the colony proper, Ashanti and the Northern Territories. The area of three divisions is estimated at about 80,000

square miles; population at the census of 1921, 2,078,043, including 2165 Europeans. Accra, with 38,000 inhabitants, is the capital and chief town.

Staple products and chief exports are cacao, palm oil, kola nuts, palm kernels, lumber, India rubber, manganese, gold, and diamonds. Including bullion and specie, imports for 1929 totaled £10,082,381 and exports £12,677,716. Cacao shipments were valued at £9,704,493; gold at £869,863; manganese, £748,286; diamonds, £584,613. The manganese deposits are among the richest known. For the year ended Mar. 31, 1930, revenue amounted to £4,091,422 and expenditure to £5,226,120. The public debt Mar. 31, 1930, stood at £11,791,000. The harbor of Takoradi, opened in 1928, offers the only complete shelter for ships of over 30-foot draft between Sierra Leone and Nigeria.

**ASHANTI, á-shán'té.** Annexed by Great Britain in 1931, Ashanti has an area of 24,560 square miles and a population (1921) of 407,000, including 400 Europeans. Kumasi, the leading town, has about 25,000 inhabitants. There were 4822 pupils in government and mission schools in 1929. Agriculture and gold mining are the chief industries, and valuable forests in the western districts yield mahogany, cedar, fruits, oil, rubber, and gum copal. Nana Prempeh, who as Kwaka Dua III ruled as last king of Ashanti from 1888 until his deposition by the British in 1896, died in Kumasi during 1931.

**NORTHERN TERRITORIES.** Constituted a British protectorate in 1901, the Northern Territories are under the governor of the Gold Coast but are locally administered by a commissioner, with headquarters at Tamale. Area, about 35,000 square miles, excluding the adjoining mandated territory of Togoland (q.v.); population, 527,914 in 1921, including 49 Europeans. Navrenge, the chief city, has about 15,000 inhabitants. Agriculture is the main occupation, though some gold has been found. About 794 miles of roads are passable to motors in dry weather.

Governor of the Gold Coast in 1931, Sir A. R. Slater; Chief Commissioner of Ashanti, H. S. Newlands; Chief Commissioner of Northern Territories, Major F. W. F. Jackson.

**GOLDEN GATE BRIDGE.** See BRIDGES.

**GOLD STANDARD.** See FINANCIAL REVIEW; GREAT BRITAIN under *History*; BANKS AND BANKING.

**GOLF.** The 1931 golf season was noteworthy for two reasons—1, the absence from competition of Robert Tyre Jones, winner of the four major titles in 1930, and 2, the remarkable comeback of Francis Ouimet, popular veteran, who captured the United States Amateur championship after 18 years had elapsed since his famous triumph in the National Open at Brookline, Mass., in 1913. With Jones out no player held a monopoly as he had for the years before his retirement. Ouimet won the Amateur; Billy Burke, a former Bridgeport, Conn., caddie, the Open; Tom Creary, another graduate of caddie ranks, the Professional Golf Association championship; Tommy Armour, former U. S. Open champion, the British Open; and Eric Martin-Smith, the British Amateur. Ouimet's feat stood out in the world of golf. This Boston veteran, who startled the world in 1913 when as a boy he defeated Ted Ray and Harry Vardon, the great English professionals, in the play-off, suddenly came to life in the Amateur championship played over rolling Beverly near Chicago,

and after a hard battle with Billy Howell, 18-year-old youngster from Richmond, Va., in the semi-final, managed to win from Jack Westland, Chicago District champion, in the final.

Billy Burke's triumph in the Open, played at Inverness, was remarkable because he was forced to play 144 holes of golf before winning the title. At the end of the regulation 72-hole grind he and George Von Elm, were tied with 292 each. A 36-hole play-off found the pair still deadlocked with 149 each, and it was not until the final hole of the second double round play-off that Burke managed to obtain an edge. He finally won, by carding 148 in the second 36-hole play-off against Von Elm's 149.

The season of 1931 was a remarkable one for Miss Helen Hicks of Hewlett, L. I. The young New York star, who had promised great things for years, finally had her strokes working perfectly and won the Women's Metropolitan, Eastern and National championships. In the National at Buffalo, she defeated the defending titleholder, Miss Glenna Collett, in the final round.

Miss Maureen Orcutt was the only United States representative in the British Women's championship, the one prize of the golf world that has always eluded American golfers. The tournament was played on an Irish course and Miss Orcutt was eliminated in the third round. Miss Enid Wilson, who later was eliminated in the United States championship by Miss Hicks, won the British tournament with a fine display of putting.

The new lighter weight (1.55—1.68) golf ball adopted by the United States Golf Association, January 1, was a source of much argument. The experts seemed to play as well with the new ball, about a stroke every 18 holes was added to their scores, but the average golfer had greater trouble controlling his shots with the new ball and the flood of complaints, petitions, and letters, aroused the Golf Association and the new ball was supplanted by a heavier one (1.62—1.68) at the annual fall meeting of the U.S.G.A.

George T. Dunlap, of Princeton University, won the Intercollegiate championship; Charles Ferrara, of San Francisco, the Public Links title; the veteran Aubrey Boomer, the French Open; and the American professional team defeated the British in the Ryder Cup matches played over the Scioto Country Links, at Toledo, the last week in June. The Canadian Open was won by Walter Hagen; the Canadian Amateur by C. Ross Somerville of London, Ontario.

**GRAND ARMY OF THE REPUBLIC, THE.** A patriotic order formed in 1866 in Decatur, Ill., among a number of former soldiers who had served in the Civil War. Its purpose is to "enjoy a companionship made sacred by common sufferings and sacrifices"; its corner stones, "Fraternity, Charity, and Loyalty," demand the care and protection of sick and helpless comrades and their widows and orphans; the upholding of all comrades in their worthy endeavors; and loyalty to the flag and laws of the Republic. Affiliated with the Grand Army of the Republic are its auxiliary, the Woman's Relief Corps, and the allied bodies, the Ladies of the G. A. R., Daughters of Union Veterans of the Civil War, Sons of Union Veterans of the Civil War, and the auxiliary to Sons of Union Veterans.

The maximum strength of the organization was in 1890 a membership of 409,487. In 1931 there were 2021 active local posts with a membership of 16,597. The sixty-fifth national encampment was held in Des Moines, Iowa, Sept. 13-17, 1931, while Springfield, Ill., was selected for the 1932 encampment. The officers for 1931-32 were: Commander-in-chief, Samuel P. Town, Philadelphia, Pa.; senior vice commander-in-chief, Olney Nelson, Slater, Iowa; junior vice commander-in-chief, Russell C. Martin, Los Angeles, Calif.; surgeon-general, Dr. Samuel A. Campbell, Mattoon, Ill.; chaplain-in-chief, the Rev. Jesse B. Bartley, Omaha, Neb.; quartermaster-general, Edward Hurley, Buffalo, N. Y.; and adjutant-general, W. F. Hambright, Lancaster, Pa. National headquarters are in Springfield, Ill.

**GRAPEFRUIT.** See HORTICULTURE.

**GRAPES.** See HORTICULTURE.

**GRAPHITE.** The total quantity and value of graphite sold by graphite miners in the United States in 1930 were considerably smaller than the corresponding figures for 1929, according to the U. S. Bureau of Mines. The sales of natural amorphous graphite by producers in 1930 were 1941 tons, valued at \$20,525. In comparison with 1929, there was a decrease of 1641 tons, or 45 per cent in quantity, and of \$26,125, or 56 per cent in value. Because only two operators reported sales of crystalline graphite in 1930, it is impossible to publish figures without disclosing confidential information. In 1929 the production was 5,806,410 pounds valued at \$264,241. The States reporting the sale or use of graphite by the miner in 1930 were Alabama, Michigan, Nevada, and Rhode Island. Alabama was the only State reporting sales of crystalline graphite in 1930. The foregoing figures represent the sales or shipments of graphite. The production figures were somewhat different. Only one amorphous graphite mine was in operation in 1930, that of the Carson Black Lead Co., in Nevada. Two other operators used or sold material from stock mined previously. The imports of graphite in 1931 amounted to 9090 short tons, valued at \$428,808 in comparison with 16,726 short tons, valued at \$624,608, in 1930.

**GRAVES, ALFRED PERCEVAL.** An Irish poet, died in Harlech, North Wales, Dec. 27, 1931. He was born in Dublin, July 22, 1846, and was educated at Windermere College and Dublin University. He held important posts in the civil service, and was inspector of schools from 1875 to 1910 and chairman of the representative managers of the London County Council schools from 1911 to 1919, having also founded the London Educational Councils. He took a leading part in the Irish literary and musical renaissance and in the Pan-Celtic movement, being one of the founders of the Irish and Welsh folk song societies and twice president of the Irish Literary Society. His most celebrated ballad was "Father O'Flynn." Among his volumes are: *Songs of Kilmarnock* (1872); *Irish Songs and Ballads* (1879); *The Irish Song Book* (1894); *The Absentee* (a play produced in 1908); *Welsh Poetry, Old and New, in English Verse* (1912); *The Book of Irish Poetry* (anthology, 1915); and *To Return to All That* (autobiography, 1930). He also collaborated with Sir Charles Villiers Stanford in publishing *Songs of Old Ireland* and *Irish Songs and Ballads* (1882-92); with Charles Wood in *Irish Folk Songs* (1897); with Michele Esposito in *Roseen Dhu*, a dramatic monologue, and *The Postbag: A Lesson in Irish*, an operetta with Arthur Somervell and Lloyd Williams in *Welsh Melodies* (1907); and with Guy Pertwee in *The Reciter's Treasury of Irish Prose and Verse* (1915).

**GREAT BRITAIN.** UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND. A constitutional monarchy comprising England, Scotland, Wales, Northern Ireland, the Channel Islands, and the Isle of Man. Capital, London; ruling sovereign in 1931, George V. The term Great Britain literally applies only to the island including England, Scotland, and Wales, but is often extended to include the other units of the United Kingdom. The British Empire comprises the United Kingdom, India, the Irish Free State, the dominions of Australia, Canada, Newfoundland, New Zealand, and South Africa, and the various colonies, protectorates, dependencies, and other territories subject to the ultimate control of the British Parliament.

**AREA AND POPULATION.** The area of England, Scotland, Wales, the Isle of Man, and the Channel Islands is 89,041 square miles and that of Ireland, 32,586 square miles. (See IRELAND, NORTHERN, and IRISH FREE STATE.) The population of England, Scotland, and Wales at the census of Apr. 26, 1931, totaled 44,790,485, according to preliminary returns, as compared with 42,019,710 at the census of June 19, 1921, an increase of 1,870,775 during the decade. The population of England and Wales was 39,947,931, as against 37,886,699 in 1921, an increase of 2,061,232. Scotland, on the other hand, declined in population by 39,943 during the decade, due largely to emigration, the total declining to 4,842,554 from 4,882,497 in 1921. Most of the large Scottish cities showed gains and most of the counties losses.

The growth of the population from 1925 to the census of 1931 is shown in the accompanying table. It excludes the army, navy, and merchant seamen abroad. Excepting 1931, for which preliminary census returns as of April 26 are given, the figures are estimates.

The numerical increase for England and Wales during the decade 1921-31 was less than that

BRITISH POPULATION, 1925 TO 1931

Year (30 June)	England and Wales	Scotland	Total of Great Britain
1925 .....	38,890,000	4,898,032	43,788,032
1926 .....	39,067,000	4,897,000	43,964,000
1927 .....	39,290,000	4,895,000	44,185,000
1928 .....	39,482,000	4,898,000	44,375,000
1929 .....	39,607,000	4,884,000	44,491,000
1930 .....	39,806,000	4,886,000	44,692,000
1931 .....	39,947,931	4,842,554	44,790,485

of any ten-year period since 1861, when the population was only half as large, with the exception of the War decade of 1911-21. The reduced rate of population increase was due wholly to the steadily falling birth rate. Births during the period 1921-31 were 1,250,000 (16.3 per cent) fewer than in the War period 1911-21 and between 2,000,000 and 2,500,000 fewer than in the normal decennium of 1901-11. The birth rate of 16.3 per 1000 of population in 1930 was about half that recorded before 1890 and about two-thirds that of the pre-War years. Sweden was the only nation having a lower birth rate than Great Britain in 1930. The British rate was said to be insufficient to maintain a stationary population in the future.

The death rate of 11.4 per 1000 of population also represented a considerable reduction. Deaths during the census period 1921-31 were more than 500,000 fewer than those recorded during either of the two preceding decades. According to the British Registrar General, the reduction in true mortality for the period 1921-31 was about 20 per cent, as compared with 1911-21, and about 30 per cent, as compared with 1901-11, thus "indicating a definite advance in the general vitality of the nation as a whole." Births in England and Wales in 1930 numbered 648,811, or 5138 more than in 1929, and deaths totaled 455,427, or 77,065 fewer than in the previous year. For Scotland, births numbered 94,538 (92,880 in 1929) and deaths 64,283 (70,917). The 1931 birth rate of 15.8 (provisional) for England and Wales was the lowest on record, while the death rate of 12.3 was .9 above the 1930 figure. The Scottish birth rate in 1931 was 19 per 1000 and the death rate was 13.3.

Preliminary 1931 census returns for the principal cities, with figures for 1921 in parentheses, were: Greater London, 8,202,818 (7,480,201); Glasgow, 1,088,417 (1,034,174); Birmingham, 1,002,413 (919,444); Liverpool, 855,539 (802,940); Manchester, 766,333 (730,307); Sheffield, 511,742 (490,639); Edinburgh, 438,000 (420,264). Greater London is officially the world's largest city, New York City proper, the next in size, having 6,981,927 residents.

Emigration from Great Britain and Northern Ireland during 1930 totaled 92,158, as against 143,686 in 1929. The inward movement amounted to 66,203, leaving an excess of emigrants over immigrants of 25,955, as compared with 87,469 in 1929. Of the total 1930 emigrants, 59,241 went to other parts of the Empire (106,900 in 1929), or 7799 more than the number returning to Great Britain and Northern Ireland from other parts of the Empire.

**EDUCATION.** Primary education is free and compulsory between the ages of 5 and 14. In England and Wales in 1930 there were 20,803 ordinary public elementary schools, with accommodation for 7,123,279 pupils and an average attendance of 4,940,831. In Scotland (1928-29) there were 2915 primary schools, with

an average attendance of 584,473. Certified secondary and technical schools in England and Wales numbered 1904 in 1929-30, with 473,644 pupils; in Scotland, 252, with 154,206 pupils. The universities enrolled an aggregate of 49,660 students in 1930-31, of whom 34,951 were in 11 English universities, 11,643 in four Scottish universities, and 3066 in the University of Wales.

**AGRICULTURE.** Only 7 per cent of the working population of Great Britain is engaged in agriculture, as compared with 41 per cent in France and 31 per cent in Germany. There were but 474,993 farm holdings in England, Wales, and Scotland in 1929, distributed as follows: Holdings of from 1 to 5 acres, 91,039; from 5 to 50 acres, 271,035; from 50 to 300 acres, 151,635; over 300 acres, 14,684. The cultivated area in England and Wales in 1930, including permanent pasture, totaled 25,380,447 acres; in Scotland, 4,640,718 acres. The area and production of the principal crops in 1929 and 1930 are shown in the accompanying table from the 1931 *Commerce Yearbook*.

UNITED KINGDOM: AREA AND PRODUCTION OF CROPS

[Including Northern Ireland]

Crop	Area (thousands of acres)		Production <sup>a</sup>	
	1929	1930	1929	1930

<sup>c</sup> Seasons ended following year.

<sup>d</sup> England and Wales.

<sup>e</sup> Unit, pound.

<sup>f</sup> Northern Ireland only.

<sup>g</sup> Thousands of units—bushels except as indicated.

In 1931, the total arable acreage reported for Great Britain declined by 2,510,000 acres to 9,500,000 acres, while that under permanent grass increased by 1,490,000 acres to 15,000,000. The wheat acreage dropped to 11,970,000 from 13,460,000 in 1930; farm workers declined by 25,000.

**INDUSTRY.** The industrial output of the United Kingdom in 1930 was 7.6 per cent less than that of 1929 and 2.2 less than that of 1928, according to official estimates of the Board of Trade. Based upon production in 1924 as 100, the Board of Trade's general index number for manufacturing and mining industries combined was 103.3 for 1930, 111.8 for 1929, 105.5 for 1928, and 106.8 for 1927. Index numbers for the respective industries in 1930 showed a decline in output from 1929 of 22 per cent in iron and steel, 20 per cent in textiles, 12.7 per cent in chemicals, 5.7 per cent in mining and quarrying, 3.6 per cent in engineering and shipbuilding, 1.2 per cent in nonferrous metal working, and 1 per cent in food, drink, and tobacco manufacturing. Output of the boot, shoe, and leather industry increased 3 per cent, and of gas and electricity, 2.9 per cent.

The output of the principal mineral and metallurgical industries in 1930, with comparative figures for 1929 in parentheses, was: Coal,

247,235,300 long tons (260,662,700 in 1929); pig iron, 6,192,400 gross tons (7,589,300); raw steel, 7,325,700 gross tons (9,636,200). Coal exports amounted to 54,879,479 tons, valued at £45,671,032 (\$222,258,000), compared with 60,266,618 tons, valued at £48,616,811 (\$236,593,000) in 1929, a decrease of 9 per cent in quantity and 6 per cent in value. The monthly pig iron output declined steadily during the year from 650,000 tons in January to 349,800 tons in December. So did the production of steel ingots and castings—from 771,100 tons in January to 337,200 tons in December. On Dec. 31, 1930, there were 76 blast furnaces and 104 open hearths in operation; there were closed down during the year 86 blast furnaces and 159 open hearths. A total of 2743 mines of all descriptions were in operation in 1929, with 985,422 employees. Production of steel and iron during 1931 was only half that of 1929, according to preliminary returns. The total output of pig iron was 3,750,100 tons, and of steel 5,164,800 tons.

British shipyards in 1930 produced approximately 1,500,000 gross tons of shipping, or about the same as in 1929. The bulk of the business was done in the first part of the year, mostly on orders obtained in 1929. Tonnage under construction June 30, 1931, was 60 per cent below the same date of 1930, a reduction of 836,460 tons.

The cotton and wool textile industries were acutely depressed in 1930, due to disturbed conditions and impaired buying power in India, China, and other overseas markets. Exports of cotton piece goods declined 33 per cent from 1929. Rayon production declined to 48,770,000 pounds from 56,900,000 pounds in 1929. The serious import of these declines on the British economy was indicated by the fact that yarns, textiles, and apparel accounted for 48 per cent of the aggregate value of British overseas shipments of all wholly or mainly manufactured articles for the five years 1924 to 1928, inclusive. For 1930, the proportion declined to less than 40 per cent.

The number of persons registered with unemployment exchanges increased from 1,491,519 at the end of January, 1930, to 2,613,749 on the same date of 1931 and to 2,627,324 at the end of November, 1931. The British economic situation was not wholly unfavorable, however. The number of workers employed was greater in 1931 than before the World War. Production of electrical machinery had doubled since 1913 and the output of central electric stations had doubled since 1918. The period since the War had seen important advances in the production of rayon, motor cars, airplanes, in road and harbor development, building construction, banking, insurance, and the chemical industries.

**COMMERCE.** British foreign commerce in merchandise declined by £357,443,000 (about \$1,747,200,000) in 1930 from the total of the preceding year. Imports fell off from £1,220,765,000 in 1929 to £1,044,840,000 in 1930, or 14.4 per cent; domestic exports from £729,349,000 to £570,553,000, or 21.8 per cent; and reexports from £109,702,000 to £86,980,000, or 20.7 per cent. The aggregate value of imports was the smallest since 1922, while the export total was the lowest in any postwar year. In 1931, the drastic trade declines continued. Imports totaled £862,226,000, exports of British products £389,156,000, reexports £64,029,000, and the excess of

imports £400,041,000, according to preliminary returns from the Board of Trade.

Due to the general decline in price levels, the value of British trade in 1930 showed a greater decrease than the volume of trade. Board of Trade statistics of the volume-value of trade, arrived at by converting declared values to 1924 values, give a better indication of the general trend of trade in 1930. On this basis, the volume of imports was 2.5 per cent less than in 1929, the volume of domestic exports was 18.1 per cent less, and the volume of reexports 4.3 per cent less. A summary of British foreign trade for the years 1924 to 1930, inclusive, is shown in the accompanying table from *Commerce Reports*.

BRITISH FOREIGN TRADE, 1924 TO 1931\*  
[In thousands of pounds sterling]

Calendar year	Imports <sup>b</sup>	Exports		Total <sup>c</sup>	Excess of imports
		King-dom goods <sup>a</sup>	Reexported merchandise <sup>a</sup>		
1924 ..	1,277,439	800,967	139,970	940,937	336,502
1925 ..	1,320,715	773,381	154,037	927,418	393,298
1926 ..	1,241,361	653,047	125,495	778,542	462,819

1928 ..	1,195,598	723,579	120,283	843,862	351,736
1929 ..	1,220,765	729,349	109,702	839,051	381,714
1930 ..	862,226	389,156	64,028	453,185	409,041
1931 <sup>d</sup> ..	862,226	389,156	64,029	453,185	409,041

\* Not including bullion and specie movements.

<sup>b</sup> C. i. f. value.

<sup>c</sup> F. o. b. value.

<sup>d</sup> Preliminary figures.

The merchandise balance of trade in 1930 was unfavorable by £387,307,000, compared with an adverse balance of £381,714,000 in 1929 and £351,736,000 in 1928. Bullion and specie movements in 1930 raised the adverse visible balance of trade to £392,337,000. Imports of bullion and specie totaled £95,175,440 and exports £90,145,824, leaving a net import balance of £5,029,616. In 1929, exports of bullion and specie amounted to £86,671,986, exceeding by £15,929,854 the imports of £70,742,132 and reducing the total adverse balance of trade for the year to £365,784,000. These unfavorable visible balances were more than offset by invisible items, such as tourist expenditures and returns on foreign investments. The Board of Trade estimated that all international commercial transactions resulted in a credit balance for Britain of £28,000,000 in 1930, compared with a credit balance of £103,000,000 in 1929. In 1931, the normal credit balance was converted to an estimated debit balance of £110,000,000.

The United States remained the leading source of supply for British imports in 1930, although its share of the total declined from 16 per cent in 1929 to 14.7 per cent. This decrease was due chiefly to the marked falling off in shipments and prices of raw cotton and grain. For much the same reasons, Argentina's share declined from 6.7 per cent of the total in 1929 to 5.4 per cent. The percentages of imports supplied by other leading countries, with figures for 1929 in parentheses, were: Germany, 6.2 (5.6); Denmark, 5.1 (4.6); British India, 4.8 (5.2); France, 4.7 (4.6); Australia, 4.4 (4.6); New Zealand, 4.3 (3.9); Irish Free State, 4.1 (3.7); Netherlands, 3.7 (3.5); Belgium, 3.6 (3.6); Canada, 3.6 (3.8); Russia, 3.2 (2.2). The percentage of British imports coming from other parts of the Empire totaled 29.1 in 1930, 29.4 in 1929, 30.4 in 1928, and 32.5 in 1925. Imports

from the Soviet Union increased in value to £34,245,000 from £26,487,000 in 1929.

Of the 16 leading customers of Great Britain, Norway was the only one whose purchases increased in value in 1930. Exports to British India, Australia, and the United States, the three leading markets in 1929, registered sharp declines. While British India retained first place in 1930, her purchases of British exports declined to £52,944,000, or 9.2 per cent of the total, from £78,227,000, or 10.7 per cent of the total, in 1929. The Irish Free State replaced Australia as the second important export market, while the United States fell from third to sixth place, taking £28,716,000 of British exports in 1930 and £45,558,000 in 1929.

FINANCE. For the fiscal year ended Mar. 31, 1931, actual revenues were £775,894,975 and actual expenditures £799,170,946, leaving a deficit of £23,275,971 (about \$113,268,000) instead of the surplus of £2,236,000 anticipated by the Chancellor of the Exchequer in his Budget speech. Expenditures, however, included £66,830,431 applied to redemption of debt. Eliminating this item, there remained a surplus of ordinary revenue (£775,894,975) over ordinary expenditure (£732,340,515) of £43,554,460, as compared with the 1929-30 surplus of £33,225,052. Included in revenue was £32,890,000 as receipts from loans. Budget estimates for the year were: Revenues, £789,445,000; expenditures, £787,209,000.

Actual ordinary expenditure included about £37,000,000 contributed for unemployment relief and transitional benefit. In addition, £36,440,000 was borrowed for the unemployment insurance fund.

The budget for the fiscal year beginning Apr. 1, 1931, was submitted to the House of Commons April 27 by the Chancellor of the Exchequer. On the basis of existing taxation, receipts were estimated at £803,500,000 (about \$3,910,233,000) while expenditures were placed at £803,366,000 (about \$3,909,581,000), leaving an anticipated deficit of £134,000 (about \$652,000). The above figures cover ordinary items only. The deficit for the total budget, including ordinary and extraordinary items, was placed at £37,366,000 (about \$187,000,000).

Mr. Snowden proposed to meet the deficit by three measures. The gasoline tax was raised to 12 cents a gallon from the existing rate of 8 cents, the extra income from this source being estimated at £7,500,000 (about \$36,450,000). The system of income-tax payments was changed so that three-fourths of the annual tax was to be collected Jan. 1, 1932, and one-fourth July 1, 1932, instead of one-half on each date. This measure, justified by Mr. Snowden on the ground that economic conditions were likely to improve in 1932, would bring an extra quarter of the income-tax payments, estimated at about £10,000,000 (\$48,600,000), into the Treasury during the 1931-32 fiscal year, which ended Mar. 31, 1932. Finally, £20,000,000 (about \$97,200,000) was taken from the £33,000,000 (\$160,380,000) reserve established in New York after the World War to buy dollars at the most favorable rate in anticipation of debt payments to the United States. Additional revenues from these three sources were calculated at £37,500,000 (about \$182,250,000), which added to anticipated revenue from existing sources, yielded a nominal budget surplus of £134,000 (about \$651,240). The feature of the budget was the

proposal to lay a tax of one penny per pound sterling (2 cents in \$4.86) on land values, commencing in 1933-34. The political aspect of this measure and of the budget in general is discussed below under *History*.

At the end of the first six months of the 1931-32 fiscal year (on September 30), the budget showed an estimated deficit of £98,410,249. The Chancellor of the Exchequer accordingly presented an emergency supplementary budget (on September 10), calculated to wipe out the deficit for the year, which he then estimated at £74,679,000. Expenditures were to be reduced £22,000,000 by drastic economies; £13,700,000 was to be saved through the Hoover moratorium on debt payments to the United States; and new taxation amounting to £40,500,000 was imposed.

The economies of £22,000,000 were provided through a reduction of about 10 per cent in unemployment benefits and an increase in unemployment assessments. Drastic cuts were made in the road-fund expenditure, and in salaries of Cabinet Ministers, members of Parliament, judges, teachers, police, civil servants, and defense personnel; other retrenchments were made in educational grants and defense services. New taxation included the raising of the basic standard rate of income tax from 4 shillings sixpence to 5 shillings in the pound (from 22½ to 25 per cent), a higher surtax, and the reduction of sinking fund applications from £50,000,000 to £32,500,000.

Great Britain's public debt on Mar. 31, 1931, totaled £7,473,000,000 (about \$36,218,000,000), as compared with £654,000,000 (\$3,168,000,000) on Aug. 1, 1914. The debt was reduced from £8,033,000,000 in 1919. The British debt in 1931 was the largest in the world. Measured on a per capita basis, it was six and a half times as large as that of the United States. Its service consumed nearly half of the public revenues.

**SHIPPING.** The net tonnage of vessels entering the ports of the United Kingdom with cargoes during 1930 was 63,715,296 (62,702,000 tons in 1929) and the net tonnage of vessels cleared was 65,853,620 (68,679,000 in 1929). The net tonnage of vessels entering and clearing from the Port of London in 1929 was 57,578,000. Vessels registered as belonging to the United Kingdom at the beginning of 1930 totaled 18,044, of 12,369,041 net tons; of these 12,795 vessels, of 11,888,976 tons, were steam and motor vessels. See **SHIPPING**.

**RAILWAYS.** At the beginning of 1931, the four great railway systems had about 20,420 miles of line, equivalent to more than 50,000 miles of single track. About one-twelfth of the population was estimated to be dependent on the railway industry for a living. As a result of the industrial depression and increasing motor-vehicle competition, the four systems reported a revenue decline of £10,319,000 (about \$50,150,000) in 1930, as compared with 1929, or £15,819,000 (\$76,880,000) below the "standard" revenue the railways were permitted by statute to earn. Of the 1930 revenue decline, \$15,581,000 represented the falling off in passenger receipts and \$34,569,000 the decrease in freight receipts. Passenger journeys, excluding season ticket holders, declined by more than 16,000,000. Upon application of the railways, the National Wages Board on Mar. 5, 1931, ordered a general reduction of 2½ per cent in the wages of all employees, and an additional 2½ per cent reduc-

tion for those in higher-salaried grades. There was a further drastic decline in revenue in 1931 to a total of £156,284,000, as compared with £170,808,000 in 1930.

A committee appointed by the Minister of Transport in September, 1929, to report upon the electrification of the main railway lines submitted favorable findings on Apr. 24, 1931. The committee estimated the required capital expenditure at about £261,000,000 (\$1,267,000,000) spread over 20 years.

On Sept. 14, 1931, the Great Western Railway inaugurated a time schedule which made the afternoon express from Cheltenham to London the fastest train in the world. The train was scheduled to cover the 77.3 miles from Swindon to Paddington in 67 minutes, equal to an average of 69.2 miles per hour.

**OTHER COMMUNICATIONS.** Highways of all descriptions in the United Kingdom extended 179,286 miles in 1930, and canals about 3822 miles. Air lines radiate from Croydon to the various European capitals and to Palestine, India, Egypt, and South Africa. A new and shorter air route to India through Haifa, Palestine, was opened in October, 1931. The Imperial air line from Cairo to Mwanza, Tanganyika, on Lake Victoria Nyanza, was scheduled for extension to Capetown in December, 1931. A weekly mail service was thereafter to be operated between London and Capetown on a schedule of 11 days, later to be reduced to nine days. Including the line to India, planes of Great Britain's civil airways in 1930 flew 1,286,000 miles, as compared with 1,386,000 miles in 1929. Passenger traffic in passenger-miles was 6,011,000 (7,127,000 in 1929).

**ARMY AND NAVY.** The Royal Air Force in March, 1931, comprised 72 regular and eight Special Reserve or Auxiliary Air Force squadrons, each squadron consisting of 12 aeroplanes.

**GOVERNMENT.** The head of the state, George V, was born June 3, 1865, and succeeded to the throne May 6, 1910. The Cabinet at the beginning of 1931 was composed as follows: Prime Minister and First Lord of the Treasury, James Ramsay MacDonald; President of the Council, Lord Parmoor; Chancellor, Lord Sankey; Privy Seal, Vernon Hartshorn; Chancellor of the Exchequer, Philip Snowden; Home Affairs, John Robert Clynes; Foreign Affairs, Arthur Henderson; Dominions, J. H. Thomas; Colonies, Lord Passfield; War, Thomas Shaw; Air, Lord Amulree; Secretary of State for India, Wedgwood Benn; Admiralty, Albert Victor Alexander; President of the Board of Trade, William Graham; Health, Arthur Greenwood; Agriculture and Fisheries, Christopher Addison; Education, Sir Charles Philips Trevelyan; Labor, Margaret Bondfield; Works, George Lansbury; Secretary of State for Scotland, William Adamson.

The composition of Parliament at the beginning of 1931 was as follows: Labor, 288; Con-

servative, 261; Liberal, 58; others, 8; total 615. For changes in the Government in 1931, see *HISTORY*.

### HISTORY

The year 1931 was undoubtedly one of the most critical and eventful in modern British history. The Labor Government, a Coalition Government which succeeded it, and the pound sterling all crumbled beneath a complex of internal and external forces. These forces were economic, political, and social in character. They flowed most directly from the world-wide economic depression of 1929-31. But their roots lay farther back—in the World War's vast destruction of wealth, in the growth of economic nationalism which excluded Britain from important markets, and in the development by the United States, Canada, Germany, and other nations of new industrial methods, summed up in the term "mass production," which deprived Great Britain of her former advantage in supplying the markets of the world.

With the advent of the world depression in the fall of 1929, all these adverse forces were intensified. Revenues declined, necessitating still higher taxes. By the end of 1930, according to the Royal Economic Society, the wholesale price level had dropped 25 per cent, the physical volume of production 18 to 20 per cent, imports 20 per cent, and exports 30 per cent, as compared with the 1929 peaks. The number of unemployed increased to 2,825,772 on Sept. 28, 1931, a total comprising considerably more than one-fifth of all Britain's industrial workers. The unemployment insurance fund was unable to meet the demands upon it. Additional contributions were required from the government and these made it increasingly difficult to balance the budget.

A balanced budget and the equalization of national income and expenditure was essential, however, to maintain the pound sterling at par. And a firmly secured pound sterling was essential, in turn, to the maintenance of London's unique position as a sort of international bank of deposit—a position which brought British financiers large commissions and profits on reinvestments (estimated at \$800,000,000 in 1930) sufficient to offset the highly adverse visible balance of trade. In the period 1924-29, British commodity exports were sufficient to pay for only 69 per cent of the goods imported.

With economy and the upholding of British credit as the most pressing of national issues, the question arose as to how the required sacrifices were to be distributed among the population. Labor demanded that the cost be borne by the rich, through higher income taxes, and lower returns on fixed investments. The British industrialists and financiers stood firm for a reduction of wages to enable British industry to compete more successfully in foreign markets, and a tariff to protect the domestic market. It was on this crucial issue that the political battle of 1931 was fought out.

**THE SNOWDEN BUDGET.** Intimations of the weakness of the Exchequer's position were given early in the year. On March 17, in accordance with a parliamentary resolution of February 11, the Prime Minister appointed a committee of financial experts headed by Sir George May to recommend all possible reductions in national expenditure. The fears of an impending deficit

were confirmed April 27, when Chancellor of the Exchequer Snowden in his budget speech announced that at the existing rate of taxation the budget for 1931-32 would show a deficit of about \$180,000,000. In his proposals for balancing the budget (see above under *Finance*), he admitted resorting to temporary expedients to balance the budget, his explanation being that he believed the worst of the economic depression had passed and that a revival of business activity in 1932 and 1933 would quickly restore the treasury balance. Gamble though it was, his budget was generally accepted as the best that could be expected, although Conservatives criticized his raiding of the debt sinking fund to reduce the deficit.

**DEVELOPMENT OF THE CRISIS.** Recounting the causes of the financial storm in a radio address of Sept. 21, 1931, the Chancellor of the Exchequer said:

"The actual crisis started with the collapse of the chief bank of Austria last May and the crisis which followed in Germany. The tying up of funds in Germany had an immediate effect on the London market, because London is the centre of international banking, and it was known, of course, that we had been lending to Germany. Once foreign centres became aware of this, the difficulties of our situation came to the front."

Austria turned to Britain for help when the French refused a loan except on political conditions and the British advanced \$21,000,000 unconditionally in an effort to preserve European stability (see *FRANCE and AUSTRIA under History*). On June 4 appeared an interim report of a commission charged with the investigation of the unemployment insurance fund. The fund, according to the report, was then \$400,000,000 in debt to the Exchequer and its income sufficed to meet only half of the demands upon it. It was running behind at the rate of about \$5,000,000 a week, and the deficit for the full year 1931-32 was estimated at \$197,250,000. The commission proposed that this deficit be reduced to \$38,250,000 by cutting down the weekly benefit rates by about 50 cents weekly, thus saving \$65,000,000, and by increasing the contributions of employees, employers, and the State, thus bringing in \$45,000,000 additional. The Labor party firmly opposed any alteration in the existing schedule of payments and contributions.

The Government accordingly pushed through a measure which ignored the commission's recommendations. It established an advisory body to deal with abuses of the fund and provided machinery for the transference of unemployed workmen and their families to districts where employment might be available. The borrowing powers of the fund were increased by \$125,000,000, making a total indebtedness of \$575,000,000. Parliament also advanced money to the depleted road fund to provide unemployment relief. These and other measures called for an expenditure of \$35,000,000 in excess of the expenditure estimates upon which Mr. Snowden based his budget of April 27.

Meanwhile the increasing seriousness of the German situation was emphasized by the visit of Chancellor Brüning and Foreign Minister Curtius to London (June 5-7) and the conferences held between them and British government officials at Chequers, the country home of the Prime Minister. Their joint manifesto, declaring

that "a revival of confidence and prosperity depend upon international coöperation" was generally considered a bid for reparation and debt revision. As such, it aroused resentment in some French circles.

President Hoover's proposal of June 20 for a year's moratorium on reparation and intergovernmental debts served to stabilize the situation in Germany temporarily. But its effect was impaired by the two weeks of negotiation required to gain France's consent to the agreement. In the course of the negotiations Hungary was forced to close its banks and the increasing instability of the European financial structure caused heavy withdrawals of short-term credits from London. A steady stream of gold flowed from London to Paris for the five weeks commencing about the middle of July. The drain on British gold reserves was felt the more acutely because of the tying up of large British credits in Germany and Central Europe by the action of the Seven-Power Conference, held in London (July 20-23), in recommending that such credits be left intact. Great Britain thus contributed to her own financial difficulties through her efforts to prevent a debacle in Germany and Central Europe. British assets locked up in Germany during this crucial period were estimated by Mr. Snowden at \$350,000,000. The moratorium agreement, furthermore, resulted in a direct loss to the British Exchequer for the year commencing July 1, 1931, of about \$55,000,000, or the amount that would otherwise have been received from her various debtors in excess of British debt payments to the United States.

The final event which convinced foreign investors in the London money market of the necessity of getting their funds out of danger was the publication on July 31 of the majority report of Sir George May's commission. The commission tripled Mr. Snowden's estimate of the budget deficit for 1931-32, placing it at approximately \$600,000,000. They reached this startling conclusion by putting into the national balance as simple revenue liabilities the unemployment insurance and road funds.

The May Commission proposed to eliminate the estimated budget deficit by drastic cuts in expenditure, rather than by increased taxation. The report of the May Commission forced the Government onto the horns of a dilemma. Defiance of this second warning from the highest financial authorities of the necessity of immediate action could not safely be ignored. Yet adoption of the commission's economy programme would be equivalent to repudiation of Labor's electoral promises.

Great harm to British credit had already been done. During the 13 days ending July 25 withdrawals of foreign funds from the Bank of England totaled \$145,500,000. To check the outward flow of gold, going chiefly to Paris, the Bank of England on July 23 raised its rediscount rate from  $2\frac{1}{2}$  to  $3\frac{1}{2}$  per cent. The rediscount rate was raised again on July 30 to  $4\frac{1}{4}$  per cent and still the flight of gold continued. Mr. Snowden declared it essential to balance the budget at all costs and warned Parliament, which was to adjourn the next day (July 31), that he would balance it. On August 1 the Bank of England obtained a credit of about \$250,000,000 from the Federal Reserve Bank of the United States and from the Bank of France to meet withdrawals. By the middle

of August these reserves were virtually exhausted, and the pound sterling was evidencing a growing weakness in foreign money markets.

The Economy Committee of the Cabinet met on August 12, in response to demands from the Chancellor of the Exchequer and British bankers for immediate action. With a balanced budget, Mr. Snowden hoped to carry through a conversion operation which would considerably reduce the burden of interest on the public debt. A split within the Labor party now appeared, growing wider as the negotiations continued. A group under Arthur Henderson, the Foreign Minister, held out for the maintenance of the existing social services, while Snowden, MacDonald, and J. H. Thomas, the Minister for Dominions, considered it necessary to reduce them. The Cabinet split in another direction on the proposal for a tariff of 10 per cent on imports; the measure was favored by Henderson, Thomas, and others and vigorously opposed by Snowden, and William Graham, President of the Board of Trade.

During these negotiations, the Prime Minister was in consultation with the Liberal and Conservative leaders. On August 20, Mr. MacDonald and Mr. Snowden outlined their proposals for balancing the budget to representatives of the other parties. The Trades Union Council was also informed. The proposals, which had been approved by a majority of the Labor Cabinet, called for a 10 per cent cut in social services. They were rejected, however, on August 21, by both the Conservatives and the Trades Union Council. The Conservatives objected because only half of the deficit was to be made up through economies; the Trades Union Council, on the other hand, demanded that all the deficit be made up through increased taxation. The Liberals made it clear that they would no longer support the Government unless drastic economies were effected.

The decision of the Trades Union Council not to accept the cuts precipitated the actual Cabinet crisis. The Council acted for the Trades Union Congress, which included 210 unions with 3,750,000 members and controlled 130 of the 286 Labor members of Parliament. In a later account of the crisis, Mr. Henderson said that the majority of the Cabinet had agreed on economies totaling \$280,000,000 and that his faction split with the Prime Minister when told that additional economies of \$150,000,000 were required and would have to be taken from unemployment insurance.

At this stage (August 23) the King arrived in London from Balmoral and took a hand in the negotiations. To his endeavors was attributed the final decision to form an emergency Coalition Cabinet. On August 24, the Labor Ministry resigned. And, much to the chagrin of the opposition group within the Cabinet, Mr. MacDonald accepted the task of forming the new Government. In doing so he sacrificed the leadership of his party, to which he had devoted his life, and won the bitter enmity of many of his erstwhile colleagues. The same course was followed by a few other members of the Cabinet—Philip Snowden, J. H. Thomas, Lord Sankey, Lord Amulree, and Sir William Jowitt—who entered the Coalition Government with Mr. MacDonald. The entire group was read out of the Labor party, which on August 28 confirmed Mr. Henderson as the official leader of the party.

A Labor manifesto of August 27 set forth the party's programme. It rejected any impairment of the standard of living or of social services and proposed to meet the deficit by the taxation of higher incomes and fixed interest-bearing securities, the reduction of war debts, and the suspension of payments into the debt sinking fund. It was recalled that British investors had some \$20,000,000,000 invested abroad, which had not been drawn upon.

**THE COALITION GOVERNMENT.** The Coalition Government was formed for the specific task of balancing the budget and restoring confidence in Britain's national credit. Party hostilities were to be suspended during this period, but it was agreed that as soon as its task was completed new elections would be held. In the interests of efficiency, the Cabinet was limited to 10 members, instead of the usual 19 or 20. It was constituted as follows: Prime Minister and First Lord of the Treasury, J. Ramsay MacDonald (Labor); Chancellor of the Exchequer, Philip Snowden (Labor); Secretary for Dominions and Colonies, J. H. Thomas (Labor); Lord Chancellor, Lord Sankey (Labor); Lord President of the Council, Stanley Baldwin (Conservative); Secretary for India, Sir Samuel Hoare (Conservative); Minister of Health, Neville Chamberlain (Conservative); President of the Board of Trade, Sir Philip Cunliffe-Lister (Conservative); Foreign Secretary, Lord Reading (Liberal); Home Secretary, Sir Herbert Samuel (Liberal). The remainder of the 54 Ministers who were not on the Cabinet included: Air Secretary, Lord Amulree (Labor); Attorney General, Sir William Jowitt (Labor); Lord Privy Seal, Lord Peel (Conservative); First Lord of the Admiralty, Sir Austen Chamberlain (Conservative); Minister of Labor, Sir Henry Betterton (Conservative); First Commissioner of Works, Lord Londonderry (Conservative); Agriculture and Fisheries, Sir John Gilmour (Conservative); War, Lord Crewe (Liberal); Education, Sir Donald MacLean (Liberal); Secretary for Scotland, Sir Archibald Sinclair (Liberal); Chancellor of the Duchy of Lancaster, Lord Lothian (Liberal).

The country remained calm during and after the Cabinet crisis, except for a few demonstrations against the Government in London. The King set an example in economy by reducing his civil list by \$250,000, while the new Government moved rapidly to meet the emergency. Parliament was convened in special session September 7, the Cabinet carrying a vote of confidence by 309 to 250. The Conservatives, Liberals, and 12 Laborites supported the Ministry; the remainder of the Laborites and Sir Oswald Mosley's group of five opposed it. Emergency legislation to give effect to Mr. Snowden's new budget was rushed through Parliament in three weeks, after a radical revision of the rules of procedure to cut short or eliminate discussion. For details of the Snowden budget (see above under *Finance*).

The formation of a coalition cabinet with a drastic economy programme served to restore foreign confidence somewhat, and on August 28 the new Government obtained a loan of about \$400,000,000, half from the United States and half from France. Withdrawals from the Bank of England fell sharply and it was hoped that they would cease entirely. The nation, however, failed to heed Prime Minister MacDonald's plea

for a united front. Inflation and repudiation of debts were urged by a few prominent persons. Labor showed bitter hostility to the financial reforms. On September 15 the nation and the world was astounded at reports of disorders in the British Navy in protest against wage cuts. The reports proved exaggerated, but they served to arouse nervousness abroad and the "run" on the Bank of England started once more. On September 17, London financiers informed the Prime Minister that the stability of the pound sterling was again imperiled. Withdrawals of foreign funds from the Bank of England that day totaled \$50,000,000. The next day they rose to \$90,000,000. With the credits raised by the Government in New York and Paris approaching exhaustion, the Government sought additional loans, but without success. On September 19, the Bank of England advised the Ministry that if withdrawals continued it would be impossible to meet the demands on it for gold. In the two preceding months, Britain had lost in foreign exchanges about \$1,000,000,000, of which \$175,000,000 was in gold. There remained in the vaults of the Bank of England only about \$650,000,000 of gold to serve as a basis for British currency.

**GOLD STANDARD ABANDONED.** The Government checked further withdrawals by abandoning the gold standard on September 21. The gold standard act of 1925, which had stabilized the pound at \$4.8665 by making British pound notes payable on demand at the Bank of England in gold, was repealed. Thereafter the exchange value of the pound was determined by the interplay of supply and demand in the market. On the same day the Bank of England raised the rediscount rate from 4½ to 6 per cent. Through internal disunity and the maladjustment of the world's complex economic and financial machinery, Britain had lost her gallant struggle to bring the pound back to par after the World War and to keep it there. And the Coalition Cabinet had failed in its effort to maintain confidence in British credit.

The reverberations of the abandonment of the gold standard were felt throughout the world. The exchange value of the pound quickly slumped to \$3.83 on September 24, and in many instances the French franc or the American dollar supplanted it as a basis for foreign contracts. Business throughout the world was profoundly disturbed. The currencies of many countries having close relations with British finance were weakened and prices broke sharply on the New York, Paris, and other stock markets. There commenced a considerable outflow of gold from the United States, which hitherto had been receiving large quantities. Banks and stock exchanges were closed temporarily in a number of countries and on September 27 Sweden, Norway, and Egypt abandoned the gold standard. Finland, Northern Rhodesia, and Southern Rhodesia followed suit on October 12.

**THE NATIONAL ELECTION.** Within a month after the formation of the Coalition Ministry it became evident that the confused political situation could be clarified only through a general election. The tariff issue, in particular, threatened to split up the coalition, and partisan intrigues were undermining the prestige of the Government. For several weeks the Cabinet sought to evolve a formula on which the coalition parties could go before the nation. The Con-

servatives demanded that the platform include a high tariff as the chief remedy for the country's economic ills. But the Prime Minister refused to continue his association with the Government on that basis. The Liberals were split wide asunder by the tariff issue. A section under Sir John Simon favored an emergency tariff, while Lloyd-George and his followers bitterly opposed it. The dissident groups finally recognized in Mr. MacDonald the sole unifying force of the coalition. Without a party following of his own, he was given a free hand to draft an electoral platform. Free Traders and protectionists alike on the Cabinet agreed to support whatever tariff programme he decided upon. Parliament was dissolved on October 7, and on the same day the Prime Minister launched the election campaign with an appeal for the return of the Coalition Government so that it might complete its task of financial and economic reconstruction.

Mr. MacDonald asked for the return of a government free to consider every proposal likely to help, such as tariffs, the expansion of exports, the contraction of imports, commercial treaties and mutual economic arrangements with the Dominions. It was essential, he said, that international action be taken "to remove some of the fruitful causes of economic misfortunes—like war debts and reparations—." He invited the support of all parties and classes in the task of national reconstruction and charged his opponents in the Labor party with shirking their duty to the nation in connection with the August Cabinet crisis.

Meanwhile, on September 30 and October 1, there had been serious riots in London, Glasgow, and Manchester in protest against unemployment insurance reductions. The Labor party, in its annual conference at Scarborough, October 5-7, had adopted a platform of radical socialism, including the socialization of land, industries and mines, complete government control of all banks and financial institutions, and the repeal of the unemployment insurance reductions and of other economy measures.

The Conservative election manifesto, issued October 8 by Stanley Baldwin, pointed out that although the budget had been balanced Britain could be saved from "ultimate bankruptcy" only through elimination of the excess of imports over exports. Mr. Baldwin stressed the Conservative view that "a tariff is the quickest and most effective weapon not only to reduce excessive imports but to enable us to induce other countries to lower their tariff walls."

Despite the issues at stake and the undertone of bitterness, the campaign was fought, on the whole, good-humoredly. Mr. MacDonald, however, was freely hissed and booed in his old constituency at Seaham. Mr. Thomas was shouted down at Liverpool. And Sir Oswald Mosley and a number of Government candidates in London were roughly handled by hooligans. In general, the Government parties were successful in avoiding contests between their members in the same constituency, and a large number of straight fights between candidates of the National Government (Liberal, Labor, or Conservative) and Opposition Laborites resulted. In some districts, however, high tariff Conservatives and free trade Liberals attacked one another more fiercely than they did their Labor opponents. In addition, each party was divided into two or

more factions on the election issues. The Conservative followers of Mr. Baldwin were harassed by the activities of the high-tariff Conservatives and the "Empire Crusaders" (see 1930 YEAR BOOK). The Liberals were split into a small faction headed by Lloyd George, which opposed the Government because it appeared pledged to a tariff experiment, another free trade group under Sir Herbert Samuel, and a group under Sir John Simon which had gone over to protection. Both Sir Herbert and Sir John supported the Government. Labor was likewise divided into three camps—the orthodox majority headed by Arthur Henderson, the MacDonald adherents, and the left wing Laborites of the Independent Labor party. There were also in the field a number of Communists and Sir Oswald Mosley's New party, with 18 candidates, which he had formed following his withdrawal from the Labor party on February 28. Sir Oswald stood for a semi-dictatorial national government. The old party structure of the nation was being drastically reshaped under the stress of the economic and financial crisis.

**THE COALITION VICTORY.** The coalition parties on October 28 won the greatest electoral victory in a century of British political history. Of the 615 seats in the House of Commons, the coalition won 554, as compared with 338 in the previous House, while the standing of the Opposition parties dropped to 61 from 276. The standing of the various Government parties in the new House, with their membership in the preceding House in parentheses, was: Conservatives, 471 (263); National Liberals, 68 (58); National Laborites, 13 (13); Independents, 2 (4). In the Opposition ranks, the party standing was as follows: Labor 50 (270); Lloyd George Liberals, 4 (0); New party (Mosley), 0 (4); Independents, 7 (2). Although the Conservatives alone won 163 seats more than the number required to control the House, the victory was distinctly won on a National rather than a party basis. Premier MacDonald won a smashing triumph in Seaham, rolling up a majority of 5951 votes in one of the strongest Labor constituencies of the country. J. H. Thomas and Sir Herbert Samuel were elected despite opposition by both Labor and Conservative candidates in their constituencies. Among the members of the previous Labor Cabinet defeated at the polls were Messrs. Henderson, Alexander, Morrison, Shaw, Greenwood, Clynes, Turner, Trevelyan, and Miss Margaret Bondfield. The total vote cast was 21,399,175, of which the National Government received 14,423,507 and the Opposition 6,975,668. Sixty-eight constituencies were not contested.

In the municipal elections held a few days later (November 2) the Labor candidates were buried under another avalanche of adverse votes. The party lost 416 seats in various municipalities in England and Wales, while the Conservatives gained 338.

**THE NEW GOVERNMENT ORGANIZES.** The new House of Commons held its first session November 3, electing Capt. Edward A. Fitzroy as Speaker, and then adjourned until November 10, when both Houses of Parliament were formally opened by King George. November 3 marked the end of Lloyd George's long rule of the Liberal party, the 33 protectionist Liberal Members electing Sir John Simon as their leader and the free-trade Liberals, 31 in number, electing

Sir Herbert Samuel. On November 4, Lloyd George formally resigned.

Premier MacDonald announced his fourth Cabinet on November 5. The anxiously-awaited list was moderately protectionist in composition and was truly national in the sense that it contained 11 Conservatives, five Liberals, and four National Laborites. The chief surprise in the list was the appointment of Sir John Simon as Foreign Secretary to succeed Lord Reading. The 20 members of the new Cabinet were: Prime Minister and First Lord of the Treasury, James Ramsay MacDonald (National Laborite); Lord President of the Council, Stanley Baldwin (Conservative); Lord High Chancellor, Lord Sankey (National Laborite); Lord Privy Seal, Philip Snowden (National Laborite); Chancellor of the Exchequer, Neville Chamberlain (Conservative); Secretary of State for Home Affairs, Sir Herbert Samuel (National Liberal); Secretary of State for Foreign Affairs, Sir John Simon (National Liberal); Secretary of State for the Dominions, J. H. Thomas (National Laborite); Secretary of State for the Colonies, Sir Philip Cunliffe-Lister (Conservative); Secretary of State for War, Viscount Hailsham (Conservative); Secretary of State for India, Sir Samuel Hoare (Conservative); Secretary of State for Scotland, Sir Archibald Sinclair (National Liberal); Secretary of State for Air, Marquess of Londonderry (Conservative); First Lord of the Admiralty, Sir Bolton Eyres-Monsell (Conservative); President of the Board of Trade, Walter Runciman (National Liberal); Minister of Health, Sir Hilton Young (Conservative); President of the Board of Education, Sir Donald MacLean (National Liberal); Minister of Agriculture and Fisheries, Sir John Gilmour (Conservative); Minister of Labor, Sir Henry Betterton (Conservative); First Commissioner of Works, William Ormsby-Gore (Conservative); Chancellor of the Duchy of Lancaster.

**ECONOMIC MEASURES.** The National government lost little time in putting into effect some of the tariff measures foreshadowed by the Conservative victory. On November 19, the House of Commons passed an emergency bill authorizing the Board of Trade to impose duties up to 100 per cent on foreign manufactured goods. The next evening the President of the Board of Trade declared a 50 per cent tariff on 23 groups of manufactured articles for six months, starting November 25. Two supplementary lists were issued on December 4 and 17, respectively, extending the tariff to a wide variety of manufactured imports. On November 30, the House of Commons went a step further by authorizing a duty on fresh fruits, early vegetables, flowers, and bulbs. A quota system for home-grown and Dominion wheat was also proposed. The tariff action aroused much anxiety in Europe and the United States. In France there was open talk of a tariff war. The President of the Board of Trade informed the House of Commons, amid cheers, on December 4 that Great Britain was ready for tariff warfare if necessary. Recalling the vain appeals made by the British government for reductions in foreign tariffs while Britain was on a free trade basis, Mr. Runciman said that henceforth Britain's internal interest would receive first consideration. France, Germany, Holland, Belgium, and Spain started negotiations for mutual tariff accommodation, but met with little encouragement from the British government.

In an endeavor to end the "crazy economics," which Premier MacDonald declared were steadily undermining the prosperity and peace of the world, he sounded out the attitude of the Powers on a project for a world economic conference to consider reparations, war debts, tariffs, and other obstacles to trade. Speaking before the House of Commons December 9, Mr. MacDonald said it would be sheer madness to attempt to stabilize the pound before there was a settlement of the international situation. He also prepared to head the British delegation to the 1932 Disarmament Conference at Geneva. Following the report of the advisory committee, appointed by the Bank for International Settlements to inquire into Germany's capacity to resume reparation payments in July, 1932, the Prime Minister secured the consent of the principal Powers to hold an economic conference early in 1932 (see **REPARATIONS AND WAR DEBTS**). At the same time the Prime Minister accepted the Canadian government's invitation to the British Empire economic parley scheduled for July, 1932, in Ottawa.

The depreciation of the pound sterling led to a considerable revival in the textile and other industries, and unemployment showed some decrease toward the close of the year. Another optimistic note was the repayment on October 31 of \$100,000,000 of the \$250,000,000 credit secured on August 1 for three months from the Bank of France and the Federal Reserve Bank of New York. Arrangements were made to extend the balance for another three months. However, the pound sterling continued to fluctuate widely, depreciating to a low level of \$3.39¼ on November 31. Exports continued to decline in November and December. Revenue receipts for the first nine months of the 1931-32 fiscal year were £40,800,000 less than during the same period of 1930-31, and the gold holdings of the Bank of England fell on December 31 to the lowest level since 1920, or £121,449,000.

**THE STATUTE OF WESTMINSTER.** Another important act of the National government was the passage of the Statute of Westminster. The ordinance transferred to the Parliaments of the Dominions full and complete power to enact legislation in respect of all Dominion matters, including merchant shipping, which hitherto had been exercised by the British Parliament. The statute formally ratified the "equality of status" conferred on the Dominions by the Imperial Conferences of 1926 and 1930, thereby bringing to a close one of the remarkable constitutional changes of modern history. It defined the Dominions as Canada, Australia, New Zealand, South Africa, the Irish Free State, and Newfoundland. Certain reservations were made with regard to India during the transition period before India received full Dominion status. An amendment to the statute discriminating against the Irish Free State was introduced by a group of ultra conservatives led by Winston Churchill, but was rejected November 24 by a majority of 300. The statute was passed on third reading by the House of Lords December 3 and was signed by King George December 11.

In the spring, a Land Utilization Bill was passed authorizing the Ministry of Agriculture to acquire land for demonstration farms and to establish small holdings, with financial assistance to unemployed men who became occupiers. The House of Lords eliminated a clause of this

bill which would have established a Land Corporation to conduct large-scale experiments in farming.

**LAND-VALUES TAX.** Perhaps the most radical and controversial piece of legislation enacted during the year was Mr. Snowden's measure for taxing land values. As explained by the Chancellor of the Exchequer in his speech of May 4, the basis of valuation of a site would be to assume that it was bare of buildings and improvements and that the surrounding land was as it actually was. Then the valuer would estimate how much a willing purchaser would give a willing seller for the land and levy the tax upon the figure. Agricultural land was exempted, as long as it had only a cultivation value. The Finance Bill, in which the land tax measure was incorporated, passed its third and final reading on July 3 after violent debate, a Conservative amendment having been defeated by 274 to 222. The support accorded the bill by Lloyd George and the majority faction of Liberals resulted in the resignation from the party of Sir John Simon, Lord Rosebery, Sir Robert Hutchinson, and Ernest Brown. In the debates, the Liberals abandoned their traditional principle of no double taxation. The work of ascertaining land valuations was stopped by Chancellor of the Exchequer Chamberlain on Dec. 8, 1931, on the ground that the cost was prohibitive. The measure was considered dead for the term of the new Parliament.

**LABOR DISPUTES.** The depressed condition of British industry was naturally reflected in a series of labor disputes. A combined strike and lockout on New Year's day threw 140,000 men out of work in the South Wales coal fields. The government had no sooner ended this than 250,000 cotton weavers were locked out in the Lancashire district (January 17). The cotton lockout ended February 16 with the abandonment by the mill owners of their plan for rationalization through extending the number of looms per weaver.

The Prime Minister in March began negotiations for an agreement to replace the act suspending the seven-hour day in the coal mines, which was due to expire on July 8. Miners and operators were unable to agree, however, and the government in the first days of July was forced to put through an emergency measure legalizing the seven and one-half hour day. The act was admittedly a temporary expedient, but it did not prevent serious strikes in the Scottish coal fields. The Coal Mines Reorganization Committee reported on August 3 that conditions in the industry were "positively self-destructive." It recommended the merging of more than a thousand colliery concerns into six regional organizations, closure of several hundred mines, and the coordination of production, transportation, sales, and research.

**FOREIGN RELATIONS.** Besides its strenuous efforts to check the financial crisis in Germany and Central Europe, and to reconcile France and Germany, the Labor Government during the first half of 1931 devoted its foreign diplomacy chiefly to the solution of the Franco-Italian naval controversy. An agreement was announced by the Foreign Offices of the three powers on March 1, but subsequent differences over the interpretation of the preliminary agreement nullified the British efforts (see FRANCE under *History*; NAVAL PROGRESS).

Relations with the Soviet Union were less

strained than in previous years. On January 19, the Prime Minister announced that the Conservative demands for a boycott of Russian timber products would be ignored, as the Government had found no evidence of forced labor in the Soviet lumber camps. Subsequently (January 26) the Soviet Government declined to allow an official British investigation of conditions in the camps.

With the tightening of the domestic crisis, the advent of the Coalition Government, and the resignation of Mr. Henderson as Foreign Secretary, Britain withdrew from her active rôle in Continental affairs. In the Manchurian crisis, however, Lord Reading lent his active support to the League Council in its effort to avert an open break between Japan and China. The new government, and particularly its Conservative element, was considered more in accord with the French viewpoint, and consequently more opposed to German policy, than had been Mr. Henderson and his Labor colleagues. Of special interest to the United States was the unanimity with which the three major parties pledged themselves during the electoral campaign to promote the revision or cancellation of reparation and inter-Allied debt payments. Lord Beaverbrook's powerful newspaper chain carried on an agitation for Britain's withdrawal from the League of Nations, urging that the country link its destiny instead to that of the Dominions and the United States.

**OTHER EVENTS.** One of the important victims of the depression was the Royal Mail Steam Packet shipping combine formed by Lord Kylsant after the World War. In February, 1931, it was saved from bankruptcy only by a moratorium extended by the White Star Line and by pledging all its assets. Losses of the Royal Mail were estimated at \$100,000,000. In August, Lord Kylsant was found guilty of making and publishing a prospectus which he knew to be false with intent to induce persons to invest in the Royal Mail Company, of which he was chairman. He was sentenced to serve twelve months in prison.

In order that Philip Snowden might remain in the National Cabinet without being a member of the House of Commons and in recognition of his distinguished services, he was awarded a Viscounty by the King on November 16 and took his seat in the House of Lords November 25.

**GREBLE, MAJ. GEN. EDWIN ST. JOHN, U.S.A., RET.** An American soldier, died in West Orange, N. J., Sept. 30, 1931. He was born in West Point, N. Y., June 24, 1859, and was graduated from the United States Military Acad-

emy in 1881, later attending the Infantry and Cavalry School at Fort Leavenworth, Kans., and the Coast Artillery School at Fortress Monroe, Va. He served during the Spanish-American War as a captain of artillery, and on the Spanish evacuation was appointed assistant adjutant general under Gen. William Ludlow, the military Governor of Havana.

He was made captain in the Regular Army in 1899 and was promoted through the grades to brigadier general in 1916. From 1910 to 1914 he was a member of the General Staff in charge of field artillery, and during 1914-16 commanded the 6th Field Artillery on the Mexican border. In 1917 he received the rank of major general in the National Army and was appointed commander of the 36th National Guard Division at Fort Worth, Texas. He was retired the following year on account of disability incurred in active service.

**GREECE.** A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea; formerly a constitutional monarchy. King George II was forced to leave Greece, Dec. 18, 1923, and the Republic was established Apr. 13, 1924, as the result of a plebiscite. In continental Greece are included Southern Macedonia, Western Thrace, and Epirus; the chief island possession is Crete. Capital, Athens.

**AREA AND POPULATION.** Greece increased her area by 20,730 square miles as a result of the Balkan Wars of 1912-13 and by an additional 3182 square miles under the Treaty of Lausanne (1923), the total area in 1930 being 50,270 square miles. The population at the census of May 15, 1928, was 6,204,684, as compared with 5,021,790 on the same territory in 1920. About 1,400,000 Greek refugees from Turkey were finally established in industry and agriculture by 1931. The chief cities, with their populations in 1928, are Athens, 452,919; Peiræus (Piræus), 251,328; Saloniki, 236,524; Patras, 61,278. For the period 1924-28 inclusive, birth rates averaged 27.7 per 1000 inhabitants annually and death rates, 16.

**EDUCATION.** Of persons over 10 years of age in 1928, 1,962,330 were illiterate. For the 1928-29 school years, 704,510 were enrolled in all schools, including 609,595 in primary schools, 87,015 in secondary schools, and 7900 in higher educational institutions. There were two universities at Athens and one at Saloniki.

**PRODUCTION.** Greece is primarily an agricultural country, with tobacco and currants as the two outstanding export crops. About one-fifth of the total area is cultivable. In 1930 there were 3,589,000 acres of arable land, and 550,000 acres of trees, shrubs, and bushes. In 1928 livestock numbered 910,000 cattle, 419,000 swine, 6,920,000 sheep, 4,919,000 goats, 290,000 horses, 150,000 mules, and 343,000 asses. The minerals produced included chromite, emery, iron ore, iron pyrites, magnesite, calcined magnesite, lignite, and lead. Excluding wine and olive oil, the value of factory production in 1930 was estimated at \$85,475,000 (\$93,041,000 in 1929).

**COMMERCE.** Imports in 1930 declined 18.3 per cent in value from the previous year, while exports were lower by 15.3 per cent. The adverse trade balance, which amounted to 6,290,335,000 drachmas in 1929, was reduced to 4,932,202,000 drachmas (1 drachma equals \$0.013 at par). Imports in 1930 were valued at 10,850,608,000 drachmas (\$141,058,000), compared with 13,275,-

531,000 drachmas (\$171,254,000) in 1929, while exports totaled 5,918,406,000 drachmas (\$76,939,000), compared with 6,985,196,000 drachmas (\$90,109,000) in 1929. Wheat, textile materials, machinery, construction lumber, coal, and livestock were the principal imports in 1930. Values of the chief exports, in drachmas, were: Leaf tobacco, 3,382,004,000; currants, 782,451,000; wine, 212,630,000; raisins, 184,830,000.

The United States continued in 1930 its predominant position in the Greek import trade, furnishing 15.3 per cent of the total. Imports in 1931 were valued at 8,825,496,000 drachmas and exports at 4,200,007,000 drachmas, according to preliminary figures, representing declines of 16 and 30 per cent, respectively, from 1930.

**FINANCE.** Preliminary data on budget operations for the fiscal year ended Mar. 30, 1931, showed an increase in both receipts and expenditures over the preceding year, with a surplus indicated for both years. According to the General Accounting Office, revenues in millions of drachmas (drachma equals \$0.013) were as follows, with comparative figures for 1929-30 in parentheses: Estimated, 11,166 (18,271, including 8190 as proceeds of loans added in March); verified, 12,646 (19,851); collected, 10,766 (9995). Expenditures were as follows: Allotments, 12,312 (10,608); obligations undertaken, 12,171 (10,342); expenditures authorized, 8540 (7563). The public debt, including the railway debt, stood at 40,838,000,000 drachmas (\$530,894,000) on Dec. 31, 1930. The external debt of about 26,642,000,000 drachmas included \$31,730,000 owing to the United States government. For the fiscal year 1931-32, revenues were estimated at 10,240,000,000 drachmas (\$133,120,000) and expenditures at 10,234,000,000 drachmas (\$133,042,000). About 38 per cent of the estimated revenues were allotted for service of the debt.

**COMMUNICATIONS.** In 1930, there were about 1600 miles of railway lines, of which 830 miles were operated by the Government. Highways extended about 6680 miles and were mostly of the graded earth or gravel type. Six international air lines used Greece as a transit station between western Europe and the Near and Far East. Vessels in the foreign trade entering Greek ports in 1930 numbered 3358, of 5,299,000 net registered tons capacity; clearances, 2323 vessels, of 4,205,000 tons.

**GOVERNMENT.** The Republic of Greece was established by a plebiscite on Apr. 13, 1924. The constitution, published on Sept. 22, 1926, was revised by the Chamber elected on Nov. 7, 1926. The new Constitution proclaimed on June 3, 1927, provides, among other things, that a second House (Senate) consisting of 120 members shall be established, that the Chamber of 250 members shall be elected by direct, universal, and secret voting, and that the Senate shall be elected partly by the people, partly by the Chamber and Senate in a joint meeting, and partly by the corporations of the different professions. President in 1931, Alexander Zaimis (elected Dec. 14, 1929). The Cabinet was composed at the beginning of 1931 in part as follows: Premier, Minister of Health, and Minister of Air, Eleutherios Venizelos; Foreign Affairs, Andreas Michalakopoulos; War, M. Katschakis; Marine, P. Argyropoulos; Interior, M. Karapanagiotis; National Economy, P. Vourloumis; Justice, M. Avraam; Finance, George Maris. The standing of the parties in the

Chamber elected Aug. 19, 1928, was: Republican parties, 227 (186 Venizelist Liberals); Royalist Popular party, 22; Metaxists, 1.

### HISTORY

Premier Venizelos remained firmly in the saddle in Greece during 1931 and except for minor incidents the internal political situation was relatively undisturbed. Animosity between the veteran Premier and former Premier Kaphandaris flared up in the Chamber in June when the latter attacked the Government's bill for censorship of the press. The 67-year-old Premier declared that only the dignity of his office prevented him from boxing M. Kaphandaris's ears. Efforts of a "court of honor," composed of members of various parties, failed to reconcile the pair and M. Kaphandaris on June 18 announced that he and his followers, forming the Progressive wing of the Liberal party, would absent themselves indefinitely from Parliament as a protest against Government repression. The incident aroused fears among Venizelist adherents that his health would not permit him to remain in office long.

Other internal developments included an anti-Jewish outbreak at Saloniki in July, which was quickly repressed by the Government; the increase in Communist propaganda, followed by the Government's decision to deport several hundred Communist prisoners to an uninhabited island; and riotous demonstrations during October and November in favor of the union of Cyprus and Greece, which followed the anti-British outbreak by the Greek inhabitants of Cyprus (q.v.). The new Athens water-supply system, supplementing the aqueduct constructed in the time of the Emperor Hadrian, was placed in operation in June, 1931. The abandonment of the gold standard by Great Britain in September forced the Greek government to take measures to protect the drachma. On September 28, a law became effective vesting in the Bank of Greece a monopoly on all foreign-exchange transactions, and providing that all deposits in Greece could be withdrawn only in drachmas. At the same time the discount rate of the Bank of Greece was raised from 9 to 12 per cent. The exchange rate of the drachma continued at \$0.0129 for the balance of the year.

**REFUGEE COMMISSION DISSOLVED.** The dissolution of the Refugee Settlement Commission on Dec. 31, 1930, left the Government with the responsibility of bringing to a close the important task assumed by the commission seven years earlier. The settlement work on behalf of Greek refugees from Turkey, however, had been almost completed. The commission had settled 145,000 refugee families on farm land and 25,000 families in urban areas at a total cost of \$65,124,000, or about \$384 per family. Up to July 31, 1930, about 1,016,000 acres had been distributed to refugee families, together with 66,048 houses built by the commission and the Government. A total of 63,886 houses previously belonging to exchanged Turks and Bulgarians, also were repaired and distributed to refugees.

**FOREIGN AFFAIRS.** In the field of foreign relations, the year was marked by the visit to Athens on October 3 of Premier Ismet Pasha and Foreign Minister Tewfik Rushdi Bey of Turkey, to exchange ratifications of the treaty of friendship and neutrality signed in 1930. The Turkish officials were welcomed with enthusiasm in

Athens, a circumstance which furthered the hope that peace between the two countries was at last assured, after nearly 600 years of strife. Relations with Bulgaria were strained as a result of several irritating incidents. On February 5, Greece renounced her trade convention with Bulgaria. During January and February there was a renewal of frontier clashes, causing the British, French, and Italian governments to exert pressure for a peaceful solution of the dispute on both Greece and Bulgaria. The Greek government reiterated its willingness to arbitrate the dispute, but the offer was not accepted by Bulgaria. In July a new dispute arose, when Greece, while refusing to accept the Hoover moratorium proposal in its original form, refused to pay Bulgaria sums due under an agreement for the exchange of nationals between the two countries. The justification advanced was that it would be unfair for Greece to discharge her obligation, while Bulgaria was freed from war reparation payments by the moratorium. For the Balkan Conference, see **TURKEY** under *History*; also see **BULGARIA**.

Consult William Miller, "Greece and Her Neighbors," *Foreign Affairs*, April, 1931.

**GREEK STUDIES.** See **PHILOLOGY**, **CLASSICAL**.

**GREENLAND.** Exceeded in size only by Australia among the islands of the world, Greenland is situated in the North Atlantic to the north and east of Canada. The total area is estimated at 839,782 square miles and the population in 1930 of the settled area (46,740 square miles) was 15,645, including 192 Europeans, mostly Danes. The settled area along the southern coast, which constitutes the only Danish colonial possession, is divided into the provinces of North, South, and East Greenland, with 6638, 8186, and 821 inhabitants, respectively.

Julianehaab, with 3532 inhabitants, is the largest settlement. Godthaab and Godhavn are the centres of administration for South and North Greenland, respectively. Trade, which is chiefly in seals, sealskins, fox skins, and oil, is a monopoly of the Danish Government. In 1928, imports totaled 2,707,000 kronor; exports, 8,864,000 kronor (1 krone equals \$0.267 at par). The budget for 1929-30 balanced at 4,190,000 kronor. Administration of the colony is in the hands of a director, who resides in Copenhagen. Director in 1931, J. Daugaard-Jensen.

**HISTORY.** The long-pending dispute between Denmark and Norway over the ownership of that part of East Greenland north of the Scoresby Sound region came to a head in 1931 and was submitted by Denmark to the Permanent Court of International Justice for adjudication. The more recent history of the dispute goes back to 1917 when Denmark proclaimed the extension of her sovereignty over the entire island. The claim was never recognized by Norway.

In 1930, British and German expeditions visited Eastern and Central Greenland to study the feasibility of transatlantic air routes via the Faroe Islands, Iceland, and Greenland. During June, 1931, a Danish expedition of 60 men under Dr. Lauge Koch sailed for Greenland with the reported object of pursuing scientific studies and establishing Danish authority throughout the region under dispute. Before the expedition reached Greenland, however, five Norwegian hunters at Myggbutka laid claim in the name of King Haakon to the territory under dispute.

The Norwegian Government supported the action of the hunters by formally proclaiming on July 10 its annexation of the coast between 71 degrees 30 minutes and 75 degrees 40 minutes North Latitude. Foreign Minister Graadland explained that this action was "purely technical" and was taken with a view to "future proceedings at The Hague."

Earlier in the year Denmark had proposed the submission of the dispute to the Permanent Court of Arbitration at The Hague. Norway held out for definite assurance that the Danes would recognize Norwegian sovereignty over certain areas in the event the arbitral decision upheld Norway's contention that the disputed territory was as yet "no man's land." This Denmark refused to do. Upon the Norwegian proclamation of annexation, Denmark, on July 13, formally submitted the case to the World Court with the request that the proclamation be declared null and void. See **WORLD COURT**. On Aug. 20, 1931, the Icelandic Parliament intervened in the dispute by authorizing the Cabinet to safeguard Iceland's claims to Greenland in connection with the Danish-Norwegian litigation before the World Court.

Returning to Copenhagen on September 8, Dr. Koch reported the discovery of coal in Vochstetter foreland, part of the territory occupied by Norwegians. He said his search for petroleum had been unsuccessful. The expedition built two main stations and two sub-stations where 61 scientists were to spend three years in geographic and geological investigation. A second Danish expedition under Dr. Knud Rasmussen investigated the coast for 2500 miles between the Greenland fjords of Julianehaab and Angmagssalik.

A Norwegian survey and exploration party under Dr. Adolf Hoel also visited East Greenland during the summer and two Norwegian students, Mehren and Hoygaard, crossed the ice cap by dog team from Umanak on the east to the west coast, a distance of about 1000 miles. See **POLAR RESEARCH**.

**GREENLAW, EDWIN**. An American philologist, died in Chapel Hill, N. C., Sept. 10, 1931. He was born in Flora, Ill., Apr. 6, 1874, and was graduated from Northwestern University in 1897, receiving the Ph.D. degree from Harvard in 1904. He became professor of English at Adelphi College, Brooklyn, N. Y., in 1905 and at the University of North Carolina in 1913, serving also at the latter institution as editor of *Studies in Philology* (a quarterly) during 1915-25 and as dean of the graduate school during 1920-25. At the time of his death he was William Osler professor of English literature and director of the English Seminar at the Johns Hopkins University. His works include: *Spenser and the Earl of Leicester* (1910); *A Syllabus of English Literature* (1912); *An Outline of the Literature of the English Renaissance* (1916); and *Builders of Democracy* (1918).

**GREIFFENHAGEN**, gri'fen-hä'gen, MAURICE. A British painter and illustrator, died in London, Dec. 27, 1931, aged 69. He received his art education at the Royal Academy, entering its classes at the age of 16. His painting was characterized by strong, emphatic line and tapestry-like beauty of color. He exhibited abroad on many occasions, his work being well known in the United States through its frequent appearance at the Carnegie Institute, Pittsburgh. He received gold medals at Munich (1897) and Dresden

(1901). In 1906 he was appointed head master of the life department of the Glasgow School of Arts. He was elected an associate of the Royal Academy in 1916 and a fellow in 1922. The University of Glasgow conferred on him the LL.D. degree in 1926. Among his pictures in permanent collections are: "The Idyll," in the Walker Art Gallery, Liverpool; "The Judgment of Paris," in the Sydney (Australia) National Gallery; "Portrait of Mrs. M. G.," in the Carnegie Institute, Pittsburgh; "The Sons of God Saw the Daughters of Men That They Were Fair," in the Municipal Museum, Ghent, Belgium. The Royal Academy purchased, with the Chantrey bequest, "Women by a Lake" in 1914 and "Dawn" in 1926. He also designed the historical panels for the Paris and Dunedin exhibitions of 1925.

**GRENADA**, gre-ná'dà. An insular possession of Great Britain in the Windward group of the West Indies. Area, 133 square miles; population at the census of 1921, 66,302; estimated Jan. 1, 1930, at 75,867. Grenada includes half the Grenadine Islands, the other half being administered from St. Vincent. The capital is St. George with a population of about 5000. The chief products, which are also the chief exports, are cacao, sugar, spices, lime juice, and cotton. The colony is under the Governor of the Windward Islands, whose headquarters are at St. George, but has its own institutions. By an Order in Council (1931) women over 30 years of age possessing the necessary qualifications became eligible for election to the Legislative Council. Colonial Secretary for Grenada in 1931, H. R. R. Blood. See **WINDWARD ISLANDS**.

**GRETA GARBO**. See **MOTION PICTURES**.

**GRINNELL COLLEGE**. A coeducational, non-sectarian institution of higher learning in Grinnell, Iowa., founded in 1846. The enrollment for the autumn of 1931 was 686, while that for the summer session was 110. There were 65 faculty members. The productive funds amounted to \$2,063,405, and the income for the year, exclusive of dormitories, was \$335,000. The library contained 85,000 volumes. President, John Scholte Nollen, Ph.D., LL.D.

**GROTIUS MEMORIAL**. See **INTERNATIONAL LAW**.

**GROTON HEIGHTS, CONNECTICUT, BATTLE OF**. See **CELEBRATIONS**.

**GRUBB, SIR HOWARD**. An Irish astronomical instrument maker, died Sept. 16, 1931, in Dublin where he was born July 28, 1844. After attending Trinity College, Dublin, he became associated with his father, Thomas Grubb, the famous optician, to whose business he succeeded in 1868. He also established a manufactory in Dublin for astronomical instruments and instruments of precision and constructed a large number of telescopes, including those for the University of Oxford and the observatories at Greenwich, Potsdam, Vienna, and Johannesburg. He introduced many improvements in the mounting and control of astronomical telescopes and in the construction and regulation of their driving clocks. In 1881 he received the Cunningham gold medal and in 1912 the Boyle medal. Knighthood was conferred on him in 1887.

**GUADELOUPE**, ga'dà-loop'. A French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper or Basse-Terre, and the one on the east, Grande-Terre. Total area, including five

small dependent islands, 688 square miles; population in 1926, 243,243. Basse-Terre is the capital, with a population of 7379; chief town and port, Pointe-à-Pitre, with 26,455 inhabitants.

**GUAM**, gwām. An insular possession of the United States, situated at the southern end of the Mariana, or Marianne, Islands in mid-Pacific about 1500 miles from Manila and 5053 miles from San Francisco. The largest and most populous island of the Mariana group, it has an area of 210 square miles. The native population in 1931 was 19,611, as compared with 9675 in 1901. Including the military establishment, the 1930 census population was 18,509. Capital, Agaña, with about 8500 inhabitants.

The public-school registration in 1931 averaged 3491 pupils. Education is compulsory between the ages of 7 and 12. Spanish and English are spoken in addition to the native Chamorro. Cacao, coffee, copra, corn, rice, sugar, sweet potatoes, and timber are the chief products of the island, but only copra and coconut oil are exported. The trade of the island is principally with the United States and Manila. For the year ended June 30, 1931, imports totaled \$541,939 and exports, \$130,588.

Guam is a United States naval station, of which the governor, who is appointed by the President, is commander. Medical care for the entire population is provided by the Navy. Commander Willis W. Bradley, U. S. N., was relieved as Governor on May 15, 1931, by Capt. E. S. Root, U. S. N. It was reported in June, 1931, that the naval personnel and equipment at Guam would be reduced to a minimum basis required for the civilian government in connection with the Government's naval-economy programme. The upkeep of the garrison of marines, a shore naval force, a squadron of airplanes, and various equipment maintained on the island cost approximately \$750,000 annually.

**GUATEMALA**, gwä'tä-mälä. A republic of Central America lying between the Caribbean Sea and the Pacific Ocean, south of Mexico, west of British Honduras, and north and west of Salvador and Honduras. Capital, Guatemala City.

**AREA AND POPULATION.** Guatemala has an approximate area of 42,364 square miles. The population totaled 2,004,900 at the census of 1921 and was estimated at 2,163,546 in 1930. About 60 per cent are pure Indian, the remainder being largely mestizos. The chief cities, with their populations in 1928, were: Guatemala City, 120,707; Quezaltenango, 30,125; Cobán, 26,774; and Escuintla, 21,840.

**EDUCATION.** About 80 per cent of the population are illiterate. The school age is nominally from 5 to 17 years. The total number between these ages in 1921 was 577,568, and in 1930 the total school enrollment was 119,228, with an average attendance of 94,047. For 1929-30, there were 3188 primary schools, with an enrollment of 88,846. The University of Guatemala was established in 1910.

**PRODUCTION.** Agriculture is the principal industry and coffee is the chief crop cultivated, furnishing about 80 per cent of the value of all exports. Sugar and bananas are other leading export crops, while wheat, corn, potatoes, and rice are produced for domestic consumption. The continued decline in the world price of coffee led to a depression in the middle of 1929 which grew worse during 1930 and 1931. The 1930-31 coffee

crop totaled 91,776,000 pounds, compared with 107,868,000 pounds in 1929-30, while the 1931-32 crop was estimated at 10 to 15 per cent lower than that of the previous year. Banana exports, which totaled 8,424,000 stems in 1929 and 4,874,000 stems in 1930, declined another 10 per cent in 1931. Production of refined sugar was estimated at 40,000,000 pounds in 1930 (47,164,000 in 1929). In June, 1931, a five-year agreement to limit sugar production to the domestic consumption was reached among sugar producers. Livestock in 1930 included 416,000 cattle, 63,000 horses, 184,000 sheep, and 79,000 swine. There are about 1,316,000 acres of forests, from which hardwoods and chicle are exported. Gold, lead, and mica are the only minerals produced in commercially important quantities, although some chromium and silver are produced, and copper, zinc, coal, salt, and marble are said to exist. Industrial establishments are confined chiefly to coffee-cleaning plants and sugar mills.

**COMMERCE.** General imports declined sharply in 1930 to \$16,474,000 from \$30,399,000 in 1929, while exports of Guatemalan products receded only slightly to \$23,578,000 from \$24,928,000 in 1929. The imports included the value of parcel-post trade. The United States supplied nearly 60 per cent of the total overseas imports in 1930, or \$7,631,000 (\$13,540,000 in 1929), while Germany occupied second place, with 13 per cent, or \$1,641,000 (\$3,365,000 in 1929). The United States purchased 39 per cent of the total exports, as against 46 per cent in 1929, while Germany, in second place, took 35 per cent as against 40 per cent in 1929. The value of coffee exports in 1930 was \$18,936,000; of bananas, \$2,437,000. Cotton fabrics, machinery and tools, iron and steel, wheat, flour, and railway supplies were the leading imports. A further considerable decrease in both exports and imports was registered in 1931.

**FINANCE.** According to a report of the Minister of Finance ordinary budgetary revenues and expenditures in the fiscal year ended June 30, 1930, totaled 13,426,739 quetzales and 14,342,812 quetzales, respectively—a deficit of 916,073 quetzales resulting (quetzal equals \$1 at par). In the latter part of 1930 the financial position of the government became more and more difficult, and near the end of the year the accumulated deficit was reported to total around 3,600,000 quetzales. Government salaries and obligations to commercial houses were in arrears. The expenditure budget for the 1931-32 fiscal year was fixed at 12,272,305 quetzales by an executive decree of June 22, 1931. The appropriation for service of the public debt, or 3,329,100 quetzales, was the largest expenditure item.

The public debt increased during 1930, and according to the President's message of Mar. 1, 1931, total obligations of the Government on Dec. 31, 1930, amounted to 20,916,732 quetzales.

**COMMUNICATIONS.** The only railroad of importance is the International Railway of Central America, which during 1930 operated 509 miles of line within Guatemala, the gross receipts of which totaled \$4,859,000.

**GOVERNMENT.** The executive power is vested in the President elected for six years and legislative power, in the National Assembly, consisting of representatives elected for four years, and the Council of State of 13 members, part of whom are elected by the National Assembly and part appointed by the president. General Lázaro Chacón, elected President in December, 1926, for

a term expiring Mar. 15, 1933, was incapacitated by a cerebral hemorrhage on Dec. 12, 1930, and his government was overthrown by a revolution (see under *History*).

**HISTORY.** On the last day of December, 1930, the National Legislative Assembly had elected its president, José María Reyna Andrade, as first designate to the Presidency. In accordance with the Constitution, Dr. Reyna Andrade immediately assumed the vacant post of Provisional President, thus bringing to a close the constitutional crisis precipitated by Gen. Manuel Orellana's coup d'état of December 16 (see 1930 *YEAR BOOK*). General Orellana had been forced to resign December 30 by the refusal of the United States to recognize his régime. His action and the simultaneous resignation of the ill and incapacitated President Lázaro Chacón left the way open for a legal solution of the constitutional tangle.

The United States formally recognized Dr. Reyna Andrade as Provisional President on Jan. 8, 1931, following his announcement that Presidential elections would be called for February 6, 7, and 8. The other Central American republics followed the lead of the United States both in refusing to recognize Orellana and in extending recognition to the provisional régime of Dr. Reyna Andrade. They were bound by a treaty, which was adhered to by the United States, not to recognize governments which obtain power in that region by revolution. The recognition of the provisional régime was automatically extended to the government of Gen. Jorge Ubico, a leader of the Liberal Progressive party, who was elected President at elections held February 6-8. General Ubico, who was educated in the United States and Europe, was inducted into office February 14, to serve the six-year term beginning Mar. 15, 1931. His predecessor, Gen. Lázaro Chacón, died April 10 in New Orleans, where he had gone to receive treatment.

The increasing difficulty of the economic situation forced President Ubico to devote his attention primarily to remedial measures during the remainder of 1931. Under pressure from local manufacturers, the Legislative Assembly at the close of 1930 had adopted a selective policy of tariff protection, which increased the price of many articles of consumption, particularly food. To relieve the distress among the poorer classes, caused by price rises and income declines, the President on August 5 offered the use of all public lands for agricultural purposes. A single person was allowed to take up 6.9 acres and a married person 8.7 acres. Title to the property was withheld. Among other measures, the government in September imposed an additional tax of four cents a gallon on gasoline, raising the tax to nine cents a gallon. In the same month a state monopoly on cigarette paper was established. In May an agreement was concluded with a large foreign fruit company for the construction within seven years of a port on the south coast of Guatemala and a branch railway line, which would open up a large area of rich banana land. The treaty of arbitration and its additional convention, signed in Washington July 10, 1930, by representatives of Guatemala and Honduras for the purpose of settling the Guatemala-Honduras boundary dispute, was ratified by the National Congress of Honduras Feb. 25 and 26, 1931, and by the Legislative Assembly of Guatemala May 30, 1931. Ratifications were

exchanged by the Ministers of the two Republics at Washington, Oct. 15, 1931.

**GUGGENHEIM FELLOWSHIPS.** See *PAINTING; SCULPTURE*.

**GUIANA.** See under *DUTCH, BRITISH, FRENCH GUIANA*.

**GUNN, HUGH.** A British educator, died in London, Feb. 23, 1931. He was born in Rogart, Sutherlandshire, May 20, 1870, and attended Aberdeen and Edinburgh Universities. After serving in the Scottish Education Inspectorate from 1898 to 1901, he became Director of Education in the Orange River Colony, Union of South Africa, reorganizing the educational system of that state, rebuilding Grey College School, and founding Grey University College. In 1912 he accepted the call to organize the University of Western Australia in Perth. He served during the World War in the British Army and as liaison officer at the headquarters of the Ministries of Munitions, Pensions, and Labour. He was a member of the council of the Royal Colonial Institute and edited *The British Empire—A Survey* (12 vols., 1924).

**GYMNASTICS.** Although durable and agile Alfred Jochim, of the Swiss Turn Verein of New Jersey, won three individual championships at the national A.A.U. gymnastic meet held in March in Philadelphia, his teammate, Frank Haubold, captured the most important title of all—the all-around championship. Jochim won championships in calisthenics on the parallel bars and at the long horse, while Haubold won on the side horse. Chiefly through the brilliant work of these two gymnasts the New Jersey Swiss Turn Verein retained team title honors. Other champions who were crowned at the meet were James Nicoll, unattached, Indian clubs; Gustav Baack, Philadelphia Turngemeinde, rope climbing; Gustav Schmelcher, Philadelphia Turngemeinde, horizontal bar; William J. Hermann, jr., Penn. A.C., tumbling; and Arthur Gillmore, Twenty-Third St., Y.M.C.A., New York, flying rings. Herman Witzig of New York University again dominated intercollegiate competition, winning the all-around championship for the second consecutive year as well as individual honors on the horizontal and parallel bars. In annexing the all-around laurels he set a new high scoring record for the competition. Miss Roberta C. Ranck, of the Philadelphia Turngemeinde, dominated the women's national championships, capturing the all-around championship with ease.

**GYNANDROMORPHISM.** See *ZOOLOGY*.

**GYPSUM.** Production of gypsum in the United States in 1931 fell below the level for the preceding year, according to the U. S. Bureau of Mines, the quantity mined being 2,519,000 short tons, a decrease of 952,000 tons, or 27 per cent, compared with 1930. This production was less than that of any year since 1919. In 1931 plant prices were maintained at a fairly uniform figure compared to 1930, when the total value of the calcined and uncalcined gypsum sold by producers was \$27,051,484, a decrease of \$4,241,485, or 14 per cent, compared with 1929. The quantity of gypsum sold by producers without calcining in 1930 was 989,591 short tons, a decrease of 76,106 tons, or 7 per cent, compared with 1929, and was valued at \$1,886,254, or \$1.91 per ton, a decrease of \$210,525, or 10 per cent, in value and of 6 cents per ton; the quantity of calcined gypsum sold by producers was 2,191,376 tons, a decrease of 1,170,204 tons, or 35 per cent, and was valued

at \$25,165,230. This was a decrease of 14 per cent in total value compared with 1929.

The production of crude gypsum in New York in 1930 was 912,070 tons, a decrease of 29 per cent from that of 1929. This was 26 per cent of the entire quantity mined in the United States. New York marketed 275,294 tons without calcining, or 28 per cent of the United States total, and 573,802 tons calcined, or 26 per cent of the total. Other important States in the production of crude gypsum in 1930 were Michigan, 519,225 tons; Iowa, 481,047 tons; Texas, 359,315 tons; and Ohio, 255,337 tons. These five States reported 73 per cent of the total production of crude gypsum in 1930.

**HADRAMAUT**, THE. See ARABIA.

**HAGUE TRIBUNAL**. See ARBITRATION, INTERNATIONAL.

**HAITI**, hā'tē. A West Indian republic, comprising the western third of the island of Haiti, the other part forming the Dominican Republic, or Santo Domingo (see DOMINICAN REPUBLIC). Capital, Port au Prince.

**AREA AND POPULATION**. The area is estimated at 10,204 square miles; population, estimated in 1929 at 2,550,000, excluding 3000 foreign white residents and the military and naval forces of the United States. The capital, Port au Prince, had a population of approximately 80,000 in 1929, excluding suburbs; Cape Haitien, about 12,500; Aux Cayes, 12,500; Gonaives, 10,000; St. Marc, 8000; Jacmel, 7500. The inhabitants are Negroes and mulattoes. The language is a dialect known as Creole French.

**EDUCATION**. In 1929-30, there were 1190 schools, with 106,505 pupils enrolled, including about 10,000 in American-directed agricultural and vocational schools. Secondary education is provided by national lycées and by private institutions. The University of Haiti was established in 1921.

**PRODUCTION**. Predominantly agricultural, Haiti produces coffee, cotton, tobacco, logwood, sugar, and cacao for export. Prosperity is chiefly dependent upon coffee production and prices. Of total exports valued at \$14,124,000 in 1929-30, coffee was valued at \$10,406,000, and raw cotton, second in importance, was valued at \$2,071,000. Cotton exports in 1929-30 were 11,298,000 pounds; sugar production, about 18,907 long tons. One pineapple and six sisal plantations have been started in the Cape Haitien district. Mining is unimportant commercially and manufacturing is confined to the production of sugar, alcohol, rum, molasses, and other products for local consumption. For conditions in 1931, see under *History*.

**COMMERCE**. The total value of all imports during the fiscal year ended Sept. 30, 1931, was \$9,576,318, compared with \$12,841,626 in 1929-30 and with \$17,237,922 in 1928-29. Exports during 1930-31 were valued at \$8,963,418, compared with \$14,144,567 in 1929-30 and \$16,723,833 in 1928-29. The decline in imports in 1930-31 was 25 per cent and in exports 37 per cent, as compared with 1929-30. Coffee and cotton accounted for over 84 per cent of the total export values in 1929-30.

**FINANCE**. For the fiscal year ended Sept. 30, 1931, revenues totaled 31,746,582 gourdes, a decline of 6,901,581 gourdes, or 17.9 per cent, as compared with 1929-30 receipts (1 gourde equalled \$0.20). Expenditures amounted to 35,190,000 gourdes, a reduction of 4,453,159 gourdes,

or 10.9 per cent, from the previous year. The deficit of 4,443,488 gourdes, was more than twice the deficit of 1,995,066 gourdes reported for 1929-30. Total receipts in 1929-30 were 38,648,000 gourdes; expenditures, 40,543,000 gourdes. The gross public debt as of May 31, 1931, totaled 78,816,000 gourdes, compared with 83,652,000 gourdes on May 31, 1930, and 88,890,000 gourdes on the same date in 1929. The service of the debt in 1929-30 required 13,208,000 gourdes.

**COMMUNICATIONS**. In 1931, there were 158 miles of railway line, all privately owned. The National Railway of Haiti, with about 120 miles of line connecting Port au Prince with Verrieres and Cape Haitien, discontinued operations on July 1, 1931. At the beginning of 1931, there were 1072 miles of highway, mostly graded earth and gravel, which provided the most important means of transportation.

**GOVERNMENT**. The Constitution adopted June 12, 1918, provided for a national assembly, consisting of a senate and house of representatives. The National Assembly was elected for the first time on Oct. 14, 1930, legislative functions having been carried on in the interim by a council of state of 21 members appointed by the President. As amended in 1928, the Constitution vested executive power in a President elected for six years and ineligible for reelection. The President in 1931 was Sténio Vincent, elected Nov. 18, 1931, by the 36 Deputies and 15 Senators, sitting as a National Assembly. Under a treaty between the United States and Haiti concluded Sept. 16, 1915, the constabulary, finances, public health, public works, and agriculture of the Republic were supervised by American advisers appointed by the President of Haiti on recommendation of the President of the United States. The post of American High Commissioner was abolished in 1930, and most of the duties of that office were taken over by the newly appointed American Minister, Dr. Dana G. Munro.

### HISTORY

An important step toward the evacuation of Haiti, recommended in the report of the Forbes Commission (see 1930 YEAR BOOK), was taken in an agreement signed Aug. 5, 1931, between the American Minister and the Haitian Minister for Foreign Affairs. In accordance with the accord, the Haitian government on October 1 assumed full control of three of the five services reserved to American officials by the 1915 treaty, namely the Service of the Public Works, the Technical Service of Agriculture and Industrial Education, and the National Public Health Service. All American personnel was withdrawn from these services, with the exception of a scientific mission of three American naval officers and six hospital corps men, which retained control of the sanitation of Port au Prince and Cape Haitien.

The United States remained in control of the office of Financial Adviser-General Receiver and of the *Garde d'Haiti*, or gendarmerie. The agreement abolished the right of the American Legation to object to proposed Haitian legislation and of the Financial Adviser to hold up payments authorized by the Haitian Secretary of Finance. The land-title registry office was detached from the Financial Adviser and placed under the complete control of the Secretary of Finance. Moreover, it was indicated in a State Department memorandum issued at Washington Oct. 1, 1931, that American officers of the *Garde d'Haiti* would

be withdrawn as soon as trained Haitians were available to replace them, and that the replacement of all American officers was anticipated before the expiration of the 1915 treaty in May, 1936. Financial control was to continue during the life of the bonds of the Haitian government held by American investors. There were about 800 officers and men of the Marine Corps in Haiti in 1931.

The agreement of August 5 was preceded by increasing restlessness among the native population and demands for immediate American evacuation. The agitation was particularly aggressive in the Legislative Assembly but that body helped to delay negotiations for a settlement by overturning the Cabinet, as a result of a dispute as to jurisdiction. The new Cabinet, formed May 19, included Abel Leger as Minister of Foreign Relations; Emmanuel Rampy, Interior and Commerce; Ernest Douyon, Finance and Public Works; Trasybule Laleau, Justice; and A. Etienne, Education, Agriculture, and Labor. Foreign Minister Leger concluded the negotiations with Dr. Munro embodied in the accord of August 5. The agreement by no means satisfied the more extreme Haitian Nationalists, who attacked President Vincent for approving it. Their specific objections were: (1) That it involved continued subordination of the Haitian Minister of Finance to the American Financial Adviser; (2) that it permitted the American Legation to interfere in the execution of Haitian laws; (3) that it admitted the principle of American occupation of Haiti; (4) that the American sanitation commission was to be subsidized by the Haitian government, although maintained in the interest of Americans in Haiti; and (5) that the Haitian government, without legal authority, granted an indemnity to some 25 American officials in the three transferred services to compensate for their precipitate discharge.

Haitian nationalism found expression in the Cauvin Law, which would have imposed special taxes on foreign employees in Haiti, and a law prohibiting foreigners from engaging in certain lines of retail trade. Both measures were passed by the National Assembly, but vetoed by President Vincent in August and September, respectively. As much of the retail and wholesale business of Port au Prince and other cities was in the hands of Syrians and other foreigners, the proposal caused uncertainty among the business community and made even more acute the effects of the economic depression. Other proposals for limiting the hours of work, fixing minimum wage scales, and introducing profit-sharing systems, had a similar effect. The severity of the economic crisis, due chiefly to the sub-normal coffee crop of 1929-30 and the low prices received, was evidenced in the closing down of the National Railway of Haiti July 1, and the suspension of operations by the pineapple plantation and canning factory and by five of the six sisal plantations during the last half of 1931.

**HAMAGUCHI, YUKO.** A Japanese statesman, died in Tokyo Aug. 25, 1931. He was born in Kochi-ken in 1870, the son of a small landed proprietor named Minakuchi. At the age of 19 he was married to a daughter of the prominent and wealthy house of Hamaguchi whose name he thereafter bore. In 1895 he was graduated in law from the Imperial Tokyo University, and after several years practice became in 1907 director of the Tobacco Monopoly Bureau. He

was appointed Vice Minister of Communications in 1912 and Vice Minister of Finance in 1914-15. After serving for several sessions as representative of his native province of Tosa in the Lower House of Parliament, he was appointed Minister of Finance in 1924 in the Kato ministry and Minister of Home Affairs in 1927 in the Wakatsuki ministry. He became Prime Minister in July, 1929, and, as president of the Minseito or Liberal party, was head of the first real party ministry Japan had known. Following the London Naval Conference, there was considerable opposition to the government's stand on ratification of the Naval Treaty by the Supreme Military Council and others, and on Nov. 14, 1930, an attempted assassination of Premier Hamaguchi was made by a misguided "patriot," a member of the Aikokusha (Love of Country Association). He recovered from his serious wound but was forced to resign his office in April, 1931, after a relapse.

**HAMBURG, STATE AND FREE CITY OF.** A constituent republic of the German Reich, the State and Free City of Hamburg has an area of 160 square miles; the population (on Oct. 10, 1929) was 1,226,111, of whom 1,143,079 resided in the City of Hamburg and 83,032 in Landgebiet. Estimated budget receipts (ordinary) for 1930 were 378,884,880 Reichsmarks; expenditures, 394,567,044 Reichsmarks (1 Reichsmark equals \$0.2382 at par). The extraordinary budget balanced at 25,753,300 Reichsmarks. Hamburg is the chief seaport of Germany; in 1929, 18,175 vessels of 21,965,410 tons entered and 20,798 of 22,134,875 tons cleared. The Constitution of Jan. 7, 1921, vests supreme power in the House of Burgesses of 160 members, which delegates executive authority to a Senate of 16 members. The elections of Feb. 19, 1928, returned 60 Social Democrats, 27 Communists, 22 German Nationalists, 21 Democrats, 20 German People's party members, 2 Centrists, and 8 others to the House of Burgesses. See GERMANY.

**HAMILTON COLLEGE.** A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 451 students was registered for the 1931 autumn session. There were 44 members of the faculty for the year 1931-32. The productive funds of the college were approximately \$4,182,000 and the income for the year 1930-31 was \$395,860. The library contained 142,214 volumes and 31,000 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

**HAMPTON INSTITUTE.** An institution founded in 1868 in Hampton, Va., for the education of Negroes. The enrollment for the autumn term of 1931 was 1087, while that for the summer school was 1055. The faculty numbered 159. The endowment for the fiscal year ending June 30, 1931, was \$9,464,310 from which the income was \$464,966. Gifts to the endowment and investment funds amounted to \$211,344. There were 78,464 volumes in the library. A school of nursing and a new practice school, the George P. Phenix School, were opened in 1931. President, Arthur Howe.

**HANDBALL.** For the third consecutive year, Al Banuet of San Francisco was the outstanding figure in handball in 1931. In March at Minneapolis Banuet faced a strong field in the national four wall singles and successfully played through to his third straight title. In the final he defeated George Nelson of Baltimore 21-13,

12-11. Strong as he was in the singles, however, he was unable to again capture the doubles title. Paired with Barney McGettigan, the champion was defeated in the final by Herman Dworman and Joe Bathe of Detroit, 21-8, 19-21, 21-9. Cy Alexander of Brooklyn won the national one-wall soft ball championship and A. Aiello and J. Seaman, also of the Trinity Club, Brooklyn, captured the doubles title. The national four-wall hard ball singles was won by Eric Peet of Brooklyn and G. Morabit teamed with M. Fitzgibbon to take the doubles. Angelo Trulio of the New York Athletic Club won the national junior four-wall singles and with William Barry captured the doubles championship.

**HARBORS.** See PORTS AND HARBORS.

**HARE, HOBART AMORY.** An American physician, died June 15, 1931, in Philadelphia, Pa., where he was born Sept. 20, 1862. He received the M.D. degree in 1884 from the University of Pennsylvania, where he was professor of children's diseases in 1890. In 1891 he was called to Jefferson Medical College as professor of therapeutics and diagnosis, remaining there until his retirement in 1927. He also edited the *Therapeutic Gazette* during this period. He wrote *Practical Therapeutics* (1890; 20th ed., 1927); *Practical Diagnosis* (1896); and *Practice of Medicine* (1907).

**HARMSWORTH TROPHY.** See MOTORBOATS.

**HARNESS RACING.** See RACING.

**HARRIS, FRANK.** A British author, critic, and editor, died in Nice, France, Aug. 26, 1931. Born Feb. 14, 1856, he ran away from school at the age of 15 and went to New York City where he found occupation as a bootblack and then as a sandhog during the construction of Brooklyn Bridge. He lived in the United States until 1878, part of which time he was a cowboy in the Middle West. He also studied law at the University of Kansas and was admitted to the bar of that State. Returning to Europe, he completed his education at different German and French universities. He edited successfully, the *Fortnightly Review*, the *Saturday Review*, the *Candid Friend*, and *Vanity Fair*, and was credited with "discovering" Bernard Shaw and Max Beerbohm, the latter of whom he turned from musical to dramatic criticism, succeeding Shaw as dramatic critic for the *Saturday Review*. In 1913 he returned to the United States to lecture, and for a short time edited *Pearson's Magazine*. His pro-German sympathies in this magazine later prevented his revisiting England. Harris's short stories, among which are *Elder Conklin* (1894), *Montes the Matador* (1900), and *The Yellow Ticket and Other Stories* (1914), are strong, impressive, and carefully constructed. Moreover, their wide removal from conventionality of motive, sentiment, and point of view give them, with their ironic and sardonic tendency, a genuine distinction. In 1885-86 his investigation of the Chicago labor troubles (which culminated in the Haymarket Square Riot) led him to a belief in the innocence of all but one of the Socialists executed as participants in a conspiracy, and in his vivid and impassioned realistic novel, *The Bomb* (1908), he presented a transcript of that tragic occurrence. In 1909 appeared *The Man Shakespeare* and in 1911 *The Women of Shakespeare*, both of which were valued by scholars as discriminating appreciations. Among his later works are: *Oscar Wilde, His Life and Confessions* (1920); *Contemporary Portraits* (1915,

1921, 1923, 1924, 1930); *Undreamed of Shores* (1924); *My Life* (4 vols., 1926); *On the Trail: My Reminiscences as a Cowboy* (1930); and *Life of Bernard Shaw* (posthumous, 1931, the proofs of this rather unflattering portrait having been read by Shaw himself). His plays include *Mr. and Mrs. Davenport* (1900) and *Shakespeare and His Love* (1910).

**HARRISON, MARY ST. LEGER** (pen-name, LUCAS MALET). A British author, died in Tenby, Pembrokeshire, Oct. 28, 1931. She was born at Eversley rectory, younger daughter of Charles Kingsley, the poet and novelist, and was educated at University College, London. In 1870 she was married to William Harrison, a young clergyman in whom her father had been much interested, and afterward settled at Clovelly in Devonshire, amid the scenes of her father's boyhood. Her husband died in 1897, after which she visited the continent, America, and India in search of health. Her popular novels of English life were written with an ethical purpose and were marked by a realism that was original and intellectually honest in its treatment. Among these are: *Mrs. Lorimer* (1882); *Colonel Enderby's Wife* (1885); *The Wages of Sin* (1891); *The Carissima, a Modern Grotesque* (1896); *The Gateless Barrier* (1900); *History of Sir Richard Calmady* (1901); *The Far Horizon* (1906); *The Score* (1909); *Adrian Savage* (1911); *Damaris* (1916); *The Survivors* (1923); and *The Dogs of Want* (1924).

**HART, EDWARD.** An American chemist, died in Easton, Pa., June 6, 1931. He was born in Doylestown, Pa., Nov. 18, 1854, and was graduated from Lafayette College in 1874 and with the Ph.D. degree from Johns Hopkins University in 1878. He was successively assistant and tutor in chemistry at Lafayette College (1874-76), adjunct professor (1876-82), and professor (1882-1924), and was also dean of the Pardee scientific department of that institution from 1909 until his retirement. As president of the Baker & Adamson Chemical Co. from 1881 to 1913, he interested himself in applied chemistry and took out ten chemical patents, for one of which, a ceresine bottle for containing hydrofluoric acid, he received the John Scott Medal and premium awarded by the Franklin Institute. He had also been proprietor of the Chemical Publishing Company since 1892 and had edited the *Journal of Analytical and Applied Chemistry* from 1887 to 1893 and the *Journal of the American Chemical Society* from 1893 to 1901. His works include *Volumetric Analysis* (1876); *Chemistry for Beginners* (1896); *Second Year Chemistry* (1905); *Text Book of Chemical Engineering* (1920); and *The Silica Gel Pseudomorph* (1924).

**HARVARD UNIVERSITY.** A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1931-32 was 8530, distributed as follows: College, 3266, including 628 seniors, 720 juniors, 879 sophomores, 967 freshmen, and 72 out of course. Graduate schools: Arts and sciences, 1051; business administration, 1095; education, 339. Professional schools: Engineering (undergraduate and graduate), 293; theology, 47; law, 1595; medicine, 518; dentistry, 129; public health, 24; architecture, 74; landscape architecture, 53; city planning, 5; special students, 47. For the summer session of 1931, the registration was 2492. The officers of

instruction for 1931-32 numbered 1807, of whom 217 were professors, 95 associate professors, and 155 assistant professors.

Visiting professors and lecturers during the year included: Pierre Martino, professor of the French language and literature, and dean of the faculty of letters at the University of Algiers, who came as exchange professor from France for the second half-year; Sigurthur Nordal, professor of Icelandic literature at the University of Iceland at Reykjavik, who came as Charles Eliot Norton professor of poetry for the entire year; Friedrich von der Leyen, of the University of Cologne, who served as Kuno Francke professor of German art and culture for the academic year; Gottfried Haberler, *privat docent* in political economy at the University of Vienna, who came as lecturer on economics for the academic year; Arthur Kent Griffin, associate professor of classics at the University of King's College and Dalhousie University, Halifax, N. S., who came as lecturer on Greek and Latin for the academic year; David Mitrany, assistant European editor of the *Economic and Social History of the War* (Carnegie Endowment for International Peace), who came as lecturer on government for the academic year; Dr. Ernst Wolf, *privat docent* in the institute of zoology at the University of Heidelberg, who came to lecture on zoology; Lucius Chapin Porter, professor of philosophy at Yenching University, who was lecturer on Chinese philosophy for the first half-year.

The book value of endowment funds of the university in June, 1931, exclusive of land and buildings used for educational purposes, was \$117,204.250; and the total expenses for the year were \$13,466,991.

Building activity during the year included the completion of the Harvard House Plan, with five houses, Adams, Eliot, Kirkland, Leverett, and John Winthrop, being put into operation to join the first two units ready a year ago, Dunster and Lowell. Simultaneous with the opening of the House Plan, the freshman class was moved to the Yard, and began to take meals in the Harvard Union. The freshman year was reorganized under the direction of a dean of freshmen, subordinate to the dean of the college but charged with the coördination of the activities of the separate freshman year. Three new dormitory buildings, known as Wigglesworth Halls, and a new University Memorial Chapel, to commemorate the part taken by Harvard men in the World War, were completed in the Yard. The new School of Geographical Exploration began operation under the directorship of Dr. A. Hamilton Rice. The new biological laboratories building was completed and occupied by the departments of biological sciences. The library contained 3,165,400 volumes and pamphlets. President, Abbott Lawrence Lowell, LL.B., LL.D.

**HAVERFORD COLLEGE.** An institution of higher education under the control of the Society of Friends in Haverford, Pa., founded in 1833. Registration for the autumn term of 1931 totaled 312 students. There were 42 members on the faculty. The productive funds of the institution amounted to \$3,988,099 (book value). The library contained 122,860 volumes. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

**HAWAII,** hā-wī'ē. A territory of the United States, consisting of a group of islands in the north central Pacific Ocean 2089 miles southwest of San Francisco; formally annexed Aug. 12,

1898. With a total area of 6449 square miles, the islands had a population of 368,336 at the census of 1930, compared with 255,912 in 1920. The capital city, Honolulu, on the island of Oahu, had 137,582 inhabitants in 1930 (83,327 in 1920). Hilo, on the island of Hawaii, followed with 19,468 in 1930 (10,431 in 1920). Between 1920 and 1930 the population of the Territory increased 43.9 per cent; that of Honolulu, 65.1 per cent; and that of Hilo, 80.6 per cent.

The population of the nine inhabited islands in 1930, with the area in square miles in parentheses, was as follows: Oahu, 202,887 (598); Hawaii, 73,325 (4016); Maui, 48,756 (728); Kauai, 35,806 (547); Molokai, 5032 (261); Lanai, 2356 (139); Niihau, 136 (97); Midway, 36 (2.7); and Kahoolawe, 2 (69). The racial and national composition of the population in 1930 was: Japanese, 141,515; Filipino, 65,785; Portuguese, 30,609; Chinese, 25,968; Hawaiian, 21,106; Caucasian-Hawaiian, 17,164; Asiatic-Hawaiian, 10,903; Porto Rican, 7109; Korean, 6593; other Caucasian, 39,154; other, 515. Of the total 1930 population, 81.4 per cent were native born, as compared with 65.9 per cent in 1920. Foreign born who had not become naturalized or taken out first papers amounted to 16.9 per cent of the total population in 1930 as against 32 per cent in 1920. In 1930, there were 10,873 births and 3976 deaths, or a rate of 29.6 and 10.8, respectively. In the five years, 1925 through 1929, a total of 37,640 Filipinos migrated to Hawaii and 18,539 returned to the Philippines from Hawaii.

**EDUCATION.** During the fiscal year ended June 30, 1931, there were 76,634 pupils enrolled in public elementary and high schools, as against 73,180 in the previous year. Japanese constituted 54 per cent of the public school enrollment in 1929-30; in the same year there were 11,835 in private schools, and 2095 in the University of Hawaii. The 1931 Legislature authorized the development of the Territorial Normal School into a full four-year teachers' college affiliated with the University of Hawaii; it also provided for the reorganization of the department of public instruction. English is the language of instruction.

**PRODUCTION.** Agriculture and cattle raising are the leading industries and raw sugar and canned pineapples are the principal exports. Considerable quantities of molasses, fresh pineapples, bananas, honey, coffee, tallow, and beeswax are shipped annually, and rice, sisal, tobacco, and cotton are also grown. In 1930, there were 5942 farms on the islands, ranging from one on Niihau to 3422 on Hawaii. Large plantation companies control much of the land devoted to sugar and pineapples. Preliminary estimates placed the sugar crop for 1930-31 at about 993,787 short tons (924,463 short tons in 1929-30); pineapples, 13,000,000 cases of 24 cans each (12,672,000 cases in 1929-30); coffee, from 8,000,000 to 9,000,000 pounds (7,000,000 pounds in 1929-30). The chief manufacturing industries are sugar refining, pineapple canning, and the production of tin cans, iron and steel, machinery, batteries, and clothing.

**COMMERCE.** During 1930 Hawaii purchased goods valued at \$81,726,000 from the mainland of the United States and sold there in return Hawaiian products valued at \$98,924,000. Comparative figures for the previous year were \$82,951,000 and \$106,313,000, respectively. General

imports from other countries totaled \$9,487,000 in 1930 (\$9,753,000 in 1929) and general exports to other countries were \$1,992,000 (\$2,128,000 in 1929). In the fiscal year ended June 30, 1931, exports totaled \$108,439,103 and imports \$91,213,040.

**FINANCE.** For the fiscal year ended June 30, 1931, receipts of the Territorial Government totaled \$12,889,702 and expenditures \$11,895,693, as compared with revenues of \$12,530,357 and expenditures of \$11,666,956 in the previous year. The bonded debt was increased by \$295,000, making a total on June 30, 1931, of \$32,000,000. Customs receipts for 1930-31 were \$1,908,632 and internal-revenue receipts \$4,816,475.

**COMMUNICATIONS.** During the fiscal year 1929-30, a total of 1407 vessels of 10,807,000 tons called at Hawaiian ports, compared with 1321 ships of 10,142,000 tons in 1928-29. At Honolulu, there arrived 871 ships of 7,524,000 tons. All the principal islands are supplied with railways. Inter-island steamship and airplane services are maintained. A telephone service linking the larger islands and the mainland was installed in 1931.

**GOVERNMENT.** The Governor and Secretary of the Territory are appointed for four years by the President of the United States. There is a legislature of two houses, the Senate of 15 members, elected for four years, and the House of Representatives of 30 members, elected for two years. A delegate, elected biennially, represents the Territory in the Congress of the United States. Governor in 1931, Lawrence M. Judd, appointed in 1929; Secretary, Raymond C. Brown; delegate to Congress, Victor S. K. Houston.

**HISTORY.** Governor Judd at the end of the legislative session in May, 1931, vetoed a joint resolution of the Senate and House of Representatives requesting Congress to pass an enabling act authorizing the establishment of a state government. Laws passed by the Legislature created a board of prison directors with wide powers, and a board of hospitals and settlement to reorganize and administer the Kalaupapa leper settlement and the Kalihi receiving station. The Territorial budget for 1931-32 was reduced to just under \$9,000,000.

Tension between the naval and military personnel and the civilian population reached a serious stage toward the end of 1931, following a criminal assault by five natives on the wife of a young naval officer September 12 and the release of the defendants after a mistrial. On the night of December 13, Horace Ida, one of the defendants, was abducted and severely beaten by a mob in an effort to force a confession of his guilt. Ida asserted that the leader of the mob was a naval officer. Between December 12 and 18, six assaults were made on enlisted personnel in Honolulu, and on the latter date Rear Admiral Yates Stirling, Jr., commandant of the 14th Naval District, issued a statement to the effect that the trouble was "gradually dividing the people into two camps, the military being on one side and a large portion of the population on the other."

A survey of labor conditions in Hawaii, made by the Bureau of Labor Statistics of the U. S. Department of Labor in 1930, was published in 1931 as Bulletin No. 534 of the bureau and summarized in the *Monthly Labor Review* for April, 1931.

**HAY.** The hay crop of the United States in 1931 was the smallest since 1914 as a result

mainly of the low native or wild hay production due to severe drought in the northern Great Plains States where the acreage harvested is usually quite extensive and of the low yields of alfalfa hay in the Great Plains and Western States. Estimates by the U. S. Department of Agriculture placed the 1931 hay crop at 72,366,000 tons, compared with 74,214,000 tons in 1930 and 87,308,000 tons in 1929. The total acreage harvested in 1931 was 65,426,000 acres of which 53,449,000 acres was cultivated or tame hay, and 11,977,000 acres wild hay. The total value of the year's production as of December 1 was \$632,110,000. The 1931 production of tame hay was 64,233,000 tons at the rate of 1.2 tons per acre. At the average farm price of \$9.06 per ton on December 1, the lowest for many years, the value of the crop was \$581,833,000. The crop of wild hay for the year was 8,133,000 tons and the average yield per acre 0.68 of a ton. The average farm price on December 1 was only \$6.18 per ton giving a total value of \$50,277,000. The tame hay yield of 1931 was 1.2 per cent greater than in 1930 but 15.6 per cent smaller than in 1929, and the wild hay crop was 24.4 per cent less than in 1930 and 27.3 per cent less than in 1929.

The crops grown for tame hay production include alfalfa, clover, timothy, lespedeza or Japan clover, millet, Sudan grass; the annual legumes: soy beans, cowpeas, velvet beans and peanuts; and cereal grains. The production of alfalfa hay in 1931 owing to dry weather was reduced to 20,914,000 tons (see ALFALFA). The yield of clover and timothy hay, also lowered materially by drought, was 27,594,000 tons, of sweet clover hay 765,000 tons, of lespedeza 384,000 tons, of annual legume hay 4,420,000 tons, of grain crops cut for hay 4,645,000 tons and of hay of millet, Sudan grass and other miscellaneous crops 5,511,000 tons. The more southerly States produced 3,676,000 tons of sweet sorghum forage, used as a roughage for feeding live stock, which is not included here in the figures on tame hay production.

The enumeration of the leading producing States in 1931 indicates the general distribution of hay production by classes. The largest yields of tame hay by States were reported as follows: New York 5,288,000 tons, Wisconsin 3,833,000 tons, California 3,679,000 tons, Iowa 3,312,000 tons, Ohio 3,196,000 tons, Pennsylvania 3,154,000 tons and Missouri 2,784,000 tons. These States produced nearly 30 per cent of the total crop and harvested over 36 per cent of the total acreage. The production of wild hay made from marsh, salt and prairie grasses in the leading States was given as follows: Nebraska 1,532,000 tons, Minnesota 1,332,000 tons, South Dakota 884,000 tons, North Dakota 809,000 tons, Kansas 758,000 tons, and Oklahoma 399,000 tons. Nebraska led in area harvested with 2,786,000 acres, followed by Minnesota with 1,776,000 acres, South Dakota with 1,769,000 acres, and North Dakota 1,349,000 acres. These four States accounted for 70 per cent of the acreage of wild hay harvested. The clover and timothy hay crop exclusive of Japan clover and sweet clover hay was produced to the extent of nearly 72 per cent in nine eastern and northern Mississippi Valley States. The more important producing States and their yields were as follows: New York 4,158,000 tons, Wisconsin 2,847,000 tons, Pennsylvania 2,754,000 tons, Ohio 2,574,000 tons, Iowa 1,959,000 tons, and Missouri 1,730,000 tons.

In the production of sweet sorghum for forage and hay among 19 States reporting Texas ranked first with 997,000 tons, Kansas second with 990,000, and Oklahoma third with 388,000 tons. Among the seven States reporting Japan clover hay crops Tennessee produced 130,000 tons or over one-third of the total crop. Millet, Sudan grass, and other miscellaneous hay crops were grown in every State, the leading ones being New York producing 510,000 tons. Tennessee 333,000 tons and Kentucky 274,000 tons. Owing to the shortage of other hay and prospects of low grain yields, increased acreage of cereal crops were cut for hay in 1930 and 1931. The leading States and their production in 1931 were reported as follows: California 802,000 tons, Washington 600,000 tons, Oregon 516,000 tons, South Dakota 484,000 tons, and Montana 254,000 tons. Among 28 States reporting production of annual legume hay Illinois stood first with a yield of 577,000 tons, followed by Indiana with 525,000 tons, Missouri with 402,000 tons, North Carolina with 351,000 tons, and Alabama with 335,000 tons.

**HAYTI.** See **HAITI**.

**HEALY, TIMOTHY MICHAEL.** An Irish Nationalist leader and statesman, died in Dublin Mar. 26, 1931. He was born in Bantry, County Cork, May 17, 1855, and attended St. Colman's College of Fermoy. While a railroad clerk in Newcastle-upon-Tyne he associated himself with the "active" section of the old Home Rule party and gained the attention of the leader, Charles Stewart Parnell, to whom he was appointed secretary.

In 1880 he was elected member of Parliament for Wexford, and on delivering his maiden speech astounded the House of Commons by his belligerent attitude. Time and again he was dismissed from the House on account of his frank and often caustic remarks, but he was not deterred in his advocacy of home rule. In 1883 he was cited to appear before the Queen's Bench for the speeches he had made, and upon refusing to give bail was sentenced to a six months' imprisonment. From the first, however, he showed that he was one of the best-informed men in the House on matters pertaining to Irish political history, and succeeded in obtaining many important concessions in settling the Irish land question.

Healy's parliamentary career extended nearly 40 years. In 1891 he joined the opposition to Parnell. Nine years later, however, he was instrumental in reconciling both factions by the nomination of John Redmond as chairman of the Irish Nationalist party. He was called to the Irish bar in 1884, became Queen's Counsel in 1899, and received the compliment of a "special call" to the English bar in 1903. He was elected bencher of King's Inn, Dublin, in 1905 and bencher of Gray's Inn and King's Counsel in 1910. In 1922 he was appointed first Governor General of the Irish Free State, distinguishing himself during his five-year tenure as a wise and able representative of the Crown. In the opinion of many, his pen was even more effective than his tongue, his writing being characterized by mordant wit, happy illustration, and trenchant argument. He was the author of *Why There Is an Irish Land Question and an Irish Land League* (1881); *Loyalty Plus Murder* (1884); *A Word for Ireland* (1886); *Why Ireland Is Not Free* (1898); *Stolen Waters: A Page in the Conquest of Ulster* (1913); *The Great Fraud of*

*Ulster* (1917); and a final volume of reminiscences, *Leaders and Letters of My Day* (1928).

**HEMMETER, JOHN CONRAD.** An American physician, died Feb. 25, 1931, in Baltimore, Md., where he was born Apr. 25, 1864. He was educated in Germany, at the Baltimore City College, the University of Maryland (M.D., 1884), and Johns Hopkins University (Ph.D., 1890). At the University of Maryland he was appointed professor of physiology, clinical professor of medicine, director of the physiological laboratory, and regent of the medical department. A specialist in diseases of the digestive organs, he was at one time president of the American Gastro-Enterologic Association and of the American Therapeutic Society, and at the time of his death was president of the American section of the International Association for the History of Medicine. He was also associate editor of several American and foreign medical journals and published, among other works, *Diseases of the Stomach* (1897); *Diseases of the Intestines* (2 vols., 1901); *Manual of Practical Physiology* (1912); and *Master Minds in Medicine—A History of the Evolution of Ideas in Medicine* (1927).

**HEMPHILL, REAR ADMIRAL JOSEPH NEWTON, U.S.N., RET.** An American naval officer, died in Washington, D. C., July 8, 1931. He was born in Ripley, Ohio, June 18, 1847, and was graduated from the U. S. Naval Academy in 1866. He was made captain in 1901 and rear admiral in 1906. During the Philippine insurrection he was in Manila, and was in Venezuela at the time of the Andrade-Castro revolution of 1900. He then became chief of staff of the North Atlantic fleet, commanding the Kearsarge (1902-04), captain of the New York Navy Yard (1904-06), president of the Board of Inspection and Survey (1906-07), commander of the Asiatic station and fleet (1907-08), and president of the Naval Examining and Retiring Boards (1908-09). He retired in 1909.

**HENRY, ALFRED JUDSON.** An American meteorologist, died in Washington, D. C., Oct. 5, 1931. He was born in New Bethlehem, Pa., Sept. 1, 1858, and attended Columbian (later George Washington) University. After serving in the meteorological section of the Signal Service of the U. S. Army, he became in 1895 chief of the division of meteorological records of the U. S. Weather Bureau. Five years later he was advanced to professor of meteorology, being in charge of river and flood work, and was also executive officer of the Mount Weather (Va.) Research Observatory during 1908-12. In 1917 he became senior and principal meteorologist, and after 1921 edited the *Monthly Weather Review*. His publications include *Climatology of the United States* (1906); *Weather Forecasting in the United States* (with others, 1916); and numerous bulletins published by the U. S. Weather Bureau.

**HENRY, SIR EDWARD RICHARD.** A British police commissioner and criminologist, died Feb. 20, 1931, in London where he was born July 26, 1850. He entered the Indian Civil Service as an assistant magistrate-collector in 1873 and was advanced to magistrate-collector in 1888, inspector-general of the police in Bengal in 1891,

and division commissioner in 1900. After being assigned to special duty in South Africa, he returned to England in 1901 to become assistant commissioner of the London metropolitan police and chief commissioner in 1903.

At Scotland Yard, of which he was superintendent, he introduced a finger-print system of identifying criminals which he had evolved as a result of observation and experiment in India. This system was later adopted in many countries. He was created a baronet on his resignation in 1918.

**HERCULANEUM.** See ARCHÆOLOGY.

**HEREDITY.** See ZOÖLOGY.

**HERFORD, CHARLES HAROLD.** A British scholar, died in London, Apr. 27, 1931. He was born in Manchester in 1853 and was educated at Trinity College, Cambridge, and in Berlin. He was appointed professor of English language and literature at University College, Aberystwyth, Wales, in 1887; lectured at Oxford in 1897 and at Johns Hopkins University and the University of Chicago in 1900; and became professor of English literature at the University of Manchester in 1906.

Painstaking scholarship appears in his contributions to the *Dictionary of National Biography* and in his *Studies in the Literary Relations of England and Germany in the Sixteenth Century* (1886); *The Age of Wordsworth* (1897); *English Tales in Verse* (1902); *Robert Browning* (1904); *Goethe* (1913); *Shakespeare's Treatment of Love and Marriage, and Other Essays* (1921); *Sketch of Shakespeare Investigation, 1893-1923* (1923); and *The Post-War Mind of Germany* (1926).

**HESSE, HES.** A constituent republic of the German Reich, with an area of 2968 square miles and a population at the census of 1925 of 1,347,279 (1,290,988 in 1919). Capital, Darmstadt. See GERMANY.

**HESSIAN FLY.** See ENTOMOLOGY, ECONOMIC.

**HETCH-HETCHY.** See AQUEDUCTS under San Francisco.

**HEWINS, WILLIAM ALBERT SAMUEL.** A British economist, died in London, Nov. 16, 1931. He was born near Wolverhampton, May 11, 1865, and attended Pembroke College, Oxford. He was director of the London School of Economics (1895-1903), taught modern economic history in the University of London (1902-03), and was Tooke professor of economic science and statistics at King's College, London (1897-1903). He was also a member of the Senate of the University of London (1900-03). In 1910 he contested the Shipley division of Yorkshire and southeast Lancashire in the Unionist interest, and in 1912 was elected to the House of Commons for north Herefordshire, serving until 1918. During 1917-19 he was Under-Secretary of State for the Colonies. He was one of the early advocates of Joseph Chamberlain's policy of imperial preferential tariffs, serving from 1903 to 1917 as secretary of the Tariff Commission. He wrote *English Trade and Finance in the Seventeenth Century* (1892); *Imperialism and Its Probable Effect on the Commercial Policy of the United Kingdom* (1901); *Trade in the Balance* (1924); *Empire Restored* (1927); and *The Apologia of an Imperialist* (1929).

**HIGGINSON, REAR ADMIRAL FRANCIS JOHN,** U.S.N., RET. An American naval officer, died in Kingston, N. Y., Sept. 12, 1931. He was born in Boston, Mass., July 19, 1843. Graduating from the U. S. Naval Academy in 1861, he served throughout the Civil War, participating in the bombardments and passage of Forts Jackson and St. Philip, in the attack on the Chalmette batteries and the capture of New Orleans, and in the engagement at Fort Sumter.

During the Spanish-American War he commanded the *Massachusetts*, being promoted to commodore in 1898 and rear admiral in 1899. He served as chairman of the Lighthouse Board from 1898 to 1901, was commander-in-chief of the North Atlantic fleet from 1901 to 1903, and had charge of the Navy Yard at Washington from 1903 until his retirement in 1905. He published *Naval Battles in the Century* (1903).

**HIGH SCHOOLS.** See EDUCATION in THE UNITED STATES.

**HIGHWAYS.** See ROADS AND STREETS.

**HILL, SAMUEL.** An American lawyer, railroad executive, and financier, died in Portland, Ore., Feb. 26, 1931. He was born in Deep River, N. C., May 13, 1857, and was graduated from Haverford College in 1878 and Harvard in 1879. On admission to the bar the following year, he served successively as associate counsel of the St. Paul & Northern Pacific, the Minneapolis & St. Louis, and the St. Paul, Minneapolis & Manitoba. From 1890 to 1900 he was president for various periods of three subsidiaries of the Great Northern Railway, of which his father-in-law, James J. Hill, was president—the St. Paul, Minneapolis & Manitoba, the Eastern of Minnesota, and the Montana Central. He then became engaged in banking, acting as president of the Minneapolis Trust Company until 1903 and of the United States Trust Company, Seattle, Wash., after 1908.

During the World War, when the transportation of import shipments of war munitions for Russia across Siberia was badly congested, he acted for the Allied nations in restoring train service from Vladivostok to the northern battle front. He received decorations from the Governments of France, Belgium, Rumania, and Japan.

**HISPANIC SOCIETY OF AMERICA, THE.** An international organization founded in New York City in 1904 to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes were placed in charge of the society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership of the society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The society has published more than 200 catalogues, reprints of old manuscripts, and monographs.

The president is Archer M. Huntington and the secretary, George Bird Grinnell. The museum and headquarters of the society are at 156th Street, West of Broadway, New York City.

#### HISTORICAL ASSOCIATION, AMERICAN.

A society for the promotion of historical studies and writings, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States government, it publishes annual reports and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress. In 1931 the Association had a membership of 3710, who represented not only every State of the Union but also Canada and many European and South American countries.

The forty-sixth annual meeting of the association was held in Minneapolis, Minn., Dec. 28-30, 1931. Among the general topics presented and discussed at the sessions were: "Nineteenth Century Liberalism"; "The Far East"; "The Byzantine Empire"; "Aspects of European Economic History"; "American Foreign Relations"; "Military and Diplomatic Aspects of the World War"; "Nineteenth Century England"; and "Missionary Activities in America."

The prizes awarded by the association in 1931 were as follows: Herbert Baxter Adams Prize, to Prof. Vernon J. Puryear of Albany College, Albany, Ore., for *England, Russia, and the Straits Question*; John H. Dunning Prize, to Francis B. Simkins and R. H. Woody, for *South Carolina during Reconstruction*; and George Louis Beer Prize, to O. J. Hale, assistant professor of history, University of Virginia, for *Germany and the Diplomatic Revolution: A Study in Diplomacy and the Press, 1904-1906*.

The official organ of the association is the *American Historical Review*, a quarterly. The *Annual Report* contains proceedings, important papers read at the annual meeting, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. The officers for 1931 were: President, Carl Becker, Cornell University; first vice president, Herbert E. Bolton, University of California; second vice president, Charles A. Beard, New Milford, Conn.; secretary, Dexter Perkins, University of Rochester; treasurer, Constantine E. McGuire, Washington, D. C.; assistant secretary-treasurer, Patty W. Washington; and editor, Lowell Joseph Ragatz, George Washington University. Headquarters are at 40 B Street, S. W., Washington, D. C.

**HISTORY.** See FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; PHILOLOGY, MODERN; SPANISH-AMERICAN LITERATURES; SPANISH LITERATURE.

**HITLER, ADOLF.** See GERMANY under *History*.

**HOBART COLLEGE.** An institution for the higher education of men in Geneva, N. Y., founded chiefly under the auspices of the Protestant Episcopal Church in 1822 and permanently chartered by the Regents of the University of the State of New York in 1825. William Smith College, a coordinate institution for the separate instruction of women, administered by the Hobart College corporation, and with instruction given by the Hobart College faculty, was established in 1908. The student enrollment in Hobart Col-

lege for the autumn of 1931 was 320, while the enrollment in William Smith College was 121. The combined faculty of the two colleges numbered 42. The endowment amounted to \$1,403,000, and the income for the year was approximately \$240,000. President Murray Bartlett, D.D., S.T.D., LL.D.

**HOCKEY.** The Montreal Canadiens won the Stanley Cup, that treasured trophy emblematic of the world's professional hockey championship, in 1931, after a gruelling regular campaign and an extraordinary series in the playoffs. The Montreal team played flashing hockey all the season and finished on top of the Canadian division of the National Hockey League standing. The Boston Bruins topped the American division. The Canadiens and the Bruins then met according to the present playoff rules, which provide that the two leaders meet and then the winner faces the winner of an elimination of the second and third place teams. After a hard series with the Bruins, the champions met the Chicago Black Hawks in the final series, winning three of five games.

The Windsor (Ont.) Bulldogs topped the International Hockey League, a professional league, by winning in the playoffs, after Buffalo had led throughout the season. The Oakland Sheiks won the California Hockey League title, defeating the Oakland Checkers in the playoff, 12 goals to 11. Vancouver won the Pacific Coast Hockey League championship for the year, winning the playoff series with Seattle, 3 games to 1. The Springfield Indians, "farm" for the New York Rangers of the National League, won the Canadian-American League title and the Fontaine Cup for 1931, downing the Boston Cubs in the playoff, 3 games to 2. At the start of the new season in November this league moved into New York City, the Bronx Tigers playing their home games at the Coliseum in the Bronx.

The Winnipeg Hockey Club won the Allan Cup, emblematic of the world's senior amateur championship, by defeating the Hamilton Tigers in two straight games. In the world's amateur championship tournament played at Krynicia, Poland, in February, the Manitoba Grads won the title for Canada, defeating the Boston Hockey Club, representing the United States, 2-0, in the final of the round robin. The national amateur tournament, held under the auspices of the Amateur Athletic Union, with an eye to developing a team for the 1932 Olympics, was won by the Crescent Athletic Club team. The Crescents defeated the Atlantic City Sea Gulls in the final, at Madison Square Garden, New York City, 4 to 2. The Winnipeg Elmwood Millionaires won the Ontario Hockey Association Memorial Cup, the symbol of supremacy in junior amateur hockey.

Yale University was considered the champion intercollegiate team, yielding only once in 16 games. This lone defeat to the Boston Hockey Club, 1-0, came in the early part of the season, and after that the Elis swept everything before them, defeating Harvard in two games, 5-1, and 3-1. Harvard, Princeton, and Dartmouth were also strong.

**HÖFFDING, hëvding, HARALD.** A Danish philosopher, died July 2, 1931, in Copenhagen where he was born Mar. 11, 1843. He attended the University of Copenhagen from which he received the Ph.D. degree in 1870. In 1880 he

became lecturer and in 1883 professor of philosophy at the University of Copenhagen, retiring in 1915.

Of his contributions to philosophy, the most notable was his concept of religion by which the religious emotion was correlated with feelings intellectual, æsthetic, or moral through the reaction of mind to the sense of values. For him the chief problems of philosophy were: the problem of knowledge; the problem of existence; the problem of the estimation of worth; and the problem of consciousness. Early influenced by Kierkegaard, he held to a distinction between knowledge and belief, but later he became a positivist who applied to the views of that school the methods of critical philosophy and the results of psychological study. In ethics he was a utilitarian of a moderate type. His works include *Psychology* (1882; 10th ed., 1925); *Ethics* (1887); *History of Modern Philosophy* (1894); *The Philosophy of Religion* (1901); *Philosophical Problems* (1902); *Modern Philosophers* (1904); *Human Thought* (1910); *Henri Bergson's Philosophy* (1914); *The Concept of Totality* (1917); *Spinoza's Ethics* (1918); *Leading Conceptions in the 19th Century* (1920); *The Concept of Relation* (1921); *The Conception of Analogy* (1923); *Epistemology and Conception of Life* (1925); *Religious Types of Thought* (1927); *Present State of Epistemology* (1930).

**HONDURAS, hón-doo-rás.** A Central American republic, bounded on the north and east by the Caribbean Sea, on the west by Guatemala, Salvador, and the Gulf of Fonseca, and on the south by Nicaragua. Capital, Tegucigalpa.

**AREA AND POPULATION.** The estimated area is 46,250 square miles; population, according to the census of 1926, 700,811, compared with 859,760 (estimated) in 1930. The inhabitants are mostly Indians with a strain of Spanish blood. The chief towns, with their estimated populations in 1930, are Tegucigalpa, 40,049; San Pedro Sula, 24,292; La Ceiba, 13,073; Choluteca, 12,371; Juticalpa, 10,809. The chief ports are Amapala on the Pacific and Porto Cortez and Omoa on the Atlantic. In the fiscal year 1929-30, there were 31,694 births and 15,476 deaths.

**EDUCATION.** Primary education is nominally compulsory for children between the ages of 7 and 15. According to the Presidential message of January, 1931, primary schools in 1930 numbered 1527, with a total enrollment of 57,359 pupils and an average attendance of 46,200. The enrollment in secondary and normal schools was 2288, and in the university (1929), 167. In 1929,

41.8 per cent of the children of school age attended school.

**PRODUCTION.** Honduras is the world's largest producer of bananas, exports of this fruit (totaling 26,982,099 stems in 1930) normally comprising 85 per cent of all foreign shipments. The industry, upon which about 30 per cent of the population is dependent, is almost exclusively controlled by the United Fruit and other foreign companies. Sugar, coffee, coconuts, hardwood, and minerals are the other chief export products. Two large foreign-owned mills on the north coast account for all sugar produced. Coffee is grown in western and southern Honduras, principally by native farmers. Mineral resources include silver, gold, lead, copper, iron, zinc, antimony, and coal, but only the first four are exported.

**COMMERCE.** Exports established a record in the fiscal year ended July 31, 1930, amounting to \$26,171,000 as compared with \$24,569,000 in the previous year. Bananas comprised approximately 87.8 per cent of the total exports, being valued at \$22,981,000 as against \$20,869,000 in the previous year. The United States was the leading purchaser of Honduran products and in the fiscal year 1920-30 took approximately 74 per cent of the total value of exports. Foreign enterprises controlled about 90 per cent of the value of all exports. Imports increased from \$14,861,000 in 1928-29 to \$15,946,000 in 1929-30. Imports from the United States increased from \$11,563,000 in 1928-29 to \$11,886,000 in 1929-30, but constituted only 74.5 per cent of the total as against 77.8 in 1928-29. The United Kingdom and Germany made slight gains in the amounts supplied.

**FINANCE.** Total government receipts for the fiscal year ended July 31, 1930, amounted to 14,314,299 pesos (1 peso equaled about \$0.50 in 1930) and total expenditures to 15,021,739 pesos, leaving a deficit of 707,440 pesos. As 404,892 pesos of expenditure were paid out of the balance of the previous year, the final deficit was 302,548 pesos. Receipts were 585,911 pesos higher than in 1928-29 and expenditures 2,158,114 pesos higher. The budget for the fiscal year 1930-31, as adopted by Congress, balanced at 15,109,628 pesos; that for 1931-32 at 16,568,612 pesos. On Sept. 25, 1931, however, the Government announced that it had reduced the 1931-32 budget expenditures by 4,000,000 pesos in line with declining revenues. On July 31, 1930, the internal public debt stood at 16,569,724 pesos and the external (sterling) debt at the equivalent of 10,400,000 pesos, compared with 18,602,341 pesos and 10,800,000 pesos, respectively, at the end of July, 1929.

**COMMUNICATIONS.** Inadequate transportation facilities hinder the economic development of the country. Railway lines, which totaled 1048 miles in 1929, are all located on the north coast and, with the exception of the government-owned National Railway (57 miles long), are the property of foreign fruit companies. Highway mileage in 1930 was 196 miles. Tela, San Pedro Sula, and Tegucigalpa are connected by a fruit company's air line. The Miami-Panama air line touches at Tela and San Lorenzo, while another air route connects San Lorenzo with San Salvador, Guatemala, and Mexico.

**GOVERNMENT.** According to the Constitution as amended in 1924, executive power is vested in the President nominated and elected by popular vote, and holding office for four years; legislative

power is in the Congress of Deputies consisting of 43 members chosen for four years directly by popular vote. A permanent commission of five members transacts the routine business for Congress while that body is not in session. President in 1931, Dr. Vicente Mejía Colindres, who assumed office Feb. 1, 1929, for a four-year term.

**HISTORY.** A serious revolt broke out on the north coast of Honduras on Apr. 18, 1931, led by Gen. Gregorio Ferrera, a full-blooded Indian with a large following among the Indian laborers on the large American banana plantations of that region. The revolt was attributed partly to unrest among unemployed plantation workers and partly to the refusal of President Mejía Colindres to include General Ferrera in his Cabinet. Following the looting of the town of Progreso and unsuccessful rebel attacks on Sonaguera and Tela, American naval and commercial vessels evacuated several hundred Americans employed by the fruit companies from that region. On April 20 the Honduran Congress declared martial law throughout the country and 3000 well-trained troops were dispatched to the north coast to quell the revolt. Government troops reported having defeated rebel forces at Chamelecon, San Pedro Sula, and other points, but on May 1 insurgents captured Santa Rosa de Copán. Reports stated that 200 were slain in the attack on the city and that the insurgents then massacred 50 civilians and officials. Government forces repulsed a severe attack on Tela May 23 and on June 20 decisively defeated General Ferrera near Lake Yojoa. The revolt was definitely terminated with the killing of General Ferrera by pursuing government troops on June 26.

The revolt caused a severe setback to the economic condition of the country, which was already unfavorable as a result of the decline in the price of bananas and other export products and the reduction of activities by the foreign fruit companies. Business was at a standstill on the north coast for three months, the financial burden of the country was increased, plans for highway and other public improvements had to be curtailed, and the price of native foodstuffs rose to levels which caused severe hardship among the population.

On Jan. 1, 1931, the Liberal and Conservative parties in Congress reached a compromise, which averted the possibility that President Mejía Colindres would be forced to declare a dictatorship. Following the elections of October, 1930, in which both parties won an equal number of seats in Congress, each demanded the right to organize Congress, under threat of abstention. Had either party withdrawn, a quorum would have been lacking and the President would have had no alternative but to rule by decree. By the compromise reached on Jan. 1, 1931, the Presidency of Congress was decided by lot, the choice falling upon a Liberal. The other posts were divided between the two parties. A new Cabinet was announced during the course of the revolt (May 18), including: Foreign Affairs, Salvador Zelaya; Finance, Coronado Garcia; War, José María Ochoa Velasquez; Interior, Ernesto Argueto.

Congress by the decree of Mar. 10, 1931, adopted the gold lempira, with a value of \$0.50 U. S. currency, as the new monetary unit, and made provision for the withdrawal of the existing silver currency within one year. The change in currency had not become effective during 1931.

**Delimitation of the Nicaraguan-Honduras boundary** by a commission in accordance with an award made by the King of Spain in 1906 was provided for by a treaty signed by representatives of the two countries in Managua, Jan. 21, 1931. The neutral member of the commission was to be an engineer appointed by the U. S. Department of State. For ratification of the treaty for settlement of the Honduras-Guatemala boundary dispute, see GUATEMALA under *History*.

**HONG KONG.** A possession of Great Britain at the mouth of the Canton River, about 90 miles to the south of Canton, China; comprising the island of Hong Kong, with an area of 32 square miles, and the opposite Peninsula of Kowloon, separated from it by a strait about a half-mile wide. Total area, 391 square miles. In addition, considerable land in Kowloon Bay has been reclaimed from the sea. At the 1931 census the population was 852,932 (provisional figure), of which about 18,150 were non-Chinese. There are about 7000 British residents, 2500 Portuguese, 2000 British Indians, and 400 Americans. Registered births and deaths in 1929 numbered 10,223 and 17,565, respectively. Chinese emigrants in 1929 totaled 227,523 and Chinese immigrants 185,390. The city of Victoria on Hong Kong Island has a population of over 580,000 (577,500 Chinese).

Hong Kong's prosperity has been built primarily on its extensive transit trade, the free port of Victoria being the distributing centre for that part of China and French Indo-China situated south of Foochow and north of Saigon. Local industries include the refining of sugar and tin, rice polishing, furniture making, shipbuilding, and engineering. Provisional trade returns for the fiscal year ended Mar. 31, 1931, showed total imports of about \$217,452,000 (U. S. currency) and exports of \$168,219,000, compared with imports of \$318,715,000 and exports of \$281,295,000 in 1924.

In the budget for 1931, receipts and expenditures were estimated to balance at 29,800,000 Hong Kong silver dollars, as compared with a budget total of about 23,800,000 dollars in 1930 (1 Hong Kong silver dollar exchanged at an average rate of \$0.3385 in U. S. currency in 1930). Expenditure for defense totaled 3,343,095 Hong Kong dollars in 1929. The colony is headquarters for the China squadron of the British navy. A total of 42,970 steamers of 39,473,000 tons and 21,146 junks of 2,673,000 tons entered and cleared the port in the foreign trade in 1930. Of the steamers, 11,772 aggregating 28,295,000 tons were ocean-going. Comparative figures for 1924 were 57,765 steamers of 38,770,000 tons and 27,725 junks of 3,299,000 tons. The colony is administered by a governor, assisted by executive and legislative councils. Governor and Commander-in-Chief in 1931, Sir William Peel, appointed in 1930.

Sir John Simon charged in the British House of Commons May 11, 1931, that thousands of little girls were being sold into virtual slavery in Hong Kong under the "mitsai system." The system operated under conditions which sometimes led to deplorable cruelty, he said. Dr. Drummond Shiels, Under-Secretary of State for Colonies, replied that it was inaccurate to speak of the mitsai (girl servants) as slaves. He added that the Government had taken steps to abolish by ordinance the initial payment of money for the mitsai and that propaganda

was being spread to do away with the system altogether.

The Japanese occupation of Mukden in September, 1931, was followed by three days of fierce anti-Japanese rioting by Chinese in Hong Kong, during which Japanese shops were looted and wrecked. Six Japanese were killed by a mob, many others were beaten, and the police and British troops were forced to take strenuous measures to end the disorders. See JAPAN and CHINA under *History*.

**HOOKWORM.** See ZOOLOGY.

**HOOVER, HERBERT, PRESIDENT OF THE UNITED STATES.** See UNITED STATES under *Administration*.

**HOOVER DAM.** See DAMS; WATER POWER.

**HOOVER MORATORIUM.** See REPARATIONS AND WAR DEBTS; GERMANY under *History*.

**HOOVER POLICY.** For developments in the so-called Hoover Policy toward the Caribbean and Central American countries, see NICARAGUA, HONDURAS, PANAMA, GUATEMALA, HAITI, and CUBA and SALVADOR under *History*.

**HOPS.** The production of hops in 1931 in most of the hop growing countries of the world suffered a further decline as compared even with the low yield of the preceding year. The total production of Belgium, England and Wales, Czechoslovakia, and the United States as reported by the International Institute of Agriculture was 71,766,000 pounds as compared with 87,208,000 pounds in 1930, a reduction of 17.7 per cent and of 22.6 per cent below the average annual yield for the five years 1925-1929. The total acreage in these countries had declined from 80,000 acres in 1930 to 74,000 acres in 1931 and stood 11.8 per cent below the average annual acreage of the five-year period. The 1931 yields reported for the European countries were 24,725,000 pounds for Czechoslovakia, 18,928,000 pounds for England and Wales, and 2,271,000 pounds for Belgium. Germany produced 24,366,000 pounds in 1930 on 32,000 acres, but the acreage in 1931 had been reduced to 25,000 acres. In view of declining hop prices the German Government passed a decree effective Sep. 1, 1931 directing certain breweries to use a minimum of 75 per cent German hops but the decree did not apply to establishments brewing for export.

In the United States according to reports issued by the U. S. Department of Agriculture the production of hops in Washington, Oregon, and California combined had been lower than the 1931 crop of 25,852,000 pounds only four times since 1917. The production in these three States was only 23,447,000 pounds in 1930 but in 1929 it was 33,195,000 pounds. The acreage harvested in these States in 1931 was 21,400 acres, compared with 19,500 in 1930 and 24,400 in 1929. In recent years Oregon had produced from half to two-thirds of the crop in the three Pacific Coast States. The yields of these States in 1931 were reported as follows: Oregon 16,430,000 pounds, California 5,550,000 pounds, and Washington 3,872,000 pounds. The areas devoted to the crop were 15,500, 3700, and 2200 acres, respectively. The average yield per acre for the total area was 1208 pounds. On the basis of the average farm price of 13.8 cents per pound the total hops crop was \$3,564,000.

**HORACE.** See PHILOLOGY, CLASSICAL.

**HORSE RACING.** See RACING.

**HORTICULTURE.** Abundant crops and low prices may be said to characterize horticulture

in the United States in 1931. Yet horticulture did not perhaps suffer as severely in the stressful times as did certain field crops such as wheat and corn, which may be stored for several years, the perishable nature of fruits and vegetables being for once a benefit as well as a handicap. The 1931 apple crop was the largest since 1926 and rather evenly distributed over all important producing sections. The 1931 peach crop was the largest on record. The grape crop, on the other hand, was 35 per cent below that of 1930. In California excessive heat and overproduction in 1930 cut the grape crop almost in half, a situation which proved a blessing rather than a disaster and removed the necessity of leaving a large part of the crop on the vines as happened in 1930. Pecans, with a tremendously increased production, sold at unprecedented low prices. Yet in the long run this large crop should help the pecan growers as it aided in the formation of the new National Pecan Marketing Association which is certain to help stabilize the pecan industry in the future. A large citrus crop in prospect for the 1931-1932 season promised to complete a year of plentiful production.

A highly promising development of the 1931 season was the further expansion of the freezing method of preserving fresh fully ripe fruits. Fresh frozen peaches and berries appeared on city markets and because of the fact that little of the original flavor and delicacy is lost in the freezing process there appears to be a bright future for this young industry.

**PRODUCTION IN 1931.** In times characterized by a general surplus of production crop yields have a dual interest, that of actual quantity and also their effect on the general price of commodities. Fruits and vegetables, because of their quickly perishable nature, have, however, no such widespread influence on markets and marketing as do corn, wheat, and cotton. Although less acreage was planted to most truck crops in 1931, increased yields per acre usually offset the anticipated reductions. Contrary to the usual situation, where smaller crops were actually harvested, they brought lower returns to the growers, there being in fact no definite stimulus from short yields. Data released on December 16 by the Bureau of Agricultural Economics of the U. S. Department of Agriculture show a yield of 211,506,000 bushels of apples in 1931 as compared with 155,982,000 bushels in 1930; 77,743,000 bushels of peaches in 1931 and 53,864,000 bushels in 1930; 23,009,000 bushels of pears in 1931 and 25,540,000 bushels in 1930; 1,582,982 tons of grapes in 1931 and 2,438,514 tons in 1930; 108,090 tons of cherries in 1931 and 115,250 tons in 1930; fresh plums and prunes 117,750 tons in 1931 and 147,875 tons in 1930; dried prunes 203,750 tons in 1931 and 206,465 tons in 1930; oranges 50,814,000 boxes in 1931 as compared with 54,559,000 boxes in 1930 and 34,034,000 boxes in 1929; grapefruit 14,770,000 boxes in 1931 and 18,690,000 boxes in 1930; lemons 8,000,000 boxes in 1931 and 7,950,000 boxes in 1930. cranberries 651,000 barrels in 1931 and 560,480 barrels in 1930; pecans 74,985,000 pounds in 1931 and 46,469,000 pounds in 1930; strawberries 11,286,000 crates in 1931 and 9,637,000 crates in 1930.

Truck crop data show a decline in asparagus production in 1931, 9,307,000 crates as compared with 10,494,000 crates in 1930; snap beans 184,500 tons in 1931 and 214,000 tons in 1930;

cabbage 992,800 tons in 1931 and 998,500 tons in 1930; cantaloupes 17,962,000 crates in 1931 and 15,951,000 crates in 1930; carrots 11,833,000 bushels in 1931 and 10,662,000 bushels in 1930; cauliflower 7,087,000 crates in 1931 and 5,843,000 crates in 1930; celery 9,750,000 crates in 1931 and 10,419,000 crates in 1930; canning corn 771,800 tons in 1931 and 659,700 tons in 1930; cucumbers 10,757,000 bushels in 1931 and 13,842,000 bushels in 1930; eggplant 775,000 bushels in 1931 and 798,000 bushels in 1930; lettuce 18,569,000 crates in 1931 and 19,591,000 crates in 1930; onions 18,857,000 bushels in 1931 and 26,002,000 bushels in 1930; peas 247,000 tons in 1931 and 354,000 tons in 1930; peppers 4,623,000 bushels in 1931 and 3,690,000 bushels in 1930; early potatoes 46,381,000 bushels in 1931 and 43,551,000 bushels in 1930; spinach 171,000 tons in 1931 and 151,000 tons in 1930; tomatoes 1,475,500 tons in 1931 and 2,216,700 tons in 1930; watermelons 75,459,000 units in 1931 as compared with 82,401,000 in 1930.

**THE WORLD SITUATION.** Abundant crops of fruits and nuts throughout the world failed to yield normal returns due to the unfavorable market conditions. According to information released by the Bureau of Agricultural Economics, the Canadian apple crop was officially forecast on October 1 as 3,656,000 barrels as compared with 3,411,000 barrels in 1930. The Australian, Tasmanian, and New Zealand export apple crop totaled 4,280,000 boxes, a decline from the 5,420,000 boxes of the preceding year. Of this crop 77 per cent was exported to England and 23 per cent to continental Europe.

Final figures on the 1931 South African citrus crop showed an export of 1,734,000 boxes, 156,000 less than in 1930. Of this crop 94 per cent was oranges and the balance mostly grapefruit. Drought and intense heat were said to have injured the younger trees and greatly reduced potential yields. Porto Rico grew 8300 acres of grapefruit in 1931, from which was harvested 6.5 per cent of the world's crop, approximately 90 per cent being grown in the United States proper. The walnut crop in Italy, France, Rumania, and Yugoslavia was 33 per cent larger in 1931 than in 1930. The Mediterranean almond crop was 90 per cent of the 1930 crop with prices much lower. The Mediterranean fig crop was estimated at 74,800 tons in 1931 as compared with 75,565 tons in 1930.

**FOREIGN COMMERCE.** Summaries presented in the October, 1931, Monthly Summary of Foreign Commerce of the United States give a clear cut picture of the trade situation with respect to horticultural products during the ten months ended Oct. 31, 1931. Rather strangely, exports showed a considerable increase in value in 1931 as compared with the same period in 1930, from \$95,864,851 to \$102,618,229. At the same time imports declined very sharply in value, from \$100,904,998 in 1930 to \$73,728,298 in 1931, a result due in part at least to the decreased purchasing power within the United States.

The principal gains in export values were recorded for citrus fruits and apples, the rise being due to total quantities handled rather than to price per unit. The 1930 value of exported oranges was \$9,379,056, the 1931 value \$11,894,106. Grapefruit exports in 1930 amounted to

\$2,981,999 and in 1931 to \$3,439,311. Boxed apples exports in 1930 were valued at \$9,942,934 and in 1931 at \$14,851,468. Barreled apples were \$4,774,803 in 1930 and \$7,809,308 in 1931.

Among import items to show material losses in value were lemons, declining from \$2,064,953 in 1930 to \$536,857 in 1931; olives from \$2,074,017 in 1930 to \$1,141,649 in 1931; pineapples from \$2,418,397 in 1930 to \$1,909,469 in 1931; shelled almonds from \$3,321,119 in 1930 to \$2,351,280 in 1931; prepared coconut from \$3,125,192 in 1931 to \$1,728,127 in 1930. Two items, namely, canned tomatoes and cashew nuts, show a considerable increase in value, the former \$1,993,770 in 1930 and \$2,178,236 in 1931. Bananas, the principal import item, decreased in value from \$30,432,066 in 1930 to \$25,882,431 in 1931, data correlated closely with a decline in number of bunches, from 55,057,280 in 1930 to 48,974,942 in 1931. Flowering bulbs showed a sharp loss in import value, hyacinths, for example, dropping from \$1,122,436 in 1930 to \$702,096 in 1931.

**COÖPERATIVE MARKETING.** The extent of co-operative marketing in the horticultural industry was clearly indicated in an address delivered on August 27 by Charles S. Wilson of the Federal Farm Board before the Vegetable Growers Association of America. Mr. Wilson stated that there were in the United States 1386 cooperative associations, including a total of 182,000 growers, engaged in the marketing of fruits and vegetables aggregating 319 million dollars in value. Two nationwide horticultural selling associations were formed during 1931 with the aid of the Federal Farm Board, namely, the National Pecan Marketing Association and the National Fruit and Vegetable Exchange.

According to the Federal Farm Board, cranberry growers of New Jersey marketed approximately 100 per cent of their crop cooperatively and Massachusetts growers 52 per cent. Pennsylvania grape growers sold 65 per cent of their production cooperatively and New York growers only 31 per cent. In the case of pears, only 2 per cent of the New York crop was handled cooperatively, suggesting the need of further expansion of the co-operative marketing movement in the Eastern States.

Motor trucks are an important factor in the marketing of fruit and vegetables. According to the Bureau of Agricultural Economics approximately 15 per cent of the total shipments of fresh fruits and vegetables transported 20 miles or more to market was handled in motor trucks, some of which travel distances as great as 400 miles and more.

**PLANT QUARANTINES.** Foreign and domestic plant quarantines have played an important part in recent years in determining the distribution of horticultural products. Probably the outstanding development during 1931 was the removal of the Mediterranean fruit fly quarantine which had regulated the movement of Florida fruits and vegetables. Apparently the eradication programme conducted co-operatively by the Federal and State governments had been so thorough that not a single fruit fly remained to menace Florida's important fruit and vegetable industry. The Japanese beetle and the European corn borer unfortunately became so widespread that hope of elimination was no longer held, efforts being confined in 1931 to the development

of methods of control and to slowing down the rate of spread. Limitations on the importation of narcissus and other bulbs formerly brought in vast quantities to the United States from European countries resulted in the continued development of home production, which promises in a few years to meet all domestic demands and in fact to provide the nucleus for a profitable home industry. Substantial progress was made in the control of the so-called Phony peach disease which had proved so destructive to peaches in the Georgia peach belt and for a time appeared very menacing. The organism was found to be an infectious virus, confined apparently to the roots of peaches and nectarines and other trees grafted on these roots. As a result a search was made for disease resistant roots and at least one species, a native plum, was found promising. There was some indication that the peach tree borer carries the disease from tree to tree.

**HORTICULTURAL RESEARCH.** No more worthy example of the aid that research was rendering the horticultural industry was forthcoming than that of the solution of the arsenical residue problem, discussed rather fully in U. S. Department of Agriculture *Technical Bulletin No. 245* (1931). Faced on one hand with the necessity of applying poisons to combat insects and on the other with laws requiring the removal of excess poisons from the harvested fruit, the growers were in a difficult position until research workers found that a dilute hydrochloric acid wash would effectively cleanse fruit. Attempts at the New York (Cornell) Agricultural Experiment Station (*Amer. Soc. Hort. Sci. Proc.* 27, 1930, pp. 190-198), to change the biennial fruiting habit of Wealthy apple trees to annual fruiting by applying large quantities of available nitrogen fertilizer and pruning heavily, failed, indicating that fruiting habits in the apple, once established are highly fixed and difficult to change. Determinations at the Ohio Agricultural Experiment Station (*Amer. Soc. Hort. Sci. Proc.* 27, 1930, pp. 32-36), of the various sugars in the fruits of apple trees supplied with different amounts of nitrogen fertilizer, failed to show any significant differences in sugars that could be traced to the fertilizer treatment.

The observation at the Pennsylvania Agricultural Experiment Station (*Pennsylvania Sta. Bul.* 261, 1931, p. 35), that apple trees in soils containing abundant organic matter suffered much less severely from drought than did trees in soils lacking in organic matter, had a very practical bearing on orchard management, since the quantity of organic matter in the soil may be greatly influenced by cover crops.

**MISCELLANEOUS.** Dr. Liberty Hyde Bailey, noted horticulturist and author, received the Honorary Award Medal of the Garden Club of America in recognition of his outstanding contributions to horticulture. As further tribute to his eminent service, Dr. Bailey was awarded the Arthur Hoyt Scott Garden and Horticultural Medal of Swarthmore College, carrying with it a cash emolument of one thousand dollars. The George Robert White Gold Medal for distinguished horticultural service was awarded by the Massachusetts Horticultural Society to Dr. Frederick C. Coville of the U. S. Department of Agriculture for his success in breeding and developing improved varieties of blueberries.

A splendid new horticultural building was

completed at the New York (Geneva) Agricultural Experiment Station. Equipped with controlled storage facilities and other modern equipment, the new building promised to be of material aid to the pomological workers at the station. The new Florida Citrus Products Laboratory at Winter Haven, Florida, was officially opened on October 23, with Secretary of Agriculture Arthur M. Hyde as principal speaker. This new laboratory will study methods of canning, dehydration and cold-storage preservation of orange and grapefruit juices, the utilization of cull fruit, etc.

For the first time, an attempt was made to transport California grapes to the Eastern seaboard by water when a cargo of 8000 lugs of fancy table grapes was shipped in the cold-storage chambers of the steamship *Virginia* from San Francisco to New York. An even more novel departure in the handling of California products was inaugurated by a Los Angeles florist who shipped a consignment of gardenias by aeroplane to New York City. The New Dawn rose, a bud sport of the well-known climbing variety Dr. Van Fleet, was the first plant to receive a patent under the recently amended U. S. Patent Law, thus marking a historical step in the advancement of American horticulture. The recipient of the patent will receive a royalty for a certain stipulated period on all plants of this new variety sold.

**NECROLOGY.** The untimely death on January 13 of Dr. Frederick J. Pritchard, plant breeder in the U. S. Department of Agriculture, was a serious loss to the department. E. G. Dezell, general manager of the California Fruit Growers' Exchange since 1922, died August 2.

**BIBLIOGRAPHY.** Many attractive and useful books on horticultural subjects made their appearance during the year, presenting concrete evidence of the widespread appeal of the garden and its inhabitants. M. C. Allwood, *Carnations for Everyman* (1931); L. H. Bailey, E. Z. Bailey, *Hortus* (New York, 1930); F. J. Chittenden, *The Garden Doctor* (London and New York, 1930); A. McCully, *American Alpines in the Garden* (New York, 1931); E. R. Fisher, *The Garden Club Manual* (New York, 1931); E. B. Higgins, *Our Native Cacti* (New York, 1931); H. H. Hume, *Azaleas and Camellias* (New York, 1931); A. Laurie, *Chrysanthemums Under Glass and Outdoors* (New York, 1930); A. Laurie and L. C. Chadwick, *The Modern Nursery* (New York, 1931); J. J. Ochse, *Fruits and Fruitculture in the Dutch East Indies* (Batavia, 1931); E. W. Oliver, *Landscaping the Small Home* (New York, 1931); H. S. Orloff, *Perennial Gardens* (New York, 1931); H. C. Powell, *The Culture of the Orange and Allied Fruits* (South Africa, 1930); L. W. Ramsey and G. H. Lawrence, *Garden Pools, Large and Small* (New York, 1930); E. S. Rohde, *The Scented Garden* (London, 1931); J. M. Shull, *Rainbow Fragments* (Garden City, N. Y., 1931); O. C. Simonds, *Landscape Gardening* (New York, 1931); H. C. Thompson, *Vegetable Crops* (2d edition, New York, 1931); T. A. Weston, *Practical Carnation Culture* (New York, 1931); E. H. Wilson, *If I Were to Make a Garden* (Boston, Mass.).

**HOTELS.** See ARCHITECTURE.

**HOWARD, JOHN GALEN.** An American architect, died in San Francisco, Calif., July 18,

1931. He was born in Chelmsford, Mass., May 8, 1864, and was graduated from the Boston Latin School in 1882. After three years of study at the Massachusetts Institute of Technology, five years under private architects, and three years at the Ecole des Beaux-Arts in Paris, he established himself as a practicing architect in New York City. Among the earlier notable buildings which he planned were the Montclair (N. J.) Public Library, Majestic Theatre, Boston, and Electric Tower at the Pan-American Exposition in Buffalo. In 1901 he was appointed supervising architect and professor of architecture at the University of California. The majority of the buildings and monuments on the Berkeley campus were designed by him, outstanding among which are the Hearst Memorial Mining Building, Greek Theatre, California Hall, Doe Library, Sather Gate, and Jane K. Sather Campanile. From 1913 to 1927 he was director of the university's school of architecture.

In 1923 he established the firm of John Galen Howard & Associates, who were the architects of the First Congregational Church in Oakland and the Le Conte School in San Francisco. He was an advisory member of the San Francisco reconstruction committee after the fire of 1906, one of the architects-in-chief for the Alaska-Yukon-Pacific Exposition held in Seattle, Wash., in 1909, and a member of the board of consulting architects of San Francisco from 1912 to 1915.

**HOWARD, DR. LESLIE O., ENTOMOLOGIST.** See ENTOMOLOGY, ECONOMIC.

**HOWARD UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Washington, D. C., incorporated by Act of Congress Mar. 2, 1867, "for the education of youth in liberal arts and sciences," open to students without regard to race but principally for the education of Negroes. The registration for the summer school and autumn quarter of 1931 totaled 2107. The faculty numbered 274. The total endowment amounted to \$844,337. The total appropriation of the U. S. government for 1931-32 was \$1,560,000. The university also received during 1930-31 \$73,682 from private sources. The library contained 56,038 volumes. President, Mordecai Wyatt Johnson, S.T.M., D.D.

**HUNGARY.** A kingdom of central Europe, formerly constituting, with Austria, the Dual Monarchy of Austria-Hungary. Capital, Budapest. Regent in 1931, Nicholas Horthy de Nagybánya (elected Mar. 1, 1920).

**AREA AND POPULATION.** At the census of 1930 (preliminary) Hungary had an area of 35,875 square miles and a population of 8,683,740, with 42.5 per cent of the total residing in cities of more than 10,000. The 1920 census population was 7,980,143. Of the 1930 total, about 90 per cent were Hungarians (Magyars), 6.8 per cent Germans, 1.7 per cent Slovaks, and the remainder Croats, Rumanians, Ruthenians, and Serbians. Births for the period 1926 to 1930 averaged 219,292 annually and deaths, 144,251. The birth rate per 1000 of population in 1930 was 24.7 and the death rate 15.3. Emigrants in 1930 numbered 6146, of whom 4366 went to the United States. The population of the chief cities in 1930, with 1920 census figures in parentheses, was: Budapest, 1,004,681 (928,996); Szeged, 135,131 (119,109); Debrecen (Debreczen), 117,410 (103,186); Kecskemét, 79,505 (73,109); Újpest, 67,374 (56,489); Kispeszt, 64,547 (51,064); Pécs,

61,801 (47,556); and Miskolcz, 61,465 (56,982).

**EDUCATION.** At the 1920 census, 15.2 per cent of the population over six years of age were illiterate. Persons of schools age, 6 to 14 years, numbered 1,325,707 in 1930. In 1928-29, there were 1,060,412 pupils in primary schools, 72,113 in secondary schools, 59,541 in high schools, and 16,322 attending universities and other graduate schools. There are four universities, at Budapest, Szeged, Pécs, and Debrecen.

**PRODUCTION.** Hungary is a fertile agricultural country, with about 13,757,000 acres of arable land, or 60 per cent of total area, 793,000 acres of vineyards and gardens, 4,144,000 acres of permanent meadow and pasture, and 2,707,000 acres of woods and forests. The value of field crops amounted to \$289,600,000 in 1929, \$433,200,000 in 1928, and averaged \$360,900,000 for the 5-year period 1923-27. Of the 1929 total the value of wheat was \$69,900,000; corn, \$39,200,000; potatoes, \$20,500,000; and rye, \$19,600,000. Livestock in 1930 numbered 1,778,000 cattle, 2,362,000 swine, 1,464,000 sheep, 22,000 goats, and 860,000 horses. Production of the chief crops in 1930, with 1929 figures in parentheses, was: Wheat, 84,338,000 bushels (74,985,000); rye, 28,406,000 bushels (31,424,000); barley, 27,605,000 bushels (31,353,000); oats, 17,998,000 bushels (28,292,000); corn, 55,304,000 bushels (70,632,000); potatoes, 67,682,000 bushels (79,669,000); sugar beets, 1,461,000 metric tons (1,607,000); beet sugar, 234,000 metric tons (247,000). The value of 1931 crops was estimated at 15 per cent less than in 1930, which in turn was about \$88,000,000 less than in 1929.

Hungary has important mineral resources, the bauxite deposits being among the largest known. Manufactured products in 1929 were valued at \$501,438,000 (\$503,187,000 in 1928). Production of the chief mineral and manufactured products in 1930 and 1929 in metric tons was: Coal, 812,000 (826,000); lignite, 6,174,000 (7,044,000); iron ore, 157,000 (252,000); pig iron, 257,000 (308,000); steel (ingots and castings), 369,000 (513,000); cement, 310,000 (375,000); alcohol, 10,826,000 gallons (11,613,000); iron, metal, and machinery, 103,602,000 (91,966,000). Both agriculture and industry were acutely depressed in 1930 and 1931. There were 29,412 unemployed at the end of August, 1931, compared with 25,583 on January 1.

**COMMERCE.** Imports for consumption in 1930 were valued at \$145,682,000 (\$186,041,000 in 1929) and domestic exports at \$159,234,000 (\$181,641,000). The trade balance was favorable by \$13,552,000, compared with an unfavorable balance of \$4,400,000 in 1929. Exports of wheat and wheat flour accounted for \$13,300,000 of the total decline of \$22,400,000. Czechoslovakia supplied 21.7 per cent of the total imports into Hungary, followed by Germany with 21 per cent and Austria with 11.8 per cent. Austria, the principal export market, took 28.2 per cent of the total. Preliminary trade figures for 1931 were: Imports, 543,770,000 pengos; exports, 570,555,000 pengos; favorable trade balance, 26,785,000 pengos (1 pengos equalled \$0.1749).

**FINANCE.** The budget estimates for the year ended June 30, 1931, placed receipts at 1,401,000,000 pengos and expenditures at 1,398,000,000 pengos. Instead of the anticipated surplus, the year ended with a deficit of 150,000,000 pengos. In addition there was left over a floating debt of 420,000,000 to 450,000,000 pengos, including

two 1-year issues of treasury bills valued at £8,200,000, which constituted a first lien on any future long-term loan. In the 1931-32 budget, receipts were originally estimated at 879,000,000 pengos and expenditures at 878,000,000 pengos. However, a deficit of 117,500,000 pengos was forecast by the autumn of 1931, and the budget was revised, by slashing expenditures by 25,000,000 pengos and levying new taxes aggregating 108,900,000 pengos, to give an estimated surplus of 16,400,000 pengos. The League of Nations placed the foreign indebtedness in October, 1931, at 4,094,000,000 pengos (State, 1,629,000,000 pengos; other, 2,465,000,000 pengos). One pengos equals \$0.1749 at par. For further financial developments in 1931, see *History*.

**COMMUNICATIONS.** Railway lines at the beginning of 1931 extended 5390 miles, of which about 4375 miles were under government operation. The government-operated railways began the 1931-32 fiscal year with a deficit of 54,000,000 pengos. There were (1930) 37,047 miles of highway, of which 11,555 miles were macadam and 17,485 miles were unimproved earth roads. Four air lines were in operation in 1929.

**GOVERNMENT.** Technically, Hungary is a constitutional monarchy with the throne vacant. The Horthy régime, which won control of the government on Aug. 7, 1919, decided that the question of who was to be chosen monarch would be postponed until the nation was liberated from external pressure. The Legislature has two Houses, the Lower House of 245 elected members, and the Upper House consisting of the six following groups: (1) Elected representatives of the former hereditary members; (2) members elected by the county councils and municipalities; (3) heads of the various religious communities; (4) high dignitaries of the state; (5) representatives of scientific institutions and the chambers of commerce; (6) life members appointed by the head of the state. Following the elections of Dec. 20, 1926, the Lower House was constituted as follows. Party of National Unity (Bethlen party), 171; Christian Social Union, 35; Socialists, 14; other parties, 25. Count Stephen Bethlen served as Prime Minister from 1921 to Aug. 19, 1931.

### HISTORY

**THE FALL OF BETHLEN.** The major political event of 1931 in Hungary was the resignation of Premier Bethlen on August 19, after ten years of veiled dictatorship exercised in collaboration with the Regent, Admiral Horthy. The motive for his withdrawal was not clear. In the first general election held in five years his Government bloc on June 28-30 secured 193 out of the 245 seats in the Lower House, the standing of the parties being: Bethlen's party of National Unity, 155; Christian Social Union, 30; Socialists, 14; Right Opposition, 17; Bourgeois Left Opposition, 11; Agrarian Opposition, 10; Legitimists, 6. While the Bethlen bloc lost 17 seats, it still retained a safe majority.

The Premier gave ill health as the reason for his resignation, but he was generally considered a victim of the financial crisis which gripped Germany and Central Europe, and which found his Government badly weakened by the extravagance of some of his Ministers. The crisis forced Hungary to turn to France for aid. But French aid was contingent upon the cessation of the agitation for revision of the Treaty of Versailles,

with which Count Bethlen was prominently identified. In particular, the French were said to have demanded the resignation of Minister of War Gömbös, an active Italophile and Fascist sympathizer. Observers believed that Bethlen resigned when Admiral Horthy refused to dismiss the Minister of War. Nevertheless, Count Bethlen approved the new Cabinet, which included M. Gömbös.

Count Bethlen's resignation occurred four days after the announcement in Paris that a \$25,000,000 loan had been advanced to Hungary for one year by a group of French, Dutch, Swiss, Italian, and Hungarian banks, with the French taking the largest part. The loan was necessitated by the withdrawal of some \$15,000,000 of short-term credits from Hungary following the collapse of the *Credit Anstalt* in Austria in May (see *AUSTRIA* under *History*). Hungarian banks, already weakened by the depression and by Government borrowing to meet deficits, had tied up large sums in dependent industries. The National Bank of Hungary was unable to assist generally, as its gold and foreign-exchange stock of 197,000,000 pengos at the beginning of 1931 had declined to 136,000,000 pengos on June 30. The Government was forced to close all banks on July 14, 15, and 16; and from July 17 to August 17 depositors were allowed to withdraw only 10 per cent of their holdings. After July 17, all foreign-exchange transactions were controlled by the National Bank.

**THE KAROLYI MINISTRY.** The new Ministry, which assumed the task of meeting the growing financial crisis, was formed August 23 by Count Julius Karolyi, a cousin of the great Hungarian statesman, Count Stephen Tisza, and also of Count Michael Karolyi. Unable to persuade any qualified person to accept the Finance portfolio, the new Premier finally assumed the task himself. Other members of his Cabinet were: Foreign Affairs, Dr. Ludwig Walko; Interior, Franz Keresztes Fischer; Justice, Tibor Zsitvay; War, Julius Gömbös; Agriculture, Adalbert Ivady; Commerce, Adalbert Kenéz; Social Welfare, Dr. Alexander Ernsts. Five of the Ministers were holdovers from the Bethlen Cabinet. The new Premier described his policy as one of economy, increased taxation, and the balancing of the budget. The extension of good relations with Italy would be his chief care in the foreign field, he said, but this was not to prevent friendly relations with both Germany and France. Upon Count Bethlen's insistence, Count Karolyi made no change in the electoral system, thus blasting hopes of the Left Opposition for the adoption of the secret ballot and of universal suffrage.

The Premier tackled the financial problem immediately by appointing a committee of 33 to work out fiscal reforms, vesting it with legislative authority upon adjournment of Parliament August 28. In August and September, the committee put into effect the financial economies and increased taxation described under *Finance*. On September 7, the Government appealed to the League of Nations for aid, and a League commission of seven members arrived in Budapest early in October to study the situation. Alarm as to the country's solvency had been further aroused by the discovery, confirmed by Count Karolyi on November 27, that the Bethlen Cabinet during its last term had expended about \$13,500,000 in excess of budget estimates and without Parliamentary sanction. On October 27,

the Finance Committee of the League of Nations appointed Royall C. Tyler, an American, as its permanent representative in Budapest. The report of the League commission, made public during October, declared that Hungary would be able to continue foreign debt payments by reducing her budget and her imports to a minimum. It did not contain the expected recommendation for a foreign loan.

With the continuation of the depletion of foreign exchange holdings, the Government on November 19 introduced a bill imposing drastic penalties for failure to place foreign currency debts due from abroad at the disposal of the Hungarian National Bank within 15 days. These restrictions led to retaliatory measures by the Yugoslav and other neighboring Governments. The Bank for International Settlement on December 16 extended the \$20,000,000 loan advanced by a consortium of ten Governments to Hungary and which was due December 18. On December 22, the Government declared a partial moratorium on foreign debt payments, explaining that the trade balance was insufficient to provide a surplus of foreign currencies acceptable to all Hungary's creditors. By the terms of the moratorium, the Government was to apply the foreign currency at its disposal to the service of the 1924 reconstruction loan, amounting annually to \$5,603,000. The interest and amortization on other loans was to be paid in a specified order of precedence, only as foreign currency became available. The moratorium affected about \$179,000,000 of American investments in Hungary, from which the income during 1932 had been estimated at between \$12,000,000 and \$14,000,000.

**POLITICAL UNREST.** Meanwhile the Government was being assailed by both the radical and ultra-reactionary elements in Hungary. The confiscation of the September 11 issue of the Socialist journal *Nepszava* and the suspension of its street sales for a month led to a great Socialist demonstration in Budapest, which was dispersed by repeated charges of the mounted police. Eleven foreign Communists were arrested in connection with the bombing of a train at Torbagy September 13, in which 14 persons were killed. On September 19, the Government widely extended the application of martial law, formerly restricted to bombing, incendiarism, and rioting. All public meetings and processions of a political nature were prohibited until further notice. A reactionary plot to seize the Government and establish a Fascist dictatorship was frustrated November 27 by the arrest of 40 or more conspirators.

**FOREIGN RELATIONS.** The temporary collapse of the revisionist agitation under French financial pressure was the outstanding development in the foreign sphere. On October 11, Ismet Pasha, Premier of Turkey, and Tewfik Rushdi Bey, Foreign Minister, arrived in Budapest for a series of conferences regarding the possibility of closer commercial relations between the two countries. Early in the year, Hungary entered upon tariff wars with Czechoslovakia and Rumania, seeking new markets in Austria for those in the Little Entente states. See FRANCE, GERMANY, AUSTRIA, and CZECHOSLOVAKIA under *History*. Consult Ferenc Eckhart, *A Short History of the Hungarian People* (London, 1931).

**HURRICANES; TYPHOONS.** See DOMINICAN REPUBLIC; JAPAN under *History*.

**HUSSEIN IBN ALI**, hōōs-sān' Ib'n ā'lē. First King of the Hejaz, died in Amman, Trans-Jordan, June 4, 1931. Born in Constantinople (now Istanbul) in 1856, he became Grand Sherif of Mecca following the coup d'état of the "Young Turks" in 1908. On the outbreak of the World War he at first coöperated with the Turks but subsequently, on the advice of his son Feisal and through the influence of Col. T. E. Lawrence, took the side of the Allies, his troops rendering efficient service to the British in Arabia. Following the proclamation of Arabian independence in June, 1916, he was made King of the Hejaz and the next year took the title of King of Arabia.

With the assistance of Great Britain he established and maintained a well-organized government in Arabia, but the Allies confined the extent of their recognition only to the kingdom of the Hejaz. He later refused to sign both the Versailles Treaty and a treaty with Great Britain in 1924, because the settlement of the Pan-Arab claims in Palestine and Syria and the status of Jerusalem were not satisfactory to him. On Mar. 7, 1924, at the request of delegations from Iraq (Mesopotamia), of which his son, Feisal, was king, Trans-Jordan, and the Hejaz, he accepted the Caliphate or leadership of the Mohammedan world, laying claim to the title by virtue of his direct descent from Mohammed and his control of the two holy cities, Mecca and Medina. The Arabs of central Arabia, however, looked askance at a dynasty which they believed was being used as a pawn by British imperialism, and the resulting invasion of the Wahabis under Abdul-Aziz Ibn Saud, King of the Nejd, caused Hussein's abdication, both as Caliph and King, on October 3 in favor of his son, Ali Ibn Hussein. The Hejaz forces under Ali were finally defeated in December, 1925, when Ibn Saud succeeded to the throne. Hussein lived in exile in Cyprus until 1930, when he was permitted to retire to Amman, the capital of his son, Abdullah, King of Trans-Jordan.

**ICELAND.** An island state united with Denmark by the Act of Union of Nov. 30, 1918. Situated to the northwest of Great Britain (to which it is next in size of European islands), and with its northern coast touching the Arctic Circle, Iceland has an area of 39,709 square miles, and a population of 106,350 (1929). The capital, Reykjavik, had a population of 26,428 in 1929. In 1927-28, there were 229 elementary schools, with 8609 pupils; also continuation schools and a university at Reykjavik.

Fisheries are the chief support of the population, as only about one-fourth of 1 per cent of the land area is suitable for cultivation. Sheep and other livestock are raised. Hay, potatoes, and turnips are the chief farm products. The cod fisheries in 1930 reported a record catch of 70,000 metric tons (66,000 tons in 1929), but prices were

lower. Foreign trade values declined sharply in 1930, exports falling to 57,000,000 crowns (1 crown equals about \$0.22) from 70,000,000 crowns in 1929. Imports declined slightly to 66,000,000 crowns from 69,500,000 crowns in 1929. Fish products accounted for 52,300,000 crowns of the total 1930 exports. State revenues for 1930 were 17,250,000 crowns and expenditures were 17,170,000 crowns; in 1925 expenditures were only 11,000,000 crowns. The National debt on Jan. 1, 1931, amounted to 40,200,000 crowns (about \$8,840,000).

Executive power is vested in the King of Denmark who acts through a responsible ministry; and legislative power in the King and Althing or Parliament, which consists of 42 members, of whom six are elected for eight years by proportional representation for the whole country, and 36 for four years by universal suffrage. The Althing is divided into two Houses, of which the upper has 14 members and the lower, 28. The right to vote is possessed by both men and women over the age of 25. King in 1931, Christian X; President of the Council and Minister of Trade and Communications, Tryggvi Thorhallsson.

**HISTORY.** The agitation for severance of the connection with Denmark and for the establishment of a republic gained ground during 1931, partly as a result of the unexpected dissolution of the Althing April 15 by King Christian, acting upon the request of Premier Thorhallsson. The latter's Agrarian government was facing defeat in the Althing, due to the withdrawal of Socialist support. New elections were held June 12. In August, the Icelandic government entered the dispute between Denmark and Greenland over the northwestern coast of Greenland (see *GREENLAND* under *History*).

**IDAHO. POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 445,032; in 1920, 431,866. The chief elements of the population as grouped by origin were: native whites, 407,108 (1930), 386,705 (1920); foreign-born whites, 30,454 (1930), 38,963 (1920, including Mexicans); Mexicans, 1278 (1930 when they were separately classed); Indians, 3638 (1930); Japanese, 1421 (1930); Negroes, 668 (1930); Chinese, 335 (1930). The rural population of 1930, numbering 315,525, greatly exceeded the urban population, living in communities of 2500 or more, which numbered 129,507. Out of the whole population, 162,223 in 1930 reported gainful occupations. Of these, 65,561 worked in agriculture, whether as farmers (40,199), managers, foremen or laborers. Manufacturing and mechanical industries included 21,420, among whom were 5125 in the building industry. Those engaged in trade numbered 18,947; in transportation, 14,034; in professional service, 12,127; in domestic and personal service, 10,132. The capital, Boise, had 5931 inhabitants (1930); 5429 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production and value of the principal crops in 1931 and 1930.

**MINERAL PRODUCTION.** Lead, zinc, silver, gold and copper, in the order of the value of the yearly product, contributed in 1930 all but a small residue of the State's mineral production. There were produced, in 1930, 268,115,963 pounds of lead, as against 297,389,488 in 1929. As the mine price was 20 per cent lower on the average for 1930, the latter year's total by value was notably reduced. Of zinc were produced 75,298,172 pounds

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ..	1931	1,052,000	2,151,000*	\$17,688,000
	1930	1,033,000	2,489,000*	20,908,000
Wheat .....	1931	1,059,000	19,641,000	9,064,000
	1930	1,245,000	80,691,000	15,980,000
Potatoes ...	1931	110,000	24,200,000	7,280,000

\* Tons. \* 100-lb. bags.

in 1930 and 91,350,807 in 1929. The silver production was maintained as to quantity, being 9,420,639 fine ounces for 1930, as against 9,414,303 for 1929; but it was severely reduced as to value by a fall in the average price of silver to 38.5 cents for 1930, from 53.3 cents for 1929. The quantity of gold mined increased to 21,445 fine ounces for 1930, from 20,247 for 1929; total by value rose to about \$443,300 for 1930, from \$418,545 for 1929. The copper production dropped to 3,111,555 pounds for 1930, from 5,131,438 for 1929. The total value of the product of these five metals was \$21,494,867 for 1930; for 1929, \$31,104,246. No other mineral product was listed as attaining the value of \$500,000 for 1929. The total value of the State's mineral products was \$32,142,685 for 1929; for 1928, \$28,589,221.

The value of the gold, silver, copper, lead, and zinc produced from ore mined in Idaho in 1931, according to estimates of the U. S. Bureau of Mines, was about \$11,798,400, the smallest since detailed records were started in 1903; the total value of the five metals in 1930 was \$21,494,867. According to published reports, mining companies paid dividends amounting to approximately \$1,700,000, compared with \$3,700,000 paid in 1930.

The mine output of gold in 1931 was valued at about \$373,000 as compared with \$443,309 in 1930. The output of silver decreased from 9,420,639 ounces in 1930 to about 7,325,000 ounces in 1931. The value decreased from \$3,626,946 to about \$2,124,300, chiefly on account of an abnormal decrease in the average price of silver. Despite this decrease the State was again the second largest producer of silver in the United States, following Utah. Lead output fell from 268,115,963 pounds in 1930 to about 200,880,000 pounds in 1931, and the value from \$13,405,798 to about \$7,633,500, as a result of general curtailment of production caused by a sharp decline in the average prices of lead and zinc. The State, however, maintained its position as the second largest producer of lead in the United States, after Missouri. The zinc recovered from ore and concentrates decreased from 75,298,172 pounds in 1930 to about 41,000,000 pounds in 1931.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering 1929 represented the number of the State's manufacturing establishments as 564. These employed 15,656 wage earners, or 15.9 per cent more than had been employed in 1927. Wages paid these earners in 1929 totaled \$22,468,035. The materials, fuel and electricity (purchased) for manufacturing cost

\$52,131,077. The manufactured product was valued at \$96,082,764, which exceeded the total for 1927 by 12.1 per cent. The value added by manufacture was estimated at \$44,551,687.

**FINANCE.** State expenditures in the year ended Sept. 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$5,502,697 (of which \$5222 was for local education); for interest on debt, \$343,478; for permanent improvements, \$3,675,944; total, \$9,522,119 (of which \$4,760,923 was for highways, \$1,597,558 being for maintenance and \$3,163,305 for construction). Revenues were \$9,229,758. Of these, property and special taxes formed 23.6 per cent; departmental earnings and remuneration to the State for its officers' services, 6.9; sales of licenses, 36.9 (including taxes of \$2,532,725 on sales of gasoline). The State's funded debt outstanding on Sept. 30, 1930, was \$4,910,000. Net of sinking-fund assets, it was \$3,878,721. On property bearing an assessed valuation of \$482,790,645 were levied in the year State taxes of \$2,922,883.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2965.21. Additions to this total in the course of the year preceding had totaled 26.27 miles, and only 0.4 mile had been abandoned. No building of new line or trackage in 1931 was reported.

**EDUCATION.** As reported for 1930, the number of the State's inhabitants of school age was 141,273. There were enrolled in the public schools 124,947 pupils. Of these, 93,775 were in common schools or elementary grades, and 27,172 were in high schools. The year's expenditures for public-school education totaled \$11,650,814.

**LEGISLATION.** The twenty-first Legislature held a regular session, which ended on March 5. This was followed by a special session, called by Governor Ross, and extending from March 6 to 13. The object of the special session was to complete necessary tax legislation. In accordance with the Governor's recommendation, the primary system of the State was revised. Each primary candidate, under the new system, was required to pay a fee of \$2 for the first \$300 in salary paid by the office for which he ran and an additional 1 per cent pro rata of further salary paid by such office. The law further regulated nominating petitions and limited candidates to specified items of personal expenditure in their campaigns.

A law providing easier divorce procedure was passed over the Governor's veto. It reduced the period of residence preliminary to divorce proceedings to 90 days. An income-tax measure was voted, imposing a graduated tax on both corporations and individuals, at rates as follows: on the first \$2000, 1 per cent; on the second \$2000, 2 per cent; on the third \$2000, 3 per cent; on all over \$6000, 4 per cent. Personal exemptions were allowed to the amounts of \$1000 of income for single persons, \$2500 for married persons and \$300 for each of the taxpayer's dependents. Electric power was subjected to a State duty levied by the kilowatt-hour. Provision was made for a system of old-age pensions. See OLD-AGE PENSIONS.

**POLITICAL AND OTHER EVENTS.** Martial law was proclaimed in three counties in the southern part of the State late in August. This proceeding was the result of an outbreak of suspected

incendiarism in the forests. Natural forest fires in periods of summer drought had brought employment to many of the population. On this occasion it was alleged that persons in Gem, Boise, and Valley counties had been starting fires in the forests in order to procure employment as fire fighters for themselves or their friends. To settle a boundary dispute between Idaho and Wyoming, President Hoover, in accordance with an act of Congress, appointed Robert Follansbee of the Geological Survey as a Federal representative to take part in negotiations of the two States.

**OFFICERS.** Governor, C. Ben Ross; Lieutenant-Governor, G. P. Mix; Secretary of State, Fred E. Lukens; Auditor, E. G. Gallet; State Treasurer, George J. Barrett; Attorney-General, Fred J. Babcock; Superintendent of Public Instruction, Myrtle R. Davis; Inspector of Mines, Stewart Campbell.

**JUDICIARY.** Supreme Court: Justices, T. Bailey Lee, Bertram S. Varian, W. F. McNaughton, Raymond L. Givens, Alfred Budge.

**IDAHO, UNIVERSITY OF.** A coeducational State institution of higher learning in Moscow, Idaho, founded in 1889, with a southern branch in Pocatello, established by Act of the State Legislature which converted the Idaho Technical Institute into a division of the State university; the change became effective in the autumn of 1927. The total enrollment at Moscow in the autumn of 1931 was 2113. Total enrollment at Pocatello was 700. The enrollment for the 1931 summer session was 446. The faculty numbered approximately 170. The physical plant at the university was valued at approximately \$2,140,000, and that at the southern branch at approximately \$765,000, making a total of about \$2,900,000. The productive funds of the university amounted to \$2,049,761, and the income for 1930-31 was approximately \$1,422,749. The library contained 92,000 volumes. The outstanding event of the year was the installation of the William Edgar Borah Foundation for the Outlawry of War, which was featured by addresses by Senator Borah and Dr. Manley O. Hudson, Bemis professor of international law at Harvard University. President, Mervin Gordon Neale, Ph.D.

**ILLINOIS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 7,630,654; in 1920, 6,485,280. As grouped with regard to origin, its chief elements were: native white, 6,048,203 (1930), 5,092,382 (1920); foreign-born white, 1,218,158 (1930), 1,200,951 (1920); Negro, 328,972 (1930), 182,274 (1920); Mexicans, 28,906 (1930), when separately grouped, having been grouped among the foreign-born whites in 1920; Chinese, 3192 (1930); Filipinos, 2011 (1930). The urban population (residing in communities of 2500 or more), numbering 5,635,727 in 1930, greatly outnumbered the rural population, which was 1,994,927.

Those of the population reporting gainful occupations in 1930 numbered 3,184,875. Of these the greatest group, that in the manufacturing and mechanical industries, contained 1,098,069, of whom 193,893 were in the building industry; those in trade were 602,896; in the transportation industry, 344,221; in agriculture, 352,524; in professional service, 233,507; in domestic and personal service, 317,851; engaged in the extraction of minerals (chiefly coal mining), 66,910.

The chief city, Chicago, had 3,376,438 inhabit-

ants in 1930; 2,701,705 in 1920. Peoria, with 104,909 (1930), 76,121 (1920), was the only other city of over 100,000. Springfield, the capital, had 71,864 (1930); 59,183 (1920).

**AGRICULTURE.** The following table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn ....	1931	9,185,000	839,845,000	\$101,954,000
	1930	8,832,000	229,632,000	142,372,000
Hay, tame .	1931	2,384,000	2,678,000*	20,582,000
	1930	2,485,000	2,453,000*	32,134,000
Oats ....	1931	4,182,000	142,188,000	28,438,000
	1930	4,267,000	142,944,000	41,454,000
Wheat ...	1931	1,935,000	45,076,000	20,285,000
	1930	1,921,000	35,086,000	24,102,000
Potatoes .	1931	55,000	4,675,000	3,039,000
	1930	50,000	3,900,000	4,875,000

\* Tons.

**MINERAL PRODUCTION.** The State's important coal industry, supplying the greater part of its yearly total value of mineral products, was depressed during much of 1930. In consequence there were mined only 53,731,230 short tons of coal, as against 60,657,641 in 1929. The value of coal mined was, for 1930, \$93,484,000, and \$113,453,000 for 1929. Production of coke declined to 3,576,577 short tons, all from by-product ovens, for 1930, from 4,204,116 for 1929; in value, to \$21,379,784 for 1930, from \$26,036,197 for 1929. Much less pig iron was made, the shipments from blast furnaces falling to 3,050,743 long tons for 1930, from 4,316,096 for 1929; in value, to \$54,290,144 for 1930, from \$79,672,295 for 1929. The total value of the mineral production of 1930 was \$182,791,131; that of 1928 attained \$188,098,866.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 represented the number of the State's manufacturing establishments as 15,327, or about 4 per cent more than in 1927. Wage earners employed in 1929 numbered 687,917, or 10.3 per cent more than in 1927. The manufacturing wages paid in 1929 amounted to \$1,038,832,796, or 13.9 per cent more than had been paid in 1927. Materials for manufacture cost, in 1929, \$3,235,079,472; fuel and purchased electricity, \$166,515,890. The manufactured product was valued at \$6,232,438,498, which exceeded the corresponding total for 1927 by 15.7 per cent. Value added by manufacture was estimated for 1929 to total \$2,830,843,046. Chicago furnished the greater part of all these totals for 1929. Its 10,200 manufacturing establishments employed 404,072 wage earners, to whom was paid in wages the total of \$644,704,472, and its manufactured product totaled \$3,884,674,736.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$45,440,410 (of which \$3,759,914 was for local education); for interest on debt, \$8,146,777; for permanent improvements, \$40,594,891; total, \$94,205,318 (of which \$33,537,810 was for highways, \$3,562,930 being for maintenance and \$29,974,880 for construction). Revenues were \$90,179,249. Of these, property and special taxes formed 36.5 per cent; departmental earnings and remuneration to the State for officers' services, 4.0; sale of licenses, 54.4 (including gasoline sale taxes amounting to \$19,290,593). The State's

funded debt outstanding on June 30, 1930, was \$202,343,320. Of this amount, \$155,372,000 was for highways and waterways. Net of sinking-fund assets, debt was \$201,784,825. On a property valuation of \$8,332,765,328 were levied in the year taxes of \$32,497,784.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 12,499.60. This was slightly less than a year before, for, while additions of 32.09 miles of line had been made in the year, 43.33 miles of line had been abandoned. Reported additional construction in 1931 was limited to 2.58 miles of first track.

**EDUCATION.** For the academic year ended with June, 1930, the number of persons of school age in the State was reported as 2,039,310; those of ages from 6 to 21 were included. There were enrolled in the public schools 1,395,907 pupils. Of these, 1,094,788 were in common schools or elementary grades; in high schools, 301,119. The year's expenditures for public-school education were: current, \$123,582,993; capital outlay, \$26,411,745. Salaries of the teachers averaged \$1681 for the year. In spite of the State's fiscal difficulties, the legislative session of 1931 rejected efforts to reduce the State's grants for local education and, on the contrary, increased the appropriation for the distributive school fund by \$500,000.

**CHARITIES AND CORRECTIONS.** The central administrative authority for the care and custody of persons rested in 1931 in the Department of Public Welfare, as created by the Civil Administrative Code of 1917. It had as its head a director (Rodney H. Brandon); under him were a superintendent of charities, administering charitable institutions; a superintendent of prisons, with like authority over the penal institutions; and a supervisor of paroles, an alienist, a criminologist and other subordinates. A division of child welfare dealt with dependent children.

With populations of November 1, some of the State institutions under the direction of the Department follow: mental hospitals at Elgin, Chicago, Kankakee, Manteno, Peoria, Jacksonville, East Moline, Alton, Anna and Chester, 23,280; penitentiaries at Joliet and Menard, boys' reformatory at Pontiac, women's prison at Joliet, State farm (misdeemeanants) at Vandalia, and women's reformatory at Dwight, 10,322; institutions for the feeble-minded at Lincoln and Dixon, 5938; Illinois School for the Deaf, Jacksonville, 552; Illinois School for the Blind, Jacksonville, 238. The Department had under parole, on June 30, 4560 released from penal institutions and correctional schools.

**LEGISLATION.** The Legislative session of 1931, following the direction given by the advisory popular referendum on prohibition held in 1930, passed an act to repeal the State's system of prohibition enforcement and the law granting wide power of search and seizure. Governor Emmerson vetoed the repeal measure, which failed to be enacted over his veto. A State income tax measure, favored by the Downstate element, passed the Senate but was defeated in the House, chiefly by the vote of the Chicago contingent, who regarded it as designed to put on the city a greater part of the fiscal burden justly assignable to the rest of the State.

The antagonism between the Chicago and the Downstate elements was responsible also for a long and fruitless struggle over the proposal

to reapportion the State's Congress districts. An act was finally passed granting Chicago four additional districts. As Chicago taxpayers had widely refrained from paying taxes on the new protested assessments, and the city had accordingly failed by about \$16,000,000 of supplying the revenue expected of it by the State, an act was passed to legalize the State's sale of tax-anticipation warrants. The sale of machine guns to others than peace and military officers was rendered illegal.

Legislation reallotting proceeds of the State tax on gasoline and assigning the maintenance of State-constructed streets in cities was enacted, despite city opposition. The percentage of the total vote that a group must attain to rank under the law as a political party was raised to 5, from 2.

*Special Session.* In November a special session took under consideration measures for putting in order the tax system of the State and of Chicago. Chicago real-estate interests worked out a plan for the city's needs. In part, this plan included the issue of 20-year bonds with which to obtain the receipts that the deferred tax of 1930 was not expected to bring in. The intention was thus to fund the tax and to spread out its burden over a series of years to come.

**POLITICAL AND OTHER EVENTS.** The continued delay in the collection of taxes in Chicago made trouble during the year not only for the government of the city but for that of the State. Governor Emmerson at the outset of July named a committee of business, political, and civic leaders to seek a practical solution of revenue problems for the State as a whole. In spite of extensive measures for the relief of the unemployed, there was much destitution and dissatisfaction, which Communist organizers sought to enlist for their purposes, notably in a "hunger march" from Chicago to Springfield in June.

Discontent in State penal institutions broke out in rioting at the old Joliet penitentiary on March 14, at the new penitentiary, four miles away, on the 18th, and on May 24 at the Vandalia prison farm. At the new penitentiary the rioters set fire to buildings, causing a loss of \$500,000, and at the prison farm they set fire to the dormitories. The deepened Illinois River was opened for navigation as far as Peoria.

The efforts to put an end to organized crime and illicit traffic in Chicago and related communities made headway. Leo V. Brothers, a resident of St. Louis, was tried in Chicago for the murder of Alfred J. Lingle, Chicago *Tribune* reporter; he was convicted and sentenced to 14 years in the penitentiary. The conspiracy of others with this defendant to effect the murder, if such conspiracy existed, was not conclusively established. Alphonse Capone, the most conspicuous of the "public enemies" against whom public opinion had been stirred up, was prosecuted in Chicago before a Federal Judge. He was sentenced in February to a prison term of six months for contempt of court. Later the Federal authorities sought indictments against him on a number of counts of infraction of the Jones law. The Grand Jury, however, declined on September 10 to bring the desired indictments. A special Grand Jury made extended inquiries during the summer into the money transactions of members of the police force. Capone received heavy sentences for Federal income tax law violations in October, and it was reported

on November 1 that of the original list of "public enemies," 41 were in prison, dead or awaiting trial; six others were fugitives sought on felony charges.

The movement for civic reform in Chicago won a success in the mayoral election of April 7, Anton J. Cermak, Democratic candidate, favored by the reform group against Mayor William Hale Thompson, who ran for reelection, was elected by a plurality (unofficial) of 191,916. Cermak, a native of Bohemia (Czechoslovakia) and a self-made business man, declared himself for political and financial reforms. The election gave him a majority in the Board of Aldermen.

The financial condition of the city was complicated by what developed into a so-called taxpayers' strike. The quadrennial tax assessment for Cook County made in 1927 had been contested and declared illegal. Thereafter, 18 months passed before the making of a reassessment. In consequence no taxes were paid in 1929. The taxes that should have been paid in 1928 were made to come due on June 10, 1930, to a total of \$219,000,000. But adverse times interfered with payments in 1930, and nearly a year later, some \$50,000,000 of the 1928 levy remained unpaid, despite the sale of about 29,000 parcels of property for delinquent payments and the offering for sale of some 59,000 others, out of a total of 332,000 parcels. The deferred taxes of 1929, in turn, became payable on May 15, 1931, and thereafter were delinquent. The levy totaled \$274,000,000, of which about 60 per cent became delinquent. Many of such payments as were made were tendered under protest. Combined property-owners, alleging discrimination and confiscatory rates, brought suit for injunction to delay tax sales. Nevertheless the County Treasurer listed for tax sale, early in September, property to an estimated value of some \$3,000,000,000, as delinquent on taxes totaling \$69,229,943, due as of 1929.

Lacking adequate revenue for its expenses, Chicago was able until early in 1931 to continue the system adopted in 1930, of raising money among large banking institutions upon its tax-anticipation warrants. The limit of such accommodation was reached in June. Cook County at that time went into temporary default on principal and interest payments, on certain of its obligations, to the total of \$1,868,000. In July the city had resort to the issue of script certificates for the payment of arrears to teachers and others.

The Federal Treasury notified Cook County on November 30 that because of its defaults of June 1 its bonds had been stricken from the list of investments for postal savings. The taxing bodies of the Chicago area had nearly \$15,000,000 of maturing obligations to meet in December and on January 1. The Legislature in special session, as the year drew toward an end, had before it numerous plans of uncertain excellence to mend the finances of the State, impaired by the situation in Chicago, and at the same time to relieve Chicago's taxpayers. Difficulties were augmented by a court decision of December 31. County Judge E. K. Jarecki, in a suit brought by taxpayers, declared the Cook County tax levies of 1928 and 1929 invalid because "personalty aggregating approximately \$15,000,000,000 had been omitted from taxation." The decision tended to affect payments on the levy of 1930, which fell

due on the following day. There were at the end of the year, according to press report, \$163,900,000 of overdue and unpaid taxes, not counting some \$280,000,000 of tax bills about to mature.

Unusual banking conditions helped bring about in June the success of preliminaries for the consolidation of the Central Trust Company of Illinois and the National Bank of the Republic, under the name of the Central Republic Bank and Trust Company, with combined resources of some \$350,000,000. About the same time was announced the combination of the First National Bank with the Foreman-State National Bank and its affiliates.

Such criminal activities as bombings and gang terrorism persisted during the summer despite numerous raids of the police on places of illicit resort. Under pressure for more decisive action Mayor Cermak, on October 1, appointed Captain James P. Allman to be Commissioner of Police, with orders to suppress vice and gambling.

OFFICERS. Governor, Louis L. Emmerson; Lieutenant-Governor, Fred. E. Sterling; Secretary of State, William J. Stratton; Treasurer, Edward J. Barrett; Auditor of Public Accounts, Oscar Nelson; Attorney-General, Oscar E. Carlson; Supt., of Public Instruction, Francis G. Blair.

JUDICIARY. Supreme Court: Chief Justice, Clyde E. Stone; Associate Justices, Norman L. Jones, Oscar E. Heard, Frederic R. de Young, Warren W. Duncan, Warren H. Orr.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher learning in Urbana-Champaign, Ill., founded in 1867. The enrollment in the autumn of 1931 was 12,152, of whom 9159 were men and 2993 were women. The summer-session enrollment was 3088, of whom 1906 were men and 1182 were women. The number of persons on the teaching staff above the rank of assistant was 808, in the grade of assistant or lower there were 426, and the administrative officers totaled 25. The income for the year 1930-31 was \$9,303,838, of which \$7,079,530 was from the State. The productive funds from Federal endowment totaled \$649,013 and from private gifts, \$350,591. During 1931 the chemistry annex, the first unit of the medical and dental laboratories (in Chicago), the woman's gymnasium, the filtration plant, the agronomy seed house, the cattle feeding plant, the ice skating rink, and power plant additions were completed. The library contained 877,884 volumes and 227,875 pamphlets. President, Harry Woodburn Chase, Ph.D., LL.D.

IMMIGRATION. The commonly expressed belief, on the part of students of immigration, that with the opening of the decade of the thirties the United States had finally abandoned its historic policy of maintaining an open door to the distressed and to the persecuted the world over, was completely substantiated when the Bureau of Immigration of the U. S. Department of Labor made public its immigration figures for the fiscal year 1930-1931. For the first time since the Civil War the annual immigration to the United States fell below 100,000. During the fiscal year 1930-1931, 97,139 immigrant aliens were admitted as compared with

241,700 in the preceding year and an immigration of more than 1,000,000 in 1914. Of the 97,139 immigrant aliens, 54,118 came in under the Immigration Act of 1924 as aliens charged to the quota of 150,000 set up by that law. In brief, only a little more than one-third of the aliens for whom provision had been made were admitted. The others were non-quota aliens, 21,139 coming from non-quota countries, principally Canada; 17,264 were husbands, wives, and unmarried children of United States citizens; and 4618 were ministers, teachers, women who had been American citizens, and other miscellaneous classes. Actually, when emigration is matched against immigration a loss in the additions made to the population was indicated, in view of the fact that 61,882 immigrant aliens departed the country in 1930-1931. One other significant tendency is worth recording and that was the increasing number of deportations taking place as a result of the more vigorous policy being pursued by the Bureau of Immigration. In the fiscal year ending June 1931, a total of 18,142 aliens were deported. The accompanying table indicates the countries of origin of the immigrant aliens admitted to the United States in the fiscal years 1924, and 1929 to 1931.

#### IMMIGRATION TO THE UNITED STATES

Countries	Immigrant aliens admitted during the fiscal year—			
	1924	1929	1930	1931
Germany .....	75,091	46,751	26,569	10,401
Great Britain ..	59,490	21,327	31,015	9,110
Ireland .....	17,111	19,921	23,445	7,305
Italy .....	56,246	18,008	22,327	18,399
Canada .....	200,690	64,440	68,502	21,687
Mexico .....	89,336	40,154	12,703	3,333
All other .....	208,932	69,077	62,139	31,904
Total .....	706,896	279,678	241,700	97,139

It will be observed that of the 97,139 immigrants admitted during the fiscal year 1930-31, 61,909 came from European countries, 21,687 came from Canada; 3333 came from Mexico. The principal nationalities contributing immigrant aliens during the fiscal year 1930-1931 were as follows: Italian, 13,399; German, 10,401; English, 9110; Irish, 10,814; Scotch, 7618; Jewish, 5692; French, 4908; and Scandinavian, 3942. Of every 100 immigrants entering the United States in 1931, 14 were Italian, 14 were German, 13 were English, 11 were Irish, 8 were Scotch, 6 were Jewish, 5 were French, and 4 were Scandinavian.

The almost complete raising of the bars against immigration of aliens, particularly from European lands, was effected as a result of the policy announced by President Hoover on Sept. 8, 1930, which was an order requiring American consuls in foreign ports to withhold visas to those aliens applying, unless they could show the possession of a very large sum of money, on the ground that they were liable to become public charges in the United States.

The tables on page 402 throw further light on the countries of origin and the racial characteristics of the new immigrants admitted into the country during the fiscal years ended June 30, 1930, and 1931.

MEXICAN IMMIGRATION. An interesting report published by a Fact Finding Committee appointed by the Governor of California threw light on the status of Mexican aliens in that State. The Committee estimated that between

1900 and 1920 approximately 200,000 Mexicans made their way into the United States by illegal means, most of whom came during the period of the World War as a result of great expansion of American agriculture and industry. During the three fiscal years in which the 3 per cent quota act of 1921 was operative, the number of Mexican immigrants coming into the United States rose from 13,246 in 1922 (5.9 per cent of the total immigration for the year) to 37,648 in 1924 (12.4 per cent of the total immigration for the year). In the next four fiscal years the immigration from Mexico rose from 32,378 in 1925 (11 per cent of the total immigration for the year) to 57,765 in 1928 (18.8 per cent of total immigration for the year). From 1928 on, Mexican immigration declined seriously, largely due to the fact that beginning with that year immigration authorities enforced more rigorous visa requirements and fixed a visa charge of \$10 per head. It is significant to note that fully 4 per cent of all alien immigrants declaring California as their intended permanent residence were Mexicans; in other words, California's alien population was being made up almost entirely of persons coming from the land south of the Rio Grande.

The Committee also pointed out that Mexican labor was an important element in the agricul-

tural life of the State and that these persons constituted the chief source of agricultural labor. The Mexicans were willing to undertake work that white labor would not or could not do and toiled under excessive heat, dust, isolation, and the like. A large majority of the farm operators of California showed their preference for Mexicans as against Japanese, Filipinos, Porto Ricans, Chinese, Negroes, and East Indians. According to the Committee, Mexicans resident in the State comprised the largest group of unskilled low paid labor and were making no serious efforts to raise their economic and social status. Said one portion of the Committee's report:

They have had little or no schooling and are unfamiliar with English. Before they came to this country they lived on a meagre diet, paying little attention to sanitation and hygiene. Their infant mortality rate is high as is also the rate for tuberculosis and other communicable diseases. They have had feudal relation toward authority, making it difficult for them to adjust themselves to American traditions. . . . Mexicans in California have had a tendency to live in colonies both in urban and in rural districts, and this retards their assimilation with the native

population. The housing facilities available to most of the Mexicans are often poor and do not conform to proper sanitation standards. Sales agreements frequently prohibit these aliens from buying properties in any but Mexican districts. The existing ground-land system in certain sections results in overcrowding and unhygienic conditions.

Certain other significant demographic and social facts were to be found in the Committee's report. For instance, it was pointed out that in 1929, births among Mexicans in California constituted 17.7 per cent of all births in the State and that in certain cities near the border such births constituted 60 per cent to 70 per cent of all births. There was one Mexican among every 10 children receiving State aid in California. In 1928, the proportion of Mexican children in the orphanages of the State was 7.8 per cent, and in Los Angeles county more than 16 per cent of all the children in institutions were Mexican.

**INDIA.** A dependency of the British Empire comprising all that part of the Indian peninsula which is directly governed by British officials or indirectly governed through the rulers of native States subject to the British Parliament. The dependency is divided into British India, or the territory subject to British law, and the Indian States, ruled by native princes. Capital, New Delhi.

**AREA AND POPULATION.** The total area, including the Indian States and Agencies which are in political relations with the Government, according to the census of 1931, was 1,819,000 square miles (1,805,332 square miles at the 1921 census), of which the British Provinces constituted 1,107,968 square miles and the Indian States 711,032 square miles. The population at the census of 1931 totaled 352,986,876, according to provisional returns. Compared with the 1921 population of 318,942,480, this represented an increase of 10.6 per cent. The British Provinces in 1931 had a population of 270,612,162 (247,003,293 in 1921) and the Native States and Agencies, 80,383,529 (71,939,187 in 1921). Of the total 1931 population, 181,921,914 were males and 171,064,962 were females. The area and population of the British Provinces and of the Native States and Agencies in 1931 are shown in the accompanying table.

Approximately 41 per cent of the total 1931 population resided in Bengal, Madras, and the United Provinces. In 1921, over 90 per cent of the population was classed as rural, only 9½ per cent living in towns of 5000 or more. The 1921 population included 115,606 persons born in Great Britain and 10,587 born in other European, American, or Australasian countries.

The population of the leading cities, according to preliminary returns of the census of Feb. 26,

1931, with comparative 1921 figures in parentheses, was: Calcutta, with suburbs, 1,383,898 (1,327,547); Calcutta proper, 1,161,410 (907,851); Bombay, 1,157,851 (1,175,914); Madras, 647,225 (526,911); Delhi, 439,736 (304,420); Lahore, 429,403 (281,781); Rangoon, 400,419 (341,962); Hyderabad, 377,006 (404,187); and Bangalore, 306,365 (237,496).

**RELIGION, ETC.** The religious division of the population in 1931 was: Hindus, 238,330,912 (216,734,586 in 1921); Moslems, 77,743,928 (68,735,233); Buddhists, not available (11,571,268 in 1921); Christians, 5,961,794 (4,754,064); Sikhs, 4,306,442 (3,238,803). The 1931 figures are preliminary. The Jains, Parsis, and Jews are minor religious sects. There were 2300 different castes, the largest, in the order named, being the Sheikh, Brahman, Chamiar, Rajput, Ahir, Burmese, Jat, and Maratha. The so-called "untouchables" comprised 30 per cent of the Hindu population. The principal languages in use are Hindu, Bengali, and Telugu. About 2,500,000 persons speak English.

**EDUCATION.** At the 1921 census, 87.4 per cent of the males and 98.1 per cent of the females over

six years of age were illiterate. Students in educational institutions in British India in 1928-29 numbered 12,165,839, including 2,137,753 females. Of this total, 9,013,591 students were in primary schools, 2,111,976 in secondary schools, and 94,257 in universities.

**PRODUCTION.** Agricultural production is the basic source of India's wealth, and supports over three-fourths of the population. Rice is the chief crop and the staple food of the masses. The cotton crop ranks second in size to that of the United States and is the leading raw material export. India is the largest cane-producing country in the world, although \$50,000,000 worth of sugar is imported annually, and it has a monopoly of the world's jute supply. The normal annual productivity of the country was estimated at \$10,000,000,000, or about 5 per cent of the world total. In 1928-29, there were 309,956,000 acres of arable land in British India and about 79,100,000 acres in the Indian States. The area and production of the chief crops for all India in the 1929-30 and 1930-31 crop seasons are shown in the accompanying table.

INDIAN CROPS: AREA AND YIELDS  
[Including Indian States]

Crop	Area (Thousands of acres)		Production *	
	1929-30	1930-31	1929-30	1930-31

Indigo . . . . .	66 <sup>d</sup>	60 <sup>d</sup>	1,613 <sup>e</sup>	1,512 <sup>e</sup>

<sup>a</sup> Not including Indian States (area only).

<sup>b</sup> Unit, long ton.

<sup>c</sup> Unit, pound.

<sup>d</sup> 89 per cent of indigo area.

<sup>e</sup> Thousands of units—bushels except as indicated.

In the British Provinces in 1929 there were 120,506,000 cattle, 30,833,000 buffaloes, 23,336,000 sheep, 38,608,000 goats, 1,728,000 horses, 1,513,000 mules and asses, and 536,000 camels.

Mineral production in 1929 was valued at £22,421,000 (£22,037,000 in 1928). In order of value, the chief mineral products were coal, petroleum, lead, manganese, gold, salt, iron ore, tin ore, silver, mica, tungsten, and chromite. Coal production in 1930 totaled 22,578,000 long tons; petroleum, about 300,000,000 United States gallons (367,000,000 gallons in 1929). Industrially, India is one of the seven leading countries of the world, the value of manufacturing output being estimated at about two-fifths that of the agricultural production. Cotton and silk weaving, shawl and carpet weaving, wood-carving and metal-working are the principal industries. In 1928-29, there were 292 cotton mills, 95 jute mills, and 17 woolen mills. The cotton mills employed 523,515 persons, consumed 1,893,269,000 pounds of cotton, and produced 803,996,000 yards of piece goods. In 1930 and 1931, domestic business was crippled to a large extent by strikes, boycotts, and internal disorders centring about the movement for Indian autonomy (see *History*).

**COMMERCE.** India ranks among the seven leading trading countries of the world. For the fiscal

year ended Mar. 31, 1931, general imports were valued at \$586,800,000 (\$878,900,000 in 1929-30) and exports of British Indian products were valued at \$784,800,000 (\$1,134,400,000 in 1929-30). Rupee values for the same periods were: Imports, 1,648,300,000 (2,408,000,000 in 1929-30); exports, 2,204,600,000 (3,018,100,000). For the calendar year 1930, the United Kingdom supplied 40.2 per cent of all imports (47.2 per cent in 1927); Japan, 9.1 per cent; the United States, 8.2; and Germany, 7. Of the total exports, 22.2 per cent went to the United Kingdom (23.7 per cent in 1927); 10.5 per cent to Japan, 9.8 per cent to the United States, and 6.7 per cent to Germany. Cotton piece goods imported from Britain in 1930 decreased nearly 600,000,000 yards from the 1929 total, or 43.4 per cent. Expressed in values this represented a decline of about £12,000,000, or 47.4 per cent.

According to preliminary 1931 (calendar year) returns, imports totaled 1,357,100,000 rupees, or 490,700,000 rupees less than in 1930, and exports 1,645,400,000 rupees, or 872,700,000 rupees less. The favorable balance of trade was 288,300,000 rupees, compared with 670,300,000 rupees in 1930.

**FINANCE.** Budget operations for the fiscal year ended Mar. 31, 1930, returned a net surplus of 26,800,000 rupees (about £201,000). The political agitation of 1930 and 1931, combined with the world-wide economic depression, seriously impaired the financial position of the Central government. In his annual budget speech on Feb. 28, 1931, Finance Minister Schuster estimated that the fiscal year ending Mar. 31, 1931, would show a deficit of £10,170,000, instead of the anticipated surplus of over £500,000. In the budget estimates for 1930-31, revenues were calculated at 1,354,811,000 rupees (about £101,636,100) and expenditures at 1,347,811,000 rupees (about £101,111,100). On the basis of existing taxation, the Finance Minister forecast a deficit of 172,400,000 rupees (about £12,930,000 at par) for 1931-32. Accordingly, military and civil expenditures were reduced by 27,300,000 rupees (about £2,048,000) and new taxation aggregating 148,200,000 rupees (about £11,115,000) was imposed. With these changes, the 1931-32 budget was expected to produce a surplus of about £232,500. By September, 1931, it became evident that the year would end with a deficit estimated at 195,000,000 rupees. The budget was again revised, effective September 30, so as to reduce the prospective 1931-32 deficit to 100,000,000 rupees and to produce an estimated surplus of 52,500,000 rupees in 1932-33. The rupee equals \$0.365 at par and the average exchange rate for 1930 was \$0.3607.

Interest-bearing obligations of the Government of India on Mar. 31, 1931, were equivalent to \$4,235,000,000 (\$3,978,000,000 on Mar. 31, 1930), and were covered by total interest-yielding assets of \$3,421,000,000, a ratio of 80.8 per cent. Also see *History*.

**COMMUNICATIONS.** Railway lines on Mar. 31, 1930, extended 41,724 miles, of which 31,218 miles were Imperial State lines and 10,506 miles belonged to the Indian States and private companies. Gross receipts of the railways for the fiscal year ended Mar. 31, 1931, were 80,300,000 rupees less than for the preceding year and 104,300,000 less than for 1928-29. Highways in British India and the Punjab extended 225,280 miles. In 1930-31, a total of 6473 vessels, of 15,810,000 net tons, entered and cleared British Indian ports with cargo in the large foreign trade.

ARMY. See MILITARY PROGRESS.

GOVERNMENT. Executive and legislative power rests with the Government-General-in-Council. For the composition of the Council and Legislature, see 1930 YEAR BOOK.

Lord Irwin was succeeded as Viceroy and Governor-General of India on Apr. 18, 1931, by the Earl of Willingdon, former Governor-General of Canada. With the fall of the British Labor government Aug. 24, 1931, Capt. Wedgwood Benn was succeeded as Secretary of State for India by Sir Samuel Hoare (Conservative). The High Commissioner for India in the United Kingdom was Sir A. C. Chatterjee.

### HISTORY

Under Mohandas Karamchand Gandhi's mystical guidance, India moved hesitantly forward during 1931 toward the goal of a coequal status within the British Commonwealth of Nations. A draft constitution envisaging unexpectedly wide powers of autonomy was the fruit of the first Round-Table Conference, ended Jan. 19, 1931. On Mar. 4, 1931, Lord Irwin and Mr. Gandhi signed a truce which terminated for the most part the welter of riots, assassinations, sabotage, strikes, and boycotts accompanying the civil disobedience campaign of the previous year. At London, in the autumn, a second Round-Table Conference undertook the task of embodying in a constitutional document India's aspirations for "dominion status." But the conference was wrecked on the rock of Indian religious animosities. Civil disobedience was renewed by the All-India National Congress and the year came to an end with India seething with disorder and unrest.

THE DRAFT CONSTITUTION. The first Round-Table Conference had convened in London, Nov. 12, 1930 (see 1930 YEAR BOOK), under a cloud of discouragement. It was boycotted by Gandhi and his associates of the All-India National Congress, who repudiated the 76 moderate leaders appointed by Lord Irwin as spokesmen for India. Yet the delegates, with surprising unanimity, held out for a large extension of self-government to India. When the two months of negotiation ended, they carried home Great Britain's offer of governmental reforms so liberal as to win the tentative acceptance of Gandhi and all but the most extreme of his adherents.

The core of the draft constitution approved by the MacDonald government was the concession of the important principle that executives of both the federal and provincial governments should be responsible to the respective native legislatures. A Central government including both British India and the hitherto autonomous Indian States was agreed upon, with the approval of the native rulers. Certain transitional safeguards were incorporated concerning British control of defense, foreign affairs, and finance. The thorny problem of the status of the minorities (Moslems, Christians, Parsis, Eurasians, and the so-called "depressed classes") under the proposed constitution proved impossible of solution in the time at the disposal of the conference and was left open.

THE IRWIN-GANDHI TRUCE. The British offer came at a time when powerful influences on both sides were eager for compromise and the reforms proposed were too far-reaching to be ignored.

Two developments greatly facilitated compromise. Immediately following the close of the Round-Table Conference, the Government of In-

dia ordered the release from prison of Gandhi and his colleagues of the Congress executive committee. About the same time, former Premier Stanley Baldwin pledged the Conservative party to support the reforms for India worked out at the conference. On March 4 Gandhi signed a formal agreement with Lord Irwin bringing to a close the non-violent campaign against British rule initiated a year earlier when he violated the government salt monopoly at Dandi.

The truce provided for the discontinuance of the civil disobedience movement in return for the withdrawal of the Government's repressive ordinances and the release from prison of Nationalists sentenced for non-violent offenses. It was agreed that a second Round-Table Conference should be held to discuss "a future scheme for constitutional government in India." Essential provisions of the new constitutions were listed as: Federation, Indian responsibilities, reservations or safeguards in the interests of India covering defense, external affairs, the position of minorities, the financial credit of India, and the discharge of obligations. The economic boycott of British goods for purely political purposes was to be discontinued. Picketing intended to discourage the use of non-Indian goods, intoxicating liquor, and drugs was to be conducted without aggressive coercion. Lord Irwin, in turn, agreed to permit villagers, in regions where salt was readily accessible, to collect and make salt, but only for domestic consumption and sale. Uncollected fines were to be remitted to Nationalist prisoners upon their release and their property forfeited but not yet sold was to be returned. Where their posts remained vacant, Indians who resigned government positions in sympathy with Gandhi's campaign were to be reinstated.

The truce became effective immediately, amid wild demonstrations for Gandhi and tributes to Lord Irwin from his Congress opponents. Gandhi, however, extended the peaceful boycott of foreign cloth and of Indian machine-made cloth in favor of homespun. Moslem-Hindu hostility continued, reaching a climax in savage riots at Cawnpore during March. According to the official report, 340 persons were killed, 948 were injured, and many Moslem mosques, residences, and shops were attacked by enraged Hindus. On March 15, the All-India Moslem League reaffirmed the conditions precedent to Moslem approval of a federal constitution for India. They demanded one-third representation in the central legislature, majorities in Bengal and Punjab, and the special weighting of representation in the other Provinces.

The Indian princes, meeting with delegates from British India at New Delhi March 16, approved federation in principle, but withheld the right to withdraw at any time. Their apprehension had been aroused by Gandhi's declaration that autocracy and democracy could not blend except on terms dictated by the latter. By 28 votes to 23, the princes elected the Nawab of Bhopal, a member of the younger group favoring federation, as their Chancellor.

At Karachi, on March 25, Gandhi won one of the major political triumphs of his eventful career. The All-Indian National Congress endorsed the Irwin-Gandhi truce and gave the Mahatma virtually a free hand to negotiate for the party at the second Round-Table Conference. The resolution extending to Gandhi the mandate of the Congress stipulated that "the Congress goal of *purna swaraj* remained intact." It instructed the delega-

tion to hold out for complete Indian control of the proposed government, including the army, external affairs, and finance, and for an impartial examination of the financial transactions of the British government in India. The delegates, however, were left free "to accept such adjustments as may be demonstrably necessary in the interests of India." Further, the term *purna swaraj* was reinterpreted to mean "partnership at will" instead of complete independence.

THE SECOND ROUND-TABLE CONFERENCE. The interlude between the two Round-Table Conferences was marked by the intensification of the Hindu-Moslem dispute concerning communal representation, despite Gandhi's efforts toward an agreement, the increasing reluctance to enter an all-Indian legislature manifested by some of the Princes, and the revival of anti-British terrorism in various parts of the country.

Both the Government and the Congress leaders charged each other with breaking the Gandhi-Irwin truce and extended negotiations ensued. Gandhi and the Congress leaders finally modified their demands (August 27), immediately following the fall of the Labor government in Great Britain. In the meantime there occurred several attempts to assassinate Government officials, renewed Hindu-Moslem clashes, and the growth of no-rent and no-tax campaigns among the peasants. Such was the state of affairs, when after much vacillation Gandhi on August 28 suddenly decided to attend the Round Table Conference. He took with him two other delegates of the All-India National Congress—Pandit Malaviya and Mrs. Sarojini Naidu.

The Round-Table Conference continued from September 14, when plenary meetings of the important Federal Structure Committee commenced, until December 1. The attendance of Mr. Gandhi and the formation of a new National Government in Great Britain, with a strong Conservative element, were new factors which influenced the deliberations. From the start the delegates of both British India and the Native States agreed that India must have a federal government, with autonomous powers both at the centre and in the Provinces. On October 31, the Federal Structure Committee presented its draft of the federal constitution, which bore striking resemblance to the Constitution of the United States, and it met with general approval. Upon Moslem insistence, it had been agreed that no action would be taken upon the constitution until the thorny problem of minority representation had been settled. This issue proved impossible of solution. On this problem, principally, the conference ended in a stalemate, although other issues involving British reservation of some measure of control over finance, defense, foreign relations, and the protection of foreign businesses, remained to be settled.

When the conference adjourned, Prime Minister MacDonald reaffirmed the British government's desire to establish an All-India federation. Shortly afterward, he announced the appointment of three Anglo-Indian committees to study, respectively, the questions of the franchise for future voters in India, the relations between federal and provincial finance, and the financial problem arising in connection with the administration of the Indian States. At the same time the Prime Minister promised the immediate organization of the Northwest Frontier Province, a predominantly Moslem district, as a "Governor's Province," and

the eventual extension to it of complete self government. He also announced that Sind would be made a separate Province, giving the Moslem majority control there. The Moslems were thus partly appeased.

The smashing victory which Mr. MacDonald won for his policy of conciliation in India in the House of Commons December 3 served to relieve somewhat Indian disappointment at the outcome of the conference. A motion of censure on the Prime Minister's Indian policy, made by Winston Churchill, was defeated by 369 votes to 43. Nevertheless, Gandhi left London December 5 expressing great disappointment at the vagueness of Mr. MacDonald's promises and describing the conference as "a complete failure." While admitting that no satisfactory solution had been found for the minorities question, he declared that this did not dispose of India's national claim, and that it "must not be allowed to block the way to a full and comprehensive scheme of responsible government." He arrived at Bombay December 28 to find India on the verge of a new struggle with the British raj.

RENEWAL OF VIOLENCE IN INDIA. The new conflict had its inception in the development of a systematic campaign of terrorism in Bengal toward the end of October. The Government responded with a repressive ordinance on October 29 and on November 30 established a virtual state of martial law. The Bengal Provincial Congress retaliated with a commercial and social boycott. By the time Gandhi reached India a District Magistrate at Comilla had been assassinated by two young women, British soldiers at Peshawar had clashed with a group of "Red Shirts," a semi-communistic organization, killing eight of them, a no-rent campaign had been declared in several Provinces, and a number of Congress leaders, including Pandit Jawaharlal Nehru and Abdul Ghaffar Kahn, leader of the Red Shirts, had been arrested. While the All-India Moslem League voted at New Delhi on December 27 to oppose terrorism and the no-rent campaign, the working committee of the All-India National Congress officially authorized the resumption of civil disobedience. Aroused by Gandhi's failure to support their demands at London, "untouchables" in Bombay attacked the Mahatma's Nationalist adherents who gathered at the pier to welcome him.

OTHER DEVELOPMENTS. The weakening confidence in the financial stability of the Government of India was indicated by a steady decline in the exchange value of the rupee, from \$0.3607 in 1930 to \$0.2536 in December, 1931. A \$50,000,000 Indian loan offered in London in May, 1931, was only 38 per cent subscribed. In order to prevent the financial condition of the Indian government from complicating the constitutional task, Prime Minister MacDonald announced on June 26 that the British government would underwrite the credit of the Government of India. The Indian Legislature was incensed by the action of the Secretary of State for India in linking the rupee to sterling, after the abandonment of the gold standard by Great Britain, without consulting Indian opinion. On September 27, the Legislature censured the Government's financial policy, by a vote of 64 to 40. The Indian government accepted the British moratorium offer in June. The net relief (normal payments to Britain minus reparation receipts) was calculated at £246,000 in 1931 and £361,000 in 1932.

See PHILOLOGY, MODERN, under INDO-IRANIAN.

**INDIANA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 3,238,503; in 1920, 2,930,390. The chief elements of the population were: native white, 2,981,002 (1930), 2,698,203 (1920); foreign-born white, 135,134 (1930), 150,868 (1920 including Mexicans); Negro, 111,982 (1930), 80,810 (1920); Mexicans, 9642 (1930); Indians, 285 (1930). The urban population (living in communities of 2500 inhabitants or over) which had slightly exceeded the rural population in 1920, rose to 1,795,892 (1930), from 1,482,855 (1920); while the rural population became distinctly a minority, diminishing to 1,442,611 (1930), from 1,447,535 (1920).

Of the 1,251,177 inhabitants reporting gainful occupation in 1930, the largest group, 440,515, were connected with the manufacturing and mechanical industries, 61,339 being in the building industry; in agriculture were 250,150, of whom 160,429 were farmers; 180,185 were in trade; 116,401 in the transportation industry; 84,419 in professional service; 98,876 in domestic and personal service; 24,034 in coal mining and other extractive mineral industries.

Indianapolis, the capital and greatest city, had 364,161 inhabitants (1930); 314,194 (1920). Evansville, 102,249 (1930), 85,264 (1920); Fort Wayne, 114,946 (1930), 86,549 (1920); Gary, 100,426 (1930), 55,378 (1920); South Bend, 104,193 (1930), 70,983 (1920).

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn . . .	1931	4,555,000	108,535,000	\$47,190,000
	1930	4,466,000	117,009,000	71,375,000
Hay, tame .	1931	1,749,000	2,017,000*	13,716,000
	1930	1,710,000	1,416,000*	20,674,000
Wheat . . .	1931	1,678,000	43,327,000	19,497,000
	1930	1,584,000	28,527,000	20,246,000
Oats . . .	1931	1,966,000	61,339,000	11,654,000
	1930	1,966,000	57,211,000	17,168,000
Potatoes . .	1931	58,000	4,930,000	2,712,000
	1930	51,000	4,539,000	5,220,000
Tobacco . . .	1931	17,400	16,060,000*	1,574,000
	1930	17,400	12,458,000*	1,184,000
Rye . . . . .	1931	126,000	1,827,000	621,000
	1930	87,000	1,088,000	598,000

\* Tons. \* Pounds.

**MINERAL PRODUCTION.** Not strictly a native industry, the production of pig iron from ores brought into the State formed the most important branch of the mineral activity of Indiana in 1930, as in other years. The blast furnaces shipped 3,195,517 long tons of pig iron in 1930, a decline of more than one-fourth from the 4,279,825 tons of 1929; in value the shipments fell to \$52,869,137, for 1930, from \$71,416,732. The quantity of coal produced declined for 1930 to 15,840,000 short tons (estimated), from 18,344,358

for the year 1929, in which year the value of coal produced was \$29,880,000. The State's by-product ovens yielded 4,984,620 short tons of coke in 1930, as against 6,455,378 in 1929; in value, \$12,160,488 in 1930 and \$41,208,876 in 1929. Indiana had an active quarrying industry, of which the production for 1929 amounted to 5,129,220 short tons and, in value, to \$22,191,883. The value of the State's mineral production was \$96,961,947 for 1929; for 1928, \$98,583,915.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the operations of 1929 gave the number of the State's manufacturing establishments as 5074. These employed 313,829 wage earners, or 11.8 per cent more than had been employed in 1927. Wages paid in 1929 totaled \$416,713,642, or 11 per cent more than for 1927. Materials for manufacture, together with fuel and purchased electricity, cost, in 1929, \$1,404,856,189, which was about 15 per cent above the corresponding figure for 1927. The manufactured product of 1929 was valued at \$2,534,716,550, and exceeded that of 1927 by 17.7 per cent. For 1929, the value added by manufacture was estimated at \$1,129,851,361.

**FINANCE.** State expenditures in the year ended Sept. 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$30,813,946 (of which \$4,709,332 was for local education); for interest on debt, \$125,016; for permanent improvements, \$20,870,085; total, \$51,809,047 (of which \$25,660,197 was for highways, \$9,085,234 being for maintenance and \$16,574,963 for construction). Revenues were \$52,632,093. The State's funded debt on Sept. 30, 1930, was \$2,654,000. Net of sinking fund assets, it was \$2,488,156. On property bearing an assessed valuation of \$5,161,009,113 were levied in the year State taxes of \$14,967,100.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 7106.54. The total had been slightly increased during the year preceding, by addition of 1.67 miles, while operation of only 0.14 mile had been given up. There were built, in 1931, 4.6 miles of additional first and 7.5 of second track.

**EDUCATION.** For the academic year 1930-31 the number of persons of school age was reported as 872,842, this number representing the total of unmarried individuals between the ages of 6 and 21 years. There were enrolled in the public schools of the State 675,352 pupils. Of these, 519,469 were in common schools or elementary grades; in high schools were 151,570. The year's expenditures for public-school education totaled \$72,387,197. Yearly salaries of teachers averaged \$1500.80 for elementary and \$1029.09 for high-school grades. Apart from the State's system of public schools, there was an enrollment, in parochial schools, of 59,676 pupils whereof 53,792 were in parochial elementary schools and 5859 in parochial high schools. Despite adverse times, the Legislature made in 1931 no reduction affecting the State appropriations for assistance to public schools and refused to alter the laws guaranteeing the teachers' conditions of tenure, retirement and pay.

**CHARITIES AND CORRECTIONS.** The non-partisan Board of State Charities, the central organization with regard to institutions of care and custody, had powers to examine into the condition and management of all such institutions.

The State maintained 20 charitable and cor-

rectional institutions. These were: Central State Hospital, Indianapolis; Logansport State Hospital, Logansport; Richmond State Hospital, Richmond; Evansville State Hospital, Evansville; Madison State Hospital, North Madison; School for Feeble-Minded Youth, Fort Wayne; Farm College for Feeble-Minded, Butlerville; Village for Epileptics, Newcastle; Soldiers' Home, Lafayette; Soldiers' and Sailors' Children's Home, Knightstown; State Sanatorium, Rockville; Indiana University Hospitals, Indianapolis; State School for the Deaf, Indianapolis; State School for the Blind, Indianapolis; State Prison, Michigan City; Reformatory, Pendleton; State Farm for Misdemeanants, Greencastle; Women's Prison; Indiana Girls' School, Indianapolis; Indiana Boys' School, Plainfield.

**LEGISLATION.** The Seventy-fourth General Assembly, in its regular session, amended the agricultural marketing act of 1925 so as to make it include benefits to agricultural production as well as marketing and to provide for the formation of cooperative societies with the broader purpose in view. An anti-lynching act was passed, providing that the Governor suspend any sheriff from whose custody lynchers had taken a prisoner, and decreeing prison sentences for those guilty of violence in lynching-mobs. For the election of Federal Representatives, the State was reapportioned by act into 12 districts, instead of 13.

A personal income tax law was passed, but Governor Leslie allowed it to die by pocket veto, as the bill was alleged to have been voted by the Senate subsequently to the constitutionally provided hour of adjournment and was therefore of doubtful validity. An emergency measure suspending penalties for the recovery of property sold for delinquent taxes and exempting taxes due in 1931 as charges on property in such sales was enacted, to run for one year only. Counties and other subdivisions were required by statute to keep their budgets for 1931 and 1932 within the 1930 amounts.

A statute was passed to eliminate the establishment of motorbus routes on the contract system. This statute was supposed also to assure to cities the right to route bus lines through their streets. But after the measure had been signed it was found that its engrossed form provided, as the lower house had sought, that final action in this field lie with the State public service commission, a feature contrary to the understanding and report of the Senate members of the conference committee. A banking statute was enacted, permitting branch banking, but only under separate charter for each branch. The law as to double liability for stockholders in banks was clarified and made to bear against those seeking to evade it through holding companies. The law against false financial statements was strengthened. Lending to a single borrower in excess of 20 per cent of a State bank's capital and surplus was prohibited, with specified exceptions.

**POLITICAL AND OTHER EVENTS.** The State act of 1929 imposing heavy fees on chain stores for licenses to do business was denied review and left in operation by the United States Supreme Court on May 18 and again in October. The Court took this course in both cases by a bare majority of five to four. The tax had been vigorously contested by chain-store interests, which sought to make the Indiana case a test and so

to set a precedent with regard to similar taxation elsewhere. The operation of the act, which had been delayed by litigation, began on June 13. Harry E. Rowbottom, U. S. Representative of the First Indiana District, was convicted in a Federal District Court on April 15 of having accepted bribes from office-seekers desiring post-office jobs. He was sentenced to a prison term of a year in Leavenworth Penitentiary and a fine of \$2000.

The 805-mile pipe line of the Panhandle Eastern Pipe Line Co., to convey natural gas from Texas, was completed to Rockville, Ind., in August. The initiation of extensive imports of natural gas from outside the State directly affected the prospects of the local utilities. The possibility of the introduction of imported natural gas into Indianapolis was particularly discussed, as that city had for 25 years been paying on the installment plan for the municipal acquisition of the Citizens' Gas Company property and stood to lose heavily by the entrance of a competitor. Suit against the "charitable trust agreement" of 1905 placing the Citizens' Gas Company under the control of the city's utility district was settled by the refusal of the U. S. Supreme Court, on May 18, to review the Seventh Circuit Court of Appeals' decision sustaining the city's demands that the company be turned over to the city.

**OFFICERS.** Governor, Harry G. Leslie; Lieutenant-Governor, Edgar D. Bush; Secretary of State, Frank Mayo, Jr.; Auditor, Floyd E. Williamson; Treasurer, William Storen; Superintendent of Public Instruction, George C. Cole.

**JUDICIARY.** Supreme Court: Judges, Julius C. Travis, David A. Myers, Clarence R. Martin, Curtis W. Roll, Walter E. Treanor.

**INDIAN ART.** See ART EXHIBITIONS.

**INDIANA UNIVERSITY.** A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1931-32 the registration aggregated 4272 students (2709 men and 1563 women). The faculty had 316 members. The endowment funds amounted to \$1,770,135, and the total income for the year, from State and private sources, was \$3,015,000. The library contained 234,000 volumes. President, William Lowe Bryan, Ph.D.

**INDIANS.** According to the annual report of the U. S. Commissioner of Indian Affairs, Charles J. Rhoads, for the fiscal year ended June 30, 1931, the total estimated and enumerated number of Indians reported by Federal agencies on Apr. 1, 1931, was 314,543. This number consisted of 225,544 Indians actually enumerated and 88,899 Indians enumerated in earlier and special censuses and in estimates based on records. The latter, excluding the population of the Five Civilized Tribes, represented an increase over the corresponding figure for 1930 of 2865, or 1.2 per cent. The Bureau of the Census, in a preliminary tabulation, reported 72,043 Indians of the Five Civilized Tribes in 1930. Of the 225,544 Indians actually enumerated, 114,778 were males, 110,753 females, and for 13 the sex was not reported.

It is significant that of the Indians enumerated 189,162, or 83.9 per cent, resided under Federal jurisdiction where enrolled, while only 4051, or 1.8 per cent, resided at another jurisdiction, and 32,331, or 14.3 per cent, resided elsewhere, that is, outside of any Federal jurisdiction. Of

the 32,447 Indians residing elsewhere on Apr. 1, 1930, 41 were living in the New England States, 208 in the Middle Atlantic, 3633 in the East North Central, 9234 in the West North Central, 437 in the South Atlantic, 93 in the East South Central, 2166 in the West South Central, 5120 in the Mountain States, and 6024 in the Pacific States, and for 5491 the residence was either not reported or unknown.

The Indian population of Oklahoma was greater than that of any other State, amounting to 93,785, or 29.8 per cent of the aggregate Indian population, if the Federal Census population of the Five Civilized Tribes be included. Arizona ranked next with 47,577, or 15.1 per cent, while only two other States, New Mexico and South Dakota, had an Indian population numbering more than 20,000. According to a tabulation of the tribes enumerated on Apr. 1, 1930, the most important numerically were the Navajo, Sioux, and Chippewa, numbering 40,862, 33,168, and 23,047, respectively.

**REORGANIZATION OF THE OFFICE OF INDIAN AFFAIRS.** In his annual report Dr. Ray Lyman Wilbur, Secretary of the Interior, reiterated the statement that solution of the Indian problem hinged on the principle of a removal of bureaucratic control in Washington. (See 1929 and 1930 YEAR BOOKS.) Commenting on this, he said:

For a hundred years we have been busy setting up islands in our civilization upon which we have maintained a native Indian population isolated in education, in industrial training, and in economic contacts from the rest of us. As a result we now have 300,000 men, women, and children who are citizens of the United States who live surrounded by white neighbors but who look to Washington, and not to themselves or their communities, for most of the normal relationships between the citizen and the State.

We have set a definite goal for the Indian Service—that it shall work itself out of a job in 25 years. We hope to accomplish in the next quarter century the breaking down of the cement which has been setting for four times that period. We hope to turn over to the States trained, alert, and active Indian citizens. Our degree of success will depend largely upon the willingness with which the States accept their part in the economic relationship. . . . Until the States develop proper protective laws for the Indians' property, Federal responsibility is inevitable, but there is no good reason for maintaining separate schools and health programmes for Indian boys and girls when the State already provides them. If the Indian ever is to succeed as a member of American society, he must have the same opportunity as do other children.

Announcement was made on Mar. 30, 1931, of the reorganization of the Office of Indian Affairs, so as to separate the activities relating to the guardianship of the Indian's person and the guardianship of his property. By this reorganization the field divisions of health, education, and agricultural extension and industry were grouped under an assistant to the Commissioner of Indian Affairs in charge of "human relations," while the divisions of forestry, irrigation, and lands were grouped under another assistant in charge of "property." The executives of these divisions continued to work toward a progressive and coöperative programme with the various States wherein the Indians were located.

**EDUCATION.** Of the 76,905 Indian children in school during the year ending June 30, 1931, some 43,652 were in public schools. The Federal Government had tuition arrangements with 2568 school districts involving 36,753 Indian children, an increase of 341 districts and 10,055 children over 1930. Three boarding schools at Mekuakey, Okla., Fort Bidwell, Calif., and Fort Mojave,

Ariz., were closed during the year, because it was felt they had ceased to fill any real need. In seven of the largest boarding schools, grades below the fourth were no longer carried. The appropriation for Indian education in 1931 was more than \$12,000,000, and represented 42 per cent of the entire Indian appropriation.

**HEALTH.** The total number of patients treated in hospitals and sanatoriums increased from 38,536 in 1930 to 39,995 in 1931, while the total number of days of hospital treatment was 866,507 in 1931 as compared with 168,160 in 1930. Tuberculosis, trachoma, and diseases of infancy and childhood were still major problems. Many of the general hospitals extended their facilities to make further provision for the care of Indians suffering from tuberculosis, and under a \$75,000 appropriation a survey of tuberculosis, trachoma, and venereal-disease conditions among the Indians was under way. The Committee on Indian Affairs of the State and Provincial Health Authorities of North America continued its coöperation toward the development of working with the various States.

**AGRICULTURAL EXTENSION AND INDUSTRY.** Organization of the division of agricultural extension and industry was effected during 1931. This division was attempting to interest the Indians in providing, through their own efforts, a more dependable and adequate food supply for themselves, a development of their industrial life, and improvement in their homes. Close coöperation is maintained with the State extension services, as well as other agencies. The work which has had the most ready response and produced more noticeable results has been the 4-H Club work. Enrolled in it were several hundred Indian boys and girls who were carrying on the same projects as the white boys and girls and competing with them.

**IRRIGATION.** One of the most important pieces of legislation passed during the year was the act of Mar. 4, 1931, canceling reimbursable irrigation charges against Indian lands for amounts expended prior to June 7, 1924, the date of the act authorizing the construction of the Coolidge Dam, on irrigation works on the Gila River Reservation in Arizona. These Indian lands were relieved of nearly \$1,400,000 that, prior to the enactment, was a lien against the lands. The construction of canals and laterals on the San Carlos project, the most recent enterprise of the Indian Irrigation Service in Arizona, were continued, the repayment contract covering it having been improved and confirmed by the Federal Court. This was a joint project, half white and half Pima Indian Reservation.

**FEDERAL APPROPRIATIONS.** For 1931 the total appropriations to the Office of Indian Affairs from the Federal Treasury aggregated \$21,723,199, including certain items carried in deficiency acts. This represented an increase of \$2,846,317 over the gross amount of \$18,876,811 available for 1930. Authorizations from tribal funds aggregated \$3,600,989. In 1931 there was transferred to the Indian Service education and medical care for the natives of Alaska, pursuant to authorization contained in the Second Deficiency Appropriation Act approved Mar. 4, 1931.

See ANTHROPOLOGY; ALASKA.

**INDO-CHINA,** also known as **FARTHER INDIA.** The southeastern peninsula of Asia including the following divisions: Burma, politically attached to British India; Siam, a self-governing

monarchy; French Indo-China, comprising Cambodia, Annam, Cochin-China, Laos, and Tongking; the Federated Malay States, a British protectorate; the Straits Settlements, a British colony; and the Non-Federated Malay States of Johore, Kedah, Kelantan, Perlis, and Trengganu, also under British protection. See the articles on BURMA, FRENCH INDO-CHINA, NON-FEDERATED MALAY STATES, SIAM, and the other principal states mentioned.

**INDY, AN'DÉ, PAUL MARIE THÉODORE VINCENT D'.** A French composer and pianist, died Dec. 2, 1931, in Paris where he was born Mar. 27, 1851. He studied under Diémer, Lavignac, and Marmontel, and after serving in the Franco-Prussian War resumed his studies under César Franck. In 1885 he became manager of the Société Nationale de Musique, of which César Franck was president, and after Franck's death in 1890 was elected president. He founded, with Charles Bordes and A. Guilmant, in 1896 the Schola Cantorum. Originally intended as a training school for liturgical music, it soon expanded into a regular conservatory, espousing the cause of ultra-modern French music. D'Indy was its director from its foundation, developing it into one of the most famous music schools in the world. In 1906 he made the first of several successful tours of the United States.

D'Indy ranked with Berlioz and Franck as the most preéminent of instrumental masters of modern France. He shared, with Berlioz, a predilection for the classical forms, filling them with individual and very modern content. His work, in the whole, bespoke an architectural conception based on rich chromatic harmony, rhythmic design, and beauty and clarity in execution. His principal works are: the operas, *Fervaal* (1897), *L'Etranger* (1903), and *La légende de saint Christophe* (1920); two symphonies, in G and B flat; the symphonic poems, *Wallenstein* (a trilogy after Schiller), *Jean Hunyadi*, *La forêt enchantée*, and *Souvenir*; two orchestral suites, *Tableaux de voyage* and *Jours d'été à la montagne*; symphonic variations, *Istar*; the dramatic legend, *Le chant de la cloche*, which in 1884 won the grand prize awarded by the city of Paris; a scene for baritone, chorus, and orchestra, *La chevauchée du Cid*; and considerable chamber music, choruses, and works for the piano and organ. He published biographies of César Franck (1906) and Beethoven (1910) and, in collaboration with A. Sérieyx, a *Cours de composition musicale* (3 vols., 1902-12).

**INGERSOLL, REAR ADMIRAL ROYAL RODNEY, U. S. N., RET.** An American naval officer, died in La Porte, Ind., Apr. 21, 1931. He was born in Niles, Mich., Dec. 4, 1847. After being graduated

from the U. S. Naval Academy in 1868, he served in various parts of the world, being in command of the *Supply* during the Spanish-American War and of the battleship *Maryland* in 1905. He was also chief of staff of the Atlantic fleet during its voyage from Hampton Roads to the Pacific in 1904, and later served on the general board of the Navy. He became rear admiral in 1908 and was retired the following year. During the World War he acted as president of the special board on naval ordnance. He wrote *Text-Book of Ordnance and Gunnery* (1887); *Exterior Ballistics* (1891); and *Elastic Strength of Guns* (1891).

**INSURANCE.** Deflation of an over-expanded business and examination of practices which had been accepted with but little question in normal times were features of the insurance business in 1931. The previous year had witnessed an almost total cessation of launching new companies, but, as the depression continued and prices of securities went lower and surpluses of companies shrank, the situation became too severe for many of them and they were obliged to seek relief. Some reduced capital in order to create surplus. The number of companies merged was much larger than usual, and almost invariably capital was reduced in the merging process. A few companies saw no prospects of success under the adverse conditions and went into voluntary liquidation. A small number were found to be insolvent and were thrown into liquidation.

The general conditions affected insurance companies of different classes in very different ways. Fire insurance companies with few exceptions suffered severely from the drop in prices of securities owned by them. The casualty and surety companies, in addition to heavy losses from depreciation, also suffered very severe insurance losses. The life insurance companies, whose securities consist mostly of bonds and preferred and guaranteed stocks, were less affected by stock market conditions, but defaults in payment of interest and principal on mortgage loans were excessive and foreclosures threw upon the hands of life insurance companies much real estate which could neither be sold without serious loss nor be made to produce a profitable income. Life insurance companies did not experience excessive mortality, but production of new business was below that of 1929 and 1930, lapses were heavy and demand for policy loans was very large.

The railroad situation affected companies of all classes as nearly all of them have large investments in railroad securities.

So seriously were the insurance companies affected by the low prices of securities that the National Convention of Insurance Commissioners, recognizing an emergency which threatened the solvency of many companies, decided to permit the use of market prices on June 30 as the values of securities listed in the companies' assets as of Dec. 31, 1931, the June 30 prices being an approximate average of those at the ends of five quarters from Sept. 30, 1930, to Sept. 30, 1931, inclusive.

Altogether the States did not treat insurance companies badly. Many harmful bills were introduced in the legislatures but few of them became laws. One or two States increased the tax on insurance premiums. The Insurance Commissioners, as a rule, assumed a very helpful attitude, permitting some necessary rate increases and aiding where possible to curb detrimental practices in which some companies engaged in efforts to keep up their premium income.

**LIFE INSURANCE.** Notwithstanding their extremely conservative investment policies, life insurance companies suffered considerable depreciation on bonds and preferred and guaranteed stocks. The low interest rates which prevailed, especially in the earlier part of the year, narrowed the range of available securities which would yield a satisfactory income. However, the companies had less than the usual amount for investment in securities because of the heavy demand for loans on policies. As investments these loans are gilt-edged, yet companies regret to make them as they induce lapse of the policies. As the result of necessary foreclosures of mortgages real estate investments of life insurance companies increased over \$100,000,000 during the year.

According to careful estimates made by the Association of Life Insurance Presidents in November, the production of new life insurance during the year amounted to \$16,400,000,000. This was 13.8 per cent less than the amount in 1930 but 9.5 per cent above the average annual production for the decade 1921-1930. At the end of the year the insurance in force was \$109,000,000,000 in addition to contracts for payment of annuities. The gain in insurance in force for the year was \$1,052,000,000. The total assets of the legal reserve life companies on December 31 were approximately \$20,200,000,000, an increase of \$1,320,389,000 during the year. Of this amount approximately \$425,000,000 was loaned to policyholders on their policies. Of the assets of the companies 38.4 per cent was invested in mortgages, 38.1 per cent in railroad securities and 15.9 per cent in policy loans and premium notes. During the year the companies paid \$950,000,000 to beneficiaries of deceased policyholders, \$800,000,000 to living policyholders for matured endowments, annuities, dividends, and disability benefits, and \$850,000,000 for surrendered policies. These payments, totaling \$2,600,000,000 exceeded those in 1930 by \$353,000,000.

The liberalizing of policy contracts in past years produced some results which necessitated changes. The period in which companies were exempt from liability in the event of suicide of the policyholder had generally been reduced to one year. Many companies raised this period to two years in view of the large number of claims

under policies from one to two years in force whose holders had committed suicide. Many of the companies, convinced that they could not safely sell the disability income provision for a premium that would make it attractive to the public, discontinued the sale of it. Others restricted it and increased the rate charged. Many companies also restricted the waiver of premium provision and charged a higher rate for it in policies to be issued in future.

**FIRE INSURANCE.** The most serious troubles of the fire insurance companies were of a financial rather than an underwriting nature. From an underwriting standpoint 1931 was not a bad year. The aggregate premium income of the companies was reduced probably 10 to 15 per cent; exact figures were not available at the end of the year. Fire losses were also reduced, the estimate for the year being more than \$11,000,000 less than for 1930. See **FIRE PROTECTION.**

The premium income from fire and theft insurance on automobiles fell off somewhat and losses were higher than in the previous year. Few companies made a profit on this class. Owing to poor crop prospects in the territory where most of the hail insurance is written, farmers bought much less of this class of cover than in the recent past. Losses were light and companies generally made a good profit on the reduced volume of business transacted. Tornado losses also were light and this class was profitable.

The difficulties of the companies tended to increase their willingness to cooperate. While they were enjoying excessive prosperity, many objected to any curbing of their activities in the interest of the entire business, but when they became companions in trouble they wanted each other's aid. The presidents and managers of many of the leading companies formed the Insurance Executives' Association. While its plans had not yet fully developed, it promised to exert a powerful influence in matters of nationwide scope.

Plans for a national organization to adjust losses for most of the companies, which were adopted in 1930, were partially put into effect during 1931 and the new organization at the end of the year was handling losses in the South and on the Pacific Coast.

**CASUALTY INSURANCE AND SURETYSHIP.** Casualty and surety companies generally experienced high loss ratios on those classes which constitute the main volume of their business. This misfortune, added to heavy losses from depreciation, necessitated many changes in capital structure.

Workmen's compensation insurance, usually an unprofitable class, fared worse than usual. Heavy underwriting losses threatened impairment of the capital of some of the companies, and the National Convention of Insurance Commissioners urged State officials controlling rates to permit material increases. Notwithstanding an increase averaging 7 per cent in the early part of the year, the emergency increases, made effective at various dates in the fall, averaged 11 per cent for the entire country, with the prospect of an additional 1 per cent if applications for advances pending in various States at the close of the year were approved. The increased loss ratios were attributed largely to inadequate rates, to malingering by injured employees, to increased liberality to claimants by industrial commissions and courts and to the

constantly mounting medical cost, which had become a serious matter. See UNEMPLOYMENT.

Automobile public liability and property damage insurance had its worst year since this class became an important one. The loss ratio was as high as in 1930 and possibly higher. This was attributed largely to the effect of "merit rating" under which a reduction of 10 per cent was allowed to owners of private passenger cars who had had no accidents within two years, to increased power and speed of popular light cars, to the larger percentage of closed cars, making driving in winter comfortable, and to the much higher judgments for personal injuries awarded by juries in many localities. The premium income from this class was about the same as in 1930, but the transfer of a large amount of collision insurance from casualty to fire companies reduced the casualty companies' premium income on their entire automobile business about 5 per cent. Higher rates were promulgated in some States during the year and on Jan. 18, 1932, new rates were to be promulgated in 14 States, generally increasing rates and also abrogating the merit rating.

Personal accident insurance companies took steps to restore business to a profitable basis. Leading companies adopted standard provisions for policies. Each may include in its policies such of these provisions as it sees fit and a bureau will fix the minimum premium to be charged for each form of policy, based upon the loss cost for each provision as shown by combined experience. The new plan was made effective not later than March, 1932, for all companies in the agreement.

The fidelity and surety companies had their worst experience in many years, due largely to the closing of over 2000 banks during 1931. Many of these banks were depositories of public funds protected by surety company bonds, and the companies were obliged to pay promptly very large sums. They were likely to make some recoveries as the banks were liquidated or reorganized. An increase in depository bond rates came too late in the year to afford much relief. So heavy were the losses that companies almost ceased writing depository bonds except for the strongest banks. The closing of the banks also tied up the cash of many contractors, and surety companies which had bonded them were obliged to advance funds to prevent their defaulting on their contracts and leaving the sureties to complete them. Losses on fidelity, court, and some other classes of bonds, and especially upon mortgage guarantees, were also heavy. The income of the surety companies was adversely affected by decrease in construction contracts except those for Government undertakings, by failures and mergers of business concerns, by reductions in personnel and by the necessary curtailment of writing bonds carrying a depository liability.

The outstanding event of the year in the field of burglary and robbery insurance was the introduction of a "storekeepers'" policy in which five different coverages are combined, suited to the needs of small merchants. It proved popular and the experience of a few months indicated that the rate charged was adequate. Underwriting results in burglary and robbery were generally unfavorable. The volume of premiums was off. Losses increased appreciably over those of the previous year.

Bank burglary and robbery insurance was very unprofitable, and rates were materially increased, especially on banks in small communities. Resi-

dence burglary and theft insurance, which has generally been profitable, was unprofitable in the large cities. The volume of this class is suffering from the competition of "all risks" floater policies issued by inland marine insurance companies, covering jewelry, works of art, furs, and other valuables. Claims under mercantile burglary and robbery policies for losses by inside hold-ups increased but those for burglaries by forcible entry did not.

**INTELLECTUAL COÖPERATION, COMMITTEE OF.** See LEAGUE OF NATIONS.

**INTERNAL COMBUSTION ENGINES.** In the stationary power plant field the oil engine predominated over the gas engine, although the year witnessed a stimulation of gas engine business for gas line pumping, in addition to which some large gas engines were built for steel mill service. A total capacity of about 300,000 horse power in Diesel engines was built in the United States during 1931 which represented a decrease of about 25 per cent from that of 1930, due largely to the business depression. During the year a number of municipal plants placed orders or installed Diesels. Outstanding among these was an order for five 7000-horse power Diesels for the new municipal station at Vernon, Calif., which will have the distinction when completed of being the largest Diesel plant in the United States.

In Europe the record in Diesel engine capacity will be held by a 23,000-horse power unit of eight cylinders under construction by Burmeister & Wain of Copenhagen. Large Diesels found favor in Europe as peak load units and to supplement hydro plants during periods of low water.

There was a trend during the year in Diesel practice toward higher speeds and wider use of trunk piston design in large engines up to 3000 horse power. The two-cycle solid-injection engine continues to lead as the most popular type. Supercharging to attain overload capacity was favored in Europe although not as yet generally adopted in the United States. Welding of the engine frames was also being employed by several European firms as a means of reducing weight. Another important development was the automatic Diesel plant which reduces the labor item to the minimum. An outstanding American example was the installation in the Chelsea Hotel in New York.

The Diesel for automotive service had been much further developed in Europe than in the United States where it had not much more than passed the experimental stage. The reason for this was the low price of gasoline, hence little incentive for the employment of the heavy oil engine. Considerable advance had been made in the application of Diesels to locomotives and rail cars, and many railroads both in America and Europe were employing units of this type for switching and branch line service.

**INTERNATIONALISM.** THE INTERNATIONAL CONFERENCE OF THE WORLD ALLIANCE. The first triennial meeting of the World Alliance for International Friendship through the Churches ever held in England met at Cambridge University, Sept. 1-5, 1931. Nearly 400 delegates from 33 nations were present representing all the churches (except the Roman Catholic, which was invited but declined). One Roman Catholic priest was present as an "observer." The discussion included such questions as disarmament, national security, the rights of minorities, national and international loyalties, and the whole question of the Christian attitude toward world peace.

The Rt. Hon. Lord Dickinson, K.B.E., honorary secretary, was elected president of the World Alliance to fill the vacancy caused by the death of Archbishop L. O. J. Söderblom, of Sweden. With regard to the Disarmament Conference scheduled for February, 1932, the conference adopted a resolution urging: (1) a substantial reduction of armaments in every form, (2) the fixing of a scale for the armed forces of the nations which shall be equitable to all and consistent with the fact that all have renounced war and have undertaken that disputes which may arise among them shall never be settled except by pacific means, and (3) security for all nations against aggression. The resolution concluded as follows:

The International Committee holds that in the world of today the churches can countenance no other methods of settling international disputes than conciliation, arbitration, or judicial decision, and that the true way to the abandonment of all instruments of war lies in the development of a system of international justice, the growth of mutual respect and confidence and the willingness to make national sacrifices for the common good.

The International Committee appeals to the Christian churches in all lands to assure their national governments that they will actively support them in this task of reducing armaments to the lowest point, and urges all members of the Christian communities to give themselves to private and public prayer that the forthcoming Disarmament Conference may under the Divine guidance achieve all desired results.

Forty experts on international problems addressed the 16th annual meeting of the World Alliance for International Friendship through the Churches, held in Chicago, Nov. 10-12, 1931. The major subjects presented dealt with disarmament and other phases of the peace movement. Among the speakers were: Herr Friedrich Wilhelm von Prittwitz and Gaffron, German Ambassador to the United States; Maj.-Gen. John F. O'Ryan, commander 27th Division, American Expeditionary Forces in France, 1917-1918; Hon. Thomas J. Walsh, U. S. Senator; Canon T. Guy Rogers, of Birmingham, England,

and chaplain to the King; Robert M. Hutchins, President of the University of Chicago; Dr. S. Parkes Cadman; Robert R. Moton, Tuskegee Institute of Alabama; Justice Florence E. Allen, Supreme Court of Ohio; Dr. Henry A. Atkinson, general secretary, World Alliance. On Armistice Day at 11 o'clock, Glenn Frank, President of the University of Wisconsin, gave an address on Lessons of Armistice Day.

**WORLD CONFERENCE FOR INTERNATIONAL PEACE THROUGH RELIGION.** The Executive Committee of this Conference met in Geneva, Switzerland, Aug. 12-14, 1931, with 60 members present. The Executive Committee voted that the conference in Washington scheduled to be held in 1932 should be a regional conference sponsored by the American Committee, instead of a world conference, as previously planned.

It was agreed that a meeting should be held in Geneva on the eve of the convening of the Disarmament Conference, at which addresses would be given by representatives of all the religions, and which would focus attention of the religious mind of the world upon the importance of this great undertaking.

**INTERNATIONAL CHAMBER OF COMMERCE.** The International Chamber of Commerce held its annual sessions at Washington May 4-9. A determined effort was apparently set on foot before the sessions by the American government to exclude mention of three controversial topics: Russia, war debts, and the American tariff. Several foreign delegates had previously gone on record as intending to bring up the question of debts. Also as the sessions proceeded it became increasingly doubtful if any measures could be adopted without taking Russia into consideration.

President Hoover made a speech at the opening session, which, to the surprise of all present, was entirely devoted to land disarmament, in his opinion the principal means to be taken to overcome the depression. It was quickly seen that this was merely another way of informing foreign nations that no debt reduction will be considered until they show their good faith by reducing expenditures on arms. The following day, Secretary of the Treasury Mellon made a speech, the main theme of which was a plea to preserve the high standard of living and even to raise it in many parts of the world. Georges Theunis of Belgium, retiring President of the Chamber, attacked American and other tariffs as a bar to progress, while American delegates demanded the right of controlling the American market, at the same time advocating free trade for European countries among themselves.

The general resolution, adopted by the Chamber on May 9, contained the following paragraphs:

The International Chamber has repeatedly emphasized the fact that war is the greatest barrier to social and economic progress, and the establishment of higher living standards is dependent primarily on the maintenance of peace. The Chamber commends the efforts being made by the governments of the world to reduce armaments to the lowest possible limit, and urges not only that there should be no relaxation of this effort, but rather that it should be redoubled. The attainment of this objective would relieve the peoples of all nations of heavy burdens of taxation.

International obligations have been made definite in amount and in terms as between nations. The integrity of such obligations is always fundamental to the maintenance of international credit and to the expansion of commerce and industry. The observance of this essential principle, however, is not inconsistent with an impartial examination of the effects of these obligations on inter-

national trade, if warranted by changed economic conditions, such examination to be based on the principles laid down by the International Chamber of Commerce at its congresses.

National and international trade should be encouraged by the removal of every obstacle possible. Tariffs should not discriminate unfairly between nations. Embargoes should be exercised only against dumping or other unfair practices. The machinery provided by some countries for the adjustment of tariff inequalities should be utilized without delay, and all nations should unite in an effort to remove all unjustifiable restrictions.

**PAGE SCHOOL OF INTERNATIONAL RELATIONS.** The primary purpose of the school, which was established in 1930 at Johns Hopkins University, Baltimore, Md., is to create a research laboratory for the study of the motivating causes of the conduct of nations in relation to one another. The school in 1931 was proceeding experimentally with investigations in the historical, legal, and economic fields, upon topics which seemed likely to disclose the fundamental nature of the motives upon which peoples and governments customarily act in their relations with each other. The investigations undertaken included the following:

Professor John H. Latané was studying the various causes leading to the development and prevalence among the American people of the doctrine of political isolation. In regard to the economic aspects of this problem he was assisted by Dr. Lazare Teper, research assistant. Professor Gilbert Chinard was tracing, in contemporary periodical literature, the changes and fluctuations in American popular sentiment towards France. In this work he was assisted by Miss Mary Francis. Dr. Albert K. Weinberg, appointed in December, 1931, a Fellow in the school, was making a study of the several occasions on which the plea of "manifest destiny" has been associated with some foreign policy of the United States. Col. Samuel C. Vestal was working on an analysis of the various systems of peace which have been projected since the time of Sully's "Grand Design." Dr. Frederick Sherwood Dunn is engaged upon a study of the legal control of international relations, based primarily upon a consideration of the theory and practice of diplomatic protection abroad, with particular reference to Mexico.

The Shaw Lectures, under the auspices of the Page School, were given by Charles C. Tansill, Professor of American History at the American University, on the subject of "Some Aspects of American Policy in the Caribbean: the United States and the Danish West Indies."

**OTHER INTERNATIONAL ACTIVITIES.** Professor Alfred Zimmern held his eighth School of International Studies at Geneva. From July 13 to September 4, international questions were dealt with by experts, and from September 7 to the close of the League Assembly a daily commentary on its work was given by the Director in English. The Post Graduate School of International Studies at Geneva continued its investigation of international problems.

Dr. William Warner Bishop, an official American Library Association delegate at the meeting of the International Committee of the International Federation of Library Associations at Cheltenham, England, Aug. 20 to 31, 1931, was elected president of the committee and of the Federation. The subject of international loans between libraries was discussed.

The World Federation of Education Associations (headquarters, 1201 Sixteenth Street,

Washington) held its fourth biennial conference at Denver, Colo., July 27-Aug. 1, 1931. About 4000 attended, including the presidents of practically all of the great national organizations throughout the world. The rounding out of the Herman-Jordan Plan and the reorganizing of the Federation to accommodate the increased amount of work were among the achievements.

The Federation, together with the American National Council for Prevention of War, arranged for an interchange of telephone conversations between boys and girls in many countries to circle the world on Goodwill Day, May 18.

Morris Leviloff, 17-year-old student of the junior class in the Bulkeley High School of New London, Conn., wrote the best 500-word paper in a contest for high-school students in the United States on "What 'Pacific Means' Should Be Developed to Make the Paris Peace Pact Effective?" The committee of judges consisted of William John Cooper, U. S. Commissioner of Education; Senator Arthur Capper of Kansas; and Gideon A. Lyon, associate editor of the *Washington Star*.

The countrywide essay contest was an optional feature of a programme for the study of the Paris Pact in American high schools formulated and encouraged by a national committee of about 300 leading educators, headed by Dr. P. P. Claxton, former U. S. Commissioner of Education, constituting the National Student Forum, of which Arthur Charles Watkins of Washington was director. Mr. Watkins stated that 200,000 students engaged in the study of the Paris Pact in over 2600 high schools in the United States, Alaska, Hawaii, the Philippine Islands, Porto Rico, the Virgin Islands, and the Canal Zone.

An average of 70 international conferences and exhibitions a month were held in Europe during 1931, according to the *Advocate of Peace*.

**INTERNATIONAL JUSTICE.** See LEAGUE OF NATIONS; WORLD COURT.

**INTERNATIONAL LANGUAGES.** See PHILOLOGY, MODERN.

**INTERNATIONAL LAW.** At the Twelfth Assembly of the League of Nations, on Sept. 25, 1931, it was recalled that the Resolution of Sept. 22, 1924, emphasized the progressive character of the codification of international law which should be undertaken, and, in view of the recommendations of the First Conference for the Codification of International Law held at the Hague in 1930, it decided to continue the work of codification with the object of drawing up conventions which will place the relations of states on a legal and secure basis without jeopardizing the customary international law which should result progressively from the practice of states and the development of international jurisprudence.

The Assembly decided to establish the following procedure for the future, except in so far as, in particular cases, special resolutions provide to the contrary.

1. Any State or group of States, whether Members of the League or not, may propose to the Assembly a subject or subjects with respect to which codification by international conventions should be undertaken. Such proposals, together with a memorandum containing the necessary explanatory matter, should be sent, before March 1st, to the Secretary-General, in order that he may communicate them to Governments and insert them in the agenda of the Assembly.

2. Any such proposals will be considered by the Assembly, which will decide whether the subjects proposed appear *prima facie* suitable for codification.

8. If the investigation of a proposed subject is approved by the Assembly and if no existing organ of the League is competent to deal with it, the Assembly will request the Council to set up a committee of experts, which will be asked with the assistance of the Secretary-General of the League of Nations to make the necessary enquiries and to prepare a draft convention on the subject, to be reported to the Council with an explanatory statement.

4. The Council will transmit such report to the Assembly, which will then decide whether the subject is provisionally to be retained as a subject for codification. If this is decided affirmatively, the Assembly will ask the Secretary-General to transmit the said report to the Governments of the Members of the League and non-member States for their comments.

5. The committee of experts, if it considers it desirable to do so, will revise the draft in the light of the comments made by the Governments.

If the committee of experts revises the draft, the revised draft will be submitted to the governments for their comments and, together with the comments received, will be transmitted to the Assembly, which will then decide finally whether any further action should be taken and, if so, if the draft should be submitted to the codification conference.

If the committee does not see any reason to revise the draft, it will be transmitted, together with the comments of the governments, to the Assembly, which will then decide finally whether any further action should be taken and, if so, if the draft should be submitted to a codification conference.

The assembly recommended:

(1) That, in relation with the further work in connection with the codification of international law, the international and national scientific institutes should collaborate in the work undertaken by the League of Nations;

(2) That the work of codification undertaken by the League of Nations should be carried on in concert with the conferences of the American States.

In commenting on the progressive Codification of International Law the American Government under date of June 23, 1931, declared that:

The Government of the United States considers that the steps looking to the codification of International Law, initiated by the Assembly of the League on September 22nd, 1924, and resulting in the Conference held at The Hague in March and April of last year, should be continued, and that it is important that very careful preparation on the subjects deemed to be ripe for codification should be made well in advance of the calling of an international conference. On the basis of the experience at the Hague Conference in 1930, the Secretary of State would suggest that any conference called in the future should be limited to the codification of one or not more than two subjects. It is also felt that greater progress would be made toward codification if subjects were chosen for the first few conferences which are less controversial than some of the more complicated subjects.

As to the mode of procedure to be followed, it is believed that the procedure suggested in the recommendations made by the Hague Conference would be likely to attain satisfactory results. It is suggested, however, that, after observations have been received from the various Governments on the draft Conventions referred to in paragraph 8 of those recommendations, a revised draft or drafts might be prepared and circulated with the comments of the Governments on the first draft, and that these new drafts, together with the comments by the Governments, should be communicated to the various Governments sufficiently well in advance of the conference as to enable the Governments to study the drafts and comments and to formulate their views thereon.

It is noted from the draft resolutions submitted by certain delegations, incorporated in the report of the First Committee (document A. 82, 1930 V), that distinctions are drawn between customary international law and new rules designed to govern relations between States, and that the view has been expressed that the term "codification" as applied to the work for the development of international law undertaken by the League of Nations should be understood as relating to the latter. It is believed that conventions adopted should be declaratory of existing customary law on the subjects dealt

with, supplemented by such enlargements as are demanded by modern conditions.

The Secretary of State takes pleasure in recognising the value of the work done at the Hague Conference of 1930. The Government of the United States signed, on December 31st, 1930, the Protocol relating to Military Obligations in Certain Cases of Double Nationality. It is regretted that, because of the unsatisfactory provisions on two important points—expatriation and the nationality of married women—the Government of the United States was unable to sign the Convention on Nationality, the principal agreement concluded at that Conference.

**AMERICAN CODIFICATION.** At the Sixth International Conference of American States (held in Havana in 1928) codification of certain subjects in public international law was adopted. In addition, the Conference provided for the appointment of three permanent committees: One at Rio de Janeiro for the codification of public international law; one at Montevideo for further work dealing with private international law; and another at Havana for the study of comparative legislation and uniformity of legislation. Conventions on public International Law were signed at the Sixth International Conference of American States held at Havana in 1928, and action was taken by the respective governments as follows: Convention on Status of Aliens was ratified by: Brazil, Nicaragua, Panama, United States; Convention on Asylum was ratified by: Brazil, Mexico, Nicaragua, and Panama; Convention on Rights and Duties of States in the Event of Civil Strife was ratified by: Brazil, Mexico, Nicaragua, Panama, and United States; Convention on Consular Agents was ratified by: Brazil, Mexico, Nicaragua, Panama; Convention on Diplomatic Officers was ratified by: Brazil, Mexico, Nicaragua, and Panama; Convention on Private International Law was ratified by: Brazil, Costa Rica, Cuba, the Dominican Republic, Guatemala, Haiti, Honduras, Nicaragua, Panama, and Peru; Convention on Treaties was ratified by Brazil and Panama.

The American Society of International Law celebrated its twenty-fifth anniversary in Washington, April 23-25. The one who conceived and organized the Society and nurtured it during the critical years of its infancy was president of the society, Dr. James Brown Scott having succeeded the Hon. Elihu Root, who served as President for seventeen years, and the Hon. Charles Evans Hughes, who occupied the position for five years. The formal opening of the meeting took place, April 23, and Dr. Scott's presidential address was devoted to the progress of international law during the last twenty-five years.

Other sessions were devoted to subjects connected with the Permanent Court of International Justice, including the obligatory jurisdiction of the court, the accession of the United States, and the independence of the court, the recognition of new governments during the past twenty-five years, and the legal position of war and neutrality during the last twenty-five years.

As a result of a written report submitted by the Committee on Codification of International Law, the Society adopted the following resolution, which was presented to the Secretary of State by a committee on May 9.

*Be it resolved that,* The American Society of International Law expresses the hope that the Government of the United States will, in its reply to the letter of the Secretary General of the League of Nations of February 27, 1931, give the largest possible encouragement to the

continuation of the work of codifying international law as far as many had hoped for; the Society is nevertheless of the opinion that the work of codification cannot be completed by any one conference, or, indeed, by any one generation, and it urges the general realization of the wisdom and necessity of continuing this effort.

The tenth annual meeting of the American Branch of the International Law Association was held in New York City, May 22, at which time Oscar R. Houston, of New York, was elected President, succeeding the Hon. John W. Davis. Paul H. Laques was elected Secretary.

**GROTIUS MEMORIAL.** Hon. Frank B. Kellogg, representing the American Bar, unveiled the Grotius Memorial Window at the Nieuwe Kerk at Delft, Holland, Aug. 25, 1931. The window was presented by the Netherlands-America Foundation to commemorate the three hundredth anniversary of the publication of Grotius' great work *De Jure Belli ac Pacis*.

See also LAW, PROGRESS AND DEVELOPMENTS. **INTERNATIONAL TRADE.** See FINANCIAL REVIEW.

**INTER-PARLIAMENTARY UNION.** The Twenty-seventh Inter-Parliamentary Conference was held in Bucharest, Rumania, in October. Together with the Government, the Parliament and the National group, the Rumanian nation, showed deep interest and warm fellow-feeling for its guests.

Twenty parliaments, represented by 145 members, replied to the invitation of the Rumanian group. They were: America (United States), Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Japan, Norway, Poland, Rumania, Sweden, Switzerland, Turkey. The number of members was thus somewhat limited, the Union being composed of no less than thirty-eight national groups. The serious economic and political crisis prevailing in a great many countries prevented politicians from leaving their posts.

The resolution adopted by the Inter-Parliamentary Council, on April 13, on the preparation for the General Disarmament Conference, was presented for adoption to the Bucharest Conference. From the beginning, it was clear that this resolution, although unanimously adopted in principle, was incomplete in the opinion of a great number of delegates, but for different motives. This divergency of opinion provoked, in the plenary meeting, within the Inter-Parliamentary Council and in the lobbies, debates of the greatest interest.

At the opening of the discussion two amendments were first presented by the German delegation, in favor of inserting in the first paragraph of resolution I the words in italics in the following paragraph:

The Inter-Parliamentary Council, making use of the right granted by it under Art. 14, Sect. 14 of the Statutes of the Union, reminds the Groups of the Union and their individual members of the urgent duty incumbent on them to do everything in their power in order that the General Disarmament Conference, which has been summoned by the League of Nations to meet on February 2, 1932, shall result in an International Convention, on a basis inspired by the equality of the rights and duties of all nations and instituting a radical reduction of the present armaments and eliminating every possibility of an armaments race, which would inevitably lead to fresh wars.

The second amendment was presented by Count Carton de Wiart and M. La Fontaine (Belgium) and by M. Fernand Merlin in the name of the French delegation, and consisted

in adding the following paragraph to the list of provisions which the Council esteemed should figure in the Disarmament Convention:

Organization of a strictly defensive international force at the disposal of the League of Nations.

The German proposal was referred to a small drafting Committee of six members whose draft, after discussion, was referred to the Council, which presented to the Conference a fresh text for the first paragraph, that was unanimously accepted. The complete text of that paragraph is as follows:

The XXVIIth Inter-Parliamentary Conference, in adopting the resolution of the Inter-Parliamentary Council of April 13, 1931, reminds the Groups of the Union and their individual members of the urgent duty incumbent on them to do everything in their power in order that the General Disarmament Conference, led by the principle of the equality of the rights and duties of States, and taking into account Article 8, Sects. 1 and 2 of the League of Nations Covenant, shall result in an International Convention instituting a drastic reduction of the present armaments, and eliminating every possibility of an armaments race, which would inevitably lead to fresh wars.

The amendment introduced by Count Carton de Wiart, in favor of the organization of an international force, was not so fortunate. Presented in forcible speeches by MM. La Fontaine and Merlin as a logical consequence of disarmament, it was at first well received by the assembly. Herr Sollmann even declared that the German delegation would accept it. Burton L. French declared that the American delegation was opposed to it and M. Moltesen (Denmark) asked the authors of the proposal to withdraw it. Finally the Conference decided to refer this amendment to the Drafting Committee which was to deal also with the German proposal. After numerous motions and references the Council, after discussion, decided to recommend the adoption by the Conference of the resolution concerning the mandate of the Security Committee, while, by 10 votes against nine, it invited the Conference not to take into consideration the amendment in favor of the creation of an international force.

At its last meeting but one, the Conference was called upon to give a final vote. Before the vote was taken, some delegates desired to explain their attitude. M. La Fontaine insisted on the unique mission of the international force to maintain international order; while Count di San Martino (Italy) and Herr Lobe (Germany) declared that their respective delegations were not opposed to the principle of an international force, but that it seemed to them that such a vast problem required detailed study before being submitted to a Conference of the Union. Finally the voting by ballot took place, after which the President declared the results. Votes made: 189. Two-thirds majority: 126. In favor of taking the question into consideration: 96. Against: 93. The President therefore declared that the taking into consideration of this question was rejected.

The Conference unanimously adopted a fresh resolution stating that the idea of an armament truce, put forward by the Inter-Parliamentary Council, had been taken up by the League of Nations Assembly, and inviting the national groups to take action with their respective governments in order that this truce be accepted before November 1, the date fixed by the Assembly.

October 5 was devoted to the discussion of the draft resolutions concerning the Protection of Mothers and Children. In the absence of one of the *rapporteurs*, Frau Olga Rudel-Zeynek (Austria), detained in her country by the presidential elections, Frau Luise Schroeder (Germany) took on the heavy task of presenting to the Conference two series of draft resolutions, the first on the protection of mothers and children during and after childbirth, including the first year of the child, the second on the situation and protection, in the different countries, of illegitimate and of destitute children. The discussion was terminated by a vote in favor of the development of the system of family allowances and social services in favor of large families, and another in favor of the creation, under the auspices of the International Labor Office, of a Consultative Committee for the regulation of the work of women.

Most of the last day of the Conference, Wednesday, October 7, was devoted to the debate on the subject of "European Federal Union." The discussion closed with a speech by the head of the American delegation, Andrew J. Montague, who declared that he and his colleagues were not sufficiently versed in the problem of the federal organization of Europe to give an opinion. They followed with interest, however, the work of the European groups in view of improved collaboration and organization. The resolution was then voted with applause and with no modifications. The Council reelected as its President M. Fernand Bouisson, President of the French Chamber of Deputies, for the period from the Twenty-seventh to the Twenty-eighth Inter-Parliamentary Conference. In this way, M. Bouisson retains the functions of President of the Executive Committee. The Duke of Sutherland (British) was elected to the Executive Committee.

The American group held its annual meeting on February 24. The greater part of the meeting was taken up by an animated discussion on the proper means of increasing the membership of the group and of making the work of the Union more widely known in parliamentary circles. President Montague was to take the first opportunity of making known by a speech in the House of Representatives the organization and work of the Union. Those present were greatly interested in the work of the Union relating to the agricultural crisis. A special committee was requested to study this question and to take part in the work in this field.

The following were reelected members of the Executive Committee: Representative Andrew J. Montague, (Virginia), President; Senators Simeon D. Fess (Ohio) and Alben W. Barkley, (Kentucky), Representative Henry W. Temple (Pennsylvania), Vice Presidents; Representative Sol Bloom (New York), Treasurer; Representative Burton L. French (Idaho), Secretary; Senators Tom Connally (Texas), Joseph T. Robinson (Arkansas), Claude A. Swanson (Virginia), Arthur H. Vandenberg (Michigan), Representatives Fred A. Britten (Illinois), Carl R. Chindblom (Illinois), J. Charles Linthicum (Maryland), A. Piatt Andrew (Massachusetts), Thomas O. Cochran (Pennsylvania), Members; Arthur Deerin Call, Executive Secretary. The group in 1931 was composed of 226 members of the House of Representatives out of a total of 435, and 33 Senators out of a total of 96.

**INTERSTATE COMMERCE COMMISSION.** See RAILWAYS; and UNITED STATES under *Administration*.

**INTERSTATE LITIGATION.** See LAW, PROGRESS AND DEVELOPMENTS.

**INTERVENTION.** For developments in intervention policies of the United States in Latin America, see NICARAGUA, HONDURAS, PANAMA, GUATEMALA, HAITI, and CUBA under *History*.

**INVESTMENTS.** See FINANCIAL REVIEW.

**IOWA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,470,939; in 1920, 2,404,021. The native white element made a moderate gain in number, to 2,282,047 (1930), from 2,158,534 (1920). The other two chief elements by origin declined: the foreign born white to 165,735 (1930), from 225,647 (1920); the Negroes, to 17,380 (1930), from 19,005 (1920). Des Moines, the capital, had a population of 142,559 (1930); 126,468 (1920). Cedar Rapids, 56,097 (1930); 45,566 (1920). Davenport, 60,751 (1930); 56,727 (1920). Sioux City, 70,183 (1930); 71,227 (1920).

**AGRICULTURE.** The following table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn ....	1931	11,640,000	389,840,000	\$136,479,000
	1930	11,335,000	385,390,000	223,526,000
Oats ...	1931	6,026,000	186,806,000	89,229,000
	1930	6,303,000	233,211,000	65,299,000
Hay, tame	1931	2,910,000	3,312,000*	27,821,000
	1930	3,099,000	4,214,000*	48,461,000
Potatoes ..	1931	81,000	4,455,000	2,673,000
	1930	70,000	4,900,000	6,370,000
Barley ..	1931	521,000	13,546,000	4,606,000
	1930	548,000	16,166,000	6,628,000
Wheat ..	1931	881,000	7,594,000	3,438,000
	1930	432,000	8,869,000	5,750,000

\* Tons.

**MINERAL PRODUCTION.** The State's production of coal in 1930, 3,065,000 tons (estimated), was about at the level of the total for 1928, but fell below the quantity mined in 1929, which was 4,241,069 tons. By value the yearly production was \$11,948,000 for 1929. There were shipped from cement mills, in 1930, 7,035,252 barrels of Portland cement, a considerable increase over the total of 6,586,111 barrels shipped in 1929. By value, the shipments of 1930 totaled \$10,647,584 for 1930 and \$9,781,159 for 1929. The total of minerals produced was \$35,904,895 for 1929; for 1928, \$35,498,669.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 stated the number of the State's manufacturing establishments as 3317. These employed 82,615 wage earners, or 12.1 per cent more than had been employed in 1927. The wages paid in 1929 to these earners totaled \$103,532,117, or 13.3 per cent more than had been paid in 1927. Materials used for manufacture, plus fuel and purchased electricity, cost \$579,991,440 in 1929, or 10.7 per cent more than the cost for 1927. The manufactured product was valued, for 1929, at \$907,929,170, which was 18 per cent above the corresponding total for 1927. Sioux City had, in 1929, 154 establishments, employing 6168 wage earners; wage payments totaled \$8,499,305; manufactured product, \$133,576,118.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and

operation of governmental departments, \$24,844,799 (of which \$838,540 was for local education); for interest on debt, \$785,887; for permanent improvements, \$20,361,585; total, \$44,992,271 (of which \$22,450,345 was for highways, \$3,738,445 being for maintenance and \$18,717,900 for construction). Revenues totaled \$44,313,396. The State's funded debt outstanding on June 30, 1930, was \$15,801,000. Net of sinking fund assets, it was \$14,189,194. On property bearing an assessed valuation of \$1,471,109,295 were levied in the year State taxes of \$11,752,546.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 9697.71. Additions to this total in the course of the year preceding had totaled 7.25 miles, while 18.56 miles had been given up. No building of additional line or trackage in 1931 was reported.

**EDUCATION.** For the academic year 1920-30, the number of persons of school age in the State was reported as 716,865. There were enrolled in the public schools in that year 554,655 pupils. Of these, 437,426 were in common schools or elementary grades and 117,229 were in high schools. The expenditures for public-school education totaled about \$57,000,000. Salaries of teachers averaged \$730 a year in rural elementary schools, \$1058 in city elementary schools, and \$1452 in high schools. A research division, according to State Superintendent Samuelson in the *Journal of the National Education Association*, was made by law a part of the State educational organization. The Legislature did not adopt proposals, prompted by adverse times, looking to the reduction of teachers' pay.

**CHARITIES AND CORRECTIONS.** The Board of Control of State Institutions, holding authority under a statute of 1898, controlled and governed in 1931 the State institutions for the care and custody of persons. The Board was composed of three members, each serving six years, terms ending in rotation, one every two years. It appointed the officers governing the several institutions and fixed the number and compensation of their subordinates. It acted as the agent for institutional purchases and maintained institutional industries.

The State institutions, with their populations of Dec. 1, 1931, were: State Hospitals for the Insane at Cherokee (1432), Clarinda (1491), Independence (1474), and Mount Pleasant (1490); Men's Reformatory, Anamosa, 1440; State Penitentiary, Fort Madison, 1410; Women's Reformatory, Rockwell City, 103; Training School for Boys, Eldora, 568; Training School for Girls, Mitchellville, 194; State Sanatorium for Tuberculosis, Oakdale, 330; Soldiers' Home, Marshalltown, 466; Soldiers' Orphans' Home, Davenport, 650; Juvenile Home, Toledo, 297; Institution for the Feeble-minded, Glenwood, 1664; Hospital for Epileptics and School for Feeble-minded, Woodward, 1003. The total institutional population was 14,018.

**LEGISLATION.** An income-tax bill, the main feature of a programme to improve the fiscal system of the State, failed of enactment in the regular session of the Legislature. A measure to establish the office of county assessor was defeated in the lower house. A bill, supplementary to the proposed constitutional amendment to provide primary roads, was passed to authorize the issue of \$100,000,000 in bonds for that purpose, subject to popular ratification. The act to authorize this issue was vetoed by Governor

Turner on the decision of the State Supreme Court (May 6) that it was itself unconstitutional.

The Legislature provided for the formation of an expert commission to study the State's conservation problems and recommend a policy with regard to them. As a means to protect the producers of lard, it placed a tax of 5 cents a pound on vegetable substitutes, despite a threat of retaliatory measures from Alabama.

Perhaps the most unusual measure enacted by the session was one designed to lessen the tax burden by placing a mandatory requirement on all State subdivisions to reduce their taxes by 5 per cent. This measure applied to counties, cities, and school districts alike. It was passed in response to a popular complaint that the burdens of direct taxation had become severely onerous. The law left it to the subdivisions themselves, in each case, to work out the problem of reducing expenditure and of fixing the tax rates that would assure the required reduction of receipts. Expenditures that were mandatory by statute and likewise expenditures for the service of debt were not to be reduced.

**POLITICAL AND OTHER EVENTS.** An attempt to enforce the State law for the application of a compulsory test for tuberculosis in cattle was forcibly resisted in March. The farmers of Scott, Muscatine, and Cedar counties had sent an appeal to the Legislature to repeal the law. State agents proceeding to Tipton to make the legal tests found the road occupied by a band of farmers reported as numbering about 1000. Two companies of the National Guard were put under arms early in April, and Governor Turner, with this display of force, succeeded in negotiating with the objectors for a compromise, under which they should permit the tests to proceed, under veterinarians of their own selection. Further trouble, however, occurred in September.

**OFFICERS.** Governor, Dan W. Turner; Lieutenant-Governor, Arch W. McFarlane; Secretary of State, G. C. Greenwalt; Treasurer, R. E. Johnson; Auditor, J. W. Long; Attorney-General, John Fletcher; Superintendent of Public Instruction, Agnes Samuelson; Secretary of Agriculture, Mark G. Thornburg.

**JUDICIARY.** Supreme Court Justices: Frederick F. Faville, Lawrence DeGraff, William D. Evans, Truman S. Stevens, Henry W. Wagner, E. A. Morling, James W. Kindig, John M. Grimm, E. G. Albert.

**IOWA, THE STATE UNIVERSITY OF.** A co-educational State institution of higher learning in Iowa City, founded in 1847. The enrollment for 1930-31 was 9901. For the autumn of 1931 the enrollment was 6697, including 1225 correspondence students not also registered in residence. The summer session registration totaled 4926. There were approximately 600 members on the faculty in the autumn of 1931. The income for 1930-31 was \$5,251,124. The libraries contained 388,349 volumes. President, Walter Albert Jessup, Ph.D., LL.D.

**IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.** A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The enrollment for the autumn term of 1931 was 3984. The registration for the first half of the 1931 summer session was 1503 and for the second half, 757. The faculty numbered 503 members. The endowment funds amounted to \$695,000, and the income for the year was \$3,480,000. The library

contained approximately 190,000 volumes. President, Raymond Mollyneux Hughes, LL.D.

**IRAQ (IRAK) or MESOPOTAMIA.** A territory in southwestern Asia, occupying the basin of the Tigris and Euphrates rivers between Persia and northern Arabia. It comprises the former Turkish vilayets of Bagdad, Basra, and Mosul, which were conquered by British and Indian troops during the World War and later recognized as an independent state under a mandate assigned to Great Britain. Capital, Bagdad; ruler in 1931, King Feisal.

**AREA AND POPULATION.** The area is about 143,250 square miles and the population, at the census of 1920, was 2,849,282; estimated in 1928 at 3,300,000. Besides 87,488 Jews and 78,792 Christians, the inhabitants in 1920 were mainly Mohammedans of the Sunnite and Shiite sects. The chief cities are Bagdad, with about 300,000 inhabitants; Mosul, 60,000; and Basra, the chief seaport, 50,000.

**PRODUCTION.** Primarily dependent upon agriculture. Iraq is capable of great development by irrigation. Dates constitute the chief export crop. Wheat, barley, cotton, oats, linseed, flax, and fruits are other leading farm products; wool and sheep casings are also produced. Petroleum production in 1930 totaled 750,000 barrels (798,000 barrels in 1929). There is some manufacturing.

**COMMERCE.** For the calendar year 1930, general imports were equivalent to \$27,582,000 (\$36,573,000 in 1929) and total exports were valued at \$15,234,000 (\$20,649,000 in 1929). Goods in transit were valued at \$13,257,000 (\$19,660,000 in 1929). The United Kingdom was the chief source of imports, followed by India, Persia, Belgium, and Germany. Iraq's exports went principally to India, the United Kingdom, United States, and Persia.

**FINANCE.** Actual budget returns for the fiscal year ended Mar. 31, 1930, showed revenues of 57,461,000 Indian rupees and expenditures of 56,412,000 rupees, leaving a surplus of 1,050,000 rupees (1 rupee equals \$0.3650 at par). Revised estimates for 1930-31 placed revenues at 50,500,000 rupees and expenditures at 53,500,000 rupees. The Indian rupee was accepted as legal tender in Iraq.

**COMMUNICATIONS.** In 1931, there were about 750 miles of railway line (excluding 180 miles of sidings) and about 4800 miles of highways, including 50 miles of macadam, 316 miles of graded or drained dirt roads, and 4434 miles of unimproved roads. Owned by the British government, the railways are administered by the Government of Iraq. Bagdad and Basra are links in the London-Karachi air line.

**GOVERNMENT.** The organic law passed by the constituent assembly in June, 1924, provided for a limited monarchy and a responsible government. The legislative body consists of the Senate of 20 nominated "Elder Statesmen" and the Lower House of 88 elected deputies. Premier and Foreign Minister in 1931, Gen. Nuri Pasha as Said (appointed Mar. 23, 1930).

**HISTORY.** By a convention signed by representatives of the Iraqi government and the Iraq Petroleum Company on Mar. 24, 1931, and ratified almost unanimously by the Iraq Chamber of Deputies late in May, the long-drawn negotiations involving the exploitation of the rich Mosul oil fields east of the Tigris River were successfully concluded. The convention granted the Iraq Petroleum Company the sole right of development

east of the Tigris, in return for which the company agreed to pay the Government £400,000 annually in advance royalties and rentals and to complete before 1935 construction of a pipe line from Kirkuk in the Mosul district to two ports on the Mediterranean—Tripolis in Syria and Haifa in Palestine. The pipe line from Kirkuk was to branch at Haditha on the Euphrates, in order to satisfy both the French interests in the company, who demanded an outlet under French control, and the British interests and the Iraqi government, who favored a port under British control. The cost of laying some 1200 miles of pipe line was estimated at £10,000,000. Separate agreements for pipe-line construction were made with Syria, Greater Lebanon, Palestine, and Trans-Jordan. The Iraq Petroleum Company was composed of the Royal-Dutch Shell group, the Anglo-Persian Oil Company, a French company, and an American group dominated by the Standard Oil Companies of New York and New Jersey, each of the four groups controlling 23¾ per cent interest.

With the royalties from the oil fields, said to be among the richest in the world, the Iraqi government and people anticipated greater economic development and financial stability, such as seemed essential to early fulfillment of their desire for independence. Early in 1931 the Permanent Mandates Commission of the League appeared unconvinced that Iraq was ready to assume the responsibilities of independent government provided for under the Anglo-Iraqi treaty of 1930 (see 1930 YEAR BOOK). On September 4, however, the League Council approved with minor modifications the general conditions which the Mandates Commission had laid down for any mandated territory to obtain statehood. The Council requested the commission to inform it at the January, 1932, session whether Iraq had fulfilled these conditions.

On October 19, Gen. Nuri Pasha as Said resigned as Premier, following friction in the Cabinet. He formed a new Ministry, composed mostly of holdovers, except for the portfolios of Foreign Affairs and Interior. High taxation led to a general strike of merchants and others in Bagdad in July, which caused much suffering among the poor. On December 4, the Chamber of Deputies voted to link the new Iraqi currency, to be placed in circulation in 1932, to the pound sterling instead of to gold. In October, 1931, Iraq suffered the worst cholera epidemic on record, 1203 persons dying out of 1906 cases. Repeated outbreaks of the rebellious Kurds in Northern Iraq were reported during the year. The Kurdish leader, Sheikh Mamud, was forced to surrender to Iraqi troops, with whom Royal Air Force units co-operated. See KURDISTAN.

In the field of foreign relations, the chief developments of the year were the reference of the Iraq-Syria boundary question to the Council of the League of Nations, a three-day visit of King Feisal to the Turkish capital at Ankara in July, and reports of strained relations between Persia and Iraq. See ARABIA under History.

**IRAQ PETROLEUM COMPANY.** See IRAQ under History.

**IRELAND.** The smaller of the two main British Isles, with an area of 32,686 square miles; politically divided into Northern and Southern Ireland, the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the par-

liamentary boroughs of Londonderry and Belfast; and the latter of the remaining 26 counties. Northern Ireland is under a separate Parliament and executive by the Government of Ireland Act of 1920 (see IRELAND, NORTHERN). The southern counties constitute an autonomous unit under the treaty of Dec. 6, 1921, known as the Irish Free State, with a status similar to that of the self-governing British dominions. (See IRISH FREE STATE.) The total population of the island June 13, 1921, was estimated at 4,485,000, as compared with 4,390,218 at the census of 1911.

**IRELAND, NORTHERN.** A constituent part of the United Kingdom, comprising the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

**AREA, POPULATION, ETC.** The area of Northern Ireland, exclusive of water, is 3,351,444 statute acres (also given as 5238 square miles). At the census of 1920, the population was 1,250,501, as compared with 1,250,531 in 1911. The estimated population, as of June 30, 1930, was 1,244,000. In 1929 births totaled 25,410; deaths, 19,822; marriages, 7441. Roman Catholics constituted one-third of the population. The population of Belfast was 415,007 in 1926. For the academic year 1930-31, there were 1893 public elementary schools, with 201,071 pupils; 73 secondary schools, with 12,094 pupils; and 123 technical schools, with 23,941 students. The Queen's University in Belfast had 1427 students.

**PRODUCTION.** Agriculture is the main occupation, although important linen and shipbuilding industries centre in Belfast. Cereals, potatoes, flax, fruit, and hay are the leading crops. In 1931, 75,000 persons were employed in linen manufacturing. Shipyards in 1930 employed 13,000 persons and the output exceeded 168,000 tons. Rope, twine, tobacco products, and soap are other products. Commerce statistics are included in those given for Great Britain.

**FINANCE.** About 30 per cent of the annual expenditure represents the cost of Imperial defense and of Northern Irish services reserved to the Imperial Parliament. Excluding these items, budget estimates for the fiscal year ending Mar. 31, 1932, balanced at £8,582,373, as compared with estimated receipts and expenditures of £9,219,995 in 1930-31. Including Imperial contributions, the total 1930-31 expenditure was estimated at £12,229,000.

**COMMUNICATIONS.** In addition to 766 miles of railway lines (1930), the country is served by various inland waterways, supplemented by 180 miles of canals. There were 12,992 miles of highway in 1931. Belfast and Londonderry are the principal seaports.

**GOVERNMENT.** The country forms an integral part of the United Kingdom and is represented in the House of Commons by 13 members. The local Parliament elected in May, 1929, included 37 Unionists, 11 Nationalists, 3 Independent Unionists, and 1 Laborite. The Governor in 1931 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Viscount Craigavon; Finance, H. M. Pollock; Home Affairs, Sir R. Dawson Bates; Labor, J. M. Andrews; Education, Viscount Charlemont; Agriculture, Sir E. M. Archdale; Commerce, J. M. Barbour.

**HISTORY.** Northern Ireland's industry and agriculture were severely depressed during 1930 and 1931 as a result of reduced demand. In the 1931-

32 budget, a saving of £637,622 was effected through a 15 per cent reduction in salaries of all members of the Government and of the Senate and House of Commons. The new Parliament House at Stormont, Belfast, was nearing completion toward the end of 1931. For religious disorders near the Ulster-Free State boundary during 1931, see IRISH FREE STATE under *History*. On December 2, Cardinal MacRory, Roman Catholic primate of all Ireland, issued a Christmas appeal to the Government of Northern Ireland in behalf of the Catholic minority, which, he said, was "cruelly aggrieved and wronged." See GREAT BRITAIN.

**IRISH FREE STATE.** A self-governing Dominion of the British Commonwealth of Nations, constituted under the Irish Free State Government Act of Dec. 5, 1922, which embodies the terms of the Anglo-Irish Treaty of Dec. 6, 1921. Capital, Dublin.

**AREA AND POPULATION.** Comprising about five-sixths of Ireland, the Irish Free State has an area of 26,601 square miles. The population in 1930 was estimated at 2,945,000, as compared with 2,949,000 in 1928 and 2,971,922 at the census of 1926. The steady decrease of population since 1871 was due primarily to emigration. In 1931, however, emigration was offset by immigration. Less than 2000 emigrants left Ireland during the year, as against 15,966 in 1930 and 20,802 in 1929. For the period 1926 to 1930, births averaged 58,192 annually and deaths 42,374, the rates per 1000 of population being 19.7 and 14.3, respectively. The population of the chief cities in 1926 was: Dublin proper, 316,693 (410,900 in 1930); Cork, 78,490; Limerick, 39,448; and Waterford, 26,647. Of the total population in 1926, 2,751,269 were Roman Catholics and 220,653 were Protestants.

**EDUCATION.** Primary education is free and compulsory for children under 14 years. Study of the Irish language was a required part of the curriculum in all national schools. In 1929-30, there were 504,427 pupils in national elementary schools, 27,645 in secondary schools, which are mostly conducted by religious orders, and 3953 students in the University of Dublin and the National University.

**PRODUCTION.** Primarily an agricultural country, the Irish Free State had 3,848,000 acres under crops in 1929, or about 22.6 per cent of the total land area. Agriculture has been marked by the contraction of tillage (grain acreage declined from 2,377,000 in 1851 to 825,000 in 1926) and the expansion of the livestock industry; grazing land in 1929 aggregated 8,431,000 acres. In 1930, there were 4,038,000 cattle, 3,515,000 sheep, 1,052,000 swine, and 448,000 horses. The chief crops—wheat, rye, barley, oats, potatoes, turnips, mangels, hay, and flax—all showed decreased yields in 1930, as compared with 1929; the sugar beet yield increased to 158,000 long tons (141,000 in 1929). Large quantities of cereals are imported annually. The fish catch in 1930 totaled 22,688,000 pounds, valued at \$790,000 (43,510,000 pounds, valued at \$1,137,000, in 1929). Butter, cheese, margarine, milled grain, and liquors were the leading manufactured products. The number of registered unemployed on July 1, 1931, was 21,427, as compared with 19,141 on the same date of 1930. The Shannon hydroelectric plant began distribution of power over the entire Free State during 1930. See AGRICULTURE under *World Agriculture*.

**COMMERCE.** General imports during 1930 were

valued at \$276,123,000 (\$298,325,000 in 1929) and exports of Free State products at \$216,820,000 (\$227,772,000 in 1929). Great Britain in 1930 took 81.7 per cent of all exports; Northern Ireland, 10.5 per cent; and the United States, 2.6 per cent. Of the total imports, Great Britain supplied 69.9 per cent; Northern Ireland, 10 per cent; and the United States, 6.8 per cent. The leading 1930 imports, in order of value, were coal, machinery, wheat flour, wheat, tea, and corn. The chief exports, in the same order, were: Cattle, \$71,413,000; porter, beer, and ale, \$25,624,000; butter, \$15,046,000; swine, fresh eggs, and horses.

**FINANCE.** For the fiscal year ended Mar. 31, 1931, actual ordinary budget receipts were £24,365,000 and actual ordinary expenditures £25,266,000. This compared with actual receipts of £24,173,000 and expenditures of £25,050,000 in 1929-30 and with estimated receipts of £25,411,000 and expenditures of £27,115,000 in 1931-32. On Nov. 6, 1931, a supplementary budget was presented to eliminate a threatened deficit of £1,350,000 for 1931-32; additional taxes estimated to yield £450,000 during the balance of the year were imposed and expenditures were reduced by £900,000. According to the Minister of Finance, the public debt on Mar. 31, 1931, totaled £29,381,000, against which there were assets of £14,106,000, leaving a net debt equivalent to \$25.30 per capita.

**COMMUNICATIONS.** All railways in 1929 had 3029 miles of line, the principal system being the Great Southern Railways, with 2188 miles. An electric storage battery, said to give all the advantages of third-rail electrification without the costs of such installation, was successfully tried out on the Great Southern Railways in December, 1931. Highways in 1930 extended 46,462 miles, of which 45,722 miles were macadam. There were 650 miles of inland navigation. In 1929, 13,663 vessels, of 9,287,000 net registered tons, entered Irish Free State ports. The telegraph and telephone systems are government owned. In 1930 there were 7008 miles of telegraph line and 90,618 miles of telephone line; receipts of the telegraph system were £229,000.

**GOVERNMENT.** The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada. Parliament (Oireachtas) consists of the Chamber of Deputies (Dáil Eireann), and the Senate (Seanad Eireann). Deputies are elected by proportional representation for five years and Senators by members of both Chambers "voting together on principles of proportional representation" for nine years. The Executive Council is responsible to the Dáil Eireann. The Governor-General in 1931 was James McNeill, appointed Dec. 16, 1927. The Executive Council as organized in October, 1930, was as follows: President, William T. Cosgrave; Vice President, Finance, Posts and Telegraphs, Ernest Blythe; Defense, Desmond FitzGerald; Industry and Commerce and External Affairs, Patrick McGilligan; Education, J. Marcus O'Sullivan; Justice, James FitzGerald-Kenny; Agriculture, Patrick Hogan; Local Government and Public Health, Gen. Richard Mulcahy; Lands and Fisheries, Finian Lynch. The distribution of parties in the Dáil Eireann in 1931 was as follows: Cumann na nGaedheal (Government party), 63; Fianna Fail (de Valera Republicans), 56; Labor, 13; Independents, 11; Farmers, 6; National League, 2; others, 2; total, 153.

**HISTORY.** The Government of the Irish Free State during 1931 was confronted with the gravest internal crisis since the civil war of 1923. Outrages by armed revolutionary bands reached proportions which constituted a direct challenge to the Government. President Cosgrave met the challenge by introducing in the Dáil Eireann October 14 one of the most drastic public safety bills in modern political history. It was adopted by a vote of 83 to 65 on October 16, after three days of bitter debate. The bill, which took the form of a constitutional amendment, authorized the establishment of military tribunals to try political offenders, with power to impose capital punishment. Membership in the Irish Republican Army and allied organizations was made an offense against the state. In introducing the measure, President Cosgrave described the conditions it was intended to correct as follows:

The existence of serious opposition to the State has grown in the past two years, especially in the last nine months. The opposition today is much more serious than when the murder of Kevin O'Higgins occurred. The danger in this is that violence is preached with a direct and continual incitement to crime, which has no parallel in any state in the world. There is evidence of an organized conspiracy to overthrow by force the Constitution, and the conspiracy's supporters are ready to murder for that end.

One crime after another is added. Intimidation is freely used, young men are forced to join the Irish Republican Army and employers are made to dismiss men in their employment who have refused to join. Killing is common all over the country and the law courts are rendered useless for the trial of political crimes by the murder or terrorizing of jurors and witnesses.

During the last few months the Irish Republican Army became allied with a new organization called the Saor Eire, seeking to establish a state on the lines of the Russian Soviet Republic. The Church and the State are bulwarks against force, and the present movement is aimed against both. The leaders of these illegal organizations have visited Russia to receive training in the methods of the Communists.

The measure was stubbornly opposed by the Fianna Fail and Labor parties, but the Independents, Farmers, and two members of the Labor party voted with the Government. Threats of violence against supporters of the measure failed to deter them. On October 18, the Catholic hierarchy in a pastoral letter declared that both the Irish Republican Army and the Saor Eire (Free Ireland) were "sinful and irreligious and no Catholic can lawfully be a member of them." On October 20 the military tribunal prescribed under the act was appointed and 12 organizations were declared unlawful, including the women's branch of the Republican Army known as the Cummann na Mham, the Friends of Soviet Russia, the Irish Labor Assembly, the Workers' Revolutionary party, the Irish Working Farmers' Committee, and the Women's Dissent League. The republican newspaper, *The Irish World*, was suppressed by the tribunal November 6 for publishing seditious articles and during the remainder of the year Republican suspects were rounded up throughout the country. Most of them were released after being interrogated by the police, but several caught in possession of arms were sentenced to long prison terms.

In August occurred a series of clashes between Hibernian and Orange organizations along the Ulster border, which led to numerous broken heads but no bloodshed. With a general election approaching, Eamon de Valera, Fianna Fail leader, commenced publication on September 5 of a new Republican newspaper, *The Irish Press*, funds for which had been partly raised in the United States. Of the 23 Senatorial vacancies

filled on Dec. 4, 1931, the Government party won ten, Fianna Fail eight, and the Labor party two, the others being scattered. In the opening speech of the electoral campaign for the Dáil Éireann on December 23, Mr. de Valera indicated that he would ask for a mandate for the removal of the oath of allegiance to the King from the Constitution and the retention in Ireland of the land annuities.

The Cosgrave government's position in the general election was greatly strengthened during the year by its land act of May 1, the extension of financial relief to agriculture under the 1931-32 budget, and the passage of the Statute of Westminster by the British House of Commons on December 10 (see GREAT BRITAIN under *History*). The land act vested full ownership of their holdings in some 150,000 tenant farmers. The Government purchased the land from the owners at a cost estimated at \$50,000,000. Land bonds were deposited to the credit of the former landlords in the National City Bank of Dublin, from which they were to draw dividends. The Statute of Westminster, vesting complete sovereignty in the Free State Parliament and empowering the Government to abolish the right of appeal to the Privy Council in Great Britain, seemed to invalidate the Republican argument that the Free State was still subservient to the British government. See AGRICULTURE, under *World Agriculture*.

See PHILOLOGY, MODERN.

**IRON AND STEEL.** The world output of pig iron and steel emphasized the wide extent of the general economic depression, and was marked by a decline to levels which while not as low as those for 1921 were less, however, than the totals of the pre-war year, 1913. According to *The Iron Age*, New York, which in its annual review assembled careful estimates of the output of the iron and steel industry in 1931, the pig iron production for that year approximated to 55,730,000 gross tons which was a decrease of 30 per cent from the 1930 output of 79,400,000 tons. Compared with 1921, the year of the previous major depression when the production was 37,680,000 tons, the 1931 output was larger by nearly 50 per cent. Likewise, the 1931 steel output was estimated at 69,150,000 tons or a decline of 28 per cent from the 1930 total of 93,330,000 tons, but was an increase of about 59 per cent over 1921 when the production was 43,510,000 tons.

The American pig iron total in 1931 was about 33 per cent of the world total as compared with 40 per cent in 1930. Likewise, the American proportion of steel in 1931 was about 37 per cent of the world's production as compared with 43 per cent in 1930. In 1929, the United States was responsible for 43.8 per cent of the world's pig iron and 47.8 per cent of the world's steel. The year 1931 was marked by the large production of Russia which was, roughly, 4,300,000 tons of pig iron as compared with 4,900,000 tons in 1930 and 5,000,000 tons of steel as compared with 5,460,000 tons in 1930. These figures were interesting as exceeding the 1913 record which was not the case for the other nations with large production. The five leading iron and steel producing nations showed a marked decline in their exports in 1931 estimated in the aggregate at 11,750,000 tons as compared with 17,110,000 tons in 1930, while likewise their imports showed a

decline from 5,660,000 tons in 1930 to 3,950,000 tons in 1931.

**IRON ORE.** The iron ore mined in the United States in 1931, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, at 31,068,000 gross tons, a decrease of 47 per cent as compared with that mined in 1930. The ore shipped from the mines in 1931 was estimated at 28,517,000 gross tons, valued at \$74,579,000, a decrease of 48 per cent in quantity and of 49 per cent in total value as compared with the figures for 1930. The average value of the ore per gross ton at the mines in 1931 was estimated at \$2.62; in 1930 it was \$2.64. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently increased from 10,383,152 gross tons in 1930 to 12,972,000 tons in 1931, or 25 per cent. The Bureau of Mines estimates in the accompanying table were based on preliminary figures furnished by producers

the Lake Superior Iron Ore Association, amounted to 23,467,786 gross tons, a decrease of 50 per cent as compared with these shipments in 1930. The average value of the ore at the mines in the Lake Superior district in 1931 was \$2.74 a ton; in 1930 it was \$2.70.

The southeastern States, in which the Birmingham district is the largest iron-ore producing area, mined approximately 3,706,000 gross tons of iron ore in 1931, a decrease of 38 per cent as compared with 1930. The shipments of iron ore from mines in these States in 1931 amounted to 3,721,000 gross tons, valued at \$6,678,000, decreases of 37 and 43 per cent, respectively, in quantity and value as compared with 1930. The average value of the ore produced in these States in 1931 per gross ton was \$1.79; in 1930 it was \$2.01. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, decreased from 913,171 gross tons in 1930 to 898,000 gross tons in 1931.

who in 1930 mined about 99 per cent of the total iron ore. They show the totals for the principal iron-ore producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of southeastern, northeastern, and western States.

About 82 per cent of the iron ore shipped in 1931 came from the Lake Superior district, in which approximately 25,873,000 gross tons were mined and 23,306,000 tons were shipped, decreases of 48 and 50 per cent, respectively, as compared with the quantities mined and shipped in 1930. The ore shipped in 1931 was valued at the mines at \$63,919,000, a decrease of 49 per cent. These totals include the ore shipped by rail as well as by water from all mines, but exclude manganese ores amounting to approximately 248,400 gross tons in 1931 and 698,244 tons in 1930 that contained 5 per cent or more of manganese in the natural state. The stocks of iron ore in this district apparently increased from 9,129,040 gross tons in 1930 to 11,749,000 tons in 1931, or 29 per cent. The shipments of iron ore by water from the Lake Superior district in 1931 (including manganese iron ores), according to

**UNITED STATES PIG IRON PRODUCTION.** Pig iron production in the United States in 1931 fell to 18,275,164 gross tons from 31,399,105 in 1930 with an average daily output in December of 31,625 tons marking the minimum monthly production not only of the year but in the period since August, 1921, when 30,780 was the record. The production by months in comparison with earlier years is shown in the following table:

THE MONTHLY PIG IRON OUTPUT IN THE UNITED STATES, 1929-1931

December .....	980,376	1,665,690	2,836,916
Total .....	18,275,164	31,399,105	42,258,769

On Jan. 1, 1931 there were 95 furnaces in blast, a number which declined to 67 on Dec. 1, 1931, with a maximum of 116 on April 1 when the operating rate was 67,880 tons, from which figure there was a steady decline to 35,810 tons a day on December 1.

The American steel industry operated at a rate of about 30 per cent of capacity during the entire year, that figure being 66,069,570 tons of open-hearth and Bessemer steel at the end of 1930 to which was added during 1931, 4,075,000 tons of new capacity. During the latter six months of 1931 the average rate was less than 30 per cent. In fact the steel output for the year was estimated at about 25,000,000 tons, including electric steel ingots as well as those of open-hearth and Bessemer steel, and was below that for any year since 1921, and, with the exception of 1914, any year since 1911. On the basis of 25,000,000 tons of steel ingots, finished steel output was about 18,500,000 tons, while the capacity figures for 1931 are interesting in view of the fact that in 1926 the industry operated at 81½ per cent; in 1927 at 75 per cent; in 1928 at 83 per cent; in 1929 at 87½ per cent; and in 1930 at 61 per cent.

In Great Britain the production of steel and iron in 1931 was only half that of 1929. The year's total production of pig iron was 3,758,100 tons, as against 6,192,400 in 1930; of steel, 5,175,600 tons, against 7,325,700. The monthly average output was 855,000 tons of pig iron and 638,600 tons of steel. At the end of December, 1931, 70 furnaces were in blast and the monthly production was 330,600 tons of pig iron and 422,400 tons of steel ingots and castings. The monthly average in 1930 was 516,000 tons of pig iron and 610,500 tons of steel. The following tabulation compares British production of iron and steel for a series of years in tons:

	Steel	Iron
1931 .....	5,175,600	3,758,100
1930 .....	7,325,700	6,192,400
1929 .....	9,636,200	7,589,800
1928 .....	8,519,700	6,610,100
1927 .....	9,097,100	7,292,900
1926 .....	3,596,100	2,458,200
1925 .....	7,385,400	6,261,700
1924 .....	8,201,200	7,307,400
1923 .....	8,481,800	7,440,500

In Germany pig iron production for 1931 was reported as 6,063,048 tons, comparing with 9,694,509 in 1930. Production of steel was 8,291,250 tons, against 11,638,624. Production of iron and steel in Germany for a series of years, in metric tons, was as follows:

	Steel	Iron
1931 .....	8,291,250	6,063,048
1930 .....	11,538,624	9,694,509
1929 .....	16,246,078	13,400,767
1928 .....	14,517,013	11,804,330
1927 .....	16,310,682	13,102,528
1926 .....	12,841,636	9,648,519
1925 .....	12,194,501	10,088,761
1924 .....	9,835,255	7,832,554
1923 .....	6,305,250	4,940,505

ITALIAN LITERATURE. The 1931 season witnessed the passing of Fausto Maria Martini. His death in April came but a few months after that of Umberto Fracchia and Antonio Beltramelli. The loss of three major writers in short order was indeed regrettable for Italy, especially on account of the prematurity of their disappearance—Martini and Fracchia were in their early forties, Beltramelli was fifty. For obituary on Martini, see under NECROLOGY.

For a bibliography of the principal works of Martini see *The Romantic Review*, vol. xxii, No. 3, p. 256.

Relative to our recent discussion on the theatrical crisis (NEW INTERNATIONAL YEAR BOOK, 1929) it was pointed out that the crisis, if in nothing else, had brought the Italian dramatist vis-à-vis of the fact that the psychology of the theatre public had to be taken into greater consideration, and that both theme and technique had to undergo some revision and readjustment. Italian dramatists of recent date, be it recalled, made fare of originality, "cerebration," philosophy. In short, the theatre in Italy was essentially one of the intellectual aristocracy. Apropos is the exhaustive and reasonable exposition of the situation made by a benevolent and keen critic, Silvio D'Amico, in his article, "La crisi del Teatro," which appeared in the January issue of *Pègaso*.

Turning now to the novel, Nino Savaresi injected material of polemical nature in his lecture on this genre delivered in Messina on February 21. The note of dissension arises as to methods and structure. The contemporary novel trends towards an architectonic structure based, let us say, on research in cultural, philosophical, moral, and scientific principles. In Italy Mr. Savaresi would discard this methodical formula and couch the principal values of the novel in pure art. The future Italian novel will either mature on an artistic background or else fail to yield fruit. Either it will be a creation in the poetic vein, or else fail to be a work characteristically Italian.

Alberto Moravia, famed for his novel *Gli indifferenti*, takes objection to the general outlines propounded by Mr. Savaresi and finds, to the contrary, that methodic and æsthetic structures are not detachable from "art," "pure art." In this respect, Mr. Moravia remarks with equanimity that the great novels of any literature, couched in an atmosphere of "pure art," do not necessarily preclude architectonic structure based on research. Mr. Savaresi's and Mr. Moravia's views are to be found in detail in the first and second March issues, respectively, of *L'Italia Letteraria*.

FICTION. At the head of the list of the season's publications stood Giovanni Papini's *Gog*. Replete with material of explosive nature it was subject of much comment. The book was, in the main, meant to be an invective against our civilization. As such it aroused suspicion, conjecture, objection, approval. Papini's sympathizers saw in him again the roaring lion of a decade and more ago—the Papini of the days of *La Voce* and *Lacerba*. What is the thunder in his latest book? Who was this mighty monster, Gog, giant king of Magog, emblem of destruction to the chosen people of God? He was Satan himself at the head of the monstrous races of Scythians. Here, Gog, short for Goggins, is represented as a half-savage who, after acquiring illimited

wealth in America, goes in search of excesses. To what abnormal and abstruse ends go wealth and power in the hands of an uneducated and restless beast, a seeker of strange situations, and of the spectacular? Seventy topics are discussed in the philosophic vein, with Gog now playing the spectator, now the performer. Withal, Papini disapproves of the trend to modernity toward which contemporary civilization is pointed.

*Beati misericordes* (Turin), a novel of sound composition, was put out by Giuseppe Marpurgo. Excellently narrated, the novel's chief merits lie in spiritual and human values. It might be called a study in morality and humanity. Four beings are throttled in episodes where destiny plays at once the tempter, the soother, the crucifier. Its plot is spun on a four-cornered affair, with a poetic mother, an uncultured husband, and a sympathetic and tender lover to make up the triangle. About this triangle an illegitimate son plays a principal rôle.

Two books of Delfino Cinelli, *The Career of Riccardo Bonòmini* (Milan) and *Five Thousand Lire* (ib.), may be discussed. *The Career of Riccardo Bonòmini* is couched in an atmosphere of cosmopolitanism. It was composed, on the whole, in the form of philosophical dialogues,—or call them, if you will, literary quibblings. Its style, with a slight tendency to prolixity, did not prevent the book, as a whole, from being chatty, learned, amusing. On the other hand, when we consider *Five Thousand Lire* (*Cinquemila lire*; Milan), Cinelli's last book, we find a novel couched in realism on a provincial background.

A historico-regional novel was contributed in Commandè's *Don Giovanni Malizia* (Palermo). Here Sicily of 1840 or thereabouts is depicted; Sicily after the Bourbonic Restoration when (be it or be it not the germ of the Mafia) law and command passed by tacit understanding into the jurisdiction of powerful personalities, let us say, of the Francesco Crispi type, or the Giovanni Malizia type as portrayed in the present volume.

Among the most important prizes awarded, the "Bagutta" went to Gino Rocca for his *Gli ultimi furono i primi* (*The Last Were First*; Milan), a novel dedicated to "Venice, the Immortal City." It deals with the Venice of some distant future epoch. The story centres about a man whose nostalgia for the poetic and the beautiful makes him live outside the world of reality. His world is in the realms of the arbitrary; it is one of beauty, though permeated with an atmosphere of melancholy. The novel, fragmentarily composed, is difficult to follow, as is also its style, which shows imprints of forcefulness and artistry.

The Società Editrice Internazionale awarded Milly Dandolo a prize of 10,000 lire for her book, *Cuori in Cammino*, a novel for youths. It is a work along simple lines, as is to be expected, not excluding, however, moments of life, poignant and inspiring. It tells the story of a brother, who, fired with an undefinable thirst for adventure, sets out with his sister in quest of their father, lost, missing or killed in the World War.

The Mondadori Academy prize went to Fernando Palazzi for his novel, *Storia amorosa di Rosetta e del Cavalier di Nérac*. Couched in an eighteenth-century setting it offers a dazzling and intriguing picture of a "yesteryear" with its adventures and colorful romance. Written in a straight-forward style, plus comic motives, it offers pleasant reading. Bruno Barilli's prize

book might be inserted, though its content does not fall strictly under fiction. *Il paese del melodrama*, the book in question, was composed by the author on a scrapbook while he attended opera performances at a large metropolitan theatre.

**SHORT STORIES.** Luigi Tonelli who devotes most of his time to studies in literature assembled a book of short stories in *Felicità perdute* (Lanciano). The themes, in cursory style, are varied and flexibly handled. In spite of an apparent note of pleasantness the undercurrent borders on the seriousness of life, and, sometimes, on its futility. The publishing house of Alberto Stock of Rome launched a series of "Romanzi Brevi," long-short stories gotten up in attractive jackets. Among the first batch we had Massimo Bontempelli's *Mia vita morte e miracoli*, in which the author sets aside his paradoxical mood and jots down in story form a few phases of his own life. In this series we had also Lucio D'Ambra's *Storia di "Monsieur le Vent,"* a story with a cosmopolitan setting.

Under this heading it is opportune to include several books of delectable memoirs in the story mood. The first, *Cose viste* (Milan), by the eminent critic, Ugo Ojetti, reflects, perforce, the eclectic personality of the author,—a personality whose refinement and taste account for the aesthetic values of the whole book. *Cose viste*, (*Things Seen*), comprises some twenty varied topics dating from 1928 to 1930. The chapter on Toscanini, a study of the maestro's wonderful hands, is as artistic as it is fascinating. This volume made up the fifth in Ojetti's series of *cose viste*.

The second volume we wish to discuss in this connection was assembled by Marino Moretti,—*Via Laura* (Milan). When contrasted with the foregoing book it discloses its difference in that it is chiefly in the subjective mood.

**THEATRE.** In view of the paucity of plays, published or staged, the theatrical season was rather quiet. In fact, it was disappointing when we consider the liveliness of the previous season,—a season crowned with three Pirandellion successes. Sabatino Lopez, in conjunction with Eligio Possenti, staged *Fuorimoda* (*Out of Date*), a vehicle which furnished the stellar actor, Ermete Zacconi, a character sketch of some importance. Sabatino Lopez, too, assembled a group of one-act plays in *Le bianche e le nere*,—six plays, thin in literary value but strong in technical conception. Sem Benelli furnished two plays contained in one volume, *Eroi* and *Madre Regina*. *Eroi*, a war drama, sketches the fortitude of the private, Bonacchi, representative of thousands of others from all lands and all creeds. This play is to be added to the already swelling list of war dramas of which Sherriff's *Journey's End* topped the list. *Madre Regina* is a play depicting a revolution (Russia) and glorifying the inviolability of mother love.

Giannino Antona Traversi-Grismondi's *Le sale di Augia* (*Augean Drawing Rooms*) is a dramatic satire on present day society. The play calls for a prologue by the director as a sort of warning that there is to be portrayed some prevalent social conditions which need as much cleansing as the Augean stables. The adjective he applies to these immoral, or amoral, social conducts is "putrid," or nothing short of it. Certainly the play is handled in a novel way; it is worthy of being staged in spite of its huge list of *dramatis personæ*, impracticable from the

point of view of modern stage craft. Attention may be called to Samuel Putnam's English translation of Pirandello's *Come tu mi vuoi* (*As You Desire Me*), which is considered far superior to the New York stage production of recent date. For a discussion of this and other plays of Pirandello see *The Romanic Review*, xxii, 1, Jan.-Mar., 1931.

**POETRY.** Two books of verse stood out among the rest. These were contributed by Ada Negri and Francesco Pastonchi, both poets of long standing. In Italy, Ada Negri occupies a place in poetry comparable with that occupied by Grazia Deledda in prose. Ada Negri's verses collected in *Vespertina* might be called prayers at eventide, for their spirituality, reflection, and resignation. The same sense of sincerity and loftiness characterized the authoress's early poems in *Fatalità*.

... La bontà di Dio  
discenderà sul mio morire. Calmo  
sarà il mio trapasso: pari a un calmo sonno.  
Mi sveglierò senza il mio corpo, in una  
strada del cielo, incoronata d'astri.  
E non più sofferenze e non memoria  
né desiderio più. Pace soltanto.

The other volume of poems, Pastonchi's *I versetti*, derives its title from a Catullian motive, "scribens versiculos . . ." It consists of varied verse, intimate or descriptive, with here and there an ever so light a note of sarcasm. Women viewed from various aspects make up the bulk of content matter as well as furnish the book its leitmotif:

Una donna  
Incontrarti è un bene,  
Scampi tu dallo scempio  
di queste aride superfici  
striate d'artificial  
miseri. . . .

Two small but decorous volumes of poetry issued from Giulio Preda's *Collection of Poetry*. The first was Riccardo Balsamo Crivelli's *Cammin lungo*, poems in a versatile vein. In addition to poems in satire and burlesque, there are several sketches, one, *The Poem of Jesus*, and the other, *The Fable of Calugino*. Giuseppe Ungaretti's *L'Allegria* offers a more difficult task to fathom the author's ideas. Mostly in blank verse, the poems are terse and emotional. Two or three words constitute a line for meaning.

**CRITICISM AND VARIA.** Among other studies, the first was a contribution of Benedetto Croce, a booklet of 90 pages, *Introduction to a History of Europe in the Nineteenth Century*. This study is a second draft of a recent limited edition of the author's lecture delivered in February before the *Accademia di Scienze morali e politiche della Società Reale di Napoli*. Then there was a series launched by the publishing house of Sandron of Palermo, under the editorship of Egisto Roggero. They are studies in the form of booklets, under title of *Collezione Scientifica del Novecento*. The outlines on hand are Manfredi Gravina's *Italian Problems Beyond the Alps and Beyond the Seas*, Eugenio Giovannetti's *The Cinema and Mechanical Arts*, and Clemente Prepositi's *La guerra nel cielo*.

There was a veritable avalanche of biographical writing on D'Annunzio. It is hard to justify so much biography on the poet at the present moment. The remunerative reason can be of slight import, except perhaps in the event of the famous poet's death. Further conjecture would be beside the point. Angelo Sodini's *Ariel Armato* (Milan) is valuable for its factual and enter-

taining information. It was awarded the Enrico Garda prize of 50,000 lire. A disciple and admirer of D'Annunzio, Sodini has fallen into the inevitable by portraying the poet more or less at his best. Otherwise the material issues from firsthand sources. The other biography is in English, *Gabriel the Archangel, A Life of Gabriele D'Annunzio*, under the joint authorship of Federico Nardelli and Arthur Livingston. In this biography D'Annunzio is treated at his best and at his worst—he has his praise and his flaying. The composition is set off in cursive style; the episodes appetizingly told. The biography in question has some new "slants" on the poet.

A few works falling under no special category may be mentioned: First,—Adriano Tilgher's *Work* (New York), translated masterfully from the Italian (*Homo Faber*, Rome, 1929) by Dorothy Canfield Fisher. It is an historical interpretation of work throughout the ages, defined from the point of view of the Greeks, Hebrews, Romans, Christianity, Fascism, Sovietism, among others. For a résumé of Italian publications and literary activities during 1930 there were the year-books *L'Arco Libro* (Milan, 1931). Both year-books are attractively gotten up with numerous illustrations, caricatures, facsimiles, and other features. The work of the splendid *Enciclopedia Italiana*, started several seasons before by the Istituto Treccani, proceeded regularly with the issuance of a volume quarterly. The set was to be completed by 1937. The editorship was under Giovanni Gentile and Tuminelli. Lastly, but certainly not in importance, Joan Redfern's translation of Francesco De Sanctis's monumental *History of Italian Literature* (New York) containing an introduction by Benedetto Croce must be mentioned. Long indispensable to the Italian scholar, this translation was destined to render adequate service to the English speaking public.

**ITALIAN SOMALILAND**, so-mä'le-länd. An Italian colony extending along the east coast of Africa from British Somaliland on the northeast to Kenya on the southwest, and bounded on the north by Ethiopia. Area, approximately 190,000 square miles; population at the census of 1929, 900,000, including, at the end of 1930, 1856 Europeans. Mogadiscio, with a population of about 28,000, is the capital.

**ITALY.** A constitutional monarchy of southern Europe, comprising, besides Italy proper, the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain, and arrangement with Yugoslavia in 1920. Capital, Rome. Reigning King in 1931, Victor Emmanuel III.

**AREA AND POPULATION.** On Jan. 1, 1915, Italy had an area of 110,632 square miles and a population of 36,120,118. According to a census and survey of 1921, the area had increased to 119,710 square miles, 9078 square miles having been acquired as a result of the World War, and the population was approximately 38,710,576. The census of Apr. 21, 1931, showed a total population of 42,118,435, or a gain of 3,407,859 in the preceding decade, making Italy third in population rank among the nations of Europe. In the ten-year period the population had increased 6.1 per cent, as compared with a 6.8 per cent increase between 1911 and 1921 and 6.5 per cent between 1901 and 1911. Alone among the Great Powers of Western Europe, Italy registered

no marked decrease in the birth rate after the World War. The birth rate in 1930 was 26 per 1000 of population, as against 25.1 in 1929 and an average of 26.7 for the five years 1925 to 1929. Deaths averaged 13.7 per 1000 in 1930, 16 in 1929, and an average of 16.2 for the period 1925-29. The average annual natural increase in population was 422,475 between 1925 and 1929. In 1930, however, the natural increase was estimated at 1,365,000. The net annual population increase in Italy was aided by the restriction of emigration. The net loss of population through emigration previous to the World War was from 300,000 to 400,000 annually. In 1930 emigrants numbered 280,097 and the number of Italians returning from other lands was 129,022, making a net loss of 151,075.

The population of the 12 leading Italian cities at the 1931 census, with figures for 1921 in parentheses, was: Rome, 1,004,028 (691,314); Milan, 993,496 (718,304); Naples, 843,073 (780,220); Genoa, 607,650 (553,999); Turin, 596,566 (502,274); Padua, 126,505 (112,021); Palermo, 389,933 (400,348); Florence, 316,193 (253,565); Venice, 256,144 (171,665); Trieste, 249,495 (238,655); Bologna, 245,647 (210,969); Catania, 226,800 (255,394). Of the total 1931 population, 7,152,875, or 17.37 per cent, were concentrated in the 22 cities of more than 100,000 population; 2,224,631, or 5.4 per cent, lived in 34 cities of between 50,000 and 100,000; and 1,171,419, or 2.85 per cent, inhabited cities of less than 50,000. The 92 cities of every description contained 10,548,925 inhabitants, or 25.61 per cent of the entire population. All 1931 census figures are provisional.

**EDUCATION.** About 27 per cent of the Italian population was illiterate in 1921, as compared with 38 per cent in 1911. Under the Fascist régime, illiteracy has been sharply reduced. Of the 4,800,000 children of school age in 1929-30, more than 4,000,000 were in public primary schools and about 300,000 in private schools, leaving approximately 500,000 not receiving instruction. In 1928-29 there were 239,991 enrolled in secondary schools and 26,932 in the 21 state and four free universities.

**PRODUCTION.** More than 50 per cent of the population was directly dependent upon agriculture in 1930, although industry was of increasing importance in the national economy. Arable land comprised about 32,249,000 acres, or 42 per cent of the total area. Farm production in 1929 was valued at 25,000,000,000 lire (about \$1,315,000,000). The area and production of the principal crops in 1929 and 1930 are shown in the accompanying table from the *Commerce Year-book* for 1931.

Although its population is about the same as that of Great Britain and France, Italy is industrially much weaker because of the lack of the natural resources necessary to industry. In 1929, Italy imported 11,300,000 metric tons of coal, coke, and briquets valued at \$81,320,000. The rapid expansion of hydro-electric power production, however, had displaced a coal consumption of 9,000,000 metric tons annually by 1930. In that year, new units completed added 640,000,000 kilowatt-hours to the combined capacity of hydro-electric plants, and new units with a total of 1,540,000,000 kilowatt-hours capacity were under construction for completion in 1931 and 1932. The total generating capacity of all Italian electric power plants on Nov. 30,

## ITALIAN CROPS: AREA AND PRODUCTION

§ Unit, gallon of wine.

\* Unit, pound.

† Thousands of units—bushels except as indicated.

1930, was 4,133,000 kilowatts, or 10 per cent more than on the same date of 1929.

Iron resources are limited also. The production of pig iron in 1930 was 534,293 metric tons, compared with 678,492 tons in 1929 and 507,611 in 1928. Crude steel output was 1,774,094 tons, as against 2,148,567 tons in 1929 and 1,962,632 in 1928. Imports of iron and steel products in the same year totaled 1,275,875 metric tons, while exports were only 9351 tons. Output of Sicilian and Italian sulphur during 1930 totaled 372,250 metric tons, or about 26,920 tons more than the 1929 output. Production of other leading minerals in metric tons in 1930, with 1929 figures in parentheses, was as follows: Iron ore, 716,590 (715,171); lead ore, 50,056 (53,496); zinc ore, 185,897 (223,907); iron pyrites, 713,500 (664,543); lignite, 559,500 (782,045); marine salt, 540,900 (562,586); metallic mercury, 1925 (1998); aluminum, 9000 (7373); lead, 24,500 (22,650); ferro-alloys, 43,707 (55,378); coke (metallurgical), 800,085 (791,607).

Along with the rest of the world, Italy suffered severely from the effects of the economic depression in 1930 and 1931. Despite its economic vulnerability, however, it was not as hard hit as Great Britain and Germany. Both wholesale prices and the export trade fell off about 20 per cent during 1930, but the volume of domestic production held up fairly well. Textile factories were operated at 15 to 18 per cent below capacity. Rayon production (1930) was 66,307,000 pounds (71,060,000 pounds in 1929); automobiles, 36,532 (54,100 in 1929); raw silk, 12,170,000 pounds (10,648,000); cotton yarn, 391,000,000 pounds (469,579,000); cotton cloth, 875,000,000 (1,093,600,000); wool textiles, 65,000,000 (76,575,000).

**COMMERCE.** During 1930, Italian imports for consumption and exports of Italian products each declined by 20 per cent, but the unfavorable trade balance for the year was only \$274,000,000, as against \$339,000,000 for 1929. Imports for consumption were valued at 17,325,000,000 lire (about \$911,000,000) and exports of domestic products at 12,115,000,000 lire (about \$637,000,000). Comparative figures for 1929 were: Imports, 21,665,000,000 lire (about \$1,140,000,000); exports, 15,236,000,000 lire (about \$801,000,000). In 1931, according to preliminary returns, imports for consumption totaled \$610,000,000 and exports \$530,000,000, representing declines of 33 and 17 per cent, respectively, from the imports and exports figures of the year 1930.

The United States in 1930 remained the largest supplier of Italian imports, but furnished only 14.6 per cent of the total, as against 16.7 per cent in 1929 and 18.3 per cent in 1928. Germany occupied second place, with 12.6 per cent in both 1930 and 1929, followed by the United Kingdom, with 9.6 per cent (8.1 in 1929), and France, with 8.7 per cent (9.6 in 1929). Germany took 12.8 per cent of all exports (11.9 in 1929); the United States, 10.9 per cent (11.5); France, 10.2 (8.8); and the United Kingdom, 9.8 (9.8). Wheat, raw cotton; coal, coke, and briquets; iron and steel, machinery, wood, and chemicals were leading imports, in the order named. Cotton fabrics, raw silk, silk and rayon fabrics, fruits and nuts, raw or dyed rayon, and wool fabrics, were the chief exports, in order of value.

**FINANCE.** The budget and supplementary budget estimates for the fiscal year ended June 30, 1931, placed total receipts at 21,524,354,792 lire and total expenditures at 21,198,332,440 lire. Closed accounts showed actual receipts of 20,083,633,979 lire and actual expenditures of 20,979,522,312 lire, leaving a deficit for the year of 895,888,333 lire, as compared with an estimated surplus of 326,022,352 lire. In the previous year, there was a surplus of 150,059,232 lire, the receipts totaling 19,896,938,440 and expenditures 19,746,279,208 lire. The 1930-31 receipts were 1,440,720,813 lire less than anticipated, while expenditures were 218,810,128 lire more. The above figures exclude capital account. Capital receipts for the year, including a new internal loan of 5,350,174,070 lire, totaled 5,920,263,081 lire and capital expenditure was 4,984,248,997 lire. The lira is equivalent to \$0.0526 at par and exchanged at \$0.0524 in 1930.

The budget for 1931-32 estimated receipts at 23,695,000,000 lire and expenditure at 24,271,000,000 lire. On June 30, 1931, the internal debt totaled 91,288,000,000 lire, of which 5,339,000,000 lire represented the floating debt. This compared with a total internal debt of 88,102,000,000 lire on June 30, 1930. The foreign debt on June 30, 1931, stood at 1,736,104,100 lire (about \$91,373,900), with interest amounting to 121,527,287 lire (about \$6,396,173).

**COMMUNICATIONS.** At the beginning of 1930, there were 10,407 miles of state-owned and 3134 miles of privately owned railway lines. Work on a new direct electric line between Florence and Bologna was approaching completion in 1931; the cost of the entire project was estimated at \$60,840,000. The double-tracking of the main line between Turin and Rome neared completion also. Receipts from the operation of the state railways in the fiscal year 1929-30 totaled 4,839,000,000 lire; expenditures, 4,747,000,000 lire. National highways in June, 1930, extended 125,626 miles, of which about 14,430 miles were macadam.

The mercantile marine at the beginning of 1930 consisted of 1396 steamers of 3,212,302 gross tons (including 152 motor vessels of 439,682 gross tons and 2692 sailing vessels of 168,202 gross tons). In 1930, a total of 14,931 vessels, of 21,203,000 net registered tons, cleared Italian ports in the foreign trade, and 15,486 vessels, of 21,807,000 tons entered.

**ARMY AND NAVY.** See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

**GOVERNMENT.** The Italian Constitution vests executive power in the King, acting through a

responsible ministry, and legislative power rests conjointly in the King and a parliament of two chambers. The Grand Council of Fascism is the supreme body which "controls all the activities of the régime," under a law promulgated in December, 1928. It "designates" the deputies for the lower chamber and "must give its opinion on all bills dealing with constitutional issues." For governmental system, see 1930 YEAR BOOK.

The Cabinet in 1931 was composed as follows: Prime Minister, Chief of the Government, and Minister of Interior, Benito Mussolini; Foreign Affairs, Dino Grandi; War, Pietro Gazzera; Navy, Giuseppe Sirianni; Air, Italo Balbo; Public Works, Araldo Di Crollanza; Corporations, Giuseppe Bottai; Education, Balbino Giuliano; Agriculture and Forests, Giacomo Acerbo; Colonies, Emilio de Bono; Finance, Antonio Mosconi; Justice, Alfredo Rocco; Communications, Constanzio Ciano. On Aug. 18, 1931, Premier Mussolini announced that the Council of State, which examines bills preliminary to their submission to Parliament, would thereafter be directed by him.

### HISTORY

**FOREIGN RELATIONS.** The bellicose note which pervaded Fascist diplomacy during 1930 largely disappeared in the following year and Italy emerged as a leading proponent of armament limitation and European peace. No such tendency was indicated at the beginning of 1931, however. On January 20, the Franco-Italian naval truce was ended and amid mutual recriminations the two rivals prepared to resume their naval building programmes (see FRANCE under *History*; **NAVAL PROGRESS**).

Times, however, were unpropitious for a continuation of the aggressive foreign policy upon which Mussolini embarked in 1930. He then deliberately challenged France's hegemony in Europe by assuming leadership of the agitation in Germany and other ex-enemy countries for the revision of the Treaty of Versailles. But France in 1931 occupied an unassailable position. Her gold resources and financial strength forced Mussolini's prospective allies—Germany, Austria, and Hungary—to turn to her for aid in the financial crisis of the spring and summer. France's hold on her allies of the Little Entente was cemented even more tightly by generous loans.

Meanwhile Italy was struggling to balance her budget, while carrying forward a great unemployment relief programme of public works. She had no money to spare for a costly armament race. Moreover, the Fascist régime became fully occupied at home in a serious dispute with the Vatican. A recrudescence of anti-Fascist activities indicated that all might not go well if Italy became engaged in a foreign war. And finally, the Austro-German Customs Union proposal aroused Italian fear that a revision of the Versailles boundary agreements along the lines desired by Germany and Austria would be more disadvantageous than advantageous to Italy's future. The Fascist Government joined with France in contesting the legality of the Customs Union project, which would have made the southern boundary of a greater Germany coterminous with that of Italy (see GERMANY under *History*).

Although Italy stressed the necessity of peace through the reduction of armaments, reparations, and war-debt payments, she did not fail to pre-

pare for eventualities. A bill introduced into the Chamber of Deputies Feb. 17, 1931, provided for the establishment of military zones on the French and Yugoslav frontiers. At the same time a proposed increase of \$5,905,000 in military expenditures for the year was announced. The Fascist press during March and April continually attacked French "militarism," particularly the extension of credits for armaments to Poland, Yugoslavia, and Czechoslovakia and the alleged development, with French aid, of the great Skoda iron and steel factories in Czechoslovakia as a source of armament supply for the Little Entente. Nevertheless, Italy slackened her authorized naval construction shortly before the visit to Rome on July 8 of the American Secretary of State, Henry L. Stimson, and gave him assurances of Italy's full coöperation in steps toward the limitation of armaments at the Disarmament Conference scheduled for February, 1932, at Geneva. Italy had previously accepted and put into effect immediately President Hoover's moratorium proposal (see REPARATIONS AND WAR DEBTS).

Statements of Premier Mussolini during the summer were strikingly peaceful, compared with his militant remarks of the previous year. Speaking at the opening of the great Ravenna aqueduct on August 1, he said the Italian people wanted peace "not because we fear the risks of war and the uncertainties of battle, but because we are engaged in a great work, and wish as soon as possible to relieve the Italian people of the hardships of the present." In an article published in the *Boersen-Courier* of Berlin August 7, Mussolini said:

The moment has come when we must find some means of putting our houses in order or collapse under the burdens of military expenditures. . . . The thirteen years (since the World War) have brought nothing but empty peace phrases and the nations have gone on constructing battle-ships, strengthening their military forces, and organizing air fleets. The European policy of balance of power must be done away with if peace is to come. For the first time a different view is noticeable now which should inaugurate an epoch of real peace.

About the same time (the first week in August), Chancellor Brüning and Foreign Minister Curtius of Germany made an official visit to Rome, where they were received by Mussolini and the Pope. Foreign Minister Grandi returned the visit on October 25. His conversations in Berlin were directed toward a preliminary understanding between Italy and Germany on the questions of disarmament, and the cancellation of reparation and war debts. In several speeches during the year Mussolini stressed the necessity for revision of the Versailles Treaty, particularly the boundary settlements.

Addressing the Assembly of the League of Nations on September 8, the Italian Foreign Minister proposed an immediate general agreement for the suspension of further work on armament programmes to last at least until the end of the 1932 Disarmament Conference. At the same time he announced Italy's ratification of the optional clause of the World Court statute and adherence to the general act for compulsory arbitration (see LEAGUE OF NATIONS; WORLD COURT; DISARMAMENT).

In preparation for the Disarmament Conference, the Italian Foreign Minister held conversations with representatives of the other European Foreign Offices during the summer and fall of 1931. He visited the United States from

November 17 to 27, discussing disarmament and other related problems with President Hoover and Secretary of State Stimson.

Italy found herself in disagreement with France also with regard to methods of economic collaboration in the rehabilitation of Europe's agriculture, industry, and trade. The Italian plan was presented by Signor Grandi before the Commission of Enquiry for European Union on May 16, 1931 (see UNITED STATES OF EUROPE). In contrast to the French plan, which sought to secure preferential treatment for agricultural products by means of a multi-lateral agreement among the European states, Italy favored a system of bilateral preferential agreements between industrial and agricultural states. A few days previously (May 11) Italy concluded commercial agreements of this nature with Austria and Hungary. The Italian Government contracted to purchase specified quantities of Austrian timber and Hungarian farm products in return for the purchase by the two countries of specified quantities of Italian fruit, silks, hats, automobiles and motor tractors. There was to be no tariff reductions on goods thus exchanged, but the duties collected were to be utilized as credits for the stimulation of mutual trade. Reductions in railway freight charges and other transportation facilities were provided.

Another important development in the field of commercial relations was the conclusion of a new trade agreement with the Soviet Union on Apr. 27, 1931. This took the place of an agreement signed Aug. 2, 1930, according to which Russia agreed to buy Italian products to the value of 200,000,000 lire (about \$10,480,000) during the year ended July 31, 1931. By the new pact, Russia undertook to purchase additional Italian products to the value of 350,000,000 lire (about \$18,340,000), the original credit having been exhausted in five months. Credit periods ranging up to 52 months in the 1930 agreement were reported to have been extended by the 1931 agreement. The Italian Government guaranteed payment of 75 per cent of the total value of exports to Russia. Automatic annual renewal of the pact was provided for, unless three months' termination notice was given.

The Italian Ambassador at Washington sent an official protest to the Department of State in January after Maj. Gen. Smedley D. Butler of the U. S. Marine Corps in an address at Philadelphia January 19 charged Mussolini with running over a child during an automobile trip in Italy and with refusing to stop his car. The American Government submitted a formal apology after Mussolini had publicly denied the charge. A scheduled court-martial of General Butler was canceled at the request of the Italian Ambassador and the incident was closed.

Italy displayed her continued interest in Albania by agreeing in June to lend that country without interest 10,000,000 gold francs annually for 10 years, the money to be repaid whenever the Albanian budget permitted of it (see ALBANIA).

DISPUTE WITH THE VATICAN. A serious controversy between the Fascist Government and the Vatican broke out in April of 1931 and continued until September 3, when settlement of the dispute was officially announced. The immediate issue was the conflict over the jurisdiction which both the Church and the State claimed to exercise in the sphere of education. But behind this was the determination of both

parties to mold the Italian people in accordance with their respective ideals.

About the middle of February, the Pope in an address to Lenten preachers, censured the Italian Government for encouraging "profanation of the Sabbath by taking young men out of the churches into athletic or recreational activities." He deplored the government's action in permitting immoral newspapers and shows and in allowing Protestants to carry on propaganda in Italy, asserting that in so doing it was violating the Lateran Accord of 1929. Government officials denied that any violation of the Lateran Accord was involved. The charges and countercharges which followed gradually assumed a more serious tone. During April Deputy Giovanni Giuriati, secretary of the Fascist party and after Mussolini the most influential member of the government, in a speech at Milan accused the Catholic Action societies of political activities intolerable to the Fascist State. Some of the Catholic Action leaders, he said, were members of other anti-Fascist organizations.

The Pope responded (April 27) in a public letter to Cardinal Schuster, Archbishop of Milan, in which he attacked Fascist practices as "inspiring hate and irreverence" in youth and "rendering almost impossible the practice of religious duties."

A month later (May 26), the Fascist daily *Lavoro Fascista* charged Catholic Action leaders with flagrantly violating Article 43 of the Lateran Accord, which bound the church organizations not to engage in political activity. The newspaper described an alleged private meeting of Catholic Action in Rome in April, at which Dr. Rossi, vice president of the organization, was said to have referred to Fascism as "the enemy." Dr. Rossi and Mgr. Pizzardo, Papal Under-Secretary of State and Assistant Secretary-General of Catholic Action, were quoted as urging Catholic Action to be prepared to repress anti-Catholic manifestations and, if necessary, to seize power. Publication of these charges was the signal for violent clashes between Fascists and members of Catholic organizations throughout Italy. Troops were called out on May 27 to repress anti-Catholic demonstrations by young Fascists, who stoned the headquarters of the Catholic Action societies and trampled upon a portrait of the Pope torn from the wall of the Catholic publishing offices in Rome. The semi-official Vatican organ, *Osservatore Romano*, which printed emphatic denials of *Lavoro Fascista's* charges, was banned from the streets of Rome.

The gravity of the dispute was emphasized May 30, when Premier Mussolini dissolved all branches of Catholic Action (about 500,000 members enrolled in 15,000 clubs); all Catholic clubs and three playgrounds in Rome financed by the American Knights of Columbus were closed by the police. The Pope at the same time placed Catholic Action under the direct tutelage of the bishops and canceled the Italian Eucharistic Congress scheduled for the following week. On June 1, Premier Mussolini ordered the dissolution of all organizations of Catholic youths in Italy by decree. On the same day the Pope called a consistory of the 24 cardinals in Rome, at the close of which he announced that "in view of the present dolorous circumstances" all processions and religious festivals outside the churches would be prohibited.

Although a halt was called to editorial

polemics on both sides, the controversy raged throughout the summer, with frequent exchanges of notes between the Vatican and the Italian Government and official statements by both parties. Several times a severance of all diplomatic relations appeared imminent. A feature of this debate was the Pope's encyclical letter of July 4, in which he presented a detailed defense of Catholic Action and unqualifiedly denied Fascist charges that Catholic Action had participated in political activities.

Meanwhile negotiations for a settlement of the dispute were continued and on September 2 the Italian Government formally announced that the controversy was at an end. The settlement was achieved through a reinterpretation of Article 43 of the Lateran Concordat. The government agreed to permit the reopening of Catholic Action clubs on condition that their activities would be confined to "occupations of a recreative or educational character with a religious purpose." Catholic Action clubs were forbidden to engage in trade-union activities and they were placed under the jurisdiction of the bishops instead of under the former control board of laymen, some of whom had been accused of political propaganda. No anti-Fascists were to be chosen directors of the clubs. Catholic Action was pledged to abstain from politics and "from all those things which by tradition properly belong to political parties." Catholic Action associations were to have no flags except the national flag and religious banners and were to refrain from any athletic and sporting activity. The educational spheres of the two parties were more clearly defined by the provision that material, physical, and athletic education was to be everywhere conducted by the Fascist Balilla and Avanguardisti, while religious and spiritual instruction was to remain in the hands of priests, who were to be appointed as chaplains in all sections of the two Fascist youth organizations. Catholic club properties were immediately returned to the owners and reopened.

The chief concession made by the Vatican was that the Catholic Action branches must abstain from athletic and sporting activities. But the Vatican won its primary contention through the retention of the right to supervise activities of an "educational character with a religious purpose." Concluding phases of the dispute were marked by the resignation of Major Giuriati, secretary of the Fascist party; the Pope dismissed the Jesuit Father Enrico Rosca, editor of the Catholic review *Civiltà Cattolica*, whose writings had displayed a marked antipathy toward Fascism, and Count dalla Torre, editor of *Osservatore Romano*. Achille Starace, vice president of the Fascist party for eight years, succeeded Giuriati as secretary on December 8. Later the Holy See announced that Catholic university professors might take the oath of allegiance to the Fascist régime, as it was "not a political party but the government of the nation." Out of more than 12,000 professors, only 11 refused to take the oath.

INTERNAL DEVELOPMENTS. The Fascist régime, as in previous years, severely punished attempts to organize public resistance against it. Michele Schirru, a naturalized American citizen, was executed by a firing squad May 29, following his conviction on a charge of conspiring against the life of Premier Mussolini. A special tribunal on May 30 sentenced five "intellectuals," who admitted opposing Fascism and working to dis-

credit it, to prison sentences of from 6 to 20 years. Two others tried on the same charge were acquitted. On June 5, six men, several of them Communists, received sentences ranging from 3 to 12 years on a charge of placing a bomb which killed 20 persons and injured 23 others as King Victor Emmanuel was inspecting the Milan fair Apr. 12, 1928. The King narrowly escaped injury. On September 1, Professor Leo J. Moulin, a Belgian, and four others were tried by the special tribunal for the defense of the state, the charge being that they introduced into Italy and distributed anti-Fascist propaganda with the object of causing an insurrection. (See **BELGIUM**, under *History*).

These drastic penalties failed to prevent a series of bombings in various Italian cities during the year, which cost the lives of a number of Fascist officials. In America it was learned that on May 20, Arturo Toscanini, Italian conductor of the New York Philharmonic Orchestra, had been attacked and beaten by a Fascist mob at Bologna. Toscanini had previously refused the request of Leandro Arpinati, Under-Secretary of State for the Interior, and the prefect of Bologna, that he play the royal march or the Fascist hymn at his concert.

Meanwhile the Fascist Government was actively developing its programme of public works. With the opening of the Ravenna aqueduct, fresh water was brought into that city for the first time since the Roman aqueducts fell into decay in the Middle Ages. The launching of the 50,000-ton Atlantic liner *Rex* on August 1 and the rebuilding of nearly 4000 miles of highway were other evidences of Fascist energy. The Ministry of Public Works announced that from Oct. 28, 1922, to Dec. 31, 1930, it had spent about \$1,345,000,000 on public improvements. The Ministry of Communications announced Aug. 29, 1931, that the government would spend \$145,000,000 during the approaching winter on public works projects which would give employment to 250,000 men. The projects included work on railways, hydro-electric plants, public buildings, land reclamation, and the further restoration of earthquake areas. At that time it was stated that 1,863,600 acres in the Pontine marshes had been drained, while 2,146,602 acres were in course of drainage, and 835,765 remained to be drained. Widespread popular support of the Fascist régime was indicated by the success of a government internal bond issue floated in May to refund 4,000,000,000 lire (about \$209,000,000) of the debt due in November. The issue was oversubscribed 75 per cent, according to the Finance Minister. On Dec. 31, 1931, there were 982,321 unemployed in Italy, compared with 878,207 on November 30.

The budget showed serious deficits during the first two months of the 1931-32 fiscal year. Accordingly the government on September 25 levied a 15 per cent ad valorem tax on all imported goods, in addition to tariffs already in force. Deaths of two important Italians—the Duke of Aosta and Tommaso Tittoni—occurred during the year. On December 21 occurred the sudden death of Arnaldo Mussolini, brother of the Premier. (See biographies of each.)

To protect Italy against the possible withdrawal of short-term loans, such as had precipitated financial crises in Germany and Great Britain, the Banca Commerciale Italiana, the largest bank in Italy, on November 3 announced

a reorganization which provided it with liquid capital sufficient to cover all short-term obligations. The banking and commercial activities of the bank were separated. To aid in thawing out "frozen" credits, a new \$25,000,000 credit organization was established by the Cabinet November 9. See **CYRENAICA**.

Consult Bolton King, *Fascism in Italy* (London, 1931); Vera Micheles Dean, "Fascist Rule in Italy," *Foreign Policy Reports*, Apr. 15, 1931, vol. vii, no. 3.

**IVORY COAST.** A colony in French West Africa situated between Liberia and the Gold Coast (British). It has an area of about 121,590 square miles and a population of 1,724,545 (1926 census). Capital, Bingerville. See **FRENCH WEST AFRICA**.

**JADWIN**, LIEUT. GEN. EDGAR, U. S. A., RET. An American soldier and military engineer, died in Balboa, Canal Zone, Mar. 2, 1931. He was born in Honesdale, Pa., Aug. 7, 1865, studied at Lafayette College in 1884-86, and was graduated from the U. S. Military Academy in 1890. After serving in the Spanish-American War and in various engineering posts, he was engaged in the construction of the Panama Canal.

During the World War General Jadwin held the temporary rank of brigadier general and organized and commanded the 15th U. S. Engineers, the first American regiment to pass under arms through England in 1917. He was at first, director of light railways and roads for the A.E.F. in France and later directed a general construction programme employing 160,000 men. He was a member of the American Mission to Poland and observer in the Ukraine in 1919. Returning to the United States, he became engineer of the 8th Corps Area at San Antonio, Tex. (1920-22), division engineer of the Southeast Division at Charleston, S. C. (1922-24), assistant to the Chief of Engineers with the rank of brigadier general (1924-26), and in 1926, chief of engineers with the rank of major general. In that capacity, he formulated the Mississippi River flood-control plan that bears his name. He was retired Aug. 7, 1929, with the rank of lieutenant general. He was senior member of the American section, Joint Engineering Board, St. Lawrence Waterway Project; chairman of the reorganized Federal Power Commission; consulting engineer to the Meadows Reclamation Commission of New Jersey; and chairman of the Inter-ocean Canal Board. He contributed articles on military engineering to the **NEW INTERNATIONAL ENCYCLOPEDIA**.

**JAIL OUTBREAKS.** See **CRIME**.

**JAÍME**, h'má, (JAÍME JUAN CARLOS ALFONSO FELIPE), Prince of Bourbon, Duke of Madrid. A Carlist claimant of the Spanish throne, died in Paris, Oct. 2, 1931. He was born in Vevey, Switzerland, June 27, 1870, son of the Bourbon Prince known as Don Carlos and of Marguerite of Parma. After receiving a military education in England and Austria, he entered the Russian army, in which he became a colonel. During the Russo-Japanese War he was a correspondent at Russian headquarters. He made his residence at Frohsdorf near Vienna for many years. On his father's death in 1909 Don Jaime became head of the royal Spanish house of Bourbon-Anjou.

**JAMAICA.** A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands;

Cayman Islands; Morant Cays; and Pedro Cays. Area of Jamaica, 4450 square miles; of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,118, including 660,420 blacks, 157,223 of mixed race, 14,476 whites, 18,610 East Indians, and 3690 Chinese; estimated population at the end of 1929, 994,419, including 17,424 East Indians.

Jamaica is primarily agricultural, the leading crops being sugar, coffee, bananas, coconuts, cacao and vegetables. In 1929-30, the area under cultivation was 828,064 acres. The 1930 sugar crop was estimated at 67,000 long tons, one of the largest on record. Imports in 1930 totaled \$28,337,000 and exports \$28,977,000, the excess of imports being characteristic of trade since 1910. The United States is the chief customer and principal source of supply. Revenue for the fiscal year ended Mar. 31, 1930, amounted to £2,292,869 and expenditure to £2,310,502. The public debt at the end of the 1929-30 fiscal year was £5,237,909. The crisis in the Jamaica sugar industry in 1930 and 1931 led the British Government to agree to suspend for 1931-32 Jamaica's annual war contribution of £60,000.

The Governor is assisted by a privy council and a legislative council of 5 *ex-officio*, 10 nominated, and 14 elected members. A resolution asking for a full representative government for the colony was introduced into the legislature in 1931. Governor-in-Chief and Captain-General in 1931, Sir R. E. Stubbs, appointed 1925. A committee of the Legislative Council recommended in 1931 that immigration from the Near and Far East be suspended for three years and that there should thereafter be a quota system.

**JAPAN.** A Far Eastern empire, consisting of the five main islands of Honshu (mainland), Hokkaido, Kyushu, Shikoku, and Taiwan (Formosa), together with some 600 smaller islands and island groups, the peninsula of Korea, or Chosen, and Karafuto (the southern half of the island of Sakhalin). Capital, Tokyo; reigning sovereign in 1931, Emperor Hirohito.

**AREA AND POPULATION.** The area of the Japanese Empire and the census populations in 1925 and 1930 are shown in the accompanying table.

#### JAPANESE EMPIRE: AREA AND POPULATION

Island	Area, square miles	Population, 1925 census	Population, 1930 census
Japan proper . . .	147,327	59,736,822	64,447,724
Chosen (Korea) . .	85,228	19,522,945	21,057,969
Taiwan (Formosa) .	13,840	3,993,408	4,594,161
Karafuto . . . . .	13,934	203,754	295,187
Total . . . . .	260,329*	83,456,929	90,395,041

\* Including Pescadores.

The Japanese government also held a 99-year lease of Kwantung (including Port Arthur and Dairen in South Manchuria) with a population of 1,327,971 (about 250,000 Japanese) in 1930, and mandated territory in the South Seas, with a population of 69,627 (about 19,000 Japanese) in 1930. The density of population per square mile for the Empire in 1930 was 347.2, while that for Japan proper was 437.4. The number of Japanese residing abroad was 762,569 on Oct. 1, 1929, including 108,639 men and 63,964 women in North America. Foreigners in Japan numbered 38,829 (2098 Americans). The average annual number of births in Japan proper during the five years 1925-29 was 2,092,822 and of

deaths 1,210,740, the excess of births being 876,082. The average annual birth rate per 1000 inhabitants for the 5-year period was 34.1 and the death rate 19.8. In 1929 the rates were 33 and 20, respectively.

The population of the chief cities at the 1930 census, with 1925 census figures in parentheses, was: Osaka, 2,453,509 (2,114,804); Tokyo, 2,070,529 (1,995,567); Nagoya, 907,402 (768,558); Kyoto, 765,142 (679,963); Kobe, 787,596 (644,212); Yokohama, 620,296 (405,888).

**EDUCATION.** Elementary education is compulsory for children between the ages of 6 and 14 and in 1927 less than 1 per cent of the population was illiterate. During the 1928-29 school year, the elementary schools enrolled 9,680,732, the secondary schools 702,978, special schools 76,920, normal schools 51,578, technical schools 274,833, and universities 61,497. There were five Imperial universities and 32 other institutions of university rank.

**PRODUCTION.** While industry has made rapid strides, agriculture in 1931 supported directly about 50 per cent of the population. Out of a total area of 94,289,000 acres, or less than that of California, there were in Japan proper in 1930, 7,847,000 acres of rice fields, 6,980,000 acres of upland farms, 4,566,000 acres of moors and pastures, and 21,266,000 acres of taxable forests. The cultivated area was less than 2 per cent of the arable acreage of the United States. About 54 per cent of the cultivated land was owned by wealthy landowners and leased, in plots averaging about 2½ acres each, to tenants who wrung a bare subsistence from the soil. Rice is the largest crop and the principal diet of the people. The value of the 1930 crop (about \$10,000,000) was over half that of all agricultural products. The area and production of the chief crops are shown in the accompanying table from the 1931 *Commerce Yearbook*.

#### CROP AREAS AND PRODUCTION: JAPAN PROPER

Crop	Area <sup>a</sup>		Production <sup>b</sup>	
	1929	1930	1929	1930
Wheat . . . . .	1,214	1,198	30,496	29,538
Barley . . . . .	2,202	2,110	80,360	72,472
Oats . . . . .	289	296	11,045	12,558

<sup>a</sup> Thousands of acres.

<sup>b</sup> Thousands of units—bushels except as indicated.

\* Unit, pound.

Next to rice, fish is the most important article of diet. Fishery products in 1930 were valued at \$150,000,000, the catch accounting for nearly one-fourth of the world supply. Mineral products are varied, but limited in quantity, copper being the only metal available in quantities more than sufficient for local needs. The value of the 1929 output was \$262,682,000. Mineral and metallurgical production for 1929 and 1930 is shown in the table on page 433.

**MANUFACTURING.** Japanese industry, as well as commerce, is largely in the hands of a few wealthy family groups. The total manufacturing output in 1929 was valued at 7,938,058,000 yen (\$3,659,445,000), compared with 7,337,954,000 yen (\$3,424,108,000) in 1928. Employees in all manufacturing plants numbered 1,824,000 (1,936,000 in 1928). Silk and cotton textiles are the predominant industrial lines. Silk yarn normally

## MINERAL AND METAL PRODUCTION: JAPAN PROPER

Product	1929	1930
Coal .....	1,000 met. tons 84,258	29,874
Iron pyrites .....	met. tons. 618,743	.....
Crude petroleum .....	1,000 bbls. 1,958	1,905
Sulphur .....	met tons. 65,464	56,000
Gold .....	troy oz. 885,078	864,292
Silver .....	1,000 troy oz. 5,163	5,127
Copper .....	met. tons. 75,469	77,911
Pig iron .....	1,000 met. tons 1,515	1,656
Steel ingots .....	do. 2,037	1,794

comprises more than 40 per cent of the value of all exports, and of this more than 90 per cent goes to the United States. Nearly a fourth of all factory workers are employed in silk filatures and about one-half of the farm families depend upon the production of silk cocoons for a substantial part of their income. In June, 1930, there were 262 modern cotton mills in Japan; cotton textiles normally comprised one-fourth the value of all exports. The 1930 production of cotton yarn was 10,080,000 pounds and of spun silk, 13,464,000 pounds; the value of cotton fabrics produced was \$253,840,000 and of silk fabrics, \$161,414,000. Rayon, iron and steel, ships, paper, flour, camphor, tobacco products, sake (rice wine), and porcelain earthenware are other leading products.

COMMERCE. Normally, the foreign trade of Japan proper aggregates about 46 per cent of the value of the domestic commerce, whereas the ratio of American foreign to domestic trade is placed at 10 per cent. Japan's national economy was consequently seriously deranged by a 31 per cent decline in the value of exports (10 per cent decline in volume) in 1930, as compared with 1929. (General exports for 1930 declined to a value of 1,469,852,000 yen from a total of 2,148,619,000 yen in 1929 (1 yen exchanged at \$0.4939 in 1930), while general imports were reduced to 1,546,071,000 yen from 2,216,240,000 yen in the previous year. The value of both imports and exports in 1930 was within close range of the trade figures recorded in the post-war depression year of 1921. The volume of exports, however, was 70 per cent greater than in 1921 and the volume of imports about 40 per cent greater. Imports exceeded exports in value by 76,219,000 yen (87,621,000 yen in 1929). Including invisible trade, however, the balance was estimated to be favorable by 50,000,000 yen, or 40,000,000 yen less than the favorable balance in 1929. The most important item of import was raw cotton, 1,262,438,000 lbs. valued at \$178,051,000, of which the United States furnished 593,282,000 lbs. valued at \$87,322,000.

The United States again held first place in Japan's trade in 1930, taking 34.4 per cent of all exports (42.5 per cent in 1929) and furnishing 28.6 per cent of its imports (29.5 per cent).

Other leading markets for Japanese exports in 1930 were China, which took 17.7 per cent of the total (16.1 per cent in 1929); British India, 8.8 per cent (9.2); Great Britain, 4.1 per cent (3.0). After the United States, British India was the leading source of supply, furnishing 11.7 per cent of all imports (13 per cent in 1929). China furnished 10.5 per cent (9.5 in 1929); Germany, 6.9 (7.1); and Great Britain, 6 per cent (7.0). Exports of raw silk in 1930 dropped 46 per cent in value and 18 per cent in quantity, compared with 1929. Silk shipments to the United States were valued at only 398,715,000 yen, com-

pared with 755,378,000 yen in 1929. Cotton textile exports declined 12 per cent in quantity and 34 per cent in value from 1929.

In 1931, exports to China decreased 36 per cent and imports from China 16 per cent, as compared with 1930. From September, 1931, when the Chinese boycott was instituted, through December, exports to China fell 60 per cent below the same period of 1930.

FINANCE. The revised budget for the fiscal year ending Mar. 31, 1932, was balanced late in 1931 at 1,397,000,000 yen, with ordinary revenues placed at 1,238,000,000 yen, and extraordinary revenues at 159,000,000 yen, including loans amounting to 123,500,000 yen. The budgets for the fiscal years 1929-30 and 1930-31 are shown in the accompanying table.

GOVERNMENT RECEIPTS AND EXPENDITURES  
[Thousands of yen: 1 yen equals \$0.4985 at par]

\* Subject to revision.

The total national debt at the end of 1930 was 6,029,162,000 yen, an increase of 123,162,000 yen during the year. On Mar. 31, 1930, with a total debt of 6,004,000,000 yen (about \$2,993,000,000), the external debt amounted to 1,447,000,000 yen (about \$721,000,000). After the removal of the gold embargo (Jan. 11, 1930) reserves of gold coin and bullion declined, the specie reserve on Dec. 31, 1931, totaling 469,549,000 yen. Gold exports during 1930 aggregated 308,634,000 yen and those during 1931, 421,539,000 yen.

COMMUNICATIONS. Railways in Japan proper in 1929 extended 12,187 miles, of which 8497 miles were government owned. In addition, the Government owned 1710 miles of line in Korea and 540 miles in Formosa. The gross receipts of public and private lines in Japan proper for the year ended Mar. 31, 1929, were equivalent to \$281,031,000. The largest railway station in the Orient was under construction at Osaka in 1931 at a cost of about \$49,000,000. The highway mileage at the beginning of 1931 was placed at 659,215 miles, of which only 35,466 miles were used for motor traffic. Four commercial air routes, with an aggregate mileage of 1888, were in operation in 1931; one linked Osaka with Dairen, Manchuria, via Seoul (Keijo), Korea. During

1930, a total of 18,818 vessels, of 58,483,000 net registered tons, entered the ports of Japan proper in the foreign trade, and 18,242 vessels, of 58,325,000 tons, cleared. On July 10, 1931, there were 523 idle steamers in Japanese ports, with a gross tonnage of 299,000 out of a total merchant marine in 1930 of 2060 vessels (of 100 tons or more), aggregating 4,316,804 gross tons.

**ARMY AND NAVY.** Military or naval service is universal and compulsory. Liability commences at the age of 17 and extends to 40, but actual service begins at 20. The peace establishment of the active army in 1930 was 15,340 officers and 195,640 other ranks. See **MILITARY PROGRESS.**

The accompanying table from the *Statesman's Year Book* for 1931 shows the classification of the Japanese Fleet for the three years ending with 1930. Also see **NAVAL PROGRESS.**

JAPANESE FLEET

	Completed at end of		
	1928	1929	1930
Battleships and battle cruisers . . . . .	10	10	10
Armored cruisers . . . . .	7	7	7
Aircraft carriers . . . . .	3	3	3
Cruisers . . . . .	27	29	32
First-class gunboats . . . . .	3	2	2

Submarines . . . . .	71	65	66*

\* Including 58 first-class and 48 second-class.

\* Including 22 first-class, 44 second-class.

**GOVERNMENT.** Executive power is vested in the Emperor who acts with the advice and aid of a ministry appointed by, and responsible to, himself; legislative power is in the Emperor and the Imperial Diet of two chambers, namely, the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering 407 members; and the Lower House or House of Representatives, elected for four years, unless sooner dissolved, and numbering 466 members. Emperor Hirohito, born Apr. 20, 1901, succeeded his father, Yoshihito, Dec. 25, 1926. The cabinet as constituted Apr. 14, 1931, was as follows: Premier, Baron Reijiro Wakatsuki; Home Affairs, Kenzo Adachi; Foreign Affairs, Baron Kijuro Shidehara; Finance, Junnosuke Inouye; War, General Minami; Marine, Admiral Baron Kiyotane Yasuho; Justice, Viscount Chiaki Watanabe; Education, Ryuzo Tanaka; Agriculture and Forestry, Chuji Machida; Commerce and Industry, Sachio Sakurauchi; Communications, Matajiro Koizumi; Railways, Tasuku Egi; Overseas Affairs, Shujiro Hara. For subsequent changes in 1931, see *History*. The membership of the House of Representatives elected Feb. 21, 1930, was: Minseito (Government party), 273; Seiyukai (Conservative Opposition), 174; Labor, 5; other groups, 9; Independents, 5.

### HISTORY

Sabotaging the conciliatory policy of the Wakatsuki government toward China, the military party in the fall of 1931 launched an armed adventure in Manchuria, which, in a few short months, brought that great Chinese domain under virtually complete Japanese control. The adventure was fraught with ominous consequences to the peace of the Far East. By the close of the year it had resulted in a state of open though undeclared warfare with China and the virtual collapse of the Nationalist government at Nanking. Relations with the United States and with

the Soviet Union evidenced a growing tension. The movement for the limitation and reduction of world armaments and the organization of world peace under the aegis of the League of Nations sustained a severe setback. Finally, the Manchurian adventure and the opposition encountered enabled the military party to triumph temporarily in its bitter struggle with the growing forces of liberalism in Japan. The aroused patriotism of the Japanese public forced the Wakatsuki government to support the aggressive policy of the militarists and with the resignation of the Cabinet on December 11 a new government more sympathetic to a "strong" policy in China came into power.

Several significant developments illumined the background of the Japanese intervention in Manchuria. The military party in Japan was anxious to consolidate its prestige, which had been shaken by the victory of the civilian Hamaguchi Cabinet in the struggle of 1930 over the London Naval Treaty (see 1930 YEAR BOOK). Japan had completed in 1930 the giant task of reconstruction necessitated by the disastrous earthquake of September, 1923. For several years, Marshal Chang Hsüeh-liang, the young Chinese war lord of Manchuria, had been obstructing Japanese commercial and economic activities in that region. In Siberia, the Soviet government was pushing to completion large metallurgical industries, which aroused Japanese fears of another Russian bid for the mastery of Manchuria. In China, a split between the Nanking and Canton leaders had destroyed what little unity the country had won through the Nationalist movement of 1926-30. Finally, the worldwide economic and financial crisis, besides absorbing the attention of the other great powers, was inflicting severe damage upon Japan's industry, finance, and foreign trade. Wages were reduced and unemployment and labor disputes increased throughout 1931. Commodity, and particularly farm prices, continued their downward trend until the end of the year, causing rural suffering and widespread unrest among the working classes.

**THE INTERVENTION IN MANCHURIA.** Japanese military action in Manchuria grew out of the fundamental clash of Sino-Japanese economic, strategic, and political interests in that area, which had long been recognized as a menace to peace. The difficulties were gradually brought to a head by the growing nationalist sentiment among the Chinese, which found expression in years of continuous anti-Japanese propaganda, in steady pressure to secure the abrogation of the treaties of 1904 and 1915 legalizing Japan's position in Manchuria, and in the construction of new railways and ports which threatened to cut off the revenues of the lucrative South Manchuria railway, acquired by the Japanese government from Russia following the Russo-Japanese War. The nationalism of the Chinese was aggravated by alarm and suspicion of Japan's intentions in Manchuria. There had been a steady expansion of Japanese economic activities and a gradual extension by purchase and otherwise of areas within Japanese treaty jurisdiction.

On the basis of its privileged position in Manchuria, Japan had developed there an economic structure of vital importance to the continued existence of the Empire as a first-class power. About \$850,000,000 had been invested in the exploitation of Manchuria's abundant coal, iron,

and other raw materials necessary to supplement the meagre natural resources of the Japanese homeland. Without free access to Manchuria's cheap minerals and food supplies, Japanese statesmen questioned the feasibility of providing sustenance for their rapidly increasing population through continued industrialization.

The menace presented by Chinese railway and port construction to the prosperity of the South Manchuria railway was mentioned by Foreign Minister Shidehara before the Diet on Jan. 22, 1931. Attempting to settle the dispute by friendly negotiation, the Foreign Minister sent an emissary to discuss the matter with Marshal Chang Hsüeh-liang, but up to the middle of the summer no agreement was reached. The increasing Chinese opposition aroused growing resentment in Japan. Late in May the Japanese National Chamber of Commerce passed a resolution calling attention to "the anti-Japanese attitude which China has been adopting of late" and demanding firm action by the government to uphold Japan's rights in Manchuria.

A succession of incidents now kindled the smoldering Sino-Japanese hostility into flame. On July 2, a dispute over water rights between Korean settlers and Chinese at Wanpaoshan, near Changchun, Manchuria, culminated in the killing of a number of Koreans and the dispatch of Japanese troops to protect their nationals. (Koreans retained their Japanese citizenship in Chinese territory.) The news, spread in Korea, led to savage retaliatory attacks on Chinese by Korean mobs, in which 119 Chinese were killed and some 375 injured. In China, it was charged that the Korean riots were instigated by the Japanese authorities. The Nanking government sent a strong protest to Tokyo and the Shanghai Chamber of Commerce launched an anti-Japanese boycott which spread throughout the country with great rapidity. Anti-Japanese riots occurred at Tsingtao, in Shantung, and other points.

Japanese sentiment was further inflamed by the announcement, August 17, that Captain Shintaro Nakamura and Private Entaro Isugi of the Japanese army were arrested and shot by regular Chinese soldiers late in June, while traveling as civilians in the interior of Manchuria on Chinese passports. Foreign Minister Shidehara continued his efforts to reach a friendly settlement, sending a new minister—Mr. Shigemitsu—to Nanking to open negotiations. But the military party, through Minister of War Minami, was also preparing to act. In June, army units in Korea were increased from two to three divisions, and in July the garrison in Manchuria was increased. On September 13 it was announced that the Manchurian authorities had accepted Japanese demands for reparation for the Nakamura execution. Three days later, came the news that Minister Shigemitsu and T. V. Soong, Chinese Minister of Finance, had agreed to the establishment of a joint commission for investigation and settlement of the Sino-Japanese disputes in Manchuria.

Hopes for a peaceful solution were dashed, however, by a clash between Chinese soldiers and Japanese railway guards at Peitaying, on the outskirts of Mukden, the night of September 18. Japanese officers reported that the clash followed the blowing up of a section of the South Manchuria railway by Chinese troops. The Chinese

stated that the Japanese forces attacked them without provocation.

Apparently without consulting the Tokyo government, the Japanese military leaders in Manchuria on the early morning of September 19 launched a carefully planned offensive covering the whole zone of the South Manchuria railway. With disconcerting suddenness, Japanese troops attacked and disarmed the large Chinese garrisons at Mukden and Changchun. Operating outside the limits of the treaty zones, the Japanese took over the arsenal and government buildings in Mukden and occupied strategic points at various other stations along the South Manchuria railway and its branches. Within three days, the military plan had been successfully pushed through against much larger Chinese forces. About 10,000 soldiers of Marshal Chang Hsüeh-liang had been dispersed, with but few Japanese casualties and much heavier Chinese losses. Kirin, capital of Kirin Province; Tunhua, terminus of the Changchun-Tunhua railway; and Chengchiatun on the Chinese-owned Tahushan-Anganchi railway, had been occupied, cutting all Chinese railway communications between North and South Manchuria. Having established a favorable strategic situation, insured the protection of Japanese nationals and investments, and dislocated the Chinese governmental system in Liaoning and Kirin Provinces, the Japanese military now rested on their arms.

The scene shifted to Geneva, Washington, Tokyo, and the other world capitals, where Japanese diplomats commenced their campaign to prevent intervention of the League of Nations or of the powers in the Manchurian dispute. The Nanking government on September 21 invoked Article XI of the League Covenant, requesting the Council of the League to restore the *status quo ante* and to determine reparation due for the Japanese military action. In response to requests of the Council and of the American Secretary of State, the Japanese toward the end of September withdrew their troops within the treaty zones, except in Mukden, Changchun, and Kirin. While denying intention to infringe upon Chinese sovereignty in Manchuria, the Japanese Foreign Office declined to allow the intervention of third parties in the dispute, insisting that it must be settled by direct Sino-Japanese negotiation. On September 30, the League Council adjourned until October 14, giving Japan until that date to carry out its promise to withdraw all troops within the treaty areas, provided the safety of Japanese nationals was assured.

The situation took a turn for the worse on October 8, when Japanese army planes bombed Chinchow, a station on the Peiping-Mukden railway southwest of Mukden, where Marshal Chang Hsüeh-liang had established temporary headquarters. While disorders and anti-Japanese riots spread throughout Manchuria and China proper, the powers and the League Council unsuccessfully exerted pressure upon the Japanese government to withdraw its troops. On October 9, Secretary of State Stimson announced that "the American government, acting independently through its diplomatic representatives, will endeavor to reinforce what the League does. . . ." On October 12, he authorized Prentiss Gilbert, American Consul General in Geneva, to participate informally in the Council sessions which began two days later. Despite the objections of Kenkichi Yoshizawa, Japanese representative on

the League Council, that body voted 13-1 to invite the American representative to join it in the consideration of the dispute and Mr. Gilbert accepted October 16.

The following day the Council voted to invoke the Kellogg-Briand Peace Pact and within the next few days the United States, Great Britain, France, and other signatories sent notes to both China and Japan reminding them of their obligations under Article II of the pact. The Japanese delegate on the Council on October 20 submitted five points as a basis for negotiations: (1) A mutual pledge of non-aggression by both China and Japan; (2) suppression of hostile boycotts, agitation, and propaganda; (3) respect for the territorial integrity of Manchuria by Japan; (4) protection of Japanese residents in Manchuria by Chinese authorities; and (5) a Sino-Japanese agreement giving effect to all existing treaty rights and eliminating all ruinous competition between the South Manchuria and other Manchurian railways. The Chinese, however, declined to enter negotiations until Japanese troops were withdrawn.

The League Council on October 22 passed a resolution calling upon Japan to withdraw its troops within the treaty areas by November 17. It also requested the Chinese authorities to assume responsibility for the safety of Japanese interests in association with representatives of other powers. Finally, the resolution urged direct Sino-Japanese negotiations for a settlement of the Manchurian dispute as soon as the evacuation had been carried out. As Mr. Yoshizawa voted against the resolution, it became merely a recommendation. Nevertheless, on October 30 and November 7, M. Briand, president of the Council, warned both parties to cease hostilities. Similar representations were made by the U. S. State Department.

Instead of withdrawing, Japanese troops steadily expanded the area under their control. Chinese troop concentrations in several Manchurian towns were bombed October 21. On November 5, Japanese forces crushed a Chinese army under Gen. Ma Chen-shan at the Nonni River, near Tsitsihar, where they had advanced to repair railway bridges on the Taonan-Anganchi line destroyed during fighting between rival Chinese leaders. The railway line was mortgaged to Japanese capitalists. On November 9 and 11, fighting occurred between Japanese and Chinese forces in Tientsin, in China proper. A puppet government under Japanese control was established in Mukden November 10, and on the 18th, despite Soviet protests, the Japanese crossed the Chinese Eastern railway at Anganchi and captured Tsitsihar, capital of the Northern Manchurian Province of Heilungkiang.

Meanwhile the League Council, with the American Ambassador to Great Britain acting in a consultative capacity, had reconvened November 16. After long efforts to reach a settlement satisfactory to both China and Japan, the Council agreed (December 10) that a commission of five neutral members would be sent to Manchuria to study the situation and report back. Some difficulty was experienced in forming the commission and at the end of the year it was not yet ready to start.

**CAPTURE OF CHINCHOW.** General Honjo, Japanese military commander in Manchuria, had repeatedly given notice that he would not permit Marshal Chang Hsueh-liang to retain any

of his authority in that region. On November 27, a large Japanese force was dispatched from Mukden against Chang's temporary headquarters at Chinchow. The following day, however, the expedition was recalled, due to protests of the powers and the intervention of the Cabinet at Tokyo. League representatives then undertook to establish a neutral zone around Chinchow. Following the collapse of the Wakatsuki Cabinet (see below), General Honjo launched a new offensive westward from the South Manchuria railway on December 21. Sweeping a large area clear of bandits and Chinese irregular soldiery, the Japanese columns continued on toward Chinchow in a converging movement which caused Marshal Chang to order the evacuation of the city on December 30. The advance on Chinchow was made in the face of strenuous protests by the governments of the United States, Great Britain, and other powers.

Thus, by the end of the year, Japan had extended her sway in Manchuria over some 200,000 square miles, as compared with the 108 square miles under Japanese control previous to the intervention. The Chinese local authorities in all three Manchurian Provinces had been ousted and dummy governments installed. The Manchurian armies aggregating some 400,000 men had been annihilated or dispersed by not more than 15,000 Japanese. Japan had extended her control of Manchurian railways from about 700 miles on September 18 to about 2300 miles on December 31. There remained only some 1400 miles of the Chinese Eastern railway, under joint Sino-Soviet control. Furthermore, Japan had assured her domination of the economic resources of Manchuria; banks, public utilities, power plants and large manufacturing establishments had been reorganized under Japanese supervision and control. The military intervention, however, was not without its disadvantages. During the last half of 1931, Japan's trade with China, which normally constituted about one-fourth of its total foreign trade, had been cut by the boycott; one-third of the value shown for the same period of 1930. And the cost of the campaign was causing an increasing drain upon the Imperial Treasury.

**DEVELOPMENTS IN JAPAN.** A direct result of the naval controversy of 1930 was the resignation of Premier Yuko Hamaguchi on Aug. 14, 1931, and the reorganization of the Cabinet the following day. Premier Hamaguchi had been severely wounded Nov. 14, 1930, in an attempt made by a member of a reactionary patriotic society to assassinate him for his support of the London Naval Treaty. His inability to resume active direction of the government occasioned repeated Opposition demands for his withdrawal and he was finally forced to comply. Hamaguchi (q.v.) died August 26. During his absence from Parliament Foreign Minister Shideha served as acting Premier. The new Cabinet headed by Baron Reijiro Wakatsuki, chief of the Japanese delegation to the London Naval Conference, continued Premier Hamaguchi's liberal policies. It contained only three new members—Gen. Jiro Minami as Minister of War, Sach Sakurachi as Minister of Commerce and Industry, and Shujiro Hara as Minister of Overseas Affairs (colonies). For the full Wakatsuki Cabinet list, see under *Government*.

Due to Opposition (Seiyukai) filibustering and obstruction, little was accomplished during the session of the Diet prorogued Mar. 27. Bills

legalizing trade unions and extending the suffrage to women for local elections were passed in the lower House but were vetoed in the House of Peers. The Cabinet's financial policies were severely arraigned and following adjournment of the Diet, the Ministry took steps to eliminate a threatened \$65,000,000 budget deficit by introducing, effective June 1, a 20 per cent cut in salaries of 60,000 government employees, along with other economies.

The resignation of Premier Wakatsuki and his Minseito Cabinet on December 11 was not primarily due to the developments in Manchuria. The Premier opposed the proposal of Kenzo Adachi, Minister of Home Affairs, for the formation of a coalition ministry including the Opposition (Seiyukai) party, whereupon Mr. Adachi declined to attend Cabinet meetings. Since the Minister controlled a large bloc of Minseito members in the House of Representatives, the position of the Government was undermined and it resigned.

Behind Minister Adachi's move was said to be the demand for the reimposition of the gold embargo made by the Mitsui trust and other great Japanese financial and industrial interests. On the advice of the surviving genro, Prince Saionji, the Emperor called on Ki Inukai, president of the Seiyukai party, to form a new government, which he did on December 13. Kenkichi Yoshizawa, the new Premier's son-in-law, was made Foreign Minister. Other members of the Cabinet were: Finance, Korekiyo Takahashi; Home Affairs, Tokugoro Nakahashi; Commerce, Yonezo Mayeda; Agriculture, Teijiro Yamamoto; Justice, Kisaburo Suzuki; Communications, Chujo Mitsuchi; Overseas Affairs (Colonies), Toyosuke Hata; and Railways, Takejiro Tokonami. Field Marshal Prince Kohohito Kanin, a prince of the royal blood, was appointed chief of the general staff and Gen. Sadao Araki, Minister of War.

The Seiyukai Cabinet held only 171 seats in the Diet, as against 251 Minseito members. Accordingly it was anticipated that Premier Inukai would seize the first favorable opportunity to appeal to the country in the hope of securing a majority in the Diet. One of the first acts of the new Cabinet was the abandonment of the gold standard (December 13). The exchange value of the yen thereafter declined steadily until the close of the year. Premier Inukai also indicated that his government would adopt most of the budget of former Finance Minister Inouye.

Full details of the extensive roundup of Communists in Tokyo during 1930 came to light on May 20, 1931, with the arraignment of 173 prisoners, of whom 93 were graduates and four former professors at the Imperial University at Tokyo. Trial of the prisoners took place in public in August. On March 16 a Japanese patriot attempted to assassinate the commercial counselor of the Soviet mission to Japan. In response to a Soviet note of protest, the Japanese Foreign Office gave satisfactory assurances and explanations. Another Soviet-Japanese quarrel, involving fishery rights off the Siberian coast, was settled early in May. A central labor organization, called the Japan Labor Club, was formed during the year, uniting a quarter of a million members of divers labor organizations. The event was considered an epoch in Japan's labor history, as repeated previous attempts had failed.

**JENKINS,** EDWARD HOPKINS. An American agricultural chemist, died in New Haven, Conn., Nov. 7, 1931. He was born in Falmouth, Mass., May 31, 1850; in 1872 was graduated from Yale University (Ph.D., 1879) and studied at the University of Leipzig (1875-76). He served as chemist (1877-1900), vice director (1882-1900), director (1900-23), and treasurer (1901-23) of the Connecticut Agricultural Experiment Station. From 1897 to 1903 he was chairman of the Connecticut Sewage Commission.

**JEWS. STATISTICS.** According to the estimates prepared for the *American Jewish Year Book* by Dr. H. S. Linfield, the total number of Jews in the world for the year 1931 was put at 15,050,000. Of that number, 4,380,000 lived in North America and the West Indies; 7,500,000 lived in the group of countries commonly designated as Central Europe; 300,000 lived in Palestine and the adjacent countries of Arabia, Iraq, and Syria; 400,000 lived in the Arab speaking countries of North Africa; 1,500,000 lived in Western and Southern Europe; 200,000 lived in the Baltic countries; and 25,000 lived in Australia and New Zealand. In all, 61.7 per cent of all the Jews lived in Europe, 30.7 per cent lived in America, 3.8 per cent lived in Asia, 3.6 per cent in Africa, and 0.2 per cent lived in Australasia.

During the fiscal year ended June 30, 1930, a total of 11,526 Jewish immigrants were admitted to the United States; 4020 Jews were admitted during the six months ending Dec. 31, 1930. Of the 11,526 Jews admitted during the year ending June 30, 1930, 7486 came from Central Europe and 4040 came from other countries, chiefly Canada, Cuba, Great Britain, and Palestine. During the year ending Mar. 31, 1930, a total of 4164 Jews were admitted to Canada, of whom 620 came from the United States. During the year 1930, a total of 1374 Jews entered Cuba. During 1925, 5610 Jews were admitted to Brazil. During the same year, 2000 Jews entered Uruguay and 5986 Jews entered Argentina.

During the year 1930, a total of 4944 Jewish immigrants entered Palestine and in the same

year, 1036 Jews departed, making for a net immigration of 3308. During the same year, 1489 non-Jewish immigrants entered and 1275 immigrants left the country. From the date of the British occupation of Palestine (Dec. 9, 1917) to the end of 1930, a total of 108,972 Jews entered the country. However, in view of the sizable emigration, the net immigration for the period was 62,944. In the same period, a total of 7816 non-Jews were admitted to the country, the emigration being 12,629 or a net decrease for these years of 4813.

**JEWS IN GERMANY.** The victory of the National Socialists (Nazi), with their open programme of hostility toward the Jews, brought dismay to Jewish communities both in Germany and throughout the world. Open demonstrations against Jews followed when the Reichstag opened in October, 1930. In the cities of Germany there took place attacks on Jews, the breaking into of shops, the disturbing of religious services in synagogues, and the desecration of cemeteries. Not a small number of German students participated in these outrages, openly giving their support to the Nazis.

**JEWS IN AUSTRIA.** The situation of the Jews in Austria was not dissimilar and here again economic breakdown lay at the heart of prevailing anti-Semitism. Demonstrations by the Heimwehr (the Austrian counterpart of the Nazi movement) continued unchecked. Clashes took place between Jewish students of the University of Vienna and anti-Semitic groups, and in February, 1931, the rector of the University was compelled to close the institution for a time because of the bitterness of feeling. Boycotts were declared against Jewish merchants, and newspaper advertisements for help directly discriminated against Jewish workers.

**JEWS IN HUNGARY.** The situation of the Jews in Hungary showed no improvement over previous years, their economic plight being particularly apparent. Anti-Jewish student attacks took place at many universities and Jewish war veterans were discriminated against when seeking membership in veteran organizations.

**JEWS IN RUMANIA.** Outrages against the Jews in this country continued unabated. Harry Schneiderman, in the *Jewish Year Book*, reported that Jews in small villages were being subjected to a veritable reign of terror. These outrages appeared to be centred chiefly in the agricultural districts of Bukovina, Bessarabia, and Transylvania. While arrests of anti-Semitic leaders did take place, none of these resulted in conviction.

**JEWS IN POLAND.** The Jews in this country continued to suffer from the prevailing economic depression. According to governmental statistics, 325,900 out of the country's 2,850,000 Jews were out of employment on Jan. 1, 1931; Jewish leaders, however, declared that the total unemployed was closer to 1,000,000 Jews. Significant proportions of Jewish families in the industrial cities of Lodz and Warsaw were being supported from communal funds. Despite strenuous efforts on the part of American Jewry to treat with the Polish government, there was no economic relief reported during the year. Representatives of the American Jewish Committee conferred with the Polish ambassador to the United States, calling particular attention to the economic disabilities leveled against the Jewish middle class. See also the article on POLAND under *History*.

**JEWS IN RUSSIA.** Jews suffered less from official persecution in this country during the year than had been the case heretofore. This was largely due to the slowing up of the anti-religious drive and to the compromises effected in the state programme of collectivization. Nevertheless, the difficulties confronting declassed Jews were still gigantic. Measures for relief in the case of the *kustars*, or artisans, were slow in appearing despite continued industrialization. The status of declassed Jews showed some improvement, however, when public employment exchanges were authorized to register all persons applying for work; when children of the *kustars* were granted admission to educational institutions; and when special privileges were accorded to the *kustars* on condition of their organization of producers' coöperatives.

The "Five Year Plan" for the economic transformation of the Jewish *kustars* was announced by the Comzet (the governmental agency for settling Jews on the land and for furthering their industrialization). This called for the training of 135,000 Jewish youths; the conversion of 50,000 *kustars* into factory workers; and the training of 10,000 Jewish professional men for productive labor. As for the Jews in agriculture, there was recorded during the year a total of 280,000 working on the land in various parts of the U.S.S.R. Eight per cent of the Jewish farmers were members of collectives. The widely heralded settlement of Bira Bidjan, in the Far Eastern Republic, was not receiving popular support and but 2700 Jews were recorded as living there.

**JEWS IN MEXICO.** Reports were current that the Mexican government planned to repudiate its earlier friendly policy toward Jewish immigrants and to move against the participation of Jews in mercantile trades. Propaganda was increasingly appearing in the Mexican press aimed at Jewish vendors and in April, in Mexico City, a large group of these peddlers actually were driven from one of the city markets. American Jewish communal organizations indicated their interest in the situation and not only filed representations with the State Department but sent their agents to the spot where they learned that the outbreaks were directed not so much against the Jews as against all foreigners. By the end of the year the situation had to a very considerable extent been relieved and no further outrages or hostility were reported.

**CLOSING OF THE PASSFIELD INCIDENT.** The 1930 YEAR BOOK contained an extended discussion of the Passfield White Paper, which was aimed against the continued Jewish economic expansion of Palestine. In February, 1931, Prime Minister MacDonald sought to remove much of the sting from this official policy by reaffirming the intention of the government to adhere to the mandate. See PALESTINE under *History*.

Dr. Chaim Weizmann, head of the Zionist world organization, expressed himself as satisfied with this revision of the White Paper and declared that the Zionist confidence in the mandatory had been restored. However, the Revisionists and the Mizrachi dissented from Doctor Weizmann's position.

**ZIONISM.** The World Zionist Congress met for its seventeenth convention at Basel, Switzerland, July 1-15, 1931. The most important concerns before the gathering, to which delegates from 50 countries assembled, were the resignation of

Dr. Chaim Weizmann, following the release of the Passfield White Paper, and the official attitude that Zionists themselves were to take toward this new policy of the mandatory power. The Revisionists, led by Vladimir Jabotinsky, attacked Weizmann and Great Britain. Concerning the latter Jabotinsky said: "Let us make a last experiment with Great Britain. I believe in the honesty of the civilized world, but what can we expect from Britain if by innumerable persuasive speeches we declared ourselves satisfied? If we are truly optimistic let us seek the fault in our leadership, its defections and its weaknesses." Mr. Jabotinsky placed on the record his party's adherence to the establishment of a state in the Holy Land in which the majority of the population was to be of Jewish origin. When the Congress defeated the Revisionist resolution calling for the creation of a Jewish state, this party bolted the Congress.

Despite Weizmann's replacement by Dr. Nahum Sokolow, who was named the new president of the World Zionist Organization, it was apparent that the Congress meant to carry out the Weizmann policies as evidenced by the following resolution carried by the members:

Zionism is a national movement to secure the freedom of the Jewish people. It adheres firmly and unalterably to its aims as laid down in the Basel programme (to create for the Jewish people in Palestine a publicly recognized and legally secured home), and to bring about in Eretz Israel a solution of the Jewish problem. The homeless and landless Jewish people which is compelled to migrate strives to overcome its abnormal political, economic and spiritual conditions by reestablishing itself in historic homeland through large and uninterrupted immigration and settlement and recreating in Eretz Israel its national home with all the essential features of a people's existence. The Congress emphatically rejects any attempt to minimize this fundamental aim of Zionism.

Particularly interesting was the victory gained by the American Zionists, led by Judge Julian W. Mack and Supreme Court Justice Louis D. Brandeis, when they obtained the approval of the Congress to the separation of the private economic developmental programme in Palestine from the political programme. The resolution as adopted committed the Congress to the establishment of private corporations to assist the flow of private capital into all the economic fields of Palestine. Corporations of the kind indicated, such as the Palestine Electric Corporation, the Palestine Potash, Ltd., and the Palestine Economic Corporation, were already functioning.

Doctor Nahum Sokolow, in addition to being elected president of the World Zionist Organization, was also named the new president of the Jewish Agency for Palestine (also succeeding Weizmann here). The post of chairman of the council, vacant since the death of Lord Melchett, was filled by the election of Osmond E. A. Goldsmid, English communal worker and president of the board of deputies of British Jews. Doctor Lee K. Frankel (United States) was named joint chairman; Prof. M. Speyer (Belgium) and Robert Szold (United States) were named vice presidents.

The Zionist Organization of America, at its meeting in November, voted to continue the administration's policy, when Robert Szold of New York was reelected national president and other officers were reelected for the next annual term. This action was taken by the unanimous vote of the 500 delegates attending the thirty-fourth annual convention. Federal Judge Julian W. Mack was elected honorary president and Louis

Lipsky and Rabbi Stephen S. Wise were named honorary vice presidents. Resolutions adopted called for the continuing of propaganda among American Jewish youths in the interest of the establishment of a Jewish national home in Palestine; for continued support of the Jewish National Fund; and for the support of colonization of the Jewish national home by American Jews.

**JOAN OF ARC ANNIVERSARY.** See CELEBRATIONS.

**JOFFRE**, zhô'fr', MARSHAL JOSEPH JACQUES CÉSAIRE. A French soldier, died in Paris Jan. 3, 1931. He was born in Rivesaltes, Pyrénées, Jan. 12, 1852. From the Collège de Perpignan he entered the École Polytechnique in 1868 to study military engineering, but the outbreak of the Franco-Prussian War resulted in his enlistment in the French Army and his taking part in the defense of Paris. After the war he returned to the Polytechnique with the grade of 2d lieutenant. In 1872 he entered the Engineer Corps, and four years later became a captain, helping to plan the defenses of Pontarlier. From 1883 onwards he served almost continuously in the colonies, fighting under Courbet in Tongking, French Indo-China; organizing the defenses of Formosa in 1885; and occupying Timbuktu, French Sudan, in 1894 after a 500-mile forced march to relieve Bonnier. Returning to France he was made a professor in the staff college at Paris for a time, and was promoted to brigadier general in 1901 and to general of a division in 1905. In 1910 he became a member of the Conseil Supérieur de la Guerre, and the following year, while commanding the 2d Army Corps at Amiens, was appointed chief of the general staff.

Marshal Joffre was commander-in-chief of the French armies on the western front from the outbreak of the World War until December, 1916, when he was transferred to Paris as "technical adviser to the government." His fame rested on the Battle of the Marne, one of the great decisive battles of the world, that stemmed the German advance on Paris Sept. 6, 1914. In recognition of this achievement he was made a Marshal of France, the first to receive that title since 1870. His unavailing offensives in 1915 and the heavy losses at Verdun and on the Somme in 1916, however, resulted in his loss of prestige, and the following year he was succeeded in the command of the western front by General Nivelle. There had also been conferred on him in 1915 the title of commander-in-chief of the French armies operating in Europe, which included the Army of the Orient. In the spring of 1917, he was sent on a mission to the United States, following the entry of that country into the World War. In 1920 he returned to the Conseil Supérieur de la Guerre. He was elected a member of the Académie Française in 1918, and received the British Order of Merit and the Grand Cross of the Legion of Honor. He wrote *My March to Timbuktu* (1915) and *La Préparation de la guerre et la conduite des opérations, 1914-15* (1920).

**JOHNS HOPKINS UNIVERSITY**, THE. A nonsectarian institution of higher education for men and women in Baltimore, Md., founded in 1876. The enrollment for the autumn of 1931 was 6316. The faculty numbered 675. The productive funds amounted to \$28,873,945, and the income from all sources for 1930-31 was \$2,812,557.

The main library contained 401,215 volumes. The plan for the reorganization of the curriculum of the college of arts and sciences was put into operation during the year. The first two years were to be regarded as a background for either a liberal arts education or a professional career. At the end of the second year the student might apply for admission to one of the departments of the schools of higher studies or for permission to remain in the college of arts and sciences as a candidate for the bachelor's degree. The curriculum for the last two years was arranged for specialized study in one of the following groups: science and logic, social science and ethics, literature and language. For the programme of the Page School of International Relations, see INTERNATIONALISM.

Important gifts to the university during 1930-31 included: \$1,500,000 from an anonymous donor as the first half of a gift for the endowment of the Osler and Halsted clinics; \$40,000 from the Chemical Foundation for the endowment of two fellowships in chemistry; \$45,000 from the J. J. Abel Fund for research on the common cold; \$146,242 from the estate of William D. Gill for the establishment and maintenance of a chair of forestry; and \$50,000 from the Rockefeller Foundation for support of the biological sciences and \$20,000 for the fluid research fund in the humanities. Dr. William H. Howell resigned as director of the school of hygiene and public health and was made director emeritus and professor emeritus of physiology; Dr. W. H. Frost was appointed dean of the school. Dr. William H. Welch was made professor emeritus of the history of medicine. Dr. P. E. Dumont, a lecturer in the university for several years, was appointed professor of Indology, and Dr. Roger Jones, formerly on the faculty of the University of California, became professor of Greek. Dr. Georg Tischler, professor of botany and director of the botanical institute and gardens at the University of Kiel, was the Speyer visiting professor. President, Joseph Sweetman Ames, Ph.D.

**JOHNSON, ALLEN.** An American historian, educator, and editor, died in Washington, D. C., Jan. 18, 1931. He was born in Lowell, Mass., Jan. 29, 1870. On being graduated from Amherst College in 1892, he studied at the University of Leipzig, at the École des Sciences Politiques, Paris, and at Columbia University. He was appointed professor of history at Iowa (later Grinnell) College in 1898, professor of history and political science at Bowdoin College in 1905, and Larned professor of American history at Yale University in 1910. He resigned the latter chair in 1926 to become editor of the *Dictionary of American Biography*, of which at the time of his death six of the contemplated 20 volumes had been completed. His works include: *The Intendant under Louis XIV* (1899); *Stephen A. Douglas* (1908); *Readings in American Constitutional History* (1912); *Union and Democracy* (1915); *Jefferson and His Colleagues* (1921); *The Historian and Historical Evidence* (1926).

**JOHNSON, ROSSITER.** An American editor and author, died in Amagansett, N. Y., Oct. 3, 1931. He was born in Rochester, N. Y., Jan. 27, 1840, and was graduated from the University of Rochester in 1863. From 1864 to 1868 he was assistant editor of the *Rochester Democrat* (later *Democrat and Chronicle*) and from 1869 to 1872 edited the *Concord* (N. H.) *Statesman*. He then became an associate editor in the revision

of the *American Cyclopædia* (1873-77) and editor of the *Annual Cyclopædia* (1883-1902). From 1886 to 1888 he was managing editor of the *Cyclopædia of American Biography* and from 1892-94 associate editor of the *Standard Dictionary*. In 1900 he was made editor-in-chief of the *Universal Cyclopædia*, in which position he remained until 1904, devoting himself thereafter to writing and lecturing on American historical subjects.

Among his works are *A History of the War of Secession* (1888); *The Turning Points of the Civil War* (1894); *A Short History of the War between the United States and Spain* (1899); *The Hero of Manila* (1899); *The Story of the Constitution of the United States* (1906).

**JOHNSON, WILLIS FLETCHER.** An American editor and historian, died in Summit, N. J., Mar. 28, 1931. He was born in New York City, Oct. 7, 1857, and was graduated from New York University in 1879. In 1880 he became a member of the editorial staff of the *New York Tribune*, and was an occasional contributor to its successor, the *New York Herald Tribune*. He was also, after 1913, a contributing editor of the *North American Review*. From 1908 to 1912 he was president of the New Jersey State Civil Service Commission. His more important writings include *A Century of Expansion* (1903); *Four Centuries of the Panama Canal* (1906); *America's Foreign Relations* (2 vols., 1916); *America and the Great War for Humanity and Freedom* (1917); *History of Cuba* (5 vols., 1920); *Life of Warren G. Harding* (1922); *Political and Governmental History of the State of New York* (2 vols., 1923); and *George Harvey—A Passionate Patriot* (1929).

**JOHNSTON, ANNIE FELLOWS.** An American author, died near Louisville, Ky., Oct. 5, 1931. She was born in Evansville, Ind., May 15, 1863, the daughter of the Rev. Albion and Mary Erskine Fellows, and after attending the State University of Iowa was married in 1888 to William L. Johnston. On her husband's death she entered upon her career as one of the most popular of children's writers.

Her most famous books were the "Little Colonel" series, which covered her entire writing career from 1895 to 1929 and were published in several languages. They included *The Little Colonel*, *The Little Colonel's House Party*, etc.

**JOHNSTON, CHARLES.** American Orientalist, died in New York City, Oct. 16, 1931. He was born in Ballykilbeg, County Down, Ireland, Feb. 17, 1867, and attended Dublin University. After spending a few years in the India civil service, he came to the United States in 1896, becoming noted as a writer and lecturer on Oriental history and philosophy and as a translator of many sacred books of the East, including *The Upanishads* (1896), *Bhagavad Gita* (1908), and *Yoga Sutras of Patanjali*. He was the author of *The Memory of Past Births* (1900); *Kela Bai* (1900); *The Parables of the Kingdom* (1909); and *Why the World Laughs* (1912).

**JOHORE.** See NON-FEDERATED MALAY STATES.

**JORDAN, DAVID STARR.** An American educator, author, and naturalist, first president of Leland Stanford Junior University, died in Palo Alto, Calif., Sept. 19, 1931. He was born in Gainesville, N. Y., Jan. 19, 1851, and was graduated from Cornell University in 1872. In 1875 he received the M.D. degree from Indiana Medical College, and in 1878 the Ph.D. degree from

Butler University, where he was professor of biology from 1875 to 1879. He held the same chair at Indiana University until 1885, when he was elected president of that institution. In 1891, on the founding of Leland Stanford Junior University, he became its president, and under his able supervision the university was successfully developed along original and progressive lines. He remained president until 1913, when the post of chancellor was created. He retired as chancellor emeritus in 1916.

While at Cornell Dr. Jordan began under the direction of Louis Agassiz the studies which were eventually to make him one of the foremost of ichthyologists. He was appointed in 1897 as special United States commissioner in the Bering Sea controversy, which had arisen out of the depredations of unlicensed Canadian sealers on the seal fisheries of the north Pacific, and was later appointed to investigate the salmon fisheries of Alaska. During 1908-10 he was international commissioner of fisheries. An ardent peace advocate, he acted as chief director of the World Peace Foundation from 1910 to 1914 and as president of the World's Peace Congress in 1915. In 1924 he received the Raphael Herman Peace Prize of \$25,000 for the best educational plan calculated to maintain world peace.

In addition to papers in the proceedings of scientific societies and in the reports of the U. S. Fish Commission and the Bureau of the Census, Dr. Jordan published *A Manual of Vertebrate Animals of the Northern United States* (1876); *Science Sketches* (1887); *Fishes of North and Middle America* (with B. W. Evermann, 4 vols., 1896); *The Higher Sacrifice* (1908); *The Religion of a Sensible American* (1909); *The Stability of Truth* (1909); *The Unseen Empire* (1912); *War's Aftermath* (with Harvey E. Jordan, 1912); *War and Waste* (1914); *World Peace and the College Man* (1914); *War and the Breed* (1915); *Ways to Lasting Peace* (1915); *Alsace-Lorraine, a Study in Conquest* (1915); *Democracy and World Relations* (1918); *The Days of a Man* (autobiography, 2 vols., 1922); and *The Trend of the American University* (1929).

**KAMERUN.** See CAMEROON.

**KANSAS.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,880,999; in 1920, 1,769,257. The predominant native white element of the population rose to 1,792,847 (1930), from 1,708,906 (1920). The number of foreign-born whites declined to 69,716 (1930), from 110,578 (1920); the decline was due only in part to the fact that the Mexican-born group, included in the total of 1920, was separately listed in 1930. Mexicans in 1930 numbered 19,149. Negroes in the State increased in number to 66,344 (1930), from 57,925 (1920). Indians numbered 2455 in 1930.

The rural group of the population remained stationary in number, 1,151,165 (1930), 1,151,293 (1920). It still predominated over the urban population (residing in communities of 2500 or over) which numbered 729,834 (1930), 617,964 (1920). The greatest city, Kansas City, had 121,857 inhabitants (1930), 101,177 (1920); Wichita had 111,-

110 (1930), 72,217 (1920); Topeka, the capital, 64,120 (1930), 50,022 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat ...	1931	12,632,000	239,868,000	\$88,749,000
	1930	12,357,000	166,702,000	93,388,000
	1931	6,505,000	113,838,000	35,290,000
Corn ....	1930	6,776,000	81,312,000	47,974,000
	1931	1,094,000	1,545,000	10,042,000
Hay, tame	1930	1,060,000	1,607,000	15,588,000
	1931	1,494,000	41,085,000	8,217,000
Oats ....	1930	1,334,000	36,685,000	12,840,000
	1931	1,107,000	17,712,000	5,314,000
Grain sorghum	1930	988,000	10,374,000	6,743,000
	1931	563,000	8,726,000	1,920,000
Barley ...	1930	512,000	10,496,000	3,884,000
	1931	46,000	3,634,000	2,180,000
Potatoes .	1930	42,000	4,788,000	4,309,000
	1931			

\* Tons.

**MINERAL PRODUCTION.** The petroleum wells of the State, usually furnishing not far from half of the yearly total of its mineral production, yielded but 41,617,000 barrels of petroleum in 1930, as against 42,813,000 in 1929; lower prices obtained brought down the value of the petroleum to \$54,500,000 (estimated) for 1930, from \$62,510,000 for 1929. The production of natural gas was 38,469,000 M cub. ft. for 1929 and 45,644,000 M cub. ft. for 1928; in value it was \$13,429,000 for 1929 and \$14,144,000 for 1928. Production of gasoline from natural gas decreased to 32,300,000 gallons for 1930, from 36,227,000 for 1929; and in value, to \$1,600,000 (estimated) for 1930, from \$2,207,000 for 1929. Less cement was produced in 1930, the shipments declining to 5,633,098 barrels for 1930, from 6,855,861 for 1929, and in value to \$8,254,416 for 1930, from \$10,041,282 for 1929. Clay products aggregated \$3,279,953 for 1929 and \$3,593,130 for 1928. Coal production dropped somewhat sharply to 2,360,000 short tons for 1930, from 2,975,971 for 1929, for which year the value of the output was \$6,697,000. The total value of the State's mineral production was \$124,472,480 for 1929; for 1928, \$113,279,524.

**MANUFACTURES.** Federal Census data gathered in 1930 to cover the year 1929 stated the number of the State's manufacturing establishments as 1918. These employed 46,906 wage earners, or 3.4 per cent more than the number for 1927. Wages paid to the earners in 1929 totaled \$72,628,477 and exceeded the total for 1927 by some 20 per cent. Materials for manufacture, plus fuel and purchased electricity, cost \$544,010,255 in 1929, or 5 per cent above 1927. The manufactured product of 1929 was valued at \$734,919,439, which was 7.8 per cent in excess of the product of 1927. Value added by manufacture in 1929 was estimated at \$19,909,184.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$15,920,202 (of which \$623,034 was for local education); for conducting public-service enterprises, \$177,156; for interest on debt, \$7,474,753; for permanent improvements, \$18,570,830; total, \$36,142,941 (of which \$19,872,414 was for highways, \$2,356,683 being for maintenance and \$17,515,731 for construction). Revenues were \$33,595,607. The State's funded debt on June 30, 1930, was \$24,500,000. Net of sinking fund assets, the debt was \$23,173,030. On a property valuation of \$3,-

\$16,825,048 were levied in the year taxes of \$7,653,907.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 9338.71. During the year preceding, 4.15 miles of line had been given up, while 0.8 mile had been added. In 1931 were built 26.89 miles of additional first track.

**EDUCATION.** For the year ended with June, 1930, the number of persons of school age in the State was reported as 554,902. There were enrolled in the public schools 430,983 pupils. Of these, 315,980 were in common schools or elementary grades; in high schools were 115,003. The year's expenditures for public-school education totaled \$43,378,595. Average salaries of teachers, by the month, ranged from \$99 and \$91, respectively, for males and females in one-teacher schools to \$154 (males) and \$155 (females) in the elementary grades and \$205 (males) and \$162 (females) in high schools, in the first-class cities.

**CHARITIES AND CORRECTIONS.** The State maintained control of its institutions of care and custody in 1931, through the Board of Administration. This board had four members, not counting the Governor, who ranked ex officio as one of its officers. As its executive aid it had a business manager. The board subsisted, substantially, as created in 1905. Institutions under its care fell into three classes, charitable, correctional, and of the special educational type. Charitable institutions, with their respective populations of Dec. 1, 1931, were: Topeka State Hospital, Topeka, 1794; Osawatimie State Hospital, Osawatimie, 1491; Larned State Hospital, Larned, 807; State Hospital for Epileptics, Parsons, 699; State Training School, Winfield, 1014; State Sanatorium for Tuberculosis, Norton, 235; State Orphans' Home, Atchison, 180. Correctional institutions, with populations of the same date, were: Kansas State Penitentiary, Lansing, 1719; Kansas State Industrial Reformatory, Hutchinson, 754; Women's Industrial Farm, Lansing, 183; Boys' Industrial School, Topeka, 245; Girls' Industrial School, Beloit, 155.

**LEGISLATION.** A regular session of the State Legislature was held, convening January 13 and adjourning March 17. Sufficient economies were effected to bring the total of appropriations for the biennium about \$1,000,000 below the corresponding total for the session of 1929. In the field of taxation, a measure was passed to submit to popular vote, in 1932, an amendment to the State constitution to permit of the creation of a graduated tax on incomes. Another proposed amendment of the constitution was submitted, to limit the rate of the general property tax to 2 per cent on city real estate and  $1\frac{1}{2}$  per cent on farms. The Legislature followed the recommendation of Governor Woodring in keeping the rate of the gasoline tax at three cents on the gallon, defeating efforts to raise the rate to four cents. A law placing the tax on intangibles at 50 cents to the \$100 was enacted, as a measure to keep liquid capital within the State.

Of a number of proposals adverse to the public utilities of the State, offered by the Governor, the Legislature rejected one that would have compelled these utilities themselves to bear the cost of supporting the Public Service Commission, which regulated them. An act was passed that provided a fund of \$100,000 for the use of the commission in proceedings to compel the lowering

of electric and gas rates in cities and towns; the power of examining the accounts of holding companies possessing the securities of utilities active in the State was also granted the commission.

A drivers' license law was enacted, requiring the licensing of persons driving motor vehicles, at a low fee. Public utilities were forbidden to retail such merchandise as appliances for the use of their own products, a practice that the local merchants had regarded as harmful to their trade. Regulations for the size of trucks and automobiles using the public roads were passed, and with them, charges upon such vehicles, in accordance with size, to contribute toward road maintenance. Through a redistricting act, the seven Representatives allowed the State under the new Federal reapportionment were assigned to as many districts.

Among other laws enacted were: Prohibition of the use of butter substitutes in State institutions; a measure creating a State system of fingerprint records of criminals; prohibition of incorporated farms; authorization of the Public Service Commission to supervise the proration of the production of petroleum; extension of the Moving Picture Censor Board's power of deletion to dialogue and sounds, as well as to pictures.

**POLITICAL AND OTHER EVENTS.** Governor Woodring, soon after his inauguration, took an aggressive course in dealing with companies purveying natural gas. With the support of the *Kansas City Star* he called for a reduction of 10 cents in the rate for natural gas, which for Kansas City was 40 cents a thousand feet. The Cities Service Company, supplying gas to more than 100 communities in the State, refused to reduce its rates. The State administration rejoined by a decree of the Banking Department to prevent the sale of the junior stock issues of the company to purchasers in Kansas. The Banking Department was enjoined from enforcing this prohibition, upon the motion of attorney for the company. Henry L. Doherty, head of the Cities Service Company at the same time brought suit for libel to the sum of \$12,000,000 against the *Kansas City Star* for alleged misstatements in its campaign to influence opinion against the company.

**OFFICERS.** Governor, Harry H. Woodring; Lieutenant-Governor, J. W. Graybill; Secretary of State, E. A. Cornell; Auditor, Will J. French; Treasurer, Tom B. Boyd; Attorney-General, Roland Boynton; Superintendent of Public Instruction, George A. Allen, Jr.

**JUDICIARY.** Supreme Court: Chief Justice, William A. Johnston; Associate Justices, Rousseau A. Burch, John S. Dawson, W. W. Harvey, William Easton Hutchinson, William A. Smith, E. R. Sloan.

**KANSAS, UNIVERSITY OF.** A State institution of higher education in Lawrence, Kansas, founded in 1864. The 1931 autumn enrollment was 4220. The 1931 summer session had an enrollment of 1902, of whom 963 were women and 939 men. The full-time teaching staff, exclusive of deans, numbered 239. The endowment fund amounted to \$240,000, and the income for the year, including the balance carried over from 1930, was \$2,000,000. The Watkins Memorial Infirmary was the outstanding gift of the year. There were 235,000 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

**KANSAS CITY, MISSOURI.** See *MISSOURI under Political and Other Events.*

**KANSAS WESLEYAN UNIVERSITY.** A coeducational institution under the auspices of the Methodist Episcopal Church, in Salina, Kan., founded in 1885. The enrollment for the autumn of 1931 was 456. The faculty numbered 30. The endowment amounted to \$221,000, while the budget for the fiscal year ending July 31, 1931, amounted to \$129,561. President, L. B. Bowers, D.D.

**KARAFUTO**, ká'ra-fóv'tó. The Japanese portion of the island of Sakhalin, lying south of the parallel of 50° north latitude. With an area of about 13,935 square miles, Karafuto had a population estimated at 240,502 on Jan. 1, 1929. Fishing, mining, lumbering, and agriculture are the chief industries. See JAPAN.

**KARA-KALPAKIA**, or KARA-KALPAK. AUTONOMOUS AREA OF. See SOVIET CENTRAL ASIA.

**KARELIA.** An autonomous socialist soviet republic within the Russian Socialist Federal Soviet Republic, Karelia lies between Finland and the White Sea. The area of 56,476 square miles is about that of the State of Illinois; the population at the 1926 census totaled 269,734 (58.5 per cent Russians and 44.5 per cent Karelians, Finns, and Vepps). Capital, Petrozavodsk. For the Russo-Finn dispute over Karelia, see FINLAND and UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

**KARIKAL.** See FRENCH INDIA.

**KARL FELDT**, ERIC AXEL. Swedish poet, died in Stockholm, Apr. 8, 1931. He was born in Folkarna, July 20, 1864, and was graduated from the University of Upsala in 1898. In 1904 he was made a member of the Swedish Academy, later becoming its permanent secretary. He was also secretary of the academy's committee which annually awards the Nobel prize in literature. Typical of his poetry, in which he voiced the beauties of nature and depicted the life and customs of the Dalecarlian peasants, are: *Songs of Love and the Open* (1895); *Fridolin's Poetry* (1902); *Flora and Pomona* (1906); and *Flora and Bellona* (1918). A posthumous award of the Nobel prize in literature to him was announced on Oct. 8, 1931.

**KASSIOTIS**, DAMIANOS. Prelate of the Greek Orthodox Church, died in Jerusalem, Aug. 14, 1931. He was born on the Island of Samos in 1848, where he attended the Pythagorean College and served as clerk in the courts of justice at Marathakampos. In 1872 he entered the monastery of St. Constantine in Jerusalem, becoming priest in 1875 and archimandrite in 1881. In 1887 he was appointed commissioner to the Phanar in Constantinople, and in 1890 became titular Archbishop of Philadelphia and a member of the Holy Synod. He represented the Synod at the coronation of Czar Nicholas II in 1894, and three years later was elected by that body Patriarch of Jerusalem and All Palestine, Syria, Arabia beyond the Jordan, Cana of Galilee, and Holy Zion. He was enthroned as the 132d Patriarch of Jerusalem on Aug. 15, 1897.

During the World War the Turks exiled him to Damascus, but on his return to Jerusalem after the British occupation he received the support of the British administration.

**KENTUCKY.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,614,589, as against 2,416,630 in 1920. The whites, native with the exception of a small total of 21,840 foreign-born, numbered, in 1930, 2,388,364; in 1920, 2,180,560. Negroes numbered 226,040 (1930); 235,938 (1920). Persons of other race or origin numbered, in 1930, only 185. The rural population was virtually stationary, numbering 1,815,563 in 1930 and 1,783,087 in 1920, while the urban population (living in communities of 2500 or more), though still inferior, rose to 799,026 (1930), from 633,543 (1920).

By reported occupation the population of 1930 was largely agricultural, 358,575 being engaged in agriculture out of a total of 907,166 having gainful occupation. Farmers and farm managers prevailed over farm laborers in the proportion of almost two to one. Persons in the manufacturing industries and the building industry numbered 153,282; in trade, 98,405; in transportation, 77,024; in professional service, 47,861; in domestic and personal service, 72,272. Louisville, the chief city, had 307,745 inhabitants in 1930, 234,891 in 1920; Lexington, 45,736 (1930), 41,534 (1920); Covington, 65,252 (1930), 57,121 (1920); Paducah, 33,541 (1930), 24,735 (1920); Frankfort, the capital had 11,626 (1930), 9805 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Tobacco ...	1931	586,000	506,890,000*	\$45,620,000
	1930	519,500	372,123,000*	45,399,000
Corn .....	1931	2,871,000	80,388,000	28,940,000
	1930	2,815,000	28,150,000	25,698,000
Hay, tame .	1931	1,154,000	1,208,000*	12,080,000
	1930	1,071,000	829,000*	12,391,000
Potatoes ..	1931	55,000	8,960,000	2,970,000
	1930	44,000	2,772,000	3,465,000
Wheat ....	1931	242,000	4,840,000	2,614,000
	1930	202,000	2,828,000	2,573,000
Oats .....	1931	232,000	4,872,000	1,418,000
	1930	155,000	2,015,000	1,068,000
Sweet potatoes .	1931	21,000	2,100,000	1,470,000
	1930	13,000	845,000	1,014,000

\* Pounds.    † Tons.

**MINERAL PRODUCTION.** The activity of the coal mines, which had normally furnished nearly three-fourths of the yearly value of the mineral production, was much curtailed. The quantity of coal mined diminished to 50,697,000 short tons for 1930, from 60,402,600 for 1929. The value of the coal mined in 1929 totaled \$93,283,000. Petroleum was produced to the quantity of 7,345,000 barrels in 1930 and of 7,775,000 in 1929; and to the value of \$11,600,000 (estimated) in 1930 and of \$13,220,000 in 1929. The production of natural gas (figures not available for 1930) had risen to 27,588,000 M cub. ft. for 1929, from 15,383,000 M cub. ft. for 1928; and to the value of \$8,822,000 for 1929, from \$5,349,000 for 1928. The total value of the mineral production of the State was \$132,649,508 for 1929; for 1928, \$131,969,907.

**MANUFACTURES.** Federal Census data gathered in 1930 to cover the year 1929 stated the number

of the State's manufacturing establishments as 2227, or about 20 per cent greater than in 1927. There were employed in such establishments in 1929, 76,201 wage earners, to whom were paid wages to the total of \$87,517,967; the earners were 1.7 per cent more numerous and the wage total was nearly 5 per cent higher than for 1927. Materials for manufacture, plus fuel and purchased electricity, cost \$262,557,633 in 1929, or 5 per cent more than for 1927. The manufactured product of 1929 was valued at \$490,492,239, which exceeded the corresponding amount for 1927 by 9.5 per cent. The value added to goods by manufacture in 1929 was estimated at \$227,934,806.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$21,953,987 (of which \$5,695,244 was for local education); for interest on debt, \$625,548; for permanent improvements, \$11,553,370; total, \$34,161,321 (of which \$14,734,415 was for highways, \$4,574,673 being for maintenance and \$10,159,742 for construction). Revenues were \$36,756,080. Of these, property and special taxes formed 34.9 per cent; departmental earnings and remuneration to the State for officers' services, 7.2; sale of licenses, 44.9 (including gasoline sale taxes amounting to \$8,076,441). The State's funded debt outstanding on June 30, 1930 was \$2,497,021. Net of sinking fund assets, debt was \$2,005,819. On a property valuation of \$3,252,926,459 were levied in the year taxes of \$11,704,653.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 4054.55. During the year preceding, 21.35 miles of line had been added, and only 0.03 mile had been given up. In 1931 were built 5.66 additional miles of first track and 22 of second track.

**EDUCATION.** For the academic year ending in 1931 the number of persons of school age (6 to 18 years) was reported as 694,971. There were enrolled in the public schools of the State 593,381 pupils. Of these, 529,012 were in common schools or elementary grades, and 64,369 were in high schools. The year's total of expenditure for public-school education, exclusive of certain appropriations for outlays, was \$28,931,340. The yearly salaries of teachers averaged \$799 for the elementary group, \$1347 for the high-school group, and \$904 for all.

**CHARITIES AND CORRECTIONS.** The management and control of the State's seven institutions of care and custody of individuals rested in the State Board of Charities and Corrections, as created by an act of 1920. The board was a non-partisan body consisting of a chairman and eight members, of whom at least 2 must be women. Members drew no salary.

The institutions thus governed, with their average populations for the year ended June 30, 1931, were: Eastern State Hospital, Lexington, 1626; Central State Hospital, Lakeland, 2200; Western State Hospital, Hopkinsville, 1703; Feeble-Minded Institute, Frankfort, 615; State Houses of Reform, Greendale, 640; State Reformatory, Frankfort, 2393; State Penitentiary, Eddyville, 1135.

**POLITICAL AND OTHER EVENTS.** The drought of 1930 left in many parts of the State an aftermath of crop failure, starving cattle, human destitu-

tion, tax delinquencies, and bank failures. Local chapters of the Red Cross were reported in January as caring for 28,700 persons. The need for succor continued for months thereafter. The failure, late in 1930, of the Bancokentucky, involving a large amount of public moneys, was investigated by a Grand Jury. The inquiry went into the negotiations for a merger of the Bancokentucky Company and the Caldwell banking interests of Nashville, Tennessee, which had preceded the collapse of the institutions in both States. Indictment was found in Kentucky against the Tennessee banker, Rogers Caldwell, for his part in the Kentuckian collapse. The defendant, however, was tried, convicted, and sentenced to prison in July in his home State of Tennessee. James B. Brown of Louisville, newspaper publisher and former head of the Bancokentucky, was tried in the Circuit Court in Louisville on a charge of embezzlement relating to a \$2,000,000 note transaction, and was acquitted on May 25.

The Democratic party of the State resorted to the convention method in nominating its candidate for Governor. This proceeding was contested in the courts by a group of Democrats who wanted the nominee chosen by the method of primary election. The State Court of Appeals, in a decision of May 1, upheld the statutory and constitutional validity of the option that the Democratic organization exercised in calling a convention. The convention was accordingly held at Louisville on May 12, and Judge Ruby Laffoon was nominated. The State Court of Appeals, in July ruled that county boards of education had no power to refund indebtedness by the issue of bonds; the decision was held to invalidate nearly \$900,000 in bonds and to affect some \$2,500,000 in floating debts. Another decision of this court, rendered on March 3, upheld as constitutional the statute permitting pari-mutuel wagers at race tracks.

A coal strike occurred in the spring and led to bloodshed in the Harlan county non-union field. Deputy sheriffs were attacked and in some cases wounded or killed. Company stores were raided. Finally Governor Sampson called into service several companies of the National Guard and sent them into the disturbed area on May 7. A series of trials of officials of coal miners' unions and leaders of the disturbers, for murder, was in progress before Circuit Judge Henry R. Prewitt at Mount Sterling in December. See **COMMUNISM.**

**ELECTIONS.** At the election on November 3 Circuit Judge Ruby Laffoon, Democrat, was elected Governor by a decisive majority of some 70,000 over William B. Harrison, Republican and Mayor of Louisville. The other elective State offices went to Democrats. A proposal to hold a State constitutional convention was reported to have been defeated by popular vote. Laffoon based his campaign largely on criticism of the Republican Federal and State administrations.

**OFFICERS.** Governor, Flem D. Sampson (until December 8; was then succeeded by Ruby Laffoon); Lieutenant-Governor, James Breathitt, Jr. (until December 8; was then succeeded by Albert B. Chandler); Secretary of State, Ella Lewis; Attorney-General, J. W. Cammack; Auditor, Clell Coleman; State Treasurer, Emma Guy Cromwell; Commissioner of Agriculture, Labor, and Statistics, Newton Bright; Superintendent of Public Instruction, W. C. Bell.

**JUDICIARY.** Court of appeals: Chief Justice,

Richard Priest Deitzman; Associate Judges, William Rogers Clay, Gus Thomas, William H. Reese, S. S. Willis, J. Basil Richardson, Wesley Vick Perry.

**KENTUCKY**, UNIVERSITY OF. A coeducational State institution of higher learning in Lexington, Ky., founded in 1866. The enrollment in the autumn of 1931 was 3222. There were 1945 students registered in the 1931 summer session. The faculty numbered 265. The productive funds amounted to \$184,075, and the income for the year was \$1,667,437. During 1931 construction of a new library building and a new observatory was completed. The library contained 127,292 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

**KENYA**, kē'en-yā (formerly the East Africa Protectorate). A British crown colony and protectorate in East Africa, bordering on the Indian Ocean between Italian Somaliland and Tanganyika and extending inland to Uganda and Ethiopia. Area, 224,900 square miles; population, estimated in 1929 at 3,003,158, including 16,663 Europeans, 39,504 Asiatics, and 12,504 Arabs. Capital, Nairobi, with 51,599 inhabitants (4411 Europeans). Mombasa, the second town in size, has a population of about 50,000, including 1200 Europeans.

The colony is mainly agricultural, there being about 2880 European farmers in the territory in 1930. Coffee, maize, sisal, and wheat are extensively raised in the highlands and maize, coconuts, sisal, and cotton in the lower regions. Sugar-cane, groundnuts, simsim, barley, and potatoes are other crops. There are more than 3300 square miles of merchantable timber; some gold, marble, lime, and mica are produced, but the mineral resources are not fully explored. Kenya and Uganda Protectorate constitute a customs union, the joint imports in 1930 being \$39,865,000 and the joint exports \$26,683,000. In the year 1929 Kenya's revenue totaled £3,333,742 and expenditure £3,505,072. The public debt at the end of 1929 was £13,500,000.

The colony is governed under the Constitution of December, 1925, which provides for executive and advisory legislative councils. Governor and Commander-in-Chief in 1931, Sir Joseph Byrne.

**HISTORY.** The report of the Parliamentary Joint Committee on Closer Union in East Africa was published in London Nov. 3, 1931. After holding hearings throughout the year in East Africa and in Great Britain, the committee rejected the proposals for making a single administrative unit out of Kenya, Uganda, and Tanganyika. In Kenya, where the question of native and Indian representation on an elective legislative council proved extremely difficult of solution, the committee recommended that the Legislative Council should retain its advisory status, while remaining the central political institution of the colony. It suggested an increase in the native representation to five in place of the one delegate formerly appointed. The powers of the Chief Native Commissioner were also to be extended and an inquiry instituted into the amount of taxation paid and received back by the natives. See TANGANYIKA and UGANDA.

**KENYON COLLEGE.** A college of arts and sciences for men in Gambier, Ohio, established in 1824 by the Protestant Episcopal Church and associated with it. The enrollment for the autumn term of 1931 was 210. The faculty numbered 22 members. The endowment funds amounted to

\$1,671,000, and the income for the year was \$209,000. The value of buildings and equipment was \$1,755,000. The library contained 78,000 volumes. President, William F. Peirce, L.H.D., D.D., LL.D.

**KINDERGARTEN ASSOCIATION**, NATIONAL. See NATIONAL KINDERGARTEN ASSOCIATION.

**KINDERGARTENS.** See EDUCATION IN THE UNITED STATES.

**KING**, EDWARD S (KINER). An American astronomer, died in Cambridge, Mass., Sept. 10, 1931. He was born in Liverpool, N. Y., May 31, 1861. On graduation from Hamilton College in 1887, he became connected with the Harvard College Observatory. In addition to photometric and spectroscopic studies of stars, he maintained systematic tests of photographic plates from 1896. He was assistant professor of astronomy at Harvard from 1913 to 1926 and Phillips professor from 1926 until his retirement in 1930.

**KIRGHIZIA**, or KIRGHIZ AUTONOMOUS SOCIALIST SOVIET REPUBLIC. See SOVIET CENTRAL ASIA.

**KITAZATO**, SHIBASABURO. A Japanese physician and bacteriologist, died in Tokyo, June 13, 1931. Born in Kumamoto in 1859, he was graduated from the school of medicine of the University of Tokyo in 1883, and during 1885-91 studied in Berlin, Germany, under Dr. Robert Koch. On his return to Japan he was appointed director of the Imperial Japanese Institute for the Study of Infectious Diseases, but retired from the government service in 1914 to open his own laboratory. At the time of his death he was dean of the college of medicine of Keio University. He succeeded in isolating the tetanus bacillus and bacillus of symptomatic anthrax in 1889, and also the dysentery bacillus in 1898. His other achievements included the preparation of a diphtheria antitoxin in 1890 and the discovery of the etiological agent of bubonic plague, the *Bacillus pestis*, in 1894.

**KIWANIS INTERNATIONAL.** An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civil and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administrations. There are 29 geographical districts, each with a governor, in the United States and Canada. The first club was organized in Detroit, Mich., in January, 1915; by 1917 the organization had spread into Canada. At the close of 1931 the international organization consisted of 1883 clubs, with an approximate membership of 100,000. Some 35,000 civic and welfare projects were carried out by these organizations during the year. William O. Harris of Los Angeles, Calif., was the international president for 1931-32; Fred C. W. Parker of Chicago, secretary; and Walter R. Weiser of Daytona Beach, Fla., treasurer. Headquarters are at 520 North Michigan Avenue, Chicago, Ill.

**KLAIPEDA.** See MEMEL.

**KNIGHTS OF COLUMBUS.** A fraternal society of Roman Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut in 1882. The order is composed of a supreme council, a board of directors, and State and subordinate councils. On June 30, 1931, there were 61 State councils and two territorial jurisdictions. The subordinate councils, numbering 2576, had a member-

ship of 591,424, of whom 261,553 were insurance members and 329,871 associate members.

The Circles of Columbian Squires, the junior order for boys between 14 and 18, in 1931 numbered 96 with a membership of 5600. The objectives of the junior order are: to develop a programme of activities most suitable for boys of the middle adolescent group; to train Catholic boys for future leadership; and to develop them through the five-fold programme into high-type Catholic gentlemen.

The supreme convention was held in French Lick, Ind., Aug. 18-20, 1931, with an attendance of approximately 1500 members. The convention reiterated its request to each council of the order that a committee be appointed to work for the general alleviation of the unemployment situation in the United States. It also was announced that at the supreme convention in 1932 a memorial statue of Cardinal Gibbons, for which Congress had granted a site in Washington, would be dedicated.

The officers reflected at the convention were: Martin H. Carmody, supreme knight; John F. Martin, deputy supreme knight; William J. McGinley, secretary; D. J. Callahan, treasurer; Edward F. Fahey, M.D., physician; Luke E. Hart, advocate; the Rev. John J. McGivney, chaplain; and David F. Supple, warden. The order publishes *Columbia*, a monthly magazine. The headquarters of the supreme council are in New Haven, Conn.

**KOBER, GEORGE MARTIN.** An American physician, died in Washington, D. C., Apr. 24, 1931. Born in Alsfeld, Germany, Mar. 28, 1850, he came to the United States in 1867 and was graduated with the M.D. degree from Georgetown University in 1873. After serving as assistant surgeon in the Medical Department of the U. S. Army until 1886, he became professor of hygiene in the school of medicine at Georgetown University in 1890 and was made dean in 1901, retiring as dean emeritus in 1928. He was also a member of the consulting staff of the Children's Hospital, the Georgetown University Hospital, and the Gallinger Municipal Hospital in Washington. He endowed the Kober Foundation for honoring each year the physician whose achievements had been of greatest importance to the advancement of medical research. Among his works are *Tuberculosis in Relation to Occupation* (1920); *Tuberculosis among the North American Indians* (1921); *Industrial Health* (with Emery H. Hayhurst, 1923).

**KONGO, BELGIAN, KONGO FREE STATE.** See CONGO, BELGIAN.

**KOREA (CHOSEN).** A peninsula of eastern Asia annexed by the Japanese Empire on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Keijo-fu (Seoul).

**AREA AND POPULATION.** With an area of 85,228 square miles, Korea had a population at the 1930 census of 21,057,969, as compared with 19,522,945 at the census of 1925. The 1930 population included about 470,000 Japanese and 53,500 foreigners. The population of the chief cities at the end of 1928 was: Keijo-fu (Seoul), 321,848 (86,548 Japanese); Fusan-fu (Pusan), 116,207; Heijo-fu (Pyong-Yang), 127,103; Taikyu-fu (Tai-Ku), 88,609; and Chemulpo, 57,449. Less than 20 per cent of the population is literate. Japanese is the official language, but the language commonly used by the people is a mixture of Japanese and Mongolo-Tartar.

**PRODUCTION.** Korea is almost exclusively an agricultural country. Land under cultivation totaled 10,115,900 acres, or about 20 per cent of the total area; 36.5 per cent of the cultivated land was devoted to paddy fields. Japanese owned nearly one-half of the tilled land. Rice, barley, wheat, beans, tobacco, cotton, hemp, ginseng, and various cereals are the leading crops. Livestock raising, fruit growing, and silk culture are important subsidiary industries of the farms.

Gold, iron, graphite, and anthracite are the principal minerals; considerable quantities of silver, zinc, copper, lead, tungsten ore, and kaolin are produced also. Textile fabrics, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather are the chief industrial products.

**COMMERCE.** General imports in 1930 were equivalent to \$181,285,000 (\$195,046,000 in 1929) and general exports to \$131,648,000 (\$159,351,000 in 1929). Rice exports in 1930 totaled 25,160,000 bushels, valued at \$54,163,000. In 1930, Japan purchased 90.3 per cent of all Korean exports (89.7 per cent in 1929) and supplied 75.8 per cent of all imports (74.5 per cent in 1929).

**FINANCE.** Actual provisional budget returns for the fiscal year ended Mar. 31, 1930, showed a surplus equivalent to \$7,896,000. All receipts totaled 240,580,000 yen (1 yen equaled \$0.4985 at par) and all expenditures 224,740,000 yen. Budget estimates for 1930-31 placed ordinary and extraordinary revenues at 238,960,000 yen; receipts at 238,960,000 yen. The public debt on Mar. 31, 1930, was 377,136,000 yen (\$188,002,000), compared with 353,034,000 yen (\$175,987,000) on the same date of 1929.

**COMMUNICATIONS.** Government railway lines extended 1710 miles in 1930; private lines, 440 miles. The highway network covered 10,767 miles in 1930, mostly graded earth or gravel roads. An air line linked the chief cities with Japan and with Manchuria. Shipping entering the ports in 1929 had an aggregate tonnage of 8,162,338; those clearing, 8,069,346.

**GOVERNMENT.** Korea is governed as an integral part of Japan through a governor general entrusted with large administrative powers. Viscount Minoru Saito and Count Kodama resigned as Governor General and Vice Governor, respectively, in June, 1931. They were succeeded by Gen. Kazunari Ugaki, a leader of the Japanese military clique, as Governor General, and Mr. Imaida. For anti-Chinese riots in Korea in July, 1931, see JAPAN under *History*.

**KOWEIT, or KUWAIT.** See ARABIA.

**KRAUSITE.** See MINERALOGY.

**KU KLUX KLAN, KNIGHTS OF THE.** An American benevolent eleemosynary, and fraternal institution, incorporated under the laws of the State of Georgia in 1915. "The membership is made up of white, male, Gentile persons, native-born American citizens, 18 years of age. They must be of sound mind, good character, commendable reputation, and respectable vocation; must believe in the tenets of Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people, or person, and whose allegiance, loyalty, and devotion to the Government of the United States of America in all things is unquestionable." The institution's membership decreased in 1931, but it continued its activity in all matters of civil government affecting its ideals or principles. The officers were: President, Hiram

W. Evans; secretary, H. C. Spratt; treasurer, Sam H. Venable. Headquarters are in Atlanta, Ga.

**KULAKS.** See UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

**KUOMINTANG** (CHINESE NATIONALIST PARTY). See CHINA under *History*.

**KURDISTAN**, kōr'dē-stān'. A term applied to an indefinite region in eastern Asia Minor comprising portions of Turkey, Persia, Soviet Transcaucasia, and Iraq and inhabited by approximately 1,500,000 semi-nomadic Kurds, a people related to the Persians in race and language. Due to their nationalistic aspirations the Kurds have remained in a state of chronic revolt against their respective governments. See IRAQ, PERSIA, and TURKEY under *History*.

**KURIA MURIA ISLANDS.** See ADEN.

**KUWAIT.** See ARABIA.

**KWANGCHOW (KWANG CHAU WAN)**, kwāng'chō'wūn. A small territory on the coast of the Chinese Province of Kwangtung, leased to France in 1898, and two small islands commanding Kwangchow Bay leased to her the following year. Area, about 190 square miles; population in 1929, 184,651. See FRENCH INDO-CHINA.

**KWANTUNG**, kwān'tung', or KWANTAO. A territory at the southern end of the Liaotung Peninsula in Manchuria leased to Japan by China, as a successor to Russia after the Russo-Japanese War. Area, including 40 small islands adjacent to the peninsula, 1303 square miles; population, July 31, 1930, 906,181, including 114,032 Japanese. Capital, Dairen (formerly Dalny), with about 262,000 inhabitants. The agricultural products include, rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. In 1929 there were 231 factories, with a total production for the year valued at 100,735,003 yen, or more than the value of agricultural production. Bean cake and bean oil, salt, paper, iron and steel, soap, glass, and cement were the chief products. Imports (1929) totaled 204,490,325 Haikwan taels and exports 256,953,525 Haikwan taels (1 Haikwan tael had an average exchange rate of \$0.64 in 1929). The aggregate budget for the fiscal year 1930-31 balanced at 22,949,939 yen (one yen equaled \$0.498 at par). The territory is administered by a Japanese governor-general. See MANCHURIA; JAPAN.

**LABOR. FIVE-DAY WEEK.** The agitation for the five-day week, largely the result of the official approval given it by the American Federation of Labor, in recent years had taken on considerable impetus. The Bureau of Labor Statistics of the U. S. Department of Labor reported that there was to be found, particularly in the building trades, an increased extension of the five-day week. In 1930 more than 50 per cent of building trade workers covered by the Bureau's surveys were receiving full holidays on Saturdays and Sundays. In June, 1931, a five-day week was in existence in 190 cities and towns for one or more of the crafts in the building trades, and in 44 cities and towns all the crafts of the building trades were at work on a 40-hour basic week. In an examination made of a sampling of 37,587 establishments in 77 different industries, the Bureau of Labor Statistics found that 3,941,800 employees were working on the basis of a five-day week. The automobile industry, as far as the percentage of workers on the five-day week was concerned, led all of the others, 44.3 per cent of all the employees being on such a basis. The radio industry came next, with 34.4 per cent; the

dyeing and finishing textiles industry showed a percentage of 27.0; the aircraft industry followed with 24.9 per cent.

**INJUNCTIONS.** In 1931, the Wisconsin legislature passed a comprehensive statute relating to litigation arising out of labor disputes and limiting the jurisdiction of courts in such cases. Thus, Wisconsin became the first State, according to the *Monthly Labor Review*, "to enact a complete and comprehensive code covering the public policy of the State toward collective bargaining and the use of the injunction in labor disputes." Among other matters this new statute provided: the right of labor to collective bargaining; the prohibition of discriminatory labor contracts; legalizing certain conduct in labor disputes; immunity of members of associations or organizations for responsibility of the acts of individuals; the use of injunctions and the right of appeal; the enumeration of the rights of individuals in contempt cases; penalties for the violation of provisions contained in the act. Contracts known as "yellow dog" contracts were declared illegal.

The following acts on the part of workers were to be considered legal: ceasing or refusing to do any work regardless of any promise undertaken to contract; becoming or remaining a member of a labor union; paying or giving strike benefits; giving publicity to and obtaining information regarding the existence of a strike whether by advertising, speaking, picketing or any other method not involving fraud, violence or breach of the peace; conducting a primary boycott; assembling peaceably; advising, urging or inducing without fraud or violence others to perform the above enumerated acts. The law forbade any court to issue temporary or permanent injunctions prohibiting any person or persons from doing singly or in concert any of the above. The law further provided that no restraining order or injunctive relief was to be granted to any complainant entering the court without "clean hands." Persons charged with contempt were to be granted public and speedy trial by an impartial jury of the county where the contempt was committed, exception being made in the case of those contempts committed in the presence of the court.

**THE NEGRO IN THE INDUSTRIAL DEPRESSION.** A study made by the National Urban League indicated that Negroes were suffering a greater proportionate amount of unemployment than were white workers; there was evincing itself a tendency in some sections of the country to substitute white for colored workers; Negroes were not suffering discrimination in the matter of public and private relief; white workers were appearing in those types of activity that had heretofore been regarded as exclusively the province of Negroes; there was a growing restlessness among Negroes who were moving about the country in search of work. The National Urban League's investigation indicated that in a number of cities unemployment among the Negroes was particularly marked. In Baltimore, where Negroes made up 17 per cent of the population, they formed 13.5 per cent of the unemployed group; in Charleston, where they made up 49 per cent of the population, they were comprising 70 per cent of the unemployed; in Chicago, where they made up 4 per cent of the population, they comprised 16 per cent of the unemployed; in Memphis, the proportions were 38 per cent and 75 per cent; in Philadelphia, 7 per cent and 25 per cent; in Pittsburgh, 8 per

cent and 38 per cent. The League found that substitution of white for colored workers was quite general, particularly in such jobs as house janitors, porters, domestic workers, maids, elevator boys, and cooks. The League also found that in a number of hotels white girls were replacing colored men. The National Urban League from its study presented the following conclusions:

That measures for relief were confined almost entirely to charity.

That negroes get more relief and fewer jobs than others from agencies established to aid the unemployed.

That negroes continued, and unless provision is made to the contrary, will continue to contribute more than their proportionate share of the burden of relief agencies.

That the economic structure of the entire negro race is in an alarming stage of disrepair with dire effect of business and professional interests dependent upon the patronage of negro wage earners.

That restlessness is evident from one end of the country to the other; for unquestionably negroes have lost jobs to which they will not return even when normal times come again.

That the new jobs offered negroes in public works have not been in proportion to their need.

The reader is referred to the following articles for discussions of the various aspects of the history of labor during the year: CHILD LABOR; CO-OPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION; and to the articles dealing with the respective countries. See also TRADE UNIONS; COMMUNISM; and SOCIALISM for special aspects of the labor subject.

**LABOR, AMERICAN FEDERATION OF.** The fifty-first convention of the American Federation of Labor was held at Vancouver, B. C., October 5-15, with 300 delegates in attendance. Among the guests of the trade unionists were Secretary of Labor William M. Doak, and Senator James J. Davis, of Pennsylvania, former secretary. The Federation's executive council's report, which was laid before the convention, recommended a national conference on work apportionment, shorter hours, wage standard maintenance, work assurance, prohibition of child labor, industrial specialization particularly in seasonal industries, the balancing of production through equalization of supply and demand, higher income taxes, modification of the Volstead act to permit 2.75 per cent beer, private and community unemployment relief work, and comprehensive planning to prevent future depressions, with national economic conferences to show the way. The average paid-up membership, as reported by the executive council was 2,889,550 for the year ending Aug. 31, 1931. This was a decrease of 71,546 from 1930's membership. The membership was distributed in 28,229 local unions, in the 105 national and international unions, and in the 334 local trade and federal unions.

Senator Davis struck the keynote of the convention when in an address on October 6 he made a severe arraignment of compulsory unemployment insurance under government auspices and advocated a plan of "employment assurance" in which management, employers and employees should share equally. Senator Davis declared that unemployment insurance tended to become a dole in time of economic depression and actually became a "premium on indolence." As indicative of the fact that Senator Davis' programme for the American Federation of Labor was likely to meet with opposition was a resolution submitted by

the American Federation of Teachers asking for convention approval of "a system of unemployment insurance, inaugurated and controlled by the States and subsidized by the Federal government."

The 21 standard railway unions reported to the convention that they were at work on a programme for a shorter work day and a shorter work week to be submitted to the next session of Congress on behalf of the 1,000,000-1,500,000 men at work on railways in the United States. In effect, it meant that the railroad brotherhoods were going to agitate for the system of a basic six-hour day. The United Mine Workers of America similarly reported to the convention their plan to summon a conference in Washington to inaugurate a legislative campaign on behalf of a bill to classify coal as a public utility, the intent being the creation of a Federal trade commission over the coal industry comparable to the rôle being played by the Interstate Commerce Commission in railroading.

Among the resolutions approved by the convention were the following: a demand for the modification of the Volstead Act to permit beer containing 2.75 per cent alcohol; the extension of the ban on immigration to keep out the nationals of all countries except Canada was approved; the prevention of the entry of Mexican laborers into the country before 10 A.M. The convention again went on record as favoring the exclusion of Filipinos. It supported independence for the Philippine Islands. The Federation pledged its support to the bituminous coal workers in their strikes throughout the coal fields for the purpose of winning immunization and in their efforts to establish an adequate wage scale. A resolution was passed opposing military training in the public schools. Labor's "non-partisan political policy" of "rewarding our friends and punishing our enemies" was reaffirmed. Another resolution was passed indorsing the principle of State income taxes graduated to levy higher percentages on larger incomes. See PROHIBITION.

William Green was reelected president for his eighth successive term; Frank Duffy, T. A. Rickert, Matthew Woll, James Wilson, John Coefield, Arthur O. Wharton, Joseph M. Weber and G. M. Bugniet were elected vice presidents; Martin F. Ryan was elected treasurer; Frank Morrison was elected secretary. The convention chose Cincinnati for its fifty-second meeting to be held in November, 1932.

**LABOR ARBITRATION AND CONCILIATION.** The U. S. Conciliation Service reported that for the fiscal year ended June 30, 1931, it handled 582 specific cases of trade disputes, threatened strikes, and lockouts. These cases came from 37 States and involved 379,585 workers, of whom two-thirds were directly involved in such disputes. For the fiscal year, of the 582 cases, 385 were adjusted, 52 were unadjusted, 82 were still pending and 63 were unclassified. The following brief summaries contain accounts of the more important disputes which were successfully handled by the Conciliation Service's commissioners. See STRIKES AND LOCKOUTS.

*Public Service Company, St. Louis, Missouri.* On May 16 a commissioner succeeded in averting a strike of some 3000 employees working on the street car railway system in St. Louis, Missouri. The point at issue was the threatened termination on the part of the company of the existing trade agreement between the union and itself as well as a proposal that the carmen participate in the income losses that the company was suffering. A strike

vote had been taken on May 14 to go into effect five days later. At the urging of the Service's commissioner both parties agreed to arbitration on the question of the termination of the trade agreement and the conditional wage cut.

**Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Indiana.** On May 18, 1931, 2400 workers in this plant went on strike in protest against pay cuts, additional work, and decreased earnings. As a result of the mediation of a Service commissioner a plan was accepted for the election of shop committees among the workers to meet with the management from time to time. Thus, after a strike lasting three weeks, manufacturing operations were resumed.

**Duplan Silk Corporation, Hazleton, Pennsylvania.** A strike of 1750 silk workers broke out here on Nov. 17, 1930, as a protest against a general wage reduction. Service commissioners participated in the negotiations between workers and employer and a number of conferences were held at Hazleton and in New York City. On December 8, the company officials declared themselves as in favor of the operation of an open shop and hence opposed to the activities carried on by representatives of the United Textile Workers, the A. F. of L. union. On Jan. 15, 1931, a final conference was held at which a basis of agreement was reached revolving about the recognition of a local branch of the United Textile Workers.

**Philadelphia and Reading Coal and Iron Company.** On Apr. 11, 1931, 7000 anthracite coal miners, employed by this company, left the pits of nine collieries as a result of the closing down of a number of openings. A Service commissioner urged the men to return to work pending the consideration of the matters in dispute in the usual way, and in line with the terms of the trade agreement entered into by the company and the United Mine Workers of America to which the men belonged. In two weeks a large number of miners heeded this advice and returned to the pits, and by April 26 the strike was declared off and the dispute was referred to the proper channels.

#### LABOR CONFERENCE, INTERNATIONAL.

The fifteenth session of the official International Labor Conference, which was held in Geneva from May 28 to June 18, dealt with the following matters: (1) hours of work in coal mines; (2) minimum age of admission of children to employment in non-industrial occupations; (3) partial revision of the convention concerning night-work of women; and (4) application of conventions which have been in force ten years. In addition, it elected the governing body of the International Labor Organization for the next three years. The conference decided to place on the agenda of the next session for a second and final discussion, the question of the age of admission of children to employment in non-industrial occupations. The conference adopted by 81 votes to 2 a draft convention for the limitation of work to 7¼ hours a day for underground workers in all coal mines, whether hard coal or lignite, the hours being calculated "from bank to bank." Two amendments to the Washington (1919) convention concerning the night work of women were adopted by small majorities. They related to the exemption from the general prohibition of women holding positions of managerial responsibility, and to the precise hours to be deemed "night."

**LABOR LEGISLATION.** In 1931 there were convened in regular session the legislatures of forty-four States, two insular possessions and two Territories, and the Congress of the United States. In addition, in several States, the Legislatures met in special session. Notable among new laws were the provision for old age pensions in five additional States thus bringing the total to seventeen; the final adoption of long-range planning of public works by the Federal government; the creation of eight State investigating commissions on unemployment and unemployment insurance; the adoption by Wisconsin of the first real Bill of Rights for labor in this country; improvement of several workmen's accident compensation laws; reorganized labor de-

partments in Georgia and North Carolina, and the creation for the first time of a labor department in New Mexico.

**Alabama.** Child labor law amended; workmen's compensation law amended.

**Alaska.** Lien law amended; liens on mining claims protected; prevailing wage rate required on public works; rest periods for public employees extended; preference created for Alaskan labor on public works.

**Arizona.** Wage payment law amended; mechanics' lien law amended; "yellow dog" contracts voided; women's hour law amended; local employment services authorized; private employment agencies regulated; emergency public works authorized; law regulating employment on public works amended and constitutional amendment upheld, excluding aliens from public works; reclamation loan fund bill urged; mine safety law amended; contractors licensed and regulated.

**Arkansas.** Federal aid for maternity and infancy accepted. (Special session.) No labor laws enacted.

**California.** Wage payment law amended; payment of disputed wage claims regulated; mechanics' lien law amended; wage preference laws amended and bureau of labor statistics authorized to collect mechanics' liens; personal service contracts extended; terms of present industrial welfare commissioners limited; law regulating wages on public works repealed and new law enacted; hours of certain railroad employees regulated; Federal action on hours of railroad employees urged; hour law for public works amended; county employees granted vacations; private employment agency law amended; bureau of labor statistics authorized to collect claims against employment agencies; aliens excluded from employment on public works; unemployment commission created; preference for California products urged; fire safety in factories, places of public assembly, etc., regulated; part-time school law amended; small cleaning shops regulated; law regulating dry cleaning establishments amended; ambulance chasing prohibited; workmen's compensation law amended and supplemented; administration of rehabilitation law altered; old age pension law amended; State employees' retirement fund created; county employees' retirement act amended; division of industrial fire safety altered; division of housing and sanitation altered; terms of industrial welfare commissioners amended; terms of industrial accident commissioners revised; jurisdiction of bureau of labor statistics extended; civil service act amended; committee created to investigate civil service charges; fire marshal authorized to regulate factories, etc.; fire marshal authorized to regulate small cleaning shops and to appoint assistants; administration of rehabilitation act altered; board created to administer retirement fund.

**Colorado.** Wage claim courts established; "yellow dog" contracts voided; salary scale fixed for clerical workers; Saturday half-holiday extended in government offices; coal mine law amended; metal mine law amended; child labor amendment ratified; boiler inspector act amended; workmen's compensation law amended; old age pension law amended; State employees' retirement law enacted; boiler inspection fees revised; civil service salary scale established; administration of mining laws altered; retirement board created.

**Connecticut.** Employment preference for citizens established on public works; employment commission created; child labor law amended; workmen's compensation law amended; group life insurance authorized for certain public employees; jurisdiction over bake shops altered; administration of employment certificating and continuation school laws altered.

**Delaware.** Wilmington relief programme commended; child labor law amended; workmen's compensation law amended; old age pension law enacted.

**Florida.** No labor legislation reported. (Special session.) No labor legislation reported.

**Georgia.** Industrial commission abolished; department of industrial relations created and certain departments abolished. (Special session.) Workmen's compensation benefits, etc., exempted from income tax.

**Hawaii.** Contractors' bond requirements amended; garnishment law amended; amendment of immigration law urged; workmen's compensation law amended; heirs protected under pension laws; public employees' retirement law amended; department of immigration, labor and statistics abolished.

**Idaho.** Work for Puget Sound Navy Yard urged; workmen's compensation law amended; old age pension law enacted; safety order power of industrial accident board revised. (Special session.) No labor laws enacted.

**Illinois.** Commission on child welfare legislation continued; contractors' bonds required; garnishment law amended; threshers' lien law amended; prevailing wages required on public works; hours limited on public works; additional public employment office authorized; private employment agency law amended; aliens excluded from certain park employment; coal mine investigating commission created; washroom law extended; child labor law of 1897 repealed; workmen's compensation act

amended; investigation of occupational disease compensation authorized; administration of vocational rehabilitation act altered; old age pension commission created; park employees retirement law amended; forestry preserve employees covered by retirement law; Chicago sanitary district employees' retirement law enacted; pension act for certain city employees amended; pension act for certain city employees repealed; division of statistics and research established; division of vocational rehabilitation created.

*Indiana.* Wage claims of certain public employees protected; preference created for state-mined coal; liability policies regulated.

*Iowa.* Contractors' bond law amended; preference created for Iowa labor on public works; workmen's compensation law amended.

*Kansas.* Wage payment law amended; contractors' bond law amended; prevailing wage rate law amended; hour law for public works amended; employment agency law amended; membership of mine examining board altered; workmen's compensation act amended; pensions and disability allowances authorized for certain city employees; membership of mine examining board altered.

*Louisiana.* (Special session.) No labor laws enacted.

*Maine.* Hour law for laundries amended; child labor law amended; work in compressed air regulated; municipal building inspection law extended; boiler safety law extended; workmen's compensation law amended; administration of rehabilitation act amended; State employees' retirement act amended; commissioner of labor and industry authorized to modify compressed air regulations; administration of rehabilitation act amended.

*Maryland.* Wage payment law amended; threshers' lien law amended; Sunday labor law repealed; commission on employment of the deaf appointed; school attendance law amended; workmen's compensation law amended; old age pension law amended; certain manual laborers included under police department pension plan; limit on administrative assessments raised under workmen's compensation law; administration of old age pension law altered.

*Massachusetts.* Obsolete provisions and errors corrected in various labor laws; commission created on minimum wage law, wage regulations for public works extended; public works appropriations for unemployment relief; State building programme accelerated; new preference established for employment on public works; present law governing preference extended; commission created on regularization of employment; certain unfair requirements as a condition of employment forbidden; regulation of hawkers and peddlers extended; street trades law amended; workmen's compensation act amended; death benefits for dependents of reserve policemen limited; financing of old age pensions temporarily provided; State employees' retirement act amended; commission on public employees' retirement granted extension; administration of street trades law amended; civil service law amended; consistent salary classification of State employees provided; operation of minimum wage law to be investigated. (Special session.) No labor laws enacted.

*Michigan.* Penalties in intimidation law revised; registration fees of public employment offices discontinued; local public employment offices authorized; loans for public employment office revolving fund authorized; union employment agencies exempted from regulation; penalties revised in certain laws protecting workers seeking employment; dry cleaning and dyeing plants regulated; sanitary law for construction workers amended; workmen's compensation act amended; fire marshal authorized to regulate dry cleaning plants.

*Minnesota.* Contractors' bonding law amended; wage standards in certain city contracts authorized; experimental public employment office authorized; Congress urged to pass Shipstead-Mansfield bill; study of employment conditions authorized; law regulating dry cleaning plants amended; workmen's compensation law amended; workmen's compensation carriers further regulated; old age pension law amended; surplus funds made available for old age pensions; State employees' retirement law amended; local employees' retirement law enacted; dependents of certain deceased public employees provided for; public employees' retirement board created; administration of old age pension law altered.

*Mississippi.* (Special session.) No labor laws enacted.

*Missouri.* Railroad workers' hour law repealed; public employment offices extended; railroad safety regulations repealed; obsolete child labor law repealed; workmen's compensation act amended; obsolete compensation law repealed; constitutional amendment on old age pensions, obsolete labor department act repealed.

*Montana.* Contractors' bonds required; threshers' lien law amended; Congress urged to limit immigration; prevailing wage rate law enacted; preference for employment on public works established; Congress urged to create preference for citizens; workmen's compensation law amended.

*Nebraska.* Hours of motor carrier drivers restricted; lunch periods required for certain employees; night work law amended. (Special session.) No labor laws enacted.

*Nevada.* Wage payment law amended; responsibility of contractors defined; wage collection powers of labor commissioner extended; private employment agencies limited; mine safety laws provisionally extended; workmen's compensation law extended; safety work financed from State insurance fund; contractors declared responsible for insurance obligations of subcontractors; powers and staff of labor commissioner extended; salaries of deputy mine inspectors increased; mine inspectors' jurisdiction extended.

*New Hampshire.* Workmen's compensation act amended; acceptance of rehabilitation act reaffirmed; old age pension law enacted.

*New Jersey.* Wage protection act for public works amended; prevailing wage rates required on public works; citizens granted preference for employment on public works; public works appropriations authorized for relief; age-discrimination act amended; migrant welfare commission appointed; migratory children's commission continued; workmen's compensation act amended and supplemented; old age pension law enacted; age-discrimination law amended in regard to pensions; boiler inspection service revised. (Special session.) Unexpended balances allotted for unemployment programmes; unemployment relief bonds authorized; municipal public works authorized; preference for employment on public works altered; highway relief work continued; emergency relief bill passed; funds transferred for emergency relief.

*New Mexico.* Collection of wage claims provided for; lien created for oil and gas well workers; Sunday observance law amended; collection of claims against employment agencies provided for and public employment office authorized; preference for employment on public works; seats for women required; liability of common carriers increased; enforcement of workmen's compensation law further provided for; acceptance of rehabilitation act reaffirmed; insurance for irrigation district employees authorized; labor and industrial commission created.

*New York.* Theatre employees exempted from certain laws; committee on liens continued; eviction of certain employees regulated; women's hour law amended; list of seven days workers in public service required; emergency public works appropriation made; advance plans for public works required; corporations authorized to contribute to social projects; committee on unemployment created; information on industrial fires required; seats for elevator operators in State buildings required; workmen's compensation law amended and supplemented; State employees' retirement act amended; city employees' retirement act amended; committee on civil service classification continued. (Special session.) Wage protection on public works temporarily extended; five-day week required on emergency public works; hour law for public works temporarily extended; emergency relief law enacted.

*North Carolina.* Wage protection law amended; personnel director empowered to determine wages; women's hour law amended; children's hour law amended; personnel director empowered to fix hours and vacations; night work law for girls enacted; report of unemployment committee requested; certain occupations prohibited for minors; labor department authorized to regulate work places; workmen's compensation law amended; rating bureau created; industrial commission included in department of labor; group insurance regulation amended; labor department reorganized; personnel department is created; salaries and qualifications of compensation commissioners altered.

*North Dakota.* Industrial survey commission created; wage claims on public works limited; threshers' lien law amended; employment preference created on public construction project; workmen's compensation act amended; acceptance of Federal maternity aid affirmed; powers and organization of workmen's compensation bureau revised.

*Ohio.* Employees protected as members of naval militia; leave of absence granted for military training, etc.; "yellow dog" contracts voided; prevailing wages required on public works; committee created to investigate wages on public works; emergency public works programme undertaken; unemployment insurance commission created; local relief bonds authorized; manufacture and sale of fireworks regulated; dry cleaning law repealed and reenacted; workmen's compensation act amended; insurance law amended; powers of fire marshal extended; department of industrial relations authorized to license fireworks plants.

*Oklahoma.* Payment of highway commission employees expedited; emergency relief funds provided; highway department equipment loaned for emergency relief work; committee created on coal mine disasters; highway law amended respecting accident insurance; compensation benefits exempted from income tax; industrial commission act amended; passage of maternity aid law urged.

*Oregon.* Wage collection powers of labor commissioner increased; contractors' bond law amended; mechanics' lien law amended; lumbermen's lien law extended; immigration restriction urged; "yellow dog" contracts voided; industrial welfare commission abolished; wage stand-

ards guaranteed in public printing contracts; hour law for public employees amended; hour standards guaranteed in public printing contracts; preference created on public printing contracts; commission created on unemployment insurance, etc.; immigration restriction urged; apprenticeship regulated; child welfare inspectors abolished; workmen's compensation law amended and supplemented; commission on old age pensions and unemployment insurance created; acceptance of Federal maternity aid authorized; welfare commission created and certain other bodies superseded; salary of labor commissioner raised; powers of labor commissioner extended; apprenticeship commission created.

*Pennsylvania.* Additional contractors' bonds required; injunctions in labor disputes limited; persons charged with contempt for violating injunctions protected; wages on public works protected; experimental employment service authorized; local relief bonds authorized; migratory children protected; workmen's compensation act amended; constitutional amendment on old age pensions provisionally passed; State employees' retirement act amended; group insurance for public employees authorized.

*Porto Rico.* Wage collection act amended; wage payment act amended; wage payment law enacted for public works; construction workers' lien created; sharecropping regulated; conciliation commission absorbed by department of labor; over-time employment regulated; child labor law amended; heavy loads prohibited; workmen's compensation act amended; workmen's compensation commission absorbed by department of labor; Federal rehabilitation act accepted; centralized labor department created; civil service law enacted.

*Rhode Island.* Wage payment law amended; night work commission created; employment preference created on public works; child labor law amended; factory regulations amended; certain reports no longer required. (Special session.) Unemployment relief law passed.

*South Carolina.* Preference for residents created in highway work. (Special session.) No labor laws enacted.

*South Dakota.* Threshers' lien law amended; cash payment required in minimum wage law; minimum wage law amended; workmen's compensation act amended and supplemented; powers and staff of child welfare commission extended; Secretary of Agriculture instructed to enforce certain labor laws.

*Tennessee.* Committee created to investigate labor conditions; coal donated for unemployed; unemployment committee created; insurance companies permitted to create pension plans for their employees.

*Texas.* Wage standards authorized for public works contracts; employment preference created on public works; workmen's compensation law amended; group insurance regulated.

*Utah.* Lien law amended; committee created to plan public works relief programme; passage of reclamation fund bill urged as relief measure; passage of drainage bill urged as relief measure; accident compensation for militia men revised; medical and hospital service provided for injured miners, continuation of Federal maternity aid urged.

*Vermont.* Free employment offices authorized in certain cities; employment preference created on highway work; child labor law amended; factory regulations extended; paint labelling law amended; workmen's compensation law amended; workmen's compensation benefits, etc., exempt from income tax, enforcement of paint labelling law transferred to commissioner of industries.

*Washington.* Electrical safety law amended; manufacture of explosives regulated, merit rating revised; workmen's compensation act amended; appeal from labor department orders revised; rule power under electrical code transferred to director of labor and industries.

*West Virginia.* Emergency road work authorized and employment preference created; action for wrongful death revised; medical care authorized for injured troopers; old age pension law enacted; health department co-operation with Federal government authorized.

*Wisconsin.* Wage payment act amended; wage deductions regulated; lien law amended; collective bargaining legalized and protected; unanimous jury findings required in certain contempt cases; prevailing wage rate laws enacted; women's hour law amended; prevailing hours required in public contracts; certain Sunday work forbidden; five-day week for public employees urged; vacation for public employees revised; emergency relief programme undertaken; adequate Federal relief programme urged; preference created for Wisconsin products; commission on unemployment insurance created; Federal unemployment insurance urged; unemployed excepted from certain relief regulations; full crew law extended; railroad safety law amended; industrial commission act extended; personal injury actions revised; workmen's compensation act amended; old age pension law amended; investigation services created in certain counties; group insurance law extended; industrial commission directed to collect wage claims; civil service act amended; destruction of certain records authorized.

*Wyoming.* Contractors' bonding law amended; employees protected as voters, etc.; hour law for miners and

smelters strengthened; hour law for public works strengthened; preference created for State products; mine safety law amended; workmen's compensation act amended; old age pension expenditures increased.

*United States.* Confiscation of pay forbidden; naturalization act amended; prevailing wage rate law enacted; Saturday half-holiday granted certain public employees; immigration service employees granted overtime pay; public works appropriations allowed; public works expedited; advance planning law enacted; appropriation for advance planning; rehabilitation act extended to Porto Rico; canal employees' retirement law enacted; organic act of Porto Rico amended to establish independent labor department.

See MEXICO under *History* for new labor code.

**LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.** Founded in 1906, this membership organization of socially-minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. Progress of the Association was recorded in its substantial quarterly, the *American Labor Legislation Review*, the December, 1931, issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States. A cumulative index to the preceding 20 volumes of this *Review* was also published during the year.

The continuance of business depression during the year brought renewed interest in the Association's unemployment programme. As in 1915 and 1921 a country-wide unemployment survey was made in 1930 and standard recommendations concerning emergency relief measures, public employment agencies, long-range planning of public works, stabilization, and unemployment insurance were stressed. After consultation with representative authorities throughout the country an unemployment insurance bill was drafted which the Association called "An American Plan for Unemployment Reserve Funds" and which was carefully framed to meet the special conditions of American industrial life.

The twenty-fifth annual meeting was at Washington, December 28-30, several sessions being held jointly with the American Economic Association, the American Political Science Association, and the American Statistical Association.

The president in 1931 was Ernest G. Draper, the secretary John B. Andrews, with headquarters at 131 East 23d Street, New York City. See LABOR LEGISLATION.

**LABOR UNIONS.** See TRADE UNIONS.

**LABRADOR,** lăb-ră-dôr. A large peninsula of British North America, lying between the Atlantic Ocean and Hudson Bay and forming the easternmost part of the North American Continent. The Atlantic watershed of the peninsula, a large part of which was claimed by Quebec, was awarded to Newfoundland by the Privy Council in 1927. The remainder comprises part of Quebec. The population of the section attached to Newfoundland was 4163 in 1929 (2228 males). Fishing and lumbering are the chief industries. An aerial hydrographic survey of the Labrador Coast from Cartwright to the northernmost point at Cape Chidley was made under the supervision of Sir Wilfred Grenfell in 1931. Approximately half of the sledge dogs of Labrador were exterminated

during the year by an epidemic of fever, which originated in wild animals. See NEWFOUNDLAND.

**LABUAN.** See STRAITS SETTLEMENTS.

**LACEY, THOMAS ALEXANDER.** A British clergyman, died in London, Dec. 7, 1931. Born in Nottingham in 1853, he studied at Balliol College, Oxford, and was ordained in the Church of England in 1876. After acting as assistant master at Wakefield Grammar School and Denstone College, he was made vicar of Madingley, Cambridge, in 1894 and chaplain and warden of the London Diocesan Penitentiary at Highgate in 1903, holding the latter appointment until 1919. He was appointed Canon of Worcester in 1918, and from 1922 to 1929 was proctor in convocation of the diocese of Worcester. Among his works are: *Liturgical Interpolations* (1898); *The Anglo-Catholic Faith* (1926); *Authority in the Church* (1928); and *The Reformation and the People* (1929).

**LACROSSE.** St. John's College of Annapolis, Md., had the best lacrosse team in the United States in 1931, winning the intercollegiate championship by defeating all opponents and then going on to capture the Lally Cup, the most prized trophy of the lacrosse season, from an all-Canada team. The State of Maryland remained in absolute control of the game, the best teams representing colleges from that State. Maryland, St. Johns, Johns Hopkins, and the U. S. Naval Academy were supreme, and only Army and Rutgers also succeeded in placing men on the all-American team, that was made up almost exclusively of Maryland men. Professional box lacrosse was organized during the season in Canada and in 1932 the league was to have teams in the United States. This is a slightly faster game and has become the national game of Australia.

**LAFAYETTE COLLEGE.** An institution for the higher education of men in Easton, Pa., founded in 1826. The registration in the autumn of 1931 was 994, the enrollment being restricted to 1000. The faculty numbered 100. The productive funds amounted to \$3,510,197, on July 1, 1931, and the income for the previous year was \$600,598. The number of volumes in the library was 80,000. The Leslie Freeman Gates Memorial Dormitory was completed during the year. President, William Mather Lewis, A.M., LL.D., Litt.D.

**LAKE TSANA,** or TANA. See ETHIOPIA under History.

**LAMBETH CONFERENCE.** See ENGLAND, CHURCH OF.

**LAMBS.** See LIVESTOCK.

**LAND CLASSIFICATION.** See SOILS.

**LANDESITE.** See MINERALOGY.

**LANDS, PUBLIC.** The Commissioner of the U. S. General Land Office, in his annual report for the fiscal year ended June 30, 1931, stated that 5,218,627 acres were embraced in original entries allowed for the fiscal year. The demand for homes thus indicated had apparently no relation to economic conditions, for in 1926, a year of general prosperity, only 3,243,446 acres of public lands were embraced in original entries. During the continuance of prosperity the amount was increased to 3,594,834 acres in 1927; to 3,726,421 acres in 1928; and during the hectic period of 1929 the land entered was 4,612,722 acres, but after the stock market collapse in 1929, and the resulting depression the acreage for the year 1930 arose to 5,434,550 acres. Final homestead entries to the number of 6199 were approved and pat-

ented. The additional amounts made available for the year 1931 for fighting forest fires were the means of a more efficient distribution of the fire prevention forces. Notwithstanding the low price of oil the receipts under the mineral leasing act were \$3,531,655.05, of which the largest amount was obtained from mineral lands in Wyoming, \$2,184,422.88. California was the second State in the amount of receipts with \$870,453.58. The total expenditures for the conduct of business of the General Land Office, including expenses of the district land offices, amounted to \$2,158,159.80 as against \$2,222,785 spent for the same purposes during the year 1930.

There were added to national forests from the public domain approximately 198,450 acres and 2000 acres excluded from such reservations were restored. On June 30, 1931, there were 151 national forests embracing 185,251,582 acres, of which something over 85 per cent is public land of the United States. Eighty-nine hydro-electric power project applications were transmitted to the General Land Office by the Federal Water Power Commission, involving public lands and lands within national forests in 12 States and the Territory of Alaska. There were withdrawn during the year 1931 under the Federal Water Power Act 35,644 acres, and prior thereto 2,064,876 acres. Executive or Departmental withdrawals placed in reservation 6,964,797.32 acres. The restoration from previous withdrawals total 4,920,363.64 acres. Allotments to Indians not residing upon reservations numbered 1684 and 384 patents were issued on cases of this character. Applications in 2396 cases for fee and trust patents for the benefit of Indians were adjudicated and 1172 fee and 188 trust patents issued.

Patents, with the reservation of all minerals to the United States, were issued on 2462 final stock-raising homestead entries for 1,051,593.21 acres. Prior to July 1, 1931, 60,071 such final stock-raising homestead entries had been passed to patent for an area of 22,341,253.90 acres, including those during the year. Patents have issued with the reservations of all minerals, or some particular minerals, to the extent of 34,610,838.20 acres. The vacant lands subject to all applicable public land laws on June 30, 1931, were 177,101,551 acres. Of this area 127,265,885 acres were surveyed and (estimated) 49,835,666 acres unsurveyed. The foregoing did not include any public land situated in the Territory of Alaska or embraced in an Indian reservation, a national forest or park, or withdrawn for stock driveway or other public purposes.

**LAND UTILIZATION.** See SOILS.

**LANE-POOLE, STANLEY.** A British Orientalist, archæologist, and historian, died Dec. 29, 1931, in London where he was born Dec. 18, 1854. Educated at the universities of Oxford and Dublin, he was connected with the coin department of the British Museum from 1874 to 1892. During this period he prepared a fourteen-volume catalogue on the Oriental and Indian coins in the museum. He also was sent on important archæological missions to Egypt (1883) and Russia (1886), and in 1895-97 was employed by the Egyptian government in research at Cairo. From 1898 to 1904 he was professor of Arabic at Trinity College, Dublin, and was also during 1901-02 secretary of the council of the Royal Irish Academy and examiner in Arabic to the

University of Wales. Among his many works are biographies of his great-uncle, Edward William Lane, the Orientalist (1877); Lord Stratford de Redcliffe (1888); Sir G. F. Bowen (1889); Aurangzib (1892); Saladin (1898); and Babur (1899). Also numerous histories, such as *The Moors in Spain* (1887); *Turkey* (1888); *The Barbary Corsairs* (1890); *The Mogul Emperors* (1892); *The Mohammedan Dynasties* (1893); *Egypt in the Middle Ages* (1901); *The Story of Cairo* (1902); *Medieval India* (1902); *Islam* (1903); *Medieval India from Contemporary Sources* (1916); and *A Short History of India in the Middle Ages* (1917).

**LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.** A religious body commonly known as the Mormon Church, existing chiefly in the United States. It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith to whom is credited by his followers the discovery, through divine revelation, of a set of metal plates, buried in a hill, from which by a special power received from God he translated the text of the Book of Mormon, the special sacred book of the church. The Mormon articles of faith include belief in God, Jesus Christ, and the Holy Ghost as individual beings, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, salvation for the dead, the Bible "as far as it is translated correctly," the Doctrine and Covenant, the *Pearl of Great Price* which contains instructions claimed to have been received divinely by Joseph Smith, the common virtues, and obedience to constituted authorities.

The administrative divisions of the church are known as the general, stake, ward, branch, and mission. A stake is a geographical division and comprises wards and branches, and is directed by a presidency of three. A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder. In 1931 the church consisted of 104 stakes, 926 wards, and 74 independent branches. The estimated membership was 671,223. There were 13 missions in America with a membership of approximately 92,751; the missions in Europe had a membership of 28,781 and those in the Pacific Islands of 15,473. A mission is directed by a mission president. In 1931, 2084 missionaries were at work in various countries, 1110 being outside the United States.

The general authorities who have jurisdiction over the entire church are the First Presidency, the Quorum of the Twelve Apostles, the Presiding Patriarch, the First Council of Seventy, and the Presiding Bishopric. In 1931 these authorities were: First Presidency: Heber J. Grant, president; Anthony W. Ivins, first counselor; Charles W. Nibley, second counselor. Quorum of the Twelve Apostles: Rudger Clawson, president, and Reed Smoot, George Albert Smith, George F. Richards, David O. McKay, Joseph Fielding

Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, John A. Widtsoe, and Joseph F. Merrill, apostles. Presiding Patriarch: Hyrum G. Smith. First Council of Seventy: Brigham H. Roberts, J. Golden Kimball, Rulon S. Wells, Joseph W. McMurrin, Charles H. Hart, Levi Edgar Young, and Antoine R. Ivins. Presiding Bishopric: Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages. It also maintains Brigham Young University (q.v.) at Provo, Utah, five junior colleges, three collegiate institutes, one high school, and 80 seminaries, small schools adjoining high schools and providing special religious instruction. The Sunday schools in 1931 had an enrollment of 258,429 pupils and 26,661 officers and teachers. Junior seminaries had an enrollment of 12,984.

**LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF.** After the death of Joseph Smith in 1844, several factions developed among the Latter-day Saints. In 1852, in Wisconsin, one of these scattered congregations effected a partial reorganization, which was completed in 1860 under the name of "Reorganized Church of Jesus Christ of Latter-Day Saints."

In 1931 the church reported a membership of 110,482, which included members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. There were 745 churches, 7000 ministers, and 730 Sunday schools with 45,000 pupils. The church also maintained Graceland College in Lamoni, Iowa, and the Institute of Arts and Sciences, home for the aged, and the Independence Sanitarium in Independence, Mo. The official periodical, the *Saints' Herald*, is issued weekly. Headquarters are in Independence, Mo.

**LATVIA.** A Baltic republic formed from territories of the former Russian Empire on Nov. 18, 1918; bounded by Estonia on the north, the Soviet Union on the east, and Lithuania and Poland on the south. Capital, Riga.

**AREA AND POPULATION.** The total area, excluding inland lakes, is approximately 24,440 square miles. The population at the census of 1930 was 1,900,045 (including 56,168 foreigners), as compared with 1,844,805 at the census of 1925. Letts comprised 73.4 per cent of the Latvian citizens, Russians 12.52 per cent, Jews 4.97 per cent, Germans 3.12 per cent, Poles 1.36 per cent, and Lithuanians, Estonians, and others the remainder. The birth rate per 1000 of population in 1929 was 18.77 and the death rate 15.01. The chief cities, with the census population in 1930, were: Riga, 377,917; Liepāja (Libau), 57,238.

**EDUCATION.** Each national minority has the right to its own schools, with its own language of instruction. In 1929-30, there were 1944 elementary schools, with 172,702 pupils; all except 127 schools were supported by the state or municipalities. In the 138 secondary schools (79 state or municipal) there were 22,876 pupils. Besides the University of Latvia at Riga, with 8284 students in 1929-30, there were a number of technical professional and art schools.

**PRODUCTION.** While agriculture is still the primary industry, manufacturing has made rapid

gains. About 55 per cent of the total area, or 8,118,000 acres, was under cultivation in 1929, and 29.2 per cent was under forest. Livestock in 1929 included 975,100 cattle, 899,900 sheep, 359,600 horses, and 387,700 swine. The principal crops are cereals, potatoes, and flax.

Ranked in order of the number of employees, the chief industries at the beginning of 1930 were: Woodworking, 13,980 employees; metallurgical, 11,485; textile, 10,100; chemical, 5410. Exports of wood and wood products in 1930 amounted to \$14,984,000 (preliminary), compared with \$16,656,000 in 1929. Mineral resources are relatively unimportant.

**COMMERCE.** Latvian foreign trade showed a marked decline in 1930. Exports declined to 247,600,000 lats (about \$47,800,000) from 273,800,000 lats (about \$52,900,000) in 1929 and imports fell even more sharply to 296,100,000 lats (about \$57,200,000) from 362,100,000 lats (about \$69,900,000) in 1929. The unfavorable balance of trade was 48,500,000 lats in 1930, compared with 88,300,000 lats in the previous year. In 1931, according to preliminary figures, imports amounted to 177,000,000 lats and exports to 164,000,000 lats.

**FINANCE.** The budget for the fiscal year ended Mar. 31, 1931, was estimated to balance at 178,299,000 lats (about \$34,412,000). Preliminary actual returns indicated a surplus of about \$578,000. In the previous year (1929-30) the budget estimates balanced at 186,491,721 lats and the closed account showed an actual surplus of 11,764,000 lats. The national debt on Apr. 30, 1930, consisted of \$5,475,000 borrowed in the United States, £2,000,000 borrowed in Great Britain, and an internal debt of 722,000 lats. As a result of the drain on the gold reserve caused by the European financial crisis of 1931, the Bank of Latvia on October 8 was given complete control of transactions in foreign exchange. Dealing in futures was prohibited. The 1931-32 budget, as revised by Parliament Dec. 30, 1931, reduced expenditures to 154,200,000 lats and the anticipated revenues to 126,500,000 lats. The budget balanced originally at 177,800,000 lats.

**COMMUNICATIONS.** On Jan. 1, 1930, Latvia had 1759 miles of railway lines, of which 1005 miles were of the Russian gauge and 282 miles of normal gauge. Highways in 1930 extended 22,796 miles, of which about 674 miles were macadamized. The navigable inland waterways total about 1829 miles and carry about 1,500,000 tons of goods annually.

**GOVERNMENT.** Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a president, elected by Parliament for three years; and legislative power in the Saeima, or Parliament, comprising 100 members elected for three years, by universal direct suffrage (men and women), on the basis of proportional representation. President in 1931, Albert Kviesis (Agrarian), elected Apr. 9, 1930. Prime Minister at the beginning of 1931, Hugo Celmins, appointed Nov. 30, 1928.

**HISTORY.** Two new Cabinets were formed in Latvia during 1931. The Celmins Ministry, an Agrarian-Conservative coalition which had been in power for two years, resigned in March and on March 24 a new Ministry was formed under Karl Ulmanis, a former instructor in the State University of Nebraska, who had served five times as Prime Minister of Latvia. The new Prime Minister also held the portfolio of Foreign Affairs. Premier Ulmanis resigned on November 3, fol-

lowing elections to the Latvian Parliament of October 3-4, which showed a strong trend toward conservatism. The parties of the Centre and Right emerged with 55 out of the 100 seats in Parliament. The Ulmanis Cabinet submitted its resignation at the first meeting of the new Parliament, when the Agrarians proposed the formation of a government by the bourgeois groups. It was not until Dec. 5, 1931, that a new Ministry was formed under Margers Skujenieks, leader of the Reform Social Democratic party, supported by a coalition of agrarian and bourgeois groups.

A compact was signed between the Foreign Ministers of Latvia and Estonia on May 5, after negotiations at Riga. It provided for close coöperation of the two governments at the 1932 Disarmament Conference and in the promotion of certain agricultural exports. A joint steamship line was to be considered. No final agreement was reached on the much-discussed trade pact of 1928 or on the question of a tariff union. Negotiations on these problems were to continue. The Ulmanis Government in April was reported to have guaranteed credits for Soviet purchases in Latvia. Consult Malbone W. Graham, "Stability in the Baltic States," *Foreign Policy Reports*, May 27, 1931, vol. vii, no. 6.

**LAVAL,** PREMIER, VISIT TO UNITED STATES. See UNITED STATES under *Administration*, and FRANCE under *History*.

**LAVONGAI.** See BISMARCK ARCHIPELAGO.

**LAW,** INTERNATIONAL. See INTERNATIONAL LAW.

**LAW, PROGRESS AND DEVELOPMENTS. LEGISLATIVE.** From the standpoint of comparative law, the most important piece of the year's legislation was probably the new Spanish republican constitution which replaced the monarchical and reactionary one of 1876. See SPAIN under *History*.

The Statute of Westminster, recognizing the legislative autonomy of the British Dominions, having passed the House of Commons by a vote of 350 to 50, was accepted by the Lords without amendment and received the royal assent early in December. The Statute was a formal expression of the fundamental agreements arrived at during the Imperial Conference of 1926 and 1930 and promises to rank as a landmark in British constitutional law, of hardly, if any, less importance than the famous Magna Carta. See GREAT BRITAIN under *History*.

The New York electorate displayed not a little discrimination in passing upon six proposed amendments to the State Constitution, viz., (1) Utilizing the Federal census in forming new legislative districts; (2) Rendering members of the legislature eligible, during their terms, to other offices and thus reviving an ancient evil; (3) Providing for the purchase of waste land for reforestation; (4) Creation of a new judicial district on Long Island; (5) Substituting "Social Welfare" for "Charities" in the title of the State department of that name; (6) Enabling Westchester County to establish its own assessment system. Amendments 1, 3, and 5 were carried although Amendment No. 3 was actively opposed by former Governor Smith and involved an eventual outlay, for posterity's benefit, of over \$19,000,000, which the legislature is required to appropriate by installments. Others were rejected and the result was hailed as a vindication of the voter as a legislator. See NEW YORK.

The new Yugoslavian electoral law was applied for the first time on November 8. The anti-government party charged that the law discriminated against it and generally refrained from voting. See YUGOSLAVIA under *History*.

**EDUCATION.** State legislatures in the United States generally grappled with the mounting costs of public instruction. A typical instance was that of North Carolina where the General Assembly took the schools out of local financial control and support, increased the school revenues and instituted drastic economies; but restricted to funds actually available the operating budget for the six months' period of school sessions for the year. To an extraordinary session of the Tennessee legislature, convened on November 16, Governor Horton announced that some schools had already closed for lack of funds and that "many others" would be forced to close unless financed speedily. The Nebraska legislature, which greatly reduced the budget offered by the State university authorities, passed an act authorizing the establishment of junior colleges, with a two-year curriculum, in any district having 200 high school pupils and property of the assessed value of \$5,000,000.

The bill, pending in Congress for over a decade, to create a Federal Department of Education, again failed to pass the committee stage; but on November 14 the National Advisory Committee on Education, submitted its report to the President, recommending a "Federal Headquarters for Education" in the form of a government department with a Secretary of Education in the cabinet but limited to research, fact-finding and the diffusion of information calculated to promote cooperation with and among the States in educational affairs and the coordination of Federal educational agencies. The present Office of Education was recommended as a nucleus.

**LABOR.** Legislation prohibiting, as contrary to public policy, "yellow dog" clauses—i.e., those by which each party to a contract of employment agrees not to join a union or association—was enacted in Arizona, Colorado, Ohio, and Oregon. In Massachusetts, the passage of a similar act was averted by an advisory opinion (171 N. E. 234) to the effect that it would be unconstitutional. A similar opinion of the Indiana Attorney General caused the Governor of that State to veto the measure which the legislature had passed; after which the lower house, but not the upper, repassed it over the veto. See **LABOR LEGISLATION**.

**MARITAL STATUS.** By a vote of 169 to 153, the Spanish National Assembly, on October 16, took the revolutionary step of authorizing the dissolution of marriage upon "just grounds" at the instance of either party and on equal terms. At least since the sixth century Spain had been under Canon law which treats marriage as indissoluble save by death. What was there known as "divorcio" was really nothing more than separation (the "limited divorce" of American jurisprudence) although it might include either persons or property or both. The new provision therefore completely reversed the prior situation and on November 18 the Papal Nuncio lodged a protest from the Vatican. Similar measures were under consideration during the year in Bolivia, Philippines and Trinidad. In Bolivia, the proposed law was adopted in the Chamber of Deputies by a large majority in November; but it was expected that the conservative Senate would postpone action until the next session. In the Philippines, the Roman Catholic Archbishop of Manila

issued a pronouncement against the pending measures on September 21. In Trinidad, where the government had been pressing the proposed legislation for some time, the Roman Catholic Archbishop likewise protested and was supported by Venezuelan priests, the Anglican Bishop, and Hindu pundits. The measure was nevertheless adopted. Approximately three-fourths of the American State legislatures considered changes in matrimonial legislation and one result was a trend toward devices like those of the Council of Trent to prevent hasty marriages. Colorado, Idaho, Iowa, Minnesota, Ohio, and Wyoming enacted laws requiring a five-day interval between the application for, and the issuance of, a license. In Idaho the latter must also be issued within 30 days after the former and in Delaware must contain a certificate as to the applicant's marital status. In Spain, the new constitution left the detailed grounds of divorce to future legislation. American State legislatures appeared disposed to extend the grounds and even to render possible divorce by mutual consent. Since 1916 an act of the Louisiana legislature has permitted either of the spouses, who have lived apart for seven years, to obtain a divorce. Thus by agreeing so to live apart such spouses become divorced by mutual consent. A similar statute, though reducing the period to five years, was enacted in 1931 in Arizona, Nevada, and North Carolina, though the last named limited its application to marriages where there are neither children nor property, while in Nevada the rendition of such a decree is made discretionary with the court and a default decree in any case is amendable if the defendant subsequently appears. A Vermont statute of the year authorizes a two-year resident to be divorced from an insane spouse, confined for five years. A tendency to shorten the residential period required of the applicant was also manifest, due perhaps to the competition of Cuba (now a signatory of the Pan-American Code, which the United States recognizes) and certain Mexican states. The Nevada legislature reduced the time to six weeks though corroborative evidence of intention is required. A 90-day period was adopted in Arkansas and Idaho, but in the former a petition for a referendum, to be taken at the general election of 1932, was presented but on November 23 was declared insufficient by five of the seven Supreme Court judges. See **MARRIAGE AND DIVORCE**.

**NATIONALITY.** Public Act 829 of the Seventy-first Congress authorizes American women who have married aliens ineligible to citizenship, or who have lost theirs by subsequent residence abroad, to repatriate themselves by registration at the consulate, thus ending a hardship resulting from the Cable Act of 1922, which left them permanently aliens under such circumstances. Public Act 683 requires the deportation of aliens under sentence for unlawfully vending narcotics.

**PROCEDURE.** Public Act 862 authorizes the United States to be made a party to Federal district court proceedings involving property in which the Government may have an interest. This is a step beyond the Court of Claims Act by which the United States consents to be sued there only. Meanwhile the Supreme Court held (*Russian Volunteer Fleet v. U. S.*, 51 Sup. Ct. Rep., 129) that the plaintiff there was an "alien friend" and entitled to sue in that court. Public Act 548 authorizes prosecution by complaint or information (instead of Grand Jury indictment) of all those

accused of offenses (those under the Volstead Act evidently intended) penalized by imprisonment not over six months or fine not over \$500 or both. Bills to authorize trials of such and similar offenses without a jury failed of passage in Congress. The Supreme Court, meanwhile, held (*Dist. of Col. v. Colts*, 51 Sup. Ct. Rep., 52) that even one charged with reckless driving of an automobile was entitled to a jury trial in the District of Columbia. The same tribunal, on the other hand, held inoperative in the Federal courts a State constitutional requirement that the defense of contributory negligence or assumption of risk should always be left to the jury (*Herron v. So. Pac. R. Co.*, 51 Sup. Ct. Rep., 383), and the Illinois Supreme Court held unconstitutional a century and a quarter old statute making jurors "judges of the law and the fact"; on the main ground that the jury trial guaranteed by the State's constitution was by a common law jury which, in the court's view, passed on the facts only. (*People v. Bruner*, 343 Ill. 146.)

A bill passed by the Nebraska legislature, requiring the Supreme Court to file written opinions in deciding all questions, was vetoed by Governor Bryan, who, although not a lawyer, thus agreed, perhaps unconsciously, with the California Supreme Court which as long ago as 1859 (*Houston v. Williams*, 13 Cal. 24) held such a statute unconstitutional as infringing the judicial prerogative.

**PROFESSIONAL QUALIFICATIONS AND STANDARDS.** An act of the New York legislature, admitting to practice in the courts of that State, without examination, former U. S. Attorney-General Sargent, was vetoed by Governor Roosevelt, on the ground that all requirements to that end should be equal and uniform. On December 17, the Supreme Court of Illinois disbarred John J. Gorman for his attack on Prof. David S. Muzzey of Columbia University, as an alleged "propagandist for Great Britain" in his textbook of American history. The attack was made in the course of a proceeding conducted by the former as corporation counsel under Mayor William Hale Thompson of Chicago. After Professor Muzzey instituted an action for libel against Gorman, the latter made a formal apology and the Chicago Bar Association thereupon initiated the disbarment proceedings. An act of the Indiana legislature gives the State Supreme Court "exclusive jurisdiction to admit attorneys under such rules and regulations as it may prescribe"; thereby providing a way of escape from an early constitutional provision which, in practice, has proved unamendable, fixing no other qualifications than a citizenship and good moral character.

The Wisconsin legislature passed an act (No. 93A) reinstating a suspended lawyer whose application for reinstatement by the Supreme Court of the State was then pending. Governor LaFollette, in approving the act, wrote a lengthy message upholding the legislature's power to pass it. In contrast was the Oklahoma Supreme Court's decision on April 21 sustaining the act incorporating the bar and giving it jurisdiction over the admission and disbarment of members.

**PUBLIC UTILITIES.** The Kansas legislature followed the lead of Massachusetts and New York in enacting a stringent law regulating gas and electric light companies. It forbids payment for service "without an itemized showing by the operating company of the actual cost," or the acquisition by a foreign company of "a local operating unit" without submitting to the public service

commission's jurisdiction and agreeing to keep it informed of all transactions between the two.

**REAPPORTIONMENT.** The Congressional Act of 1929, reapportioning representatives among the several States, led to many complications in those whose representation was reduced, especially where the governor and the legislature were politically opposed. In Massachusetts and Nebraska, under such a situation, the two finally came together. In New York the legislature ignored the governor and attempted reapportionment by joint resolution. This was declared inoperative by Supreme Court Justice Staley (*Koenig et al. v. Secretary of State*, November 7) whose decision is to be reviewed by the Court of Appeals. A somewhat similar situation exists in Minnesota where the State Supreme Court, on October 9, reversed an order of the district court, declaring invalid a reapportionment act which had been vetoed by the Governor and not repassed and was alleged to be "so arbitrary and unfair as to violate the provisions" of the Federal laws and Constitution. (*State v. Holm*, 238 N. W. Rep., 494.) The case was in the course of presentation to the Federal Supreme Court. In Illinois the reapportionment was pronounced unconstitutional by a *vis prius* court, on the ground of inequality in the populations of the new districts. In Missouri, the State Legislature adjourned without making a reapportionment, so that, unless a special session is called before the 1932 election, all of the representatives from that State will be chosen at large. Such a session of the Wisconsin legislature was called for November 24.

**JUDICIAL.** The Permanent Court of International Justice on February 21, promulgated amendments to 18 of its 75 rules of procedure. Among the more important changes are the commencement of ordinary sessions on February 1, instead of June 15, of each year, empowering the President of the Court to call it in extra session "whenever he thinks it desirable," requiring the judges to appear at all sessions unless on leave or prevented unavoidably, as by illness, and giving "interim measures of protection priority over all other cases." See WORLD COURT.

**THE SUPREME COURT OF THE UNITED STATES.** A number of notable decisions were rendered in 1931.

**Aeronautics.** An airplane is not a "vehicle" within the meaning of a Federal statute penalizing interstate transportation thereof, according to the opinion in *McBoyle v. U. S.*, 51 Sup. Ct. Rep., 340, which doubtless will be included in the proposed "Uniform Aeronautical Code" drafted by a committee of the American Bar Association.

**Income Tax.** On November 30, a majority of the Federal Supreme Court, in *Hooper v. Wisconsin Tax Commission*, declared unconstitutional as "contrary to due processes of law" a State statute requiring a husband to return, and pay tax on, the combined income of himself and wife. Justice Holmes wrote a dissenting opinion, in which Justices Brandeis and Stone concurred, holding it competent for the legislature to treat all of the wife's property, as at common law, as belonging to the husband.

**Indians.** Under the decision in *U. S. v. Equitable Trust Co.*, 51 Sup. Ct. Rep., 639 the property of Indians, notwithstanding the statutory restrictions upon its alienation, is subject to claims for legal services in protecting it, although rendered for one under guardianship.

**Interstate Litigation.** The clause in the original Federal Constitution (III, 2) extending the

judicial power "to controversies between two or more States" appears to have been availed of to an unusual extent during the year, though all of the cases noted relate to interstate waters. Relief in two was denied for failure to show a serious and presently threatened injury (*Connecticut v. Massachusetts*, 51 Sup. Ct. Rep., 286, Connecticut River; *Arizona v. California* Id., 522, Boulder Dam). In the latter case the Court took judicial notice that the Colorado "south of Black Canyon was formerly navigable." Again it was announced (*New Jersey v. New York*, 51 Id., 478) that a more liberal rule must be applied to such waters as those between States than to private riparian owners. "A river," said Justice Holmes, "is more than an amenity; it is a treasure." Hence a division of waters considered equitable was ordered but New York was enjoined from using daily more than 440,000,000 gallons from the Delaware. In *New Jersey v. New York City*, Id., 519, defendant was enjoined from dumping its garbage into the Atlantic Ocean, off plaintiff's coast. The case of *Vermont v. New Hampshire*, which, though a boundary dispute, likewise involves the Connecticut River, was referred to Edward F. Trabue, Esq., to take evidence. Upon his report the decision will probably be rendered.

**Naturalization.** Among the most widely discussed decisions of the year were *U. S. v. Macintosh*, 51 Sup. Ct. Rep., 570, and *U. S. v. Bland*, Id. 569, in both of which, by a bare majority, the Court denied naturalization to Canadians who were ready to take the oath of allegiance to the Constitution, but to take up arms for the United States only in a just war. The first named defendant was a Baptist minister and a professor in the Yale Divinity School; the second was a war nurse in France working among American soldiers. The Chief Justice and Justices Holmes, Brandeis, and Stone dissented, and there was much criticism of the decision, not only in the public press but in technical periodicals. (See, e.g., *Am. Bar Ass'n. Journal*, XVII, 551) President Charles A. Boston, in his annual address before that association, pointed out the exemption of conscientious objectors in the early constitutions.

**Police Power.** Another group of hotly contested cases involved, in part at least, the exercise of police power. In *State Board v. Jackson*, 51 Sup. Ct. Rep., 540, plaintiff sued to enjoin the enforcement of an act of the Indiana legislature imposing a graduated license tax upon "chain store" owners. The Federal district court granted an injunction on the ground that the act was discriminatory; but the Supreme Court, again by a bare majority, reversed the decree and upheld the statute. This time, however, it was the "liberal" group which prevailed, the dissenters being Justices Sutherland, Van Devanter, McReynolds, and Butler. The same division occurred in *Near v. Minnesota*, Id., 625, where the majority held unconstitutional a State law under which "a malicious, scandalous, and defamatory newspaper" etc. might be declared a nuisance and its publication enjoined. Likewise a conviction under the California "Red Flag Law," penalizing the display of any "sign, symbol or emblem of opposition to organized government," was reversed for repugnance to the Fourteenth Amendment to the Federal Constitution. Justice Butler dissented.

**Radio Law.** In *Jewell-LaSalle Realty Co. v. Buok*, Id., 506, the Court held that the operation of radio apparatus in a hotel, transmitting to its guests, without permission, a copyrighted musical

composition, constituted an infringement. In that connection should be noted the failure in the Senate, during the closing days of the late session, of the "Vestal Copyright Bill" which would have given the United States the full benefit of international legislation on the subject.

**Other Causes Célèbres.** In *U. S. v. Smith*, at the end of the year pending in the District of Columbia Supreme Court, the Senate majority sought to oust George Otis Smith, as chairman of the Federal Power Commission. His nomination, first confirmed on Dec. 20, 1930, was on Jan. 9, 1931, reconsidered by the Senate and on February 4 rejected by a vote of 40 to 33. Meanwhile, on Dec. 22, 1931, he had been commissioned; but a Senate rule permits reconsideration on either of the next two days of executive session and that period had not passed when the commission was issued. Two eminent counsel appear—John W. Davis for the Senate and George Wharton Pepper for the respondent—and the case promised eventually to reach the Federal Supreme Court. See LOUISIANA under *Political and Other Events*.

**The American Law Institute**, a select and endowed organization, chosen from the bench and bar, which meets annually at Washington to consider and pass upon restatement of the law with a view to eventual codification, held its ninth session from May 7-9. Tentative drafts were discussed by the full membership present on the following subjects: Agency, Conflict of Laws (final draft), Contracts, Criminal Law Administration, Property, Torts and Trusts.

**JUDICIAL SELECTIONS.** The disclosures of the Seabury Committee's investigations into the conduct of the New York judiciary drew public attention to the important though complicated subject of the selection of judges. Early in his term President Hoover announced that such selection would be made upon professional, and not upon political, recommendations and that the names of all indorsers would be published in connection with each appointment. No such publication, however, accompanied the nominations of three Americans to be justices of the Philippine Supreme Court nor of Gunnar Nordby to be Judge of the U. S. District Court in Minnesota. The former appear to have been selected, one each, by the Secretaries of State and War and Chairman Bingham of the Senate Philippine Committee, without consulting the Attorney General, and the Senate Judiciary Committee voted not to report them favorably.

The Minnesota judgeship had been recently created by Congress and the State's delegation in that body unanimously recommended for appointment thereto Ernest A. Michel, a lawyer of St. Paul. He was opposed by Attorney General Mitchell from the same State who offered no specific objections to Mr. Michel's character or professional attainments but claimed to have received letters adverse to such appointment, which, however, he declined to show even to Senators. This was declared unfair by Mr. Michel's friends as it left him, they said, under an apparent cloud and without opportunity for defense. They urged the President to give the Senate Judiciary Committee an opportunity to investigate Mr. Michel's qualifications, hearing both sides. To this the Attorney General refused to agree and when the President finally sent in the nomination of Gunnar Nordby, the Judiciary Committee voted not to report it, but after the adjournment of Congress he was

given a recess appointment and the nomination was renewed on December 16.

**JUDICIAL MILESTONES.** On March 8, Justice Holmes of the U. S. Supreme Court, reached the ripe age of ninety, after nearly a half century of judicial service, three-fifths of which have been on the Federal Supreme Court. Under the joint auspices of the *Columbia Law Review* and the *Yale Law Journal*, a commemorative observance of the occasion was conducted by radio, President Boston of the American Bar Association, speaking from New York and Chief Justice Hughes, with Justice Holmes himself, from Washington.

Justice Brandeis, of the U. S. Supreme Court, became 75 on November 13 and while his judicial career of 15 years had been briefer than that of his more venerable colleague, the former's record as a practitioner was much more conspicuous.

**LAWRENCE COLLEGE.** A coeducational institution comprising a college of liberal arts and a conservatory of music in Appleton, Wis., founded in 1846. For the autumn term of 1931 750 students were enrolled in the college and 209 in the conservatory. There were 65 members on the faculty of the college and 20 on the faculty of the conservatory. The endowment, exclusive of buildings and equipment, amounted to \$1,869,920; the income from endowment for 1931 was \$98,139. There were 53,000 volumes in the library exclusive of government documents. President, Henry Merritt Wriston, Ph.D., LL.D.

**LEAD.** Production of lead in 1931 throughout the world was 1,512,155 short tons, compared with 1,833,281 tons in 1930, according to the American Bureau of Metal Statistics.

WORLD LEAD PRODUCTION  
1931

	Short tons

\* Partial.

† Estimated or partly estimated.

The recoverable lead contained in ore mined in the United States in 1931 was about 397,800 short tons, a decrease of 29 per cent from the output of 558,951 tons in 1930, according to the Bureau of Mines figures. The Western States as a group showed the largest percentage decline in lead production, or 34 per cent. Output in the southeastern Missouri district, the most important lead-producing area in the United States, dropped 21 per cent. The quoted price of lead concentrates at Joplin was \$57.50 a ton for the first

week of 1931. This was the lowest price recorded for 1930 and the highest for 1931. From this point the price receded, with minor fluctuations, to \$30 a ton for the week ending May 16 through the third week in June. It then rose to \$50 a ton in the latter part of August. After September 26, the price tended downward again, with some fluctuations, closing the year at \$37.50 a ton.

The output of refined primary lead from domestic ores was 32 per cent lower than in 1930, and foreign primary output was 24 per cent lower. The total refinery output of primary lead was 31 per cent below 1930, after dropping 17 per cent in 1930, and was the smallest since 1908.

The output of primary domestic desilverized lead in 1931 was about 206,000 tons, of soft lead about 143,000 tons, and of desilverized soft lead about 41,000 tons, making a total output from domestic ores of about 390,000 tons of refined lead. Corresponding figures in 1930 were 326,801 tons of desilverized lead, 201,361 tons of soft lead, and 45,578 tons of desilverized soft lead, making a total of 573,740 tons. The output of lead smelted and refined from foreign ore and bullion was about 53,000 tons, as compared with 69,293 tons in 1930. The total primary lead smelted or refined in the United States in 1931 was thus about 443,000 tons, a decrease of about 31 per cent as compared with the total of 643,033 tons in 1930. The output of primary antimonial lead in 1931 was about 9000 tons, as compared with 13,711 tons in 1930.

The average monthly price for lead at New York (outside market) was 4.80 cents a pound, the high for 1931, during January. It dropped steadily to 3.82 cents in May, rose to 4.40 cents in July and August, and dropped steadily again to a low for the year of 3.80 cents in December, slightly below the price recorded for May.

The output of lead in Canada in 1931 was estimated at 267,850,972 pounds valued at \$7,241,000, as against 333,067,797 pounds valued at \$13,109,451 in 1930, a decrease of 20 per cent in the amount. See *METALLURGY.*

**LEAGUE OF NATIONS.** Two important gatherings were held at Geneva in January, 1931. On the 16th, representatives of 27 European states came together to study the question of European union. A few days later the 62nd session of the League Council was held. The early sessions of the first conference were marked by a heated controversy over whether the Soviet Union should be invited to participate. Italy, supported by Germany and Great Britain, approved the proposal, while France was in opposition. A compromise was finally adopted whereby the Soviet Union, Turkey, and Iceland were to be invited, through the League, to participate in the study of economic questions only.

The Pan-European committee insisted upon the importance of solving the economic problems of Europe. With this end in view, it urged the ratification of the League customs convention, and appointed three committees: (1) the wheat committee, to study means of disposing of future surpluses of Eastern Europe; (2) an agricultural credits committee; (3) a committee on future organization. These committees reported to the second session of the Pan-European conferences held in May.

Although the conference thus emphasized the necessity of solving the economic problems of Europe, it did not neglect the political factor, as indicated by the following resolution:

As a result of our discussions and conversations during the last few days concerning the problems which our governments have respectively to face, it has become plain that economic recovery is now being hindered by a lack of confidence in the course of future events due to widespread political anxiety. That anxiety has been increased by irresponsible talk in various quarters concerning the possibility of an international war.

We recognise that there are political difficulties in Europe at the present time and that these difficulties have been accentuated by the economic instability and unrest which the world economic depression has caused. The best service we can render toward the improvement of the economic position is the firm assurance of European peace.

We therefore declare, as Foreign Ministers or responsible representatives of European states, that we are more resolutely determined than ever to use the machinery of the League of Nations to prevent any resort to violence.

Although the League Council assembled in the midst of gloom, it ended its sessions on January 24 upon a note of optimism. Its most notable act was to rebuke Poland (q.v.) for its treatment of the German minority in Upper Silesia. As a result, Poland agreed to name a new governor of Upper Silesia. The Council also decided to convene the world Disarmament Conference, toward which the Preparatory Commission had been working for five years, at Geneva on Feb. 2, 1932.

The Pan-Europe movement undoubtedly exercised considerable influence in causing the League of Nations to emphasize its universality. The Council authorized the head of the League financial section, Sir Arthur Salter, to help in the reconstruction of China. Sir Arthur was already in India upon a similar task. The Council also appointed a committee containing representatives of Great Britain, France, Germany, Italy, Liberia, Spain, Venezuela, and Poland to study how the recommendations of the Liberia Slavery Commission might be carried out and how financially the public health assistance to this Negro republic might be extended. The United States agreed to participate in the work of the committee. The final indication of the League's universal interests was the fact that Sir Eric Drummond, its Secretary-General, had just completed a tour in Latin America.

The 63rd meeting of the Council held in the last week of May produced a significant result in the unanimous decision to refer the problem of the legality of the Austro-German Customs Union to the Permanent Court of International Justice. It was hoped that the Court would give its advisory opinion before the next meeting of the Council in September and this it did. (See *WORLD COURT*; *GERMANY, FRANCE, and AUSTRIA under History*.) Tension was accordingly relaxed. The Council approved a proposal to defer consideration of a report on the position of German minorities in Polish Silesia and rejected a German proposal that details of war stocks and trained reserves should be included in the information which states should be asked to furnish to the Disarmament Conference. Meetings of the Special Committee for European Federation preceded that of the Council and were notable for the presence of M. Briand, fresh from his Presidential defeat, and for an illuminating speech on the world economic situation from the Soviet delegate, M. Litvinov. He pleaded for support for a pact of economic non-aggression to which he maintained that the Soviet Union would give its full adherence (see *UNION of SOVIET SOCIALIST REPUBLICS under History*).

The German Foreign Minister chaired the Coun-

cil session. Of the 14 members, nine were represented by their Foreign Ministers, namely, Great Britain, Germany, France, Irish Free State, Italy, Norway, Poland, Spain, and Yugoslavia. Arthur Henderson, British Foreign Secretary, was appointed president of the 1932 Disarmament Conference. Other questions dealt with were the protection of minorities in Poland, relations between Poland and Danzig, Polish-Lithuanian relations, and the position of the Memel territory. The Council was able to place on record the formal accession of Great Britain, Australia, India, New Zealand, and France to the General Act for the Pacific Settlement of International Disputes, and the promise of the Italian Government to accede shortly.

The 64th session of the Council opened at Geneva on September 1, with Alejandro Lerroux, Foreign Minister of Spain, as president. The outstanding event was the news that France was preparing to give up her mandate over Syria. The Council approved the recommendations of the Permanent Mandates Commission as to the conditions under which a mandated area might become an independent member of the League and asked the commission to report in January, 1932, as to how far Iraq and Syria had progressed in these respects. The Council also took up the perennial minority troubles between Poland and Germany and Poland and Danzig. In both cases, the atmosphere was cleared somewhat. It was decided to seek advisory opinion from the World Court on the question of whether Polish warships should be allowed to anchor in the harbor of Danzig. The World Court was also asked to give an advisory opinion on the financial relations of Greece and Bulgaria as affected by the Hoover moratorium. See *BULGARIA under History*; *WORLD COURT*.

The 65th Session of the Council, held in Paris, opened on November 16 and continued into December. The agenda included the continuation of the discussion of the appeal of the Chinese Government under Article XI of the Covenant and a request of the French and the British Governments for consideration of the frontier dispute between Iraq and Syria (see *IRAQ under History*).

**THE MANCHURIAN CRISIS.** The Manchurian dispute between China and Japan came before the League Council on September 21, when China invoked Article XI of the League Covenant. Article XI declares "any war or threat of war . . . a matter of concern to the whole League" and authorizes the League to "take any action that may be deemed wise and effectual to safeguard the peace of nations." The Council's effort to restore the *status quo ante* in Manchuria continued, with several intermissions, throughout the remainder of the year, but without success.

Outstanding developments in connection with these negotiations were: Formal support of the Council's efforts by the State Department at Washington (commencing October 9); participation of the American Consul at Geneva in the deliberations of the Council (commencing October 15); the evoking of the Kellogg-Briand Pact by the Council at both Tokyo and Nanking (October 17); the Council's recommendation adopted 13 to 1, the Japanese delegate opposing, for withdrawal of Japanese troops in Manchuria by November 16 (October 24); adoption of the Council's plan to send a neutral commission of inquiry to Manchuria to suggest a basis for the

cessation of hostilities (December 9). The Chinese and Japanese representatives on the Council agreed to the appointment of the neutral commission, with the understanding that it would not participate in Sino-Japanese negotiations for a direct settlement, not interfere with military arrangements of either party. Also see JAPAN under *History*.

**THE TWELFTH ASSEMBLY.** Contrary to custom, M. Titulescu of Rumania was reflected president of the Twelfth Assembly over Count Apponyi of Hungary, the first time that any one had been president of the Assembly twice and the first time that there had been a contest for the position. The 51 nations represented voted unanimously to invite Mexico (q.v.) to become a member of the League, and the invitation was accepted.

The Twelfth Assembly adjourned on September 29 after considering a wide variety of world problems. Following the usual custom, work was divided among committees. Each country had the right to be represented on these committees where every League activity is decided upon after thorough discussion. Usually when the committee reports were presented they were accepted unanimously by the Assembly. The First Committee of the Assembly, under the chairmanship of M. Scialoja of Italy, considered legal problems that arose. Seven major matters were discussed. The committee recommended a procedure to be followed for the progressive codification of international law, profiting from the comparative failure of the codification conference at The Hague in 1930, which proved that the most careful preparation and preliminary study were necessary.

An important problem was the attempt to revise the Covenant of the League in harmony with the Kellogg-Briand pact. The pact was vague and general in its terms, where the Covenant was explicit and definite. Moreover, the Covenant had served fairly well and it was felt that it should be amended only when urgently necessary. On the other hand, most League supporters desired to overcome the weakness in the Covenant which allowed a country to go to war if all other means of settling a dispute had failed. The Assembly accepted the committee's plan for the appointment of a special committee of all members of the League to meet during the 1932 Disarmament Conference to determine a possible agreement.

A committee on the work of the League's technical organizations approved the work of the organization for communications and transit, including its work on the buoyage and lighting of coasts, and the preparations made for the scheduled conference on calendar revision. The organization was asked to give special attention to large public works the world over that might relieve unemployment. The long-talked-of convention to prevent the extinction of whales was adopted by the committee on technical organizations and opened for signature. It becomes effective when ratified by eight states, which must include Great Britain and Norway. Six countries signed immediately.

A third committee concerned with armaments and security considered the "general convention to strengthen the means of preventing war," which outlined in detail how the Council could proceed in case of a crisis. This convention was adopted by the League and was ready for sub-

mission to the nations. An armament truce was proposed by Italy and, in different form, by the Scandinavian countries, in an attempt to establish a friendly and favorable atmosphere for the Disarmament Conference. It was evident that no progress could be made without the collaboration of the non-member states, and they were invited to sit with the committee for that purpose. The United States, Costa Rica, Egypt, and Turkey accepted. An elastic agreement was finally reached, under which the Assembly asked all governments to signify by November 1 whether they were willing to enter an agreement to "refrain from any measure involving an increase in armaments." Only 25 nations out of 60 reported to the League on the conditions of their armaments, but these 25 included all the more important nations.

A fourth committee, concerned with the internal organization of the Secretariat, faced the problem of reducing League expenses to a minimum. Some countries found themselves unable to pay even their small dues. Nicaragua formally asked the League to be excused from her 1931 payments. The budget of the League for 1932 as finally adopted, including the expense of new buildings and of the Disarmament Conference, was about \$7,000,000. An unusual number of ratifications of League convention was received during the meeting of the Assembly.

**INTERNATIONAL AGRICULTURAL MORTGAGE CREDIT CONVENTION.** A committee working on the details of the International Agricultural Mortgage Credit Company completed its task and drew up a draft convention, which was approved by the European Union Commission, approved by the Council, opened for signature on May 21, and signed the same afternoon by 16 nations. The convention provided that the company, with headquarters at Geneva, would receive from the nations ratifying it, advances in proportion to their dues to the League, up to a total of \$5,000,000. Further shares might be sold to the public up to \$45,000,000. As this is received, the company was to issue bonds up to ten times the paid-in capital (a maximum of \$500,000,000), and lend the proceeds to national credit companies in each country of Europe, which, in turn, would lend it to farmers at reasonable interest as first mortgages up to 50 per cent of appraised value on their farm lands. There would be a slight profit on the transactions from which the advances of the governments would be gradually repaid. The convention was to go into effect whenever the \$5,000,000 special reserve was paid in, either from obligatory contributions coming due upon a country's ratification or from voluntary contributions which a government might make before ratification. The financial delegation which outlined the details was appointed as an organization committee to initiate the scheme. If the company was not in operation by Dec. 31, 1931, a conference was to be called to consider further action.

**ROUTINE WORK OF THE LEAGUE.** Meanwhile the important routine work of the League went on. The report of the commission which investigated charges of slavery in Liberia was published in Geneva and Washington on January 10 (see LIBERIA under *History*). The subcommittee of customs experts was asked to give technical opinions on: (1) Methods for application of tariffs according to gross weight, net weight, etc., (2) the customs régime of samples and of ad-

vertising matter, (3) the nationality of goods. The committee met at Geneva from December 8 to 18 and drew up reports on these matters designed to unify customs regulations and aid foreign trade. The Conference for the Unification of River Law finished its work and drew up three conventions, which were to become effective when ratified by three or more states.

**OPIUM CONVENTION RATIFIED.** The conference of nations meeting at Geneva in July to limit the manufacture of dangerous drugs to the medical and scientific needs of the world adopted a revised draft convention. The British "quota" plan was abandoned in favor of the Franco-Japanese "open market" proposal. Under the latter plan a country could manufacture narcotic drugs for domestic use and for export if an import certificate and actual order were received from the purchasing country. Up to 50 per cent of the preceding year's exports might be manufactured, on the supposition that orders would be received for that amount, any excess over actual orders received being added to the following year's available stocks.

Yearly estimates of each country's legitimate requirements were to be submitted for examination to a central supervisory body made up of one member selected respectively by each of the following organizations: The League's Advisory Committee on Traffic in Opium, the Permanent Central Opium Board of the League, the League's Health Committee, and the Office International d'Hygiene Publique in Paris. The estimates were to be forwarded to the Secretary General of the League for transmission to all the countries. Imports by the manufacturing countries were to be limited to the total of the amount specified in the estimates for each such country, less the amount indicated in the estimates as manufactured in that country that year. The convention also included the American delegation's proposal to limit supplies of raw material to six months' requirements or, in exceptional circumstance, to one year's requirements.

Habit-forming drugs covered by the convention were divided into three groups—"narcotic drugs," compounds from which narcotic drugs could be made, and compounds not then known to science, which might come under either of the two former classifications. The export of heroin, a derivative of opium, was prohibited, except on the definite request of a competent public department of a non-manufacturing government, with the drug always remaining under strict government control. As urged by the American delegation, codeine for the first time was placed on the list of dangerous drugs. This convention was ratified on July 13 by 28 states, six of which were from the group of "indispensable countries"—the United States, France, Great Britain, Germany, Japan, the Netherlands, Switzerland, and Turkey—of which only four were necessary. Any disputes arising may be referred to a special arbitration body agreed upon by the disputants and then, if no agreement is reached, to the World Court.

**THE LEAGUE AND INTELLECTUAL COÖPERATION.** During July the League of Nations groups were concerned with intellectual coöperation. The first group to meet was a delegation of the subcommittee of Experts for the Instruction of Young People in the Aims of the League. The delegation discussed the revision of school manuals with a view of rectifying passages detrimental to good-will among the nations, and a

special committee was appointed for this purpose. Wider distribution of publication on and of the League was recommended. The Committee of Scientific Experts, presided over by Mme. Curie-Sklodowska, met on July 17 and discussed the co-ordination of scientific bibliography, ways of facilitating scientific research, and the exchange between countries of professors and students. The Committee of Intellectual Coöperation was requested to have the Institute make a study of the possibilities for laboratory work afforded foreign professors and students and to establish a draft list of scientific laboratories. The committee further recommended technical coöperation in organizing scientific work.

Composed of so illustrious a group that it is often called the "World Academy" in Geneva circles, the Permanent Arts and Letters Committee opened its first session on July 6. Jules Destree of Belgium was appointed chairman, and among the members were John Masefield, British Poet Laureate; Thomas Mann, German winner of the Nobel Prize; Paul Valery of the French Academy; Bela Bartok, composer and conductor; Carel Capek, playwright and journalist; and Mmes. Roll-Anchor and Bacaresco. Recommendations were made to the Committee of Intellectual Coöperation that correspondence be arranged for between leaders of outstanding schools of thought, and interviews be scheduled between authorities on technical and intellectual questions and research, and that the results of such correspondence and interviews be published regularly. It was further recommended that meetings be organized to "spread knowledge of the aims, methods and results of intellectual coöperation" and that an international bibliography of translations be published as soon as possible.

These conclusions were submitted to the Committee of Intellectual Coöperation, which met in plenary session July 20, under the chairmanship of Sir Gilbert Murray of England. Dr. James T. Shotwell of Columbia University, attending the meeting in place of Dr. Robert A. Millikan, suggested the application of the methods used in the intellectual field to social, political, and economic questions, in order to further the spirit of international coöperation. In response to China's request for help in reorganizing her school system, the committee appointed a group of four experts to study the situation on the ground.

See UNITED STATES OF EUROPE; DISARMAMENT; WORLD COURT; and the articles on the member states of the League, under *History*; *Peace*.

**BIBLIOGRAPHY.** Consult *The League of Nations: Ten Years of World Coöperation* (1931), compiled by the League Secretariat and distributed in the United States by the World Peace Foundation, Boston; H. Wilson Harris, *The League of Nations* (New York, 1930).

**LEATHER.** As indicated in the table in the article LIVESTOCK, the number of cattle slaughtered in the United States in 1931, 8,107,842, was less than in the preceding year and also less than the three-year average, 1928-29-30. More calves, hogs, and sheep, however, were killed in 1931 than in 1930 or on the average for the three years previous. The price of hides declined during the year, native steers being quoted on Dec. 20, 1931, at eight cents a pound as against nine and a half cents on Dec. 1, 1930. The decline, which was practically continuous in 1930, was not halted during 1931. The production of leather also witnessed a decline and was smaller than in the

previous year in practically all fields except pig and hog skins. Sole leather from cattle amounted in 1931 to 12,755,313 backs, bends, and sides, as against 15,513,124 in 1930. The raw hides and skins worked in by American tanners in 1931 were as follows: cattle, 14,254,357; buffalo, 37,286; calf, 11,297,394; kip, 1,741,433; goat and kid, 47,905,376; cabretta, 3,049,165; sheep and lamb (including skivers), 32,727,784; kangaroo, 1,001,476.

In 1931, the imports of raw hides and skins, except furs, into the United States amounted to 271,738,179 pounds valued at \$50,302,106 as against 399,910,995 pounds valued at \$92,268,412 in 1930. Declines were registered in practically all kinds of hides, including cattle hides, calf hides, horse hides, sheep and lamb skins, and kid and goat skins. The imports of leather into the United States in 1931 were valued at \$10,595,469 as against \$23,727,904 in 1930.

The United States during the calendar year imported leather manufactured goods valued at \$22,106,985, or a decrease of 29 per cent from the value of 1930, \$31,169,901. Leather glove exports amounting to \$12,273,145 represented 55 per cent, and leather footwear valued at \$7,107,943, 32 per cent of the total. (See **BOOTS AND SHOES**.)

**LEBANON**, REPUBLIC OF. See **SYRIA**.

**LE BON**, le bôn', GUSTAVE. A French physiologist, psychologist, and ethnologist, died at Marne-la-Coquette, near Paris, Dec. 13, 1931. Born at Nogent-le-Rotrou in 1841, he studied medicine, and during the Franco-Prussian War commanded an ambulance division attached to the Army of Paris. In 1877 he published *L'Homme et les sociétés* (2 vols.) He abandoned his medical practice in 1894 to take charge of a government expedition to study the architecture of the Buddhist monuments in India. After that he went on a series of voyages and expeditions, writing books on the countries he visited. These were followed by works of distinction in physics, and his *Recherches anatomiques et mathématiques sur les lois des variations du volume du crâne* was crowned by the Academy of Sciences and the Anthropological Society of Paris. His psychological works include: *Lois psychologiques de l'évolution des peuples* (1895; Eng. trans., *The Psychology of Peoples*, 1898); *Psychologie des foules* (1895; Eng. trans., *The Crowd: A Study of the Popular Mind*, 7th ed., 1910). The series dealing with the psychological and philosophical aspects of the World War gained for him an international reputation: *Enseignements psychologiques de la guerre européenne* (1915); *Premières conséquences de la guerre: transformation mentale des peuples* (1st series, 1916; 2d series, 1917); *Hier et demain: pensées brèves* (1918); *Psychologie des temps nouveaux* (1920); *Le déséquilibre du monde* (1923); and *L'Évolution actuelle du monde: illusions et réalités* (1927).

**LEEWARD ISLANDS**. The most northerly of the British Lesser Antilles, lying to the north of the Windward group and southeast of Porto Rico, comprising Antigua, Dominica, Montserrat, St. Christopher or St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles; population at the census of 1921, 122,242, as compared with 127,193 in 1911. The estimated population in 1929 was 124,901. The two largest islands with their area and estimated population in 1929 were: Dominica, 305 square miles and 41,482 inhabitants; Antigua, 108 square

miles, but with Barbuda and Redonda, 170 square miles, with a population of 30,974. The chief towns are Roseau (Dominica), 7042 inhabitants; St. John (Antigua), 6997 inhabitants; and Basseterre (St. Christopher), 7736. The islands are divided into five presidencies under a central government, at the head of which is a governor, who is also commander-in-chief, assisted by a Federal executive council, and a Federal legislative council. Governor in 1931, Lieut.-Col. T. R. St. Johnston.

In April, 1931, the Secretary of State for Colonies appointed Sir Sydney Armitage-Smith to study the finances of the Leeward Islands and of St. Lucia in the Windward group with a view to reducing the calls being made by them upon Imperial funds. See **BRITISH WEST INDIES**.

**Leeward Islands** is also the name of an island group in the Pacific under French sovereignty. See **OCEANIA**, **FRENCH ESTABLISHMENTS IN**.

**LEGION**, AMERICAN. See **AMERICAN LEGION**.

**LEGION**, FOREIGN, ANNIVERSARY. See **CELEBRATIONS**.

**LEGISLATION**. See **LAW**, **PROGRESS AND DEVELOPMENTS**; **UNITED STATES**, and the articles on the separate States.

**LEHIGH UNIVERSITY**. A nonsectarian institution for the higher education of men in Bethlehem, Pa., founded in 1866. The enrollment for the autumn of 1931 was 1596, distributed as follows: Arts and science, 261; business administration, 360; engineering, 806; graduate students, 128. The enrollment for the summer session of 1931 was 456. The faculty numbered 179, including 22 persons on the administration staff. The endowment amounted to \$5,333,251, while the total income for the year was \$1,319,850. There were 196,000 volumes in the library. A department of moral and religious philosophy was created in the college of liberal arts in 1931. President, Charles Russ Richards, Eng.D., LL.D.

**LEHMANN**, FREDERICK WILLIAM. An American lawyer, died in St. Louis, Mo., Sept. 12, 1931. Born in Prussia, Feb. 28, 1853, he was brought to the United States in childhood and was graduated from Tabor College, Iowa, in 1873. Admitted to the bar in 1873, he practiced in Nebraska City, Neb., until 1876, in Des Moines, Iowa, until 1890, and thereafter in St. Louis, Mo., where he was successively a member of the firms of Boyle, Priest & Lehmann and Lehmann & Lehmann. He was appointed Solicitor-General in 1910 by President Taft, serving until 1912, and represented the United States at the Mexican Mediation Conference sponsored by the "A B C" Powers (Argentina, Brazil, and Chile) at Niagara Falls, N. Y., in 1914.

**LEMONS**. See **HORTICULTURE**.

**LENS TESTING**. See **PHOTOGRAPHY**.

**LEONIDS**. See **ASTRONOMY**.

**LEUTZE**, REAR ADMIRAL EUGENE HENRY COZZENS, U. S. N., Ret. An American naval officer, died in Brooklyn, N. Y., Sept. 15, 1931. He was born in Düsseldorf, Germany, Nov. 16, 1847. Coming to the United States in early youth, he was graduated from the U. S. Naval Academy in 1867 and was promoted through the various grades to captain in 1901 and rear admiral in 1907. He served on the Board of Inspection and Survey (1904-05) and was commandant of the Washing-

ton Navy Yard and superintendent of the naval-gun factory (1905-10). Although retired by operation of the law in 1909, he continued in active service, being commandant of the New York Navy Yard from 1910 to 1912.

**LEWIS, COL. ISAAC NEWTON, U. S. A., RET.** An American soldier and inventor, died in Hoboken, N. J., Nov. 9, 1931. He was born in New Salem, Pa., Oct. 12, 1858, and on graduation from the U. S. Military Academy in 1884 was commissioned in the Second Artillery. By successive promotions he rose to the rank of colonel Aug. 27, 1913, and was retired for disability in line of duty the following September. Colonel Lewis invented numerous devices in connection with ordnance and particularly with coast defense, including a time-interval clock and bell system of signals for coast defense batteries, quick-reading mechanical verniers, and a rapid-fire field gun and mount. His chief fame, however, rests on the invention of the Lewis machine gun, of which during the World War more than 100,000 were used by the Allies. He presented this invention to the Ordnance Department in Washington in 1912, but it failed of acceptance.

The gun, however, was adopted by the British government and was used not only in field service but as airplane armament. In the U. S. Army the Lewis gun was employed as an aircraft weapon and functioned satisfactorily. Other inventions by Colonel Lewis included a device for lighting railroad trains electrically by means of a self-regulatory dynamo operating from car axles and a method of providing electric power for rural homes by windmill-driven generators.

**LEXICOGRAPHY.** See **PHILOLOGY, MODERN.**

**LIBERIA.** A Negro republic on the west coast of Africa, extending from the British colony of Sierra Leone on the west to the French Ivory Coast on the east, with about 350 miles of coast line. Area, about 43,000 square miles; population, estimated at 2,000,000 to 2,500,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages. The civilized inhabitants, reported at about 60,000, live along the coast and speak English. Whites in the country number about 250. Capital, Monrovia, with 10,000 inhabitants (including Krutown). In 1929, there were 10,250 pupils in 127 schools (63 Government and 64 mission schools).

**PRODUCTION AND TRADE.** Agriculture, mining, and industry are comparatively undeveloped. Cacao and cotton are produced in small quantities, but the staple product is native coffee. Other products are piassava fibre, palm oil, palm kernels, chillies, and beniseed. In 1930 over 30,000 acres of the 1,000,000-acre Firestone rubber concession, granted in 1926, had been planted to rubber trees.

**FINANCE.** Budget operations have resulted in a deficit every year since 1926-27. In the fiscal year 1928-29, revenue totaled \$1,028,123 and expenditure \$1,098,152. Revenue for 1930-31 was estimated at about \$700,000. A \$5,000,000 loan floated in the United States in 1927 is secured by a first lien on customs revenues and head moneys, and supervision of Liberian finances by agents of the American bankers was provided for.

**COMMUNICATIONS.** Means of transport and communication are severely limited, there being no railway, telephone, or telegraph service. Along the coast are 150 miles of roads passable for light motor traffic but native porters carry all goods in the interior.

**GOVERNMENT.** The constitution, modeled on that

of the United States, vests executive power in a president, assisted by a cabinet of eight, and legislative power in a legislature of two houses. Suffrage is restricted to Negroes owning land. English is the official language. President in 1931, Edwin Barclay.

**HISTORY.** Charges of slavery and forced labor in Liberia were substantiated by the report of an international commission of inquiry made public by the League of Nations and by the U. S. Department of State on Jan. 11, 1931. The contents of the report, which had been submitted in September, 1930, to the Governments of Liberia and the United States, were forecast by the resignations of President King and Vice President Yancey of Liberia in December following receipt of a sharp note from Secretary of State Stimson.

As summarized by the *Baltimore Sun* of Jan. 7, 1931, Mr. Stimson's note virtually threatened the severance of diplomatic relations with Liberia unless the Liberian Government took more active steps to abolish slavery and punish the high officials responsible.

The resignations of the President and Vice President left Edwin Barclay, Secretary of State, as Provisional President. In May, 1931, the Liberian Legislature elected Barclay constitutional President and James S. Smith Vice President. The American Minister at Monrovia was instructed to withhold formal recognition of the new régime until slavery reforms and sanitary improvements had been satisfactorily carried out. The Legislature had taken preliminary steps in December, 1930, by passing laws incorporating some of the recommendations of the commission of inquiry. The laws provided for the freeing of all domestic slaves, the abolishment of the "pawn" system, and the prohibition of the recruiting of contract labor for foreign employment. The President was authorized to engage two persons of European or American nationality to submit recommendations for the reorganization of the hinterland. Trade restrictions in the hinterland were removed and the creation of a public-health and sanitation service was provided for.

The report of the commission of inquiry was considered by a special committee of the League of Nations, commencing Feb. 27, 1931. To assist the Liberian Government in putting into effect the recommendations of the international commission of inquiry, the League sent to Liberia shortly afterward Dr. Melville D. MacKenzie of the League's health section; Henri Brunot, a French administrative officer and former Governor of the Ivory Coast; Mynheer Lighthart, a Dutch financial expert; and Dr. Howells, a British health officer from the Gold Coast. At the suggestion of the League Council, Liberia ratified in 1931 the forced-labor convention adopted by the International Labor Conference in 1930. See **LEAGUE OF NATIONS.**

**LIBIA, lib'i-ä.** An Italian possession on the north coast of Africa between Egypt and Tunis, transferred from Turkey to Italy by the treaty of Oct. 18, 1912. It is divided into the administrative districts of Tripolitania and Cyrenaica (q.v.), with capitals at Tripoli and Benghazi, respectively.

**LIBRARY ASSOCIATION, AMERICAN.** The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103; in 1931 it reached

15,000. The activities of the association are carried on by its officers; by more than 60 voluntary committees and boards, engaged in studying such problems as book buying, book selection, cataloguing, and library work with the blind and with the foreign born; by hundreds of volunteer workers; and by the members of the headquarters staff, which numbered about 60 in 1931, including the executive assistants to the Board of Education for Librarianship, the Board on the Library and Adult Education, and the Library Extension Board.

The association issues various books and pamphlets for libraries and in the interest of library progress. Important publications of the year included: Charles B. Shaw, *List of Books for College Libraries*; Edna A. Hester, *Books for Junior Colleges*; a list of *Recreational Reading for Young People*; Douglas Waples and Ralph W. Tyler, *What People Want to Read About* (published jointly with the University of Chicago Press); *Handbook for Teacher-Librarians*; Ethel F. McCollough and Maud van Buren, *Essentials in Library Administration*; *Catalogers and Classifiers' Yearbook*, No. 2; *Children's Library Year Book* No. 3; *School Library Yearbook*, No. 4; and *College and Reference Library Yearbook*, No. 3. *Reading with a Purpose* courses, published by the association during 1931, were: Avrahm Yarmolinsky, *Russian Literature*; J. D. Condliffe, *The Pacific Area in International Relations*; Sir J. Arthur Thomson, *Evolution*; Clarence Poe, *Farm Life*; and James G. McDonald, *Latin America*.

The association issues three periodicals also: *Bulletin of the American Library Association*, a monthly which includes the annual reports, the conference proceedings, and the yearly handbook, and which in 1931 included also a quarterly section devoted to adult education; *The Booklist*, published monthly as a guide to the selection and purchase of current books; and *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by canvassing agents.

The fifty-third annual conference, which ranked first in point of attendance in the history of the association, was held June 22-27, 1931, in New Haven, Conn., with more than 3200 librarians present. On this occasion, the John Newbery Medal, given annually by the section for library work with children, for the most distinguished children's book of the year, was awarded to Elizabeth Coastworth for her book, *The Cat Who Went to Heaven*. The council of the association went on record as favoring the entrance of the United States into the International Copyright Union, the abrogation of the requirement that books be manufactured in this country if they are to have copyright protection here, and abolition of the restrictions which hamper libraries and individuals in importing foreign books for use. The council also adopted a resolution calling public attention to the fact that economic depression, with its accompanying unemployment, had increased the demands upon library facilities and urged that no reduction should be made in library appropriations. At the same time, a Federal appropriation as an equalizing and stimulating fund for rural public library service was approved.

The officers elected for 1931-32 were: President, Josephine Adams Rathbone, vice director,

Pratt Institute School of Library Science, Brooklyn, N. Y.; first vice president, Charles E. Rush, associate librarian, Yale University Library, New Haven, Conn.; second vice president, Beatrice Winsor, librarian, Public Library, Newark, N. J.; treasurer, Matthew S. Dudgeon, librarian, Public Library, Milwaukee, Wis. Gratia A. Countryman, librarian, Public Library, Minneapolis, Minn., and Sydney B. Mitchell, director, University of California school of librarianship, Berkeley, Calif., were elected members of the executive board. The headquarters of the association are at 520 North Michigan Avenue, Chicago, Ill.

**LIBRARY ASSOCIATION, THE.** An organization of libraries and librarians in Great Britain, founded in 1877 and incorporated by Royal charter 1898. Its membership includes libraries throughout the United Kingdom. It publishes the *Library Association Record* (monthly), *The Subject Index to Periodicals* (annual), *The Year's Work in Librarianship* (annual), and other works appropriate to the conduct of libraries of various types. It maintains a professional register consisting of Fellows (F.L.A.) and Associates (A.L.A.). President at the end of 1931, Lt. Col. J. M. Mitchell, Secretary of Carnegie United Kingdom Trust, Dunfermline; secretary, P.S.J. Welsford, F.I.S.A. The association maintains headquarters at 26-27 Bedford Square, W. C. 1, London.

**LIBRARY PROGRESS.** Notwithstanding the economic situation, library development continued during 1931, and, largely on account of the business depression and consequent unemployment, the reported circulation of public library books showed a marked increase throughout the United States. State library extension agencies received increased appropriations in 16 States, and county-wide library service was established in eight counties. In an area composed of parts of three Vermont counties—Chittenden, Franklin, and La Moille—a regional library experiment was begun, 28 small town libraries in the section receiving aid through loans of books and the advisory visits of a regional librarian. The project was being conducted under the auspices of the Vermont Commission on Country Life, financed by a special grant. The Fraser Valley (British Columbia) rural library demonstration had successfully completed its first year, and the British Columbia Library Commission opened a district office in Prince George in order to provide better library service for the large North Central District. In Maine, rural library service was being given from well established city libraries, seven of these district libraries being in operation.

The Southern States were showing an increased appreciation of the library as an essential service agency. The committee on reading of the South Carolina Teachers Association, in a recently published report, urged the founding of county and other public libraries as a step to promote wider reading among the people of the State. The American Library Association's regional field agent for the South was assisting in a study of economic and social conditions and problems of the Southern Appalachian highlands.

**CIRCULATION.** Circulation figures for all libraries were not available, but 41 libraries in cities of more than 200,000 population reported in 1931 a total circulation of 134,103,005 for

1929-30, as compared with a circulation of 124,016,051 for 1928-29. The total number of libraries, in the continental United States, possessing collections of 3000 or more volumes, was 6429, and the total number of books which they own was approximately 162,000,000—an increase of 33,500,000 in the six years from 1923 to 1929, according to figures published in 1931 by the U. S. Office of Education. These statistics show further that there is one library to every 11,226 persons in the United States.

**LEGISLATION.** Florida adopted permissive county library legislation in 1931, and Michigan went on record as the first State to pass a law permitting regional library establishment. A law providing State aid for county libraries was passed by the Pennsylvania Legislature. Complete revision of the Arkansas municipal library law was a step forward. The reorganization of State departments in Maine resulted in bringing the State library into the department of education. In Alabama, a bill carrying an appropriation for the establishment of a State library commission passed the legislature, but was vetoed by the governor. In Washington, a permissive county library law met a similar fate.

**NATIONAL CONFERENCE.** A report on children's reading was presented to the White House Conference on Child Health and Protection, and one on library service to home builders, home owners, and home-makers to the President's Conference on Home Building and Home Ownership. Recommendations of the committee on reading of the White House Conference emphasized the need of adequate library service for children everywhere.

**ADULT EDUCATION.** Readers' advisory service was inaugurated in six public libraries in 1931, making a total of 42 libraries which offer this service. In the field of alumni education, many universities and colleges were vigorously engaged in a variety of experimental projects, undertaken in response to the interest of their graduates, as first expressed at the meeting of the American Alumni Council in Columbus, Ohio, in 1926. The alumni reading lists of the University of Michigan, issued in 1931 by the Michigan Library Extension Service in coöperation with the Bureau of Alumni Relations, illustrated one method of developing a programme in continuous education for the American college graduate. Similar lists are distributed by more than 40 other universities and colleges. The board on the library and adult education of the American Library Association, approved a proposal to study books and libraries in their relation to the changing curricula of institutions of higher learning, and voted to coöperate with an advisory committee of university and college librarians in an effort to coördinate the college education with the whole educational life of the individual.

Several publications of special interest to workers in adult education appeared during the year. In *What People Want to Read About*, by Douglas Waples and Ralph W. Tyler, the Graduate Library School of the University of Chicago made, as one of its first contributions to library research, a study of the reading interests and habits of adults. In *University Extension and the Library*, a survey was made of the need of extension students for better book service and the means of supplying it, published

jointly by the National University Extension Association and the American Library Association. In *The Education of Adult Prisoners*, by Austin H. MacCormick, published by the National Society of Penal Information, the present educational work of libraries in adult penal institutions has been surveyed, and an expanded programme has been suggested by John M. Chancellor, supervising librarian of the U. S. Bureau of Prisons. For new *Reading with a Purpose* courses, see **LIBRARY ASSOCIATION, AMERICAN.**

Libraries throughout the United States continued and increased their coöperation with educational radio programmes, such as those of the National Advisory Council on Radio in Education, the National League of Women Voters, and the American School of the Air. In *The Broadcaster and the Librarian*, published by the National Advisory Council on Radio in Education, Francis K. W. Drury has summarized the actual and proposed activities of libraries along this line.

**LIBRARY SCHOOLS.** The opening of five new library schools in the United States in the autumn of 1931 left no large section of the United States unprovided with a centre of training for librarianship. The new schools have been established at the University of North Carolina, the University of Denver, Louisiana State University, Our Lady of the Lake College (San Antonio, Tex.), and the College of William and Mary. The last two offer courses in school library work only. In 1930-31 the 25 accredited schools enrolled 1394 students; five other library schools had a total enrollment of 235 students.

In December, 1930, the Association of Colleges and Secondary Schools of the Southern States adopted standards for the training of librarians and teacher-librarians to be employed in high school libraries for which the association had adopted standards the previous year.

**BIBLIOGRAPHICAL WORK.** Project "B," financed by a Rockefeller grant of \$50,000 annually for five years, includes several different undertakings which have as objective the increasing of the bibliographical apparatus of the Library of Congress, in the aid of research. Work on the Union Catalogue of the Library of Congress had reached its first goal—the location of 6,000,000 titles in American libraries, representing four years' labor. Additions were made to the Union List of Special Collections until at the end of 1931 it included 7500 collections.

Printing of the preliminary edition of all but three of the national lists to be included in the *List of Serial Publications of Foreign Governments* was announced in 1931. The lists for Great Britain, Canada, and Russia were still to appear. The *Supplement to the Union List of Serials* was past its first stage. Cards submitted by coöperating libraries to show important changes in holdings and new acquisitions make up the *Supplement*.

**INTERNATIONAL COÖPERATION.** At the meeting of the international committee of the International Federation of Library Associations, held at Cheltenham, England, in August, 1931, Dr. William Warner Bishop of the American Library Association was elected president of both the committee and the federation. Action was taken to facilitate international loans of books between libraries and to further the study of statistics on the national production of books.

Tentative plans for publishing the *Union Catalogue of the Libraries of Prussia* and the completion in print of four of the six volumes of *Transactions of the Library and Bibliographical Congress*, held in Rome and Venice in 1929, were announced.

The American Library in Paris, organized to promote the closer acquaintance of European scholars with American literature, institutions, and thought, reported in 1931 that it had 3189 registered borrowers and a normal daily attendance of about 600 persons. The book collection totals more than 49,000 active volumes, or an increase of 4941 during the year. J. Mark Baldwin presented 1000 volumes on scientific subjects to the library, and an anonymous donor gave 16,000 volumes, chiefly current fiction and biography, for lending to Americans removed from their ordinary sources of reading matter. Books are circulated by mail to distant countries, as well as to points near at hand. Another project in international coöperation was the collection of printed cards of all the books in Spanish and on Spanish subjects which were being gathered at the Library of Congress for donation to the library of the Centro de Estudios Históricos at Madrid, Spain.

**FUNDS AND ENDOWMENTS.** The Pratt-Smoot Bill, appropriating \$100,000 annually for books for the adult blind, was passed by Congress in 1931. The grants voted by the Carnegie Corporation during the fiscal year 1929-30 included \$729,750 to be spent in the interest of library progress. More than half of this sum was appropriated for the purchase of books by college libraries. A study of rural school libraries and county library service to schools was being made by Edith A. Lathrop of the U. S. Office of Education, with a grant-in-aid from the Carnegie Corporation. Graduate study was being carried on by more than a dozen librarians under library fellowships provided by grants from the corporation. Other gifts to libraries made during the year included: \$3,500,000 for erection of a new library building at Columbia University (to be completed in 1933), presented by Edward S. Harkness; \$375,000 given to the library of Mount Holyoke College by the General Education Board; \$300,000 for erection of a new library at Atlanta University, Atlanta, Ga., granted by the General Education Board; \$200,000 left to the public library in Morristown, N. J., in the will of Grinnell Willis (who had previously given \$100,000 to erect the library building), half of the bequest to be added to the library's endowment fund created by Mr. Willis and half to be known as the Grinnell Willis Book Fund; and \$150,000 granted by the Carnegie Corporation to endow the college librarianship at Lafayette College, Easton, Pa.

**NEW BUILDINGS.** The University of Chicago was planning to spend \$6,000,000 within a five-year period, beginning in 1931, in reorganizing its libraries and housing in a single new building the books at present in the general library (Harper Memorial Library) and scattered in departmental collections in a number of other buildings. Among library buildings in course of construction, or completed, during 1931 were: the 42-story Library Tower in Brooklyn, N. Y., costing \$7,000,000; the new home of the Enoch Pratt Free Library, Baltimore, Md., costing \$1,198,000; the main public library in Long Beach, Calif., costing \$1,000,000; the main public li-

brary in Berkeley, Calif., costing \$300,000; the central library in Evansville, Ind., costing \$300,000; the James E. Morrow Library at Marshall College, Huntington, W. Va., costing \$225,000; the library at East Texas State Teachers College, Commerce, Tex., costing \$200,000; the library at Tuskegee Normal and Industrial Institute, Tuskegee, Ala., costing \$200,000; and the public library at Highland Park, Ill., costing \$150,000. The University of Kentucky, Lexington, Ky., dedicated its new library building in October, and James Millikin University held dedicatory ceremonies for the Orville B. Gorin Library (costing \$150,000) in November.

**LIBYA.** See *LIBIA*.

**LIECHTENSTEIN**, Ik'tén-shtIn. One of the smallest independent European states. Liechtenstein is a principality lying between the Austrian province of Vorarlberg and the Swiss cantons of St. Gallen and Graubünden. Area, 65 square miles; population at the census of 1930, 10,213, of whom 9492 were Roman Catholics. Capital, Vaduz (population, 1715). Reigning Prince, Francis I.

**LIFE.** See *ZOOLOGY*.

**LIFE INSURANCE.** See *INSURANCE*.

**LIGHT.** See *PHYSICS*.

**LIGHTHOUSES.** The annual report of the U. S. Commissioner of Lighthouses George R. Putnam for the fiscal year 1930-31 stated that 12 new radio beacons had been installed during that period and that two major lighthouses were under construction, while plans had been made for the immediate rebuilding of an important lighthouse in Alaska. A number of primary lights were increased in candlepower, more modern types of fog signal apparatus were installed at stations where the old equipment had reached the limit of usefulness, and additional minor lights constructed at points requiring effective marking. The use of compressed acetylene gas for automatic unattended lights continued to increase, and electric lights operated by dry cells, primary cells, and storage batteries, were also finding more extensive application. A new aid to navigation, was the synchronization of air fog signals and radiobeacon signals, for distance finding purposes.

The report showed that the total number of aids to marine navigation on June 30, 1930 was 20,273, an increase over the previous year of 711. Appropriations for the maintenance of the Lighthouse Service totaled \$10,090,075 for the fiscal year, and for special works \$1,424,000. This money was expended for the maintenance of navigational aids in 21 States having ocean coastlines, in eight bordering the Great Lakes, and an additional six States bordering upon important navigable rivers. The allotment made by the Aeronautics Branch of the Department of Commerce for the prosecution of airways activities amounted to \$7,785,600.

One of the major lighthouses completed and placed in commission on November 10 was that at Detour, Mich., in Lake Huron, at the mouth of the St. Marys River which connects that lake with Lake Superior. The first light to be erected in this vicinity was built in 1848, but upon the shore and nearly a mile from the edge of the deep water channel used by the present lake vessels. The new lighthouse was built out in the water, close to the lanes of traffic, where it is of

most service. Detour Lighthouse, 74 feet high with a 100,000 candlepower light, in common with other recently constructed lighthouses in the Great Lakes built on submarine sites, is an engineering project of considerable importance, owing to the construction problems involved, for in no other part of the country is the problem of ice action upon lighthouse structures so serious a one. The other lighthouse of major rank under construction, was at Anacapa Island, Calif. The extremely rocky shore at this point, and the difficulties of landing materials, made this a project that would require another year for its completion. One of the outstanding lights established during the year, because of its exceptional height above the sea, was that at Lehua, in the Hawaiian Islands. An unattended light was placed at the highest point of this small island, over 700 feet above the water. This light is entirely automatic in operation, a single charge of acetylene gas being sufficient for several months' operation.

During the fiscal year three new lightships were completed and placed on station. One of these went to Frying Pan Shoals, N. C., one to Fenwick Island, Del., and another to Nantucket Shoals, off the coast of Massachusetts.

density in restricted waters, the Lighthouse Service was called upon to provide many new aids. Extensive dredging and improving of channels was under way in the St. Marys River, connecting Lakes Superior and Huron, and these works necessitated the relocating of many aids to navigation, the improvement of others and establishment of new aids. A noteworthy improvement was the establishment of double sets of range lights, a continuance of work begun in the previous year. These lights separate up and down bound traffic and provide ranges on each course, both ahead and astern.

**AIRWAYS FACILITIES.** The lighting of airways, landing fields, and the provision of signaling and communication systems—was further extended. Lights were established on about 2283 additional miles of airways. The additional radio facilities provided included 13 communication stations, 45 radio range beacons, a number of radio marker beacons, and telephone-typewriter circuits totaling over 3000 miles. Because of several changes in the routing of air mail and passenger-carrying lines, considerable airway reconstruction was undertaken. More direct courses were laid out and larger landing fields provided.

#### SUMMARY OF AIDS TO NAVIGATION AND CHANGES DURING FISCAL YEAR IN THE UNITED STATES

Class	Estab- lished	Discon- tinued	1931		Total, June 30—

are due to minor discrepancies in previous count.

only once in the grand total.

number of aids shown includes beacon lights, radio-point radio stations, and radio marker stations. There lights in operation June 30, 1931.

The system of radiobeacons, on June 30, 1931 included ninety stations under the jurisdiction of the Lighthouse Service. These radiobeacons, while few in number compared with the primary lighthouses, cover both coasts of the United States and the Great Lakes in an effective manner. They enable navigators to obtain bearings on known points at distances up to 200 miles, and are equally as effective in fog as in clear weather. The Lighthouse Service published *Radiobeacons and Radiobeacon Navigation*, by George R. Putnam.

With the substantial increases in traffic upon the Great Lakes, involving deeper channels, new harbor works, and a general increase in traffic

**LIGHT STUDIES.** See ASTRONOMY; PHYSICS.

**LIGNITE.** See COAL.

**LIME.** The sales of lime in 1931 produced in the United States amounted to 2,710,000 short tons, valued at \$18,506,000, according to preliminary estimates of the U. S. Bureau of Mines, Department of Commerce. This was a decrease of 20 per cent in quantity and 28 per cent in value as compared with sales of 3,387,880 tons, valued at \$25,616,486 in 1930, and followed a decrease of

21 per cent in quantity and 23 per cent in value in 1930 as compared with 1929. Sales of lime in 1931 for construction were estimated at 970,000 tons compared with 1,204,614 tons in 1930, a decrease of 19 per cent. Sales of lime for chemical uses were estimated at 1,460,000 tons, a decrease of 21 per cent from 1930 (1,840,155 tons). The sales of lime for agricultural use were estimated at 280,000 tons, a decrease of 18 per cent in 1931 from 1930 (343,111 tons) and following an increase of 1 per cent in 1930 from the 1929 figures. All the States producing lime except two, Florida and Massachusetts, showed decreases from the 1930 production ranging from 5 to 75 per cent in quantity and 8 to 60 per cent in value.

**LINDBERGH, COL. CHARLES A.** See **AERO-NAUTICS**.

**LINDSAY, (NICHOLAS) VACHEL.** An American poet, died Dec. 5, 1931, in Springfield, Ill., where he was born Nov. 10, 1879. He attended Hiram College, O. (1897-1900), the Art Institute, Chicago (1900-03), and the New York School of Art (1904-05). In the winters from 1905 to 1909 he lectured for the Y. M. C. A. and in 1909-10 for the Anti-Saloon League. He made several long tramping trips during the summers, the first of which in 1906 was through the Southern States. His longest trip was in 1912 when he walked from Illinois to New Mexico. On these trips he gained notice by paying his way with recitation and distribution of his verse, on the analogy of the troubadours and strolling players of the Middle Ages. With the publication of his works in the *Village Magazine* after 1910, he became not only one of the leading figures in American poetry but one of the strongest forces in the development of the epic of the West. His chief works are: *The Tramp's Excuse* (1909); *Rhymes To Be Traded for Bread* (1912); *General William Booth Enters Heaven and Other Poems* (1913); *The Congo and Other Poems* (1914); *Adventures while Preaching the Gospel of Beauty* (1914); *The Art of the Moving Picture* (1915); *A Handy Guide for Beggars* (1916); *The Chinese Nightingale and Other Poems* (1917); *The Golden Whales of California and Other Poems* (1920); *The Golden Book of Springfield* (1920); *Going to the Sun* (1923); *Collected Poems* (illustrated by himself, 1925); *Going to the Stars* (1926); *The Candle in the Cabin* (1926); *Johnny Appleseed and Other Poems for Children* (1928); *The Litany of Washington Street* (1929); *Every Soul Is a Circus* (1929); and *Selected Poems* (Modern Readers' Series, 1930).

**LINGUISTICS.** See **PHILOLOGY, MODERN**.

**LINSEED OIL.** See **FLAX**.

**LIONS CLUBS, INTERNATIONAL ASSOCIATION OF.** An organization of business and professional men's clubs united in one association for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and in the professions.

The number of Lions Clubs had grown by Dec. 1, 1931, to approximately 2600, with a membership in round numbers of 82,000. At the international convention of 1931 in Toronto, Canada, Julien C. Hyer of Fort Worth, Texas, was elected president and Charles H. Hatton of Wichita, Kan., Roderick Beddow of Birmingham, Ala., and Vincent C. Hascall of Omaha, Neb., vice presidents. Melvin Jones of Chicago has been secretary-treasurer since the International Association was founded. The official magazine is *The Lion*,

Charles Lee Bryson, managing editor. Headquarters are at 332 South Michigan Avenue, Chicago.

**LIPPE, H'p'è.** A state of the German Republic. See **GERMANY under Area and Population**.

**LIPTON, SIR THOMAS JOHNSTONE.** A British merchant and yachtsman, died in London, Oct. 2, 1931. He was born in Glasgow May 10, 1850, of Irish parentage. Coming to the United States when 15 years old, he worked in New York City as a clerk for a short time, and then for about two years in the South—on plantations in Virginia and South Carolina and in the rice fields of Louisiana. He returned to Glasgow and in 1876 opened a grocery store where he put into practice the advertising technique he had acquired in America. From this small beginning his business expanded and came to include hundreds of stores in London, Liverpool, Manchester, and other British cities, as well as tea, coffee, cocoa, and rubber plantations in Ceylon, and a large pork-packing establishment in Chicago. In 1898 his business was converted into a limited liability company. From boyhood he was an enthusiastic sailor, and in his later years he became famous for his repeated challenges to win back the *America's* cup, spending more than \$5,000,000 on the attempts of the five *Shamrocks* in 1899, 1901, 1903, 1920, and 1930. He was knighted in 1898, and in 1901 was made a Knight Commander of the Royal Victorian Order and in 1902 a Baronet.

**LIQUOR, LIQUOR LAWS.** See **PROHIBITION; FINLAND under History**.

**LITERATURE.** See **FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; PHILOLOGY, MODERN; SPANISH-AMERICAN LITERATURE; SPANISH LITERATURE**.

**LITERATURE, ENGLISH AND AMERICAN.** Although no conspicuous publishing houses had financially failed during the year, it was known that many were finding their course difficult, and a few yielded identity through mergers during 1931. Bookstores were decreasing in number and those remaining carried depleted stocks. To meet the depression, tinkering with book prices was as usual proposed, but the failure of the dollar-book plan (see 1930 YEAR BOOK) warned American publishers against it, and little reduction in prices could be discerned. In England, however, one publisher promised new short novels at 9d. each. And English publishers made much play with "omnibus" books, huge volumes containing, for instance, three novels at the price of one, or a cross section of an author's work in various forms, or a collection of ghost or detective stories. The most remarkable of the omnibus books was *The Outline of Modern Knowledge*, edited by William Rose, one volume of 1100 pages, written by the foremost English authorities, and selling for 8s. 6d. The same book in America cost \$5. In America, production was not even slackened, the figures at the end of the year, compiled by the *Publishers' Weekly*, showing the total number of new books published during the year to be 10,307, an increase of 280 over 1930. Titles classed under sociology and economics showed the greatest increase, 632 being published, an increase of 109 over the previous year. In medicine and hygiene, there were 419 titles, an increase of 101, and books for children numbering 1018 increased by 83 titles over 1930. The record for fiction, 2103 new books in 1930 declined to 1942 in 1931, and biog-

raphy from 792 to 775. The *Publishers' Weekly* states

In the span of ten years the most marked increases have been in fiction, which has risen from 68 to 1272; children's books, 482 to 873; biography from 297 to 699; religion, from 460 to 788; sociology, 855 to 580; education, from 11 to 242; science, from 227 to 367; medicine and hygiene from 169 to 818. The classifications which show little change over such a period are business books, history, law, agriculture, while technical books have shown a decrease.

In Great Britain according to the *Publishers' Circular and Booksellers' Record* there were published in 1931, 14,688 books as against 15,393 in 1930 or a decrease of 705 titles.

FICTION. The success of the year was Pearl S. Buck's *The Good Earth*, about Chinese peasants, acclaimed both in England and America. A Scotch melodrama, *Hatter's Castle*, by A. J. Cronin, had commanding vitality. Virginia Woolf told a story in soliloquies, *The Waves*. Depths of depravity were coolly exposed in *Sanctuary*, by William Faulkner, who was rising to high position in American fiction. Edna Ferber's *American Beauty*, about immigrants in New England, maintained her reputation. *Two People*, by A. A. Milne, dealt sweetly with marriage. W. Olaf Stapledon's *Last and First Men* was an extraordinary piece of scientific prophecy. John Galsworthy's *Maid in Waiting* was not about the Forsytes, and not so highly praised. David Garnett's *The Grasshoppers Come* was delicate irony.

Historical novels made a distinguished group: Evelyn Scott's *A Calendar of Sin*, several generations in America; Willa Cather's *Shadows on the Rock*, old Quebec; Naomi Mitchison's *The Corn King and the Spring Queen*, laid in ancient Egypt, Greece, and Macedonia; George Moore's *Aphrodite in Aulis*, ancient Greece; Maurice Baring's *In My End is My Beginning*, about Mary Queen of Scots; Ludwig Lewisohn's *The Last Days of Shylock*, continuing Shakespeare; Joseph Hergesheimer's *The Limestone Tree*, old Kentucky; T. S. Stripling's *The Forge*, Civil War Alabama.

Novels centring in a family continued their vogue, such as: Clemence Dane's *Broome Stages*, generations of actors; Storm Jameson's *A Richer Dust*, last of a trilogy; Hugh Walpole's *Judith Paris*, second of his Herries saga; Mazo de la Roche's *Finch's Fortune*, third of the Whiteoaks series; Edith Olivier's *Dwarf's Blood*. Satirical novels included: Tiffany Thayer's *The Greek*, and Eric Linklater's *Juan in America*, satirizing this country; Richard Aldington's *The Colonel's Daughter*, attacking rural England; Margaret Kennedy's *Return I Dare Not*, against literary exhibitionism; Robert Nathan's *The Orchid*, against the city. Fantasies were few, but Bruce Marshall's *Father Malachy's Miracle* and John Erskine's *Unfinished Business* should be named. Romances were more numerous, as: Stella Benson's *Tobit Transplanted*, borrowed from the Apocrypha; Roark Bradford's *John Henry*, a legendary negro; Mary Austin's *Starry Adventure*, and Robert Reynolds' *Brothers in the West*, both western; Anne Green's *Reader, I Married Him*, about Paris; Eleanor Smith's *Flamenco*, gypsy stuff; Elizabeth Madox Roberts' *A Buried Treasure*; Michael Arlen's *Men Dislike Women*.

Novels whose interest was psychological included: V. Sackville-West's *All Passion Spent*, a woman through with action; Edward Sack-

ville-West's *Simpson*, a child's nurse; Fannie Hurst's *Back Street*, an over-generous woman; "Elizabeth's" *Father*, who remarried; Katharine Brush's *Red-Headed Woman*, a leech; Sheila Kaye-Smith's *Susan Spray*, who never grew up; Susan Glaspell's *Ambrose Holt and Family*; Ford Madox Ford's *When the Wicked Man*, an Englishman in America; Margaret Ayer Barnes' *Westward Passage*, a woman in a triangle. Mystery stories included: Kenneth MacGowan's *Sleuths*, an "omnibus"; Ben Ames Williams' *An End to Mirth*; Raoul Whitefield's *Death in a Bowl*; Anthony Berkeley's *The Second Shot*; Lawrence Sanders' *The Columnist Murder*; Dorothy Sayers' *The Five Red Herrings*; Freeman Crofts' *Mystery in the English Channel*; and many more.

Either sober realism or escaping classification were: *S. S. San Pedro*, by James Gould Cozens; *Sparks Fly Upward*, by Oliver La Farge; *The Man Who Died*, by D. H. Lawrence, about Jesus after the crucifixion; *This Our Exile*, by David Burnham; *Hunger and Love*, by Lionel Britton; *Endless River*, by Felix Riesenberg; *Morning Tide*, by Neil M. Gunn; *In Krusac's House*, by Thames Williamson; *Half a Loaf*, by Grace Hegger Lewis.

Short story books included: *These Thirteen*, by William Faulkner; various authors on the same *Mr. Fothergill's Plot*; *The Night Visitor*, by Arnold Bennett; *Basque People*, by Dorothy Canfield; *First Person Singular*, by W. Somerset Maugham; *Most Women*, by Alec Waugh; *Hope against Hope and Other Stories*, by Stella Benson; *Our Gods are Not Born*, by Charles R. Walker; *Guys and Dolls*, by Damon Runyon; *Oklahoma Town*, by George Milburn; *White-gates*, Scotch stories, by Orgill Mackenzie; *The Road to Canaan*, about Negroes, by Pernet Patterson; *Guests of the Nation*, Irish stuff, by Frank O'Connor.

POETRY. A sequence of love sonnets by Edna St. Vincent Millay, *Fatal Interview*, was perhaps the most highly praised and best selling poetry of 1931. John Masefield's *Minnie Maylow's Story* contained narrative poems in his early most successful manner. Ogden Nash, with strange rhymes and sophisticated humor, won many buyers and probably more imitators for his *Hard Lines* and *Free Wheeling*. Edwin Arlington Robinson reworked the vein of psychological narrative in *Matthias at the Door*. Dorothy Parker's *Death and Taxes* was acridly humorous. Sylvia Townsend Warner's *Opus 7* was the story, gracefully told, of a drunken woman flower-grower. Alice Duer Miller treated the triangle situation in *Forsaking All Others*. Conrad Aiken's two books, *Preludes for Memnon* and *The Coming Forth by Day of Osiris Jones*, were darkly pessimistic. A.E.'s *Enchantment and Other Poems* was highly praised, as was *Strict Joy*, by his compatriot James Stephens. Difficult "modern" verse was represented by Robert Graves' *To Whom Else?* and E. E. Cummings' *VV (Viva)*. Joseph Auslander made a highly regarded translation of *The Sonnets of Petrarch*.

Other books of poetry were: *The Flowering Stone*, by George Dillon; *The Georgiad*, by Roy Campbell; *Jonathan Gentry*, a long narrative by Mark van Doren; *The Heart's Unreason*, by Edward Davison; *Eden Tree*, by Witter Bynner; *The Cicadas and Other Poems*, by Aldous Huxley; *Naked Heel*, by Leonora Speyer; *Green River*, by James Whaler; *Ballads and Poems*,

1915-1930, by Stephen Vincent Benét; *Jane Matthew and Other Poems*, by Eda Lou Walton; *Jaabo Brown*, by Du Bose Heyward; *Snow*, by Humbert Wolfe; and *Godbey*, by Edgar Lee Masters.

Among the anthologies were: *American Poetry from the Beginnings to Whitman*, by Louis Untermeyer; *The Pleasures of Poetry*, by Edith Sitwell; and—strange apparition at this date—*Imagist Anthology 1930*, by Ford Madox Ford and Glenn Hughes.

DRAMA. The long Greek melodrama by Eugene O'Neill, *Mourning Becomes Electra*, takes first place among dramas of 1931. Paul Green's *The House of Connelly* dealt with a decaying Southern family. Noel Coward's *Post-Mortem* showed a British soldier revisiting the post-war world. In *The Anatomist*, *Tobias and the Angel*, *The Amazed Evangelist*, James Bridie showed himself a promising playwright. Philip Barry's *Tomorrow and To-morrow* used the good old triangle plot. William Bolitho's *Overture 1920* dealt with the post-war world, as did Hans Chlumberg's *Miracle at Verdun*, translated by Julian Leigh.

Among anthologies were: four volumes of *Contemporary Drama*, by E. Bradlee Watson and Benfield Pressey; *Dramas of Modernism*, by Montrose J. Moses; *Plays of the Restoration and Eighteenth Century*, by Dougald MacMillan and H. M. Jones; and *Modern American and British Plays*, by S. M. Tucker.

ESSAYS. *If, or History Rewritten*, by various authors, told what might have happened if—. *The Mirrors of 1932 and Washington Merry-Go-Round*, both anonymous, were political gossip, as Rebecca West's *Ending in Earnest* was literary gossip. W. C. Sellar and R. J. Yeatman spoofed English history in *1066 and All That*, and Richard Dark did likewise for English literature in *Shakespeare and That Crush*. Other humorous essayists included Frank Sullivan with *Broccoli and Old Lace*; Will Cuppy with *How to Tell Your Friends from the Apes*; Stephen Leacock with *Wet Wit and Dry Humor*; George S. Chappell with *Dr. Traprock's Memory Book and The Gardener's Friend and Other Pests*. The serious thinkers included: Irwin Edman with *The Contemporary and His Soul*; Benjamin N. Cardozo with *Law and Literature and Other Essays and Addresses*; Julian Huxley with *What Dare I Think?*; Sir J. G. Frazer with *Garnered Sheaves*. Will Durant's *Adventures in Genius* was biographical. J. Brooks Atkinson reminisced in *East of the Hudson*; Max Eastman attacked some contemporaries in *The Literary Mind*. Others were: *Come to Think of It*, by G. K. Chesterton; *Out of Soundings*, by H. M. Tomlinson; *The Balconinny*, by J. B. Priestley; *Adventures in Solitude*, by Ray Stannard Baker; *A Conversation with a Cat and Others*, by Hilaire Belloc; *Music at Night and Other Essays*, by Aldous Huxley; *Apocalypse*, by D. H. Lawrence; *Skyscrapers and Other Essays*, by L. B. Namier; *Visibility Good*, by E. V. Lucas.

CRITICISM AND LITERARY HISTORY. Edmund Wilson's *Axel's Castle*, demonstrating the influence of French symbolism upon many types of later work, was fresh and well done. Philo M. Buck's *The Golden Thread* followed the course of the grand tradition in letters. Lewis Mumford's *The Brown Decades* dealt critically with the period 1865-1895 in American arts. Constance Rourke's *American Humor, a Study of*

*the National Character*, and Russell Blankenship's *American Literature as an Expression of the National Mind*, followed the principles of Professor Parrington's *Main Currents in American Thought*. Henry Seidel Canby's *Oclassio Americans* was temperate and judicious.

There was much interesting and valuable writing about Shakespeare, such as: Leslie Hotson's *Shakespeare versus Shallow*, reporting his annual discovery; Lily B. Campbell's *Shakespeare's Tragic Heroes. Slaves of Passion*; J. W. Mac-kail's *The Approach to Shakespeare*.

Concerned with other dramatists and the theatre were: Allardyce Nicoll's *Masks, Mimes, and Miracles*; J. M. Robertson's *Marlowe*; D. Crane Taylor's *William Congreve*; Rosamund Gilder's *Enter the Actress*; Harley Granville-Barker's *On Dramatic Method*; volumes v, vi, and vii of George C. D. Odell's *Annals of the New York Stage*; Frank W. Chandler's *Modern Continental Playwrights*; Newell W. Sawyer's *The Comedy of Manners from Sheridan to Maugham*.

About poets and poetry: *Wordsworth*, by C. H. Herford; *Chaucer*, by John Masefield; *Imagism and the Imagists*, by Glenn Hughes; *Swinburne*, by William R. Rutland; *Landscape in English Art and Poetry*, by Laurence Binyon; *The Greek View of Poetry*, by E. E. Sikes; *Poetry and the Criticism of Life*, by H. W. Garrod. About novelists: Arthur McDowell's *Thomas Hardy: a Critical Study*; John Bailey's *Introduction to Jane Austen*; F. C. Green's *French Novelists from the Revolution to Proust*; Stuart Gilbert's *James Joyce's Ulysses*; H. Douglas Thomson's *Masters of Mystery: a Study of the Detective Story*.

*Fashion in Literature*, by E. E. Kellett; *Vulgarity in Literature*, by Aldous Huxley; *The Romantic Quest*, by Hoxie N. Fairchild; volume ii of *Scrutinies*, by various authors; volume x of *Essays by Divers Hands*, edited by Sir Francis Younghusband; *A Survey of Burlesque and Parody in English*, by George Kitchin; *Seven Types of Ambiguity*, by William Empson, ranged widely over the literary fields. And Percy H. Boynton's *The Rediscovery of the Frontier*; Bliss Perry's *Emerson Today*; and John Jay Chapman's *Plato and Lucian* were important.

BIOGRAPHY. Even in times of depression the value and popularity of biography continued undiminished. As charming and thoughtful a work as the year showed was *The Autobiography of Lincoln Steffens*, a former newspaper reporter and editor who had exposed many political and civic ills. Volumes iii and iv of *The Life and Letters of Woodrow Wilson*, by Ray Stannard Baker, carried him up to the World War. John J. Pershing's *My Experiences in the World War* revealed his struggle for independent command. *Newton D. Baker: America at War*, by Frederick Palmer, showed the home side of the same conflict, as did *Crowded Years*, autobiography by William Gibbs McAdoo, helped by W. E. Woodward. Roosevelt was done twice, in *Theodore Roosevelt*, by Walter F. McCaleb, and *Theodore Roosevelt*, by Henry F. Pringle. Other Americans of political importance were written about in *Lincoln the Man*, an attack by Edgar Lee Masters; *George Washington*, by Bernard Fay; *The Rise of U. S. Grant*, by A. L. Conger; *Light Horse Harry Lee*, by Thomas Boyd; *Master of Manhattan* (Richard Croker) by Lothrop Stoddard.

Delightful in every way was *Ellen Terry and Bernard Shaw: a Correspondence*, edited by

Christopher St. John. Shaw was done again in Frank Harris's *Bernard Shaw*. About other English literary figures were: J. Middleton Murry's *Son of Woman*, about D. H. Lawrence; Evan Charteris' *Life and Letters of Sir Edmund Gosse*; C. Archer's *William Archer*; George O'Neill's *Special Hunger*, about Keats; Gaius Glenn Atkins' *Life of Cardinal Newman*; R. Brimley Johnson's *Jane Austen*; Michael Sadleir's *Bulwer*; Malcolm Elwin's *Charles Reade*; Mona Wilson's *Sir Philip Sidney*; Sidney Dark's *Robert Louis Stevenson*; John Drinkwater's autobiography *Inheritance*; Eric Linklater's *Ben Jonson and King James*; J. Y. T. Grieg's *David Hume*; Ernest Rhys' *Everyman Remembers*; and Catherine Carswell's largely fictional *Life of Robert Burns*.

Wellington, by Philip Guedalla, was written with his customary brilliance. Sir Robert Walpole was done twice: in volume ii of *The Endless Adventure*, by F. S. Oliver, and *Robert Walpole and His Age*, by G. R. Stirling Taylor. Other books about English political personages were: *Lord Rosebery*, by the Marquis of Crewe; *Cranmer*, by Hilaire Belloc; *Nelson*, by Clennell Wilkinson; *King Charles II*, by Arthur Bryant; volume ii, series iii, of *The Letters of Queen Victoria*, edited by G. E. Buckle; volume iii, *Dawes to Locarno*, of Viscount D'Abernon's *Diary of an Ambassador*; Denis Gwynn's *Traitor or Patriot?* about Sir Roger Casement; Henry Harrison's *Parnell Vindicated*; Bernard M. Allen's *Gordon and the Sudan*.

Lytton Strachey published a mélange of essays, *Portraits in Miniature*. Edith Gittings Reid described Sir William Osler in *The Great Physician*; and Gertrude M. Williams, Annie Besant in *The Passionate Pilgrim*. Other Englishmen were treated in: *Turner*, by Walter Bayes; *Men and Memories*, by Sir William Rothstein; *John Wesley*, by C. E. Vulliamy.

Theodore Dreiser's *Dawn* was autobiography, as was Hamlin Garland's *Companions of the Trail*, Christopher Morley's *John Mistletoe*, Owen Davis's *I'd like to Do It Again*, and Arthur Train's *Puritan's Progress*. Few American writers were written about, but there was *The Caliph of Bagdad* (about O. Henry), by R. H. Davis and A. B. Maurice, and *James Fenimore Cooper*, by Henry Walcott Boynton. Other Americans included: *The Life and Times of Lydia E. Pinkham*, by Robert Collyer Washburn; *The White King of La Gonave*, by Faustine Wirkus and Tanev Dudley; *Plain Anne Ellis*, by Anne Ellis; *My United States*, by Frederic Jessup Stimson; *Bedford Forrest and His Critter Company*, by Andrew Nelson Lytle; *Incredible Carnegie*, by John K. Winkler; *Wyatt Earp*, by Stuart N. Lake; *Whistler*, by James Laver; *Sister Aimee*, by Nancy Barr Mavity; four lives of Knute Rockne. And volumes vi and vii of the *Dictionary of American Biography*, edited by Allen Johnson and Dumas Malone.

The Russians were of absorbing interest, as in every field this year. Lenin had three books: D. S. Mirsky's *Lenin*; George Vernadsky's *Lenin, Red Dictator*; Ferdinand A. Ossendowski's *Lenin, God of the Godless*. Other Russians included: *Stalin*, by Isaac Don Levine; *Dostoevsky*, by Edward Hallett Carr; *Maxim Gorki and His Russia*, by Alexander Kaun; *The Education of a Princess*, by the Grand Duchess Marie.

About speakers of French were: *Memoirs of Marshal Foch*, translated by T. B. Mott, and

Liddell Hart's *Foch*; R. Macnair Wilson's *Germaine de Staël*; Agnes Repplier's *Mère Marie of the Ursulines*; Percy Waxman's *The Black Napoleon*, about Toussaint L'Ouverture; Jean Plattard's *Life of François Rabelais*; C. E. Vulliamy's *Rousseau*; André Mourois' *Lyautey*; L. V. Jacks' *La Salle*.

Other Europeans were described in: Frederico Nardelli and Arthur Livingston's *Gabriel the Archangel*, about D'Annunzio; Fritz Wittels' *Freud and His Times*; H. S. Ede's *Savage Messiah*, about Gaudier-Brzeska; Faith Compton Mackenzie's *The Sibyl of the North*, about Queen Christina of Sweden; Francis Toye's *Giuseppe Verdi*; *Memoirs of Prince von Bulow*, translated by F. A. Voight; *Cervantes*, by T. R. Ybarra; D. B. Wyndham Lewis's *Charles of Europe*, about Charles V; Ernest Newman's *Fact and Fiction about Wagner*. Asians were few: *Noguchi*, by Gustav Eckstein; and *Mahatma Gandhi at Work*, edited by C. F. Andrews.

THE FINE ARTS. These boasted a best-seller, Thomas Craven's *Men of Art*, about painters from Giotto to Cézanne. Their characters and characteristics were vigorously exhibited. Robert Byron and David T. Rice, in *The Birth of Western Painting*, ascribed that birth to the Byzantines. The new Whitney Museum fathered an American Artists Series, biographical-critical works: *Arthur B. Davies*, and *Guy Pène du Bois*, by Royal Cortissoz; *Maurice Prendergast*, by Margaret Breuning; *John H. Twachtman*, by Allen Tucker; *George Bellows*, by George Eggers; *Kenneth Hayes Miller*, by Alan Burroughs; *Robert Henri*, by Helen A. Read; *William Glackens*, *John Sloan*, and *Edward Hopper*, by Guy Pène du Bois; *George Luks*, by Elisabeth Luther Cary; *Eugene Speicher*, by Frank Jewett Mather, Jr.; *Henry Lee McFee*, by Virgil Barker.

Frank Lloyd Wright's *Modern Architecture* will no doubt become gospel to modernists in that field. *The Sculptor Speaks*, Joseph Epstein to Arnold L. Haskell, will probably have similar authority. Others on sculpture: *The Art of Carved Sculpture*, by Kineton Sparks; *Medieval Sculpture in France*, by Arthur Gardner. National studies included: René Grousset's *The Civilization of the East*; *The Art of Egypt through the Ages*, edited by Sir E. Denison Ross.

RELIGION. Generally, the tone of the bulk of the religious writing of the year was non-controversial. But Lewis Browne's *Since Calvary*, a history of Christianity written from the point of view of a Jew, was scarcely sympathetic to its subject. And Herbert Parrish's *What is There Left to Believe?* expressed disillusionment. But there were more books devoted to straight theology, such as: *The Growth of the Idea of God*, by Shailer Matthews; *The Holy and the Living God*, by M. R. Willink; *The Kingdom of God*, by Ernest F. Scott; *The Natural and the Supernatural*, by John Oman; *God and the Universe, a Symposium*, by S. C. Carpenter, M. C. D'Arcy, and B. Lee Woolf, edited by J. Lewis May; *Jesus—Lord or Leader?* by Frank Lenwood; *Jesus and the Gospel of Love*, by Charles Raven; *The World and the New Testament*, by T. R. Glover.

Dealing especially with ethical problems were: Justin Wroe Nixon's *The Moral Crisis in Christianity*, and John Laird's *Morals and Western Religion. Founders of Great Religions*, by Millar Burrows, and *The Historic Jesus*, by James Mackinnon, were biographical. The fol-

lowing were mainly historical: *The Origin and Growth of Religion*, by W. Schmidt; *Religion on the American Frontier: the Baptists, 1788-1830*, by William Warren Sweet; *Religion Follows the Frontier*, by Winfred Ernest Garrison. *A Country Parson Looks at Religion*, by H. Adye Prichard, and *Which Way Religion*, by Harry F. Ward, were devoted to the problems of the churches. And *Religious Realism*, essays by fifteen American Professors, described carefully present-day trends in religious thought.

**SOCIOLOGY.** An impressive work of survey and synthesis was R. H. Tawney's *Equality*. Eleanor Rowland Wembridge provided fascinating case-studies in *Life Among the Lowbrows*. Mary R. Beard's *On Understanding Women* showed that social history was too exclusively masculine. Sherwood Anderson's *Perhaps Women* appealed to them to take charge of civilization. Other important works on women, love, and marriage were: Mary Day Winn's *Adam's Rib*; Marie C. Stopes' *Married Love*; Havelock Ellis' *More Essays of Love and Virtue*; E. B. Reuter and Jessie R. Runner's *The Family*. Gina Lombroso, in *The Tragedies of Progress*, pled for a revival of handicraft. *Men of Earth*, by Russell Lord, dealt with the necessities of the farmers. The anthropological origins of civilization were considered in: *The Making of Man*, edited by V. F. Calverton; *Man's Own Show*, by George A. Dorsey; and *Robots or Gods*, by Alexander Goldenweiser. George S. Counts, in *The Soviet Challenge to America*, made a comparison of social conditions. Margaret Wilson's *The Crime of Punishment*, John G. Gillin's *Taming the Criminal*, and Ernest Jerome Hopkins' *Our Lawless Police*, were outstanding works in criminology. Robert Gessner's *Massacre* exposed the United States treatment of the Indians. Katherine Mayo continued *Mother India* in *Volume Two. The Public Pays*, by Ernest Gruening, exhibited the workings of public utility propaganda.

Confining their attention to America: Salvador de Madariaga in *Americans*; Jay Franklin in *What This Country Needs*; and *Behold America!* edited by S. D. Schmalhausen; Louis Adamic's *Dynamite: the Story of Class Violence in America*, and Heywood Broun and George Brett's *Christians Only*, about anti-Jewish prejudice, deserve mention. General works included: Jerome Davis' *Contemporary Social Movements*; C. DeLisle Burns' *Modern Civilization on Trial*; *A Systematic Source Book in Rural Sociology*, edited by Pitirim A. Sorokin, Carl C. Zimmerman and C. J. Galpin; and volumes iv and v of *The Encyclopædia of the Social Sciences*, edited by E. R. A. Seligman.

**EDUCATION.** L. P. Jacks' *The Education of a Whole Man* was perhaps the most favorably reviewed non-technical work in this field. Two books appeared on English universities: the anonymous *The Government of Oxford*, and Ernest Barker's *Universities in Great Britain*. George Sarton's *The History of Science and the New Humanism* used the history of education as a basis for prophecy. Other works were: *This New Education*, by Herman H. Horne; *Education as a Social Force*, by M. V. Marshall; and *Creative Mind*, by C. Spearman.

**POLITICS AND INTERNATIONAL.** The great topics this year were Russia and Peace. About the first: M. Ilin's *New Russia's Primer*, translated by G. S. Counts and N. P. Lodge; Bruce

Hopper's *Pan-Sovietism*; William C. White's *These Russians*; Sherwood Eddy's *The Challenge of Russia*; Edmund A. Walsh's *The Last Stand*; Louis Fischer's *Why Recognize Russia*; Maurice Hindus' *Red Bread*; and many others. About Peace: Esmé Wingfield-Stratford's *They That Take the Sword*; Frank H. Simonds' *Can Europe Keep the Peace?*; Sir Leo Chiozza Money's *Can War Be Averted?*; A. C. F. Beales' *The History of Peace*; Florence G. Tuttle's *Alternatives to War*. Among general works appeared the second H. G. Wells's *What Are We to Do with Our Lives?*; volume i of Leonard Woolf's *After the Deluge*; G. Young's *The Pendulum of Progress*; *Social and Political Ideas of the Revolutionary Era*, edited by F. J. C. Hearnshaw; and Charles Hodges' *Background of International Relations*.

Concerned with particular nations were: C. Walter Young's *Japan's Special Position in Manchuria*; Harold G. Moulton and Junichi Ko's *Japan: an Economic and Financial Appraisal*; W. R. Crocker's *The Japanese Population Problem*; Sherwood Eddy's *The Challenge of the East*; E. M. Gall's *Facets of the Chinese Question*; Younghill Kang's *The Grass Roof*, about Korea; H. N. Brailsford's *Rebel India*; Julian Huxley's *Africa View*; John O. Crane's *The Little Entente*; *Dictatorship on Trial*, edited by Otto F. de Battaglia; *England the Unknown Isle*, by Paul Cohen-Portheim; *England's Crisis*, by André Siegfried; *America Hispana*, by Waldo Frank; *Mexico*, by Stuart Chase; *America the Menace*, by Georges Duhamel; *America, We Need You*, by E. Mueller-Sturnheim.

**ECONOMICS.** Happy the nation that has no economics. Russia and the depression made this field interesting to the general reader as almost never before. H. G. Wells explained and propagated ideas in *The Work, Wealth, and Happiness of Mankind*. Various authors, in *Economic Behavior*, described the wealth-getting and wealth-consuming processes. Hartley Withers did the same in *Everybody's Business*. Concerned with our immediate distresses were: Wallace Brett Donham's *Business Adrift*; Norman Thomas' *America's Way Out*; James D. Mooney's *Wages and the Road Ahead*; P. W. Martin's *The Problem of Maintaining Purchasing Power*; James Harvey Rogers' *America Weighs Her Gold*; Charles Albert Collman's *Our Mysterious Panics, 1830-1930*; Paul H. Douglas and Aaron Director's *The Problem of Unemployment*. Three books dealt with combinations: Frank Albert Fetter's *The Masquerade of Monopoly*; H. A. Marquand's *The Dynamics of Industrial Combination*; and Harry W. Laidler's *Concentration in American Industry*. John T. Flynn attempted to prove *Graft in Business*. A. E. Feaveryear, in *The Pound Sterling*, showed its variable value. *The End of Reparations*, by Hjalmar H. G. Schacht, translated by Lewis Garnnett, revealed Germany's economic troubles.

Out of the many books explaining Russian economics, these may be mentioned: Calvin B. Hoover's *The Economic Life of Soviet Russia*; Ethan T. Colton's *The X Y Z of Communism*; *Soviet Foreign Trade, Menace or Promise?* by J. S. Budish and S. S. Shipman; *The Success of the Five-Year Plan*, by V. M. Molotov; *Piateletka—Russia's Five-Year Plan*, by Michael Farbman; *The Red Trade Menace*, by H. R. Knickerbocker; and *Red Villages*, about Russian agriculture, by Y. A. Yakolov (trans. by A. L. Strong).

**HISTORY.** A most amusing, though carefully documented, work was Walter Millis' *The Martial Spirit*, about the Spanish-American War. *The Epic of America*, by James Truslow Adams, was brilliant social history. George Fort Milton published *The Age of Hate*, about 1864-1869, a favorite period of late. Frank Lawrence Owsley's *King Cotton Diplomacy*, Donaldson Jordan and Edwin J. Pratt's *Europe and the American Civil War*, and Clarence E. Macartney's *Lincoln and His Cabinet*, were concerned with the Civil War period. *The Course of Empire*, a collection of first hand accounts of the California Gold Rush, edited by Valeska Bari, and *Westward: the Romance of the American Frontier*, by E. Douglas Branch, had similar themes.

Other works in the history of the United States were: *The Populist Revolt*, by John D. Hicks; *Slave Trading in the Old South*, by Frederic Bancroft; *The Correspondence of Sir Thomas Gage with the Secretaries of State, 1763-1775*, edited by Clarence Edwin Carter; *America's Siberian Adventure*, by General William S. Graves; and *Only Yesterday*, about the 1920's, by Frederick Lewis Allen.

A fresh general history of England was J. A. Williamson's *The Evolution of England*. Other works in English history were scattered: Volume iv of Hilaire Belloc's *The History of England*; *The English Revolution, 1603-1714*, by I. Deane Jones; *The Foreign Policy of Castlereagh, 1812-1815*, by C. K. Webster; *A Second Elizabethan Journal*, by G. B. Harrison; *Georgian England*, by A. E. Richardson. But there was much valuable work done about the World War, including: Winston S. Churchill's *The Unknown War*, about the various eastern theatres; volume v of *Naval Operations*, of the British *Official History of the War*, by Sir Henry Newbolt; volume iii, *The Growing Antagonism, 1898-1910*, selected and translated from *German Diplomatic Documents, 1871-1914*, by E. T. S. Dugdale; *The German Submarine War*, by R. H. Gibson and Maurice Prendergast; and *Liaison 1914*, by General E. L. Spears.

In European history appeared: Sir J. A. R. Marriott's *A History of Europe from 1815 to 1923*; R. B. Mowat's *The Concert of Europe*; G. P. Gooch's *Studies in Modern History*; and James Westfall Thompson's *The Middle Ages, 300-1500*. Two studies of the French revolution were: Meade Minnegerode's *The Magnificent Comedy* and J. Mills Whitham's *A Biographical History of the French Revolution*. Frederick B. Artz published *France Under the Bourbon Restoration*. In early history: *Early Man*, by G. Elliot Smith, Sir Arthur Keith, and others; *Ancient Civilizations of the Andes*, by Philip Armesworth Means; *The Architect of the Roman Empire*, Augustus, by T. Rice Holmes; and *Viking Civilization*, by Axel Olrik. Histories of particular nations: volume ii of Eleanor Hull's *A History of Ireland*; D. S. Mirsky's *Russia: a Social History*; T. W. Atchley's *Finland*; and F. A. Kirkpatrick's *A History of the Argentine Republic*.

**SCIENCE.** Among the general books of popular science, Bertrand Russell's *The Scientific Outlook* attacked the conclusions of some recently successful writers for the public; Edward R. Weirlein and William A. Hamor, in *Science in Action*, showed its relation to industry; *The Degradation of Science*, by T. Swann Harding, complained of the profit economy which governed

scientific effort; F. S. C. Northrup's *Science and First Principles* explained the relation of recent results in physics to other fields. John O'Hara Cosgrave discussed the ends of science in *The Academy for Souls*. Peter D. Ouspensky projected *A New Model of the Universe*.

The great effort of the year in biology was either *The Science of Life*, by H. G. Wells, Julian Huxley, and G. P. Wells, or *Life*, by J. Arthur Thompson and Patrick Geddes. And J. S. Haldane wrote about *The Philosophical Basis of Biology*; Lancelot Hogben about *The Nature of Living Matter*; E. S. Russell about *The Interpretation of Development and Heredity*; and various authors, under the editorship of Edward M. East, about *Biology in Human Affairs*.

The physicists produced: *Beyond Physics*, by Sir Oliver Lodge; *The New Conception of Matter*, by C. G. Darwin; and *Amber to Amperes*, by Ernest Greenwood. A history was: *Two Thousand Years of Science*, by R. J. Harvey Gibson. Others: Henry Smith Williams' *The Biography of Mother Earth*, supporting the theory of continental drift; W. G. Kendrow's *Climate*; Charles R. Stockard's *The Physical Basis of Personality*, physiology; T. C. Bridges and H. H. Tiltman's *Master Minds of Modern Science*; and Sir Arthur Keith's *New Discoveries Relating to the Antiquity of Man*.

**TRAVEL AND OUT-OF-DOORS.** Africa was a favorite subject, as shown by: William B. Seabrook's *Jungle Ways*, which tried hard to be sensational; Janet Miller's *Jungles Preferred*, quiet and impressive; Paul L. Hoefler's *Africa Speaks*; Ronald A. Monson's *Across Africa on Foot*; Sidney Spencer Broomfield's *Kachalola, or Mighty Hunter*.

The Irishman Liam O'Flaherty published *I Went to Russia*, and Vladimir Zenzonoff and Isaac Don Levine wrote *The Road to Oblivion* about Siberia. Arnold J. Toynbee made *A Journey to China*, and Llewelyn Powys *A Pagan's Pilgrimage to the Holy Land*. Alfred Batson found Nicaragua *Vagabond's Paradise*, and Julian Duguid thought the upper reaches of the Amazon *Green Hell*. Robert Lee Eskridge visited *Manga Reva: the Forgotten Islands*, and Hendrik de Leeuw the *Crossroads of the Java Sea*. Douglas Goldring wrote about *Sardinia*; Bertram Thomas about *Alarms and Excursions in Arabia*; Michael Terry about *Hidden Wealth and Hidden People*, in the Australian deserts; and Alfred F. Loomis about *Hotspur's Cruise in the Aegean*. Carleton Beals' *Mexican Maze*; R. W. Thompson's *Argentine Interlude*; and Mrs. Basil Hall's *The Aristocratic Journey, to America in 1827*, edited by Una Pope-Hennessy, were notable.

About sailing appeared *Windjammer*, by Ken Attiwill; *Sail Ho!* by Gordon Grant; *Under the North Pole*, by Sir Hubert Wilkins and others; and *The Wreck of the Dumaru*, by Lowell Thomas. Perhaps *Nudism in Modern Life*, by Maurice Parmelee, fitly concludes. See **PHILOLOGY, MODERN**.

**LITERATURE STUDIES.** See **PHILOLOGY, MODERN**.

**LITHUANIA**, lith'ú-á'n'á. A Baltic republic established Feb. 16, 1918, from territories of the former Russian Empire; bounded by Latvia on the north, Poland on the east, and Poland and East Prussia on the south and southwest. Capital, Kovno, although Vilna, which was transferred to Poland by the Council of Ambassadors in 1923, was still claimed by Lithuania as its capital.

**AREA AND POPULATION.** Poland retains possession of approximately 10,000 square miles of territory claimed by Lithuania. The actual area under Lithuanian sovereignty in 1931 was 21,490 square miles, and the population on Jan. 1, 1931, was 2,367,000, as compared with 2,316,615 on Jan. 1, 1929. The birth rate per 1000 of population in 1929 was 27.2 and the death rate, 17. The chief cities are Kovno (Kaunas), 96,535; Memel (Klaipėda), 36,633; and Shavli (Siauliai), 22,560. Lithuania also claims Gardinas (Grodno), population 61,600, and Suvalkai (Suvalki), population 31,600, which are in Polish hands.

**EDUCATION.** According to the 1923 census, 35.9 per cent of all males and 38.8 per cent of all females over five years of age were illiterate. In 1930, there were 2386 primary schools, with 155,238 pupils, and 101 secondary schools, with 18,595 pupils. The University of Kovno in 1930 enrolled 4025 students.

**PRODUCTION.** Lithuania is predominantly rural, agriculture and lumbering being the chief support of the population. About 50 per cent of the total area is arable land, 25 per cent meadow and pasture land, 16 per cent forests, and 9 per cent waste land. Production of the chief crops in metric tons in 1930 was: Rye, 682,500; wheat, 286,890; barley, 219,440; oats, 384,205; potatoes, 1,852,900; peas, 66,940; flax fibre, about 34,000; flax-seed, about 43,640. Livestock in the same year included 1,170,100 cattle, 1,097,000 sheep, 1,136,000 swine, and 559,000 horses. Mineral resources are small. About 88,000 tons of peat were produced in 1929. There is considerable manufacturing.

**COMMERCE.** In 1930, as in the previous year, Lithuania was the only Baltic state to report an export surplus and also the only one to increase its trade. Exports totaled 333,800,000 lits (1 lit or litas equals \$0.10 at par) in 1930, compared with 329,800,000 lits in 1929, while imports amounted to 312,400,000 lits, as against 306,400,000 lits in 1929. The favorable balance of trade was 21,400,000 lits in 1930 and 23,400,000 in the previous year. According to preliminary returns, imports in 1931 were valued at 277,900,000 lits (\$27,790,000) and exports at 273,100,000 lits (\$27,310,000).

**FINANCE.** For the fiscal calendar year 1930 actual receipts amounted to 347,694,000 lits (\$34,769,000) and actual expenditures to 320,627,000 lits (\$32,063,000). The previous year, also showed a surplus, with receipts of 338,541,000 lits (\$33,854,000) and expenditures of 269,960,000 lits (\$26,996,000). The external public debt on Jan. 1, 1931, totaled 103,494,000 lits (\$100,349,000), of which \$6,235,000 was due the United States government. The internal debt was negligible.

**COMMUNICATIONS.** Railways in operation in March, 1930, totaled 1048 miles, of which 737 miles were broad-gauge lines. Highways extended about 27,543 miles, of which 752 miles were macadam and 7903 improved earth.

**GOVERNMENT.** According to the constitution as amended May 25, 1928, executive power is vested in the President of the Republic, elected for seven years, who acts through a responsible ministry; and legislative power is in a diet elected for five years by universal, equal, direct, and secret suffrage. No elections had been held up to 1931, however, and government remained in the hands of a small nationalist intelligentsia, with legislation being enacted by presidential decrees. President in 1931, Antanas Smetona; Prime

Minister and Minister of Finance, Juozas Tubelis.

**HISTORY.** The continuance during 1931 of the disputes with Poland over Vilna and with Germany over Memel served effectively to prevent improvement in the inherently unstable internal political situation. The Tubelis Government, in which Foreign Minister Dovas Zaunius remained the most influential figure, took no steps toward the holding of elections and the restoration of parliamentary government. The dictatorship under Voldemaras—deposed in 1929—had alienated the national minorities and this factor, together with the conflict between the dictatorship and the Roman Catholic Church, made its defeat virtually certain had it permitted elections. Instead the Government strove to widen its support by improving agricultural conditions and cultivating foreign markets for the benefit of the commercial classes.

The trial of former Premier Voldemaras and 22 other defendants, on charges of high treason arising from his alleged conspiracy of 1930 for his return to power, was begun behind closed doors at Kovno Aug. 17, 1931. General Plehavičius on August 19 testified that Voldemaras had sought his aid in engineering a coup d'état. The trial ended with the acquittal of Voldemaras and the codefendants, except for minor penalties for assault imposed upon several students. President Smetona was unanimously reelected President by the board of electors on Dec. 11, 1931, for a seven-year term.

The conflict between the dictatorship and the Roman Catholic Church, which led to the severance of diplomatic relations with the Vatican, was in many respects similar to that between the Vatican and the Fascist Government in Italy (see ITALY under *History*). There had been continuous difficulties since the *modus vivendi* of 1928. As Roman Catholicism was the state religion, the 1928 agreement had provided for the continuance of disbursements from the treasury to the clergy. Both the Vatican and the Lithuanian Government, however, insisted upon complete control of these disbursements. The Government, retaining control of the appropriations; had favored the lower clergy, who in general were in sympathy with Lithuanian nationalism. The higher clergy, who were believed sympathetic to Poland, were discriminated against. Late in 1930, as a result of alleged efforts of the higher clergy to organize the theological students against the Government, the President decreed the dissolution of the student (Catholic Action) clubs. The bishops retaliated early in 1931 by ordering the lower clergy to sever their connection with the Government. Thereupon the Government interned certain prelates and the secular leaders of the Christian Democratic party. Broadcasting of church services was also forbidden. The uncompromising stand of both the Government and the Church in the subsequent negotiations resulted in the expulsion of the Papal Nuncio to Lithuania on June 6. Diplomatic relations were reported to have been broken off August 24.

Of considerable importance, in view of the strained relations between Lithuania and Poland, was the renewal for five years on May 6, 1931, of the non-aggression pact of 1926 between Lithuania and the Soviet Union. To the new agreement was annexed an affirmation by the Soviet Government of its recognition of Lithuania's right to Vilna—a recognition originally affirmed in the Soviet-Lithuanian treaty of 1920. See POLAND.

Consult Malbone W. Graham, "Stability in the Baltic States," *Foreign Policy Reports*, May 27, 1931, vol. vii, no. 6.

**LITTLE ENTENTE.** A designation applying to the three countries of Czechoslovakia, Rumania, and Yugoslavia, whose governments in 1920 concluded a defensive alliance aimed at the maintenance of the status quo in central Europe as established by the Treaties of Versailles, St. Germain, and Trianon. The treaties of alliance were renewed in 1929. At the biannual meeting of the Little Entente Foreign Ministers at

The numbers of cattle, calves, hogs, and mutton slaughtered under Federal Inspection in the United States during 1931, as shown in the following table, were not materially different from 1930. The total dressed weight of slaughtered cattle, calves, and mutton was, however, in excess of the three-year average as a result of the cheap feed prices.

The cattle population in the United States was 2.4 per cent larger in 1931 than 1930; the numbers moving into the feed lots during the normal marketing period, from July to October, inclu-

<sup>f</sup> 69,977,000 lbs. fresh, and 22,717,000 lbs. cured beef.

<sup>g</sup> 139,961,000 lbs. fresh, 464,111,000 lbs. cured pork, and 72,916,000 lbs. lard.

Bucharest May 3-5, 1931, a resolution was adopted strongly condemning the projected Austro-German Customs Union and endorsing the demand of France and Great Britain that the proposal be submitted to the World Court (see AUSTRIA, GERMANY, and FRANCE under *History*). The conference also reached full agreement with regard to the participation of the Little Entente in the 1932 Disarmament Conference and their position on proposals for adjusting the Kellogg-Briand Peace Pact to the covenant of the League of Nations.

See also CZECHOSLOVAKIA, RUMANIA, and YUGOSLAVIA under *History*. Consult John O. Crane, *The Little Entente* (New York, 1931).

**LITTLE THEATRE MOVEMENT.** See THEATRE.

**LITTMANN, MAX.** A German architect, died in Munich, Sept. 21, 1931. He was born in Chemnitz, Jan. 3, 1862, and studied there and in Dresden. After traveling in Italy he became a resident of Munich in 1888. In 1892 with the engineer, Jacob Heilmann, he established the firm of Heilmann and Littmann which designed, among other notable buildings in Munich, the Hofbrauhaus, Schack Gallery, and Prince Regent Theatre. This firm also designed the Schiller Theatre in Charlottenburg, National Theatre in Weimar, Court Theatre in Stuttgart, and Municipal Theatres in Hildesheim and Posen.

**LIVESTOCK.** In 1931 livestock products, like other agricultural commodities, were marketed under adverse conditions as a result of the reduced domestic and foreign demand. The price of meat animals declined rather steadily during the year, but the relationship between feed prices and meat animal prices made the relative economic position of the industry as compared with that of most of the alternative agricultural enterprises, as favorable as when prices were higher. See AGRICULTURE under *Federal Farm Board*.

sive, were smaller than the movement for that period in 1930 and considerably below the five-year average for the period. Short feed and water supplies in some of the range States resulted in some forced marketing of cattle during the summer and autumn, but feed supplies in a few of the range States were sufficient to permit holding the cattle over to be marketed in 1932. While prices of feeder cattle were lower, the ratio of feed grain and fat-cattle prices were higher, and feed supplies in most of the principal cattle-feeding States were larger, the scarcity of credit and the heavy losses from feeding operations in the years 1929 and 1930 tended to discourage farmers from feeding cattle.

The numbers of hogs on farms and the supplies of hog products in storage in the United States were larger than they were in 1930, but were smaller than the five-year average. The numbers of hogs slaughtered and the total dressed weight of slaughtered animals was slightly greater in 1931 than in 1930. The upward trend in European hog production was shown by the fact that there was an increase of 12.3 per cent in total hog numbers in Denmark, an increase of 8.2 per cent in numbers in Germany, and evidence of substantial increases in The Netherlands, Poland, and the Baltic States. A survey in June, 1931, showed a marked increase in the number of sows to farrow in the fall of 1931 in the United States. The per capita consumption of federally inspected pork and lard was 4.1 per cent smaller in 1931 than in 1930.

Increased hog production in European countries and decreased purchasing power of European consumers caused the export of hog products from the United States to be the smallest in more than 30 years. The principal export product, lard, dropped from 642,486,396 pounds during 1930 to 568,708,208 pounds in 1931. Germany increased her imports of lard from

the United States by 21,550,558 pounds, and the United Kingdom by 11,888,069 pounds during 1931, but there was a material reduction in amounts exported to other European and Central American countries. Other pork products exported by the United States that decreased in 1931, as compared with 1930, were as follows: Cured hams and shoulders, 84,817,944 pounds in 1931, and 120,169,842 pounds in 1930; bacon 36,711,507 pounds in 1931, and 90,686,964 pounds in 1930; pickled pork 15,769,477 pounds in 1931, and 30,628,424 pounds in 1930; and fresh pork 9,614,222 pounds in 1931, and 17,573,008 pounds in 1930.

The sheep industry apparently reached the peak of a production cycle with a 1931 lamb crop, estimated by the U. S. Department of Agriculture, at 31,684,000 head, an increase of about 8 per cent over the 1930 lamb crop. The large lamb crop, together with poor range and feed condition in the range States and restricted credit, caused many range sheepmen to market more than the usual proportion of their lambs. In the native sheep States there was apparently little tendency for farmers to reduce their breeding flocks. There was an increase of 5.6 per cent in the per capita consumption of federally inspected lamb and mutton in 1931 as compared with 1930, but the larger market supplies and a weakened demand were jointly responsible for the lower level of sheep and lamb prices.

The poultry industry was in relatively favorable position in the fall of 1931. The number of poultry on farms had decreased, there was an increase in current market receipts of poultry over 1930, and the stocks of poultry in storage was above both 1930 and the five-year average, while stocks of eggs in storage were much less than during the previous year but only slightly less than the five-year average. During 1931 poultry feed prices showed a greater decline than either poultry or egg prices.

**TRENDS IN RESEARCH.** Studies of economic methods of feeding, nutrition, management, and breeding claimed the attention of investigators during 1931. A knowledge of the needs and uses of minerals in the animal body is of special interest in the field of nutrition. Fluorine, an ingredient of certain minerals commonly fed to livestock, inhibited growth when fed to rats at the Illinois Agricultural Experiment Station. At high levels fluorine salts lowered the percentage of calcium that would normally have been retained by the body. Both the soluble sodium and the insoluble calcium salts were equally effective in bringing about the characteristic abnormalities of the teeth caused by flourine.

The addition of as small an amount of cottonseed meal as 0.5 pound to a ration of wheat straw at the New Mexico Agricultural Experiment Station not only increased the consumption of roughage, but changed the nitrogen balance of the animals from negative to positive, and also increased the rate of gains in body weight. The added proteins of the cottonseed meal were almost solely responsible for the increase in total digestible nutrients of the ration, indicating that protein was probably the most important single nutrient among the total digestible nutrients.

The New Hampshire Agricultural Experiment Station found that the energy requirements of sheep during growth were greater than those of adult sheep. Since sheep mature earlier than larger domestic animals, their metabolism is

higher in proportion to the faster growth rate.

As swine production becomes more intensive and concentration of breeding animals increases, nutritional anemia of young pigs becomes a serious problem. The Illinois Agricultural Experiment Station found that while the addition of iron salts to the feed of young pigs was not effective for preventing anemia, brushing the sow's udder with a solution of iron and copper salts prevented anemia during the entire suckling period. At the New York Cornell Agricultural Experiment Station no anemia was apparent among pigs that received a daily dose of a solution of ferric sulphate, or those which had dried ferrous sulphate mixed with their feed, or those whose dams' udders were painted daily with a concentrated solution of ferric phosphate.

A study of the factors influencing the quality and palatability of meat was the subject of co-operative investigations between several State agricultural experiment stations and the U. S. Department of Agriculture. In studying the age problem in beef, the Missouri and Iowa Agricultural Experiment Stations found that more desirable beef was produced by two-year-old and yearling steers than by calves. While the meat of calves was lighter in color than that of older animals, the latter produced carcasses that were more satisfactorily marbled, and their beef ripened better than the beef of calves. Studies of the influence of sex on the quality of beef at the Missouri, Illinois, and Nebraska Agricultural Experiment Stations revealed that heifer carcasses carried more internal and external fat than steer carcasses of the same age. Steers made more rapid and economical gains than heifers but did not carry as much finish and cut a smaller percentage of hind quarter.

A study of the formation of the hen's egg was made partly at the University of British Columbia, Canada, and partly at the Wisconsin Agricultural Experiment Station to determine the normal functioning of the hen's oviduct and to ascertain how it could be influenced. It was found that the vagina does not take part in the formation of the eggs and that the position of the uterus and its attachment to the ligaments has little if any influence on the muscular or secretory activity of the uterus. Removal of half of the isthmus did not prevent the remainder from forming normal shell membranes, and it was also capable of influencing the shape of the egg and the pigmentation of the shell. Further work indicated that the general shape of the egg is determined by the amount of albumen secreted in the albumen part, which to some extent is dependent upon the size of the bird and the size of the oviduct; by the calibre of the lumen of the albumen part and isthmus; and by the muscular activity of the walls of these parts.

**CHANGE IN PERSONNEL.** Dr. W. A. Lippincott, professor of poultry husbandry at the University of California, died Jan. 5, 1931. Dr. Lippincott, as one of the leading poultrymen of this country, and as a recognized authority on the subject throughout the world, made valuable contributions, especially in the field of breeding, toward the ever increasing knowledge in this phase of the livestock industry. Prof. G. R. Henderson was appointed to succeed Prof. E. J. Maynard, at the Colorado Agricultural Experiment Station, the latter resigning to become head of the animal and poultry husbandry department at the Utah Agricultural Experiment Station, where he succeeded

Dean K. C. Ikeler who was made general manager of the Ogden Livestock Yards. At the Iowa Agricultural Experiment Station, Prof. C. C. Culbertson was appointed chief of beef cattle, swine, and sheep production, and Prof. B. H. Thomas was made chief in animal chemistry and nutrition. Prof. H. E. Reed, of the Kansas Agricultural Experiment Station, resigned to accept a position in the foreign service of the U. S. Bureau of Agricultural Economics, and was succeeded by Prof. A. D. Weber of Nebraska. Prof. W. C. Skelley, of the New Jersey Agricultural Experiment Station, was appointed professor of animal husbandry vice F. G. Helyar who was to devote his entire time to directing resident teaching.

**BIBLIOGRAPHY.** Among recent publications on livestock are the following: H. W. Vaughn, *Types and Market Classes of Live Stock* (Columbus, O., 13th ed., 1931); W. W. Smith, *The Elements of Live Stock Judging* (Philadelphia 2d ed., 1931); E. Mangold, *Handbuch der Ernährung und des Stoffwechsels der Landwirtschaftlichen* (Berlin, 3 vols., 1931); S. T. Parkinson and W. L. Fielding, *The Microscopic Examination of Cattle Foods* (Ashford, Eng., 1930); *International Live Stock Atlas* (Rome, 1930); F. S. Hultz and J. A. Hill, *Range Sheep and Wool in the Seventeen Western States* (New York, 1931); B. M. Patten, *The Embryology of the Pig* (Philadelphia, 2d ed., 1931); H. M. Lamon, *Practical Poultry Production* (St. Paul, 1930), and *How to Select the Laying Hen* (New York, 1931); and R. E. Pardee, *Raising Ducks for Profit* (Springfield, O., 1930).

**LONGWORTH, NICHOLAS.** An American public official, died in Aiken, S. C., Apr. 9, 1931. He was born in Cincinnati, O., Nov. 5, 1869, and was graduated from Harvard in 1891. He was admitted to the Ohio bar in 1894, after having received the LL.B. degree from the Cincinnati Law School, and served in the State Legislature of Ohio from 1899 to 1903. During 1903-13 he was a member of Congress and was reelected to the 64th to 72nd Congresses (1915-33) as representative from the 1st Ohio District. He was Republican floor leader of the House of Representatives, 1923-25, and speaker of the 69th, 70th, and 71st Congresses (1925-31). In 1906 he married Alice, daughter of President Theodore Roosevelt.

**LOS ANGELES.** See **AQUEDUCTS.**

**LOS ANGELES ANNIVERSARY.** See **CELEBRATIONS.**

**LOUCHEUR, LOUIS.** A French politician, died in Paris, Nov. 22, 1931. He was born in Roubaix, Aug. 12, 1872, and attended the École Polytechnique in Paris. As an engineer he was interested in industrial enterprises, especially railroad development. He did not come to the fore

as a politician until the World War, when he became Under-Secretary of State for war industries in December, 1916, and for coal supply in March, 1917. He held the portfolio of armaments in Clémenceau's cabinet (1917-20), the ministry being known after the Armistice as that for industrial reconstruction of the liberated regions. He was also consulted in the drafting of the economic sections of the Versailles Treaty. In 1919 he entered the Chamber as deputy of the Nord Department, becoming one of the leaders of the radical left. He again became Minister for Reconstruction of the liberated regions under Briand (January, 1921, to January, 1922), negotiating with Walter Rathenau, the German Minister for Reconstruction, the so-called Wiesbaden agreement. He served as Minister of Labor in Poincaré's cabinet (November, 1928, to July, 1929), in Briand's cabinet (July to October, 1929), and in Tardieu's cabinet (October, 1929, to December, 1930). His last portfolio was that of commerce in the short-lived Steeg cabinet (December, 1930, to January, 1931). He had also represented France at the League of Nations Assembly since 1924 and at the World Economic Conference at Geneva in 1927. He was proprietor of *Le Petit Journal*, a Parisian daily newspaper.

**LOUISE VICTORIA ALEXANDRA DAGMAE, PRINCESS ROYAL OF ENGLAND.** Widow of the Duke of Fife and eldest sister of King George V, died Jan. 4, 1931, in London where she was born Feb. 20, 1867. She was married in 1889 to the Earl of Fife, who was created by Queen Victoria, in honor of the occasion, Duke of Fife and Marquis of Macduff. On the death of the Duke in 1912 she went into semi-retirement. She was declared Princess Royal by her father, King Edward VII, in 1905.

**LOUISIANA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1931, was 2,101,593; in 1920, 1,789,509. The white population increased to 1,318,160 (1930), from 1,096,611 (1920). The Negro population increased also, to 776,326 (1930), from 700,257 (1920). But as its rate of increase was less rapid, the Negro population receded to 36.9 (1930), from 38.9 (1920), in its percentage relation to the entire population. Of the whites, 34,910 (1930) were foreign-born. Other groups contributed 7107 to the population of 1930. The chief of these groups were Mexicans, first classified apart from foreign whites in 1930, when they numbered 4552. Indians numbered 1536.

Of the 815,725 persons listed as gainful workers, in 1930, 297,239 were in agriculture, 146,836 in manufacturing and mechanical industries (including 26,666 in the building industry and 26,918 in the saw and planing mills), 77,507 in transportation and 98,709 in trade. New Orleans had 458,762 inhabitants (1930), 387,219 (1920); Shreveport, 76,655 (1930), 43,847 (1920); Baton Rouge, the capital, 30,729 (1930), 21,782 (1920).

**AGRICULTURE.** The table on page 478 shows the acreage, production, and value of the principal crops for 1931 and 1930.

**MINERAL PRODUCTION.** After previous diminution the production of petroleum tended upward in 1930, rising to 23,107,000 barrels for that year, from 20,554,000 barrels for 1929; the product rose in value also, to \$26,300,000 (estimated) for 1930, from \$25,700,000 for 1929. The extraction of natural gas was on the increase in 1929, the latest year for which official figures

Crop	Year	Acresage	Prod. Bu.	Value

\* Bales.    \* Tons.

were at hand. There were produced, in 1929, 261,138,000 M. cub. ft., as against 227,821,000 M. cub. ft. in 1928; by value, \$26,505,000 for 1929 and \$20,279,000 for 1928. It would appear from the quantity of natural gas gasoline extracted in 1930 that in that year also the natural gas industry was active. There were obtained, in 1930, from natural gas, 70,200,000 gallons of such gasoline, as against 64,957,000 in 1929; by value, \$3,600,000 for 1930 and \$4,010,000 for 1929, when higher prices for the gasoline ruled. The total value of the mineral production of 1929 was \$62,725,997; for 1928, the total was \$56,810,403.

**MANUFACTURES.** Federal Census data gathered in 1930 to cover the year 1929 rendered the number of the State's manufacturing establishments as 1986, which was about 23 per cent more than for 1927. The establishments of 1929 employed 87,511 wage earners, or 0.2 per cent more than had worked in 1927; and paid these wage earners \$83,990,368, or 4.4 per cent more than the wage bill of 1927. Materials for manufacture, plus fuel and purchased electricity, cost \$441,979,590 in 1929, or 3.3 per cent above the 1927 figure. The manufactured product of 1929 was valued at \$684,885,999, and exceeded that of 1927 by 7.3 per cent. The value added to goods by manufacture in 1929 was estimated at \$242,906,409.

**FINANCE.** State expenditures of the year ended Dec. 31, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$23,799,274 (of which \$5,451,625 was for local education); for interest on debt, \$1,701,422; for permanent improvements, \$21,299,267; total \$46,863,331 (of which \$25,594,072 was for highways, \$5,187,564 being for maintenance and \$20,407,108 for construction). Revenues were \$33,209,952. Of these, property and special taxes formed 31.8 per cent; departmental earnings and remuneration to the State for officers' services, 5.2; sale of licenses, 51.1 (including gasoline sale taxes amounting to \$7,334,713). The State's funded debt outstanding on Dec. 31, 1930, was \$37,537,703; \$22,640,000 was for highways. Net of sinking-fund assets, debt was \$37,355,879. On a property valuation of \$1,746,869,796 were levied in the year taxes of \$10,044,501.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 4654.13. In the course of the year preceding, 108.58 miles of line had been given up. No building of additional line or trackage in 1931 was reported.

**EDUCATION.** For the academic year 1930-31, the numbers of the educable school-age population were reported as: White, 399,999; Negro, 263,170; total, 663,169. There were enrolled as pupils 282,337 whites and 154,772 Negroes—in

all, 437,109. Of these, 228,781 whites and 147,915 Negroes were in common schools or elementary grades; in all, 376,896. Those enrolled in high schools numbered 53,556 whites and 6857 Negroes—in all, 60,413. The year's expenditures for public-school education totaled \$17,062,854. Salaries of teachers, by the year, averaged \$1130 for the whites and \$463 for the colored. Two constitutional amendments were adopted by popular vote in 1931, the one requiring the State to furnish support to public schools at the rate of \$12 for each child of school age and the other creating a State equalization fund to be nourished by a tax of one-half cent a gallon on gasoline.

**LEGISLATION.** Governor Long, who advocated the most radical of a number of schemes of cotton restriction proposed in the cotton-growing States as a consequence of the year's collapse in the market for this staple, called the Legislature in special session in August. Conforming to his recommendation on the subject, the Legislature enacted a statute prohibiting entirely the planting of cotton in 1932. The measure was to become operative in January of that year, but only on condition that States supplying three-fourths of the country's cotton crop should previously have adopted similar measures. Under this act a fine of from \$100 to \$500 or imprisonment of from 10 to 60 days was to be the penalty for any person planting cotton within the limits of the State in 1932. The authority was granted to the Commissioner of Agriculture to destroy any cotton found growing in that year. The ginning of cotton was prohibited also.

**POLITICAL AND OTHER EVENTS.** A deficiency of revenue receipts depleted the Treasury in March and compelled the State Treasurer to refuse to honor warrants presented. The sale of bonds that had been authorized in 1930 was nevertheless successful in April, and the State obtained temporary accommodation for its current needs, through loans contracted by the State Board of Liquidation. The statute prohibiting the cultivation of the marihuana plant, used locally as a narcotic drug, was sustained by the Supreme Court of the State on May 26, in a decision affirming a conviction under the law. John H. Overton of Alexandria won the Democratic nomination to the Federal House of Representatives, to succeed the late James B. Aswell, in the March primaries, and was thus assured of election. A party of Acadians from the Maritime Provinces of Canada, 138 in number, visited the Acadian region of Louisiana in April and were the guests of New Orleans.

Lieutenant Governor Paul Cyr, acting on the theory that Governor Long, by his election to be Senator in November of 1930, had become the holder of another office and had therefore ceased to be constitutionally qualified as Governor of the State, attempted to assume the office on October 13. He had himself sworn in at Shreveport. Long rejoined by ordering the National Guard to keep Cyr and his followers out of the Capitol and the executive mansion. Cyr demanded that the troops be disbanded and the dispute submitted to the courts for determination. His suit to be declared Governor was denied in a lower court in November, and he appealed.

The Sage Foundation, which had donated Marsh Island to the State, applied on December 22 for an injunction against the State Conservation Commission, to restrain it from issuing fur-

ther permits to trap on the island; it was alleged that seven men high in State politics had derived considerable sums from the trappers thus favored with special rights on the 500,000-acre wild-life preserve.

**OFFICERS.** Governor, Huey P. Long; Lieutenant-Governor, Paul N. Cyr; Secretary of State, Alice Lee Grosjean; Treasurer, H. B. Conner; Auditor, L. B. Bayard, Jr.; Attorney-General, Percy Saint; Superintendent of Education, T. H. Harris.

**JUDICIARY.** Supreme Court: Charles A. O'Neill, Chief Justice; Associate Justices, Ben C. Dawkins, Winston Overton, John St. Paul, Wynnee G. Rogers, John R. Land, H. F. Brunot, Fred. M. Odom.

**LOUVRE.** See ART MUSEUMS.

**LÜBECK, lü'bék.** A state of the German Republic. See GERMANY under *Area and Population*.

**LUBRICANTS.** See CHEMISTRY, INDUSTRIAL.

**LUCAS MALET.** See HARRISON, MARY ST. LEGER.

**LUIGGI, LUIGI.** An Italian engineer, died in Rome, Feb. 1, 1931. Born in Genoa in 1856, he played an important part in the commercial development of his native city, having charge from 1882 to 1892 of the construction of the breakwaters in the harbor of Genoa. He was also engaged from 1896 to 1905 as consulting engineer to the Argentine government. He was professor of hydraulic and maritime engineering at the Royal University of Rome, inspector general of the Royal Corps of Civil Engineers, a member of the international advisory board for the Suez Canal, a director of the State railways of Italy, and a member of the Italian Senate.

**LUMBER.** See FORESTRY.

**LUNDIE, JOHN.** An American consulting engineer, died in New York City, Feb. 9, 1931. He was born in Arbroath, Scotland, Dec. 14, 1857. Following his graduation from the University of Edinburgh in 1880, he came to the United States and was engaged in railroad engineering in Oregon and Washington until 1884, in municipal work in Chicago until 1890, and in bridge construction until 1893. He then took up private practice, and at the time of his death was president of the Lundie Engineering Corporation in New York City. He assisted in the electrification of the Illinois Central Railroad, the Boston, Brooklyn, and Manhattan Elevated Railroads, and the London Underground lines. In addition to designing the combined electric hoist and traveler known as the "telfer," he designed the Lundie rheostat, tie plate, and duplex rail anchor, and developed the Lundie formula for train resistance. He was at one time an officer in charge of the Birmingham Southern Railroad Company and vice president and general manager of the Panama-American Corporation in Panama.

**LUTHERAN CHURCH.** A church made up of groups of religious bodies, acknowledging "the Holy Scriptures . . . as the only source and infallible norm of all church doctrine and practice" and declaring the unaltered Augsburg Confession and Luther's Small Catechism to be "a pure exposition of the Word of God." Its membership is chiefly in central and northern Europe and in the United States and Canada. The following organizations in the United States bear the Lutheran name: United Lutheran Church in America; American Lutheran Conference; Evangelical Lutheran Church (Eielsen Synod); Church of the Lutheran Brethren of

America; Danish Evangelical Lutheran Church of America; Icelandic Lutheran Synod of North America; Finnish Evangelical Synod in America (Suomi Synod); Finnish Evangelical Lutheran National Church; Finnish Apostolic Lutheran Church; and the Evangelical Lutheran Synodical Conference of North America.

During 1931 the American Lutheran Conference completed its organization by the appointment of working commissions and committees (see 1930 YEAR BOOK). There also was organized in Pittsburgh, Pa., Nov. 26, 1931, a conference of Hungarian Lutherans in the United States and Canada, with a view to uniting all Hungarian Lutheran churches and societies. The Lutheran Church of Europe, especially Germany and Sweden, celebrated on Sept. 17, 1931, the three hundredth anniversary of the Battle of Breitenfeld, as well as honored the memory of Gustavus Adolphus, the savior of the cause of Protestantism in Germany. On Dec. 18, 1931, Prof. Erling Eidem of Lund University was appointed Archbishop of Upsala and Primate of Sweden, succeeding the Most Rev. Nathan Söderblom (q.v.).

Statistics showing the general growth of the church in the United States and Canada during 1930-31 were as follows: Pastors, 11,953; congregations, 16,532; baptized members, 4,350,002; confirmed or communicant members, 2,908,702. Church schools numbered 19,741, with 148,899 officers and teachers and 1,637,181 pupils; catechumens numbered 105,623. Church property was valued at \$378,575,685, while congregational expenses amounted to \$44,901,614, congregational benevolences to \$11,496,585, and total congregational expenditures to \$56,398,199. It was estimated that throughout the world there were 75,000 Lutheran congregations, with 50,000 pastors and a baptized membership of 82,180,000.

In 1931 the Lutheran organizations in the United States maintained 34 theological seminaries, 36 colleges, and 93 academies, with a total enrollment of 38,294 students, 2217 instructors, endowment amounting to \$16,486,837, and property valued at \$39,994,773. An outstanding event in the educational field was the accrediting of the Lutheran Theological Seminary at Gettysburg, Pa., by Queen Wilhelmina of the Netherlands, one of 30 institutions accredited in the United States and the only Lutheran institution so honored. Lutheran inner-mission institutions, such as deaconesses' homes, hospitals, old-people's homes, orphanages, immigrants' and seamen's homes, numbered 400, with an endowment of \$4,466,180 and a property value of \$42,568,002; during the year they sheltered or ministered to 6156 children and 431,689 men and women. The Lutheran Federation of Charities was organized in New York City Mar. 3, 1931, by inner-mission work representatives of the Evangelical Lutheran Synodical Conference of North America.

The work of the churches in fields outside of the United States and Canada was carried on principally in India, Africa, Japan, China, New Guinea, Argentina, and British Guiana. Baptized converts in 3867 congregations numbered 314,511; confirmed members, 203,449; and communing members, 189,102. The total value of the property of these congregations was \$5,886,787. The United Theological Seminary, established by the United Lutheran Church of

America in Madras, India, was opened on July 18, 1931. Fifteen Lutheran congregations in the Kilimandjaro, the Meru, and the Para Mountain districts in East Africa held their first church conference in August, 1930. The Board of American Missions, after lengthy negotiations with the Suomi Synod, took over all of the Finnish work in Canada and assumed the full support of that work so far as support was necessary.

The church maintains 25 publishing houses with a total property value of \$5,663,798. Official periodicals are the *Lutheran* (United Lutheran Church), *Lutheran Standard* (American Lutheran Church), *Lutheran Companion* (Augustana Synod), *Lutheran Herald* (Norwegian Lutheran Church), *Lutheran Witness* (Missouri Synod), *Northwestern Lutheran* (Wisconsin Synod), *Ansgar Lutheran* (United Danish Church), *Lutheran Men* (American Federation of Lutheran Brotherhoods), and *National Lutheran* (National Lutheran Council). Headquarters of the National Lutheran Council, in which the United Lutheran Church in America and the American Lutheran Conference cooperate, are at 39 East 35th Street, New York City, the executive director being the Rev. Ralph H. Long.

**LUXEMBURG (LUXEMBOURG)**, lûks'em-bûrg. A small state of western Europe, bounded by Germany, France, and Belgium and linked economically to Belgium by a customs union effective May 1, 1922. Area, 999 square miles; population at the census of 1930, 300,748. Capital, Luxembourg, with a population in 1930 of 52,126; ruler in 1931, Grand Duchess Charlotte.

Agriculture engages only 32 per cent of the population, the 394,000 acres under cultivation being devoted principally to oats and potatoes. Mining and metallurgical industries predominate. Production of iron ore (1930) totaled 6,610,088 metric tons; pig iron, 2,473,735 metric tons; steel, 2,269,910 metric tons. In 1929, there were 47 blast furnaces and seven steelworks in operation. The brick, printing, leather, and glass industries are relatively important. Figures for foreign trade are included in those for Belgium. In the budget for 1931, revenue was estimated at 505,641,000 Luxembourg francs and expenditure at 461,586,000 francs (1 Luxembourg franc equals \$0.139 at par). The funded debt in 1930 stood at 456,908,531 francs and the floating debt at 64,101,980 francs.

Executive power is vested in the sovereign, who appoints the Cabinet, and legislative power is vested partly in the sovereign and partly in the Chamber of Deputies of 52 members elected by direct suffrage for six years. The Council of State of 15 members, chosen by the sovereign for life, acts as a Senate. Premier in 1931, Joseph Bech (Catholic-Conservative), who is assisted by three director-generals. See **BELGIUM**.

**LYNCHINGS.** Tuskegee Institute found that 13 lynchings had occurred during the year 1931, as compared with 21 in 1930, 10 in 1929, 11 in 1928, and 16 in 1927. Of the victims of mob rule, 10 were taken from law officers or were presumably under the protection of the law. Twelve of the lynched persons were Negroes; one was a white. The alleged offenses with which the murdered men had been charged were as follows: murder, 5; attempted rape, 5; wounding man, 3. The States in which the lynchings occurred were: Alabama, 1; Florida, 2; Louisiana, 1; Maryland, 1; Mississippi, 3; Missouri, 1; North

Dakota, 1; Tennessee, 1; West Virginia, 2. It was significant to note that attempted lynchings had been prevented by officers of the law in 57 instances, 7 occurring in Northern and Western States and 50 in Southern States. In 45 of these cases, the prisoners were removed or the guards about the jails augmented. In the 12 other cases, the would-be lynchers were repelled by force. A total of 88 persons were thus saved from the hand of the mobs, of whom 18 were whites and the others Negroes.

The Southern Commission on the Study of Lynching, whose establishment was described in the 1930 YEAR BOOK, submitted an elaborate report during the year which severely condemned the continuance of this form of mob rule in the Southern States. The Commission was headed by George Fort Milton, editor of the *Chattanooga News*, and included the following other prominent Southern persons: Julian Harris, of the *Atlanta Constitution*; Dr. John Hope, president of Atlanta University (for Negroes); Dr. Benjamin F. Hubert, president of Georgia State College; Dr. Charles S. Johnson, of Fisk University (for Negroes); Dr. W. P. King, book editor of the Methodist Episcopal Church, South; Dr. W. J. McGlothlin, president of Furman University and of the Southern Baptist Convention; Dr. R. R. Moton, principal of Tuskegee Institute (for Negroes); and Dr. Howard W. Odum, University of North Carolina. The Commission's study of the lynchings perpetrated in 1930 indicated that 2 of the 21 victims in that year were innocent and 11 others were probably so. In some cases the Commission found reasons to suspect that victims had been deliberately killed for purposes of concealment or revenge.

Among the more important findings of the Commission the following were to be noted: (1) Ignorance is to be directly correlated with and in large part may be held responsible for lynchings. Of the 21 victims in 1930, only 1 had gone as far as high school. The same charge is true of the mobs participating. The greatest frequency of lynching occurred in the rural areas. (2) There was a direct correlation between poverty and lynching. Low economic status was characteristic of both offenders and jobs. (3) The influence of bigotry was undeniable. (4) Sex offenses counted for less than one-fourth of all the lynchings. Of the 3693 lynchings perpetrated since 1892, 77 per cent were for non-sexual offenses, real or alleged. (5) Lynching was not necessary for the protection of white women. The Commission went on record as believing that lynching actually increased the jeopardy of white women and led Negroes to believe that only lynching mobs were ready to protect or avenge southern womanhood. (6) Men were not infrequently lynched for non-criminal acts, such as political differences. (7) Mob leaders go unpunished in most cases and are rarely indicted despite the fact that their identification can be established without difficulty. (8) An important reason for public indifference is that Negroes do not vote in areas where the most lynchings occur and hence the lack of sensitivity on the part of the law officers.

**LYTTELTON, GEN. SIR NEVILLE (GERALD).** A British soldier, died in London, July 6, 1931. He was born in Hagley, Worcestershire, Oct. 28, 1845. After attending Eton, he entered the Rifle Brigade in 1865, and three years later was appointed aide-de-camp to Lord Spencer, Viceroy

of Ireland, serving until 1873. During 1883-85 he was military secretary to Sir John Adye, Governor of Gibraltar, and during 1885-90 to Lord Reay, Governor of Bombay. He was made assistant adjutant general at the War Office in 1895 and assistant military secretary in 1897. He had also participated in the Fenian Rebellion in Canada (1866), the Jowaki Expedition (1877), the Egyptian Campaign (1882), and the Nile Expedition (1898).

During the Boer War he commanded the 4th Brigade, 2d and 4th Divisions, and from 1902 to 1904 was commander of the forces in South Africa. On his return to England he was made Chief of the newly organized General Staff and first military member of the Army Council created to perform the functions of a commander-in-chief in time of peace. In 1908 he became commander-in-chief of the forces in Ireland, retiring in 1912.

**MACAO, makä'ô.** An island at the mouth of the Canton River, in China, which with the two adjacent islands of Taipa and Colôane, constitutes a province of Portugal. Area, 4 square miles; population, according to the census of 1927, 157,175 (including 3946 Portuguese, and 152,738 Chinese). The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1929-30, revenues were estimated at 4,871,492 patacas and expenditures at 4,658,272 patacas (1 pataca equals approximately \$0.48). In 1929, imports were valued at 21,423,000 patacas and exports at 9,742,000 patacas.

**MCCULLOUGH, ERNEST.** An American civil engineer, died in Long Island City, N. Y., Oct. 1, 1931. He was born in Staten Island, N. Y., May 22, 1867, and attended the Institute of Technology, Chicago, and the Van der Naillen School of Engineering, San Francisco, being graduated from the latter in 1887. While engaged in engineering practice in San Francisco he edited *Engineer and Contractor* during 1893-96. He also practiced in Lewiston, Idaho, from 1898 to 1903 and then removed to Chicago where he remained until 1917. During the World War he served successively in France as lieutenant colonel in the Chemical Warfare Service and as chief engineer of the American Red Cross, and in 1919-20 was director of the Chemical Warfare Service Officers' school at Lakehurst, N. J. He resumed his practice in Syracuse, N. Y., in 1920-21 and then came to New York City where during 1925-28 he edited *Building Age and National Builder*. His writings include *Farm Drainage* (1892); *Municipal Public Works* (1894); *Vrooman Act—Treatise on California Street Laws* (1896); *Engineering Work in Towns and Cities* (1906); *Reinforced Concrete* (1908); *Engineering as a Vocation* (1911); *Practical Surveying* (1915); *Practical Structural Design* (1917); *Everybody's Money* (1923); and *Class Warfare* (1927).

**MACDONALD, J. RAMSAY.** See GREAT BRITAIN under *History*.

**MACEDONIA.** A stretch of territory in the Balkan peninsula, included in European Turkey until the outbreak of the Balkan Wars (1912-13) and since the World War divided between Greece and Yugoslavia to the exclusion of Bulgaria. See BULGARIA and YUGOSLAVIA under *History*.

**MCGILL UNIVERSITY.** A coeducational institution of higher learning in Montreal, Quebec, Canada, founded in 1821. The enrollment

for the autumn session of 1931 was distributed as follows: Faculties of arts and science, 1040; medicine, 408; engineering, 337; dentistry, 32; law, 91; music, 149; and graduate studies, 251; and schools or departments of agriculture, 124; architecture, 47; commerce, 266; household science, 89; graduate nursing, 38; physical education, 34; social service, 16; pharmacy, 3; library administration, 18; and teachers' training school, 194. The registration in the French summer school of 1931 was 220 and in the summer library school, 10. The number of members on the teaching staff was 551.

The endowment of the university amounted to \$18,566,463; the income for the year was \$2,480,911. The library contained 400,000 volumes. The department of pharmacy and the school for social workers were discontinued in 1931. The faculty of applied science was changed to the faculty of engineering, granting the B.Eng. and M.Eng. degrees. The library school also was made a graduate school, requiring a bachelor's degree for entrance, the course leading to a B.L.S. degree. A grant of \$110,000 was received from the Rockefeller Foundation for social research. Principal, Sir Arthur William Currie, G.C.M.G., K.C.B., LL.D.

**MCINTOSH, WILLIAM CARMICHAEL.** A British zoologist, died Apr. 1, 1931, in St. Andrews, Scotland, where he was born Oct. 10, 1838. He was educated at Madras College, St. Andrews, and at the universities of St. Andrews and Edinburgh. After practicing medicine for a short time he devoted himself to zoology, being professor of natural history at St. Andrews from 1882 to 1917. He was also director of the University Museum and the Gatty Marine Laboratory and a pioneer in the scientific investigation of sea fisheries.

He was elected a Fellow of the Royal Society in 1877; was president of the biological section of the British Association for the Advancement of Science in 1885; and received the gold medals of the Edinburgh Fisheries Exhibition (1882) and of the London Exhibition (1883), the royal medal of the Royal Society (1899), and the Linnean gold medal (1924). His extensive publications, many of which were illustrated by his own drawings, include *Observations and Experiments on the Shore Crab* (1861); *Monograph of British Annelids* (4 vols., 1874-1923); *The Marine Invertebrates and Fishes of St. Andrews* (1875); *Life Histories of British Marine Food Fishes* (with Arthur T. Masterman, 1897); and *The Resources of the Sea* (1899).

**MACKENNAL, SIR BERTRAM.** A British sculptor, died in Torquay, Devonshire, Oct. 10, 1931. Born in Melbourne, Australia, in 1863, he received his art training in London and Paris, where his early work attracted attention by its imaginative power and originality. In later years, however, he showed more conformity to British conventions in art, being described as a classical realist. His first great success was a statue of "Circe" made in 1893. Among his other works are the equestrian statue of Edward VII in Trafalgar Square, London, and other memorials to that monarch in Calcutta, Melbourne, and Adelaide, as well as the memorial tomb in St. George's Chapel, Windsor; statues of Queen Victoria for India and Australia; the pediment of the government buildings at Westminster; the national memorial to Gainsborough; and the war memorial at Islington.

**MACKENTY, JOHN EDMUND.** An American laryngologist, died in New York City, Dec. 11, 1931. Born in Richmond, Quebec, Canada, he attended Ottawa and McGill Universities, obtaining the M.D. degree from the latter in 1894. After further study in Europe he established himself in New York City, where he became professor of otology at the New York Polyclinic. At the time of his death he was senior surgeon at the Manhattan Eye, Ear, Nose, and Throat Hospital.

**MACKENZIE.** See NORTHWEST TERRITORIES.

**MACKENZIE, JAMES CAMERON.** An American educator, died in Dongan Hills, New York, May 10, 1931. He was born in Aberdeen, Scotland, Aug. 15, 1852, and came to the United States when a boy. He was graduated from Lafayette College in 1878, and after studying theology at Princeton was ordained to the Presbyterian ministry in 1885. He was organizer and head master of the Lawrenceville (N. J.) School for boys (1882-99); director of the Jacob Tome Institute, Port Deposit, Md. (1899-1901); and director of the Mackenzie School, which he founded at Dobbs Ferry and later removed to Monroe, N. Y. (1901-26). At the World's Columbian Exposition in 1893 he served as chairman of the International Congress of Secondary Education.

**McMILLAN, MARGARET.** A British welfare worker, died in Harrow, Mar. 29, 1931. She was born in New York City in 1861 and was educated at the Inverness (Scotland) Academy and at schools in Geneva and Lausanne, Switzerland. While serving on the Bradford school board during 1894-1902 she became convinced of the importance, among elementary school children, of medical examination and treatment, and in 1904, with her sister Rachel, drew up the first scheme of a health centre or school clinic. Parliamentary sanction for this scheme was obtained in 1907, and the first experimental school clinic was opened at Bow in 1908.

In 1910 the Deptford Health Centre, the largest in England, was founded, followed four years later by the first open-air nursery school. On the death of Rachel McMillan in 1916 there was established, as a memorial to her work, the Rachel McMillan College for "training students in the theory and practice of dealing with young children." Miss McMillan was the author of *The Child and the State* (1911); *The Camp School* (1917); and *Life of Rachel McMillan* (1927).

**MACNAMARA, THOMAS JAMES.** A British educator and politician, died in London, Dec. 4, 1931. He was born in Montreal, Quebec, Canada, Aug. 23, 1861, but was removed to England in childhood. After attending the Borough Road Training College for Teachers in London, he taught from 1876 to 1892 in Exeter, Huddersfield, and Bristol. He was editor of the *Schoolmaster*, the organ of the National Union of Teachers, from 1892 to 1907, and was also in 1896 president of that organization. From 1894 to 1903 he served on the London School Board. Elected to Parliament as Liberal member for North Camberwell in 1900, he represented that constituency (which became Northwest Camberwell in 1918) until 1924. He was made a Privy Councillor in 1911, and during 1920-22 held the first portfolio of labor in Lloyd George's coalition cabinet.

**MACVEAGH, CHARLES.** An American lawyer and diplomat, died near Santa Barbara, Calif., Dec. 4, 1931. He was born in West Chester, Pa.,

June 6, 1860, and was graduated from Harvard University in 1881. After receiving the LL.B. degree from Columbia University in 1883, he was admitted to the bar and practiced in New York City. After 1901 he was general solicitor and assistant general counsel of the U. S. Steel Corporation. In October, 1925, he was appointed American Ambassador to Japan, resigning from this post four years later.

**MADAGASCAR.** An island belonging to France, separated from the southeast coast of Africa by the Mozambique Channel, which is 240 miles wide at its narrowest point. The area is 241,094 square miles and the population at the census of 1926 was 3,621,342 (including the Mayotte and Comoro Islands), of whom 3,591,943 were Malagasy, 18,040 French, and 11,359 foreigners. In 1929, the population was estimated at 3,853,300. Capital, Tananarive, with 92,998 inhabitants in 1929.

Other leading towns, with their populations in 1929 were: Antsirabe, 8253; Fianarantsoa, 13,162; Tamatave, 16,380; and Majunga, 19,072.

**PRODUCTION.** Cattle breeding and agriculture are the chief occupations, the principal crops being rice, sugar, coffee, manioc, cotton, cacao, vanilla, tobacco, beans, cloves, rubber, and mulberry trees. The forests contain valuable woods and gums. Phosphate, graphite, and mica are mined. In 1929, 12,500 metric tons of phosphate were produced. Local industries included rice milling, sugar grinding, and meat packing.

**COMMERCE.** The balance of foreign trade has been unfavorable since 1925. In 1930 exports were valued at 369,669,000 francs, compared with imports of 602,783,000 francs (1 franc equals \$0.0302 at par). Trade is chiefly with France. In 1930, exports to France totaled 257,172,000 francs (367,423,000 in 1929) and imports from France were 240,704,000 francs (407,346,000 in 1929). Exports were principally vanilla, hides and skins, raffia fibre, coffee, graphite, and manioc.

**FINANCE.** In the budget for 1929, revenue was estimated at 412,077,000 francs and expenditure at 396,225,000 francs. Closed accounts showed a surplus of 14,368,000 francs. The 1930 budget and the 1931 budget proposals balanced at 295,647,000 francs and 301,452,000 francs, respectively. The public debt on Jan. 1, 1930, stood at 127,128,000 francs (131,142,000 francs on Jan. 1, 1929).

**COMMUNICATIONS.** With 430 miles of line in operation in 1929, the Government-owned railways carried 1,254,000 passengers and 282,000 metric tons of freight. In 1931, the railways were working on large-scale electrification projects. There were about 1800 miles of highway. A total of 5732 vessels of 3,279,427 tons entered the ports in 1929 and 5756 vessels of 3,253,380 tons cleared.

**GOVERNMENT.** The colony is under a governor-general assisted by a consultative council. A delegation of 24 French citizens and 24 natives meets once a year to examine budget proposals. Governor-General in 1931, Leon Cayla, appointed Feb. 10, 1930.

**MADEIRA, mǎ-de-rá.** A group of islands in the North Atlantic, with an area of 314 square miles and a population estimated at 185,000 in 1929, politically an integral part of Portugal. Funchal, the capital (population about 25,000), lies 535 miles southwest of Lisbon and 360 miles

west of the African coast. See **PORTUGAL** under *History* for an account of the insurrection in 1931.

**MADOERA** (MADEIRA). See **NETHERLAND EAST INDIES**.

**MAGNETIC EYE**. See **CHEMISTRY, INDUSTRIAL**.

**MAGNETISM**. See **PHYSICS**.

**MAHE**. See **FRENCH INDIA**.

**MAINE**. **POPULATION**. According to the Fifteenth Census the population of the State on Apr. 1, 1931, was 797,423; in 1920, 768,014. Native whites, increasingly predominant, numbered 694,815 (1930); 658,346 (1920). Foreign-born whites totaled 100,368 (1930), having decreased from 107,349 (1920). The Negroes numbered only 1096 (1930) and the members of other races 1144 (1930). Of the 308,003 persons reporting gainful occupations in 1930, 40,514 were factory laborers, 31,162 farmers, 16,826 paid farm laborers, and 10,208 retail dealers. Portland, the chief city, had 70,810 inhabitants (1930), 69,272 (1920); Lewiston, 34,948 (1930), 31,791 (1920); Augusta, the capital, 17,198 (1930), 14,114 (1920).

**AGRICULTURE**. The accompanying table shows the acreage, production, and value of the principal crops for 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes . . . .	1931	196,000	50,960,000	\$10,192,000
	1930	181,000	45,250,000	29,412,000
Hay, tame . . . .	1931	962,000	947,000*	9,875,000
	1930	977,000	868,000*	9,461,000
Oats . . . . .	1931	118,000	3,776,000	1,473,000
	1930	120,000	4,740,000	2,465,000
Apples . . . . .	1931	.....	1,310,000	1,048,000
	1930	.....	2,170,000	1,410,000

\* Tons.

**MINERAL PRODUCTION**. Stone, which supplied not much less than half of the total by value of the State's mineral production for 1929, was produced in that year to the quantity of 354,500 short tons, or distinctly less than the 413,960 of 1928. By value, on the other hand, the production was considerably higher, totaling \$2,902,603 for 1929 as against \$2,579,523 for 1928. The total value of the mineral products of the State was \$6,748,799 for 1929; for 1928, \$5,922,729.

**MANUFACTURES**. Federal Census data gathered in 1930 to cover the year 1929 stated the number of the manufacturing establishments of Maine as 1557, which was nearly 10 per cent more than for 1927. Wage earners in such establishments numbered in 1929, 69,593 (2.1 per cent more than in 1927) and received \$73,601,093 (slightly less than 1 per cent short of the wage total for 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$218,984,735 (about 5 per cent more than for 1927). The manufactured product was valued at \$392,096,124 (5.4 per cent more than the total for 1927). The value added by manufacture in 1929 was estimated at \$173,111,389.

**FINANCE**. State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$13,118,197 (of which \$2,244,894 was for local education); for public service enterprises, \$109,929; for interest on debt, \$955,738; for permanent improvements, \$8,383,834; total, \$22,567,698 (of which \$11,387,162 was for highways, \$3,487,826

being for maintenance and \$7,899,336 for construction). Revenues were \$21,562,775. Of these, property and special taxes formed 37.1 per cent; departmental earnings and remuneration to the State for its officers' services, 8.4; sales of licenses, 44.7 (including taxes of \$3,784,932 on sales of gasoline). The State's funded debt outstanding on June 30, 1930, was \$21,911,680, of which \$15,137,500 was for highways. Net of sinking fund assets, it was \$21,809,555. On property bearing an assessed valuation of \$757,289,579 were levied, in the year, State taxes of \$5,861,010.

**TRANSPORTATION**. The total number of miles of railroad line under operation on Jan. 1, 1931, was 2193.00. There had been abandonment of 3.94 miles of line during the year preceding, and no considerable offsetting addition. No building of new line or trackage in 1931 was reported.

**EDUCATION**. Measures were passed by the Legislature that, according to State Superintendent Packard, in the *Journal* of the National Education Association, would render it possible to require higher standards in the certification of teachers. A revision of the elementary curriculum, with the aid of members of the faculty of New York University, was effected during the year.

**LEGISLATION**. The regular session of the eighty-fifth Legislature, convened in January, ended on April 3. Its most notable work was a reorganization of the State's administrative government under five departments, to replace 28 separate State administrative units. The five were departments, respectively, of Finance, Health, and Welfare, Sea and Shore Fisheries, Education, and Audit. The last-named was to be headed by a certified public accountant, to be elected by the Legislature. Among agencies abolished or merged were: State assessors, budget committee, superintendent of printing, commissioner of health and his separate department, public health council, prison commissioners, trustees of reformatories and juvenile institutions, hospital trustees, department of welfare, public welfare commission, commissioner of wrecks and shipwrecked goods. This measure was rendered subject to approval by a popular referendum held on November 9. The popular vote then cast adopted the new administrative code by a majority of some 7500.

The law on Standard Time was amended to permit towns and cities to adopt daylight saving. Reports of expenditures in primary and in referendum elections were made compulsory. A reapportionment of the districts for the election of Federal Representatives reduced the number of such districts to three, from four. Expenditure of \$1,000,000 over three years, half by the State and half by railroads, was authorized, to eliminate grade crossings. The registration of all those, save religious denominations, professing the "healing arts" was required. It was made legal to form rural electric companies to buy current from larger companies for retail distribution at rates to be set by the public utilities commission. The prohibition against the exhibition of pictures of boxing bouts was repealed. Issue of \$6,000,000 of highway bonds was authorized. Municipal courts obtained special jurisdiction in cases of delinquents under the age of 15 years. Bears acquired the status of game animals. A tract on Mount Katahdin, the gift of ex-Governor Baxter, was accepted for a State Park. Appropriations for the ensuing two years totaled about \$27,000,000.

The laws on banking and securities were rendered more stringent. The limit of a trust company's loans to one borrower was lowered to the proportion of 20 per cent of the company's capital, surplus and undivided profits. The minimum of capital for new banks was raised to \$50,000, paid in, plus a 50 per cent surplus, also paid in. The top limit of \$1,000,000 for a bank's capital stock was removed. Banks were allowed to issue their shares at other par values than \$100. Savings banks gained permission to establish branches in their own or adjoining counties. Circulation of false reports as to banks or trust companies was made punishable. Registration fees for dealers in securities were raised to \$50, and dealers were required to file bond in proof of responsibility.

**OFFICERS.** Governor, William Tudor Gardiner; Secretary of State, Edgar C. Smith; Treasurer, William S. Owen; Auditor, E. D. Hayford; Attorney-General, Clement F. Robinson; Commissioner of Education, Bertram E. Packard.

**JUDICIARY.** Supreme Judicial Court: Chief Justice, William R. Pattangall; Associate Justices, Charles J. Dunn, Frank G. Farrington, Guy H. Sturgis, Sidney St. F. Thaxter, Charles P. Barnes. Superior Court: Justices, James H. Hudson, George L. Emery, Herbert T. Powers, William H. Fisher, George H. Worster.

**MAINE, UNIVERSITY OF.** A coeducational State institution of higher learning in Orono, founded in 1865. The enrollment for the autumn of 1931 was 1882 and for the summer session of 1931, 490. There were 177 members on the faculty. The productive funds of the university amounted to \$895,858, and the income for the year was \$1,628,972. The library contained 103,000 volumes. Merrill Hall, the new home economics building, was dedicated in October, 1931. President, Harold Sherburne Boardman, C.E., D.Eng., LL.D.

**MALAY STATES.** See BRITISH MALAYA, FEDERATED MALAY STATES, NON-FEDERATED MALAY STATES, STRAITS SETTLEMENTS, BRITISH NORTH BORNEO, BRUNEI, SARAWAK.

**MALDIVE ARCHIPELAGO.** See CEYLON.

**MALTA.** An island in the Mediterranean Sea, which, with the adjacent islands of Gozo and Comino, was annexed by Great Britain in 1814. Situated 58 miles south of Italy and 180 miles from the African coast, it is an important link in British Imperial communications and the base of the British fleet in the Mediterranean. Area of Malta, 95 square miles; total area with Gozo and Comino, 122 square miles. The civil population increased from 224,680 at the census of 1921 to 232,832 on Jan. 1, 1930. There is a garrison of about 10,000 troops. Valletta, the capital, is the chief town and port (population, 48,240). The people generally speak a Maltese dialect, but English and Italian are the official languages.

In 1929-30, there were 156 public elementary schools, with 24,478 pupils, besides several secondary institutions and a university with 115 students. About 40 per cent of the population is illiterate. The Church owns one-third of all the land. Cereals, vegetables, cotton, and fruit are the leading crops. Fishing and the manufacture of lace, cotton, filigree, beer, and cigarettes

are other industries. Imports in 1929 totaled £4,041,926, and exports £585,870, including bullion and specie. Revenue of the Government in 1929-30 totaled £932,097 and expenditure £930,113.

**GOVERNMENT.** Under the Constitution of 1921, suspended temporarily in 1930, local affairs were controlled by a legislature, consisting of the senate of 17 members, 10 of whom are appointed, and a legislative assembly of 32 elected members. There was a responsible ministry for local affairs. A governor, appointed by the King, controls the naval, military, and air forces, Imperial interests, external relations and trade, coinage, immigration, and may veto local legislation. He is assisted by an appointed executive council and a nominated council, consisting of the Lieutenant-Governor, a legal adviser, and three officers of the military forces. Governor and Commander-in-Chief in 1931, General Sir David Campbell, who succeeded General Sir John Du Cane on June 30, 1931.

**HISTORY.** No settlement was reached in 1931 of the dispute involving the relations of Church and State in Malta, which resulted in the suspension of the Maltese Constitution on June 24, 1930, and the virtual severance of diplomatic relations between the British Government and the Vatican (see 1930 YEAR BOOK). A deputation representing the pro-British Constitutional and Labor parties, headed by the former Prime Minister of Malta, Lord Strickland, left the island on Feb. 18, 1931, to present their case before the Imperial Government. On the day of their arrival in London (February 23) the British Government announced the appointment of a Royal Commission to investigate the possibility of re-establishing constitutional government in Malta.

The Royal Commission, consisting of Lord Askwith, Sir Walter Egerton, and the Count de Salis, arrived in Malta toward the end of April and conducted hearings through May and June before returning to London. All parties favored the restoration of constitutional government, with a larger measure of autonomy, according to the testimony before the commission. The Constitutional and Labor parties requested the abolition of Italian as the official language of the courts, a proposal which was vigorously opposed by the Nationalists. The Nationalist leaders also objected to the continuance in office of the pro-British Ministry after the suspension of the Constitution. They demanded that any changes in the Constitution should be made by the Maltese alone.

**MAMMALS.** See ZOÖLOGY.

**MAN, EARLY HISTORY OF.** See ANTHROPOLOGY.

**MANAGUA EARTHQUAKE.** See NICARAGUA; EARTHQUAKES.

**MANCHURIA,** man-chō'ŕé-á. A vast region comprising one of the Chinese Outer Territories, extending from the Amur River south to China proper and from the Khingan Mountains on the west to Korea and the Ussuri River. Area, about 363,610 square miles; population, estimated at 26,643,000 in 1930. Capital, Mukden, with about 250,000 inhabitants. Antung (72,500), Changchun (80,000), and Newchwang (65,600) are other leading cities.

Manchuria is divided into the three Provinces of Fengtien or Liaoning (area, 56,000 square miles; population, about 15,233,000; capital,

Mukden), Kirin (105,000 square miles; population, about 7,635,000; capital, Kirin), and Heilungkiang (area, 203,900 square miles; population, about 3,775,000; capital, Tsitsihar). Due to improved conditions in Shantung Province of China proper and economic depression in Manchuria, the number of Chinese permanent settlers in Manchuria fell to 293,183 in 1930, compared with 424,294 in 1929 and with 1,677,848 for the three years 1927 to 1929. The population is overwhelmingly Chinese, there being about 200,000 Japanese.

With its vast areas of rich soil attracting thousands of settlers from China, Manchuria is one of the most rapidly developing frontier regions in the world. The economic conflicts arising from the convergence there of the expanding interests of Japan, China, and Soviet Russia have long been recognized as one of the principal dangers to world peace. By the Russo-Japanese War of 1905, Japan secured from Russia the lease of Port Arthur and Dairen (Dalny), the southern extremity of the Liaotung peninsula known as Kwantung (q.v.), and the South Manchuria Railway. In March, 1915, the Chinese Government was forced to agree to extend the lease on these territories to 99 years. They include a narrow strip on each side of the South Manchuria and Antung-Mukden Railways, totaling 109 square miles, in which Japan was authorized by treaty to maintain about 15,000 soldiers to protect the railway until order was established. By 1931, the Japanese had invested about \$1,000,000,000 in Manchuria, principally in the leased territories, and had contributed greatly to the opening up of the country. They had under exploitation the great Fushun open-strip coal deposits, 22 miles east of Mukden, where in an area of 15 square miles were about 1,200,000,000 tons of bituminous coal covered by approximately 5,000,000,000 tons of oil shale. The South Manchuria Railway Company, early in 1930, placed in operation a plant for the reduction of oil shale. Iron ore deposits were estimated at 738,000,000 metric tons, with an iron content of 259,000,000 metric tons.

Railways in operation in 1931 totaled about 3736 miles, of which China controlled 1800 miles, Russia 1096 miles, Japan 700 miles, and Japan and China jointly 140 miles. The main line of the South Manchuria Railway runs from Dairen north through Mukden to Changchun (438 miles), with branch lines to Port Arthur, Newchwang, the Fushun coal mines, Yentai, and Antung. The Russian lines, in which China also has an interest, include the Chinese Eastern running from Manchuli on the Siberian border across north Manchuria through Harbin to Vladivostok, with a branch line south from Harbin to join the South Manchuria Railway at Changchun. The most important of the purely Chinese railways are the Manchurian branch of the Peiping-Mukden railway (392 miles within Manchuria), and the Mukden-Hailungcheng line with its branches linking Hailungcheng and Kirin, Tsitsihar and Koshanchen, Tsitsihar and Anganchi, and Harbin and Hailun. There were in addition some 111 miles of narrow-gauge line and about 833 miles under construction. Of the Chinese lines, however, several were built with Japanese capital, including the Ssuningkai-Taonan Railway and the Taonan-Anganchi Railway. The Kirin-Changchun and Kirin-Tunhua lines were joint Sino-Japanese enterprises.

Primarily an agricultural land, Manchuria's chief products are soya beans, millet, wheat, and rice. In 1930 5,351,000 short tons of soya beans were harvested from 7,000,000 acres, 5,136,000 tons of kaoliang from 3,060,000 acres, 3,692,000 tons of millet from 2,890,000 acres, and 1,552,470 tons of wheat from 2,125,000 acres. Sugar beet and silk cultivation and livestock raising are expanding. Forests cover about 28,756,000 acres. Industries are confined to the larger cities and consist mainly of flour mills, bean-oil mills, soap works, sugar refineries, saw mills, distilleries, glass factories, and tanneries. There are rich mineral deposits of coal, iron, gold, silver, lead, and cement.

About 65 per cent of the foreign trade of Manchuria passed through the port of Dairen in the Japanese leased territory of Kwantung previous to 1931. In that year, however, recently constructed Chinese Government railways diverted part of this traffic to the Chinese-controlled port of Newchwang. The aggregate foreign trade for the first half of 1931 at Dairen amounted to \$79,106,700, compared with \$127,400,000 in the same period of 1930 and with \$163,448,000 in the first half of 1929. Trade in Manchuria was virtually suspended following the Sino-Japanese clashes of October, 1931, and the inauguration of a boycott of Japanese goods by the Chinese.

The actual ruler of Manchuria during the first half of 1931 was Gen. Chang Hsüeh-liang, son of the late war lord, Chang Tso-lin, although the Nationalist (Nanking) Government retained nominal control. With the Sino-Japanese outbreaks in September all semblance of civil authority disappeared and the attention of the world was focused upon one of the most serious threats to world peace since the World War (see JAPAN, CHINA, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*; LEAGUE OF NATIONS).

**BIBLIOGRAPHY.** For an analysis of trade rivalries in the region, consult Dr. Herbert Feis, "The International Trade of Manchuria," *International Conciliation* (April, 1931).

**MANDATES.** See LEAGUE OF NATIONS; IRAQ; PALESTINE; SYRIA.

**MANGANESE.** Of the world deposits of manganese ore, estimated at more than 500,000,000 metric tons, the Soviet Union is believed to have over 200,000,000 tons or the most extensive deposits of any one country. The largest of these are in the Transcaucasia where the world-famed Chiaturi mines are situated, while a more recent development are the mines in the Nikopol district in the Ukraine, both fields being convenient to Black Sea ports and connected by railroad. In 1927 the Soviet Union had a total output of 1,302,700 tons, or about 40 per cent of the world production, and in 1930 the output was 1,561,000 tons.

The Soviet Union was the main source of supply of manganese in the world markets, and in 1930 out of total imports into the United States of 585,568 long tons of ore valued at \$6,476,802, Soviet Russia supplied 225,888 tons valued at \$2,445,871. In 1931 the United States imported 502,518 gross tons of ore containing 245,910 tons of metallic manganese, valued at \$5,104,570. Of the total ore imported in 1931, 39 per cent was from Soviet Russia, 27 per cent from Brazil, 10 per cent from India, and 17 per cent from British West Africa (Gold Coast). The

manganese content of manganese alloys imported was 17,764 tons in 1931, equivalent to 22,000 tons of ferromanganese.

The U. S. Bureau of Mines reported for 1931 shipments of manganese ore containing 35 per cent or more of metallic manganese from domestic mines of approximately 39,000 gross tons, valued at \$699,400, as compared with 67,035 tons, valued at \$1,437,465, in 1930. The shipments of metallurgical and miscellaneous ores in 1931 amounted to about 31,000 gross tons, valued at \$417,900, as compared with 55,278 tons, valued at \$1,004,797, in 1930. Battery ore shipments from Montana and Virginia decreased from 11,757 gross tons, valued at \$432,668, in 1930, to about 8000 tons, valued at \$281,500, in 1931. Manganese ore was shipped from Arizona, Arkansas, California, Georgia, Montana, New Mexico, Tennessee, Texas, Virginia, and West Virginia in 1931 in quantities ranging from a carload each in Arizona, California, and West Virginia to about 25,800 tons in Montana.

**MANITOBA**, măn'î-tô'bă. The easternmost of the Prairie Provinces of Canada, situated west of Ontario and Hudson Bay and east of Saskatchewan. Capital, Winnipeg.

The area is 251,832 square miles and the census population in 1931 was 700,139, compared with 610,118 in 1921. The chief cities, with the population in 1931, were: Winnipeg, 217,587 (179,087 in 1921); Brandon, 17,082 (15,397); St. Boniface, 16,305 (12,821). In 1920, births totaled 14,236; deaths, 5808; marriages, 5269. The public-school enrollment in the same year was 150,517. In 1929-30, 2844 full-course students registered at the University of Manitoba at Winnipeg.

Agriculture, mining, and manufacturing are the leading industries. In 1930, the area under field crops was 6,794,700 acres (6,687,163 in 1929) and the value of production was \$52,463,000 (\$78,919,000 in 1929). The acreage sown to the chief crops in the spring of 1931 was 5,676,722, compared with 5,756,610 at the census of 1921. The total value of all agricultural production in 1929 was estimated at \$119,472,000 (\$155,452,000 in 1928). The 1931 wheat crop of about 26,000,000 bushels was the lowest in 23 years. Mineral output in 1930 declined slightly to \$5,326,568 (provisional figure) from \$5,423,825 in the previous year. Gypsum, gold, and copper are the principal minerals produced. The 1929 fish catch was valued at \$2,745,205. In the same year there were 923 manufacturing establishments, with a capital investment of \$173,152,948, 26,318 employees, and a gross value of production of \$164,909,127 (net value, \$75,750,746).

Provisional returns for the fiscal year ending April 30, 1930, showed provincial receipts of \$13,922,135 (\$12,150,490 in 1928-29) and expenditures of \$13,802,934 (\$12,344,493). The provincial funded debt on April 30, 1929, stood at \$87,701,771; the estimated assets were \$136,875,364. Railway mileage in 1929 aggregated 4294 miles of line. The highway building programme for 1931 called for the expenditure of \$2,628,000, in addition to \$1,025,000 for maintenance. Government is administered by a lieutenant-governor and a legislative assembly elected for five years. The Province is represented in the Dominion Parliament by six members in the Senate and 17 in the House of Commons. Lieutenant-Governor in 1931, J. D. McGregor; Premier, President of

the Council, and Provincial Treasurer, John Bracken.

**HISTORY.** Manitoba was hard hit by the economic depression and drought in 1931. On April 9, the provincial Legislature passed a law designed to protect farmers and home owners from foreclosure. It provided for the appointment of a debt-adjustment commissioner, who, upon application of a debtor, was empowered to issue a certificate holding up legal actions or cancellations, foreclosure, and mortgage-sale proceedings. In June, due to the depression, the Government postponed until 1932 the provincial elections scheduled to be held in 1931 and on August 20 Premier Bracken announced that salaries of all civil servants, from Cabinet Ministers down, were to be reduced.

Although two test shipments of grain via the recently-completed Hudson Bay railway and Port Churchill were made successfully in September, 1931, the provincial Minister of Mines and Natural Resources announced that the opening of Port Churchill for settlement would be postponed until the summer of 1932. The Minister said that the entire town-site of Port Churchill would remain permanently in possession of the Province. No land was to be sold; instead long-term leases were to be issued subject to revision at five-year intervals. The cost of the Hudson Bay route to May, 1931, totaled \$46,168,000, of which \$30,997,000 represented the cost of the railway and the remainder the cost of terminal facilities at Port Churchill.

A provincial Hydro-electric Power Commission, with powers sufficient to enable it to construct, purchase, and operate hydro-electric plants and transmission facilities was established by the 1931 session of the Legislature. See CANADA.

**MANN**, LOUIS. An American actor and playwright, died Feb. 15, 1931, in New York City where he was born Apr. 20, 1865. After attending the University of California he joined the McCullough and Barrett Stock Company in San Francisco and later appeared with Booth, Salvini, Marie Prescott, and Lewis Morrison in all their repertoires. He also toured during the '90s with his own company in *Lady Audley's Secret* and other plays and co-starred with Clara Lipman, who later became his wife, in *The Laughing Girl*, *The Girl from Paris*, *The Telephone Girl*, and *The Girl in the Barracks*. His important rôles on the New York stage included Gustave Muller in *The Bubble* (co-author, 1915); and Karl Pfeiffer in *Friendly Enemies*, his greatest success (1918-20). He later appeared in *The Unwritten Chapter* (1920); *The Whirl of New York* (1921); *Nature's Nobleman* (1922); *Give and Take* (1923); *Milgrim's Progress* (1924); and *That French Lady* (1927).

**MANNING**, RICHARD IRVINE. An American capitalist and ex-governor of South Carolina, died in Columbia, S. C., Sept. 11, 1931. He was born on Homesley Plantation, Sumter Co., S. C., Aug. 15, 1859, where he was later engaged in farming. His political career began in 1892 when he was elected a member of the South Carolina House of Representatives. He also served during 1898-1906 in the State Senate. He was twice elected governor, in 1914 and 1916.

**MANUFACTURING.** See BUSINESS REVIEW; CENSUS; UNITED STATES, and section *Manufactures* under the various States.

**MANURES.** See FERTILIZERS.

**MAPLE SUGAR.** See SUGAR.

**MARINE DISASTERS.** See SAFETY AT SEA.

**MARINE ENGINES.** See INTERNAL COMBUSTION ENGINES; SHIPBUILDING.

**MARITAL STATUS.** See MARRIAGE AND DIVORCE; LAW, PROGRESS AND DEVELOPMENTS.

**MARITIME PROVINCES.** The three most easterly Provinces of Canada—Prince Edward Island, Nova Scotia, and New Brunswick. The population of the three Provinces was 1,009,105 at the census of 1931, compared with 1,000,328 in 1921. See CANADA and separate articles on each province.

**MARKETS, MARKETING.** See AGRICULTURE; AGRICULTURE, U. S. DEPT. OF; COÖPERATION.

**MARQUESAS ISLANDS.** See OCEANIA, FRENCH ESTABLISHMENTS IN.

**MARQUETTE UNIVERSITY.** An institution of higher education for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered as a university in 1907. In the autumn of 1931 there was a grand total of 3455 enrolled in the university, excluding 472 students registered in the high school. The registration for the 1931 summer session was 843. The faculty in the autumn numbered 362 members, excluding 30 high school instructors. Endowment funds amounted to \$2,858,839, excluding Jesuit service endowment estimated at \$1,315,000. The income for the year was \$1,129,302. The library had 59,000 volumes. During 1931 a new building for the school of medicine, costing \$500,000, was under construction. President, the Rev. William M. Magee, S.J., A.M., LL.D.

**MARQUIS, JOHN ABNER.** An American clergyman and educator, died in New York City, July 5, 1931. He was born in Dinsmore, Pa., Dec. 27, 1861, and was graduated from Washington and Jefferson College in 1885 and from the Western Theological Seminary in 1890. Following his ordination to the Presbyterian ministry in 1891, he served as pastor in Greensburg, Pa. (1892-1902), Redlands, Calif. (1902-05), and Beaver, Pa. (1905-09). He was also associate editor of the *Presbyterian Banner* from 1899 to 1909. In 1909 he was elected president of Coe College, holding that office until 1920. In 1916 he served as moderator of the General Assembly of the Presbyterian Church in the United States of America. He was also general secretary of the Board of Home Missions of that denomination from 1917 to 1923 and general secretary of the Board of National Missions from 1923 to 1930.

**MARRIAGE AND DIVORCE.** The Bureau of the Census of the U. S. Department of Labor announced that in 1930 there were 1,128,180 marriages performed in the United States representing a decrease of 104,379 or 8.5 per cent over

the year 1929. In 1930, there were also granted 191,630 divorces, representing a decrease of 9838 or 4.9 per cent over the year 1929. There were 4333 marriages annulled in 1930 as compared with 4408 in 1929. The marriage rate per 1000 of the population was 9.2 in 1930; the divorce rate per 1000 of the population, 1.56 in 1930. In 1930, 5.9 marriages for each divorce were reported, as compared with 6.1 in 1929. The District of Columbia and New York State, each having but one cause for absolute divorce, reported 57.5 and 24.5, respectively; the rates in the other States ranged from 12.9 marriages to each divorce in Georgia to 2.3 marriages to each divorce in Nevada. The rate of marriages per 1000 of the population ranged from 4.6 in North Carolina and 4.7 in Delaware to 20.5 in New Mexico and 67.0 in Nevada. The ratio of divorces per 1000 of the population in individual States in 1930 ranged from 0.19 in the District of Columbia and 0.38 in New York to 3.22 in Oklahoma and 28.07 in Nevada. The tables on pages 488 and 489 give the marriages and divorces for all of the States in the Union.

**ATTITUDE OF THE CHURCHES.** Pope Pius XI, in his Encyclical on Christian marriage, delivered in January, denounced all loosenings of the marriage bond, the use of birth control methods, and all forms of trial marriage. The Encyclical declared that "chaste wedlock is the principle and foundation of domestic society and, therefore, of all human intercourse," and that "the family is more sacred than the State and men are begotten not for the earth but for heaven and eternity." Therefore, the Encyclical concluded, marriage is a "perpetual and indissoluble bond which cannot be dissolved by civil law." The Encyclical raised particular objection to sterilization of mental defectives and criminal persons by civil authorities, easier divorce, birth control and the loose morals at the present time to be found in romantic fiction, the movies, and the like. On the question of birth control the Encyclical declared that "no reason, however grave, may be put forward by which anything intrinsically against nature may become conformable to nature and morally good. Since, therefore, the conjugal act is destined primarily by nature for the begetting of children, those who in exercising it deliberately frustrate its natural power and purpose sin against nature and commit a deed which is shameful and intrinsically vicious."

However, the Pope was prepared to recognize that the State had a function to perform as regards marriage. On this point the Encyclical said: "Such social and economic measures must be set up as will enable every head of a family to earn as much as, according to his station in life, is necessary for himself, his wife, and for rearing his children, for the 'laborer is worthy of his hire.'"

The Protestant Episcopal Church of the United States at its Fiftieth General Convention, held in Denver in Sept., 1931, adopted a new Canon (No. 43) of the Solemnization of Matrimony, which while retaining practically all of the former Canon made to it certain definite additions. In the new Canon section I requires all ministers of this Church to give instruction on the nature of Christian marriage. Section II requires those in marital trouble to turn to the minister for help. Section III provides that no Minister of this Church shall solemnize any marriage before the

\* A minus sign denotes decrease.

following conditions have been carefully complied with:

(a) He shall ascertain by due inquiry the right of the parties according to the laws of this Church to contract a marriage.

(b) He shall instruct the contracting parties as to the nature of Holy Matrimony, its responsibilities, and the means of grace which God has provided through His Church.

(2) There shall be at least two witnesses present at the solemnization of the marriage.

(3) Every Minister shall without delay formally record in the proper register the name, age and residence of each party. Such record shall be signed by the Minister who solemnizes the marriage, by the married parties, and by at least two witnesses of the marriage.

(4) No marriage shall be solemnized by a Minister of this Church unless the intention of the contracting parties shall have been signified to the Minister at least three days before the service of solemnization.

Section V states the position of the Church regarding the marriage of divorced persons and is, in full, as follows:

No Minister, knowingly, after due inquiry, shall solemnize the marriage of any person who has been or is the husband or the wife of any other person then living,

from whom he or she has been divorced for any cause arising after marriage. Nor shall it be lawful for any member of this Church to enter upon a marriage when either of the contracting parties is the husband or the wife of any other person then living from whom he or she has been divorced for any cause arising after marriage. But this Canon shall not be held to apply to the innocent party in a divorce for adultery; PROVIDED, that before the application for such remarriage a period of not less than one year shall have elapsed after the granting of such divorce; and that satisfactory evidence touching the facts in the case, including a copy of the Court's Decree, and Record, if practicable, with proof that the defendant was personally served or appeared in the action, be laid before the Ecclesiastical Authority, and such Ecclesiastical Authority, having taken legal advice thereon, shall have declared in writing that in his judgment the case of the applicant conforms to the requirements of this Canon; and PROVIDED, FURTHER, that it shall be within the discretion of any Minister to decline to solemnize any marriage.

In Section VI nullity is clearly defined. The Protestant Episcopal Church has always recognized certain marriages as null and void, and a few of its bishops have at times annulled marriages in accordance with the impediments now stated in the Canon, and which are now made clear and

\* A Minus sign denotes decrease.

available for the whole Church. Section VI also places the responsibility for judgment definitely upon the bishop or upon a court constituted by the canons of a diocese or of a missionary district. It should be here noted that under the former Canon there was nothing to prevent any clergyman of this Church from giving his own definition of annulment. Section VI is as follows:

(1) Any person whose former marriage has been annulled or dissolved by a civil court may apply to the Bishop or to the Ecclesiastical Court constituted by Canon, of the Diocese or Missionary District of the said person's domicile to have the said marriage declared null and void by reason of any of the following impediments to marriage:

1. Consanguinity (whether of the whole or of the half blood) within the following degrees:
  - (a) One may not marry one's ascendant or descendant.
  - (b) One may not marry one's sister.
  - (c) One may not marry the sister or brother of one's ascendant or the descendant of one's brother or sister.
2. Lack of free consent of either party.
3. Mistake as to the identity of either party.
4. Mental deficiency of either party sufficient to prevent the exercise of intelligent choice.

5. Insanity of either party.
6. Failure of either party to have reached the age of puberty.
7. Impotence of either party undisclosed to the other.
8. The existence of venereal disease in either party.
9. Facts which would make the proposed marriage bigamous.

(2) The Bishop in such case, after taking legal advice thereon, or the Ecclesiastical Court proceeding in accordance with the canons and acting through the Bishop, shall render judgment in writing to the petitioner. All judgments rendered under this Canon by the Bishop or the Ecclesiastical Court shall be made matters of permanent record in the archives of the Diocese or Missionary District. No such judgment shall be construed as referring in any way to the legitimacy of children or the civil validity of the former relationship.

(3) Any person whose former marriage has been annulled or dissolved by a civil court and pronounced null by the Bishop, may be married by a Minister of this Church as if he had never previously been married.

In Section VII the Church declared itself as desirous of making a more definite declaration for the need of mercy toward those who have been unfortunate in marriage, the sentence printed in italics in the following extract having been added. In the last paragraph of the Canon it is

stated that those who have been married by civil authority or otherwise than this Church provides, after the favorable judgment of the bishop or court, may have their marriage blessed by a minister of this Church. The complete Section VII reads as follows:

(1) If any Minister of this Church shall have cause to think that a person desirous of Holy Baptism, or of Confirmation, or of receiving the Holy Communion, has been married otherwise than as the word of God and discipline of this Church allows, such Minister, before receiving such person to these ordinances, shall refer the case to the Bishop for his godly judgment thereupon. *The Bishop, after due inquiry into the circumstances, and taking into consideration the godly discipline both of justice and of mercy, shall give his judgment thereon in writing, PROVIDED, HOWEVER, that no Minister shall in any case refuse these ordinances to a penitent person in imminent danger of death.*

(2) Any persons who have been married by civil authority, or otherwise than as this Church provides may apply to the Bishop or to the Ecclesiastical Court of their domicile for the recognition of communicant status or for the right to apply for Holy Baptism or Confirmation. After due inquiry into all the facts relevant thereto, judgment shall be given in writing to the petitioners by the Bishop or by the Ecclesiastical Court acting through the Bishop. In case of a favorable decision, a Minister of this Church may, at his discretion, bless the parties to the union.

**DIVORCE IN SCANDINAVIAN COUNTRIES.** Despite the existence of more liberal divorce laws in Sweden, Norway, and Denmark, where, in fact, divorce may be obtained openly on the basis of mutual consent, the divorce rate in these countries is considerably lower than that of the United States. The following figures give rates for the countries in question, as of 1929:

Country	Percentage of divorces to marriages	Divorces per 1,000 population
United States .....	16.3	1.641
Sweden .....	...	0.376
Norway .....	4.4	0.285
Denmark .....	8.2	0.659

In the Scandinavian countries, joint application for divorce may be made by husband and wife, on the ground of incompatibility alone; the severing of the union may be ordered on the representation of the aggrieved mate, if adultery, conviction of a crime, venereal disease, or incurable insanity is charged and proved. Where children exist, proper provision for them is the first condition for the sundering of a marriage; where the parents have indicated their willingness and ability to provide for dependents, the court does not insist upon an arrangement supervised by the authorities. Both parties have equal standing before the law, particularly as regards property rights; the payment of alimony is not a sex privilege but is ordered only in the case of need; breach of promise suits are not tolerated except when an illegitimate child is involved; the husband has not patriarchal rights over the property of wife and children, as is commonly true under the legal codes of the Continent. Both parties are protected in their property, the courts making provision for either husband or wife if either shows an inability toward self-support. See *LAW under Marital Status*.

**MARTINIQUE**, măr'ti-nèk'. One of the Lesser Antilles group of the West Indies, forming a colony of France. Area, 385 square miles; population, in 1929, 231,435, of whom 10,000 were whites, and the remainder Negroes, mulattoes, East Indians, and Chinese. Capital and chief port, Fort-de-France, with a population of 43,338.

Sugar, rum, cacao, coffee, tobacco, pineapples, and bananas are the chief products. Imports in 1929 were valued at 266,168,492 francs and exports at 272,900,755 francs (1 franc equals \$0.0392 at par). Sugar and rum constituted nearly 90 per cent of the value of all exports. The 1930 budget balanced at 92,240,200 francs. Governor in 1931, L. Gerbinis, appointed in 1927.

**MARYLAND.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,631,526; in 1920, 1,449,661. The number of native whites was 1,259,077 (1930), 1,102,560 (1920); of foreign-born whites, 95,093 (1930), 102,177 (1920); of Negroes, 276,370 (1930), 244,479 (1920). Baltimore, the chief city, had 804,874 inhabitants (1930), 733,826 (1920); Cumberland, 37,747 (1930), 29,837 (1920); Hagerstown, 30,861 (1930), 28,004 (1920); Annapolis, the capital, 12,531 (1930), 11,214 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat .....	1931	404,000	9,696,000	\$5,042,000
	1930	481,000	11,063,000	8,519,000
Corn .....	1931	545,000	20,710,000	8,284,000
	1930	508,000	6,858,000	6,378,000
Hay, tame ..	1931	381,000	469,000 <sup>a</sup>	5,628,000
	1930	369,000	309,000 <sup>a</sup>	7,015,000
Tobacco ..	1931	38,000	31,540,000 <sup>b</sup>	7,570,000
	1930	35,000	16,625,000 <sup>b</sup>	4,821,000
Potatoes ....	1931	32,000	8,360,000	1,848,000
	1930	30,000	2,520,000	2,394,000
Sweet potatoes	1931	11,000	2,013,000	1,006,000
	1930	9,000	630,000	567,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**MINERAL PRODUCTION.** The production of coal from mines in the State diminished in yearly total to 2,288,000 short tons for 1930, from 2,640,114 short tons, in value \$4,640,000, for 1929. Coke ovens produced 1,169,016 short tons of coke in 1930, as against 1,393,052 in 1929. Largely with its own coke the State produced from non-native ores a substantial output of pig iron. But the pig iron shipments of the blast furnaces decreased, to 981,466 long tons, for 1930, from 1,111,219 for 1929. The total value of the mineral output of the State, exclusive of coke and pig iron, was \$18,460,568 for 1929; for 1928, \$18,417,781.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering 1929 stated the number of the manufacturing establishments as 3229. These establishments employed 131,399 wage earners (3.7 per cent in excess of the number for 1927) and paid them \$149,051,281 (5 per cent more than the wage bill of 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$560,183,235 (slightly less than for 1927). The manufactured product was valued at \$1,120,409,058 (18.8 per cent more than that of 1927). The value added by manufacture was \$560,225,823.

**FINANCE.** State expenditures in the year ended Sept. 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$21,579,370 (of which \$3,024,357 was for local education); for conducting public-service enterprises, \$91,875; for interest on debt, \$1,342,377; for permanent improvements, \$12,983,763; total, \$35,997,385 (of which \$17,105,849 was for highways, \$6,297,012 being for maintenance and \$10,808,387 for construction). Revenues were \$31,-

159,400. Funded debt outstanding on Sept. 30, 1930, totaled \$33,154,000; of which \$19,268,000 was for highways. Net of sinking fund assets, it was \$31,276,689. On an assessed valuation of \$2,781,851,071 the State collected in the year ad valorem taxes of \$6,358,323.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 1443.13. Additions of 5.72 miles had been made to the total during the year preceding, while the operation of 1.41 miles of line had been given up.

**EDUCATION.** Legislation was enacted in 1931 to provide State aid for the special education of children physically or mentally handicapped. The course of the normal schools was lengthened to three years, from two. The law as to school attendance was made more strict.

**CHARITIES AND CORRECTIONS.** The State, under the system operating in 1931, carried on institutional work largely through privately managed institutions receiving State aid. The number of institutions supported to a greater or lesser extent by such aid was 112. The central State authority was the Board of State Aid and Charities, composed of the Governor, ex officio, and six appointees serving terms of four years. Executive functions were exercised by the Board's secretary (William J. Ogden).

**LEGISLATION.** A regular session of the Legislature was held, terminating April 6. It voted the Governor's budget of approximately \$72,000,000 for the ensuing two fiscal years. The issuance of State bonds to the total of \$7,633,000 for the building of roads, and for construction and repair of bridges, was authorized. The State blue laws were modified to the extent of granting Baltimore the right to vote on its own proposed code of local Sunday observance, and of allowing Sunday baseball in Hagerstown. This modification went through in the face of earnest opposition from Protestant church groups. The Washington, Baltimore and Annapolis Railway Company was by statute exempted from taxation for the period of two years in view of its adverse business.

Motorists involved in serious accidents, under another statute, were required to satisfy the Commissioner of Motor Vehicles of their financial responsibility or to suffer suspension of their licenses. Power to regulate taxicabs was vested in the Public Service Commission, and it was required that such vehicles be operated either by owners or by owners' employees. For Baltimore were authorized a water loan of \$7,500,000 and a paving and bridge loan of \$5,000,000, as well as school and sewerage loans. Some progress was made with legislative investigation of a proposal to build a bridge over Chesapeake Bay via Claiborne and Annapolis. A bill to create a State commission to manufacture and sell intoxicating beverages was presented but failed of passage.

**POLITICAL AND OTHER EVENTS.** H. W. Jackson, Democrat, was elected Mayor of Baltimore on May 5. Upon the incoming of a Democratic city administration charges of payroll padding and of excessive expenditure on the \$4,000,000 municipal airport were brought forward for investigation. Work was prosecuted on a new Baltimore post office, to be completed early in 1932.

**OFFICERS.** Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner, 3d; Treasurer, J. M. Dennis; Auditor, Edmund R. Stewart; Comptroller, William S. Gordy, Jr.;

Attorney-General, William Preston Lane, Jr.; Superintendent of Schools, Albert S. Cook.

**JUDICIARY.** Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges, John R. Patterson, T. Scott Offutt, William H. Askins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

**MARYLAND, UNIVERSITY OF.** A coeducational State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1931 was 3278. The faculty in the autumn numbered 500. The total income from appropriations and other receipts amounted to \$3,214,869. The library contained approximately 68,000 volumes. During 1931 a new power plant costing \$216,000 was completed, and construction was started on a new horticulture building at \$220,000, an addition to the engineering buildings at \$100,000, and a dormitory for women at \$125,000. President, Raymond A. Pearson, D.Agr., LL.D.

**MARYLAND TERCENTENNIAL CELEBRATION.** See CELEBRATIONS.

**MASHONALAND.** See RHODESIA.

**MASSACHUSETTS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 4,249,814; in 1920, it was 3,852,356. There were 3,138,290 native whites (1930), 2,725,990 (1920). The foreign-born numbered 1,054,636 (1930), 1,077,534 (1920). The number of Negroes rose to 52,365 (1930), from 45,466 (1920). A sprinkling of 4323 (1930) of other races included 2973 Chinese. The population was, if anything, increasingly urban; under the classification of communities that prevailed in 1920, the urban percentage would have been 95.3 in 1930; but certain of the towns were reclassified as rural, with the result that the urban percentage for 1930 was rendered as 90.2, producing a merely apparent decrease from the 94.8 of 1920.

Out of 1,814,422 reporting gainful employments in 1930, 837,446 were listed in the manufacturing and mechanical industries, including 117,817 in the building industry. Only 56,015 were in agriculture while 325,406 were in trade, 153,763 in professional service, 188,917 in domestic and personal service, and 148,355 in transportation. Populations of the chief cities according to the Federal Census for 1930, with those for 1920 shown in parentheses, were: Boston, 781,188 (748,060); Worcester, 195,311 (179,754); Springfield, 149,900 (129,614); Fall River, 115,274 (120,485); Cambridge, 113,643 (109,694); New Bedford, 112,597 (121,217); Somerville, 103,908 (93,091); Lynn, 102,230 (99,148); Lowell, 100,234 (112,759).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ...	1931	334,000	481,000*	\$8,610,000
	1930	336,000	427,000*	8,070,000
Cranberries ..	1931	14,000	450,000*	2,700,000
	1930	14,000	370,000*	3,700,000
Tobacco .....	1931	7,600	10,184,000*	2,240,000
	1930	8,300	11,728,000*	3,483,000
Corn .....	1931	37,000	1,591,000	955,000
	1930	39,000	1,755,000	1,755,000
Potatoes .....	1931	13,000	1,625,000	1,056,000
	1930	11,000	1,870,000	2,057,000
Apples .....	1931	.....	1,713,000	1,799,000
	1930	.....	4,398,000	8,511,000

\* Tons.    † Barrels.    • Pounds.

**MINERAL PRODUCTION.** The product of the stone quarries for 1929, the latest year for which official data were furnished, slightly exceeded half of the year's entire value of minerals produced. From imported coal originating in other States Massachusetts produced in its by-product ovens much coke; in 1929, 776,679 short tons, having a value of \$5,919,159. The quantity of this product rose to 862,663 for 1930, and the value to \$6,697,235. Exclusive of non-native products, chiefly coke, the total value of the State's mineral production was \$16,030,807 for 1929; for 1928, \$16,234,037.

**MANUFACTURES.** Federal Census data obtained in 1930 to cover the year 1929 presented the number of the State's manufacturing establishments as 9952 (not quite 1 per cent below the number for 1927). These establishments employed 559,443 wage earners (3.2 per cent fewer than for 1927). The wages paid these earners totaled \$695,351,100 (1.2 per cent less than the total for 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$1,685,585,153 (about the same amount as in 1927). The manufactured product totaled \$3,392,149,485 (2.2 per cent above the figure for 1927). Value added by manufacture was estimated at \$1,706,564,332.

Boston, the leading centre of manufacture, had 2752 establishments, which employed 76,613 wage earners, paid wages of \$106,800,959, and attained a manufactured product of \$613,303,031. Like figures for other manufacturing cities were: Worcester, 539 establishments, 31,822 wage earners, \$45,364,759 for wages, and \$215,798,511 of product; Springfield, 326 establishments, 18,728 wage earners, \$25,620,495 for wages, and \$121,430,408 of product; Cambridge, 390 establishments, 21,854 wage earners, \$28,078,148 for wages, and \$174,621,190 of product; New Bedford, 193 establishments, 32,155 wage earners, \$31,407,670 for wages, and \$121,692,217 of product.

**FINANCE.** State expenditures in the year ended November 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$46,768,579 (of which \$2,670,221 was for local education); for operating public-service enterprises, \$205,213; for interest on debt, \$1,235,404; for permanent improvements, \$13,992,359; total, \$62,201,555 (of which \$15,273,912 was for highways, \$6,986,772 being for maintenance and \$8,287,140 for construction). Revenues were \$69,182,443. Of these, property and special taxes formed 47.0 per cent; departmental earnings and remuneration to the State for officers' services, 6.4; sale of licenses, 30.4 (including gasoline sale taxes amounting to \$10,342,851). The State's funded debt outstanding on November 30, 1930, was \$30,823,738. Of this total, \$4,554,000 was for highways. Net of sinking fund assets, debt was \$17,291,040. On a property valuation of \$7,233,539,128 were levied in the year taxes of \$7,000,000.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2021.79. There had been increases, during the year preceding, to the total of 12.70 miles, while the operation of 6.85 miles had been given up. No building of new line or trackage in 1931 was reported.

**EDUCATION.** For the academic year ending with June, 1931, the number of persons of school age (from 5 to 16 years, inclusive) was reported as

852,115. There were enrolled in the public schools of the State 760,208 pupils. Of these, 515,884 were in common schools or elementary grades; 101,067 in junior high schools; 143,257 in the upper high schools. The year's expenditures for public-school education were: current, \$72,521,041; outlay, \$11,947,278. Salaries of teachers, inclusive of principals and superintendents, averaged yearly \$1910. Progress was reported by State Superintendent Smith in providing for the separate education of special groups of children.

**CHARITIES AND CORRECTIONS.** The authority of the State over its institutions for care or custody of persons, under the system existing in 1931, was not centred in a single body. A Department of Public Welfare consisting of a Commissioner and an advisory board of six members, dealt with a variety of welfare problems. It gave some sort of State assistance to about 70,000 individuals during the year, at an expenditure of about \$5,000,000. Among these were 2982 mothers and 8202 children assisted under the Mothers' Aid Law. In the Department's custody, as State wards, were 6601 children (December 1). It had charge also of 3327 minors on parole from the State training schools. The Department had charge also of old age assistance; supervision of town planning, housing regulations and divers sorts of private charitable corporations; and the investigation of adoptions. It directed the State Infirmary, Tewksbury, with 2988 inmates; Massachusetts Hospital School, Canton, 329; Lyman School for Boys, Westborough, 480; Industrial School for Girls, Lancaster, 342; Industrial School for Boys, Shirley, 306.

Under the government of a Commissioner of Correction were the State Prison, Boston; Massachusetts Reformatory, Concord; Reformatory for Women, Framingham; Prison Camp and Hospital, Rutland; State Farm, Bridgewater. A Department of Mental Diseases supervised State mental hospitals at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Monson, Foxborough and Grafton. The Department of Public Health had authority over five State sanatoria.

**LEGISLATION.** Governor Ely, Democrat, succeeded after a protracted contest in obtaining from the Legislature a great part of the programme of public relief through State works that he had recommended. As enacted, this programme provided an increase in the tax on sales of gasoline, for two years, to three cents a gallon, from two cents. The expenditure of the proceeds of the additional levy, on highway construction; on a building for the department of public works; and in measures of relief for individuals in cities, towns, and counties, was authorized. The amount to become available for highways was estimated at \$5,000,000.

Measures to give the State a system of pensions for the needy aged met with only partial success. The measure committing the State to inaugurate the system of old age relief was enacted, to go into effect on July 1, but the two houses of the General Court failed to agree on the means to raise the requisite money. The House sought to finance the plan by an inheritance tax, while the Senate insisted on a head tax of \$1 on men and \$2 on women. The two houses concurred in a resolution asking the Federal Congress either to call a convention for the repeal of the Eighteenth Amendment or itself to propose to

the several States an amendment repealing the Eighteenth. Statutes were enacted to extend by an hour the time for public Sunday afternoon sports and to allow civic and fraternal organizations to parade on Sunday.

The State was redistricted into 15 Congressional districts, in place of the previous 16, to conform with the new Federal reapportionment, by which the State had lost one seat in the House of Representatives. Over the veto of Governor Ely a bill was enacted to relieve cities and towns of the maintenance of State highways within their borders. The system of public control over the Boston Elevated lines was extended for a period of 28 years, subject to acceptance by the stockholders. This measure prolonged a virtual lease, by which the company obtained guarantee of dividends, depreciation charges and possible losses in certain contingencies.

Among other enactments were one making it a punishable offense for a police officer to search for and seize, without a warrant, intoxicating liquor in a dwelling; an act requiring mental and physical examination of children before their commitment as delinquents or to institutions for mental disease; a measure authorizing the State Department of Education to give free correspondence courses to inmates of hospitals, infirmaries, and correctional institutions. A measure to abolish the State's physical examinations for cities' civil service laborers was vetoed.

**POLITICAL AND OTHER EVENTS.** Industrial and economic conditions in the State during the year were in some respects better than in the country in general. This was largely due to a moderate improvement in the textile industry. Important cotton mills at Fall River reopened in March. A strike of some 10,000 workers in the woolen mills at Lawrence occurred in February, but most of the workers returned to work at the end of the month. Governor Ely united with the governors of three other New England States, in July, to intervene before the Interstate Commerce Commission in opposition to the Pennsylvania R. R. system's control of the New York, New Haven & Hartford and the Boston & Maine railroads. In Boston a legal contest made by advertisers against the regulation of billboards by the Commissioners of Public Works was decided by the Supreme Court in favor of the Commissioners. The Supreme Court, in a decision of May 31, found the State measure to prohibit "yellow dog" contracts (excluding union affiliation) on the part of employees in part unconstitutional.

Parts of the State were afflicted by an epidemic of bank runs and suspensions in the middle part of December. The Federal National Bank of Boston closed on December 15 with deposits reported as around \$28,000,000. It carried down with it nine affiliates in other cities, having deposits of some \$32,000,000. Other closings brought the total tied up to about \$80,000,000.

The construction of a new traffic tunnel was begun in East Boston on March 23. The proposal to equip the Cape Cod Canal with a 1000-foot lock and other improvements was recommended to Congress in March by Secretary of War Hurley. The American Woolen Company declared a 10 per cent reduction in wages, effective October 13, one of the most extensive of the year's wage cuts in the New England area. Employees in textile mills at Lawrence, some 23,000 in number, responded by striking on October 6, but returned to work in November.

The city of Boston, in an action before the Interstate Commerce Commission, sought to obtain railroad rates on import and export freight lower than those in effect to and from New York. The proceeding was connected with the petition of New Jersey interests for the abolition of free lighterage in the port of New York. The Port of New York Authority, which had not intervened in the lighterage matter, offered a brief against Boston as to that city's rate demand.

**OFFICERS.** Governor, Joseph B. Ely; Lieutenant-Governor, William S. Youngman; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, Charles F. Hurley; Auditor, Francis X. Hurley; Attorney-General, Joseph E. Warner; Commissioner of Education, Payson Smith; Commissioner of Public Welfare, Richard K. Conant.

**JUDICIARY.** Supreme Judicial Court: Chief Justice, Arthur Prentice Rugg; Associate Justices, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, William Cushing Wait, George Augustus Sanderson, Fred Tarbell Field.

**MASSACHUSETTS BAY TERCENTENARY.** See CELEBRATIONS.

**MASSACHUSETTS INSTITUTE OF TECHNOLOGY.** A nonsectarian institution for scientific and technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1931 was 3188, including 578 graduate students. For the summer session, the registration was 1679. There were 240 members on the faculty and 323 others on the active staff of the institute. The productive funds amounted to \$34,500,000; and the income for the year was \$3,550,000 received from various sources, as follows: Funds, \$1,729,000; student fees, \$1,321,000; miscellaneous, \$500,000. The book value of land and buildings in Boston and Cambridge was \$15,500,000. The library contained 275,000 volumes. A new building for research in physics and chemistry was under construction during 1931 at a cost of \$1,200,000. President, Karl Taylor Compton, D.Sc., D.Eng., Ph.D., LL.D.

**MASSACHUSETTS STATE COLLEGE** (formerly MASSACHUSETTS AGRICULTURAL COLLEGE). A State institution for agricultural and scientific training in Amherst, founded in 1867. The enrollment in 1931 was 1356. There were 203 members on the faculty, including 113 in resident teaching, 61 in research at the experiment station, and 29 in extension service in agriculture and home economics. The income in 1931 amounted to \$1,226,765, of which \$1,045,460 was from State appropriation and \$181,305 from Federal appropriation. The library contained approximately 90,000 volumes. President, Roscoe W. Thatcher, D.Agr., LL.D.

**MATABELELAND.** See RHODESIA.

**MATERNAL HEALTH.** See CHILD WELFARE.

**MATERNITY PROTECTION.** The Children's Bureau of the U. S. Department of Labor reported that there were several forms of aid to mothers with young children, in use in countries outside of the United States. First among these aids were mothers' pensions paid from public funds to widowed, divorced or deserted women with children under a certain age. Denmark was the only European country to carry such a law on its statute books covering the whole nation. In Norway such pensions were being paid in two cities; in France, aid was given to large families with children of school age; in six provinces of

Canada, the States of New South Wales and Victoria, in Australia, and in New Zealand, mothers pension laws existed. A Turkish law of 1930 made provision for the rendering of aid for mothers with six or more living children.

In the second place, aid to mothers was provided for under various forms of social insurance paid from insurance funds to which in some countries the state made contributions. In Great Britain, a special law provided for pensions for widows and for orphans under 16 of those men who were insured under the compulsory sickness insurance law. In those countries which possess a system of compulsory insurance against invalidity and old age—as in Austria, Czechoslovakia, France, Germany, Italy, Sweden and the U. S. S. R.—a person in receipt of such a pension (who had children of school age) was paid an allowance for each child in addition to the pension. In nearly all these countries temporary pensions were being paid to the orphans upon the death of an insured parent. In Italy and Spain, the majority of employed women were obliged to pay a proportion of their wages into a common maternity insurance fund with the employers in the state also making contributions. In 24 countries having compulsory sickness insurance (all of these in Europe, with the exception of Chile and Japan) maternity benefits were being paid to insured women at the time of confinement and for several weeks before and after; in some of these countries benefits were also being paid to the non-insured wives of insured workers.

In the third case aid was being rendered through family allowances. In France and in Spain, such allowances were provided by law in the case of large families. Belgium, New Zealand, and New South Wales legally provided for family allowances for wage earners in proportion to the number of their children, the allowances being paid in addition to the wages. In some countries, notably France, in the absence of such legislation, family allowances are paid voluntarily by a large number of private groups (see *CHILD WELFARE under France*).

In the fourth case, aid was being rendered from public funds at the time of child birth. Such aid was being given on application to women of small means, who were not covered by social insurance, in France, Germany, and Norway. In France, maternity benefits were being paid for 12 weeks; in Germany, for periods varying according to the need; and in Norway, for six weeks before and six months after confinement. In Australia, a lump sum of \$25 was payable to every mother at the time of confinement and in Saskatchewan, Canada, aid was granted not to exceed \$25.

In the fifth case, provision for maternity aid came under various labor law codes. In Ecuador, Guatemala, Peru, Salvador, some of the Mexican States, the Province of Bombay (India), and China, general child labor laws provided for weekly maternity benefits to women employees at the time of child birth, amounting usually to about one-half the regular wages. Such women were required to refrain from work for a certain number of weeks. These benefits were to be paid by the employers in some of the countries and in others out of mutual benefit funds.

It is to be noted that in June, a royal Swedish decree made provision, for the first time in that country, for the payment of maternity benefits

from the national treasury to women, whether married or single, who did not belong to sickness insurance funds and whose income whether singly or with that of the husband was below a certain amount. One krona a day was to be paid to such women for 30 days after child birth on condition that they refrained from employment. The women who were protected by the labor law and who by that law were required to remain away from work for at least six weeks might receive a benefit for 56 days. A midwife's services or hospital care was to be provided on request and in that case a deduction was to be made from the cash benefit.

**GERMANY.** A study made of 3000 women and 7700 children was carried out in this country to determine the effect of factory work on motherhood. It was found in this investigation that the babies of women working in the last weeks of pregnancy weighed less than babies of those who stayed at home during the entire period; also that the percentage of still births was greater among the factory workers. The infant mortality rate among children of factory workers was 126 per 1000 live births as compared with a rate of 106 for the children of housewives. The difference in mortality rates between the two groups was notably high after the beginning of the seventh week of the child's life, which was the time when the mother usually returned to the factory and stopped nursing her infant.

**MATHER, FLORA STONE, COLLEGE.** The women's college of liberal arts and sciences of Western Reserve University (q.v.).

**MATHESON, KENNETH GORDON.** An American educator, died in Bryn Mawr, Pa., Nov. 29, 1931. Born in Cheraw, S. C., July 28, 1864, he attended the South Carolina Military College during 1882-85 and was graduated with the M.A. degree from Stanford University in 1897. He served successively as commandant of cadets at the Georgia Military College (1885-88), University of Tennessee (1888-90), and the Missouri Military Academy (1890-96). He then became professor of English at the Georgia School of Technology, where he was elected chairman of the faculty in 1905 and president in 1906. During the World War he served in France as Y. M. C. A. divisional chief of the Langres area. He was elected president of Drexel Institute in 1922.

**MAURITANIA.** See FRENCH WEST AFRICA.

**MAURITIUS**, ma-ri-sh'ü-s. An island in the Indian Ocean, 500 miles east of Madagascar, forming with the adjacent small islands of Rodrigues and Diego Garcia a crown colony of Great Britain. Area, about 720 square miles; estimated population Jan. 1, 1930, 415,543 (including 9985 in the Dependencies), largely East Indian in origin. Port Louis, the capital and largest city, had 54,147 inhabitants in 1929.

Sugar is the main crop, one-quarter of the island being devoted to its cultivation. Production in 1929-30 was estimated at 240,000 metric tons. Low prices in 1930 and 1931 caused distress and a severe business depression. Coconuts, cacao, tobacco, coffee, aloe fibre, tea, and vanilla also are grown. Exports in 1930 were valued at 26,000,964 rupees; imports, 39,806,180. The budget for 1930-31 estimated revenue at 13,322,000 rupees and expenditure at 16,930,000 rupees (1 rupee equalled about \$0.36). Governor in 1931, W. E. Francis Jackson, who was appointed on March 7, 1930.

**MAWSON, SIR DOUGLAS.** See **EXPLORATION.**  
**MAYOR-COUNCIL PLAN.** See **MUNICIPAL GOVERNMENT.**

**MAYOTTE** (má-yôt') and **COM'ORO ISLANDS.** An archipelago midway between Africa and the northern end of Madagascar, belonging to France and administered by the Governor-General of Madagascar. Capital, Dzaoudzi (111 inhabitants). Total area, about 790 square miles; population in 1928, 126,208 (about 800 Europeans).

**MEAD, GEORGE HERBERT.** An American philosopher, died in Chicago, Ill., Apr. 25, 1931. He was born in South Hadley, Mass., Feb. 27, 1863, and was graduated from Oberlin College in 1883 and from Harvard in 1888, after which he studied at the Universities of Leipzig and Berlin. He became instructor in philosophy at the University of Michigan in 1891 and assistant professor in 1893. The following year he went to the University of Chicago as assistant professor of philosophy, becoming associate professor in 1902 and professor in 1907. At the time of his death he was chairman of the department of philosophy at the University of Chicago. In 1930 he delivered the Carus lectures at the University of California. His important contribution was in developing a sense of social-consciousness whereby the individual mind might recognize its relation to the world of nature and social institutions. His works include *The Definition of the Psychical* (1903) and "Scientific Method and Individual Thinker" in *Creative Intelligence: Essays in the Pragmatic Attitude*, by John Dewey and Others (1917).

**MEAT.** See **LIVESTOCK: FOOD AND NUTRITION.**

**MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF.** An organization founded in April, 1880, to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions, organized on the basis of a common interest in a branch of engineering within the scope of the society. These divisions are: Aeronautic, applied mechanics, fuels, hydraulic, iron and steel, machine shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, printing industries, railroad, textile, and wood industries. Another division was being developed by the process industries committee, which was organized during 1931.

Local sections of the society have been established in 72 industrial centres of the United States. They foster and promote the welfare of strong local engineering societies, inclusive of members of all branches of the engineering profession, together with architects and chemists. The formation of student branches of the society at the University of Alabama and Harvard University during 1931 brought the total number of these groups to 108. A grade of membership known as "Student Member" was established during the year, and the problem of affiliating the student members more closely with the work of the society was brought nearer to a satisfactory solution. The membership of the society at the beginning of its fiscal year Oct. 1, 1931, was 20,009.

Among the achievements of the technical committees during 1931 was the survey of screw-thread practice in the United States, sponsored by this society in cooperation with the Society of Automotive Engineers and the National Bureau of Standards. Many firms manufacturing and using threaded products were visited by the committee's

representative, and approximately 7500 bolts, nuts, and screws were collected and shipped to the National Bureau of Standards for measurement in an effort to judge the extent to which the American National Standard screw thread had measured up to commercial requirements, and in what respect revisions should be made.

The regular publications of the society are as follows: *Mechanical Engineering*, the monthly journal; *Transactions*, containing the year's papers of specialized interest and issued annually in 36 sections, including the "Record and Index," which contains annual reports, necrology, and an index to all publications of the society for the year; *The Engineering Index*, a comprehensive index to the engineering literature of the world; the *Membership List*; *Mechanical Catalog*, formerly the Condensed Catalogues of Mechanical Equipment; and the *A.S.M.E. News*, the semi-monthly news sheet for the members. In September, 1931, the society issued an abridged edition of *Steam Tables and Mollier Diagram* by Joseph H. Keenan, published in 1930. A new edition of the *Bibliography of Management Literature*, including material up to January, 1931, also appeared in 1931.

In addition to the meetings of its student branches, local sections, and professional divisions, the society held four outstanding gatherings during the year. These were the semi-annual meeting in Birmingham, Ala., April 20-23, 1931; meetings at Hartford, Conn., June 1-3, 1931, and at Kansas City, Mo., Sept. 7-9, 1931; and the annual meeting in New York City, Nov. 30-December 4, 1931.

The society is a member of the American Engineering Council and has cooperated with it in all of its work, including that on unemployment. The society's own committee on the economic status of the engineer conducted an intensive study of this subject during the year and published its findings in three installments in the September, November, and December issues of *Mechanical Engineering*.

The officers for 1931-1932 were: President, Conrad N. Lauer; vice presidents, Harvey N. Davis, William A. Hanley, T. R. Weymouth, Robert M. Gates, Charles M. Allen, Fred H. Dornier, William B. Gregory; managers, Harold V. Coes, James D. Cunningham, C. F. Hirschfeld, William L. Batt, H. L. Doolittle, H. L. Whittemore, Alexander J. Dickie, Eugene W. O'Brien, Harry R. Westcott; treasurer, Erik Oberg; secretary, Calvin W. Rice; executive secretary, C. E. Davies; assistant secretaries, E. Hartford, C. B. LePage. Headquarters are in the Engineering Societies Building, 29 West Thirty-ninth Street, New York, N. Y. The mid-West office, established in April, 1930, is at 205 West Wacker Drive, Chicago, Ill. A mid-continent office in Tulsa, Okla., is concerned principally with the problems of the petroleum industry.

**MECKLENBURG DECLARATION OF INDEPENDENCE.** See **CELEBRATIONS.**

**MEDICAL ASSOCIATION, AMERICAN.** A union of the constituent, or State and Territorial, medical associations, founded in 1847 "to promote the science and art of medicine and the betterment of public health." Members in good standing, who have qualified as fellows, consti-

tute the scientific assembly of the association, which meets annually to present and discuss subjects pertaining to the science and art of medicine.

The 1931 annual session was held in Philadelphia, Pa., June 8-12, with an attendance of more than 7000. Among the outstanding speakers were: Dr. Walter Freeman of Washington on "Physicochemical Factors in Mental Disorders"; Dr. George W. Crile of Cleveland on "The Treatment of Peptic Ulcer and Neurocirculatory Asthenia by Suprarenal Denervation"; Dr. Robert H. Halsey of New York City on "The Etiology of Heart Disease"; and Dr. Robert L. Dickinson of New York City on "A Medical Analysis of One Thousand Marriages." The association's highest awards at the scientific exhibit are those in Class I for exhibits of individual investigations, judged on the basis of originality and excellence of presentation. The gold medal in this class was awarded to Jacob Furth of the Henry Phipps Institute, University of Pennsylvania, for "original investigative work on experimental leukemia." The silver medal was awarded to Bedford Shelmire of the Baylor University of Medicine, Dallas, Texas, and W. E. Dove of the U. S. Bureau of Entomology, Charleston, S. C., for "original work on the spread of typhus fever by the tropical rat-mite."

The association's 1932 convention was scheduled to meet in New Orleans, La., May 9-13. The membership in 1931 totaled 98,348. The officers for 1931-32 were: President, E. Starr Judd, Rochester, Minn.; president-elect, Edward H. Cary, Dallas, Texas; vice president, George C. Yeager, Philadelphia; secretary and general manager, Olin West, Chicago; treasurer, Austin A. Hayden, Chicago; and editor, Morris Fishbein, Chicago. The official publication is the *Journal of the American Medical Association*. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

**MEDICINE, PROGRESS IN.** The more significant developments in medicine during the year are discussed in the following summary.

**POLIOMYELITIS.** The rather severe epidemic of infantile paralysis occurring in New York, New Jersey, and the New England States, and to a less marked degree in Michigan, Minnesota, and Wisconsin centred public interest on a problem which for many years had received the attention of physicians and medical investigators. Coincident with the epidemic there came valuable communications concerning the etiology, diagnosis, and treatment of the disease.

The work of Flexner, and of Popper and Landsteiner in 1913 established certain fundamental facts concerning the nature of poliomyelitis. They showed that it was an acute infectious disease caused by a filterable virus (that is, an organism small enough to pass through the meshes of a Berkfeld filter which sifts out all bacteria of ordinary size), which could be recovered from the brain and cord, and from the naso-pharyngeal discharge and which, when inoculated into monkeys, reproduced the disease. It remained, however, to isolate and identify the organism itself. Dr. Frederick Eberson of the University of California Medical School announced before the American Association for the Advancement of Science at New Orleans on December 31 that by prolonged incubation of the virus of poliomyelitis (obtained from the brain and cord of persons dying of the disease) on

special media he had succeeded in culturing a visible, though minute, organism varying between 0.05 and 0.1 micra in size. He was able, after carrying the organism through a number of subcultures, to reproduce the disease by inoculation into monkeys (*Macacus. Rhesus*). When recovered again from monkeys, the organism would become visible after several weeks of cultivation. Dr. Eberson hoped that his discovery might make possible the preparation of a vaccine or serum to be used in immunization and treatment.

Dr. Jungeblut of Columbia University in recent publications (*Proc. Soc. Exp. Biol. and Med.* 28: 1072 and *Jr. Exp. Med.* 53: 159) for the first time showed that apparently allergic phenomena exist in poliomyelitis. His work was based on the earlier observations made by Fairbrother and Hurst in England and by Kramer and his co-workers in the United States, who noted a febrile reaction in monkeys appearing 24 to 48 hours before the onset of paralytic symptoms, about five to seven days after the intracerebral injection of poliomyelitis virus. Jungeblut re-inoculated convalescent monkeys at intervals of five to eighteen months after the cessation of acute symptoms, and found that they reacted with an immediate elevation of temperature, amounting to three to five degrees in two hours. Subcutaneous injection gave a similar fever but did not produce a local skin reaction; nor was corneal instillation associated with any local inflammatory signs. Monkeys which had been previously vaccinated with the heat-killed virus reacted with a less marked fever response; which suggests that the phenomenon may have quantitative as well as qualitative implications.

With this evidence in hand, Jungeblut tried intracutaneous injection of human subjects known to have previously had infantile paralysis. He found that the introduction of a small amount of heat-killed poliomyelitis virus (0.2 c.c.) into the skin produced a typical local allergic response, with redness, swelling, and signs of inflammation appearing around the site of injection in about five hours and increasing in intensity until the twenty-fourth hour. These subjects, incidentally, did not have any systematic febrile reaction. Dr. Jungeblut's work promised to afford a means of recognizing susceptibility to and immunity from poliomyelitis quite as important as the now widely used Schick test for diphtheria and the von Pirquet reaction for tuberculosis.

Another important advance in the study of the experimental production of poliomyelitis was that of Dr. Simon Flexner of the Rockefeller Institute for Medical Research, long a student of this disease, who reported (*Sci. Nov.* 20, 1931) that by repetition of the injection of the virus into monkeys a greater proportion of animals could be successfully inoculated. Previously only a certain number of human strains could be transferred and often a single injection failed. By this same technique, Dr. Flexner was able to change the abortive form of the disease into one of progressive paralysis, such as is seen in severe human cases. The exact mechanism of this reaction is not known, but it is a definite advance in research technique.

Dr. George Draper of New York summarized the problems encountered in the clinical management in a paper in the *Journal of the American Medical Association* (vol. 2, 1931, p. 1139). He pointed out that until we know the exact mode

of transmission, questions of isolation and quarantine present great difficulties. The disease is certainly transferred by direct contact; possibly by those with mild, atypical, unrecognized forms and by immune carriers; and even perhaps by raw food and milk. As far as treatment is concerned the chief problem is that of early diagnosis in the stage before paralytic symptoms become evident. It is known experimentally that immune serum will neutralize the virus in monkeys (Flexner) if given before the latter has actually combined with the nervous tissues of the brain and cord. Once this has occurred, the serum is incapable of exerting any neutralizing effect (Andrewes, 1929). The fact that the serum has not been given early enough as a rule (intravenously before invasion of the meninges has occurred and intra-spinally afterwards) probably accounts for the uncertain and generally unsatisfactorily clinical results.

A clinical report of interest was that of Shaw and his coworkers of the University of California Medical School (*Jr. Am. Med. Assn.* 1931, vol. 2, p. 162), who observed 104 cases of poliomyelitis between July 1 and Dec. 31, 1930. Of these 92 were given specific treatment with immune serum. Their results were as follows: of 53 treated in the pre-paralytic stage 28 (average age 9½ years) developed no paralysis, 15 (average age 10 years) showed a transient weakness, 9 (average age 17 years) developed some permanent paralysis, and 1 died; of 39 treated in the acute stage after the occurrence of demonstrable paralysis, 9 (average age 6.8 years) showed only transient weakness, 23 (average age 11.7 years) developed some permanent paralysis, and 7 (average age 19.8 years) died. In summary.

	No permanent paralysis Per cent	Permanent paralysis Per cent	Deaths Per cent
Treated before pa- ralysis, 53 ...	84.4	16.9	1.9
Treated after pa- ralysis, 39 ...	23.1	59.0	18.0

Shaw concluded from his study that "the use of known highly immune serum will be productive of consistent results" and that "hyper-immune animal serum offers the greatest promise in this direction." He also pointed out the interesting relationship between the age of the patient and the severity of the disease, the incidence of permanent paralysis and the death rate both being higher in older children and young adults.

**PNEUMONIA.** Since the discovery by Gay and Chickering in 1915 of an immune serum effective in experimentally produced pneumonia in animals, interest in the treatment of this extremely common and serious disease had centred largely in the development of a clinically useful serum. Two items of interest in this respect appeared in the *Journal of the American Medical Association*—one an editorial reviewing briefly the history of the development of the concentrated serum widely used in certain types of the disease, and the other a clinical report from the Boston City Hospital of their experience with this form of therapy. (1931, vol. I, pp. 1465 and 1505).

Cole, Dochez, and Gillespie of the Rockefeller Institute opened the way for specific therapy in pneumonia when they distinguished four biologically different types of organisms previously grouped together culturally as pneumococci.

Shortly afterward came the work of Gay and Chickering who produced a serum effective in Type 1 pneumonia experimentally and useful in clinical cases as well. The effort since then has been to refine and concentrate this serum and to free it from extraneous protein in order that it may be administered to patients in large amounts without the dangers of "serum sickness." By the work of Huntoon, of Avery, and later of Felton, of the Massachusetts Board of Health, this objective has been in large part attained.

All the clinical studies point to the effectiveness of an immune serum prepared for use in cases of Type 1 pneumonia, and to a much smaller extent, in cases of Type 2. So far no effective serum has been prepared to combat pneumonia caused by the Type 3 and Type 4 organisms.

During 1931 a report came from the Boston City Hospital and the Harvard Medical School. Sutleff and Finland, using Felton's concentrated pneumococcus anti-body in cases of Type 1 pneumonia, treated 29 of 59 cases between Nov. 15, 1929 and June 30, 1930. Alternate cases were chosen for treatment. They found that the early administration of serum, before the fourth day, shortened the duration of the illness by one to two days, that it often sterilized the blood stream from which, previously pneumococci could be cultured, and that extension to uninvolved lobes of the lung did not occur in treated cases (although it often did in the untreated ones.) They did not think that their mortality rate, 7 of 28 treated cases (25 per cent) against 10 of 31 untreated ones (32.2 per cent) fairly reflected the efficacy of the serum, because of the small number of cases treated and the fact that the more seriously ill seemed to fall by chance largely into the treated group. They emphasized their clinical impression of obvious improvement after administration of the serum and pointed out the necessity for early diagnosis of the disease, early typing of the organism, and early serum therapy. They concluded that "the antibody has a constantly beneficial effect. As with other specific measures, best results are obtained following treatment early in the course of the disease."

**ADDISON'S DISEASE.** One of the most important advances in medicine during the year 1930 was the isolation from the cortex of the supra-renal gland by Swingle and Pfiffner of Princeton (and independently by Hartmann and Brownell of Buffalo) of a hormone capable of maintaining life in supra-renalectomized animals and clinically efficacious in cases of Addison's Disease. This condition, characterized by extreme asthenia, low blood pressure and pigmentation of the skin, is caused by a destructive process in the supra-renal glands, usually tuberculous in nature, and is as a rule fatal. Of considerable importance, therefore, was the report of Rowntree, Greene, and Ball of the Mayo Clinic in the *Journal of the American Medical Association* (1931, vol. 2, p. 1446), which gives a summary of their experience with the use of the hormone during the year since it was discovered. Their early impression of its therapeutic value was confirmed and strengthened as the treated cases increased in number.

Rowntree found that even markedly prostrated patients were greatly improved after administration of the serum—that nausea and vomiting stopped, appetite improved, pigmentation of the skin decreased and there was a marked gain in strength and feeling of general well being. In

tabulating the results at the Mayo Clinic, he divided the cases into five groups as follows:

1. Those who did not do well in spite of adequate treatment. 1 case.
2. Those moribund on entry who died before adequate treatment could be given. 2 cases.
3. Those who showed a partial response while under treatment but who have required nearly constant treatment with the hormone since their dismissal. 5 cases.
4. Those who showed an excellent response to treatment at the Clinic, but who died at home when treatment was stopped. 3 cases.
5. Those who showed a good response at the Clinic, and who have done well since dismissal. 9 cases.

He also pointed out that treatment is complicated by the fact that these patients usually have other foci of tuberculosis beside that in the suprarenal glands, and although the deficiency of hormone may be supplied, the tuberculosis process in other organs is not affected.

**MULTIPLE SCLEROSIS.** Recent investigations in the United States rather disappointingly failed to confirm the observations of Purves-Stewart and Chevassut of London who announced in 1930 that they had succeeded in isolating the causative agent of multiple sclerosis. They found a minute organism, which they named *Spherula Insularis*, in the spinal fluid of 176 of 189 patients suffering from the disease, and were unable to find the organism in 209 cases of other diseases of the nervous system which they studied. Weil of Northwestern University Medical School, Chicago, who had seen Chevassut's preparations in London and was familiar with the details of her cultural technique, carefully repeated the work and came to the conclusion that the spheres and colonies of sphere seen in smears taken from agar cultures of spinal fluid really represented a precipitate of colloidal protein, or possibly lipid particles, and was not actually a living organism. He was able to demonstrate similar spheres in spinal fluids from other neurological conditions and thought that they were caused by the presence of a protein (globulin), which is found in a great number of pathological conditions of the central nervous system. He concluded that "repetition of the experiments failed to produce convincing evidence that, in multiple sclerosis, cultures from the spinal fluid yield a filtrable virus and that this virus is responsible for the production of the disease." (*Jr. Am. Med. Assn.*, 97-1587.)

Putnam, McKenna, and Morrison of the Harvard University Medical School also adduced evidence against a specific virus being the causative agent in the disease. They were able to produce experimentally in dogs the histological picture of multiple sclerosis (that is, scattered areas of degeneration and scarring) by a variety of means which had nothing in common except the fact that they all probably caused some degree of obstruction of small vessels in the brain and cord. They found that injection of minimal doses of tetanus toxin, poisoning by carbon monoxide inhalation, and the introduction of a cod liver oil emulsion into a vein all produced rather similar microscopic changes. And some of the animals so treated developed nervous symptoms not so very dissimilar to those found in clinical cases. It is their opinion that it is "not necessary to postulate a specific virus, toxin, or ferment to account for the histological appearance seen in multiple sclerosis." (*Jr. Am. Med. Assn.* 97, p. 1591.)

**ÆTIOLOGY OF INFLUENZA AND THE COMMON COLD.** In the YEAR BOOK for 1930 the results of the investigations of Dochez at Columbia and of

Long and Doull at the Johns Hopkins were reported which pointed to a filtrable virus as being the causative agent in the production of the common cold. Two further contributions were made to the study of this subject. Dochez was able to grow the virus of the common cold in the laboratory. (*Proc. Soc. Exper. Biol. and Med.* Feb. 1931.) Using the method of Li and Rivers, which in essential consists of the employment of embryonic tissues as a culture medium, he was able to obtain a positive take in a monkey and a chimpanzee after incubation of the virus for 13 days. Subcultures of this organism, he found, were pathogenic for fifteen generations. Two of three human volunteers inoculated with this material (which represented a dilution of the original culture of about one part to one million billion parts) contracted colds.

Long, Bliss and Carpenter (*Jr. Am. Med. Assn.* Oct. 17, 1931) at Hopkins obtained symptoms very strongly resembling those seen in influenza in man by the intranasal inoculation of three chimpanzees with a bacteria free filtrate obtained from the rhino-pharyngeal washing of patients ill with influenza. These animals developed within 36 to 48 hours fever, rather marked prostration, and a decrease in the number of white blood corpuscles (a finding significant in the diagnosis of influenza in man). They did not have the respiratory symptoms usually seen in the human form of the disease.

**STUDIES ON THE GROWTH OF NERVES.** The annual award of the American Association for the Advancement of Science was given to Dr. C. C. Speidel of the University of Virginia Medical School in recognition of his work on the mechanism of the growth of nerves, a subject concerning which there has been considerable controversy for many years. Dr. Speidel watched microscopically the growing nerve fibres in the transparent tail fin of tadpoles by means of a special technique which he devised. Daily observations were made for a period of months, as a result of which he was able to demonstrate definitely that "nerves do not grow as a result of cells forming a chain, but that each nerve grows out of a single cell in the central nervous system." His work establishes the so-called "outgrowth theory" as opposed to the "chain theory." He found that at the tip of each outgrowing nerve sprout there was an enlargement which he called a growth cone. This sends out a number of delicate processes which "are being continually extended and retracted, as if the immediate vicinity is being explored for a favorable route. The growth cone advances by a slow, irregular flowing motion, spinning the nerve fibre behind it." The nerve fibre tends to follow the fibrous processes of tissue cells which it meets. When an obstruction is met, the cone leaves a thickening behind, and when its growth in one direction is blocked a new cone may develop and progress in a more favorable direction.

**MISCELLANEOUS BRIEF ANNOUNCEMENTS.** The following items, summarized by Science Service in its annual review, are of interest and may be mentioned briefly although in the main formal detailed reports have not been made or are not accessible. McCollum and Orent of the Johns Hopkins School of Hygiene and Public Health found that lack of magnesium in the diet may cause death in experimental animals by producing a disturbance of the adrenal glands. Dr. McCollum also found that the formation by the pituitary

gland of a hormone concerned in the regulation of sexual function is related to the magnesium content of the diet.

D. Walter B. Cannon of the Harvard Medical school discovered a new hormone, thought by him to be formed as the result of the action of nervous impulses on muscle cells. This hormone, which he calls sympathin, is similar to adrenalin, a well known hormone obtained from the medulla of the supra-renal glands. The causative agent of small-pox, hitherto considered a virus disease, was said to have been discovered by Prof. J. C. G. Ledingham of the Lister Institute of London; and two American investigators, McKinley and Soule, reported that they had succeeded in growing the organism of leprosy outside the human body.

Studies on deafness made by Dr. S. J. Crowe of the Johns Hopkins Medical School show that certain forms may be due to alteration in the rigidity of certain small bones in the inner ear (so called ossicles) and that pressure on a membrane ("round window") in the inner ear may greatly increase the acuity of hearing.

**MELBA, NELLIE.** An Australian operatic soprano, died in Sydney, Feb. 23, 1931. She was born, Nellie Porter Mitchell, near Melbourne on May 19, 1861, her later stage name being an adaptation of that of her native city. Following her marriage to Capt. Charles Armstrong in 1882, she studied under Mme. Marchesi in Paris in 1886, and the following year made her debut as Gilda in *Rigoletto* at the Théâtre de la Monnaie in Brussels. Possessing a coloratura voice of exceptional purity and beauty, she achieved a signal success at Covent Garden, London, the Paris Opera, and La Scala, Milan. Her first appearance in the United States was in 1893 at the World's Columbian Exposition in Chicago and at the Metropolitan Opera House in New York City. She remained a member of the Metropolitan Opera Company until 1910, her repertory including more than 25 operas of which the last to be added was *La Bohème*. In 1915-16, after an extensive concert tour, she returned to American opera as a member of the Chicago Company. She was made Dame Commander of the Order of the British Empire in 1918, and in 1927, following her retirement to private life, was created Dame of the Grand Cross of the Order of the British Empire. She wrote *Melodies and Memories* (1925).

**MELONS.** See HORTICULTURE.

**MEMEL, mǎ'mēl, or KLAIPĖDA.** A territory on the Baltic including the city of Memel (population, 36,633) and the lower reaches of the Memel or Niemen River, which was detached from Germany by the Treaty of Versailles and subsequently incorporated in Lithuania under a convention agreed to by the conference of ambassadors (May, 1924). The German population of Memel received a clearly defined measure of administrative and financial autonomy. The governor is appointed by the President of Lithuania. The port of Memel was designated a port of international concern. A harbor board, including a neutral appointee of the League, was charged

with its control. The total area is 943 square miles and the population (1930) about 147,000, of whom 37,000 were Lithuanians. Governor in 1931, Antonas Merkys. See LITHUANIA.

**METALLURGY.** The rate of metallurgical activity again declined to a considerable extent during 1931 with the sole exception of gold. Gold mines and reduction plants benefited greatly by reduced costs of both labor and materials while getting a fixed price for their product. On the other hand, many base-metal mines were closed down altogether, and the others, almost without exception, operated at a greatly curtailed rate, with a minimum expenditure for new equipment or for research. Nevertheless, several new plants of importance were completed during the year, and the period was not without technological progress.

**COPPER.** Interest centred in the newly developed district of Northern Rhodesia where one of the new companies, Roan Antelope, put a large new concentrating plant and smelter into operation during the year, and another company, Rhokana, completed a mill at its N'Kana property that went into operation on December 11. A smelter also under construction was expected to be in operation early in 1932. A third company, Mufulira, had a large concentrating plant under construction but further work was deferred owing to the large accumulation of copper on the market. All three of these companies were controlled by Rhodesia Selection Trust, and all were similar metallurgically. The ore is a sulphide and after ball-mill grinding, is subjected to the flotation process. The concentrates thus obtained are roasted in multiple-hearth furnaces, and smelted in reverberatories, the matte being blown to blister in horizontal basic-lined converters, all of which follows conventional American practice.

In Canada, the Flin Flon property of the Hudson Bay Mining and Smelting Co., and the Sherritt-Gordon mine, both in Manitoba, entered the ranks of producers during the year with mines and concentrating plants in operation. The product was shipped East for smelting and refining in recently built plants. All of the Canadian copper is electrolytically refined, in distinction to that produced by the Roan Antelope company, already mentioned, which has so little gold and silver in it that fire refining is adequate.

**LEAD-ZINC.** The new plant of the Mt. Isa company, in Queensland, Australia, proved of dominant interest. Both sulphide and carbonate ores are present here, and it was first planned to treat them separately. Subsequently, however, it was found feasible to mix the two underground in the proportion of two tons of carbonate to one of sulphide. After being mixed intimately, the ore is sent to the concentrator where it is first treated on tables which recover about half of the lead present, the percentage of lead present in the concentrator feed being about 13. The table tailing is reground to 80 mesh in ball mills, con-

ditioned with soda ash, and the lead sulphide floated off with xanthate and Aero-float. Remaining lead carbonate is then sulphidized with sodium sulphide and subsequently floated. Sometimes zinc sulphate or cyanide are added to depress the zinc, which is not recovered at present. The concentrate contains about 50 per cent lead, with an over-all recovery of 85 per cent. A new lead smelter, the Britannia, was under construction on the Thames, in England, to handle the Mt. Isa concentrates.

Volatilization processes for zinc attained considerable importance. Four were developed during the last seven years, of which two had reached the commercial stage. The Waelz process, referred to in the YEAR BOOK for 1927 as being of much promise, is now responsible for the production of well over 100,000 tons of zinc oxide a year.

The Laist slag-fuming furnace developed by Anaconda at East Helena, and recently installed also by the Consolidated Mining and Smelting Co. at Trail, B. C., proved efficient for the recovery of zinc from lead blast-furnace slags. Production of metallic zinc by the Coley process apparently was not a commercial success, but the process was being adapted to the production of zinc oxide on an experimental scale.

Zinc oxide of unusual purity was being produced commercially at the new plant of the St. Joseph Lead Co. in Pennsylvania, using concentrates from the company's properties in northern New York, which are substantially lead-free. The concentrates are roasted in Herreshoff furnaces, each with 12 hearths, and the gas from which is used for making sulphuric acid by the contact process using vanadium mass. Sintering is accomplished in three Dwight & Lloyd machines, and the sinter is charged to a battery of electrothermic furnaces developed here for this work. The current passes directly through the charge of sintered ore and coke. The fume from these furnaces is caught in a baghouse. No metallic zinc had been produced commercially in this plant up to the end of the year, but may be in the future. In Sweden, where zinc metal had been produced by electrothermic smelting for twenty years, the last plant closed down, evidently not being able to compete with electrolytic processes, or with the vastly improved practice in retort volatilization now available.

**FLOTATION.** Flotation continued to be the outstanding method of concentrating ores, and its applications were constantly extending into the non-metallic field, and into the concentration of oxidized ores as well as sulphides. Over 100,000,000 tons of ore were said to be treated annually by this process. Recent developments in special varieties of ore include the following:

**Manganese Carbonate** (Rhodochrosite). A 300-ton plant at Anaconda, Mont., floated this mineral successfully. **Phosphate rock.** Coarse material was floated in a modified cascade type machine in a 1000-ton plant in operation at Mulberry, Fla., by the International Agricultural Corporation. **Fluorspar.** A 50-ton plant was in operation at Rosiclare, Ill., by the Franklin Fluorspar Co. **Barytes.** A concentrate carrying 94 per cent barium sulphate was being produced from 25 per cent material in a 125-ton plant at Barstow, Calif. **Coal.** Flotation of coal was still only experimental, but the Pittsburgh Coal Co. was giving much attention to the matter and a commercial plant may soon be put in operation.

**Native Copper.** In Michigan flotation was generally utilized. In Rhodesia, a variation known as the segregation process involved heating oxidized ore with coal and salt in a reducing atmosphere, thus reducing the copper to the metallic state; then regrinding, and recovering the copper by flotation. **Gold.** See a succeeding paragraph. **Iron.** Though flotation had not been applied to iron ore in North America, it was successfully used for separating pyrite and chalcopyrite from hematite in one or two European plants.

Reagents used in flotation had changed considerably in the last few years. The total amount used in the United States in 1929 was recently announced by the U. S. Bureau of Mines, and their importance takes the following order: Frothers: pine oil, cresylic acid. Collectors (distillation products): coal-tar creosote, blast-furnace oil, petroleum products, wood-tar creosote. Synthetic products: ethyl xanthate, discredol-dithiophosphoric acid, sodium diethyl-dithiophosphate, amyl xanthate, sodium discredol-dithiophosphate, butyl xanthate, thiocarbamilid. Acids and alkalies: lime, sulphuric acid, sodium carbonate, cement. Other inorganic reagents: copper sulphate, zinc sulphate, sodium sulphide, cyanides, sodium sulphite, sodium silicate.

With the gradual exhaustion of high-grade iron ore, washing plants to treat the leaner material were beginning to be built. Concentrating practice on the Mesabi range developed individual flowsheets rather than the general methods of treatment formerly followed. The Oliver company at its Trout Lake plant had a Newhouse crusher, rolls, and vibrating screens to screen the ore from a maximum of six inches to a minimum of one-fourth inch. At the Holman-Cliffs washing plant, comparative tests had been going on between a Hydrotator machine and a bowl classifier, and some work also was done with the new Dorr-Fahrenwald sizer, of six spigots. Wisconsin Steel Co., at its Hawkins washing plant, installed Hancock jigs to treat roll-crushed ore. The finest material was still recovered in a bowl classifier. Butler Brothers, at Nashwauk, was using jigs, and experimenting with a commercial sized flotation machine.

The largest sintering machine in the world proved successful at the Evergreen plant, at Crosby, Minn. This treats limonitic ores of the Cuyuna range. It is 72 inches wide by 125 feet long, and sinters over 1400 tons a day. Labor amounts to about 20 tons per man-shift. An 18-inch bed is carried. The operating cost per ton of sinter is 7.7 cents, of which 6.3 cents is for supplies. All ore coarser than three-eighths inch is screened out before sintering, and mixed with the sinter afterward to dry it, making the capacity of the plant virtually double what it was when coarser material was being sintered as well. Also, some of the hot gases from the sintering machine are used for drying the coke breeze used for fuel.

**GOLD.** The Rand, the greatest producing gold district in the world, set a new record in output in 1931. Two new plants entered production on the Far East Rand during the year. The first was the East Geduld, capacity 2000 tons a day, which has adopted the all-sliming flowsheet, with three-stage grinding in tube mills. Newhouse crushers were installed here as secondary crushers, following their successful application at West Rand Consolidated. They were also installed during the year at Daggafontein, the second Far

East Rand mill to go into operation, and at Robinson Deep, on the Central Rand, which revamped its mill. The new Daggafontein mill has a capacity of about 50,000 tons a month.

The application of flotation to gold ores had become of importance and several plants in various parts of the world were using it in connection with cyanidation. The Lake View and Star in Western Australia had a new mill in which the gold ore was crushed in gyratories and cone crushers to one-half inch, then in ball mills, and concentrated in Fahrenwald flotation machines. Tailings are impounded for possible future treatment. Concentrate is dried and roasted in Edwards furnaces after which the small bulk of concentrate is cyanided. The Wiluna, another Western Australian mill completed in the year, has a similar flowsheet. Here, arsenic is recovered from the roasters as well.

Another new gold mill but one not embodying flotation, was the Howey, a 900-ton plant in Canada. The flowsheet is simple but effective. The ore is reduced in jaw and cone crushers and ground to about 40 mesh only, in ball mills. The pulp then goes to 40-foot Dorr thickeners, the overflow from which goes to a clarifying press, and then to a Crowe-vacuum system, followed by zinc-dust precipitation. Thickened sludge goes to agitators and then to Genter thickeners, the sludge from which is dewatered in disk filters and then discarded as tailing. Costs have been exceedingly low, averaging about \$2.55 per ton mined and \$3 per ton milled, an appreciable tonnage being hand-picked as waste. These costs are total for the mine and mill and even include interest on loans.

**METEORITES.** See EXPLORATION under *Australia*.

**METEOROLOGY.** The difficulty, if not impossibility, of determining with certainty from direct evidence of accurate meteorological records whether or not significant changes of climate have occurred during historic times has led C. E. P. Brooks to attempt a reconstruction of past climates over Europe and neighboring regions on the basis of indirect evidence, such as historical and literary writings, former distribution of forests, etc. The five periods 2500-2000 B.C., 800-400 B.C., the beginning of the Christian Era, 300-800 A.D., and 1100-1400 A.D. were investigated. The available evidence indicates that during the first period the climate was abnormally dry throughout Europe, western Asia, and northeastern Africa. In contrast, the second period appears to have had a generally wet, cold, and stormy climate. The climate of the third period did not differ greatly from present conditions. The fourth period was marked by dryness. During the fifth period, the southern North Sea area was marked by heavy rainfall, especially during 1150 to 1275; while in the late thirteenth and fourteenth centuries northeast Africa, southeast Asia, and perhaps Italy, had heavy rainfall.

It has often been suggested that we are at present living in an interglacial, rather than in a postglacial, period. A recent study by Erdtman of the annual pollen deposits from forests in lakes and bogs seems to indicate that in Scandinavia and the British Isles a southward movement of the deciduous forests is now under way, and that a return of the great glaciers may occur in about 2000 years. Deciduous forests are

known to have been much more extensive in southeastern Canada a few thousand years ago than they are to-day. The present climate is more humid and probably cooler than it was then.

**DYNAMICAL METEOROLOGY.** While weather forecasting is still predominantly empirical, there has been an increasing tendency in recent years to utilize results of theoretical investigations as far as possible, and to place the practice of weather forecasting at least partially on a scientific basis. Exact precalculation of coming weather from the mathematical equations in accordance with which the physical phenomena of the atmosphere take place will perhaps never be practicable; but it is of interest and importance that certain elements of the weather complex may sometimes be submitted more or less successfully to mathematical calculation. For example, Gião has recently attempted to apply the dynamical theory of the motion of adjacent cold and warm masses of air over the earth to the calculation of the motion of such air masses shown on the daily synoptic charts. Again, Angervo has developed formulæ for calculating the future positive of centres of high and low barometric pressure, and the magnitude of the pressure. These methods have limitations and imperfections, but seem to be valuable beginnings, and are capable of yielding useful results in practice.

A beginning has also been made toward a dynamical theory of climates: Climatology has hitherto consisted almost entirely of the compilation of statistical data on the meteorological elements and the average course of the weather over the globe, without much systematic effort to discover the underlying dynamic and thermodynamic phenomena which are responsible for the climatic characteristics of any given region. Bergeron, however, has suggested a method for the scientific representation and dynamical explanation of climate, by introducing into statistical climatology some of the concepts that have been developed in recent years in connection with the rational analysis of daily synoptic charts; and he has attempted to construct a unified picture of the dynamic and thermodynamic mechanism by which climate is controlled. A summary of Bergeron's theory is given in the *Monthly Weather Review*, June, 1931.

**METEOROLOGICAL PHYSICS.** In the study of the physical phenomena of the atmosphere, it is of importance to have some method of characterizing the physical state of a mass of air, together with a means of identifying a given air mass as it moves from place to place over the earth. The so-called equivalent potential temperature is coming into extensive use for this purpose; it is the temperature to which a mass of air would come if the latent heat of all the water vapor that is present were liberated, and the air then brought adiabatically to some standard pressure. The equivalent potential temperature is apparently the most conservative of all meteorological quantities; it remains unchanged throughout any adiabatic process, whereas ordinary potential temperature is altered by condensation of water vapor.

The long, narrow, parallel bands of cloud which sometimes stretch across the sky, and which are often called billow clouds or windrow clouds, are usually explained as caused by a flow of one air current over another current of air of different temperature and speed: As the

one current glides over the other, waves known as Helmholtz waves are formed at the interface, much as water waves are generated by a wind blowing over a water surface; as the air rises and falls in these waves, it alternately cools and warms by expansion and contraction respectively, and if the humidity is just right the wave crests may be cloud capped, while the troughs are free from cloud. Similarly, the long rows of rectangular cloud patches which sometimes occur have been ascribed to the simultaneous existence of two such wave systems at right angles to each other.

Recent studies of the forms of stratified clouds by S. Mal, however, indicate that these and other similar cloud patterns may, on some occasions at least, be formed in another way: It has long been known that when a thin layer of liquid is heated at the lower boundary or cooled at the upper boundary so strongly as to become unstable, it spontaneously breaks up into polygonal sections; and there are several reasons for thinking that when a thin cloud stratum breaks up into patches arranged in more or less regular patterns, the phenomenon may be caused by instability of the air within which the cloud lies. Direct evidence for the latter interpretation of cloud patterns has now been provided by the laboratory experiments of Mal, in which rectangular arrays in unstable liquids were produced for the first time, and by aeroplane observations of the atmospheric conditions which exist at the times when stratified clouds appear. Such an unstable layer might be produced in the atmosphere either by radiation effects or by a general lifting of a cloud layer above which the air is clear and dry. Instability accompanied by sufficiently great shear due to motion gives cloud bands parallel to the shear, while less rapid shear gives rectangular patterns. It is possible that Helmholtz waves may in reality be rather rare.

The peculiar features of the nitrogen bands in the auroral spectrum have been reproduced in the laboratory for the first time by Kaplan; this was accomplished by running a continuous electric discharge for long periods through air at a pressure of less than  $\frac{1}{1000}$  millimeter. The green oxygen line was also obtained, and thus the complete auroral spectrum was reproduced.

On the basis of laboratory experiments, Cohn has concluded that some of the characteristic polarization and color properties of the light from the sky are caused by the combination of electrons from the sun with atmospheric ions in the uppermost atmosphere.

**NECROLOGY.** Franklin G. Tingley, January 26; Alfred Judson Henry, October 5; Preston C. Day, October 21; Robert DeCourcy Ward, November 12; Alfred Wegener, lost on the German Scientific Expedition that was exploring central Greenland in November, 1930.

**METEORS.** See **ASTRONOMY.**

**METHANOL.** See **CHEMISTRY. INDUSTRIAL.**  
**METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN.** A branch of the Methodist Episcopal Church. In 1931 the branch comprised 27 annual conferences. There were 628 churches, 797 ministers, and 24,341 members; the Sunday schools numbered 638, with 6300 teachers and officers, 39,949 pupils, and 6984 persons enrolled in the home department and on the cradle roll.

The Connection's quadrennial general conference was held in Houghton, N. Y., June 24-30, 1931. This conference, which is the highest ecclesiastical body of the church, legislated for the following corporations: The Wesleyan Methodist Connection (or Church of America); the Wesleyan Methodist Publishing Association; the Superannuated Minister's Aid Society of the Wesleyan Methodist Connection of America; the Missionary Society of the Wesleyan Methodist Connection of America; and the boards of trustees of the following colleges maintained by the church: Houghton College in Houghton, N. Y.; Central College in Central, S. C.; Marion College in Marion, Ind.; and Miltonvale College in Miltonvale, Kans. The foreign missionary department of the Missionary Society continued its work in Africa, India, and Japan, and the department of home missions and church extension among the American Indians, Mexicans, and in the mountain region of the South. The *Wesleyan Methodist*, published weekly in Syracuse, N. Y., is the official organ of the church.

The officers elected at the 1931 general conference were: President, the Rev. E. D. Carpenter; first vice president, the Rev. J. S. Willett; second vice president, Joe Lawrence; and secretary, the Rev. E. F. McCarty. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

**METHODIST EPISCOPAL CHURCH.** Methodism in its widest significance and intention was a "revival of Christian earnestness, simplicity, and power." John Wesley (1703-91) had no intention of establishing a new church; his effort was to revive pure and undefiled religion, but he was forced out of the Church of England. Richard Boardman and Joseph Pilmoor, two of Wesley's workers, came to America in 1769 and were followed in 1771 by Francis Asbury who became the great leader of the infant church. The Methodist Episcopal Church was organized at a "Christmas conference" held in Baltimore in 1784.

The governing body of the church is the quadrennial general conference, composed of an equal number of ministerial and lay delegates who make all the rules and regulations and appoint commissions to carry on the work of the church. Such a conference was held at Kansas City, Mo., in 1928 and that for 1932 was called for Atlantic City, N. J., in May. There also are held annual conferences, presided over by the bishop of each area, at which all pastoral changes are considered and reports of the local churches are gathered and compiled. A local quarterly conference administers all matters pertaining to the work of the local church.

In 1931 there were in the United States and territories 97 annual conferences and missions, 399 districts, and 15,136 charges in 21 episcopal areas. Effective ordained ministers numbered 12,696 and local, or lay, preachers, 10,521. There were 4,016,919 church members, of whom 102,007 were preparatory and 3,914,912 full members.

The enrollment in 23,853 church schools was 4,008,126, including 376,948 officers and teachers. There were 525,543 Epworth League members. Conferences outside of the United States in 13 episcopal areas included 5 in Africa, 10 in Eastern Asia, 21 in Europe and North Africa, 5 in Latin America, 3 in southeastern Asia, and 12 in southern Asia. The membership totaled 641,943; ordained ministers, 1892; and local preachers, 3064. Church schools numbered 7674, with an enrollment of 349,472, including 17,917 officers and teachers.

The administration of the missionary, educational, and philanthropic work of the Methodist Episcopal Church is committed to six general boards: Foreign missions; home missions and church extension; education; hospitals, homes, and deaconess work; pensions and relief; and temperance, prohibition, and public morals. These boards cooperate in the world service movement, their budgets being fixed and their work correlated by the world service commission. On May 31, 1931, this commission reported total net receipts of \$6,721,299.

The board of foreign missions administers the missions of the church in Africa (Central and South), Europe and North Africa, Eastern Asia (China, Japan, Korea), Latin America (Mexico, Central America, South America), Southeastern Asia (Philippine Islands, Malaya, Sumatra), and Southern Asia (India and Burma). Its receipts for the fiscal year ending Oct. 31, 1931, totaled \$2,412,750. The board of home missions and church extension administers the missions in the United States and its possessions, not including the Philippine Islands, and looks after weak churches in new and growing communities in the United States. During the fiscal year a total of \$1,387,721 was expended on home missions, while disbursements for church maintenance and extension amounted to \$1,664,180. There are two women's missionary societies, the foreign and the home, which reported total receipts in 1931 of \$2,085,112 and \$2,588,983, respectively.

The educational system of the church, administered by the board of education, included, in 1931, 47 colleges and universities, 24 secondary and preparatory schools, 8 schools of theology, and 15 institutions for colored students. Its total income for the fiscal year ending June 30, 1931, was \$1,043,763, while total expenses and appropriations amounted to \$1,114,540. The board of hospitals, homes, and deaconess work administered, in 1931, 77 hospitals, 44 homes for the aged, 43 children's homes, 45 deaconess homes, and 27 homes for young business men and women. The board of pensions and relief reported in 1931 a connectional permanent fund amounting to \$1,376,825; endowments and reserves in trust, \$332,028; conference stewards' fund in trust, \$303,193; and ministers' provident annuity fund, \$614,751.

The board of temperance, prohibition, and public morals is responsible to the general conference, its purpose being "to make more effective the efforts of the church to create a Christian public sentiment" and "to crystallize opposition to all public violations of the moral law and to all attempts to undermine and destroy civil and religious liberties."

The official publications of the church are the *Christian Advocate* (New York); the *Epworth Herald* (Chicago); *Zion's Herald* (Boston); and *Der Christliche Apologete* (Cincinnati). The

*Pittsburgh Christian Advocate* (Pittsburgh, Pa.) and the *Michigan Christian Advocate* (Detroit) are also official in character. The secretary of the general conference in 1931 was the Rev. John M. Arters, 700 Hammond Street, Bangor, Me. See METHODIST EPISCOPAL CHURCH, SOUTH, for account of the SIXTH METHODIST ECUMENICAL CONFERENCE.

**METHODIST EPISCOPAL CHURCH, COLORED.** This denomination was organized in Jackson, Tenn., in 1870 and was composed of the colored membership of the Methodist Episcopal Church, South. In 1931 it reported 4361 churches with 488,520 members; 3620 traveling preachers and 2104 local preachers; 3210 Sunday schools with an enrollment of 301,520 pupils; and 1809 Epworth Leagues with a membership of 47,201. The amount raised during the year for educational purposes was \$192,600 and about the same for missionary purposes. More than \$1,000,000 was also contributed for home maintenance. The church has 9 bishops and 12 connectional officers. The *Christian Index* is the official organ, while the *Eastern Index* and *Western Index* serve their respective sections. A quadrennial general conference was held in Louisville, Ky., in May, 1930. Headquarters are in Jackson, Tenn.

**METHODIST EPISCOPAL CHURCH, SOUTH.** A separate branch of the Methodist Episcopal Church, formed in 1845 over the question of slavery. In 1931 there were 48 conferences and missions, of which 41 were in the United States and 7 in foreign countries; 10,381 churches; 8127 traveling preachers and 4329 local preachers; and 2,621,900 church members. Sunday schools numbered 15,339, with an enrollment of 1,930,552 pupils; and Epworth League societies, 9008, with a membership of 260,159. Contributions for all purposes in 1931 amounted to \$31,048,919. The denomination sponsored 248 educational institutions, including 32 universities and colleges, 21 academies, and 46 mission schools. Important periodicals are the *Missionary Voice* and the *Christian Advocate*. The executive body is the college of bishops which in 1931 had 15 members.

In October, 1931, the Methodist Episcopal Church, South, acted as host to the Sixth Ecumenical Methodist Conference which met in Atlanta, Ga., and brought together 550 delegates representing 23 Methodist bodies in 25 countries. More than 100 addresses were delivered during the 10 days of the conference on various aspects of the main theme, "Methodism in the Life of Today," and the four general topics, "Personal Religion," "Church Life," "The Christian Social Order," and "Wider Human Relationships." Important pronouncements also were delivered on prohibition, marriage, race relations, war and peace, and economic distress. After the conference many delegates made a pilgrimage to Savannah to visit the site of the historic labors of John Wesley and George Whitefield.

During 1931 autonomous national churches were established in Mexico, Brazil, and Korea as a result of the visits of the three special commissions appointed for the purpose by the Methodist Episcopal Church and the Methodist Episcopal Church, South. In the setting up of each of these new churches preachers from the Methodist Episcopal Church, South, were elected to the episcopacy, as follows: in Mexico, the Rev. Juan N. Pascoe; in Brazil, the Rev. J. W. Tarboux; and in Korea, the Rev. J. S. Ryang.

**METHODISTS.** **WESLEYAN METHODIST CHURCH.** The principal branch of the Methodist denomination in Great Britain and Ireland, founded at the University of Oxford in 1739 by John and Charles Wesley and holding its first conference in London in 1744. This is the mother church of the denomination and is composed of five divisions: Great Britain; Ireland; Foreign Missions; French Conference; and South African Conference. The church maintains a publishing house at 25-35 City Road, London, E. C., 1. See **METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN.**

**PRIMITIVE METHODIST CHURCH.** Commonly known as the "Camp Meeting Methodists," organized in Staffordshire in 1810. Next to the Wesleyan, this is the most numerous and most democratic of the denominations which have arisen out of the Methodist movement. The church was organized in the United States in 1844 by Hugh Bourne, one of the founders of the movement in England. A publishing house is maintained at Holborn Hall, Clerkenwell Road, London, E. C., 1.

**UNITED METHODIST CHURCH.** Formed in England in 1907 by the union of three denominations of Methodists which had hitherto been separate from and independent of each other: The Methodist New Connection; the Bible Christians; and the United Methodist Free Church. The church maintains a publishing house at 12 Farrington Avenue, London, E. C., 4.

In Great Britain, a scheme for the reunion of the Wesleyan, the Primitive, and the United Methodist churches, after having been approved by all three conferences and having received Parliamentary sanction, was voted on finally at both representative and pastoral sessions held in June and July, 1931. A united meeting in London of the conferences of the three churches was announced for Sept. 20, 1932. A further stage in the world-wide union of Methodism and the establishment of autonomous churches was the approval by the Primitive Methodist conference in June, 1931, of the draft bill to be presented to the South African Parliament, formally asking for powers to combine the South African conference of the Wesleyan Methodist Church and the Primitive Methodist missions, the new church to be known as the Methodist Church of South Africa.

**WESLEYAN REFORM UNION.** One of the smaller divisions of the Methodist movement, which separated in 1850 from the Wesleys and organized as a separate body in 1859. Its adherents are mostly in the Midland counties of England.

**INDEPENDENT METHODIST CHURCHES.** Founded in 1796 in England and united with other societies in 1806.

**AUSTRALASIAN METHODIST CHURCH.** Methodism in Australia dates from 1812; the first conference was held in 1855. Publishing houses are maintained in Sidney, Melbourne, Adelaide, Brisbane, and Perth.

Other branches, or autonomous churches, of the denomination include the New Zealand Methodist Church, the Japan Methodist Church, the Korean Methodist Church, the Methodist Church of Mexico, and the Methodist Church in Brazil. See also **CANADA, THE UNITED CHURCH OF.**

**METROPOLITAN MUSEUM OF ART.** See **ART EXHIBITIONS; ART SCHOOLS.**

**MEXICAN LABOR.** See **IMMIGRATION; MEXICO** under *History*.

**MEXICO.** A federal republic lying between the United States and Central America. Capital, Mexico City.

**AREA AND POPULATION.** With an area of about 767,198 square miles, the population at the census of May 15, 1930, was 16,404,030, or 2,069,250 (14.4 per cent) more than at the census of 1921. Of the 1930 population, 9,040,590 were of mixed race, 4,620,880 were Indian, 2,444,466 were pure white, 140,094 of unknown racial origin, and 158,000 (including about 14,600 citizens of the United States) were foreigners. About 1,791,000 Indians still spoke their native language. The population is overwhelmingly Roman Catholic, but the Church, under the Constitution of 1917, is separated from the State and strictly regulated. The birth rate for the years 1924-28 averaged 33.1 per 1000 inhabitants and the death rate 28.4.

The population of Mexico City, according to the 1930 census, was 968,443 (752,194 in 1921). A presidential decree of Aug. 24, 1931, extended the city boundaries to include parts of four adjoining villages, thus increasing the population to slightly more than 1,000,000. Other leading cities, with their populations in 1930, are: Guadalajara, 150,000; Puebla, 111,701; Monterrey, 98,940; Mérida, 91,139; San Luis Potosí, 73,205; Vera Cruz, 70,000; and Torreón, 65,000.

**EDUCATION.** Elementary education is nominally free, compulsory, and secular. In the schools of the Federal District and the territories, supported by the National Government, there were 252,988 boys and 161,276 girls in 1927. The other schools are supported by the respective States. Enrollment in all State and Federal schools in 1929 was 1,662,371 and in private schools, about 18,000. Three universities, at Mexico City, Mérida, and Guadalajara, enrolled a total of 9379 students in 1928, of which 7527 attended the National University at Mexico City.

**PRODUCTION.** Agriculture is the main factor in Mexico's national economy. In the henequen industry, which supplies about half the world's requirements, there was overproduction and prices dropped 40 per cent toward the close of 1930. Production of the chief crops in 1930, with figures for 1929 in parentheses, were: Corn, 1,325,000 metric tons (1,543,835); wheat, 311,517 metric tons (308,447); beans, about 80,478 metric tons (16,769); tomatoes, 78,076 metric tons (88,000); chickpeas, 49,795 (69,134); and cotton, 36,712 (51,000). Sugar, rice, coffee, chicle, cacao, bananas, winter vegetables for export to the United States, and tobacco are other important products.

Mining is the chief industry, but about 97 per cent of the 31,000 mining properties in 1930 were foreign-owned. Metal prices, particularly silver, dropped steadily during 1930 and 1931 and the industry suffered greatly. The value of mineral and metal production (1930) was 264,743,000 pesos (1 peso equals \$0.4985 at par), exclusive of petroleum production, compared with 359,866,000 pesos in 1929; petroleum production was valued at 12 per cent less than in the previous year. Five important oil fields were under exploitation in 1930 by some 1186 concessionaries occupying about 30,870,000 acres. The output, which reached 64,119,884 barrels in 1927, fell to 44,687,879 in 1929 and to 33,038,600 in 1931. Silver output in 1930 was 105,700,000 fine ounces,

out of a world total of 243,700,000 ounces; in 1929 it was 108,700,000 fine ounces. The decline in silver prices, from about 53 cents per troy ounce in 1929 to 27½ cents in May, 1931, reduced the value of the Mexican output by approximately one-half in the latter year. Production of the other principal minerals in 1930 was: Copper, 73,411 metric tons; lead, 232,930 metric tons; zinc, 124,083; antimony, 3032; arsenic, 9977; graphite, 5853; mercury, 167 metric tons; coal, 1,294,000 metric tons.

Manufacturing centres in Mexico City and Monterrey and is mainly for local consumption.

**COMMERCE.** Preliminary official statistics for 1930 showed imports of 350,178,000 pesos (\$165,039,000), compared with 382,843,000 pesos (\$184,454,000) in 1929, and exports of 458,674,000 pesos (\$216,173,000), as against 590,633,000 (\$284,587,000) in 1929. The imports and exports declined 10.5 per cent and 24 per cent, respectively, compared with 1929. Mineral and vegetable products comprised over 95 per cent of all exports. United States imports from Mexico (U. S. statistics) amounted to \$80,293,000 and exports to Mexico were \$116,214,000 during 1930, or 31.8 per cent and 13.2 per cent, respectively, below 1929. The United States supplied 68.2 per cent of all Mexico's imports in 1930 and purchased 58.3 per cent of the total exports.

**FINANCE.** The revised budget estimates for 1932, as submitted to the Chamber of Deputies Dec. 23, 1931, estimated revenues at 213,074,225 pesos and expenditures at 212,987,421 pesos. This compared with the 1931 budget estimates of 298,500,000 pesos and 298,488,000 pesos, respectively. The 1932 appropriations for the War and Marine Department were cut to 55,000,000 pesos from 70,000,000 pesos in 1931 and 113,000,000 pesos in 1930. The appropriations authorized under the 1931 budget were reduced about 6,000,000 pesos during the year, but Finance Minister Luis Montes de Oca on August 20 estimated that the final deficit would be about 80,000,000 pesos.

Under the agreement concluded with the International Committee of Bankers on Mexico in July, 1930, the principal amount of the government's direct foreign debt was fixed at \$267,493,250 and the principal amount of the debt of the Mexican National Railways was fixed at \$225,000,000. The internal debt was estimated by the Minister of Finance in 1931 at 600,000,000 pesos (nearly \$300,000,000 at par).

**COMMUNICATIONS.** Mexico had about 14,600 miles of railways, of which about 7500 miles comprised the National Railways of Mexico, the principal system. The National Railways are government owned but are privately managed under government supervision. A total of 66½ miles of new line were completed in 1930. Work was proceeding in 1931 upon the uncompleted 198-mile section of the Laredo-Mexico City highway, which was to provide for all year traffic between the Mexican capital and the United States. A new graveled highway between Mexico City and Vera Cruz, opened Mar. 21, 1931, reduced the traveling time by motor car to 10 hours.

**GOVERNMENT.** Under the constitution of 1917, executive power is vested in the President, elected by direct popular vote for four years and ineligible for reelection; legislative power in the Congress consisting of the House of Deputies elected for two years by universal suffrage, and the Senate, comprising two members from each State, elected in the same manner. A permanent

committee of 14 Senators and 15 Deputies, appointed by the respective Houses, sits while Congress is in recess. President in 1931, Pascual Ortiz Rubio, who assumed office Feb. 5, 1930. For local government, the Republic is divided into 28 States, one Federal District, and three Territories; a decree of Feb. 7, 1931, subdivided the peninsula of Lower California, formerly the Territory of Lower California, into Southern and Northern Territories of Lower California. The dividing line is the 28th parallel.

## HISTORY

**MEXICAN-AMERICAN RELATIONS.** The friendly relations with the United States developed during the ambassadorship of Dwight Morrow (q.v.) became embittered during 1931 by a series of unfortunate incidents. Foremost among these was the killing at Ardmore, Oklahoma, on June 8 of two Mexican students attending college in the United States. The two youths—Emilio Cortes Rubio, a nephew of President Ortiz Rubio, and Manuel Garcia Gomez—were mistaken for gunmen by two local deputy sheriffs and shot to death. About the same time Reuben Pardo, a Mexican citizen, was shot and killed by an American immigration official near San Diego when he sought to evade arrest on a charge of illegally entering the United States. The Mexican Government vigorously protested the action of a Chicago municipal judge in sentencing Adolfo G. Dominquez, Acting Mexican Consul in Chicago, to six months in jail for contempt of court on July 7. Acting Secretary of State William R. Castle, Jr., made a formal apology for this violation of the consul's diplomatic immunity (July 10) and secured his immediate release. But these incidents, and the acquittal by an Oklahoma jury of the deputy sheriffs involved in the Rubio-Gomez slayings, aroused much hostile feeling in Mexico.

There were numerous minor irritations. In January, Senator Ashurst's resolution for the purchase of Lower California and part of the State of Sonora aroused little interest in the United States but much indignation and recrimination in Mexico. The competition and the tactics of large American business concerns operating in Mexico aroused resentment. On February 22 the Confederation of Owners of Small Businesses protested to the convention of American consuls then in session in Mexico City that some American companies were selling below the cost of production in order to eliminate small native competitors and establish monopolies. And on August 8, Minister of Communications Juan Andreu Almazan reported to President Ortiz Rubio that foreign (i.e., American) fruit companies were seeking to destroy rather than to develop Mexico's fruit industry, in order to eliminate competition from the American market.

Friction arose also as a result of numerous deportations of Mexicans who had illegally entered the United States, alleged discrimination against Mexican wage earners north of the boundary, and the exodus of more than 100,000 Mexicans from the United States due to the economic depression and unemployment.

In August, the closing of the international bridges across the Rio Grande at 9 P.M. by the U. S. Treasury Department aroused protests from both sides of the border. The order was apparently intended to prevent all night gambling and revelry by American citizens in the Mexican fron-

tier towns. On September 15, a Ciudad Juarez crowd, celebrating the Mexican independence day, stoned a number of automobiles with American license plates. During February, the Governor of Lower California ordered the discharge of all Americans employed in Mexicali and the replacement of them by unemployed Mexicans.

The entry of Mexico into the League of Nations (q.v.) on Sept. 12, 1931, was considered of great importance in its effect upon future Mexican-American relations. Mexico's acceptance of the League's invitation was accompanied by a declaration that "she has never admitted the regional understanding mentioned in Article XXI of the League covenant." Article XXI specified in part that the League Covenant should not affect the validity of "regional understandings like the Monroe Doctrine."

On September 4, the Foreign Affairs Department announced that it could not accept the mediation of the U. S. Government in behalf of Chinese nationals in Mexico, which had been requested by the Chinese Foreign Minister. Accordingly, the American State Department on September 10 declined to exercise its good offices. The Chinese Government had requested American mediation in connection with the forcible expulsion of some 10,000 Chinese from the five northern and western Mexican States of Sonora, Jalisco, Chihuahua, Sinaloa, and Nayarit. The Chinese were notified by the State Governments that they would be forced to leave by September 5. They were given less than 60 days in which to dispose of their property and many were reduced to poverty by forced sales. On September 3, however, the Federal Government intervened and extended indefinitely the time limit set for September 5.

The Mexican Ministry of Foreign Relations, on October 1, announced the appointment of Dr. José Manuel Puga-Casauranc as Ambassador to the United States, succeeding Señor Manuel Tellez. For U. S. Mexican Mixed Claims Commission, see ARBITRATION, INTERNATIONAL.

**THE POLITICAL CRISIS.** A crisis of somewhat mysterious origin led to the resignation of President Ortiz Rubio's entire cabinet on October 15 and the emergency appointment of former President Calles as Minister of War. It was the second time that Mexico's "strong man" had emerged from political retirement to tide the nation over an emergency. The first time was in 1929 when Calles succeeded General Amaro temporarily as Minister of War and put down the Escobar rebellion. In 1931, circumstances pointed to factional divisions within the National Revolutionary party, which was in complete control of the country, rather than to unrest in the army.

That all was not well within the party was indicated by the transference of Gen. Lazaro Cardenas from the party presidency to the post of Minister of Interior on August 28. General Cardenas was succeeded as party leader by Gen. Manuel Perez Treviño, whose former position as Minister of Agriculture went to Gen. Saturnino Cedillo.

President Ortiz Rubio's official explanation for the resignation of the cabinet was that the members had retired "in order to leave their Executive in a position to reorganize the government on a basis of freedom from political unrest." He added that "on several occasions there have appeared in political and governmental circles indications of a crisis productive of lamentable public

unrest." General Calles in a statement on October 16 absolved the army of any responsibility for the crisis but issued a stern warning to "those who fail to comply with their duty." The same day he declared that the crisis had been "solved, due to the patriotism of certain members of the army, principally among them General Amaro."

The cabinet resignations were followed by those of virtually all party members holding important government posts, including the executive board of the National Revolutionary party, the three territorial governors of Lower California and Quintana Roo, the head of the Federal District, the Attorney General, and the chief of the Public Health Department.

The new cabinet was notable for the absence of the strong military element present in the preceding one. General Calles retained the War portfolio. The Ministry of Interior, ranking post in the cabinet, went to Manuel Tellez, who for 11 years had been Ambassador to Washington. The four civilian members of the former cabinet—Señors Estrada, Montes de Oca, Saenz, and Silva—were reinstated in their old posts.

The cabinet crisis passed without disorder, due to the intervention of General Calles. But it was preceded by several clashes of National Revolutionary party factions over State issues. A violent attack upon the Governor of Jalisco during a debate in the National Chamber of Deputies August 25 ended in a pistol battle in which Deputy Manuel H. Ruiz of Jalisco was killed and two other Deputies seriously wounded. Sixty shots were fired before the police restored order. The following day the Chamber expelled four Deputies from Jalisco, all supporters of Governor Ignacio de la Mora. Another factional struggle raged in the State of Chihuahua, where Governor Andres Ortiz was accused of manipulating the National Revolutionary party for his own ends. **ANTI-CATHOLIC DISORDERS.** Much more threatening than these minor political disorders was the development of open conflict between some of the State governments and the Roman Catholic Church. The 1929 agreement had ended a three-year struggle between the Federal Government and the Church. In the dispute concerning subsequent anti-Catholic legislation by the State legislatures, the Federal Government took the position that it could not intervene without violating States' rights.

The religious strife centred in the State of Vera Cruz, where the State Legislature on June 11 passed a law limiting the number of priests to one for every 100,000 inhabitants, or to 13 priests for the entire State. Archbishop Leopoldo Ruiz y Flores, Papal Delegate to Mexico, protested to President Ortiz Rubio on the ground that the Vera Cruz measure and similar legislation in the State of Tabasco were violations of the 1929 compact. The Federal Government declined to intervene. The Vera Cruz clergy refused to abide by the new law and in subsequent clashes which followed efforts of the authorities to put it into effect, a number of priests, laymen, and public officials were slain.

Restriction of the number of clergy and other anti-clerical measures spread from Tabasco and Vera Cruz to Yucatan, Chiapas, Durango, and Chihuahua. Similar legislation was under consideration in Sonora, Michoacan, and other States. Congress showed its sympathies on August 7 by ordering the removal of José Ramon Valdes, Acting Governor of Durango, on charges of permit-

ting violations of State religious laws. Late in September Mgr. Ruiz y Flores stated that the Roman Catholic religion was not being exercised formally in Vera Cruz, Tabasco, or Yucatan and only to a limited extent in several other States. The Catholic episcopate announced September 15 that it would postpone its petition for a reform of the Constitution until a more opportune time.

A provisional settlement of the Church-State feud in Vera Cruz was announced December 11 and churches in various cities were reopened. The following day, the ecclesiastical authorities celebrated with pomp and splendor the 400th anniversary of the legendary appearance of the Virgin Mary at Mexico's most sacred shrine, Guadalupe Hidalgo, just outside of Mexico City. Thousands of pilgrims from all parts of Mexico and other Latin American countries worshipped at the shrine. Declaring that the Guadalupe Hidalgo festivities represented a "gross exploitation" of the Mexican people, the leaders of the National Revolutionary party inaugurated a new campaign against the Church. A law limiting the number of priests in the Federal District, comprising Mexico City, and Lower California, to one for every 50,000 inhabitants was placed in effect December 30. In a pastoral letter issued the same day, Mgr. Pascual Diaz, Archbishop of Mexico, declared that Catholics could not accept the new law. Arrests of a number of priests followed.

THE FINANCIAL CRISIS. Despite political and religious difficulties, the nation's attention was mainly absorbed in the battle to check the economic depression and prevent the collapse of the currency. Although Mexico was nominally on the gold standard, with the silver peso as the circulating medium, the restriction of gold export to the Bank of Mexico in 1924 was virtually an abandonment of the gold standard. The government was unable to redeem the silver peso in gold and in 1928 it began to depreciate in relation to the gold peso. This depreciation was greatly aggravated in 1930 and 1931 by economic conditions. In December, 1930, the silver peso was selling at a 20 per cent discount in relation to the gold peso. This disparity in the value of the gold and silver peso caused severe dislocations in the economic structure and brought hardship to large sections of the population. There were serious strikes when industrial establishments sought to pay wages in silver. However, the government adopted this practice in December, 1930, and it was everywhere followed. Many who had contracted to pay rents, mortgages, and other fixed charges in gold received their own income in depreciated silver coins. The government's revenue likewise declined in gold value and at the beginning of 1931 it found itself unable to meet the gold payments on the foreign debt called for under the 1930 debt agreement (see 1930 YEAR BOOK). On Jan. 30, 1931, a supplementary agreement was reached with the International Committee of Bankers on Mexico under which Mexico for two years was to be allowed to deposit debt payments in Mexico in silver pesos. It was stipulated that if the silver peso did not regain parity, the Mexican government would make up the difference in gold.

The supplementary debt arrangement and the securing of a \$15,000,000 loan in January from the National City Bank of New York strengthened the silver peso somewhat. But in May it commenced another severe decline, which was not halted by the withdrawal from circulation of

10,000,000 silver pesos. With the silver peso selling at a discount of from 30 to 36 per cent below the gold peso, former President Calles was made head of the Bank of Mexico in July to avert further collapse. At his suggestion the government on July 18 pruned the salaries of the civil and army personnel by some 15,000,000 pesos (about \$7,500,000 at par) in order to offset a threatened budget deficit. Also on July 25, the Chamber of Deputies voted to abolish the gold standard in favor of a modified silver basic coin.

The abandonment of the gold standard was followed by the closing of a Mexico City bank and a heavy run on the Banco Nacional de Mexico, a strong institution. New York bankers predicted that foreign banks operating in Mexico would be compelled to withdraw. The government made strenuous efforts to balance the budget and provide for the payment of both the foreign and internal debt. Extraordinary taxes put into effect August 1 were estimated to yield an additional 20,000,000 pesos. The tariff was several times revised to encourage the consumption of domestic products, to aid Mexican producers in foreign markets, and thereby to restore an excess of exports.

IMPORTANT LEGISLATION. The Mexican Congress convened in special session May 24 and adjourned late in August in time for the convening of the regular session. In addition to the currency and tax laws mentioned above, Congress passed legislation extending the boundaries of the capital city and putting into effect a revolutionary labor code, promulgated by President Ortiz Rubio August 28. Provision was also made for the extension of agricultural credits and for reforms in agrarian legislation. On December 21, the Federal Chamber of Deputies approved a bill providing for the payment of the government's internal debt by the sale of government-owned lands, through the medium of bonds redeemable in lands.

The new labor code, which consisted of some 700 articles, inaugurated a unified and advanced social-economic policy covering the whole country. It provided for the preferential employment of nationals; written labor contracts; compulsory adoption of collective labor contracts under certain circumstances; the 8-hour day, with paid vacation after one year of service; a minimum salary standard; the payment of indemnity of three months' wages for unauthorized suspension or termination of labor contracts; recognition of strikes; labor accident benefits; compulsory arbitration of labor disputes; and close supervision of employer-employee relations by the government. The World Press Congress was held in Mexico City, commencing Aug. 10, 1931. See IMMIGRATION; EARTHQUAKES.

S. Bureau of Foreign and Domestic Commerce (I.L.L. 14), offers an extensive summary of the 1931 labor law.

MEYDUM. See ARCHAEOLOGY.

**MEZES, SIDNEY EDWARD.** An American educator, president emeritus of the University of Texas and the College of the City of New York, died in Pasadena, Calif., Sept. 10, 1931. He was born in Belmont, Calif., Sept. 23, 1863, and was graduated from the University of California in 1884, receiving the Ph.D. degree from Harvard University in 1893. Appointed an adjunct professor of philosophy at the University of Texas in 1894, he became associate professor in 1897, professor in 1900, dean in 1902, and president in 1908. In 1914 he was elected president of the College of the City of New York, where he remained until 1927. He also was director of *The Inquiry* in 1917-18, and in 1919 accompanied President Wilson to Paris, where he was a member of the Central Territorial Commission of the Peace Conference, having previously served as director of the Territorial Section of the American Commission to Negotiate Peace. He received the LL.D. degree from Southwestern University (1911), the University of California (1912), New York University (1915), and the University of Cincinnati (1915). He was co-author of *The Conception of God* (1897) and *What Really Happened in Paris* (1921) and author of *Ethics, Descriptive and Explanatory* (1901).

**MIAMI UNIVERSITY.** A coeducational institution in Oxford, Ohio, founded in 1809. The enrollment for the autumn of 1931 was 2309, distributed as follows: College of liberal arts, 836; school of education (four-year course), 728, (two-year course), 188; business administration, 478; fine arts, 79. The enrollment in two summer sessions was 1042. The faculty numbered 170. The income from the State of Ohio, fees, gifts, and income on investments for 1931-32 was approximately \$1,330,000. There were 121,000 bound volumes in the library. During 1931 a new physical education building and gymnasium and a new chemistry building were completed at a cost of approximately \$600,000, the funds being appropriated by the Ohio Legislature. President, Alfred H. Upham, Ph.D.

**MICHELSON, ALBERT ABRAHAM.** An American physicist, died in Pasadena, Calif., May 9, 1931. He was born in Strelna, Germany (now in Poland), Dec. 19, 1852, and at the age of two was taken to the United States.

Graduated from the U. S. Naval Academy in 1873 he had several years service in the U. S. Navy in the course of which he was instructor in physics and chemistry at the Naval Academy (1875-79) and at the Nautical Almanac Office (1880). It was while at the Naval Academy in 1878, engaged in repeating Foucault's experiment on the velocity of light, that Michelson began his classic and original experiments, the first of which were described in *Silliman's Journal* of May, 1878. He studied at Berlin, Heidelberg, and Paris (1880-82), and on his return to the United States became professor of physics at the Case School of Applied Science (1883-89) and held a similar chair at Clark University (1889-92). In 1892 he became head of the department of physics at the University of Chicago, retaining this chair until 1929 and being "distinguished service" professor after 1925.

Michelson's determinations of the velocity of light were carried on with many refinements after his first work of 1878. His interferometer enabled him to measure distances in terms of light waves; the original instrument was de-

vised in 1887. This method was used by him at the International Bureau of Weights and Measures at Sèvres, near Paris, to determine the length of the International Standard Meter in terms of the red light from a cadmium arc. This was found to be 1,553,164.13 wave lengths of such light, and when repeated 14 years later by French physicists, a value was obtained with a difference of but a small fraction of a wave length, so that the standard meter could at any time be reproduced from light measures. The interferometer also was employed by Michelson, with Gale and Moulton, to measure the rigidity of the earth, and later in measuring the diameter of a star by placing two interferometer mirrors on a 20-foot beam it was possible to measure the diameter of a star as effectively as with a telescope having a lens 50 feet in diameter. In the celebrated "Michelson-Morley experiment" motion relative to the ether was determined, and the work was repeated by Prof. Dayton C. Miller and again by Michelson, as the results were important to the development of the theory of relativity. Michelson devised the echelon spectroscope by which he was able to secure greater dispersion than with a prism, and under his direction was built a new and more efficient dividing engine for the construction of diffraction gratings.

Professor Michelson was a member of the National Academy of Sciences and was its president in 1923. He also was president of the American Physical Society (1901-02) and of the American Association for the Advancement of Science (1910). Among his more notable honors were Rumford Medal (1899); Grand Prix, Paris Exposition (1900); Matteucci Medal, Society Italiana, Rome (1904); Copley Medal, Royal Society, London (1907); Nobel Prize for Physics (1907); Elliott Cresson Medal (1912); and Draper Medal (1916). He was a member of many important learned societies of Europe, and held academic honors from many American and European universities. He published *Light Waves and Their Uses* (1903), a notable course of lectures delivered at Lowell Institute, Boston, in 1899.

**MICHIGAN. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1931, was 4,842,325, as against 3,668,412 in 1920. The native whites numbered 3,809,903 (1930), 2,874,992 (1920); foreign-born whites, 840,268 (1930), 726,635 (1920); Negroes, of whom there had been a considerable immigration from other States, 169,453 (1930), 60,082 (1920). Those of other races, 22,701 in 1930, included 13,336 Mexicans and 7080 Indians. The number of those listed as in gainful occupations in 1930 was 1,927,498. Of these, only 247,963 were in agriculture, while 833,789 were in the manufacturing and mechanical industries (this total including 349,151 in automobile manufacture and 113,046 in the building trades); 283,272 were in trade, 150,311 in transportation, 162,972 in domestic and personal service and 125,548 in professional service. Detroit's population numbered 1,568,662 (1930), 993,678 (1920); Grand Rapids had 168,592 inhabitants (1930), 137,634 (1920); Flint, 156,492 (1930), 91,599 (1920); Saginaw, 80,715 (1930), 61,903 (1920); Lansing, the capital, 78,397 (1930), 57,327 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops of Michigan for the years 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame ..	1931	2,394,000	2,544,000*	\$21,878,000
	1930	2,548,000	2,460,000*	40,098,000
Corn .....	1931	1,407,000	40,944,000	16,378,000
	1930	1,245,000	26,768,000	20,611,000
Oats .....	1931	1,435,000	43,768,000	10,504,000
	1930	1,354,000	48,744,000	16,573,000
Wheat .....	1931	711,000	18,446,000	9,234,000
	1930	705,000	16,160,000	11,802,000
Potatoes ...	1931	250,000	23,750,000	7,125,000
	1930	227,000	14,301,000	12,156,000
Dry beans ..	1931	614,000	3,316,000*	6,964,000
	1930	690,000	2,525,000*	10,858,000
Sugar beets .	1931	59,000	590,000*	.....
	1930	74,000	513,000*	4,143,000
Barley .....	1931	278,000	7,228,000	2,891,000
	1930	288,000	6,593,000	3,626,000
Rye .....	1931	158,000	2,183,000	811,000
	1930	140,000	1,820,000	1,001,000

\* 100-lb. bags.    \* Tons.

**MINERAL PRODUCTION.** Ranking after Minnesota alone in the mining of iron ore, Michigan produced much less ore in 1930. The long tons shipped from the State's mines decreased to 11,154,773 tons for 1930, from 16,838,508 for 1929; value of shipments fell to \$31,515,996 for 1930, from \$47,597,976. The production of the coal mines declined to 665,000 short tons for 1930, from 804,969 tons for 1929, when the product was valued at \$2,904,000. Chiefly from non-native coal, there were produced, in 1930, 2,603,815 short tons of coke, all in by-product ovens, or but little less than the 2,679,971 tons of 1929; by value, the totals were \$14,222,856 for 1930 and \$14,867,651 for 1929. The blast furnaces, however, shipped only 711,224 long tons of pig iron in 1930, as against 841,089 in 1929; by value, \$12,859,820 for 1930 and \$14,099,647 for 1929. The production of the copper mines declined moderately in quantity to 169,381,413 pounds for 1930, from 186,402,218 for 1929, and more severely in total value, to \$22,019,584 for 1930, from \$32,800,790 for 1929. The cement industry was less active, shipping 10,817,994 barrels of cement from mills in 1930, as against 13,325,727 in 1929; by value, \$14,897,439 in 1930 and \$18,816,711 in 1929. The total value of the mineral production of the State was \$151,975,563 for 1929; for 1928, \$123,825,527.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 represented the number of the State's manufacturing establishments as 6683 (some 15 per cent above the number for 1927). These establishments employed 528,512 wage earners (8.1 per cent more than had been employed in 1927) and paid them wages to the total of \$838,241,649 (10 per cent more than for 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$2,578,818,719 (an advance of 10 per cent over 1927). The manufactured product totaled \$4,636,361,417 (or 9.2 per cent above the total of 1927). The value added by manufacture was estimated at \$2,057,542,698. Somewhat less than half the manufacturing activity was concentrated in Detroit, where 2416 establishments employed 223,416 wage earners, paid them \$390,878,645, and turned out a manufactured product of the value of \$2,026,937,319. Pontiac, in second place, had 65 establishments, 21,800 wage earners, a wage total of \$35,944,723 and a product of \$248,201,533.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$66,-

456,045 (of which \$22,657,170 was for local education); for conducting public-service enterprises, \$180,032; for interest on debt, \$4,521,015; for permanent improvements, \$30,412,644; total, \$101,569,736 (of which \$33,034,409 was for highways, \$7,638,514 being for maintenance and \$25,395,895 for construction). Revenues were \$113,500,763. Of these, property and special taxes formed 49.1 per cent; departmental earnings and remuneration to the State for officers' services, 0.6; sale of licenses, 37.3 (including gasoline sale taxes amounting to \$16,714,394). The State's funded debt outstanding on June 30, 1930, was \$90,432,253, of which \$50,000,000 was for highways. Net of sinking fund assets, debt was \$64,372,174. On a property valuation of \$9,015,297,600 were levied in the year taxes of \$43,757,456.

**TRANSPORTATION.** The total number of miles of railroad line in operation on Jan. 1, 1931, was 8071.93. Increases of line to the total of 21.05 miles had been made during the year preceding, but abandonments to the total of 104.47 miles much exceeded them. In 1931 were built 14.24 miles of new second track.

**EDUCATION.** For the academic year ending in 1930 the number of persons of school age in the State was reported as 1,365,008. There was a net enrollment, in the public schools, of 970,582. The number (gross) of pupils enrolled in common schools or elementary grades was 838,790; that (gross also) of pupils enrolled in high schools was 167,857. The year's expenditures for public-school education totaled \$97,860,353. Salaries of teachers averaged, by the month, \$172.36. Legislative commissions reported in 1931 on the respective subjects of the equalization of school costs in different localities and the retirement of teachers.

**CHARITIES AND CORRECTIONS.** The State Welfare Department, as operating in 1931 comprised five commissions, those respectively of welfare, of prisons, of hospitals, of corrections and of the State Institute. Four of these bodies were each composed of five members; the fifth, the Hospital Commission, of seven. All members were appointive. Each commission performed duties of central control or administration in its respective field.

A sixth State hospital, situated at Ypsilanti, went into operation in June. On September 1 the 17 State institutions contained 22,836 inmates or pupils. The institutions and the numbers of persons for whom each cared, were: Kalamazoo State Hospital, 2717; Pontiac State Hospital, 1756; Traverse City State Hospital, 2180; Newberry State Hospital, 1162; Ionia State Hospital, 621; Ypsilanti State Hospital, 360; Farm Colony for Epileptics, 821; Michigan Home and Training School, 3402; State Prison, Jackson, 5576; Michigan Reformatory, Ionia, 1907; Branch Prison, Marquette, 936; Boys' Vocational School, Lansing, 599; Girls' Training School, Adrian, 282; State Public School, Coldwater, 380; School for the Deaf, Flint, 212; School for the Blind, Lansing, 138; Employment Institute for the Blind, Saginaw, 57.

**LEGISLATION.** The State Legislature held its regular session, sitting until May 22. It enacted the important measure for the reapportionment of seats in the Federal House of Representatives, creating 17 districts for the election of such Representatives, as against the previous 13. Wayne County, virtually Detroit, obtained five of the

districts and part of a sixth, as against a previous two and part of a third. Appropriations of about \$30,000,000 for each of the two ensuing fiscal years were provided. The Governor, however, vetoed about \$1,000,000 of each year's items. A number of special taxes were created, but a proposal to alter the State constitution so as to permit of the creation of an income tax failed of passage. A tax on malt, designed to yield some \$2,000,000 a year, of which the proceeds were to be devoted in part to a tuberculosis hospital in the northern part of the State, was voted. It was opposed by supporters of Prohibition and was vetoed by Governor Brucker, but was enacted over his veto. Penalties for delinquency in payment of taxes and assessments for 1929 and 1930 were remitted up to July 1. Another effort to render effective the taxation of banking assets was made in the passage of the McEachron bill, providing a new method of assessing such items for taxation.

**POLITICAL AND OTHER EVENTS.** In a special election held on April 6, the voters rejected the referendum proposal to establish the penalty of death for murderers. The voters also defeated a proposed amendment of the State constitution that would have permitted the issue of new bonds for the refunding of maturing debt of the State. This amendment, if adopted, would have had the particular effect of enabling the State to refund, instead of paying off, an issue of \$47,000,000 of its highway bonds maturing serially, starting with 1934. Investigation of the affairs of the State sinking funds brought to light in March purchases of municipal bonds of uncertain value during the term of State Treasurer McKay. About \$1,000,000 of State moneys paid for such bonds was reported to have been recovered to the State after the inquiry had been instituted.

Detroit experienced some financial difficulty, which was intensified by the need to make considerable expenditure to relieve distress among the unemployed. A citizens' finance committee formed to help the municipal government deal with these difficulties produced a plan by which the city, if it imposed on itself certain financial restrictions, might obtain the support of bankers to its refinancing some \$59,500,000 of its short-term notes. The plan was accepted by the city council on July 23. It involved a postponement of public improvements, with exceptions where impracticable, and a limit on payments for purposes of public welfare. The city reduced its assessed valuations of taxable property by about 10 per cent of the total and raised the tax rate by about the same percentage. Mayor Murphy sought in the winter and spring to take care of many of the destitute by means of an unemployment committee. Contributions to the funds of this committee were drawn from great numbers, including city employees.

Detroit, like some other leading American cities, had difficulty in placing bonds to cover its fiscal deficiency. Less than half of the year's tax levy of \$76,029,000 had been collected by the close of September. In August the city's floating debt rose to about \$82,000,000, but was partly cared for by the issue of \$30,000,000 in short-term serial bonds maturing yearly up to 1936, with the aid of a syndicate of bankers.

The Michigan statute requiring a person to disclose the source of liquor that he had obtained was tested in the courts, in the case of a farmer who had been put in jail for refusing to tell who

purveyed liquor with which he had become intoxicated. The Supreme Court discharged the defendant, holding that the statute was valid only against unwilling witnesses, not against persons accused. An oil well with the flow, unprecedented for the State, of nearly 3000 barrels a day was drilled in during July near Mount Pleasant.

**ELECTION.** The 8th Congressional District, which had been Republican for 32 years, elected Michael J. Hart, Democrat, on November 3, to be its representative, to fill a vacancy. Hart defeated his Republican opponent, Foss O. Eldred, by 25,744 (unofficial count) to 20,683.

**OFFICERS.** Governor, Wilber M. Brucker; Lieutenant-Governor, Luren D. Dickinson; Secretary of State, Frank D. Fitzgerald; Treasurer, Howard C. Lawrence; Auditor-General, Oramel B. Fuller; Attorney-General, Paul W. Voorhies; Superintendent of Public Instruction, Webster H. Pearce.

**JUDICIARY.** Supreme Court: Chief Justice, Henry M. Butzel; Associate Justices, Louis H. Fead, Nelson Sharpe, William W. Potter, John S. McDonald, George M. Clark, Walter H. North, Howard Wiest.

**MICHIGAN, UNIVERSITY OF.** A State institution for the higher education of men and women in Ann Arbor, founded in 1817. In 1930-31 the enrollment was 15,000. The registration in the 1931 summer session was 4329. The teaching staff was composed of 887 members, including 54 of the summer session staff not at the university during the regular year.

For current expenses, the State appropriated \$4,920,000, while approximately \$4,300,000 was derived from other sources. During the year 1930-31 the William W. Cook Legal Research Building was opened, and the construction of a new law school building, Hutchins Hall, was begun. The Model Elementary School was opened for its first year of operation. Two stories were added to the central portion of the University Hospital, to house a fully equipped unit for the treatment of tuberculosis. Important changes were made in the administration of the university: three vice presidents, in charge of finance, educational investigations, and the various extra-mural relations of the institution, were appointed; a university council was set up, taking the place of the more cumbersome senate; and a university press and an institute of archaeological research were organized. Among the important gifts of the year were a publications building, donated by Dexter M. Ferry, Jr., of Detroit (value with site, \$43,000); the Edwin S. George reserve of 1200 acres, from Col. Edwin S. George of Detroit; and bequests of \$100,000 and \$50,000 respectively, from the late Charles H. Ditson of New York City and the late William H. Murphy of Detroit. The university libraries contained 799,573 volumes. President, Alexander Grant Ruthven, Ph.D.

**MICROBIOLOGY.** See SOILS.

**MIDDLEBURY COLLEGE.** A coeducational, nonsectarian college in Middlebury, Vt., founded in 1800. For the autumn term of 1931, 655 students were registered as undergraduates and 17 as graduates; of these 372 were men and 300 women. The enrollment in the special summer schools of French, Spanish, German, and English, conducted by the college, amounted to 525. There were 67 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the college in 1930-31 amounted to \$4,263,820, and the income

for the year was \$363,933. Gifts to the college amounted to \$55,268. The library contained 60,000 volumes. President, Paul Dwight Moody, D.D.

**MIDWAY ISLAND.** See **HAWAII.**

**MIGRATION OF BIRDS.** See **ZOOLOGY.** under *Birds.*

**MILITARY PROGRESS.** The Disarmament Conference convening in Geneva on Feb. 2, 1932, was to have the task of examining the data submitted to it by the various governments concerning existing land, naval and air armaments. By Oct. 15, 1931, reports of 25 governments had been received, including most of the larger ones. Reserves and material constitute two of the most important factors in the strength of modern armies, as trained reserves form the backbone of conscript armies and permit rapid expansion from a peace to a war basis. These essential statistics were not given or were not satisfactory, and the same held in the case of military expenditures. Estimates based upon the laws of the larger European countries indicated in 1931 that the number of reserves had been kept very nearly at prewar levels. In the case of France since the World War, it was probable that at least 3,000,000 men had been trained with the active army and placed in the first-line reserve. The older classes and second-line reserves provided an additional reserve of more than a million. Italy had probably built up a reserve of 2,500,000 trained men although the actual number had not been made public. Poland had approximately 1,700,000 trained men; Czechoslovakia probably a reserve of 1,000,000 men. All the states created since the War had adopted conscription and built up considerable bodies of trained reserves.

The peace-time strength of land armed forces of the 18 principal European powers in 1913 (excluding Russia) was approximately 3,000,000. Including armies required by the six states created after the War—Poland, Czechoslovakia, Latvia, Lithuania, Finland, and Estonia—with a combined strength of 487,000, the total peace-time European effectives in 1930 were approximately 2,865,000 officers and men.

The strength of the British regular army in 1913 was approximately 174,000 officers and men, excluding Indian forces; in 1930 the average was 144,000 officers and men. The Indian Army in 1913 consisted of 75,000 British and 150,000 Indian troops, officered almost entirely by British officers. In 1930 the numbers were 60,000 and 162,000, respectively.

In the United States in 1913 the total personnel of the regular army was 92,035, including 4655 officers. In 1930 it was 139,957, including 13,080 officers—an increase of approximately 60 per cent.

In Japan the 1913 peace-time army was composed of 250,000 officers and men; in 1930 this total was approximately 259,000. In China there was no organized military establishment.

As to the total national budget of the great powers expended upon national defense the proportions were no less illuminating. Great Britain for the fiscal year 1930-1931 applied approximately 13.8 per cent of its total budget to the upkeep of the army, navy, and air forces, including ordinary pensions; France 21.9 per cent, not including pensions; the United States approximately 16.5 per cent. Approximately 69 per cent of the French budget was applied to pensions, debt

service and the army, navy and air forces; 65 per cent of the British budget; and 60 per cent of the United States budget.

France and Great Britain each devoted 18 per cent of the total expenditure for 1930 of their land forces to war material; while the United States and Italy devoted 17 per cent.

The increasing importance of military and naval aviation is shown by the proportion of total national defense expenditure devoted to air forces—Great Britain 18 per cent; France, Italy, and United States, 15 per cent.

#### MILITARY AIRPLANES

Country	Total no.	Notes
France	2,375	Includes 1,210 machines capable of use in war in service in tactical units and 637 in training school or formations in home country, but not those in immediate reserve.
Great Britain	1,434	Includes 706 machines in operational units, 247 in training and miscellaneous units, 481 in "immediate service"—distributed as follows: 848 in home country—286 reserves and 300 aircraft carriers.
Italy	1,507	Includes all machines suitable for use in war.
Japan	1,639	Includes machines in service.
United States	1,752	Army 965 tactical types in commission. Navy 787 machines in commission.

The year 1931 witnessed a definite advance in the valuation of air power and better understanding of the manoeuvres by which it could be brought into play. Since it was impossible to keep an impenetrable line of defending fighters in the air, it became essential to keep defending aircraft in a state of readiness and by a system of intelligence to dispatch a suitable force to intercept attacks. Air forces in turn must be supplemented by anti-aircraft defenses.

**GREAT BRITAIN.** The air exercises for 1931 considered as a whole showed that adequate air defense was practicable with a sufficiency of the best aircraft, anti-aircraft guns, and observation systems, but that Great Britain did not possess that sufficiency. An air force designed primarily for defense must be stronger numerically and in quality than one designed primarily for attack in similar circumstances. Great Britain in 1931 ranked fifth among the world's air powers in terms of first-line strength. Three new regular squadrons were to be added to the home defenses, bringing up the number of such squadrons to 29. The total strength of the air force was to be 72 regular squadrons. There were to be in addition, 13 non-regular squadrons, 8 belonging to the auxiliary air force and 5 organized on a cadre basis. There were 52 accidents to Royal Air Force machines in 1931 involving 41 cases of injury and 46 of loss of life.

The total strength of the Regular Army at home on June 1, 1931, was 101,248, compared with 99,223 a year earlier. Officers holding commissions in the Indian Army numbered 3114, of whom 105 were Indians, in addition to 116 British and 9 Indian officers awaiting appointment. The total number of men in the army establishment, exclusive of India, in March, 1931, was 148,800.

Effective July 1, reduction in pay for Army officers amounted to 8 per cent and was to be in force for two years. Under the new schedule, second lieutenants would receive \$2.45, captains

\$5.25, and majors \$7.10 daily. The air estimates for 1931 carried a net total of £18,000,000, an increase of £250,000.

**FRANCE.** The war budget passed by the Chamber of Deputies early in 1931 provided for land, sea, and air defenses of over \$461,000,000. The Army and Colonial defense items totaled about \$258,320,000 and the air budget \$89,196,036, providing for subventions for airplane manufacture, retaining civilian pilots for war service, and the development of new models. The French government's memorandum to the Secretary General in the matter of armament data was entirely devoted to reaffirming the French viewpoint that reduction of armament depends on the degree of security assured by a general organization of peace. See **DISARMAMENT**; **FRANCE** under *History*.

According to the memorandum, the number of effectives liable to be stationed at home had been brought down to 163,000 trained men out of 270,812 for home defense, to whom may be added 66,000 trained men out of 69,823 constituting the "expeditionary force" stationed at home. The expeditionary force not only was the normal reservoir for the relief of forces stationed overseas, but it also constituted a reserve in the event of colonial troubles. The oversea army comprised on the one hand the expeditionary force as defined and on the other the troops permanently stationed overseas. These are forces of a special nature, almost exclusively made up of professional soldiers and natives. The sum total of the forces stationed overseas, had been reduced from 312,312 in 1921 to 237,363 men in 1931, 13,904 of whom were for service in the mandated territories.

A decree constituting a Higher Air Council to be an advisory body on all subjects relevant to military aviation and in particular the organization of the aerial forces in peace and war was signed on Aug. 27, 1931. This placed the air command for the first time on an equal footing with the naval and military high command.

**GERMANY.** Germany's arms statement, as published by the League of Nations Secretariat, showed 100,500 men and 4500 officers. Naturally the report showed the lack of land armed forces overseas and of armed and air forces stationed in Germany.

**JAPAN.** A military reorganization scheme providing for a smaller and better army without increase in cost had been under consideration by a military committee formed in 1928. It planned for a reduction in man power by some 25,000, reducing the annual budget by \$3,250,000. The number of divisions was to remain at 17, with no reduction in the period of compulsory training of 18 months. In 10 years there had been a reduction in man power of 50,000, the peace strength being 272,000 in 1920 and 220,000 in 1930.

**ITALY.** A general law dealing with war-time drafting was passed, stating that in the event of war Italy looked to all its inhabitants, including women and minors, to collaborate in the defense of the country. One of the objects of the Air manoeuvres in Italy was to test the organization of mass formations and the direction of mass attacks on cities and on naval and military bases. Over 1000 planes were assembled in these manoeuvres, the largest air fleet ever brought together in Europe. It was found that defenses

against air raids were inadequate. One airplane was fitted with special wireless equipment enabling it to transmit drawings and pictures while in flight, the observers making rapid sketches of every position and wirelessly the actual sketches. The low-flying "trench strafers" carried front and flank machine guns and gas tanks.

**SPAIN.** The plan of the Minister of War to cut the strength of the Spanish peace-time army from eight divisions, effective July 1, 1931, would result in a saving of approximately \$20,000,000 per year. About 4000 army officers took advantage of the full retirement provisions prior to May 28, 1931, and left the service. Thirty-seven infantry regiments, 21 cavalry regiments, and one railway operation regiment were abolished. Two armored tank regiments and one machine gun battalion were added to the Army as well as additional anti-aircraft defense. (See **SPAIN** under *History*.)

Sixteen mobilization and reserve centres were established for mobilization of men; the requisitioning of animals, vehicles, materials and supplies of all kinds; and the organization of the reserve units.

**UNION OF SOVIET SOCIALIST REPUBLICS (RUSSIA).** The parade in Moscow on the fourteenth anniversary of the Revolution was an impressive display of military force, with automotive traction outnumbering the horse-drawn and cavalry sections combined by 10 to 1, including tanks from the "beetle" one-man machine gun carriers to lumbering caterpillars with an armament of two machine guns and one 2-inch gun.

The U. S. S. R. efforts towards armament production were being pushed at top speed. However, inferior steel turned out by Germany was being used and interfered with tank production. The *Ant-14*, the first Soviet-built 5-motored plane, had a speed of 135 miles per hour—only the DO-X and the Italian bomber KA-90 surpassed it in size. The number of military aircraft in the U. S. S. R. was over 1000 excluding training aircraft. The U. S. S. R. in 1931 had more aircraft than all her European neighbors put together. The land, sea, and air forces were under one head or command, the Commissar for War.

**UNITED STATES.** The normal 1930-31 appropriations for the military and non-military activities of the War Department amounted to \$445,691,011. The special funds made available for essential construction and maintenance programmes amounting to over \$58,000,000 were for relief measures and would not ordinarily have been undertaken in the fiscal year 1931. The adoption of a programme of operative economies involved the abandonment of 53 superfluous army posts. In some of these posts, however, congressional action would be necessary.

All components of the Army presented satisfactory evidence of efficiency and training. The Air Corps five-year programme had proceeded satisfactorily. A striking example of the advances realized in this field was the concentration on May 9, 1931, of the first provisional air division of 603 planes, piloted by Regular Army, National Guard, and the Organized Reserve personnel. Continuous progress was made in the important sphere of motorization and mechanization and in the evolution of new tactical methods rendered desirable and necessary by these improvements.

The personnel of the War Policies Commission created by Public Resolution No. 98—71 Con-

gress, comprised six cabinet officers, four Senators and four members of the House of Representatives. Hearings were conducted during months of March and May, 1931. A report was to be submitted to the session of Congress during the year 1932.

There were 1600 rifle clubs authorized by the War Department, and the popularity of rifle shooting continued.

Plans for the procurement of army munitions and for prompt mobilization of American industry in emergency, on which the Army and leading industrialists had been working, were not near completion. Of the 663 planes participating in the field exercises in May, 1931, only 449 were tactical types that would be used in active operation against an enemy. These represented the maximum combat strength of Army aviation units in continental United States. The United States stood fourth in actual tactical strength, including both the Army and Navy Air Service. With the Navy airplanes out of the calculation, the United States stood fifth. There is always a close relationship between racing and fighting planes. The United States Air Service was not keeping up with medium speed development, because of lack of funds. At the end of the fourth year of the five-year programme of expansion for the Air Corps, 1476 serviceable airplanes were on hand, a shortage of 183. There was a shortage of 190 R. A. officers commissioned in the Air Corps and 203 vacancies for second lieutenants in the same unit.

During the year Army airplanes were flown a total of 396,961 aircraft hours, or approximately 175 flights around the globe. The most marked improvement was made in the new bombardment type with a high speed of 108 miles per hour, an increase of 60 miles over the types in service. A new attack plane in sufficient numbers to equip one attack squadron attained a speed of 196 miles per hour, an increase of 55 miles over existing types. Improvements were made in radio communications and equipment for facilitating navigation in fog. The fatal accidents decreased from 37 to 21 and number of fatalities from 52 to 26, due to splendid air and ground discipline. There were 241 Reserve officers on extended active duty with tactical units, flying 67,391 hours, and for the first time service-type flying equipment was available for Reserve officers' use.

Under agreement between the War and Navy Departments the naval air forces were to be based on the fleet and move with it as an important element in performing the essential missions of the forces afloat. The army air forces were to be land based and employed as an element of the Army in carrying out its missions of defending the coasts, both in the homeland and in overseas possessions. Thus the fleet was assured absolute freedom of action with no responsibility for coast defense—which became absolutely the Army's—with little danger of duplication in planning, training, and procurement activities.

In another direction an accord with equally significant consequences in war planning was reached in principle, and made public in a document that might be called "Joint Army-Navy-Industry Preparation for National Organization in War." During the year the independent "mechanized force" at Fort Eustis was broken up, and the Cavalry was given the task of developing combat vehicles that would enhance its power

in reconnaissance, counter reconnaissance, flank action, pursuit and similar operations. One of its regiments was to be equipped exclusively with such vehicles, while the Infantry was to give its attention to machines intended to increase the striking power of that arm against strongly held positions. To the greatest extent possible machines were to be used to increase the mobility, security and striking power of every ground arm, but no separate corps was to be established.

The Organized Reserve Corps, including both active and inactive lists, had a commissioned strength of about 108,000. Promotions were placed entirely upon the basis of military qualifications, changing policies heretofore in effect. With the development of reserve organization it was becoming more feasible to administer them as units, instead of treating individually with officers. Reserve regulations were liberalized to permit promotion of second lieutenants from Reserve Officers' Training Corps to first lieutenants without restriction as to vacancies.

During the year 6569 students completed the Reserve Officers' Training Corps. camps, while in the Citizens' Military Training camps 38,000 applicants received training.

The Annual Report of the Adjutant General of the Army for the fiscal year ending June 30, 1931, showed the actual strength of the Army by classes of personnel, as follows:

<b>Commissioned officers:</b>	
Regular Army .....	12,099
Philippine Scouts .....	78
Retired (both of above) on active duty .....	145
<b>Total .....</b>	<b>12,322</b>
<b>Total Warrant Officers .....</b>	<b>1,028</b>
<b>Total enlisted, including 6,433 Philippine Scouts .....</b>	<b>125,817</b>
<b>Aggregate .....</b>	<b>139,267</b>

In addition to all the foregoing there were 809 army nurses (597 Regular, and 212 Reserve), 31 Contract Surgeons, and 836 cadets at the United States Military Academy—making a grand total of 140,543 individuals in the military service.

The regular troops in China consisted of 58 commissioned officers, 2 warrant officers, and 948 enlisted men, a total of 1008. In view of conditions in China this seemed a very inadequate legation guard.

The strength of the Officer Reserve Corps by grades on June 30, 1931, was major generals 18, brigadier generals 106, colonels 1202, lieutenant colonels 3505, majors 8910, captains 20,678, first lieutenants 31,246, second lieutenants 54,825, or a total of 120,550 accepted appointments, a gain of 7027 in all grades. For the fiscal year \$6,542,362 was appropriated for Organized Reserve activities, \$2,815,866 was set aside for preparation for commission as Reserve Officers, 43,042 applicants were ordered to camps, 40,564 reported, 39,061 enrolled and 37,049 completed training, including 2037 graduated from the blue course. During the summer of 1931 there were held 99 camps for training reserves.

On June 30, 1930, there were 2578 officers on the retired list of the Regular Army.

During the year the 1st Battalion, 2nd Field Artillery in Panama was equipped with the new standard 75 mm. pack howitzer, one of the most

efficient weapons ever devised by the Ordnance Department. The .50-calibre machine gun was eliminated from consideration for anti-aircraft defense for field artillery due to the superiority of the .30-calibre machine gun in point of hits per elapsed period of time, up to ranges of 1000 to 1200 yards.

Troops in the Canal Zone obtained training in transporting the 14-inch railway guns in Panama between the emplacements at either end of the canal, by moving one gun from Culebra Island to Fort Randolph and return in nine hours without attempting high speed or obtaining right of way over the Panama Railroad.

Including overseas possessions the system of harbor defense embraced approximately 315 batteries numbering 800 fixed major and minor calibre guns, fire control installations, searchlights, power plants and other accessories. There were also 103 batteries mounting 245 fixed anti-aircraft guns, installations costing \$250,000,000. Recent changes in naval design and in the composition of fleets had the effect of increasing the offensive power of guns mounted on shore which were formerly out-classed by guns carried by battleships. The 12-inch and 16-inch guns, long range, installed during and after the World War were superior to guns possessed by any country for similar purposes and the latest 16-inch gun was superior to any calibre carried by ships of any navy. Progress was being made in the development of fire control equipment for long-range sea coast guns and in the development of the same for anti-aircraft artillery.

In the Ordnance Department the following items were procured: 15 75-mm. pack howitzers, 15 3-inch anti-aircraft mobile guns and 1 set of tools for its manufacture, 11 37-mm. guns, 12 75-mm. howitzers, 4 105-mm. howitzers, 20 .276 Garand rifles.

The pilot 155-mm. gun with 8-inch howitzer carriage T2 was completed and transferred to the Aberdeen Proving Ground for test. Its preliminary firing indicated this unit satisfactory as a firing unit, and capable of making a speed of 45 miles per hour.

Contracts were made for the manufacture of seven Christie convertible type (medium T3) tanks. In the tests made early in the year this machine sped over rough country at 45 miles per hour on its caterpillar tractor belts. With wheels instead of tractors it reached a maximum speed on a macadam road of 84 miles per hour. It is a 10-ton tank carrying a crew of two. To shift the chassis from tractors to wheels requires 14 minutes. It carries one one-pound cannon and one .45-calibre machine gun and is armored with steel plate  $\frac{5}{8}$ -inch thick. Carrying 90 gallons of gasoline it can move 3 miles on a gallon on wheels and 2 miles with caterpillar treads.

Contrary to popular belief the use of helium in military balloons in place of hydrogen was found more economic and further study contemplated the disuse of hydrogen altogether.

According to the chief of the Militia Bureau the aggregate strength of officers, warrant officers and enlisted men of the National Guard was 187,386. To promote general efficiency 295 selected officers were sent to various army service schools, where special courses adapted to their needs were given. There were 16 major generals and 82 brigadier generals in the National Guard on June 30, 1931; 239 colonels, 499 lieutenant

colonels, 1184 majors, 4374 captains, 3487 first lieutenants and 3197 second lieutenants, with 198 warrant officers and 1 cornet—making a total of 13,250. During the year four divisions were assembled for field training. The strength of the guard was 184,371 officers and men and the maximum was 190,211.

The accompanying table from the War Department gives the strength of the guard, by States, as of Apr. 1, 1931:

State	Officers	Enlisted
Alabama	216	2,506
Arizona	78	1,148
Arkansas	139	2,046
California	452	6,010
Colorado	192	1,651
Connecticut	309	8,995
Delaware	55	775
District of Columbia	70	980
Florida	175	2,288
Georgia	243	3,875
Hawaii	102	1,590
Idaho	103	1,158
Illinois	647	8,855
Indiana	373	4,427
Iowa	266	3,291
Kansas	248	2,926
Kentucky	218	2,526
Louisiana	186	1,845
Maine	172	2,215
Maryland	245	3,081
Massachusetts	666	8,936
Michigan	341	4,175
Minnesota	353	4,626
Mississippi	122	1,612
Missouri	309	4,160
Montana	77	1,107
Nebraska	108	1,606
Nevada	8	127
New Hampshire	77	972
New Jersey	304	4,452
New Mexico	74	900
New York	1,365	19,685
North Carolina	266	3,110
North Dakota	77	1,089
Ohio	616	7,876
Oklahoma	403	4,745
Oregon	206	2,841
Pennsylvania	850	10,993
Porto Rico	90	1,401
Rhode Island	153	1,765
South Carolina	146	2,000
South Dakota	105	1,241
Tennessee	180	2,281
Texas	698	7,507
Utah	126	1,256
Vermont	81	1,117
Virginia	258	3,556
Washington	216	2,410
West Virginia	122	1,843
Wisconsin	359	4,516
Wyoming	51	573
Totals	13,145	171,226

The guard in 1931 was about 60,000 officers and enlisted men greater in size than it was in 1914, the year of the outbreak of the World War. In 1915 it was 120,693 and in 1916, when the war clouds began to gather in the United States it was 123,605. In 1929 its strength was 182,715. Indications were that maximum strength would be reached in the near future.

**MILITARY TERRITORY OF THE NIGER.** See FRENCH WEST AFRICA.

**MILK.** See DAIRYING.

**MILLS, CHARLES KARSNER.** An American neurologist, died May 28, 1931, in Philadelphia, Pa., where he was born Dec. 4, 1845. He was graduated from the medical department of the University of Pennsylvania in 1869 and received the Ph.D. degree two years later. From 1883 to

1898 he was professor of diseases of the mind and nervous system at the Philadelphia Polyclinic, and from 1891 to 1902 clinical professor of nervous diseases at the Women's Medical College of Pennsylvania. At the University of Pennsylvania he served as professor of mental diseases and medical jurisprudence (1893-1901), clinical professor of nervous diseases (1901-03), and professor of neurology (1903-15). He attained a high reputation as an alienist and was particularly well known for his pioneer work in the field of cerebral localization. He was also president of the American Neurological Association during 1886-87 and 1923-24. Besides monographs on mental and nervous strain he published *The Nursing and Care of the Nervous and Insane* (1912) and edited a valuable *Treatise on the Nervous System and Its Diseases* (1898).

**MILLS COLLEGE.** A college for women in Oakland, Calif., founded in 1885. The enrollment in the autumn of 1931 was 515, while that for the summer session was 52. The summer session included courses only in music and physical education. The faculty numbered 81 members, plus 12 assistants below the rank of instructor. The total productive funds amounted to \$1,612,737 and the total assets to \$4,242,420, while the income for the year ending June 30, 1931, was \$432,742. The library contained 56,500 volumes. President, Aurelia Henry Reinhardt, Ph.D., LL.D., Litt.D.

**MINAS GERAES.** See BRAZIL under *History*.  
**MIND.** See *PHILOSOPHY*.

**MINERALOGICAL CHEMISTRY.** See *CHEMISTRY*; *MINERALOGY*.

**MINERALOGY.** Several important papers appeared during the year 1931, of which the following selection should be noted.

An American version of Dr. Victor Goldschmidt's admirable discussion of "Crystallographic Classification" appeared in the *American Mineralogist* (vol. xvi, p. 18). Dr. Goldschmidt in this paper advanced arguments in favor of a six system division as against the thirty-two group proposed by Gadolin (1867), and advocated by P. Groth (1895). This stand is in line with the present day trend toward simplification in matters of scientific classification, and carries with it the weight of the opinion of the world's greatest authority on mathematical crystallography.

Among the very useful compilations and collections of data may be cited Dr. L. J. Spencer's "Twelfth List of New Mineral Names" (*Mineralogical Magazine*, vol. xxii, pp. 614-632). Like the preceding lists compiled by Dr. Spencer, this compendium includes the new mineral species and varieties added to the science during the three years preceding its issue. A collection of very useful data is contained in the "Tables and Charts of Specific Gravity and Hardness for use in Determination of Minerals," by Joseph L. Rosenholtz and Dudley T. Smith, both of Rensselaer Polytechnic Institute (*Engineering and Science Series* No. 34). The matter is arranged for alphabetical species reference and also on a basis of specific gravity (Chart A), and hardness (Chart B).

An extremely valuable crystallographic compilation is Dr. L. Tokody's "Pyrit formen und fundorte" (*Zeitschrift für Kristallographie*, lxxx, pp. 255-348). In addition to the usual list of crystallographic forms with localities and

authors, this work lists alphabetically the pyrite occurrences which have been studied crystallographically with the habit, occurring forms, authors, and literature.

The complex and much discussed problem of the crystallization of the mineral species Calaverite has been exhaustively dealt with by Doctors Victor Goldschmidt, Charles Palache, and Martin Peacock (*Neues Jahrbuch für Mineralogie, Geologie und Paläontologie, Beilage-Band* 63 pp. 1-58).

A new edition of *Gem and Gem Minerals*, by Edward H. Kraus and Edward F. Holden (New York), contains considerable added material both in text and illustrations, bringing this standard work up to date. Particularly illuminating and well chosen are the added and substituted half tone illustrations. *The Minerals of New York City and its Environs* by James G. Manchester (New York Mineralogical Club) is a much needed volume that should prove of more than local interest.

In regard to the number and importance of the new mineral species announced, the year 1931 was a notable one. A new manganese phosphoborate, closely related to reddingite, was found in the Chicago mine, in Iron County, Michigan. The name *seamanite* was assigned to this new species in honor of Prof. Arthur E. Seaman of the Michigan College of Mining and Technology. Seamanite occurs in acicular, orthorhombic crystals, pale yellow in color.

*Landesite*, a new ferromanganese hydrated phosphate from Poland, Maine, was named in honor of Prof. Kenneth K. Landes of the University of Kansas. It is an alteration product of reddingite, sometimes pseudomorphous after the latter mineral and is brown in color.

*Krausite*, named in honor of Prof. Edward H. Kraus, of the University of Michigan, is a new sulphate of iron and potash from the borax deposits of San Bernardino County, California. It occurs in monoclinic crystals, pale greenish yellow in color. From the same region comes a new sodium sulphate with fluorine, which occurs in colorless crystals steeply rhombohedral in habit at Searles Lake. This new sulphate has been named *Schairerite* in honor of Dr. J. F. Schairer, of the Carnegie Geophysical Laboratory. *Curtseite*, another new California mineral species, was named in honor of L. Curtis who first noticed this organic material in the crevices in sandstone at Shaggs Springs in Sonora County, where its greenish yellow flakes result from the emanations of hot springs.

A new hydrated iron vanadate was found in the carnotite region of Colorado and Utah, and was named *I'ervanite* (*ferrum-vanadim*) in recognition of its metallic composition. It occurs in brownish to yellowish masses of fibres which are probably monoclinic.

*Clarkeite*, named in honor of the late Prof. Frank Wigglesworth Clarke (1847-1931) of Washington, D. C., is a newly recognized uranium product, related to gummite but distinct from it. It occurs in the vicinity of Spruce Pine, Mitchell County, N. C., as dark brown masses associated, and in direct contact with, uraninite, and itself surrounded by gummite. A new sulphantimonite of lead and silver, near frizelyite in composition, has been found in the Department of Potosi, Bolivia. This new species, which occurs in dark gray prismatic crystals, has been

named *ramdohrite*, in honor of Prof. Paul Ramdohr, of Aachen, a German mineralogist.

A new silico-arsenide of manganese and minor metallic bases has been announced as coming from Långban, Sweden, a locality notable for rare and unusual species. The name *allodelphite*, has been assigned to this new species, which is closely related to, and associated with synadelphite, the relation between the two minerals being expressed in its name. Allodelphite occurs in dark reddish brown tabular crystals. *Bianohite*, a new hydrous sulphate of iron and zinc, was found to occur in Venezia (formerly part of Carniola), as a white crystalline crust on the walls of the mines at Raihe. It was named in honor of Prof. Angelo Bianchi, of Padova. From Nagatejima, on the Noto Peninsula of Japan, comes a new phospho-silicate of alumina, the rare earths, iron and calcium, which has been named *nagatelite*. It occurs in black crystals and tabular masses, the monoclinic prisms placing it in the epidote group close to allanite. *Serendite*, named in honor of J. N. Serend, was a new hydrous silicate of manganese, lime soda, and potash from the Island of Rouma, in the Los Archipelago, French Guinea. It occurs in nepheline syenite in rose red monoclinic crystals.

The Belgian Congo, which has in recent years been highly productive of new and rare species, yielded a new cobalt hydroxide, from Mindingi, Katanga. This has been named *stainierite*, in honor of Prof. Xavier Stainier, of the University of Gand (Ghent), Belgium. It occurs in compact, black, crystalline masses, and is regarded as a crystalline phase of cobalt oxide, of which the colloidal equivalent is heterogenite. *Cooperite*, which was reported in the YEAR BOOK for 1929, as a provisional new species was confirmed.

*Maitlandite* and *Nicolayite*, two amorphous uranium minerals from Wodgina, Northwest Division, Western Australia, which had previously been described as mackintoshite and thorgummite respectively, as a result of a more thorough investigation were established as new species. The first is named in honor of A. Gigg Maitland, a former Government Geologist, the latter is named after the late Rev. C. G. Nicolay, an eminent local mineral collector. Maitlandite is black in color, nicolayite is yellow. From the famous mines at Broken Hill in New South Wales comes a new hydrous silicate of iron, manganese, lime and magnesia, occurring in jet black, compact amorphous masses. This has been named *sturtite*, in recognition of Captain Charles Sturt, the first white man to visit the site of the Broken Hill mines. See also CHEMISTRY, GEOLOGY.

**MINERAL PRODUCTION IN THE UNITED STATES.** In 1931 the economic depression seriously affected the mineral industry in the United States and there resulted in all fields, except gold, a considerable curtailment in mining operations with a marked decline in production indicated both by reduced amounts and values. In the non-ferrous metals, prices suffered, while in the case of the mineral fuels, there was decreased production of coal, petroleum, and natural gas all registered in heat lines. Articles on individual minerals discuss productions for the year 1931 while the following paragraphs, based on the Annual Summary for 1930 of the U. S. Bureau of Mines, discuss the situation in that year which was in a large measure

preliminary to 1931 indicating the unprecedented curtailment of operations and production.

The U. S. Bureau of Mines stated the aggregate value of all mineral products in the United States in 1930, at \$4,810,400,000, the lowest point reached since 1922. This figure, as compared with the total value for 1929, represented a reduction of 18 per cent. However, the relative decline in value between 1930 and 1929 was only about one-half as severe as the 41 per cent decrease shown by the total value for 1921 as contrasted with the all-time record year of 1920. The 1930 total value was approximately equal to that reported for 1919 and 1922 and was approximately double that reported for any of the pre-war years 1912 to 1915. The accompanying tabulation on pages 517 and 518 and the separate articles on various minerals indicated decreased production in 1930 as compared with 1929.

The mineral fuels as a group showed a decrease of about 14 per cent in value of total products. Less bituminous coal and anthracite were produced in 1930 than in any postwar year free from serious labor difficulties, and the average unit sales realizations were somewhat lower than in immediately preceding years. Petroleum production decreased for the first time in six years; the output in 1930 dropped sharply to a level below that of any of the preceding three years, and the total value declined in somewhat large ratio. The production of natural gas increased, while the total value remained approximately the same as in 1929; a decline in the output of natural gasoline was accompanied by a much large relative decrease in total value.

The total value of metals produced in the United States in 1930 decreased about 33 per cent from 1929. Most striking were the notable declines in value of the major metals, ranging from 30 to 49 per cent for copper, pig iron, lead, silver, and zinc. Only gold, the standard price of which was not affected by the business depression, showed an increase in value that accompanied a gain of 3.5 per cent in output. Aluminum, manganese ore, and cadmium made moderate gains in production, but the total values were slightly less than in the preceding year. All producers of metals felt sharply the effect of weakened prices and generally reduced output.

The total value of nonmetallic products (not including fuels) showed a comparatively moderate decline of 12 per cent. Prices were almost universally lower than in 1929; and output was usually reduced, especially during the latter half of the year. All of the important nonmetallic building materials—stone, sand, gravel, gypsum, lime, cement, asphalt, slate, mineral paints, sand-lime brick, and clay—showed moderate to marked decreases in total value in 1930.

**MINING AND METALLURGICAL ENGINEERS,** AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 47 affiliated societies in American colleges. On Nov. 15, 1931, there were 9502 members, distributed as follows: Honorary, 17; members, 6561;

## MINERAL PRODUCTS OF THE UNITED STATES, 1929 AND 1930 \*

Product	1929		1930	
	Quantity	Value	Quantity	Value
<b>METALLIC</b>				
Aluminum .....	pounds.. 225,000,000	\$ 51,864,000	229,035,000	\$ 50,961,000
Antimonial lead <sup>b</sup> .....	short tons (2,000 pounds).. 25,669	8,267,095	13,711	1,892,524
Antimony <sup>c</sup> .....	do. 3,052	545,700	1,685	258,500
Bauxite .....	long tons (2,240 pounds).. 865,777	2,265,638	830,612	1,928,297
Cadmium .....	pounds.. 2,451,427	2,009,956	2,777,762	1,777,768
Chromite .....	long tons.. 269	8,976	80	1,908
Copper, <sup>d</sup> sales value .....	pounds.. 2,002,863,135	852,504,000	1,894,389,327	181,271,000
Ferro-alloys .....	long tons.. 829,824	75,506,078	650,240	51,900,220
Gold <sup>e</sup> .....	troy ounces.. 2,208,386	45,651,400	2,285,603	47,247,600
Iron:				
Ore <sup>f</sup> .....	long tons.. 75,602,734	197,148,640 <sup>f</sup>	55,201,221	145,619,059 <sup>f</sup>
Pig .....	do.. 41,549,161	781,858,075	29,905,355	512,165,131
Lead (refined), <sup>d</sup> sales value .....	short tons.. 672,498	84,735,600	573,740	57,374,000
Manganese ore (85 per cent or more Mn) .....	long tons.. 60,379	1,612,357	67,035	1,437,465
Manganiferous ore (5 to 35 per cent Mn) .....	long tons.. 1,188,258	8,274,466	785,390	2,401,605
Mercury:				
Metal .....	flasks (76 pounds net) 23,682	2,892,638	21,553	2,478,789
Ore .....	short tons.. (g)	(h)	(i)	(j)
Nickel (value at New York City) .....	do.. 840	297,273	808	213,803
Ores (crude), old tailings, etc.:				
Copper .....	do.. 68,422,000	(h)	(i)	(j)
Copper-lead and copper-lead zinc .....	do.. 259,000	(h)	(i)	(j)
Dry and siliceous (gold and silver) .....	do.. 7,671,000	(h)	(i)	(j)
Lead .....	do.. 8,165,000	(h)	(i)	(j)
Lead-zinc .....	do.. 14,469,000	(h)	(i)	(j)
Zinc .....	do.. 7,193,000	(h)	(i)	(j)
Platinum and allied metals (value at New York City) .....	troy ounces.. 47,977	3,121,471	43,502	2,048,824
Silver .....	do.. 61,327,868	32,687,754	50,748,127	19,538,029
Tin (metallic equivalent) .....	short tons.. 39	35,600	17	10,590
Titanium ore .....	do.. (j)	(j)	(j)	(j)
Ilmenite .....	do.. (j)	(j)	(j)	(j)

<b>SUMMARY</b>				
Total value of metallic products .....		\$1,475,990,000		\$ 982,550,000
Total value of nonmetallic products (exclusive of mineral fuels) .....		1,210,353,000		1,067,500,000
Total value of mineral fuels .....		3,190,527,000		2,751,450,000
Total value of "unspecified" (metallic and non-metallic) products (partly estimated) <sup>e</sup> .....		10,430,000		8,900,000 <sup>h</sup>
Grand total approximate value of mineral products .....		\$5,887,800,000		\$4,810,400,000

<sup>a</sup> In this general statement certain of the figures represent shipments rather than quantity mined, and some of the figures for 1930 are estimates. The reader is referred to the articles on the various mineral products for information in greater detail than is given here.

<sup>b</sup> From both domestic and foreign ores.

<sup>c</sup> Figures represent antimony content of antimonial lead. Value excluded from metallic total as the value of the antimony is included in the antimonial lead value.

<sup>d</sup> Product from domestic ores only.

<sup>e</sup> Value, \$20.671834625323 an ounce.

<sup>f</sup> Value not included in total value.

<sup>g</sup> Figures not available.

<sup>h</sup> Figures showing values not available.

<sup>i</sup> Figures for 1930 not available.

<sup>j</sup> Value included in total value of metallic products; Bureau of Mines not at liberty to publish figures.

<sup>k</sup> Figures obtained through cooperation with Bureau of the Census. Figures for 1930 not available, estimate of value included in total value of nonmetallic products.

<sup>l</sup> Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

<sup>m</sup> Figures represent tripoli only. Value of diatomite is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

<sup>n</sup> No canvass. Estimate of value included in total value of nonmetallic products.

<sup>o</sup> Value included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

<sup>p</sup> Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").

<sup>q</sup> Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

<sup>r</sup> Equivalent as K<sub>2</sub>O.

<sup>s</sup> According to Bureau of the Census.

<sup>t</sup> Figures represent talc only. Value of Soapstone is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

<sup>u</sup> Includes for 1930 the value of bismuth, cadmium compounds (\$323,718), chats (\$515,000), columbite (\$3,350), flint lining for tube mills and pebbles for grinding (\$50,816), optical fluor spar, iodine, iron ore sold for magnets, iron ore sold for paint (\$53,520), lithium minerals (\$56,327), new ingot magnesium (\$268,864), natural magnesium salts (\$1,071,112), calcareous marl (\$112,523), greensand marl (\$221,211), micaceous minerals (\$56,731), molybdenum (\$2,065,000), selenium (\$454,911), silica sand and sandstone (finely ground) (\$1,009,500), sodium salts (carbonate, bicarbonate, sulphate, and trona) from natural sources (\$1,789,104), sulphur ore (\$2,700), tellurium (\$7,996), and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

junior members, 273; associates, 995; student associates, 945; Rocky Mountain members, 130; and junior associates (class abolished in 1930), 581. The income for 1931 was \$170,000.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centres, an annual meeting, or four-day convention beginning on the third Tuesday in February, is held in New York City. The medals and prizes awarded by the society during 1931 for notable work in the field of mining and metallurgy were: The James Douglas Medal, to William H. Peirce; William Lawrence Saunders Gold Medal, to Francis William MacLennan; Robert W. Hunt Prize, to Edmund Sharington Davenport. The Institute publishes *Transactions*, an annual in several volumes containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly bulletin; the *Year Book*, which constitutes a "Who's Who" in the profession; *Technical Publications*, a series of individual technical pamphlets; and special volumes from time to time. In connection with

three other societies, it maintains the engineering societies library and an employment bureau. The officers elected at the 1931 convention were: President, Robert E. Tally; vice presidents, Howard N. Eavenson and H. A. Guess; directors, Louis S. Cates, Karl Eilers, S. R. Elliott, H. G. Moulton, and William Wraith; secretary, H. Foster Bain, who was succeeded by A. B. Parsons on Nov. 1, 1931; and treasurer, Karl Eilers. Headquarters are in the Engineering Societies Building, 29 West 39th Street, New York City.

## MINNEAPOLIS INSTITUTE OF ARTS.

See ART MUSEUMS.

**MINNESOTA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,563,953; in 1920 it was 2,387,125. The native whites numbered 2,150,679 (1930), 1,882,772 (1920); foreign-born whites, 388,294 (1930), 486,164 (1920). Negroes numbered 9445 (1930). Persons of other races, 15,535 in 1930, including 3626 Mexicans (formerly counted among the foreign-born whites) and 11,077 Indians. Of 992,847 persons listed as in gainful occupations in 1930, 303,822 were in

agriculture, 183,645 being farmers; those in manufacturing and mechanical industries numbered 195,779, including 44,551 in the building industry; in trade, 162,680; in transportation, 98,180; professional service, 82,273; domestic and personal service, 86,852. Minneapolis, the most populous city, had 464,356 inhabitants (1930), 380,582 (1920); St. Paul, the capital, 271,606 (1930), 234,698 (1920); Duluth, 101,463 (1930), 98,917 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1931	4,896,000	115,056,000	\$42,571,000
	1930	4,533,000	140,528,000	74,477,000
Hay, tame	1931	2,536,000	2,756,000*	22,875,000
	1930	2,411,000	3,179,000*	32,426,000
Oats	1931	4,575,000	123,525,000	25,940,000
	1930	4,442,000	166,575,000	41,644,000
Barley	1931	1,874,000	37,480,000	12,743,000
	1930	1,994,000	53,838,000	18,843,000
Wheat	1931	1,224,000	18,011,000	9,983,000
	1930	1,366,000	22,626,000	13,014,000
Potatoes	1931	861,000	28,880,000	8,664,000
	1930	814,000	22,608,000	14,695,000
Flaxseed	1931	361,000	6,027,000	7,413,000
	1930	742,000	7,420,000	10,759,000
Rye	1931	865,000	5,475,000	1,916,000
	1930	424,000	6,869,000	2,129,000

\* Tons.

**MINERAL PRODUCTION.** The State maintained its production of iron ore in 1930 at the rate of five-eighths, by value, of the total for the United States. The quantity produced in Minnesota, however, fell sharply to 34,165,777 long tons for 1930, from 46,470,243 for 1929; and the total by value to \$90,835,451 for 1930, from \$121,776,312 for 1929. As usual, a small proportion of the ore was converted into pig iron within the State. The quantity of pig iron shipped from the blast furnaces fell to 206,622 long tons, for 1930, from 376,551 for 1929. Related to the iron industry, the coking of coal from outside the State yielded 641,205 short tons of coke in 1930, as against 746,004 in 1929; by value, \$5,508,979 for 1930 and \$6,478,228 for 1929. There were mined, in 1930, 693,546 long tons of the lower-grade manganiferous ore; in 1929, 1,004,420 tons; the values of these quantities were, for 1930, \$1,794,334 and, for 1929, \$2,506,081. Exclusive of coke and pig iron, the total value of the mineral production of the State was \$136,349,610 for 1929; for 1928, \$108,247,963.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 presented the number of the State's manufacturing establishments as 4319 (about 11 per cent more than their number in 1927). In these establishments were employed 102,408 wage earners (3.6 per cent more than in 1927), to whom were paid wages to the aggregate of \$130,949,720 (an excess of nearly 6 per cent over 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$769,477,057 (or some 6 per cent more than for 1927). The manufactured product had a total value of \$1,171,710,384 (higher than that of 1927 by 9.8 per cent). Value added by manufacture was reckoned as \$402,233,327.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$37,167,418 (of which \$10,034,147 was for local education); for interest on debt, \$3,647,869; for

permanent improvements, \$14,692,232; total, \$55,507,519 (of which \$16,325,126 was for highways, \$4,543,772 being for maintenance and \$11,781,354 for construction). Revenues were \$64,412,587. Of these, property and special taxes formed 16.6 per cent; departmental earnings and remuneration to the State for its officers' services, 8.9; sales of licenses, 53.7 (including taxes of \$6,750,331 on sales of gasoline). The State's funded debt outstanding on June 30, 1930, was \$58,034,759 (including debt for rural credits). Net of sinking-fund assets, it was \$4,018,220. On property bearing an assessed valuation of \$2,385,662,055 were levied in the year State taxes of \$12,753,261.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 8778.66. There had occurred, during the year preceding, additions of 7.23 miles, but they had been exceeded by abandonments of 44.73 miles. No building of new line or trackage in 1931 was reported.

**EDUCATION.** There were enrolled in the public schools of the State, in the school year ending in 1931, 554,014 pupils. Of these, 435,245 were in the common schools or in elementary grades; the number separately listed as attending classes for defectives was 7890; pupils in the high schools numbered 104,537; and there were in addition 7422 pupils at high schools taking special courses not in the regular grades. For the school year ending in 1930 the expenditures for public education totaled \$54,613,386, of which \$45,832,186 was for maintenance. The salaries of teachers averaged, for men, \$176.89 a month; for women, \$117.31. The campaign of the public-school teachers for a revision of the retirement law in their favor succeeded in 1931; the Legislature revised the retirement law so as to provide annuities on teachers' retirement after from 30 to 35 years of service.

**CHARITIES AND CORRECTIONS.** The State Board of Control, a body created by an act of 1901, had in 1931 general control over 18 State institutions for the care or custody of persons.

State institutions under the control of the board, with their population November 1, 1931, were: Anoka State Asylum, 1067; Hastings State Asylum, 1034; Willmar State Asylum, 1031; Fergus Falls State Hospital, 1761; Rochester State Hospital, 1509; St. Peter State Hospital, 1813; School for Feeble-minded, Faribault, 2082; Colony for Epileptics, Cambridge, 443; School for the Blind, Faribault, 101; School for the Deaf, Faribault, 303; State Public School, Owatonna, 527; State Training School for Boys, Red Wing, 374; Home School for Girls, Sauk Centre, 292; State Reformatory for Women, Shakopee, 58; State Reformatory, St. Cloud, 999; State Prison, Stillwater, 1307; Sanatorium for Consumptives, Ah-gwah-ching, 251; Hospital for Crippled Children, St. Paul, 250.

**LEGISLATION.** A regular session of the State Legislature was held, ending on April 22. It made appropriations of \$43,466,155 for the State expenditures of the ensuing two fiscal years. A bill to authorize the issuance of \$15,414,000 of State bonds for road construction in that period was passed, with the backing of those who believed that activity in highway building would supply the best means for the relief of unemployment. By a bill proposing the amendment of the State constitution so as to permit of the levying of a State income tax, the necessary constitutional change was submitted to popular vote. For

the maintenance of State institutions the Legislature granted \$11,553,383 to the Board of Control. Of this amount, \$1,880,500 was made available for institutional construction in 1931.

A Conservation Commission of five members was created, charged with directing the use and development of the State's forest and mineral resources. An effort to help agriculture was made in the form of a law to permit storage of wheat and other grains on farms in such manner that the farmers might issue warehouse receipts, upon which to obtain loans or advances, in the manner permitted in the other spring-wheat States. To the State's veterans of the war with Spain was granted a bonus totaling \$1,500,000, divisible among some 3000 individuals.

The measure to provide a joint sewage system for St. Paul and Minneapolis, a proposal over which the two cities had failed to reach entire agreement, was passed, but was vetoed by Governor Olson. See below under *Political Events*.

The Legislature united upon a site on Wabasha Street, Minneapolis, for a new \$1,500,000 State office building; required an intervening period of five days between application for marriage licenses and their issuance; memorialized Congress to provide for the early completion of the 9-foot channel in the upper Mississippi River; and recognized October 12 as Columbus Day.

**POLITICAL AND OTHER EVENTS.** The State's so-called Press Gag law was declared unconstitutional by the Federal Supreme Court in a decision rendered on June 1 by a bare majority of 5 to 4. This enactment of 1925 gave authority for the abatement, as public nuisances, of malicious, scandalous and defamatory journals. The efforts to carry forward a plan of joint sewer construction for Minneapolis and St. Paul were held back by the inability of the two cities to agree on the details of a metropolitan drainage system.

Plans were prepared for a new \$4,000,000 City Hall and Court House for St. Paul, and were submitted to the city council and the commissioners of Ramsey County in April. Work was begun on a \$1,500,000 addition to the St. Paul Auditorium. The improvement of the upper Mississippi River proceeded with the completion of the Hastings Dam and the filling of the stretch of river above it, known as Lake St. Paul. The State Railroad and Warehouse Commission sanctioned on July 20 the acquisition of the Northwestern Telephone and Telegraph Company by the Northwestern Bell Telephone Company. Both companies served the Twin Cities. An ordinance of the City of St. Paul providing automatic rise and fall of salaries of public servants in accordance with changes in the cost of living was suspended by the City Council on July 13, in response to protests from public servants facing a reduction on account of lower living costs.

Suit was brought to test the validity of the vetoed bill of the Legislative session of 1931 for the redistricting of the State into nine districts for the election of Federal Representatives. The State Supreme Court rendered a decision early in October sustaining the vetoed bill as a constitutionally valid act, on the theory that the power of gubernatorial veto did not extend to a measure of this character. Notice of appeal from this decision to the Federal Supreme Court was filed.

**OFFICERS.** Governor, Floyd B. Olson; Lieutenant-Governor, Henry Arens; Secretary of State, Mike Holm; State Treasurer, Julius A.

Schmahl; Auditor, Stafford King; Attorney-General, Henry N. Benson; Commissioner of Education, James M. McConnell.

**JUDICIARY.** Supreme Court: Chief Justice, Samuel B. Wilson; Associate Justices, Homer B. Dibel, Andrew Holt, Clifford L. Hilton, Royal A. Stone, I. M. Olsen and Charles Loring.

**MINNESOTA, UNIVERSITY OF.** A coeducational State institution for higher learning in Minneapolis, founded in 1851. The 1931 autumn registration was 12,539, while the summer session enrollment for the same year was 6210. The university staff on a full-time basis, including professors, associate professors, assistant professors, and instructors, numbered 706. The income for the year ending June 30, 1931, amounted to \$11,339,177. The permanent university fund was increased by \$503,374. Gifts received during the year included \$275,000 from the Rockefeller Foundation to be used as a fluid research fund over a period of seven years and \$75,000, each, from the Rockefeller and Carnegie Foundations for an economic and social study of unemployment and a study of the reeducation of the unemployed. Pioneer Hall, a man's dormitory accommodating 258 persons, was completed in September, 1931. The library contained 750,491 volumes. Chancellor, Lotus Delta Coffman, Ph.D., LL.D.

**MINORITIES.** See LEAGUE OF NATIONS; POLAND under *History*.

**MISSISSIPPI. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,009,821; in 1920 it was 1,790,618. The native white population was 989,807 (1930), 845,943 (1920). The Negro population was 1,009,718 (1930), 935,184 (1920). Thus the native whites, though not yet quite equal in number to the Negroes in 1930, had increased at a rate sufficiently more rapid in the decade almost to overcome their numerical inferiority. The foreign-born white population, only 8019 in 1920, had decreased to 7049 in 1930. The State contained, in 1930, 1458 Indians and 1221 Mexicans; the latter group had been classed in 1920 with the foreign-born whites. Jackson, the capital and most populous city, had 48,282 inhabitants (1930), 22,817 (1920); Meridian, 31,954 (1930), 23,399 (1920); Vicksburg, 22,943 (1930), 18,072 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1931	3,988,000	1,725,000*	.....
	1930	4,243,000	1,484,000*	.....
Corn	1931	2,299,000	42,532,000	\$17,018,000
	1930	1,999,000	22,988,000	22,528,000
Hay, tame	1931	320,000	440,000*	4,224,000
	1930	250,000	237,000*	3,910,000
Sweet potatoes	1931	63,000	5,355,000	2,678,000
	1930	45,000	3,825,000	2,869,000
Potatoes	1931	14,000	1,134,000	850,000
	1930	9,000	504,000	832,000

\* Bales.    † Tons.

**MINERAL PRODUCTION.** Some petroleum drilling was undertaken in 1931, for the exploration of what were reported to be promising oil-sand deposits. The total value of the mineral production of the State was \$2,572,616 for 1929; for 1928, \$2,634,347.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 1912 (about 44 per cent more than in 1927).

Wage earners employed in these establishments numbered 52,039 (exceeding by 2.9 per cent the number of those thus employed in 1927). Wages paid to these earners amounted to \$42,508,069 (above 5 per cent more than had been paid in 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$113,093,147 (exceeding such cost for 1927 by about 7 per cent). The manufactured product attained the total value of \$220,209,414 (12 per cent higher than that of 1927).

**FINANCE.** State expenditures in the year ended Sept. 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$18,469,727 (of which \$5,677,539 was for local education); for interest on debt, \$1,413,242; for permanent improvements, \$4,315,278; total, \$22,198,247 (of which \$4,260,437 was for highways, \$2,557,364 being for maintenance and \$1,703,073 for construction). Revenues were \$17,071,346. Funded State debt outstanding on Sept. 30, 1930, totaled \$31,611,049. Net of sinking-fund assets, it was \$31,479,106. On an assessed valuation of \$742,504,531 the State levied in the year ad valorem taxes of \$5,940,036.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 4208.94. There had been, during the preceding year, a trifling addition of 0.35 mile of line, while operation of 75.54 miles had been abandoned. No building of new line or trackage in 1931 was reported.

**EDUCATION.** A state-wide survey of the educational system was undertaken in 1931. Its scope extended from the rural school to the college.

**LEGISLATION.** In a special session the Legislature passed, on October 1, a measure providing for the restriction of the acreage to be planted to cotton in 1932. The plan of restriction conformed to that previously adopted by Texas (see TEXAS under *Legislation*). Provision was made for a State Agricultural Credit Corporation, carrying a \$1,000,000 bond issue. A highway act was passed, raising the tax on gasoline to 5½ cents and authorizing an issue of \$5,000,000 in road bonds as means to meet the requirements for entitling the State to the Federal contribution of highway aid. The heavy deficit of the State Treasury was handled in similar fashion, an issue of \$6,000,000 of the State's bonds being authorized for the purpose of covering it.

A delay in the working of the previous year's act for the issue of State bonds so as to enable the State to take up its outstanding bank-guarantee certificates was corrected by the passage of an act amending defects in the earlier measure authorizing the issue of \$5,000,000 of the State's indebtedness. As a lightening of the incidence of the tax burden, the Legislature provided that the tax payments of 1932 might be made in quarterly installments. The State having had trouble with tax-dodging in the sale of gasoline, a law was passed making the "boot-legging" of this commodity a misdemeanor.

**POLITICAL AND OTHER EVENTS.** The State was troubled early in the year by insufficiency of funds in its treasury. Members of the Legislature, largely opponents of Governor Bilbo, met informally in April and took the occasion to petition him to call a special session to make the necessary provisions for financing. Bilbo, suspecting his opponents of intention to attack his course in office, refused to call the session. The State

Bond Commission, however, negotiated the sale to bankers of some \$2,000,000 in bonds and notes of the State at the end of April. Of this, \$1,000,000 was to provide for the building of a State Hospital for the Insane, and the remainder, in short-term notes, was to defray deficiency in running expense of the State government to the end of 1931.

A law of the Legislature of 1930 providing for an issue of \$5,000,000 of bonds of the State to provide the means to pay off guarantee certificates issued to creditors of failed banks, in excess of the resources of the guarantee fund obtained from the banks, was contested by interests in Jackson. The State Supreme Court decided on March 23 that the proposed bond issue was lawful and valid. The Democratic primary elections, held on August 4, resulted in the choice of H. L. White as regular and of Martin S. Conner as independent candidate for Governor. A run-off primary, held on August 25, gave Conner the nomination over White, assuring his election because of the solidly Democratic politics of the State. Mississippi offered in December one-half of its bonds authorized by the special session of the Legislature, but was unable to sell them.

**OFFICERS.** Governor, Theodore G. Bilbo; Lieutenant-Governor, Bidwell Adam; Secretary of State, Walker Wood; Attorney-General, George T. Mitchell; Treasurer, H. C. Yawn; Auditor, C. C. White; Superintendent of Education, W. F. Bond.

**JUDICIARY.** Supreme Court: Chief Justice, Sydney Smith; Associate Justices, W. D. Anderson, James G. McGowan, George H. Ethridge, W. H. Cook, V. A. Griffith.

**MISSISSIPPI, UNIVERSITY OF.** A coeducational, State institution of higher learning in University, Miss., chartered in 1844 and opened in 1848. The university consists of a college of liberal arts and schools of law, engineering, medicine, pharmacy, education, and commerce and business administration. The enrollment for the autumn of 1931 was 1156, while that for the 1931 summer session was 350. There were 70 faculty members. The library contained approximately 40,000 volumes. The income (appropriation) for the biennium was \$405,000; students' fees amounted to approximately \$180,000. Erection of a new hospital completed the \$1,600,000 building programme which was made possible through special legislative appropriation in 1928. Chancellor, J. N. Powers, M.A., M.Pd., LL.D.

**MISSISSIPPI RIVER.** See FLOODS AND FLOOD PREVENTION.

**MISSOURI POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 3,629,367, in 1920 it was 3,404,055. The native white population increased to 3,249,497 (1930), from 3,039,018 (1920). The foreign-born whites decreased to 149,390 (1930), from 186,026 (1920). The number of Negro inhabitants rose to 223,840 (1930), from 178,241 (1920). The percentage of the Negroes in the whole population rose to 6.2 (1930), from 5.2 (1920). In 1930 the State contained 4989 Mexicans (previously grouped with foreign-born whites) and 578 Indians and 634 Chinese.

Of 1,458,054 persons reported in 1930 as having gainful occupations, 371,251 were in agriculture, 370,787 in the manufacturing and mechanical industries (these including 74,573 in the building industry), 245,020 in trade, 145,379 in transportation, 141,849 in domestic and personal

service, and 86,879 in professional service. St. Louis, the most populous city, had 821,960 inhabitants (1930), 772,897 (1920); Kansas City, 399,746 (1930), 324,410 (1920); St. Joseph, 80,935 (1930), 77,939 (1920); Springfield, 57,527 (1930), 39,631 (1920); Jefferson City, the capital, 21,596 (1930), 14,490 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1931	6,184,000	170,060,000	\$56,120,000
	1930	6,123,000	85,722,000	64,292,000
Hay, tame	1931	2,787,000	2,784,000*	18,931,000
	1930	8,112,000	2,242,000*	26,904,000
Wheat	1931	1,497,000	29,938,000	13,476,000
	1930	1,275,000	17,888,000	13,186,000
Oats	1931	1,865,000	50,355,000	11,078,000
	1930	1,727,000	41,448,000	16,165,000
Cotton	1931	350,000	270,000*	.....
	1930	869,000	161,000*	.....
Potatoes	1931	49,000	8,675,000	2,572,000
	1930	48,000	4,848,000	4,848,000
Sweet potatoes	1931	10,000	900,000	675,000
	1930	9,000	765,000	842,000
Tobacco	1931	8,100	8,505,000*	936,000
	1930	6,200	5,678,000*	875,000

\* Tons. \* Bales. \* Pounds.

**MINERAL PRODUCTION.** The mining of the ores of the State continued in 1930 about as actively as in 1929. There were produced from these ores, in 1930, 199,632 short tons of lead and, in 1929, 198,649 tons. The value of lead produced fell to \$19,963,200 for 1930, from \$25,007,094 for 1929. The mine production of zinc for 1930 was 10,811 short tons and, for 1929, 11,017 tons; by value it fell to \$1,037,856 for 1930, from \$1,454,244 for 1929. Ores yielded also minor values in silver and copper. The clay products of 1929 amounted to \$14,994,548; those of 1928 to \$14,891,273. The cement production of 1930 was somewhat down from 1929, but was exceeded by the shipment from mills, which ran to 8,030,528 barrels for 1930, as against 7,984,337 for 1929; by value, \$11,470,751 for 1930 and \$11,557,905 for 1929. The coal mines, producing 3,408,000 short tons in 1930, were less active than in 1929, when they produced 4,030,311 short tons, valued at \$9,778,000. There were produced, in 1929, 4,397,800 short tons of stone and, in 1928, 3,445,690 tons; in value, \$7,085,323 for 1929 and \$6,137,631 for 1928. The sales of lime producers fell to 261,000 short tons for 1930, from 316,579 for 1929; and by value, to \$1,813,000 for 1930, from \$2,319,886 for 1929. The total value of the State's mineral production was \$78,948,484 for 1929; for 1928, \$74,981,382.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 rendered the number of the State's manufacturing establishments as 5757 (about 5 per cent in excess of their number in 1927). Wage earners in these establishments numbered 201,174 (3 per cent above their number for 1927). Wages paid them amounted to \$238,432,655 (3.6 per cent more than for 1927). The cost of materials for manufacture and of fuel and purchased electricity was \$1,124,967,658 (nearly 12 per cent greater than for 1927). The manufactured product was valued at \$1,876,140,033 (an excess of 12.7 per cent over the figure for 1927). The value added by manufacture was reckoned at \$751,172,375. St. Louis led as a manufacturing centre, having 2704 establishments, 107,468 wage earners on payrolls, a total of \$133,051,352 paid in wages, and a manu-

factured product of \$983,823,009. It thus accounted for about one-half of the manufacturing done in the State in 1929. Kansas City, Mo., ranked next, with 904 establishments, 29,865 wage earners there employed, a wage bill of \$38,402,756, and a product of \$340,890,312.

**FINANCE.** State expenditures of the year ended Dec. 31, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$30,988,165 (of which \$7,373,924 was for local education); for interest on debt, \$3,505,595; for permanent improvements, \$33,408,041; total, \$67,941,801 (of which \$39,116,031 was for highways, \$6,145,687 being for maintenance and \$32,970,344 for construction). Revenues were \$50,749,141. Of these, property and special taxes formed 32.8 per cent; departmental earnings and remuneration to the State for officers' services, 13.5; sale of licenses, 43.5 (including gasoline sale taxes amounting to \$8,602,175). The State's funded debt outstanding on Dec. 31, 1930, was \$92,312,839; of this, \$74,000,000 was for highways. Net of sinking-fund assets, debt was \$90,699,700. On a property valuation of \$4,730,949,500 were levied in the year taxes of \$5,677,139.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 7896.66. Additions of line totaling 13.28 had been made during the preceding year, but 56.53 miles of line had been abandoned. In 1931 were built 85.53 additional miles of first and 45.53 of second track.

**EDUCATION.** With a view to rendering it possible to reconstruct the system of school districts on a basis of greater areas, the Legislature in 1931, according to State Superintendent Lee, in the *Journal* of the National Education Association, enacted a law under which the school districts of the entire State would have the option of joining to make larger districts. A State school fund of approximately \$8,500,000 a year was provided, chiefly to serve as an equalizing fund. In order to furnish support to every elementary teaching unit at the rate of \$750 a year and to every high-school teaching unit at \$1000 a year, there was enacted a law permitting the imposition of a local school tax at the rate of 20 cents on every \$100 of property.

As reported in December, 1931, the number of the State's inhabitants of school age was 948,220. There were enrolled in the public schools, in 1930, 656,073 pupils. Of these, 524,023 were in common schools or elementary grades; in high schools, 132,050. The year's expenditures for education totaled \$55,462,083. Salaries of teachers, by the year, averaged \$932 for men and \$703 for women.

**CHARITIES AND CORRECTIONS.** The State Board of Charities and Corrections, as functioning in 1931, was the central organization in matters of the State's welfare activities. It exercised supervisory duties with regard to jails, almshouses, workhouses, and many hospitals. It performed many duties relating to the safeguarding of unprotected children, and maintained a State home for neglected children committed to its care. Through a Children's Bureau it supervised the treatment of all dependent or neglected children. It licensed maternity hospitals, supervised poor relief, acted in an advisory capacity to county superintendents of public welfare. Hospitals for the insane and a colony for the feeble-minded were under the control of another body, the Eleemosy-

nary Board. The penal institutions, also, were separately operated. The control of the State custodial and eleemosynary institutions was thus only incompletely centralized. Among the institutions of the State were four State hospitals, the Missouri Colony for the Feeble-minded and Epileptic, Missouri State Sanatorium, Confederate Home, State Soldiers' Home, State Penitentiary, Reformatory, Industrial Home for Girls, and Industrial Home for Negro Girls.

**LEGISLATION.** The Legislature met in regular session and enacted a new graduated income tax designed to add about \$5,500,000 to the State's yearly revenue. About \$3,250,000 of the proceeds were to be applied to improving the public schools of the State, chiefly the rural schools. Appropriations made by the session from anticipated general revenue were estimated as exceeding such revenue by \$5,580,000 for the ensuing two years, and were largely cut by Governor Caulfield, exercising the power to veto separate items of appropriation. A school bill was enacted, to assure a minimum of eight months of operation in all the public schools of the State and a guarantee of \$750 a year, at least, for each class or teaching unit. The State law rendering it a felony for bank officers and directors to permit a bank to receive deposits when insolvent and rendering subsequent suspension *prima facie* evidence of such knowledge on their part had been criticized as unjust, and it was repealed. A State highway patrol force of 115 was created. April 13, the anniversary of the birth of Thomas Jefferson, was made a State holiday.

The prevailing Democratic Legislature passed a measure to redistrict the State into 13 districts, in accordance with the new Federal apportionment, for the election of members of the Federal House of Representatives. This measure, providing what were regarded as eight Democratic and five Republican districts, was obnoxious to the Republicans. Governor Caulfield vetoed it. This left the State without any means for the election of its reduced number of Representatives severally by districts. The Governor vetoed likewise an anti-lynching law and a measure for additional aid to disabled children.

**POLITICAL AND OTHER EVENTS.** As the Legislature had failed to redistrict the State for the election of State Senators, Governor Caulfield, later in the year, had recourse to executive proclamation in the effort to obtain the rearrangement of districts that the Republicans had long demanded in vain. The Senatorial districts had remained the same for some 30 years, during which the Democrats had lost control of the State Senate but once. On July 14 Governor Caulfield filed with the Secretary of State a proclamation altering the bounds of the 34 districts, to take effect at once. The authority cited for his action was a provision of the State Constitution to the effect that the Governor, Secretary of State, and Attorney General should establish new district lines within 30 days after the adjournment of the Legislature in case that body had failed to perform the duty. The effort to redistrict by executive action had been made previously under Governor Hyde and had been held invalid in 1921 by a close majority of the State Supreme Court divided on strictly partisan lines. The Democratic State Committee took steps to sue against the proclamation.

The Baltimore & Ohio R.R. system, effecting the final steps in the acquisition of the Chicago

& Alton Railroad Co., extended its territory by this means into Missouri as far as Kansas City. Kansas City adopted a ten-year plan of public improvements involving large capital outlay. The plan provided for the expenditure of \$4,000,000 on a new City Hall, \$2,750,000 for parks and playgrounds, \$2,000,000 for hospitals, \$8,300,000 for traffic arteries, \$3,500,000 for a water-softening plant and allied work, \$4,500,000 for a public auditorium, \$1,000,000 for an incinerating plant and considerable sums for markets, a stadium, river improvement, sewers, an airport, and police and fire stations. At county expense were to be built a court house costing \$4,000,000 and other buildings. The bond issues for the entire plan were voted at a special election held on May 26; they totaled \$39,575,000.

The old Kansas City Joint Stock Land Bank was sold by the Federal receiver on June 4. Its resources of some \$26,000,000 were acquired by a new organization, the Phoenix Joint Stock Land Bank, established in Kansas City and chartered to make farm loans in Missouri and Kansas. In a special election held on September 29 to fill the vacancy of a Federal Representative in the Seventh District, Robert D. Johnson, Democrat, was elected, defeating John W. Palmer, Republican, and a third independent candidate, by a majority of 5 to 4, in what had been mainly Republican territory.

**OFFICERS.** Governor, Henry S. Caulfield; Lieutenant-Governor, Edward H. Winter; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, Larry Brunk; Attorney-General, Stratton Shartel; Superintendent of Public Schools, Charles A. Lee.

**JUDICIARY.** Supreme Court: Chief Justice, William T. Ragland; Associate Justices, Berryman Henwood, Frank E. Atwood, Earnest S. Gantt, William F. Frank, John Turner White, George R. Ellison.

**MISSOURI, UNIVERSITY OF.** A State institution of higher education in Columbia and Rolla, Mo., founded in 1839. The enrollment for all divisions for the first semester of 1931-32 was 4668, of whom 3373 were men and 1295 women. The total enrollment for the 1931 summer session was 2741, of whom 1250 were men and 1491 women. The total annual enrollment of all classes of students, including those in correspondence and extension courses, was 8473. There were 456 faculty members. The endowment of the university was approximately \$2,500,000, and the total income from all sources was approximately \$4,200,000. The libraries contained 287,117 volumes. President, Walter Williams, LL.D.

**MONACO**, mōn'ă-kō. A principality on the Mediterranean coast, surrounded on the land sides by the French Department of Alpes Maritimes. Area, about 8 square miles; population at the census of 1928, 24,927. It is chiefly known for its gambling resort, Monte Carlo (population in 1928, 11,055). Other towns are Monaco (2085) and La Condamine (11,787). Under the constitu-

tion of Jan. 7, 1911, the Government consists of the Prince, assisted by a Council of State and a National Council elected by universal suffrage. Revenue is mainly derived from the gambling concession, which is leased for about \$450,000 annually. Receipts of the gambling resort, the Monte Carlo Casino, for the fiscal year ended Mar. 31, 1931, totaled \$5,250,000 and gross expenditures were nearly \$3,000,000. The ruler in 1931 was Prince Louis II. A decree issued by Prince Louis, Dec. 20, 1930, dissolved the Council of State and National Council and suspended some of the constitutional guarantees (see 1930 YEAR BOOK).

**MONASH, GEN. SIR JOHN.** An Australian soldier and engineer, died Oct. 8, 1931, in Melbourne where he was born June 27, 1865. He attended the Scotch College and Melbourne University, and on graduation in 1884 practiced as a civil engineer. Made brigade commander in the Australian Army in 1915, he served in the Gallipoli campaign after which, in recognition of his bravery, Monash Valley at Anzac was named for him. He also participated in the Suez Canal defense, and was then transferred to France where during 1916-18, he commanded the 3d Australian division. In May, 1918, he was made a lieutenant general and succeeded Sir William Birdwood in command of the Australian Army Corps in France, achieving distinction at the Battle of Amiens and the subsequent battles which led to the Allied victory. After the Armistice he became director-general of the Department of Repatriation and Demobilization of the Australian Imperial Force in Europe, Africa, and Asia. After 1920 he was chairman of the State Electricity Commission, appointed by act of Parliament, and was a member of the Commonwealth Council of Defense, retiring from the Australian Army in 1930 with the rank of general.

**MONEY.** The table on page 525 from the annual report of the director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1931, June 30, 1930, Oct. 31, 1920, Mar. 31, 1917, June 30, 1914, Jan. 1, 1879.

**MONEY RATES.** See FINANCIAL REVIEW.

**MONGOLIA.** A huge and vaguely defined region lying west of Manchuria and south of the Siberian territories of the Soviet Union. It is divided politically into Inner Mongolia, which is administratively a part of China, and Outer Mongolia, an independent soviet republic in close relations with the Soviet Union. The total area is estimated at from 1,367,000 to 1,875,000 square miles and the total population at 750,000 Mongols and 100,000 others, chiefly Chinese and Russians. The nomadic Mongol and Kalmuk tribes live mainly by stock raising and furs, skins, hides, horns, and wool are the principal exports. The soil is naturally fertile but needs irrigation to be productive. Gold, iron, coal, copper, silver, and tin are found, but are not worked extensively.

**INNER MONGOLIA.** In 1928, the Nationalist Government of China made provinces of the former special administrative districts of Jehol, Suiyuan, and Chahar, into which Inner Mongolia had been divided (see CHINA under *Area and Population*). Chengteh, Kweisui, and Kalgan are the respective provincial capitals. In recent years there has been a steady influx of Chinese settlers, who are extending the area under cultivation.

**OUTER MONGOLIA.** Established as an independent republic along soviet lines in May, 1924, Outer Mongolia has an area of 714,000 square

miles and a population (1928) of 676,000, of whom 579,000 are Mongols, 90,000 Russians, and 7000 Chinese. The capital, Ulan Bator Khoto (City of the Red hero), formerly known as Urga, has about 60,000 inhabitants. Shale coal mines at Nalaiha, near the capital, produced 10,000 tons in 1927; salt and precious stones are mined. The net national income is estimated at about \$10,000,000 annually.

Foreign trade has shown a steady increase. In 1927 exports were valued at 25,259,000 tuhriks and imports at 24,608,000 tuhriks (1 tuhrik, the unit of currency, equals about \$0.36 U. S. currency). In the same year 63.6 per cent of the total trade was with China and 36.4 per cent with the Soviet Union. There are no railways, but motor transportation is developing, particularly on the main trade route to China via Ulan Bator Khoto and Kalgan. A small steamer plies on Lake Kosogol and there is an air line between Ulan Bator Khoto and Verkhneudinsk on the Trans-Siberian Railway.

For political developments in 1931, see CHINA under *History*. Also consult I. I. Serebrennikov, "A Soviet Satellite: Outer Mongolia Today," *Foreign Affairs* (April, 1931).

**MONOPLANES.** See AERONAUTICS.

**MONTANA.** POPULATION. According to the Federal Census of 1930 the population of the State on Apr. 1, 1930, was 537,606; in 1920 it was 548,889. The number of native whites increased slightly to 444,366 (1930), from 440,640 (1920). Foreign-born whites decreased to 72,961 (1930), from 93,620 (1920). There were 1256 Negroes (1930), 1658 (1920); 2571 Mexicans (1930) previously classed as foreign-born whites; 14,798 Indians, 486 Chinese, and 753 Japanese were also numbered in the population of 1930. The urban population (living in communities of at least 2500) increased during the decade to 181,036, from 172,011; the rural declined to 356,570, from 376,878. Of 216,471 persons listed as in gainful occupations in 1930, 79,678 were in agriculture, 26,982 in manufacturing and mechanical industries, 24,303 in trade, 23,379 in transportation and 17,655 in mining, quarrying, and petroleum extraction. The population of Butte was 39,532 (1930), 41,611 (1920); Helena, the capital, had 11,803 inhabitants (1930), 12,037 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat .....	1931	2,182,000	14,684,000	\$ 8,053,000
	1930	4,217,000	35,313,000	17,096,000

\* The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

† This total includes \$39,166,138 gold deposited for the redemption of Federal reserve notes (\$113,730 in process of redemption), \$29,415,523 lawful money deposited for the redemption of National bank notes (\$17,959,975 in process of redemption), including notes chargeable to the retirement fund, \$1,350 lawful money deposited for the retirement of additional circulation (act of May 30, 1908), and \$11,826,349 lawful money deposited as a reserve for postal savings deposits.

‡ Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

§ Includes any paper currency held outside the continental limit of the United States.

|| Population of continental United States (estimated) June 30, 1931, 124,076,000; June 30, 1930, 123,191,000; Oct. 31, 1920, 107,096,005; Mar. 31, 1917, 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

¶ Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

\* These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

† Non-Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption: silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury; these notes are being canceled and retired on receipt. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for the retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for the retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of National bank notes secured by Governmental bonds.

duced in 1930 fell severely, to \$32,720,416, from \$71,779,547 for 1929. The decline was due in part to lower prices obtainable for all of these metals, in 1930, except gold. It resulted, in part, also from much reduced mining activity. There were treated in 1930 but 2,686,669 short tons of ores bearing any of these metals, as against 4,723,445 tons treated in 1929. In consequence, the mine production even of gold declined to 43,489 fine ounces for 1930, from 54,758 for 1929; by value, to about \$900,000 for 1930, from about \$1,137,000 for 1929. That of silver was reduced to 7,052,889 fine ounces for 1930, from 12,716,977 for 1929; by value, to about \$2,700,000 for 1930, from about \$6,750,000 for 1929. The yield of copper, the principal feature of the State's mineral industry, fell to 196,187,523 pounds, for 1930, from 297,725,973 pounds for 1929, for which year the value of the product was \$52,399,771. The yield of lead for 1930 was 21,306,044 pounds, and for 1929, 39,213,707 pounds with a value of \$2,470,464. Zinc produced in 1930 amounted to 52,841,108 pounds; in 1929, to 136,351,704 pounds, having a value of \$8,999,214. The quantity of coal mined declined to 2,845,000 short tons for 1930, from 3,407,526 tons, in value \$7,561,000, for 1929. There were produced 3,139,000 barrels of petroleum in 1930, as against 3,980,000 in 1929; by value, \$5,300,000 (estimated) in 1930 as against \$7,260,000 in 1929. Increasing natural gas output, for 1929, attained 9,659,000 M cub. ft., in value \$2,377,000. The total value of the State's mineral production was \$93,842,135 for 1929; for 1928, \$74,752,309.

The value of gold, silver, copper, lead, and zinc produced from Montana mines in 1931, according to estimates of the U. S. Bureau of Mines, was about \$18,073,000. This decrease of nearly 45 per cent from the value of \$32,720,416 in 1930 was caused chiefly by the sharp decline in the sales price of copper and the inactivity of nearly all the large producers of silver, lead, and zinc. The value of the gold output decreased from \$899,001 in 1930 to about \$875,600 in 1931. The output of silver decreased from 7,052,889 ounces in 1930 to about 3,920,000 ounces in 1931; it was the lowest output since detailed production figures were first recorded. Copper output decreased from 196,187,523 pounds in 1930 to about 184,482,000 pounds in 1931, and the value from \$25,504,378 to about \$15,312,000, the lowest output and value since 1921. The production of lead decreased from 21,306,044 pounds valued at \$1,065,302 in 1930 to about 8,168,000 pounds valued at \$310,400 in 1931, the smallest output since 1912. The output of zinc recovered from ore mined in Montana decreased from 52,841,108 pounds in 1930 to about 11,550,000 pounds in 1931, and the value from \$2,536,373 to about \$438,900, the lowest output since 1909.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 rendered the number of the State's manufacturing establishments as 583. These employed 13,673 wage earners (slightly fewer than in 1927), to whom were paid wages totaling \$21,718,995 (nearly 5 per cent more than had been thus paid in 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$173,594,372 (some 14 per cent more than the corresponding aggregate for 1927). The manufactured product was valued at \$247,952,720 (exceeding that of 1927 by 21.8 per cent). The value added by manufacture was estimated as \$74,358,348.

**FINANCE.** State expenditures in the year ended

June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$7,404,970 (of which \$1,802,094 was for local education); for interest on debt, \$410,879; for permanent improvements, \$5,626,551; total, \$13,442,400 (of which \$6,293,033 was for highways, \$890,498 being for maintenance and \$5,402,535 for construction). Revenues were \$13,135,098. Of these property and special taxes formed 18.2 per cent; departmental earnings and remuneration to the State for its officers' services, 6; sales of licenses, 36.8 (including taxes of \$3,005,015 on sales of gasoline). The State's funded debt outstanding on June 30, 1930, was \$5,605,252. Net of sinking-fund assets, it was \$3,121,226. On property bearing an assessed valuation of \$443,082,816 were levied in the year State taxes of \$2,023,042.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 5228.14. Additions of line totaling 6.03 miles had been made during the year preceding, while operation of 8.49 miles of line had been abandoned. In 1931 were built 9 miles of additional first track.

**EDUCATION.** For the academic year 1929-30, the number of persons of school age (from 6 to 21 years) was reported as 154,413. There were enrolled in that year, in the public schools of the State, 120,337 pupils. Of these enrolled, 95,769 were reported to be in common schools or in elementary grades, and 24,787 were in high schools. The year's expenditures for public-school education totaled \$15,106,521. Salaries of teachers were stated to range from about \$600 to \$1200 a year in rural schools and from about \$900 to \$1800 in towns and cities. The Legislature of 1931 adopted a codified law covering all the public high schools. This law was described as rendering the provisions for the financing of high schools more nearly dependent upon the needs of the different types.

**CHARITIES AND CORRECTIONS.** The central agency for the institutions having the care and custody of persons is the State Board of Charities. This Board in 1931 consisted of 3 members, each holding under appointment of the Governor, confirmed by the State Senate, for a term of 6 years. The Board had supervisory and advisory powers over charitable and correctional institutions receiving State aid. A Bureau of Child Protection, having as its head a Secretary (Maggie Smith Hathaway), performed extensive duties in the way of safeguarding minors.

**LEGISLATION.** The State Legislature held a regular 60-day session, which ended on March 7. It passed a measure providing, subject to popular referendum, an issue of \$6,000,000 of tax-anticipation warrants on receipts from the tax on gasoline. The proceeds were to enable the State to make, without raising a corresponding amount on taxes, the expenditure necessary to secure it the Federal highway subsidy. A commission of five was created to examine the State's existing system of taxation. A license tax on coal dealers was put under the control of the State Board of Equalization. A constitutional amendment was proposed, to the effect that only taxpayers might vote on tax levies or bond issues. The Board of Equalization was charged with the duty of studying the problem of reducing the expenditure of the State government.

Branch banking was rendered permissible for State institutions, to the limited extent that they

might establish branches in their home counties or counties adjoining, through consolidation with existing banks in such counties. The American Bankers' Association's uniform bank-collection code was adopted. The sale of securities was further regulated by requiring that security salesmen must reside in the State six months in order to become eligible for license and must be bonded for \$1000. Mining and oil companies were required to show at least 75 cents used in property development, out of every dollar of receipts from stock sales, to render their securities legal for sale.

Commercial motor carriers were required to operate under certificates from the Public Service Commission and to pay an annual fee of \$10 for each vehicle operated. Provision was made for the restoration of Fort Owen. The corporation law, unchanged for 35 years, was liberalized. The law on the State high schools was codified, and a system of school budgets was created. A budget system, likewise, was provided for cities. An issue of \$3,000,000 in bonds, later invalidated by the courts, was made for institutional construction.

**POLITICAL AND OTHER EVENTS.** The \$6,000,000 in tax-anticipation warrants which the Legislature had voted as a means to capitalize expected receipts from the gasoline tax were ratified by the people in a special election of May 5 and were subsequently declared valid by the State Supreme Court. Difficulties among the wheat farmers of the State were common by reason of the collapse of prices for their staple, combined with an inferior crop of spring wheat. The North-Dakota-Montana Wheat Growers' Association, with a membership of about 25,000, was reported in April to have severed connection with the Federal Farm Board, against whose policies much opposition was raised.

**OFFICERS.** Governor, J. E. Erickson; Lieutenant-Governor, Frank A. Hazelbaker; Secretary of State, W. E. Harmon; Treasurer, F. E. Williams; Superintendent of Public Instruction, Elizabeth Ireland.

**JUDICIARY.** Supreme Court: Chief Justice, Lew L. Callaway; Associate Justices, John A. Matthews, Albert J. Galen, S. C. Ford, Albert H. Angstman.

**MONTANA, STATE UNIVERSITY OF.** A State institution for the higher education of men and women in Missoula, Mont., founded in 1895. The enrollment for the autumn of 1931 was 1482. In the 1931 summer session 618 students were registered, of whom 205 were men and 413 women. The faculty had 102 members. The productive funds and income for the year amounted to \$700,000. There were about 200,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

**MONTE CARLO.** See **MONACO**.

**MOORE, CLARENCE LEMUEL ELISHA.** An American mathematician, died in Newton, Mass., Dec. 5, 1931. Born near Bainbridge, O., May 12, 1876,

he was graduated from the Ohio State University in 1901 and received the A.M. degree from Cornell University in 1902 and the Ph.D. degree in 1904. He also studied at the universities of Göttingen, Turin, and Bonn. In 1904 he was called to the Massachusetts Institute of Technology as instructor in mathematics, becoming assistant professor in 1909, associate professor in 1916, and professor in 1920. Among the subjects in which he made special investigations were geometry of the sphere and of the circle in space and the differential geometry of hyperspace.

**MOORE, CLIFFORD HERSCHEL.** An American classicist, died in Cambridge, Mass., Aug. 31, 1931. He was born in Sudbury, Mass., Mar. 11, 1866, and was graduated from Harvard University in 1889, receiving the Ph.D. degree from the University of Munich in 1897 and the Litt.D. degree from Colorado College in 1914. After teaching Greek at Phillips Andover Academy for two years, he became instructor in Latin at the University of Chicago in 1894 and assistant professor the following year. In 1898 he transferred to Harvard where he served as assistant professor of Greek and Latin until 1905 and as professor of Latin thereafter. In 1905-06 he was also professor of Latin at the American School of Classical Studies in Rome, and in 1925 was appointed Pope professor and dean of the faculty of arts and sciences at Harvard. He edited Allen's edition of Euripides' *Medea* (1899) and Horace's *Odes and Epodes* (1902) and was the author of *A First Latin Book* (1903); *The Elements of Latin* (with J. J. Schlicher, 1906); *Religious Thought of the Greeks* (1916); and *Pagan Ideas of Immortality* (1918). He also contributed to the **NEW INTERNATIONAL ENCYCLOPEDIA**.

**MOORE, FRANK FRANKFORT.** A British novelist and dramatist, died at Saint Leonard's, East Sussex, May 11, 1931. He was born in Limerick, Ireland, May 15, 1855, and attended the Royal Academical Institution, Belfast. He was engaged in journalism during 1876-92, recounting his experiences in *A Journalist's Note-Book* (1894). His novels were generally of a sensational kind, and included: *Coral and Coconut* (1890); *I Forbid the Banns* (1893); *A Gray Eye or So* (1893). He also wrote *Life of Oliver Goldsmith* (1910) and *Truth about Ulster* (1914).

**MOORE, GEORGE FOOT.** An American theologian, died in Cambridge, Mass., May 16, 1931. He was born in West Chester, Pa., Oct. 15, 1851, and was graduated from Yale in 1872 and from the Union Theological Seminary in 1877. Ordained to the Presbyterian ministry, he was pastor of the Putnam Presbyterian Church in Zanesville, Ohio, for five years. From 1883 to 1902 he was Hitchcock professor of Hebrew at the Andover Theological Seminary. He then became professor of theology at Harvard, and after 1904 was Frothingham professor of the history of religion. He was retired as professor emeritus in 1928. He was for several years editor of the *Journal of the American Oriental Society*, whose president he was in 1911-12. He was also president of the American Academy of Arts and Sciences from 1921 to 1924. His publications include *The Literature of the Old Testament* (1913); *History of Religions* (2 vols., 1913 and 1919); *Metempsychosis*, the Ingersoll lecture at Harvard (1914); and *Judaism* (2 vols., 1927).

**MOORE, MARY.** (LADY WYNDHAM). A British actress, died Apr. 6, 1931, in London where she

was born July 3, 1861. She first appeared on the London stage under the management of John Hollingshead, but soon retired into private life on her marriage in 1878 to James Albery, the dramatist. She returned to the stage in 1885, appearing in Bradford and London as Lady Dorothy in *The Candidate* under the management of Charles Wyndham. Her first stellar rôle was Lady Amaranth in *Wild Oats*, and during 1886-87 she played Ada Ingot in *David Garrick*.

Her other important rôles include: Mrs. Mildmay in *Still Waters Run Deep* (1889); Grace Harkaway in *London Assurance* (1890); Lady Susan Harabin in *The Case of Rebellious Susan* (1894); and Lady Bagley in *Our Mr. Hepplewhite* (1919). She continued under Wyndham's management until 1912, when he discontinued acting, and from 1897 until his death in 1919 was associated with him as joint proprietor of the Criterion, New, and Wyndham's Theatres. She was married to Sir Charles in 1916. At the time of her death she was president of the Actors' Benevolent Fund and chairman of Wyndham Theatres, Ltd., which she organized in 1924.

**MOORE, RICHARD BISHOP.** An American chemist, died in New York City, Jan. 20, 1931. He was born in Cincinnati, Ohio, May 6, 1871, and was educated in England and France and at the University of Chicago, from which he was graduated in 1896. He was instructor in chemistry at the University of Missouri during 1897-1905 and professor of chemistry at Butler College, Indianapolis, during 1905-11. In 1912 he became connected with the U. S. Bureau of Mines as physical chemist in charge of the chemistry and metallurgy of rare metals, and was chief chemist during 1919-23. After 1926 he was dean of science and head of the chemistry department at Purdue University. His original investigations were largely concerned with the properties of rare gases in the atmosphere, such as helium, and the metallurgy of rare metals, especially tungsten, uranium, vanadium, and radium, on which he wrote valuable papers. In 1906 he made a survey for the U. S. Geological Survey of the thermal waters of the Yellowstone National Park for radio-active properties. He was also instrumental in establishing the Radium Institute in New York City.

**MOORE, VERANUS ALVA.** An American veterinarian and bacteriologist, died in Ithaca, N. Y., Feb. 11, 1931. He was born in Houndsfield, N. Y., Apr. 13, 1859, and was graduated from Cornell University in 1887 and with the M.D. degree from Columbian (later George Washington) University in 1890. In the U. S. Department of Agriculture he was engaged in investigation of infectious diseases for the Bureau of Animal Industry from 1890 to 1896 and was chief of the division of animal pathology during 1895-96. He then went to Cornell University where he was professor of comparative pathology, bacteriology, and meat inspection from 1896 to 1929 and was also dean of the New York State Veterinary College after 1908. On his retirement he became superintendent of the Ithaca Memorial Hospital.

**MORATORIUM ON REPARATION AND WAR DEBTS.** See REPARATIONS and WAR DEBTS; GERMANY under *History*; UNITED STATES under *Administration*, *Foreign Affairs*; BANKS and BANKING; PUBLIC FINANCE.

**MORAVIA AND SILESIA.** A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

**MORAVIANS.** A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1457 under the leadership of John Hus and Jerome of Prague. The doctrine is evangelical, without a creed peculiar to itself, and in its polity the denomination follows a modification of the episcopacy, having a ministry of three orders: Bishops, presbyters, and deacons.

THE UNITAS FRATRUM, the largest branch, is organized in the United States in two coördinate provinces: the Northern, with a provincial synod meeting every fifth year; and the Southern, of which the provincial synod meets every third year. The church maintains the following four educational institutions: Linden Hall, Lititz, Pa., Moravian College and Theological Seminary, and Moravian Seminary and College for Women, Bethlehem, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and in Nicaragua, Honduras, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, Unyamwesi, Central Africa, and South Africa. The official periodical, *The Moravian*, is published weekly in Bethlehem, Pa.

On Jan. 1, 1931, there were in the United States 145 churches; 170 ministers; 27,371 communicant members, although the actual membership was estimated at 38,075; and 137 Sunday schools with 24,226 pupils. The five "home provinces" of the American and European branches had a total membership of 58,218. In Europe there were also affiliated societies, known as "Diaspora," with a membership of about 30,000. The foreign missions had a membership of 140,823. A world conference of Moravians was held in Herrnhut, Saxony, in June and July, 1931, for the purpose of reestablishing the International Moravian Church (Unitas Fratrum) on a somewhat different administrative basis than heretofore.

**MORMONS.** See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

**MOROCCO.** Occupying the northwestern corner of the continent of Africa, Morocco is divided into three zones: First and most important, the French protectorate, including approximately 85 per cent of both area and population, with Rabat as the political capital and Casablanca as the leading port and commercial centre; second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean, with Ceuta, Melilla, and Tetuan as the principal localities; and third, the international Tangier zone ruled in accordance with the terms of the Paris protocol of July 25, 1928, adhered to by France, Great Britain, Spain, and Italy. The total area is about 218,525 square miles, of which the area claimed by Spain was about 18,300 square miles. In 1931 the area effectively held by the French was estimated at 162,200 square miles.

A census of the French zone taken in March, 1926, placed the population at 4,016,882 native Moslems, 107,552 native Jews, 74,558 French, and 104,712 foreigners, making a total of 4,229,146. That of the Spanish zone was estimated at about 1,000,000 and that of the Tangier zone at about

80,000. The largest towns in the French zone, with their populations in 1931, are Marrakech, 193,852; Casablanca, 161,113; Fez, 107,843; and Rabat, 53,000. In the Spanish zone the largest town is Tetuan, with a population of about 24,000. The population of Tangier is approximately 60,000. The chief languages are French, Spanish, Moorish, Arabic, and Berber dialects. In 1929 there were 48,827 pupils in schools in the French zone.

**PRODUCTION.** Agriculture is the predominant industry. In the French Zone in 1929, there were 8,476,000 acres of arable land, or 8 per cent of the total area, on which wheat, barley, oats, corn, flax, grapes, and olives were grown. Wool production (1929) was about 19,400,000 pounds. Livestock in the same year included 2,107,000 cattle and 8,848,000 sheep. Phosphate exports from the French Zone in 1930 totaled 1,779,000 metric tons. Important manganese deposits at Bou-Arfa were in process of development in 1931; iron ore, coal, zinc, and lead are also found. Agriculture, some iron mining, and tunny fishing are the chief industries in Spanish Morocco.

**COMMERCE.** Imports of the French Zone in 1930 were valued at 2,209,700,000 francs (\$86,621,000) and exports at 712,800,000 francs (\$27,943,000); for 1929 imports were valued at 2,549,800,000 francs and exports at 1,231,000,000 francs. France in 1929 supplied 55 per cent of all imports and took 43 per cent of all exports.

**FINANCE.** Ordinary budget operations in the French Zone for 1930 resulted in receipts of 787,826,620 French francs and expenditures of 802,288,294 francs. The public debt on Dec. 31, 1929, totaled 1,030,624,000 francs (about \$40,400,000). The budget of the Spanish Zone for 1928 balanced at 55,913,441 pesetas, with the help of a Treasury subvention. For 1930, estimated revenues of the Tangier Zone were 25,423,500 francs and expenditures 25,349,569 francs.

**COMMUNICATIONS.** Railways in the French Zone in 1929 extended 1433 miles; there were about 72 miles of line in the Spanish Zone. Motor highways extended 2764 miles in the French, 350 miles in the Spanish, and about 65 miles in the Tangier Zones. A total of 3879 vessels of 4,793,000 tons entered ports of French Morocco in 1930 in the foreign and coastwise trade.

**GOVERNMENT.** The Tangier Zone is permanently neutralized and demilitarized and is governed by an international control organization. The French Zone constitutes a protectorate, under a French and native administration. The office of Sultan continues, but the Sultan is obliged to follow the advice of the French Resident General in all matters. The Spanish Zone is a protectorate, governed by the Spanish High Commissioner. The Sultan in 1931 was Sidi Mohammed. French Resident General, Lucien Saint (appointed Jan. 2, 1929); Spanish High Commissioner, Lopez Ferrer (appointed June 17, 1931); Administrator of the Tangier Zone, M. Le Fur.

**HISTORY.** The overthrow of the monarchy in Spain was accompanied by a mutiny against republican officials among units of the Spanish Foreign Legion at Ceuta in May, 1931, and by riots and a general strike among Moorish workmen in Tetuan and other communities in the Spanish Zone. Order was restored by troops loyal to the republic. Toward the end of the year, the French extended the area under their control south of the Atlas Mountains by a combination of military force and political negotiation. These

operations were understood to be preliminary to the projected construction of a railway from rich mining areas of the South Atlas to Agadir.

**MORROW, DWIGHT WHITNEY.** An American Senator and ex-Ambassador to Mexico, died in Englewood, N. J., Oct. 5, 1931. He was born in Huntington, W. Va., Jan. 11, 1873, and was graduated from Amherst College in 1895 and from the Columbia University Law School in 1899. Admitted to the bar in the latter year, he became associated with the firm of Simpson, Thacher and Bartlett in New York City, becoming a member in 1905. After 1914 he was a member of the banking firm of J. P. Morgan & Co., resigning in September, 1927, to accept appointment as U. S. Ambassador to Mexico. As Ambassador, he was brilliantly successful in promoting friendly relations between the two countries, his outstanding accomplishment being the settlement of the long-standing controversy over Mexico's nationalization of petroleum deposits. He also aided the Mexican Government, under Presidents Calles and Portes Gil, in solving its financial problems and played an important rôle, as a friendly mediator, in the settlement of the struggle between the Roman Catholic Church and the State in Mexico.

He was a delegate to the Sixth Pan-American Conference at Havana in 1928 and to the London Naval Conference in 1930. Following his resignation of the ambassadorship, he was elected Senator from New Jersey in November, 1930, for the unexpired term of Walter E. Edge in the 71st Congress and for the full term in the 72nd Congress, his campaign being conspicuous for the frank and outspoken stand which he took in favor of the repeal of the Eighteenth Amendment. During the World War he served with the Military Board of Allied Supply and was adviser to the Allied Maritime Transport Council, receiving the Distinguished Service Medal for these services. In 1925 he was chairman of the President's Aircraft Board, and two years later sponsored the goodwill flight to Mexico of Col. Charles A. Lindbergh, who later became his son-in-law. He also took an active part in military, civic, and philanthropic matters in his State, being director of the War Savings Committee of New Jersey in 1918 and chairman of the Prison Inquiry Commission of New Jersey in 1917 and of the New Jersey State Board of Institutions and Agencies in 1918-20.

**MORTALITY RATES.** See VITAL STATISTICS and each country under *Area and Population*.

**MORTON, MICHAEL.** A British dramatist, died in Tadworth, Surrey, Jan. 11, 1931. Born in London in 1864, he attended the South Kensington School of Art and in 1883 came to the United States as an actor under Daniel Frohman's management. On his return to London in 1902 he was associated for several years with Sir Herbert Tree as literary adviser and producer. His plays include *Miss Francis of Yale* (1897); *Training a Husband* (1898); *A Rich Man's Son* (1899); *The Yellow Ticket* (1914); *My Superior Officer* (1916); *Jeff* (1916); *On with the Dance!* (1917); *Woman to Woman* (1921); *The Talking Shop* (1921); and *Five Minutes Fast* (1925). He also collaborated with Paul Gavault and Peter Traill in writing numerous plays.

Among his important adaptations are: *Resurrection* (from Tolstoy's novel, 1903); *Colonel Newcome* (from Thackeray's novel, *The Newcomes*, 1906); *Riceyman's Steps* (from Arnold

Bennett's novel, 1926); and *Beauty* (from the French of Jacques Devat, 1929).

**MOTION PICTURES.** During 1931 the cinema shared with everything else the burden of depression. It was a difficult period for the producing organizations, with the value of their stocks collapsing, the bankers engaged in assuming control of the industry, the cost of manufacture remaining excessive, the quality of the product showing scant improvement, and the public revealing signs of staying away from their choicest products. In the endeavor to find a way out of their difficulties, the producers tried, however, few novelties, and concentrated on the careful exploitation of familiar lines of story development, rather than upon any strikingly original ideas or methods.

The chief advance made by the motion picture as a dramatic form consisted of a certain suggestion of sophistication, a certain hint of willingness to contemplate something more than the usual cinema topics of material success and the triumph of young love, which slowly seemed to be creeping into the minds of the Hollywood producers. There was, for example, *Five Star Final*, which, though adapted from a stage play, revealed for an ordinarily non-controversial medium a surprisingly controversial propensity for attacking, with considerable indignation, the methods of the more sensational tabloid press. There was, in addition, a fairly large number of photoplays, which had about them a new air of unsentimental boldness, that, though it did not find favor in some quarters, seemed to many a definite sign of intellectual growth.

Despite everything, the favorite topic of the films was the gangster. Though the organization headed by Will Hays was unfriendly towards them and the censors showed signs of extreme dislike, Hollywood continued to turn out a succession of melodramas dealing with the activities of the racketeers. It was the contention of the defenders of this type of photoplay that, since the cinema is essentially a topical dramatic form, it could not be expected to overlook a subject which appeared on the front pages of every newspaper with decided regularity. It was generally conceded, too, that, whatever might be thought of the ethics of these gangster pictures, they were almost invariably handled by their producers with a vigorous dramatic reality and resourcefulness, which were frequently lacking in pictures dealing with more sedate topics.

The two most successful films in this field were *Little Caesar* and *The Public Enemy*. Both of them were stark and bitter in their earnestness and in their realism, but, while *Little Caesar*, despite its merciless treatment of the killer who served as its central figure, provided him with a death which had a touch of tragedy about it, *The Public Enemy* possessed a grim, chilling quality which revealed the gangster as a murderous insect, rather than as an anti-social, but picturesque, adventurer. Among other things, these films established their stars as distinguished

actors of the cinema. Edward G. Robinson, who also played the leading rôle in *Five Star Final*, achieved his position in the screen hierarchy by his work in *Little Caesar* and James Cagney gained recognition by his portrayal in *The Public Enemy*.

It was in *The Public Enemy*, incidentally, that the raciest and most vigorous playwrights of the screen made their appearance. During the year, it had been an axiom of the motion picture that the defects of the medium were chiefly the fault of the writers in charge of story construction and dialogue. In most of the films, the direction was expert, the sets and the lighting admirable, the camera work skillful and the dramatic movement properly dynamic. In nearly every case, however, the quality of the writing was thin, imitative and generally ineffective. Kusbek Glasmon and John Bright, who, in addition, to writing *The Public Enemy*, were the authors of *Smart Money* and *Blonde Crazy*, developed a vein of vigorous, credible, earthy, and heartily sardonic prose, which seemed definitely to belong to the medium of the motion picture. With the exception of Edwin Burke, who wrote effective realistic dialogue for *Bad Girl*, the adaptation of a popular novel by Vina Delmar, Glasmon and Bright were the only writers who appeared to be complete and original screen playwrights.

One of the tendencies of the cinema was towards the manufacture of films about children. The success of *Tom Sawyer* the year before resulted in the making of *Huckleberry Finn*, which was considerably less successful. The most popular of the narratives dealing with juvenile adventures was *Skippy*, based on Percy Crosby's comic strip, which, thanks to the dialogue by Don Marquis and the acting of little Jackie Cooper, proved to be immensely popular. *Sooky*, a sequel to *Skippy*, appeared at the end of the year and gave signs of encountering the usual unhappy fate of sequels. After his success in his first picture, young Cooper appeared, opposite Wallace Beery, in *The Champ* where he became definitely the most admired child actor since Jackie Coogan played with Chaplin in *The Kid*.

It was, incidentally, Charlie Chaplin who provided the only important silent film of the year in *City Lights*. Playing his familiar rôle of the wistfully misfit tramp, Chaplin proved himself as effective and well-beloved as ever in his first comedy in several years, but, although *City Lights* was accepted as one of his best pictures and proved a financial success wherever shown, it did not, as many had hoped, prove to be a harbinger of the return to the pantomimic cinema. For non-dialogue films, the picture-goers were forced to depend on the Russians, but, although the Soviet films continued to be brilliantly photographed and dramatically in earnest, none of them attracted either popular or critical attention during the year when shown in the United States.

The most controversial work of 1931 was Theodore Dreiser's *An American Tragedy*, as adapted by Samuel Hoffenstein and directed by Josef von Sternberg. Before the picture was shown publicly, the author denounced it earnestly and went to court in a futile effort to suppress it as a faithless distortion of the book's viewpoint and literary quality. It was, however, the general belief among screen observers that the picture was an earnest effort to be faithful to

Charles Chaplin and Virginia Cherrill in "City Lights"

Helen Hayes and Ronald Colman in "Arrowsmith"

the original and that most of its faults were those which were found by unfriendly observers in the novel itself.

There was no real effort made during the year to restore the general interest in either filmed musical comedies or photoplays in color. *The Smiling Lieutenant*, with Maurice Chevalier in the leading rôle, was in the nature of an operetta, and *Palmy Days*, with Eddie Cantor, was a conventional musical comedy in cinema form. Both of them were economically successful and there was considerable talk about a general return to the medium, but, although a few works of the *Palmy Days* school were tried, in particular *Flying High*, there was no general trend in that direction. Color was used in but a few films, and none of them proved particularly popular.

In addition to *An American Tragedy*, the popular novels which were filmed included Edna Ferber's *Cimarron* and Sinclair Lewis's *Arrowsmith*. The adaptations were carefully faithful in both cases, and in the instance of *Arrowsmith* the work was enthusiastically approved by the author, one of the rare occasions where such a thing had happened. Another tendency in the cinema was towards the production of travel pictures, which would be somewhat out of that routine, to which the public had grown so familiar. There was, in particular, Douglas Fairbanks's *Around the World in Eighty Minutes*, a combination of travelogue and interpolated comedy.

Throughout the year Greta Garbo remained the most discussed and the most spectacular player of the motion pictures. Despite even the chilling medium of sound she was able to maintain herself as a sort of distant, legendary person, even more completely than she had managed during the days when she was enveloped in silence. There were those who insisted that she was less distinctive as a player than as a personality, but it was generally conceded that, with the presentation of her two latest vehicles, *Susan Lenox: Her Rise and Fall* and *Mata Hari*, she proved herself, even more strongly than ever, the most distinguished acting figure of the audible motion pictures.

Among the other players, who were outstanding during 1931, were, as already mentioned, Edward G. Robinson and James Cagney, and, in addition, Helen Hayes, of the stage, for her work in *The Sin of Madelon Claudet*; Jackie Cooper, Wallace Beery, James Dunn, Adolphe Menjou, Marlene Dietrich, Janet Gaynor, Lionel Barrymore, Norma Shearer, Robert Montgomery, Joan Crawford, Jimmy Durante, Estelle Taylor, Sylvia Sydney, Pat O'Brien, the Marx Brothers, Richard Dix, Sally Eilers, Dudley Digges, George Arliss, Claudette Colbert, Miriam Hopkins, Tallulah Bankhead, Ronald Colman, Clive Brook, and Clark Gable. It was Mr. Gable who gave every evidence of being the current matinee idol of the feminine film-goers.

The important photoplays of the year included *Five Star Final*, *Little Caesar*, *The Public Enemy*, *The Front Page*, *Skippy*, *City Lights*, *Smart Money*, *Bad Girl*, *Arrowsmith*, *Street Scene*, *Touchdown*, *Monkey Business*, *Private Lives*, *Frankenstein*, *The Criminal Code*, *Cimarron*, *Dracula*, *Rango*, *Dishonored*, *Tabu*, *The Skin Game*, *The Dreyfus Case*, *Waterloo Bridge*, *The Guardsman*, and *Le Million*. *The Skin Game* and *The Dreyfus Case* were made in England and *Le Million* was produced in France. See EDUCATION

IN THE UNITED STATES under *Motion Pictures and Radio*; PHOTOGRAPHY.

**MOTOR ACCIDENTS.** See PSYCHOLOGY under *Applied Psychology*.

**MOTORBOATS.** An event that occupied the front pages of newspapers all over the world and caused arguments and discussions that were being waged, even as the year closed, was the race in September on the Detroit River, for the British International Trophy, known as the Harmsworth Trophy, the most valued trophy in the motorboat world. Kaye Don of Great Britain, representing Lord Wakefield, was matched against Gar Wood, the holder of the Harmsworth Trophy, and his brother, George Wood.

Don, racing *Miss England II*, won the first heat in record time, but in the second, on Labor Day, Gar Wood in *Miss America IX* flashed across the starting line eight seconds ahead of the signal, followed by Kaye Don who also crossed ahead of the signal. George Wood, who was behind Don, went across the line on time. On the first turn Gar Wood, in *Miss America IX* cut wide and Don flashed across the foaming wake of the roaring American boat. The *Miss England II* hit the wake, bobbed, reared, tossed its driver and mechanics clear, and plunged to the bottom of the Detroit River, to the consternation of the hundred and fifty thousand spectators lining the banks. The authorities, despite the fact that George Wood finished alone, disqualified both boats that had beaten the gun and declared the race "no contest" and the trophy remained in the United States.

Then the bitter controversy began. Wood's action of going over the line ahead of the gun, and drawing Don along with him, was characterized as a "smart Yankee trick" and drew expressions of rage from British and American newspapers and sportsmen. In the first heat of the Harmsworth *Miss England II* was timed in 89.913 m. p. h. for the 30 miles, and 93.017 for one lap, five miles.

Even before the races at Detroit a battle of speed had raged between Don and the veteran Wood. On the Indian River in Florida, March 20, Wood had set a record of 102.256 m. p. h. and April 2, Don, on the Parana River, in Argentina had flashed 103.49. Wood then failed to break this mark, but set the American record when *Miss America IX* was driven at 103.069. Don, however, shattered all marks, and drove a boat the fastest any had ever gone, when on Lake Garda, in Italy, July 9, his *Miss England II* was timed in 110.223.

Victor Kleisrath's *Hotsy Totsy* of Port Washington, N. Y., defending champion, won the Gold Cup at Montauk, establishing a new record of 53.59 for three 30-mile heats.

*El Lagarto*, owned by George Reis of Lake George, N. Y., won the National Sweepstakes at Red Bank, N. J. This same boat had led *Hotsy Totsy* at Montauk for nine laps but was forced out of the race by engine failure. The two boats met again at Washington, D. C., in the President's Cup race, and *El Lagarto* won in two straight heats. The third was called off on account of the first death in American speedboat racing in thirty years. William Frietag of Philadelphia, a veteran driver, was pinned in his seat when *Miss Philadelphia*, which he was driving at high speed, overturned. In the same regatta at Washington, C. Roy Keys' *Core-naught* retired the Secretary of the Navy Cup

by winning it for the third consecutive time.

Outboard racing was again popular and where there was only one American record of more than 50 miles an hour at the start of the year, at the end of the year there were five on the books of more than 51 m. p. h. In October at Salton Sea, Calif., Tommy Estlick of Waukegan, Ill., traveled a mile straightaway in 56.525 seconds, and Charles Harrison, an Englishman, almost tied the mark at Welsh Harp, November 20. Wade Woodworth, former Northwestern University football player, won the annual Albany-New York marathon in the spring, and Ben Rhymers won the 100-mile marathon held at Lake Quinsigamond, Worcester, Mass.

**MOUNT HOLYOKE COLLEGE.** An institution for the higher education of women in South Hadley, Mass., founded in 1837. The registration for the autumn session of 1931 was 1019. The faculty, including professors, associate professors, assistant professors, instructors, and chief administrative officers, numbered 138, and there were 55 assistants, graduate assistants, curators, and secretaries. The endowment funds amounted to \$4,001,118 and the income for the year was \$1,260,332. The total amount of gifts and bequests during the year 1930-31 was \$139,563. There were 120,000 volumes in the library. President, Mary Emma Woolley, LL.T.D., L.H.D., LL.D.

**MOVING PICTURES.** See MOTION PICTURES.

**MOZAMBIQUE (PORTUGUESE EAST AFRICA)**, mō'zām-bêk'. A colony of Portugal, occupying the east coast of Africa between Tanganyika Territory and the Union of South Africa. Area, 287,756 square miles; total population in 1929, 3,701,000, including about 17,842 Europeans. The colony is divided into the state-administered Province of Mozambique (area, 235,700 square miles) and the territory of Manica and Sofala administered from Beira by the Mozambique Company under royal charter; area, 52,056 square miles; population, 313,927 (3616 Europeans) in 1928-29. Lourenço Marques (population 37,307) is capital of the Province. The chief products are sugar, maize, cotton, and minerals. For 1929, imports into the Province totaled 14,001,545 escudos gold; exports, 11,335,517 escudos gold (1 escudo gold equals \$1.08). Imports and exports of the chartered territory (1928) were 6,336,000 and 2,436,000 escudos, respectively. Revenues of the Province in 1930-31 were estimated at 331,982,780 escudos. In the chartered colony receipts for 1928 totaled about 64,758,000 escudos and expenditures about 44,570,000 escudos.

The principal ports are Mozambique, Beira, Lourenço Marques, Porto Amelia, and Quelimane. A total of 838 vessels of 3,889,199 tons entered the port of Lourenço Marques in 1929 and 835 vessels of 3,872,453 tons cleared. In the same year, 432 vessels of 1,644,271 tons entered Beira. New port works under construction at Beira in 1931 and the completion of a direct railway route from Beira to Lake Nyasa were expected greatly to increase the traffic of the port. The Province is

under a governor-general, assisted by a governor in each of the six districts. There is a military force of about 3900 men (2400 natives). Governor-General in 1931, José Cabral.

**MOZART ANNIVERSARY.** See MUSIC.

**MÜLLER**, mū'lër, HERMANN. A German statesman, died in Berlin, Mar. 20, 1931. He was born in Mannheim, May 18, 1876. In 1899 he became editor of the Socialist newspaper, *Görlitzer Volkszeitung*, and from 1906 onwards was a leader of the Social Democratic party. In addition to acting as delegate to several international socialist congresses, he conferred on the outbreak of the World War with the French socialists in Paris, but his attempt to determine if an international concerted action of the socialists could avert the war was unsuccessful. He was a member of the Reichstag from 1916 to 1918 and of the National Assembly at Weimar in 1919. He served as Minister for Foreign Affairs during the chancellorship of Gustav Bauer (1919-20) and in this capacity was one of the German signatories of the Versailles Treaty. He was reelected to the Reichstag in 1920. He was twice chancellor, his first term lasting from March to June, 1920, and his second term from June, 1928, to March, 1930.

**MUNICIPAL GOVERNMENT.** The year saw some important changes in the framework of municipal government, mostly additional adoption of the council-manager plan, with a return to the mayor-council plan at Cleveland after eight years of the council-manager plan, and with the adoption of a quite mixed type of city charter at San Francisco. The industrial and financial depression increased the necessity for unemployment relief and other human welfare work in many cities and put some in financial straits. Some cities curtailed expenditures for public improvements while others felt it imperative to do more work of the sort in order to reduce the army of the unemployed. Reduction of salaries became increasingly common through the year, either applying to the higher salaried or all down the scale, even taking in the lower classes of wage earners. A relatively small number of cities postponed for longer or shorter periods meeting payroll demands. Outside of Chicago and associated district and county governments where delayed payrolls began still earlier owing largely to complications over the basis of tax assessments, the most notable example of temporary embarrassment over municipal payrolls was in Philadelphia in December. This was caused by a combination of circumstances including old deficits due to lack of a true budgeting system, delinquencies in paying taxes and inability to market bonds in the usual manner owing to dissatisfaction of bankers and dealers with the city's financial status. The delay in paying salaries in Philadelphia was brief, the city virtually obtaining money by buying its own bonds, "over the counter," with money taken from its sinking fund accumulation. For various details relating to more than a hundred of the larger cities of the United States see Bird, *The Present Financial Status of 135 Cities in the United States and Canada*, a bulletin published by the Municipal Administration Service, New York City; for difficul-

ties in a single city see Fishack, "A Financial Dictatorship for Fall River," *National Municipal Review* (April, 1931).

The return of Cleveland to the mayor-council plan by a charter amendment adopted Nov. 3 (61,000 for and 52,000 against) strikes from the city-manager list the largest city of the United States operating under that plan after failures of three previous attempts to the same end (see earlier YEAR BOOK issues). For detailed critical comment on this change see Fessler, "Why Cleveland Abandoned the Council-Manager Plan," *Public Management* (December, 1931). Three of the larger cities to adopt the council-manager plan during the year were San Diego (148,000 by the 1930 census), Utica, N. Y. (191,000), Binghamton, N. Y. (77,000). The plan was defeated at Toledo, Ohio (291,000 population), on November 3, where the alternatives of the city manager combined with a large or with a small council were both defeated by substantial majorities. At Oakland, Calif. (284,000 population), the council-manager plan voted the previous year went into effect on July 1, following an attempt to baffle it by an intermediate vote on the proposed charter amendment providing for the appointment of the manager by the mayor and the consolidation of all city departments under mayor and manager. The office of manager at Oakland was filled by the appointment of a veteran in the service, O. E. Carr, an engineer who began his city-manager career at Cadillac, Mich., in 1914 and subsequently was manager successively at Niagara Falls, Springfield, Ohio; Dubuque, Iowa; and Fort Worth, Texas. The new form of city charter adopted by San Francisco March 26, by a vote of 59,000 to 46,000 was to become effective Jan. 8, 1932. It is a combination of the old "strong-mayor" type of charter with the city-manager plan. The mayor is chief appointing and executive officer. Under him is a chief of administration in charge of all singleheaded departments: public works, electricity, purchasing, financial, and records. In the matter of removal, the superintendent of operations is at the mercy of the mayor, a two-thirds vote of the supervisors (city council) and also subject to popular recall. The utilities commission has charge of the municipal street railway system, the waterworks, the municipal airport and any other utilities that may be acquired as time goes on.

The recall was successfully applied to the mayor of Seattle in July on charges of giving false reasons for dismissing the superintendent of public utilities and appointing, it was alleged, an incompetent man in his place as head of the city lighting department. The dismissed superintendent, who had served in the capacity named for 25 years, was subsequently reappointed. Seattle recalled its mayor in 1911, but subsequently elected him to office twice. In the first successful recall election in the history of Pasadena, Calif., on December 28, the entire Board of City Directors were recalled and replaced by candidates sponsored by the Pasadena Association. The resignation of the City Manager, R. V. Orbison and the appointment of J. W. Charleville to that post was one of the principal points at issue.

Changes in the government of greater Berlin, Germany, took effect during the year. (For de-

tails see Prof. Dr. Walter Norden, "Berlin's New Government," *National Municipal Review*, December, 1931.)

**BIBLIOGRAPHY.** Among the more important books of the year in this field are: *Who's Who in Government* (New York); Walker, *Municipal Expenditures* (Baltimore); National Industrial Conference Board, *State and Local Taxation of Property* (New York); Manny, *Rural Municipalities* (New York); Fairlie and Knier, *County Government and Administration* (New York); Studenski, *The Government of Metropolitan Areas in the United States* (New York).

**MUNICIPAL LEAGUE.** NATIONAL. See NATIONAL MUNICIPAL LEAGUE.

**MUNICIPAL OWNERSHIP.** The city of Elizabeth, N. J., took over the distribution system of the privately owned waterworks supplying that city on July 15, paying \$4,000,000 to the Elizabethtown Water Co. and \$275,000 to the Plainfield-Union Water Co. The city will buy water from the two companies named, which still supply other municipalities in the vicinity, and also from the city of Newark. On April 15 New York City took title to the property of the Long Island Water Corporation, paying \$2,000,000 for works that supplied the Rockaway section of the city. The city of Peoria, Ill., opened a rail and water terminal, built by the city, on June 15, 1931. Extension at a great total cost of the rapid transit subway system in New York City was being continued. A new plan for acquiring and unifying the street transportation facilities of New York City was reported in December. It provides for the purchase of the Interborough and Brooklyn Rapid Transit systems for \$475,000,000. Public hearings on the proposal were to be held in March, 1932. See RAPID TRANSIT. During the year Detroit, Mich., obtained full control of the transportation system of the city.

The municipally owned Berlin Electric Company, supplying Greater Berlin, Germany, with electric light and power, was changed to a "mixed economic undertaking" in March in order to relieve the financial straits of the city due to a large volume of short-term debts. The stock of the company was divided between the government of the city of Berlin, Prussia, and the Reich and a number of European and American bankers (see *National Municipal Review*, December, 1931).

**MUNICIPAL PLANNING.** See CITY AND REGIONAL PLANNING.

**MURAL PAINTING.** See PAINTING.

**MURDER.** See CRIME.

**MURDOCK.** REAR ADMIRAL JOSEPH BALLARD, U. S. N., RET. An American naval officer, died in Manchester, N. H., Mar. 20, 1931. He was born in Hartford, Conn., Feb. 13, 1851, and was graduated from the U. S. Naval Academy in 1870. He was executive officer of the *Panther* during the Spanish-American War and of the *New York* during 1899-1901. Murdock became commander in 1901, captain in 1906, and rear admiral in 1909. He commanded the *Rhode Island* in the cruise around the world in 1907-09, was commandant of the New York Navy Yard in 1909-10, and served as commander of the second division of the Atlantic fleet in 1910-11 and as commander-in-chief of the Asiatic fleet in 1911-12. He was retired in 1913, but during the World War was ordered to duty at the Portsmouth

(N. H.) Navy Yard. He published *Notes on Electricity and Magnetism* (1884).

**MUSIC.** GENERAL NEWS. Musical activities during 1931 were, naturally, not unaffected by the unfavorable economic conditions that prevailed during the year, although, all things considered, the adverse effect was less than might have been expected. In the American concert field, reports issued by the two large managerial alliances, the Columbia Concerts Corporation and the NBC Artists Service, stated that advance bookings in September were substantially ahead of those recorded at the corresponding period in 1930. That business depression had not, however, left American musical activities entirely unscathed was indicated in the fall, when it was announced that General Manager Gatti-Casazza and the other non-union members of the Metropolitan Opera Company had accepted a voluntary salary reduction of 10 per cent—whereupon the Chicago Civic Opera Company announced that its members had accepted a 20 per cent reduction.

In Europe, reports from various centres indicated less than normal concert activities. Poor houses and fewer concerts marked the first two months of the year in Vienna, but a slight upward trend was recorded for March and April. A Paris report in April styled the local concert season as the leanest since the World War, with only noted artists able to draw good houses. *Le Guide Musical* recorded a drop of 109 events for the season of 1930-31, as compared with 1929-30. In October, concert bookings in London were said to be only about 50 per cent of normal.

Conditions in Germany led to the organization, in January, of the League of German Concert Givers, which began a movement to correct unnecessarily unfavorable factors, especially high rents for concert halls. In achieving lower rental rates, the League's activities scored some success.

In France, early in the year, a committee was organized for propaganda for music, with a membership including 200 musicians, as well as directors of operatic organizations and conservatories, editors, manufacturers, and social and political leaders.

Apart from the closing of the Kroll Opera in Berlin, a move determined the year before, most of the existing operatic organizations of Western and Central Europe survived 1931, although financial stress led to administrative reorganizations in certain centres. Both the German and Austrian governments passed laws limiting the salaries of the artistic personnel in state-controlled institutions. In Berlin, the "festival weeks" projected for May and June were abandoned, and opera houses in some smaller Central European cities had to close their doors.

Another economy move in Austria, besides the limitation of operatic salaries, was the merging of the State Academy of Music with the State High School of Music.

Musicians suffered from unemployment on both sides of the Atlantic. One remedial move was the organization of orchestras of unemployed musicians; such an orchestra in Berlin began its activities in February, when 160 musicians played under Fritz Steidry's direction. In Paris, an Association of Jobless Musicians, organized under the presidency of Edouard Herriot, began

a series of concerts under Paul Bremond. In America, the competition of the radio and of mechanically reproduced music had made unemployment among musicians a serious problem even before the business depression. The Roxy Theatre, one of the principal motion picture houses of New York, increased its orchestra by 75 previously unemployed players for a series of Sunday morning concerts during the winter.

The concentration of concert management in the United States into the hands of two large alliances was continued with the effecting of an agreement between the NBC Artists Service and the Civic Concert Service of Chicago, and the engagement by the Columbia Concerts Corporation of the two principal Pacific Coast managers, L. E. Behymer of San Francisco and Selby C. Oppenheimer of Los Angeles, as its Western representatives. Both alliances aimed to decentralize musical activities in the United States by promoting concert courses in the smaller communities.

The 175th anniversary of Mozart's birth passed with relatively little notice in America, but there were special programmes and observances both in Berlin and Vienna. The Austrian government designated 1931 as Mozart year, and ordered observances of the anniversary on January 27 in the public schools. At the same time, there was an extraordinary revival of interest in Mozart's nearly forgotten opera *Idomeneo*. The most heralded revision was that made by Richard Strauss and finally produced, after postponement, under his direction at the Vienna State Opera on April 16. Impressions were mixed; some praising Strauss's work on the old score, while others found too much Strauss in the refurbished music.

On declining to conduct the Fascist anthem and the Royal March at a memorial concert of Martucci's works on May 14 in Bologna, considering that their inclusion would not be in harmony with the spirit of the occasion, Arturo Toscanini was assailed and beaten by a group of young Fascists outside the concert hall. As a protest against the treatment of Toscanini, Serge Koussevitzky cancelled an engagement to conduct in Milan during the month of June.

Mr. Toscanini, as in 1930, scored an artistic triumph at Bayreuth, but after the festival it was reported that he was not in sympathy with the prevailing policies at Bayreuth, and would not return for the next festival in 1933.

Mr. Toscanini resumed his work with the New York Philharmonic-Symphony Orchestra on November 23, but, owing to continuing pain in his arm, had to end the first part of his season on December 20, instead of January 10.

As in previous years, there were several discoveries of little known works by famous composers. Early in 1931, the Warsaw pianist, Marie Mirska, discovered a Chopin mazurka in A flat in the Musée Mickiewicz in Paris. The manuscript of Bach's chorale *Sei gegrüsst, Jesu gütig* was discovered in the library of Carpentras, in southern France; it had formerly belonged to the painter and composer, J. J. Bonaventura Laurena. In the summer, at Vienna, Prof. Otto Deutsch discovered 12 German Dances by Haydn, composed in 1792. At Eisenach, Hans Loeffler discovered a valuable eighteenth century treatise on organ playing in the Bach collection of Manfred Gorles. In the University library at Upsala, Sweden, Prof. Bruno Grusnick discovered a "sacred concerto" for five instruments which he

considered, almost beyond doubt, to be the work of Heinrich Schütz.

In October, it was announced that Mrs. Mary Louise Curtis Bok had bought the famous Burrell collection of Wagneriana and brought it from England to Philadelphia.

Steps were undertaken to establish a Berlioz museum in France at La Côte St. André, his birthplace. A Bellini museum was opened in the spring in the composer's house at Catania, Sicily, and was made a national monument.

In January, the first general phonograph record convention was held in Mannheim, Germany, before a gathering of 600. In the spring, the International Concerts Federation held its first congress in Rome, which was attended by delegates from ten countries, including Japan. At a German congress of electrical and radio instruments in the summer at Munich, several new or improved devices were exhibited, including the "Trautonium" and "Mellerton."

The National Federation of Music Clubs held its biennial convention in June at San Francisco, where the programme included the biennial contests for young musicians and performances of works which had won the Federation's prizes.

**ARTISTS.** The most sensational success to be scored during the year by a hitherto little known artist was that of Lily Pons, a young French coloratura soprano, who made her début with the Metropolitan Opera Company in New York on January 3 in the title rôle of *Lucia di Lammermoor*. The singer, whose previous experience had been limited to opera in the French provinces, was immediately acclaimed as an artist of unusual promise, with a voice clear in quality, of notable fluency and wide range. It was noted that her voice sometimes lacked fullness, and had occasional unevenness in the quality of tone, and that her capacity for emotional expression in song was still limited, but, with her vocal assets, intelligence and musicianship, the general impression was that Mme. Pons had begun an unusually brilliant career. Besides singing at the Metropolitan for the rest of the season, she sang in several spring festivals and made an extensive fall tour in the United States, and appeared during the summer in the opera season at the Teatro Colon in Buenos Aires, where she duplicated her North American successes.

Although seventy years old, Ignace Jan Paderewski filled 80 engagements on his 1930-31 American tour, which closed May 22 at the Westchester, N. Y., festival. He played in Paris in June, and made further European appearances in the fall before returning to America.

The fourteen-year-old violinist, Yehudi Menuhin, was honored in June in Paris by being made an honorary member of the "Association Amicale des Prix du Violin du Conservatoire." As before, he gave a limited number of concerts, in America in the winter and in Europe in the spring and fall. In September, he underwent an operation for appendicitis, but was able to resume his concert work later in the autumn. Ruggiero Ricci, eleven-year-old violinist, who had been withdrawn from the concert stage late in 1930 after the legal dispute over his guardianship, resumed his appearances in the autumn of 1931.

One result of the successes of these youthful violinists was the appearance of several other violinists of relatively few years upon the American concert stage. The most promising of these seemed to be Grisha Goluboff, nine, who, like

Menuhin and Ricci, came from California. In Paris, attention was drawn to a fourteen-year-old violinist, Jean Hubeau, who won the Conservatoire's first prize for "accompaniment"—a word which, in this sense, is almost equivalent to "general musicianship."

Adolf Busch, noted German violinist, made his first American tour in the autumn, appearing only as soloist with several prominent orchestras, including the New York Philharmonic-Symphony under Toscanini. Mr. Busch's playing did not cause a sensation, but he was hailed as an accomplished master of his art.

Another German musician who made his American début in the fall of 1931 was the tenor, Richard Tauber, who, in a visit of three weeks, gave six recitals in New York, besides a few appearances in other cities, with programmes specializing in German lieder and songs from the operettas of Franz Lehar.

Carlo Zecchi, a young Italian pianist, made his American début during the winter, scoring a fair degree of success, while not duplicating the sensation caused by Vladimir Horowitz and José Iturbi in their first American appearances. The latter, who returned for another tour in the fall, continued to be the most acclaimed of the younger pianists active in America.

A French pair of pianists, Jean Wiener and Clement Doucet, made their American début in October, with programmes including American jazz as well as more familiar concert numbers. In this field, a loss was sustained when Guy Maier and Lee Pattison concluded an artistic association of 12 years in April; this left the British musicians, Ethel Bartlett and Rae Robertson, as the foremost exponents of two-piano music, among those known in America.

Fewer American musicians than before attempted European appearances, but Charles Kullman, tenor, an American exchange student at the Hochschule für Musik, won much praise after his operatic appearances in Berlin. With a New York recital on November 22, Geraldine Farrar made the last appearance in a career of 25 years before the American public, remaining faithful to her decision to retire before reaching the age of fifty. The soprano planned, however, to sing occasionally over the radio.

**CHAMBER MUSIC.** The fifth festival in the series given at the Library of Congress in Washington under the provisions of the Elizabeth Sprague Coolidge Foundation was held from April 23 to 25. In the choice of material for the programmes the term "chamber music" was interpreted in a very liberal sense. The opening programme, which was repeated in New York on April 26, was devoted to "music with stage action": interpretations, with the aid of a group of mimes and dancers, of Bach's organ toccata and fugue in D minor, troubadour songs arranged by Carlos Salzedo, and Ernest Bloch's string quartet. Hugh Porter was the organist; the Gordon String Quartet played the Bloch work. The stage action had been devised by Irene Lewisohn.

In later programmes, Nina Koshetz sang Russian and French songs; the Spanish guitarist, Manuel Llobet, and Hugo Holle's madrigal singers from Stuttgart made their first American appearances; a small orchestra under Ossip Gabrilowitsch played a symphony in G by Frederick the Great, and the Brosa Quartet of London played Serge Prokofiev's quartet, Op. 50, which he had composed especially for this fifth festival.

The only European chamber music ensemble to make its American debut during the year was the Budapest String Quartet (Emil Hauser and José Roisman, violins; Stephen Ipolyi, viola; Emil Schneider, cello), which was first heard in New York January 4.

**CHORAL MUSIC.** Choral activities in New York sustained a serious loss when the Society of the Friends of Music found it necessary to discontinue its activities in November, shortly after the death of its president and principal sponsor, Mrs. Harriet Bishop Lanier, who, during the Society's 18 years, had contributed between \$500,000 and \$1,000,000 to its support.

The Society of the Friends of Music had been organized in 1913, and at first engaged artists or groups to present music of various types which was considered of artistic value, but seldom heard on the concert stage. In 1921, the Society organized its own chorus, and Artur Bodanzky, a conductor of the Metropolitan Opera Company, became its musical director. This heralded an increasing specialization in music for chorus with orchestra. On Jan. 17, 1931, the Friends gave what was probably the first American concert performance of Beethoven's *Mass in C*, and, for the first time in America, Pfitzner's arrangement of eight choruses by Schumann for women's voices. On October 25, the Society gave Anton Bruckner's *Mass in F minor* for the first time in New York; its only previous American performances had been in 1900, in Cincinnati and Chicago.

The disbandment of the Friends of Music left the Oratorio Society, under Albert Stoessel, and the Schola Cantorum, under Hugh Ross, as the principal concert choruses of New York. The Schola Cantorum, on January 29, introduced to the United States Karol Szymanowski's *Stabat Mater*, and to New York, Constant Lambert's *The Rio Grande*, which, during the year, had hearings in several other American cities.

On June 3, a meeting was held to organize the American Choral and Festival Alliance under the presidency of Mrs. William Arms Fisher, with the increase of public interest in choral singing as one of its principal objects.

**AMERICAN MUSIC FESTIVALS.** The spring festival season in the United States began with the annual event at Lindsburgh, Kansas, April 3 to 5. The Virginia State Choral Festival was held at Charlottesville April 14 to 17, with the Virginian pianist, John Powell, as its principal proponent, and a folk-music programme as an important feature. The biennial festival at Cincinnati, May 5 to 9, was the first under the musical direction of Eugene Goossens. Its principal feature was an impressive performance of Mahler's eighth symphony, the *Symphony of a Thousand*, which had not been heard in America since the performances in Philadelphia and New York in 1916. Two English singers, Muriel Brunskill and Walter Widdop, made American debuts in this festival.

The annual Mozart festival at Harrisburg, Pa., took place May 7 to 9 under the direction of Ward Stephens. On May 15 and 16, Dr. J. Fred Wille conducted the twenty-fifth festival of the Bethlehem, Pa., Bach Choir, presenting nine church cantatas of Bach and the B minor Mass.

The Eastman School of Music at Rochester, N. Y., celebrated its anniversary with a four-day festival of American music under the direction of Dr. Howard Hanson and others. Among works heard for the first time were *Sahdji*, a choral

ballet by the Negro composer, William Grant Still, and *The Marriage of Aude*, a lyric drama with music by Bernard Rogers. Frederick A. Stock and the Chicago Symphony Orchestra took part in the thirty-eighth annual festival at Ann Arbor, Mich., May 14 to 16, and the twenty-third Chicago North Shore Festival at Evanston, Ill., May 18 to 23.

An innovation in the seventh annual Westchester Music Festival, held May 20, 22, and 23 at White Plains, N. Y., under Albert Stoessel's direction, was a performance of opera, Gluck's *Orpheus*, in English, with Margaret Matzenauer in the title rôle. Lily Pons sang in the Cincinnati and Evanston festivals; Ignace Jan Paderewski played in the Ann Arbor, Evanston, and White Plains events. George Sawyer Dunham conducted the twenty-ninth annual festival at Keene, N. H., May 20 to 22. The second annual Talbott Music Festival at Ithaca, N. Y., was held under John Finley Williamson's direction from June 18 to 20, with a volunteer choir of 2500 taking part.

Under Albert Stoessel's direction, the seventy-second annual festival at Worcester, Mass., was held October 7 to 10. The first concert included the first American performance of Arthur Bliss's war memorial cantata *Morning Heroes* and the first performance of Percy Grainger's *Tribute to Stephen Foster*, with a score including musical glasses in its instrumental line-up. In Canada, the Mendelssohn Choir held its annual Toronto festival February 12 to 14.

**EUROPEAN FESTIVALS.** The International Society for Contemporary Music held its ninth annual festival, the first to take place in England, from July 21 to 28 at Oxford and London. Three American works were heard.

In the chamber music concerts at Oxford, Lyeffer Knipper, Josef Koffler, Marcel Delannoy, Otto Jokl, Jean Cartan, Ernesto Halffter and Mario Pilati were represented in the instrumental numbers and Egon Wellesz, Jean Hure, and Jan Malakiewicz in the choral works offered.

In the two London concerts, Gregor Fitelberg, Hermann Scherchen, Constant Lambert and Ferdinand Quinet conducted orchestral works by the two latter composers, Roman Palester, Anton von Webern, Virgilio Mortari, Vladimir Vogel, and the Gershwin and Dukelsky numbers. The choral list included music by Ferenc Szabo, Vaughan Williams and Albert Roussel. The 211th Three Choirs Festival was held at Gloucester, England, from September 6 to 11. Novelties were Gustav Holst's *Choral Fantasia*, Robin Milford's *A Prophet in the Land* and R. O. Morris's *Sinfonia in C major*.

The first festival of American music to be held in Europe was given in Germany at Bad Homburg from July 6 to 8, with programmes selected by Irving Scherke. The repertoire included music by Frederick Jacobi, Roger Sessions, Quincy Porter, Leo Sowerby, MacDowell, Charles Griffes, William Grant Still, and Carl McKinley, besides a programme of music of the Colonial period. Press comment was polite, but noted a lack of originality and profundity.

The Wagner festival at Bayreuth opened July 21 and closed August 19. As in 1930, the repertoire consisted of *Tannhäuser*, *Tristan and Isolde* and the *Ring* cycle, but there were some changes of conductors, Arturo Toscanini again conducted five performances of *Tannhäuser* and also conducted the five performances of *Parsifal*, previously conducted by Dr. Karl Muck, who had retired from Bayreuth activities after the 1930

festival. The three performances of *Tristan und Isolde* were transferred from Mr. Toscanini to Wilhelm Furtwaengler, making his Bayreuth debut; Karl Elmendorff again conducted the two *Ring* cycles.

*Parsifal*, under Mr. Toscanini, was hailed as the highest artistic achievement of the festival, which, despite uncertain conditions in Germany at the time, registered an 8.3 per cent increase in attendance over the 1930 figure. With a delegation of 845, Americans were in a plurality among the foreign visitors at the festival.

The annual opera festival at Munich, which opened July 15, was primarily devoted, as usual, to performances of Wagner's works at the Prinzregenten Theatre and of Mozart's operas at the Residenz Theatre. Pfitzner's *Palestrina* and Strauss's *Der Rosenkavalier* also had two performances each.

Eleven operas were heard in the August festival at Salzburg, Austria, where Bruno Walter, Robert Heger, and Clemens Krauss conducted five Mozart works and *Fidelio*, *Orpheus*, and *Rosenkavalier*.

ORCHESTRAS. The Philharmonic-Symphony Society of New York completed its eighty-ninth season, counting from the organization of the original Philharmonic in 1842, on April 19. Arturo Toscanini conducted until January 19, and returned for the last eight weeks of the season, after Bernardino Molinari had been in charge for a five-week period. The ninetieth season began October 8, when Erich Kleiber returned for a six weeks' stay, lengthened to seven owing to the delay in Mr. Toscanini's return. After the great Italian conductor's departure on December 23 (see above under *General News*) the remaining concerts of 1931 were led by Vladimir Golschmann, of the St. Louis Symphony, and Hans Lange, of the Philharmonic-Symphony.

In April, Mr. Toscanini conducted three works for the first time anywhere, including *Parade and Flirtation in a Chinese Garden*, the latter a transcription of a piano work, by Abram Chasins, a young American composer, and Ildebrando Pizzetti's *Introduction to the Agamemnon of Eschylus*. On December 10, he gave the first American performance of Castelnuovo-Tedesco's overture to *The Taming of the Shrew*. Mr. Molinari's only novelty was *Rossiniana*, a transcription by Respighi of piano pieces of Rossini, introduced January 22.

Scipione Guidi resigned as concertmaster of the Philharmonic-Symphony in April, and was engaged for the corresponding post with the St. Louis Symphony. His successor was Mishel Piastro, formerly concertmaster of the San Francisco Symphony. Ernest Schelling continued as conductor of the orchestra's junior series.

The Manhattan Symphony Orchestra, under Henry Hadley, moved its regular concerts to the new Waldorf-Astoria Hotel for the new season beginning in October. Novelties heard during the year were Dr. Hadley's *Mirtil in Arcadia*, for chorus and orchestra, February 8, and *Halcyone* for tenor and orchestra, March 15.

The training orchestra of the National Orchestral Association gave eight concerts during the year under Leon Barsin's direction; works presented for the first time were *Mayan Legend* by Raul Paniagua, Guatemalan composer-pianist, and *Night on an Island of Phantasy* by Quinto Maganini, a Californian.

The Boston Symphony Orchestra, under Serge

Koussevitzky, continued the observance of its semi-centennial with a Bach festival from March 24 to 29, given as a memorial tribute to the orchestra's founder, the late Major Henry L. Higginson. The presentation of works written for the orchestra's fiftieth season was completed by a symphony by Arthur Honegger, February 13, and Paul Hindemith's *Konzertmusik* for six brass instruments, April 3. Other 1931 novelties were the second symphony of Edward Burlingame Hill, of Harvard University, February 27; Arthur Lourié's *Sonate Liturgique*, in January; Gustav Mahler's Ninth Symphony, October 16; Respighi's orchestration of five *Études-Tableaux* by Rachmaninoff, November 13.

In March, the Philadelphia Orchestra Association created the new post of Musical Director for Leopold Stokowski, giving him entire charge of its musical affairs. A rearrangement of the conductor's schedule divided Mr. Stokowski's time with the orchestra into several periods throughout the season, instead of concentrating it in the autumn and the spring. Ossip Gabrilowitsch, who conducted the orchestra from January until late in March, had to decline an invitation to return the next season.

On April 10, 11 and 13, in Philadelphia and April 21 and 22 in New York, Mr. Stokowski conducted the orchestra in the first American stage performances of Stravinsky's opera-oratorio *Oedipus Rex* and Serge Prokofiev's *Le Pas d'Acier*.

The new season opened October 10. Mr. Stokowski conducted the first three pairs of concerts. The next two weeks, originally planned for Mr. Toscanini, were under the direction of Eugene Ormandy. Fritz Reiner alternated with Mr. Stokowski for the next four weeks, and Alexander Smallens conducted on December 11 and 12.

Novelties heard under Mr. Stokowski's direction were Kurt Weill's *Lindbergh's Flight*, for tenor, chorus and orchestra, and the overture to *The Diadem of Stars* by Ruth Deyo, American composer-pianist, April 4; *Sinfonia Dialectica* by Arthur Lourié, April 17; four études by Stravinsky, October 23; Alexander Tansman's *Toccata*, Anton von Webern's symphony for small orchestra, two études by Wladimir Vogel and Robert Russell Bennett's *Abraham Lincoln, a Likeness in Symphonic Form*, all on October 24. Mr. Bennett's symphony, despite some lack of variety of mood, was held to be a work of considerable consequence, promising much for the future career of this American composer. Mr. Reiner, on November 13, gave the American première of the overture to Toch's *The Fan*.

On February 5, the Cleveland Orchestra moved into its new home, Severance Hall, giving a programme of which Charles Martin Loeffler's *Evocation*, written for the occasion, was the principal feature. The principal donor of the hall, John L. Severance, had contributed \$2,500,000 for the building as a memorial for his wife. On March 26 and 27, the orchestra and the Neighborhood Playhouse of New York gave a programme of mimed interpretations of orchestral works.

For its forty-first season, beginning October 16, the Chicago Symphony Orchestra transferred its evening concerts from Saturdays to Thursdays. Frederick A. Stock conducted most of its concerts; a few others were directed by the assistant conductor, Eric De Lamar, who introduced a suite from his own *Dance of Life* on February 27. In his choice of novelties, Mr. Stock was hospitable towards Chicago composers, who were represented

by Albert Noelte's suite for wind, percussion and harp, March 13; Adolf Bruno's *Overture to a Tragedy*, April 17; Wesley La Violette's violin concerto, *Dedications*, November 26; and Edward Collins's Concert Piece in A minor, December 3.

Fritz Reiner completed his ninth and last season with the Cincinnati Symphony on April 18, and was succeeded by Eugene Goossens, formerly conductor of the Rochester (N. Y.) Philharmonic.

During Mr. Gabrilowitsch's absence in the winter, the Detroit Symphony Orchestra was conducted by Bernardino Molinari, Howard Hanson, Arnold Volpe, and Victor Kolar. Mr. Gabrilowitsch, who was in charge for the remainder of the year, conducted the Detroit Symphony Orchestra and Choir on April 1 in their annual performance of Bach's St. Matthew Passion.

After four seasons under guest conductors, the St. Louis Symphony Orchestra returned to the régime of a permanent conductor, engaging Vladimir Golschmann, who had appeared as a guest leader for two weeks in January, as regular conductor, beginning in October. In November, Mr. Golschmann gave the first American performance of Tansman's *Triptyque* in its revised form for string orchestra.

In November, Henri Verbrugghen, conductor of the Minneapolis Symphony, had to discontinue his work owing to a long illness. Eugene Ormandy, who had been called to Minneapolis as a substitute leader, was engaged as regular conductor.

Issaye Dobrowen, who conducted the San Francisco Symphony Orchestra in the second half of the 1930-31 season, was reengaged to share the following season with Basil Cameron and to return as regular conductor for three seasons.

Karl Krueger, conductor of the Seattle Symphony Orchestra, tendered his resignation, effective at the end of the season, in November, stating that the lack of adequate financial support prevented further growth of the organization.

In Washington, D. C., which long had had to depend on organizations from other cities for its symphonic music, the National Symphony Orchestra made its debut November 2, with Hans Kindler as the conductor.

The thirteenth season of New York summer concerts at the Lewisohn Stadium of City College was held from July 7 to August 31. Willem van Hoogstraten conducted the Philharmonic-Symphony Orchestra in the first three weeks and Albert Coates conducted during the last three; the intervening fortnight was under Fritz Reiner. Hans Lange also conducted several programmes. The special features were two performances apiece of Beethoven's Ninth Symphony and Verdi's Requiem with chorus, two evenings partly devoted to singing by the Hall Johnson Negro Choir and two to dancing by Anna Duncan; three evenings occupied by the Denishawn Dancers, who gave the first American performances of Vaughan Williams's masque, *Job*, and an all-American programme including new music by Robert Russell Bennett and Allan Lincoln Langley. In the second season of the Philadelphia summer concerts, the conductors were Alexander Smallens, Ormandy, van Hoogstraten, Reiner and Coates.

The San Francisco Symphony divided its summer season between the Civic Auditorium in San Francisco and the Woodland Theatre at Hillsborough. In the first concert, Walter Damrosch conducted the first performance of *Eccabibur* by the late Louis Adolphe Coerne, which had won the prize of the National Federation of Music

Clubs for a symphonic work. Other conductors were Sir Hamilton Harty, Pierre Monteux and Dr. Rodzinski.

The same five conductors shared the direction of the summer concerts in the Hollywood Bowl, where the season ran from July 7 to August 29, with four concerts each week. The total attendance for this series, which was completed without a deficit, marked an increase of 36,218 over the 1930 record. Among other American summer series were those of the new Chicago Philharmonic under Adolphe Dumont and the San Diego "Midsummer Nights" under Nino Marcelli.

Despite unfavorable conditions, London suffered no diminution of orchestral activity during 1931. The principal orchestras were the B.B.C. (British Broadcasting Corporation) Orchestra, whose regular conductor was Adrian Boult, and the London Symphony, which was heard under Willem Mengelberg, Nicolai Malko, Sir Thomas Beecham, Hans Weisbach and others. London's senior orchestral society, the Royal Philharmonic, adhered to the guest conductor system, appearing, among others, under John Barbirolli, Vaclav Talich, Alfredo Casella, Ernest Ansermet and Basil Cameron. The Courtauld-Sargent concerts, a recently established series that has become one of the most important features in London's musical life, presented programmes under conductors including Malcolm Sargent, Bruno Walter, Otto Klemperer and Igor Stravinsky.

The annual Promenade Concert season in London began August 8 and closed October 3, with Sir Henry Wood conducting the B.B.C. orchestra. Among novelties performed were Elgar's new *Nursery Suite*, Delius's *Song of Summer*, Eric Fogg's bassoon concerto and Lord Berners's *Luna Park*. Richard Strauss conducted the B.B.C. orchestra in a concert on November 21.

The Berlin Philharmonic Orchestra, under Wilhelm Furtwaengler, made a three weeks' tour of England, Belgium, and Holland in March, and visited Paris in May; the Gewandhaus Orchestra of Leipzig appeared in Paris in June. In the fall, the Orchestre Symphonique de Paris, under Pierre Monteux, made the first trip to Germany to be taken by a French orchestra since the World War, and gave a French programme in Berlin November 19. On October 23, in Berlin, Igor Stravinsky conducted the world premiere of his violin concerto, with Samuel Dushkin as soloist. The work was not hailed as a masterpiece; virtuosity and striking effects were noticed, but there were complaints of slowness of musical substance.

Despite high taxes, Paris continued to have an imposing number of orchestral concerts given by eight organizations, including the Colonne under Pierre, the Lamoureux under Albert Wolff, the Padeloup under Rhene-Baton, the Orchestre Symphonique de Paris under Monteux, a series under Gaston Poulet, and W. Straram's series.

OPERA. During its home season of 1930-31, the Metropolitan Opera Company of New York gave 169 performances, offering 45 works 181 times, in addition to 24 Sunday concerts. Twenty-four works were given in Italian 89 times; 11 works 55 times in German; 9 works 31 times in French; and one work in English 6 times. Ten Italian composers were represented by 76 performances of 21 operas; 8 French composers by 32 performances of 9 operas; 2 Russian composers by 9 performances of 2 operas; and 1 American composer by 6 performances of 1 opera. The most popular composer was Wagner,

with 9 works given 42 times. Six operas of Verdi were heard 24 times, and 4 by Puccini 13 times.

The company began its season of 1931-1932, the forty-seventh regular season at the Metropolitan Opera House and the twenty-fourth under the general management of Giulio Gatti-Casazza, on November 2. During the year, the Metropolitan gave its usual quota of performances at the Academies of Music in Philadelphia and Brooklyn, besides three performances at the Westchester County Centre, White Plains, N. Y., and one in Hartford, Conn. The spring tour, which closed May 4 at Rochester, N. Y., included, as in 1930, a week shared by Baltimore and Washington and a week in Cleveland, but the visit to Richmond and Atlanta was not repeated.

On February 7, the Metropolitan gave the first performance of *Peter Ibbetson*, the second opera by the American composer, Deems Taylor, who adapted his libretto from John N. Randolph's play based on Du Maurier's novel.

The style of the work was musico-dramatic with the orchestra, rather than the voices, as the principal agent of musical expression. Dramatically *Peter Ibbetson* was more effective than Mr. Taylor's first opera, *The King's Henchman*. Critical comment on the music varied; praise was mingled with some disappointment that the composer had not fused the elements influencing his score into a more individual style.

Aided by the appeal of its story, *Peter Ibbetson* had a notable initial success, with six performances at the Metropolitan and four elsewhere. Another American opera, *Merry Mount*, book by Richard L. Stokes and music by Howard Hanson, was first scheduled by the Metropolitan for 1931-1932, but was postponed until the next season.

In the autumn, the Metropolitan produced two more operas for the first time in the United States. Jaromir Weinberger's *Schwanda, der Dudelsackpfeifer*, the most successful novelty of recent years in Central Europe, was produced November 7. While not sensationally acclaimed, the Czech composer's first opera was cordially welcomed; despite some unevenness of merit and occasional derivativeness in its musical ideas, the score pleased through its fresh tunefulness, vivacity and adroitness of construction.

Italo Montemezzi's *La Notte di Zoraima*, which had had its world première at La Scala in Milan January 31, was produced at the Metropolitan December 2. The critical verdict was almost unanimously adverse, noting that Montemezzi had merely repeated musical formulas of his *L'Amore dei Tre Re*, while his new score lacked the former's eloquence and vitality.

The Metropolitan's other novelty of 1931 was Franz von Suppé's *Boccaccio*, produced January 2. The Viennese operetta met with a varied reception at the hands of the critics, some of whom did not consider it among the best representatives of this genre, but it proved successful at the box-office, and Mr. Gatti-Casazza announced another Suppé work, *Donna Juanita*, for 1932.

On October 26, Otto H. Kahn, who had held this office since the beginning of the Gatti-Casazza régime, resigned the chairmanship of the company's board of directors, and was succeeded by Paul D. Cravath, who announced that no change would be made in the general policy maintained by his predecessor.

Among the Metropolitan's new singers, the most striking success was scored by Lily Pons

(see under *Artists*). Georges Thill, Parisian tenor, and Maria Ranzow, German contralto, were first heard in March; the former was reëngaged for the following season. The most prominent new artist appearing in the fall was Max Lorenz, tenor, from the Dresden Opera, who made his American début in *Die Meistersinger*, November 12. Marie von Essen, American contralto, made her Metropolitan début in the same performance, and Carlton Gould, American basso, was first heard in *Die Walküre* November 15.

To replace Wilhelm von Wymetal and Ernst Lert, the Metropolitan engaged two new stage directors for the season of 1932-1933, Alexander Sanin, a Russian, from the Royal Opera in Rome, and Hanns Niedecken-Gebhard, from the Berlin State Opera.

In the matter of new productions of opera in the United States, the most important event of 1931 was the American première of Alban Berg's *Wozzeck*, given by the Philadelphia Grand Opera Company in the Metropolitan Opera House of that city on March 19. Most of the critics considered the music as notably poetic and expressive, poignantly eloquent, and in marked contrast to the externalism, the avoidance of emotion, that has been in vogue with many of Berg's contemporaries. The production, with settings by Robert Edmond Jones, also won warm praise.

The Chicago Civic Opera closed its Chicago season on January 26 and reopened it November 2; the annual tour began late in January with a fortnight in Boston. In Chicago, during the year, the company gave 78 performances of 33 operas by 21 composers; the repertoire also included a ballet, *Chopiniana*, and a scene from *Prince Igor*.

The two works given for the first time in Chicago during 1931 were Max von Schillings's *Mona Lisa*, November 21, and Leonï's *L'Oracolo*, December 7.

Among artists making their first appearances with the company in the fall were Jean Kiepura, Polish tenor; Noel Eadie, English soprano; Claire Clairbert, Belgian coloratura; Paolo Marion, Italian tenor; Iva Paretto, Italian soprano; Serafina di Leo and Leola Turner, American sopranos; and Augusto Boef, Italian baritone.

The annual statement of finances for the home season of 1930-31 disclosed some falling off in attendance and receipts, resulting in the large deficit of \$1,079,483 to be shared by the guarantors. In June, Herbert Witherspoon, as vice president in charge of opera, became the artistic head of the company, while Herbert M. Johnson remained its business head.

In the annual summer season given under Louis Eckstein's direction at Ravinia, north of Chicago, 34 works were performed, mostly in Italian and French. The Ravinia Company also had to face an increased deficit, \$279,829, of which two-thirds was met by Mr. Eckstein.

The operatic division of the Juilliard School of Music in New York gave as its first production in the school's new uptown auditorium a new opera, *Jack and the Beanstalk*, with libretto by John Erskine and music by Louis Gruenberg, November 19 to 21.

In London the spring season at Covent Garden, the first to be aided by a government subsidy, began April 27 and continued for 10 weeks. The German repertoire included Wagner's *Ring* cycle, *Tristan und Isolde* and *Lohengrin*, Mozart's *Die Zauberflöte*, Richard Strauss's

*Der Rosenkavalier* and Johann Strauss's *Die Fledermaus*. The English Opera Company, organized by the Blois-Szarvasy syndicate, began a six weeks' season at Covent Garden September 14.

In Berlin, the State Opera on the Platz der Republik, generally known by its former title of Kroll Opera, closed its doors on July 3, despite strenuous attempts made to preserve it during the preceding months.

Jaromir Weinberger's second opera, *Die Geliebte Stimme*, was first produced at Munich on February 28, under Hans Knappertsbusch's direction. It was found inferior to its predecessor, *Schwanda*. Leos Janacek's last opera *Aus einem Totenhaus*, with a libretto adapted from Dostoevsky, was first produced at Prague in February, and had its Berlin première at the Kroll Opera May 25. Hans Pfitzner's *Das Herz*, produced simultaneously in Berlin and Munich November 12, was well spoken of.

In Vienna, where attendance at the State Opera had fallen off early in the year, the government passed laws limiting salaries drastically and conferring on the management the right to cancel existing contracts as of September 1 and to renew them on its own terms. The highest fee was limited to 1100 schillings (about \$154) per performance.

In Paris, M. Ricou, one of the directors of the Opéra-Comique, resigned in May, pointing out that a state subsidy of 3,000,000 francs, over double the actual annual contribution, would be needed to maintain adequate artistic standards. His colleague, Louis Masson, was elected as sole director in August.

Mme. Anita Colombo, general director of La Scala in Milan, resigned her position in September after a tenure of 14 months. The objection of conductors to taking orders from a woman director was reported to be one of the reasons forcing Mme. Colombo to resign, although her management was said to be efficient.

Meanwhile plans for the reorganization of La Scala placed it under the control of a board of 11 and an executive committee of three, whose chairman was to be chosen by Mussolini. The process of placing the leading Italian opera houses under closer government control was continued. Moscow was operatically active in 1931 with three houses engaged in this form of art. In Liège, Eugene Ysaÿe's *Peter the Miner* was first produced March 5.

**BIBLIOGRAPHY.** Among books on musical subjects published during the year are the following:

**REFERENCE:** Gladys Davison, *Stories from the Operas* (new edition, New York and London); A. della Corte and Guido M. Gatti, *Dizionario di musica* (Turin); Bence Szabolcsi and Aladar Toth, *Zenei Lexikon, L-Z* (Budapest); Pierre Kéy's *Musical Who's Who* (New York); Ernst Bücken, *Handbuch der Musikwissenschaft* (Potsdam).

**NATIONAL ACADEMY OF DESIGN.** An institution in New York City, established in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of design." The academy holds two exhibitions of contemporary art each year, to which an artist of any country may submit his work. The works which are accepted by the jury of selection are exhibited without charge to the artists; members

of the academy may exhibit one work without approval by the jury. The total number of associate members in 1931 was 150; the number of academicians was 146, including 111 painters, 27 sculptors, 7 architects, and 1 engraver. The following academicians were elected in 1931: Painters, Barry Faulkner, Jules Guerin, Lillian Westcott Hale, William H. Singer, Jr., Van D. Perrine; sculptors, Laura Gardin Fraser and Malvina Hoffman; and architect, J. Monroe Hewlett. The associate members elected were: Painters, Louis F. Berneker, Frederick S. Bosley, Alexander Bower, Ettore Caser and Andrew Winter; and sculptor, Frances Grimes. The officers in 1931 were: President, Cass Gilbert; first vice president, H. W. Watrous; second vice president, Robert Aitken; corresponding secretary, Charles C. Curran; assistant corresponding secretary, Albert P. Lucas; recording secretary, Hobart Nichols; treasurer, Henry Prellwitz; and assistant treasurer, F. Ballard Williams. The council members were: Louis Betts, Sidney Dickinson, Eugene Savage, James Earle Fraser, Roy Brown, and Ernest D. Roth. Headquarters are at Amsterdam Avenue and 109th Street, New York City. See ART EXHIBITIONS.

**NATIONAL ACADEMY OF SCIENCES.** A body of American scientists incorporated by act of Congress, approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art when called upon by any department of the Government. The actual expense of such investigations, examinations, experiments, and reports are met from appropriations made for the purpose, without compensation for any services to the Government. Membership in the academy is limited to 300 active members and 50 foreign associates. New members are elected on nominations from the 10 sections: Mathematics, astronomy, physics, engineering, chemistry, geology and paleontology, botany, zoology and anatomy, physiology and pathology, anthropology and psychology. The following new members were elected in 1931: Henry Bryant Bigelow (zoologist), Edwin Broun Fred (bacteriologist), Edwin Crawford Kemble (physicist), Adolph Knopf (geologist), Robert Harry Lowie (ethnologist), Joseph Haines Moore (astronomer), Robert Lee Moore (mathematician), Hermann Joseph Muller (geneticist), George Linus Streeter (anatomist), and Margaret Floy Washburn (psychologist). One additional foreign associate was elected: Peter Debye (physicist), of the University of Leipzig, Germany.

The academy's annual meeting was held in Washington Apr. 27-29, 1931, and its autumn meeting in New Haven, Conn., Nov. 16-18, 1931. These meetings are devoted to the transaction of business and the presentation of scientific papers by members of the academy or by persons introduced by them. At the April meeting, the Daniel Giraud Elliot Medal for the year 1929 was presented to Henry Fairfield Osborn for his monograph entitled *The Titanotheres of Ancient Wyoming, Dakota, and Nebraska*, published as Monograph 55 of the U. S. Geological Survey; and the Mary Clark Thompson Medal was presented to Edward Oscar Ulrich for his outstanding contributions to geology and paleontology, especially of the Paleozoic of America. At the autumn meeting, the Henry Draper Medal was presented to Miss Annie Jump Cannon for her outstanding contributions to astronomical sci-

ence; and the Agassiz Medal for Oceanography was presented to Henry Bryant Bigelow in recognition of his outstanding contributions to that field of scientific research.

The academy publishes a series of *Memoirs*, consisting of monographs by academicians or sponsored by them and reports of investigations conducted for the Government. The *Proceedings*, issued monthly, are devoted to condensed reports of the most recent scientific discoveries. The following officers, who were elected at the April meeting, assumed their official duties on July 1, 1931: President, William Wallace Campbell (succeeding Thomas Hunt Morgan); vice president, David White (succeeding Fred E. Wright); home secretary, Fred E. Wright (succeeding David White). The foreign secretary, Dr. Robert A. Millikan, and the treasurer, Dr. Joseph S. Ames, continued their respective offices, as these terms expired at other times. Headquarters are at B and 21st Streets, Washington.

**NATIONAL BANKS.** See BANKS AND BANKING.

**NATIONAL CIVIC FEDERATION, THE.** This movement was organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of enlightened public opinion, and promotes legislation when desirable.

The organization was active in 1931 through the following departments and committees. The commission on industrial inquiry drafted a proposed bill to amend the Federal Trade Commission Act by adding certain powers to enable it to determine whether proposed or existing mergers intended to or were engaged in practices in violation of the Anti-Trust Acts. The commission also issued a report on *The Writ of Injunction in Industrial Disputes*, describing how it can be shorn of its abuses and made a weapon of righteous defense. The department on subversive activities carried on its programme of opposition to the recognition of the Soviet government, making an intensive study of the Soviet police organization O.G.P.U. and of subversive propaganda promoted by that government in American colleges and universities, public schools, churches, and other institutions. The industrial welfare department issued critical findings against State pensions for the aged and in opposition to compulsory State unemployment insurance. The woman's department continued its activities in favor of restrictive Federal immigration legislation; and the department of active citizenship aimed to interest citizens in participating actively in political organizations.

The officers of the federation in 1931 were: Elihu Root, honorary president; W. N. Doak, honorary vice president; Matthew Woll, acting president; Ralph M. Easley, chairman executive council; Samuel McRoberts, treasurer; and Ellis Searles, secretary. Headquarters are at 570 Lexington Avenue, New York City.

**NATIONAL DEBTS.** See articles on each country under *Finance*.

**NATIONAL DEFENSE.** See MILITARY PROGRESS; NAVAL PROGRESS.

**NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES.** An organization of persons actively engaged in educational work and others interested in education, organized Aug. 26, 1857, at Philadelphia under the name of the National Teachers' Association and on June 30, 1907, incorporated by Congress under its present name. At the annual meeting in July, 1920, the association was reorganized, and provision was made for a representative assembly composed of delegates from State and local educational associations. The other governing bodies are a board of directors, an executive committee of five, a board of trustees, departmental organizations, standing and special committees, and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies. In 1931 there were 20 departments, each having its own officers, as follows: Adult education, business education, classroom teachers, deans of women, educational research, elementary school principals, kindergarten-primary education, lip reading, rural education, school health and physical education, science instruction, secondary school principals, social studies, special education, superintendence, supervisors and directors of instruction, supervisors and teachers of home economics, teachers' colleges, visual instruction, and vocational education. There were also more than 15 standing and special committees actively at work on professional problems.

The association's sixty-ninth annual meeting was held in Los Angeles, Calif., June 27-July 3, 1931, with a registered attendance of more than 15,000. There were held, in addition to the general session, meetings of the representative assembly, the departments of the association, and a number of allied organizations, at which the progress of the year in education was reviewed. Among the important resolutions adopted on this occasion was that urging the establishment of a department of education, with a secretary in the President's Cabinet, and the efficient integration in this department of the educational activities of the Federal Government. There was also held at this meeting the first national conference on rural education, which was sponsored by the National Education Association, the U. S. Office of Education, and the National Congress of Parents and Teachers. The conference recommended that there be held in Washington a national conference on rural education and culture, following the general plan of the White House Conference on Child Health and Protection.

The association's department of superintendence held its winter convention in Detroit, Mich., the last week in February. The subject of the year book, prepared for presentation at this meeting, was "Five Unifying Factors in American Education," while "Character Education" was selected as the theme of the 1932 year book. The *Journal of the National Education Association* is the organization's monthly publication. It also publishes an annual volume of *Proceedings* and numerous reports on its activities. Research bulletins, containing statistical information on educational subjects, are issued regularly. The enrollment of the association on Dec. 31, 1930, was 216,188. Officers elected for 1931-32 were: President, Florence Hale, Augusta, Me.; secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Bloomington, Ind. Headquarters are at 1201 Sixteenth Street, N. W., Washington.

**NATIONAL FORESTS.** See **FORESTRY**.

**NATIONAL GUARD.** See **MILITARY PROGRESS**.

**NATIONALITY.** See **LAW, PROGRESS AND DEVELOPMENTS**.

**NATIONALITY OF WOMEN.** See **LEAGUE OF NATIONS**.

**NATIONAL KINDERGARTEN ASSOCIATION.** An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the children of the United States. The association is supported entirely by private subscriptions which amount annually to approximately \$45,000. These funds are used for the purpose of promoting a knowledge of, and an interest in the value of the kindergarten as an integral part of the public school system. By the end of 1931 the association had been instrumental in securing the establishment of 1824 kindergartens.

The association has secured kindergarten training for one child for each dollar that it has ever received. It supports no classes but, through its State field secretaries, arouses communities to support them for their own children. During 1928, 1929, and 1930, through the generosity of its members, it was able to set aside a fund from which to aid in the purchase of equipment for 48 classes which otherwise could not have been opened.

The officers in 1931 were: President, Maj. Bradley Martin; honorary president, Hon. P. P. Claxton; first vice president, Mrs. Henry Phipps; second vice president, Mrs. Charles Cary Rumsey; secretary, Mrs. Roger C. Aldrich; executive secretary, Miss Bessie Locke; and treasurer, Julian M. Gerard. Headquarters are at 8 West Fortieth Street, New York City.

**NATIONAL MUNICIPAL LEAGUE.** An organization which acts as a central clearing house for current information on improvements in State and local government throughout the United States, founded in 1894 and incorporated in 1923. Its aim is to promote efficient and democratic government in city, county, State, and nation. Under its direction, committees of experts are constantly at work developing sound principles of governmental methods and administration. Those active in 1931 were as follows: Committee on New Municipal Programme; Committee on Model Administrative Code; Committee on Park and Playground Administration; Committee on Citizen Organization for Municipal Activity; Committee on Organized Citizens' Participation in City Government; Committee on County Government; National Committee on Municipal Standards; and National Committee on Municipal Reporting.

The Committee on Park and Playground Administration, of which Jay B. Nash of New York University was secretary, published in August, 1931, its final report, "Standards of Play and Recreation Administration," as a supplement to the official magazine of the league, the *National Municipal Review*. The first report of the National Committee on Municipal Reporting, entitled "Public Reporting," was also issued in 1931 as a number of the Municipal Administration Service pamphlet series.

The thirty-seventh annual meeting of the league was held in Buffalo, N. Y., Nov. 9-11, 1931, under the general title of the National Conference on Government. The Governmental Research Association, the National Association

of Civic Secretaries, the Proportional Representation League, and the American Legislators' Association cooperated in this conference. The officers elected for 1932 were: President, Murray Seasongood of Cincinnati; first vice president, Louis Brownlow of Chicago; second vice president, Mrs. F. Louis Slade of New York City; treasurer, Carl H. Pforzheimer; secretary, Russell Forbes; honorary secretary, Clinton Rogers Woodruff; editor of the *National Municipal Review*, H. W. Dodds; and public relations secretary, Howard P. Jones. Headquarters are at 261 Broadway, New York City.

**NATIONAL PARKS.** See PARKS, NATIONAL. **NATIONAL RECREATIONAL ASSOCIATION** (formerly PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA). An association organized in 1906 by Theodore Roosevelt, Jacob A. Riis, Luther H. Gulick, and others for the purpose of binding together in a national movement the efforts growing up in various parts of the country to provide safe and adequate areas where children might play under experienced leadership. A staff of field workers is maintained to assist cities in organizing year-round recreation programmes for children, adults, and the community as a whole, to strengthen existing programmes, and to help secure State legislation for facilitating the development of municipal recreation. The association publishes a monthly magazine, *Recreation*, maintains a bulletin service, and publishes pamphlets and books pertaining to recreation.

The community drama service of the association supplies practical suggestions and literature to amateur dramatic groups and prepares programmes for holiday and special-day celebrations. The community music service promotes this form of recreation and provides an exchange for community music information. The national physical education service is active in sponsoring physical education legislation. The association maintains a bureau which gives assistance to Negro groups in securing recreation opportunities and, in cooperation with the U. S. Department of Agriculture, has assigned three full-time workers to help in the training of rural leaders for recreation. The officers of the association for 1931 were: President, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

**NATIONAL RESEARCH COUNCIL.** A co-operative organization of American scientists, established in 1916 by the National Academy of Sciences, at the request of President Wilson, for the purpose of coordinating the research facilities of the United States for work on war problems involving scientific knowledge. Reorganized by the Academy as a permanent body in 1918, it has maintained close relations with governmental scientific bureaus and has the formal recognition and cooperation of 78 national scientific and technical societies, its membership being composed in large part of appointed representatives of these societies.

The activities of the council are conducted by 11 divisions, each of which has a chairman and from 20 to 40 members. These divisions are composed of two groups, science and technology and general relationships. The science and technology group consists of divisions representing physics, mathematics, and astronomy; engineering and industrial research; chemistry and chemical

technology; geology and geography; the medical sciences; biology and agriculture; and anthropology and psychology. The general relationships group consists of government, foreign, States, and educational relations divisions. Each of these divisions maintains a number of administrative and technical committees.

Among the important undertakings of the council during 1931 were the administration of about 150 post-doctorate research fellowships, and the completion of the series of seven volumes of the *International Critical Tables of Numerical Data, Physics, Chemistry, and Technology*. There were also being prepared, in a series of ten bulletins, a comprehensive treatise on the physics of the earth, and an annual survey of American contributions in chemistry.

The general administrative officers of the council in 1931 were: Chairman, George K. Burgess, director, U. S. Bureau of Standards; first vice chairman, David White, principal geologist, U. S. Geological Survey; second vice chairman, Simon Flexner, director, Rockefeller Institute for Medical Research; treasurer, Joseph Sweetman Ames, president of the Johns Hopkins University; and permanent secretary, Vernon Kellogg. Headquarters of the council are on Constitution Avenue between 21st and 22d Streets, Washington, D. C.

**NATIONAL SAFETY COUNCIL.** A non-profit, co-operative association, not only national but international in scope, devoted to the conservation of human life through a continuous campaign of accident prevention. In 1931, there were 5300 members including industrial corporations, firms, individuals, public officials, schools, Chambers of Commerce, clubs, and civic organizations; about 70 per cent of the memberships were industrial concerns. Allied to accident prevention is the council's work in improving health conditions and preventing vocational diseases in industry.

Affiliated with the National Safety Council are 59 local councils in as many communities throughout the United States. They carry on intensive safety work in approximately 12,000 plants in 150 different lines of industry, reaching more than 10,000,000 persons.

During 1931 the council's activities laid especial emphasis on the highway accident problem. A "safety city" contest was conducted among community council cities. Educational work was intensified among cities and schools throughout the United States, and valuable engineering studies were made in highway safety. Council experts also made special studies of the mental aspects of accidents, and accident research, not only in the highway field but also in industrial and home-safety fields, was greatly broadened.

The council publishes *The National Safety News*, for industries; *Public Safety*, for public officials, police chiefs, etc.; *Safety Education*, for schools; *The Safe Worker*, which is distributed each month to 200,000 workers; and *The Safe Driver* with a monthly circulation of 60,000 copies. It also issues safe practices and health practices pamphlets for industry and carries on extensive work through 27 sections represented in the industrial division, for the exchange of new ideas, new plans, and new practices among members.

The twentieth annual safety congress was held in Chicago in October, 1931, with an attendance of approximately 6000 delegates and visitors. The officers elected were: President, C. W. Bergquist,

Chicago; managing director, W. H. Cameron, Chicago; treasurer, Will Cooper, Chicago; vice president for industrial safety, Arthur M. Tode, New York City; vice president for membership, Howard B. Fonda, New York City; vice president for business administration, G. T. Hellmuth, Chicago; vice president for public safety, Edward Dana, Boston; vice president for engineering, J. E. Culliney, Bethlehem, Pa.; vice president for territorial councils, John E. Long, Albany; vice president of education, A. W. Whitney, New York City; vice president for health, Dr. C. E. A. Winslow, New Haven, Conn.; and vice president for finance, J. I. Banash, Chicago. Executive offices of the council are at 20 North Wacker Drive, Chicago.

**NATURAL GAS.** See GAS, NATURAL.

**NATURALIZATION.** See LAW, PROGRESS AND DEVELOPMENTS.

**NAVAL PROGRESS.** The world-wide economic depression led to such insistent demands for reduction of expenditures for armaments that governments throughout the globe were obliged to give naval appropriations the closest scrutiny.

Naval thought was largely centred around

this entire problem of limitation of armaments. The experts in the inner sanctuaries of sea armaments offices over the entire globe were busily engaged in juggling statistics, devising budgetary equivalents for world monies, comparing tons and guns, yardsticking horse powers, separating reserves from regulars, and performing a thousand and one other diversified functionary details pertinent to armament limitation endeavor.

In this connection Foreign Minister Dino Grandi, of Italy, proposed to the League Assembly and Council at their September sessions that in preparation for the General Disarmament Conference the nations concerned enter into an immediate general agreement on suspension of new armament programmes. Following acceptances from some 50 governments this one-year truce was declared in effect on Nov. 1, 1931. The agreement affected only new naval construction, not building, already under way, or contracted for, and was regarded as having little practical significance save as creating a favorable atmosphere for the February, 1932, conference.

The accompanying table gives the strength of the principal navies at the time the General

Category "B"—Those carrying a gun not above 6.1 inches in calibre.

† The 1931-32 programme provided money for the plans of a capital ship of about 23,000 tons.

Disarmament Conference was scheduled to convene. The age limits of various types of ships are as agreed upon in the Washington and London treaties. These limits are 20 years for capital ships and aircraft carriers; 20 years for cruisers laid down since January 1, 1920, and 16 years for those laid down earlier; 16 years for destroyers laid down since Jan. 1, 1920, and 12 years for those laid down earlier, and 13 years for submarines.

In the earlier part of the year attention was centred on the negotiations to bring about a naval settlement between Italy and France to complete the accord reached among the five powers in London in 1930. See FRANCE under *History*.

Mutiny in the navies of Chile and Great Britain caused the widest interest throughout the world. In both instances threat of pay cuts was the primary cause of the disturbance. See CHILE and GREAT BRITAIN under *History*.

ARGENTINA. The naval budget for 1931 was \$56,128,000. The government accepted delivery of the twin cruisers *Almirante Brown* and *Veinticinco de Mayo*, which were ordered from Italian yards and launched in August, 1929. They were handsome and, for their tonnage, very powerful vessels. Displacing only 6800 tons, they were able to steam at 32 knots. Six 7.5-inch guns in double turrets, 12 3.9-inch anti-aircraft guns, and six torpedo tubes constitute the armament. Three flotilla leaders, *Mendoza*, *Tucuman*, and *La Rioja*, of 1520 tons and 36 knots, were completed for the Argentine Navy by J. Samuel White and Company, of Cowes. All bettered their contract speed, *Mendoza* and *Tucuman* maintaining 38 knots for six hours and *La Rioja* reaching 39.4 knots without exceeding the designed horse power. The submarine *Santa Fé* was launched at Taranto, Italy, on July 19. This and the other two Argentine submarines being built by the Tosi yard were to have a cruising radius of 9000 miles. Details were given in the 1930 YEAR BOOK.

AUSTRALIA. In a strenuous effort to balance her budget Australia made further curtailments in naval expenditures. The submarines *Otway* and *Ozley*, which were completed by Vickers-Armstrong in 1927, were transferred to and joined the Royal Navy. As they were similar to the British "O" class they fitted in well with the Mediterranean forces which they joined. The flotilla leader *Anzac* was paid off, and the destroyer *Tattoo*, from the reserve, took her place. There was only one vessel of this class in commission to provide for destroyer training in the commonwealth service, as all others were laid up for economy's sake. The active force included four vessels, the cruisers *Canberra* (commodore's ship) and *Australia*, the aircraft carrier *Albatross*, and the destroyer *Tattoo*.

BRAZIL. The naval budget for 1931 was \$14,741,948. At the expiration of the last four-year contract of the United States Naval Mission, the Brazilian government found itself unable, for economic reasons, to renew the contract. Accordingly the mission was withdrawn on January 31 when a United States naval attaché was accredited to Brazil. While she was taking on ammunition an explosion occurred on the submarine *Humayta* in Rio de Janeiro. The damage was so great that repairs could not be effected. The *Humayta*, one of Brazil's four submarines, was built in the dockyards of La Spezia, Italy.

She is similar in general design to the Italian *Balilla* type. Although completed in 1927 she did not reach Brazilian waters until two years later. The government signed a contract with the Italian ambassador for the purchase of General Balbo's hydroplanes, in which his squadron flew from Italy to Brazil, for 870,000 lire each payable in cash or coffee.

CANADA. The new destroyers *Saguenay* and *Skeena* built by the Thornycroft firm at Southampton were commissioned in May and June, respectively. Characteristics of these ships were given in the 1930 YEAR BOOK. Canada's two remaining destroyers, the *Champlain* and the *Vancouver*, were still in commission at Halifax and Esquimalt, respectively, and it was understood that they would be retained for training purposes.

CHILE. The naval budget for 1931 was \$21,231,082. The six *Serrano* class destroyers, built by Thornycroft's, the three large submarines and the submarine depot ship *Araucano*, all built by Vickers-Armstrong, were delivered. Complete satisfaction was expressed by Chilean naval officers with the performance of these craft. The battleship *Almirante Latorre*, after an extensive refit, including new machinery, at Devonport, returned home. But during this refit Communist agents from Moscow and Berlin established an influence with the sailors. The first week of September, seamen, threatened with pay cuts, took over control of vessels at the Coquimbo naval base. Initial overtures made by the government through Admiral van Schroeder were unsuccessful. Naval cadets at Valparaiso and forces at the Talcahuano base joined the revolt but were overcome, the latter after considerable fighting. The ships off Coquimbo, short of food and coal, and generally demoralized, finally surrendered after a 15-minute airplane bombardment which did little or no actual damage. In subsequent courts-martial the death penalty was invoked for only a few leaders. In new skeleton crews for the ships, about 10 per cent of the old crews were retained. See CHILE under *History*.

CHINA. Early in the year the British, in accordance with the naval agreement, signed in June, 1929, in Nanking, sent an officer to arrange preliminaries for the establishment of a mission to assist the Ministry of the Navy of the Nationalist government in the projected reorganization and modernization of the Chinese Navy. During the strife with the Japanese in Manchuria the naval forces played no part.

DENMARK. The 1930 YEAR BOOK told of the drastic reductions in naval armaments being made by the Socialist government. On Mar. 11, 1931, the lower House of the Danish Parliament passed a measure to abolish the standing army and reduce the navy to the status of a coast and fish patrol. Up to the end of the year, the bill had not received the approval of the upper Chamber. See DENMARK under *History*.

FINLAND. The first gunboat of the new naval programme was launched in 1931. The principal details are: tonnage, 4000; length, 302 feet; beam, 52.5 feet; draft, 15 feet; horse power 4000; speed, 16 knots; armament, four 10-inch guns, eight 4.3-inch, and four rapid fire guns. It was not expected, however, that she would be ready for service before 1934. It may be recalled that, while discussions regarding the establishment of a navy in Finland had been going on

since 1921, the law creating one was not passed until December, 1927.

FRANCE. The naval budget for 1931 amounted to \$134,421,968. This did not include amounts expended by the Air Ministry for naval purposes. The average naval personnel for the year was 4384 officers and 58,833 men; these figures to exclude the personnel of the Naval Air Force that were under control of the Air Ministry. Despite the very large superiority of France over other nations in total number of airplanes in their armed forces only 89 machines (exclusive of spares) were carried on board ship.

The steady increase in the French navy continued. There was probably no other period in French history in which their naval power had developed so steadily and progressively as in the years since the World War. The handicap of frequent cabinet changes did not check the continuity of the development. Cruisers and destroyers particularly, grouped in homogeneous classes, each group marking an advance over its predecessor, were ordered, laid down, and completed according to schedule. Since the Washington treaty France had 152 vessels with a total tonnage of 329,646 built, building, or appropriated for. The number of such ships exceeded that of any other nation, although Great Britain's tonnage was slightly larger.

The 4800-ton mine laying cruiser *Pluton*, on her trials during the year, was considered to be the most up-to-date mine layer in existence. The leading officials of the French navy stressed the potential value of mining tactics on warfare, especially in some of the narrow European waters. The point was never lost sight of in framing combined manœuvres. Not only had new construction continued apace but older vessels were thoroughly modernized. Work on the *Jean Bart* class was finished, the 24,000-ton *Provence* was being extensively refitted at Brest, the 10,000-ton *Duquesne* and *Tourville* were to go to Toulon and Brest, respectively, the 8000-ton *Primauguet* was already in Bizerta, while the 24,000-ton *Paris* was having less extensive work done while remaining in commission.

Between Apr. 1, 1932, and Mar. 31, 1933, the government proposed to place on the stocks four second-class cruisers, one torpedo boat, one destroyer, one hydrograph boat, and one river gunboat, at a total cost of over 1,000,000,000 francs, that is over \$40,000,000. Considerations of a man-of-war of about 25,000 tons to surpass Germany's *Deutschland* still were under way. The Chamber of Deputies appropriated money for the plans of such a ship but final action was not taken in regard to credits for actual construction. The submarine *Espoir* launched at Cherbourg on July 18 was the first of a new group of six vessels similar to the 17 of the *Pascal* type but more heavily armed. The *Espoir* has one 5.5-inch gun instead of one 3.9-inch and a smaller gun for anti-aircraft purposes. It is fitted with 11 torpedo tubes. The submarine cruiser *Surocouf* of 2880 tons, with two 8-inch guns was having exhaustive trials.

All the recently built destroyers were assembled in the Mediterranean. While all later ones carry 5.5-inch guns, the *Verduns* were armed with 1924 model long-range guns good for not over eight rounds per minute; the *Aigle* class mounts a 1927 design with shorter range, but more handy and with a much higher rate of fire. Further improvement was being made in the

guns being manufactured for the 12 destroyers of the 1928-1930 programme. As they were to be semiautomatic the ships were given greater ammunition supply. The two 7500-ton cruisers already started were to carry heavier armor and make less speed than France's recent cruisers. The armor was designed to resist 6-inch shells from a distance of 16,000 yards. These ships were to have eight 6.1-inch guns, together with torpedo tubes, and would carry aircraft.

The vessels of importance completed in 1931 were: light cruisers *Dupleix*, *Foch*, and *Colbert* (10,000 tons); school ship *Jeanne d'Arc* (6500); destroyers, *Aigle*, *Albatross*, *Gerfaut*, *Lion*, and *Vauban* (2440); submarine *Surocouf* (2880); submarines *Saphir* and *Turquoise* (668); and

submarine *Orion* (558). The vessels under construction Dec. 31, 1931, and those for which construction was authorized but may or may not be laid down are listed in the accompanying table.

GERMANY. The naval budget for 1931 amounted to RM 186,994,293 (Reichsmark equals \$0.2382). This budget provided for 1500 officers and 13,500 men. The construction programme was divided into two parts. The first part declares that the replacement of the four oldest battleships cannot and will not be undertaken. The other part says that when the financial situation will permit, the replacement of the other four battleships and three light cruisers authorized by the Peace Treaty will be considered. The new budget estimates call for RM 18,800,000 for the *Deutschland*, armament included, RM 29,700,000 for other new construction, RM 2,100,000 for armaments for destroyers, and RM 18,100,000 for naval gunnery. Incidentally the 1931 expenditures for new construction are reported to have reached RM 50,000,000, that is about RM 10,000,000 more than estimated. On recommendation of the Minister for Defense a subsidy of RM 2,500,000 was granted the Deutsche Werke of Kiel, in order to insure that they might be able to make repairs on naval vessels.

The building programme in 1931 provided for continuation of the work on the *Deutschland*, and the *Lothringen* (laid down in 1931). The *Braunschweig* was to be laid down in 1932 and completed in 1936 while the *Elsass* was not to be begun until 1934. The estimated cost was RM 50,000,000 annually. The cost of the "pocket battleships" was estimated at RM 75,000,000. Although effort was made to keep the work load at Kiel and Wilhelmshaven even the ministry seemed inclined to have one of the cruisers built at the Deutsche Werke in Kiel. The target ship *Zähringen* was badly damaged by fire but was repaired. The old battleship *Hannover*, after taking part in the autumn manoeuvres, was dismantled at Kiel, and her crew transferred to the recently completed light cruiser *Leipzig*.

The old cruiser *Hamburg* was being converted to a naval museum. Machinery was being removed, but her external appearance was being changed as little as possible. Officers' quarters were to contain busts and photographs of distinguished officers of the World War. Many old vessels were being sold. Yugoslavia purchased the cruiser *Niobe* and renamed it the *Dalmazia*. Others sold (none to foreign powers) were the old battleships *Braunschweig*, *Elsass*, and *Lothringen*; surveying ship *Panther*; destroyers *S-18*, *S-19*, *T-152*; and cruisers *Nympe* and *Amazona*.

The two dispatch boats *Weser* and *Elbe* were launched. Built primarily for protecting fisheries, they were equipped for scientific experiments and research; a well equipped sick bay, and an efficient wireless equipment were provided. They are of 600 tons, 800 horse power, maximum speed about 16 knots, maximum cruising radius 7000 miles. The school ship *Bremse*, which was completed in 1931 for training purposes, displaces 1425 tons. Her oil engine propelling machinery can drive her at a speed of 27 knots an hour.

With the completion of the *Leipzig*, Germany concluded the cruiser portion of her post-war construction programme. The cruiser material was deemed to be in the worst condition and was replaced first. Those previously built were the *Emden*, completed in 1925; the *Karlsruhe* and

*Königsberg*, 1929; and the *Köln*, 1930. All are of 6000 tons, but design was developed, so that the *Leipzig* was faster and more heavily armed—with nine 5.9-inch guns instead of eight—while her horse power was 72,000, as compared with 65,000 in the *Köln* and 46,500 in the *Emden*. Full accounts of these appear on pages 520 and 521 of the YEAR BOOK for 1930.

On May 19 the whole fleet was assembled at Kiel to participate in the launching ceremonies of the *Deutschland*. Through some mischance she was suddenly and unexpectedly launched while President von Hindenberg was in the midst of his dedicatory speech. In her design, by utilizing every device for saving weight, such as welding instead of riveting, the German naval architects produced a vessel which they claimed was superior in all-around battle worthiness to any other ship of similar tonnage. She has a length of about 590 feet, beam of 67.5 feet, and draught of about 19 feet. There is an armor belt amidships incorporated as part of the hull, and two protective decks. The vessel will be the first armored ship in the world to be driven by motor engines, and was expected to have a radius of action of more than 10,000 miles at a speed of 20 knots. Her propelling machinery consists of eight M.A.N. double-acting two-stroke engines, with a total shaft horse power of 54,000, the designed maximum speed being 26 knots. The reliability and durability of such engines, compared with steam machinery, was a subject of much discussion. The armament will include six new model Krupp 11-inch guns, firing 670-pound projectiles at a range of 30,000 yards, with an elevation of 60 degrees, at which elevation the main armament might be used against air attack. There are also eight 5.9-inch and four 3-inch anti-aircraft guns, and six 19.7-inch above water torpedo tubes. She was scheduled for completion in 1932.

GREAT BRITAIN. The naval budget for the fiscal year ending Mar. 31, 1931, was \$274,132,976 but this sum does not include appropriations for the Air Force nor the cost of the Dominion navies. Neither does it include sums donated by possessions. In her report to the League of Nations Great Britain gave £49,902,540 as the expenditures for this year on her naval forces. Similarly the report for all air home forces was £19,227,924. There were reported to be 300 planes carried in aircraft carriers. There was no material change in numbers of naval personnel. The total in the reserve force was given as 71,000. The estimates for 1931-1932 are £51,605,000. The building programme included three submarines, one destroyer leader, eight destroyers, one 5000-ton cruiser and two 7000-ton cruisers of the *Leander* class. One of the naval economies for the succeeding year was a 10 per cent reduction in practice ammunition and star shell for all ships in full commission. Decision also was made to postpone all expenditures at the Singapore base upon completing the equipment of the docks and defense works. Incidentally \$2,000,000 had been spent to the end of 1931 on the Singapore Air Base.

The *Bendow* and *Tiger* were scrapped under the terms of the London treaty; the *Emperor of India* was converted to a gunnery target; the *Iron Duke* might be made a gunnery training ship after her armament and warlike stores had been removed; and the *Marlborough* was scheduled for scrapping after certain explosive tests had

been carried out. Six light cruisers of the *Champion* class completed in 1916 were to be scrapped. The submarine *Poseidon*, one of the newer English submarines, was sunk in a collision in Chinese waters. The destroyers *Comet* and *Crusader* launched at Portsmouth, on September 30, were the first destroyers to be built in a government yard. Since 1918 nine ships of the *Queen Elizabeth* and *Royal Sovereign* class had been brought up to date, as had also the battle cruisers *Renown* and *Repulse*, while such work on the *Barham* was in progress. The main alterations consisted in the addition of bulges, the increase in some cases of anti-aircraft armament, and improvement of bridges and tops. Ventilation and accommodations for personnel also were improved. In the *Renown* and the *Repulse* additional armor protection was given, this item alone costing approximately £2,870,000. Following the practice instituted in the American navy years ago the British abandoned the terms "starboard" and "port" for helm orders and substituted left and right orders for the rudder.

During the year 1931 the following vessels were completed and placed in commission: 32-knot light cruiser *Essex* (8400 tons); 10 35-knot destroyers, *Brilliant*, *Boreas*, *Basilisk*, *Boadicea*, *Bulldog*, *Brazen*, *Beagle*, *Blanche* (1300 tons), *Acheron* (1330 tons), and *Keith* (1400 tons); four submarines, *Rainbow*, *Regent*, *Regulus*, and *Rover* (1475 tons). Other important vessels under construction in 1931 or appropriated for are listed in the accompanying table.

ITALY. The naval budget for the fiscal year ending June 30, 1931, amounted to \$80,795,701 exclusive of Air Force appropriations. The report to the League of Nations showed 51,326 men and

3296 officers exclusive of the Air Force. No definite information was available as to the number of planes carried in the fleet. Italy had no aircraft carriers nor was she building any. The budget for 1931-32 carried a total of 1,573,000,000 lire, or 87,000,000 more than the preceding year.

The amounts assigned to naval construction for 1931 were 125,000,000 lire more than the previous year. They reached a total of 725,000,000 or 46 per cent of the total budget of the navy, against 41.5 per cent in 1930. Such at least are in the official figures. But, as was well known, it was impossible to know what Italy actually spends for her navy, or her army, as the ministers of national defense have the right to make expenditures with the consent of the council of ministers without informing either Parliament or the public. See FRANCE under *History*.

Recent cruisers and destroyers were designed for exceptionally high speeds, and hulls and machinery were of light construction in order to accomplish this. Some doubts arose as to whether the scantlings would long endure the strain of such powerful machinery if ships were frequently driven at high speed. The 10,000-ton cruisers *Zara* and *Pola* were slower than their predecessors and carried more protection. An innovation that was being watched with keen interest by gunnery officers as well as naval constructors was the installation of a Sperry gyro stabilizer (developed and made in the United States) for the 2,000-ton destroyer leader *Piguetta*. The rotor, 91 inches in diameter, weighed 38,800 lbs., and operated at 1350 revolutions per minute.

The vessels completed in 1931 were: two 10,000-

ton light cruisers, *Fiume* and *Zara*; four 5000-ton light cruisers, *Da Guisano*, *Da Barbiano*, *Colleoni*, and *Bande Nere*; three 1200-ton destroyers, *Freccia*, *Dardo*, and *Strale*; two 1650-ton destroyer leaders, *Da Verazzano* and *Cadamo*; and six 800-ton submarines *R. Settimo*, *Tricheco*, *Delfino*, *L. Septembrini*, *F. Corridoni*, and *M. Bragadino*.

Other important vessels under construction in 1931 or appropriated for are listed in the table on page 548.

**JAPAN.** The naval budget for the year ending Mar. 31, 1931, was \$131,468,844. A budget demand for 560,000,000 yen for new construction 1931-1936 was made by the minister of marine. This, however, was reduced to something under 400,000,000 yen. It was to be apportioned as follows: Four cruisers of 8600 tons, 12 destroyers, 1400 tons, one submarine, 1970 tons, two submarines, 900 tons, six submarines, 1300 tons, and one mine layer, 500 tons, several smaller craft; large increase in naval air force and establishment of air station at Yokohama near Yokosuka; 247,000,000 yen was for shipbuilding, 90,000,000 for naval aviation, and the balance for modernizing the various shops and laboratories of the naval establishment.

The Minister of Finance agreed to consider favorably another programme to be begun after 1934, and to obtain money for it. The Minister of the Navy requested 140,000,000 yen for this programme and expected to include, in addition to two aircraft squadrons, one aircraft carrier, six destroyers, one mine layer, one repair ship, one fuel oil ship, and other smaller units. Japan had made tremendous strides in naval aviation and continued to increase the number of planes capable of operating with her fleet. In her report to the League of Nations she gave 88,199 as the number of naval effectives. This includes 9877 naval air effectives. She reported 801 naval planes including 329 on men-of-war.

When the *Maya* was completed in 1932 Japan would have in commission her full allotment, under the London treaty, of 8-inch gun cruisers. The aircraft carrier *Ryujo* launched on April 2 is of 7600 tons, length 548 feet, beam 60 feet, draft 15 feet; she has geared turbines, estimated speed 25 knots; armament twelve 5.1-inch guns. The Japanese destroyers have especial shields for protecting gun and torpedo crews from strafing attacks by planes and from splinters.

During 1931 the following ships were completed: three 10,000-ton, 33-knot, 8-inch gun cruis-

ers, *Okakai*, *Takao*, and *Atago*; four 1700-ton, 34-knot, 5.1-inch gun destroyers, *Ushio*, *Orado*, *Akebono*, and *Sagiri*. Other important ships building during 1931 are listed in the accompanying table.

**NETHERLANDS.** The defense estimates for 1931 were naval construction 10,408,000 florins, ordinary 85,370,290, non-military 5,952,987, total 101,731,277 florins (florin equals \$0.402). The report to the League of Nations gave the following average personnel strength for 1930; 8613 including 695 officers, and in addition 405 men at home and 426 men overseas in the navy part of the air force. The destroyer *Van Nes* completed in 1931 marked the completion of a destroyer building programme of eight destroyers. All were intended for the East Indies. Their design was from Yarrow and Company but they were built in various home yards. Included in the equipment were a seaplane, bomb throwers, and 24 mines. A new cruiser with 6-inch guns of the general type of the *Java* and *Sumatra* were approved for the East Indies station, but details regarding it were not settled.

**PARAGUAY.** The gunboats *Comodoro Deza* and *Capitan Cabral*, sister-ships, were built in Genoa, Italy, by Oddero. Their principal characteristics are as follows: 865 tons, twin screw, turbine, 1350 s. hp. 400 r.p.m., speed 17.5 knots, cruising radius 1700 miles at 16 knots, 150 tons of fuel, draft, 5 feet; armament four 4.7-inch guns, three 3-inch anti-aircraft guns, two machine guns, and six mines with releasing gear.

**PERU.** The naval budget for 1930-1931 was 824,000 Peruvian pounds (Peruvian pound equalled \$0.295). Financial reasons compelled the government to reduce to three the number of officers from the United States on the naval mission to that country. Since the outbreak of revolution the status of these was changed from executive control to an advisory capacity only.

**POLAND.** The 1931-1932 naval budget provided for 34,280,000 zlotys (approximately \$3,800,000). The navy consisted of two destroyers, 3080 tons; three submarines, 2940 tons, two gunboats, five torpedo boats, and several smaller vessels. The personnel consisted of 275 officers and 3108 men.

**PORTUGAL.** In carrying forward the construction programme given in detail on page 523, 1930 YEAR BOOK, the government awarded the contract for the four 1400-ton destroyers to Yarrow, but specified that two should be constructed in a Portuguese shipyard, while the other two might be built in England. The machinery for all of them, however, was to be made in England. The other fighting craft of the programme, two 2000-ton gunboats, two 1000-ton gunboats, two submarines, and one small aircraft carrier, were being built in various yards in Italy and England. Vickers-Armstrong had the contract to furnish the armament for all these vessels for £900,000.

**RUMANIA.** The naval budget for 1931 was £400,000 or \$2,100,000. Personnel 289 officers, 3702 men. The two new destroyers, *Regele Ferdinand I* and *Regina Marina*, built in Naples and completed in 1930, have joined the Black Sea Division. With a contract speed of 34 knots they are reported to have reached 39 knots on their trials. Each destroyer is equipped to carry 50 mines.

**SPAIN.** The Republican government changed the names of the battleship *Alfonso XIII*, and the cruisers *Reina Victoria Eugenia*, and *Prin-*

*oipe Alonso to España, República, and Libertad*, respectively. The 10,000-ton cruiser *Canarias* was launched at Ferrol on May 29. The government planned to reduce the navy personnel by about 6000 or approximately one-third. Many of the older ships were to be sold or scrapped.

**SWEDEN.** The naval budget for 1931-1932 is 44,649,250 kronor (krona equalled \$0.268) and in addition there are 4,510,000 kronor for armament and operations, and 9,200,000 kronor for new construction. The active personnel was about 4300 officers and men. Interest centred in the 5000-ton aircraft cruiser *Gotland* being built at the Lindholmen Shipyard, Göteborg. As redesigned this 33-knot vessel would carry eight hydroplanes that could be launched one at a time from a centre-line catapult. A weak point seemed to be in the recovery of planes after a flight. There seemed to be a sort of scoop or sweep under the crane to facilitate this work. The *Gotland* was to carry six 6-inch and four 14-pounder anti-aircraft guns. Two destroyers and two submarines were building.

**TURKEY.** A new construction programme was to be undertaken when funds were available, meantime the 1929 amended programme provided for six large destroyers, 12 submarines, and six motor launches. Italian yards were building four destroyers, two submarines, and three motor launches for Turkey. The destroyers *Koja Tepe* and *Ada Tepe*, built in the Ansaldo yards, reached Istanbul on October 18. They were reported to have a speed of 38 knots with a standard displacement of 1350 tons.

**UNION OF SOVIET SOCIALIST REPUBLICS (RUSSIA).** The budget for army, navy, and special military units was 1,390,000,000 rubles (\$0.5146). Information as to the disposition of these funds was meagre and unreliable. The battleship *Lenin* was reported as being converted into an aircraft carrier. Three new submarines *DeKabrist*, *Narodvoietz*, and another unnamed, were reported to be under construction at Leningrad. On May 22 the submarine *Tovarisch* was lost in the Gulf of Finland. Another submarine was reported lost off Vladivostok, with all hands. On October 24 a Soviet submarine was rammed by the German steamer *Gratia* as the former emerged from a dive. At first thought lost, it was later reported that it was towed to port by a destroyer. It may have been the ex-British *L-55*. Unconfirmed German reports stated two other submarines were lost during torpedo practice in Estonian waters within two weeks of each other. Fifteen men were lost in one, 20 in the other.

**UNITED STATES.** The naval appropriation bill approved on Feb. 28, 1931, amounted to \$357,174,912 for the fiscal year 1931-1932. In his annual report to the President the Secretary of the Navy gave his expenditures for the preceding year as \$357,806,219. In preparing estimates to be submitted to Congress for 1932-1933 the Navy Department asked for approximately \$400,000,000. This increase was to be used entirely for new construction to replace fighting craft already over age or about to become so. When President Hoover directed that these estimates be reduced to \$340,000,000, his action brought forth a very violent attack from the Navy League upon him, and his policies. None the less the estimates were revised as the Chief Executive had directed. On June 30, 1931, there were on the active list of the navy 5709 line officers, 2100 staff officers, 1194 chief warrant officers, and 257

warrant officers, a total of 9260 officers. The appropriation act for 1930-1931 provided for 84,500 men but as a part of the President's economy programme this number was reduced to 79,700 in January. That the continued reduction of naval personnel was a cause for alarm to officers responsible for the national defense is indicated by the following quotation from the annual report of the head of the navy's personnel department, the chief of Bureau of Navigation:

During the past year the number of ships in active commission was materially reduced. The proposed operating force plan for the fiscal year 1933 contemplates further reductions in the number of ships in full commission and reductions in the numbers of men allowed all types of combatant ships, except submarines. Such reductions must inevitably result in materially lowered training and efficiency, and in the event of war would be of the gravest consequence. Any decrease in the strength of the Navy in ships or in personnel must result in expenditures of funds manifold greater than savings temporarily effected. This is the lesson of history.

The Marine Corps for the fiscal year 1931 had appropriations for 1030 commissioned officers, 154 chief warrant and warrant officers, and 18,000 men.

Alleged necessity for rigid economy in governmental expenditures was undoubtedly responsible for the reduction of the number of ships in commission. Sixteen destroyers, 16 submarines (11 R5s and 5 S's), one submarine tender (*Camden*), one auxiliary (*Procyon*), and one mine layer (*Aroostook*) were decommissioned but retained ready for recommissioning; nine submarines (O-class), and one battleship (*Florida*) were decommissioned for disposal on account of their age, or condition, or in accord with treaty provisions. In addition, eight destroyers and one battleship (*Arkansas*) were formed into a training squadron and operated with greatly reduced personnel allowances. The *Wyoming* was converted into a training ship and operated with reduced allowances. In addition, two old light cruisers (*Denver* and *Galveston*) and some smaller craft were placed out of commission.

The United States completed, during the fiscal year, 1930-31, the modernization of two battleships; completed three 10,000-ton cruisers; one fleet submarine.

The modernizing of the *Arizona* and *Pennsylvania* brought the total of modernized battleships to seven out of the 15 allowed under the London treaty. Three more were now undergoing this process during which additional protection against submarines and air attacks was being installed, boilers and main and auxiliary machinery replaced, turret-gun elevation increased, 5-inch anti-aircraft guns installed, new fore-and-aft fire-control stations with modernized equipment installed, and such further repairs or alterations as were necessary to place these vessels in an up-to-date condition when they were ready to return to the fleet.

The three 10,000-ton (or category "A") cruisers completed during the year were the *Augusta*, *Chicago*, and *Louisville*. This type of cruiser developed large rolling amplitudes which were reduced by increasing the area of the bilge keels already installed, or the installation of new bilge keels of different design, and also by the installation of anti-rolling tanks. Similar steps were contemplated on all of this class that had been completed, and the design of those uncompleted was altered to remedy this fault. Defective stern

castings were renewed on these cruisers, and the design changed for castings for ships to be built. The use of welding to a greater extent than ever before in the American navy effected a considerable saving in weight. Because of the inflammable qualities of cork; aluminum foil, corrugated asbestos, and aluminum sheathing were used in lieu of cork insulation. The characteristics of these vessels are given here as a means of comparison with other cruisers completed by foreign countries: Standard displacement, 9060 tons (*Chicago* 9300); speed 32.7 knots, armament nine 8-inch guns in four turrets, four 5-inch anti-aircraft guns; six torpedo tubes; four planes carried.

The *Nautilus*, 2730-ton fleet submarine, was completed during the year, and was to be the last of the large type submarines, as the new fleet type were to be appreciably smaller in order to obtain maximum offensive and seagoing qualities on a reasonable displacement. The restricted global tonnage of submarines allowed by treaty had brought about this change in design. Improved rescue devices for submarines brought out during the year included the new type rescue chamber (which had been tested to 400 feet submergence and had successfully removed personnel from the *N-4* while she was lying in 60 feet of water) and a new marker buoy for telephonic conversation with a disabled submarine while submerged.

## UNITED STATES: WARSHIPS BUILDING IN 1931

Class and name	Tons	Probable date of completion
<b>Cruisers:</b>		
<i>New Orleans</i>	10,000	6/ 2/33
<i>Portland</i>	"	8/15/32

<i>Hull</i>	"	Indefinite
<i>Macdonough</i>	"	"
<i>Worden</i>	"	"

In addition appropriation was made to begin work on six other destroyers; but the President, as part of his economy programme, did not permit contracts to be let for them. For preliminary work on three additional 10,000-ton cruisers, \$100,000 also was appropriated.

Since 1924 the line officer personnel assigned to aeronautical duties had increased from 422 to 1132; the number of enlisted men from 5296 to 12,639. On June 30, 1931, there were 737 naval aviators on active duty. The number included 715 commissioned officers and 22 warrant officers. The total number of enlisted pilots (naval aviation pilots) was 331.

The year 1931 saw the completion of the five-year building programme of 1000 planes, a full year ahead of schedule, and at a saving of \$23,307,160 over the original estimate. Large numbers of experimental service airplanes were built during the year. Forty new types, including the autogiro, were delivered to and tested by the navy during the year. The year 1931 saw continuous improvement of standard types of air-

craft engines and marked improvement of engine test facilities. In general it might be said that the power and reliability of American air-cooled engines used in the naval service were equal, if not superior, to the best engine products in the world. Safety in operation was still increasing as indicated by the fact that during the year there was an increase of approximately 50 per cent in the number of flying hours per forced landing due to engine failure.

A new method of determination of load factors for airplanes resulted in more exact knowledge of strength requirements for the various types. This is particularly important to the navy in its study of the stresses imposed by dive bombing attack. Great progress was made in the development and utilization of high strength ferrous and non-ferrous alloys; also in the study of the use of corrosion resisting steel for various airplane parts. Successful carrier operations were continued with the *Saratoga*, *Lexington*, and *Langley* operating actively throughout the year. At the close of 1931 the *Langley* made a special trip to the higher latitudes to determine the feasibility of deck landings and take-offs under the conditions of icy decks and low temperatures.

The powder type catapult continued to give satisfactory and reliable service. Air type catapults were still installed in 7500-ton cruisers and a few of the older type battleships. In the latter they were mounted on the quarter-deck only. Although catapult operations were carried on continuously during the year there were no major accidents due to improper functioning of material. It was planned ultimately to replace all air type catapults with powder catapults. The completion and successful trials of the dirigible, U. S. S. *Akron*, was one of the outstanding events of the year. Facilities were incorporated in the design of this ship to permit the carrying, launching, and recovery in flight of five fighting airplanes. The U. S. S. *Los Angeles* took part in fleet manoeuvres during February, 1931. That vessel was in continuous operation for three weeks during which time she used the mooring mast of the oiler U. S. S. *Patoka*, as a base for refueling and servicing. A new lighter-than-air base at Sunnyvale, Calif., was acquired during the year. Plans for hangar accommodations for both the U. S. S. *Akron* and *ZRS-5* were a definite part of the programme of lighter-than-air expansion on the Pacific coast. Construction of the new aircraft carrier *Ranger* was started—the first vessel of this type for the U. S. Navy to be laid down as such from the keel up. The construction of the *ZRS-5* was started at Akron, O. The following Marine Corps aviation squadrons were assigned:

VS 14M—6 VS planes to U. S. S. *Saratoga*.  
VS 15M— " " " " *Lexington*.

**YUGOSLAVIA.** The naval budget for 1921-32 was 235,276,039 dinars (\$0.017). This was to be expended as follows: personnel 51,152,039 dinars, material 155,424,000, and special 28,700,000. The personnel is 487 officers, 5500 men. The old pre-war German cruiser *Niobe* was bought and rechristened *Dalmazia*. A flotilla leader, the *Dubronik*, being built by Yarrow was launched in October. She is 1880 tons (standard), dimensions 371 feet x 35 feet x 12 feet, designed for 37 knots, with Parsons geared turbines and 3 Yarrow boilers. Her armament is four 5.6-inch guns,

one 3.3-inch anti-aircraft gun, two small anti-aircraft guns, and six 21-inch torpedo tubes.

**NEBRASKA.** POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,377,963; in 1920 it was 1,296,372. The native whites numbered 1,238,356 (1930), 1,129,567 (1920). Foreign-born whites, 115,346 (1930), 149,652 (1920). Negroes, 13,752 (1930). Mexicans numbered 6321, in 1930, and Indians 3256. Omaha, the most populous city, had 214,006 inhabitants (1930), 191,601 (1920). The capital, Lincoln, had 75,933 (1930), 54,948 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Corn ....	1931	10,138,000	172,346,000	\$ 65,491,000
	1930	9,564,000	239,100,000	121,941,000
Wheat ..	1931	3,465,000	58,376,000	23,359,000
	1930	3,939,000	71,557,000	37,761,000

	1930	317,000	4,121,000	

\* Tons.

**MINERAL PRODUCTION.** Only the usual minor features appeared in the U. S. Bureau of Mines' report of the State's mineral industries for 1929. The chief of these was the extraction of sand and gravel. The total value of the State's mineral production was \$4,844,542 for 1929; for 1928 it was \$3,454,700.

**MANUFACTURES.** Federal Census figures gathered in 1930 and covering the year 1929 rendered the number of the State's manufacturing establishments as 1490 (some 16 per cent greater than their number for 1927). Wage earners there employed numbered 28,219 (being 8.1 per cent more than for 1927). Their wages totaled \$36,882,542 (exceeding those of 1927 by fully 6 per cent). The materials used in manufacture, plus the cost of fuel and purchased electricity, came to \$364,305,751 (being about 12 per cent above the corresponding figure for 1927). The value of the manufactured product was \$484,262,511 (exceeding the value for 1927 by 15.2 per cent). Much the greater part of the manufacturing centred in Omaha, where 430 manufacturing establishments employed 16,108 wage earners, in 1929, to whom were paid wages of \$21,356,630, while the manufactured product totaled \$353,158,836.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$14,947,345 (of which \$1,823,865 was for local edu-

cation); for interest on debt, \$14,177; for permanent improvements, \$7,655,545; total, \$22,617,067 (of which \$10,417,241 was for highways, \$4,169,046 being for maintenance and \$6,248,195 for construction). Revenues were \$22,858,434. Of these property and special taxes formed 33.6 per cent; departmental earnings and remuneration to the State for its officers' services, 11.1; sales of licenses, 38.7 (including taxes of \$6,467,930 on sales of gasoline). The State's funded debt outstanding on June 30, 1930, was \$237,500. There were no sinking fund assets. On property bearing an assessed valuation of \$3,486,532,466 were levied in the year State taxes of \$7,976,000.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 6173.9. In the year preceding there had been no extensive additions or abandonments of line. No building of new line or trackage in 1931 was reported.

**EDUCATION.** In spite of depressed business and financial conditions, it was reported that there had been no serious abandonment of plans for the construction of buildings in the school districts.

**CHARITIES AND CORRECTIONS.** The 17 custodial and eleemosynary institutions of the State in 1931 were operated under the direction of the State Board of Control. This board consisted of three members, each appointed by the Governor to serve six years, a member's term expiring every three years. The Board had full jurisdiction over the institutions in its charge. Its maintenance expenditures ran in 1931 at the approximate rate of \$2,500,000 a year. The number of the institutional inmates in its charge on July 1, 1931 was 7179.

**LEGISLATION.** The Legislature held a regular biennial session which concluded on May 2. It passed the act of reapportionment necessary to redistrict the State, for the election of Federal Representatives, into five districts, instead of six. A system of higher licenses for motor trucks was created, the cost of licenses running up to a maximum of \$250 a year. Governor Bryan vetoed the act, but it was repassed over his veto. By another act the irrigation districts acquired the right to build electric power plants. The law taxing sales of gasoline was amended so as to render all gasoline subject to tax, without respect to the purpose for which it was to be employed. Penalties for drunken driving were increased. The City of Omaha was authorized to issue \$2,000,000 of negotiable revenue bonds for its projected South Side Bridge. The bridge was to become free to the public on the retirement of the bonds. The regular session failed to pass a general appropriation measure carrying appropriations of some \$40,000,000 for the ensuing two years, and thus rendered it necessary to call a later special session for the purpose.

**POLITICAL AND OTHER EVENTS.** Charles W. Bryan, brother of the late William Jennings Bryan, was inaugurated Governor on January 8. In his inaugural speech he made a series of radical proposals, which included the establishment and ownership of banks by the State, the reenactment of the old State law guaranteeing bank deposits, and the creation of municipal gasoline stations. He later investigated the State banking department and allied services and dismissed certain of the officials, charging that a plot had been formed to maintain undue control of bank receiverships in the hands of a clique. A U. S.

Veterans' Hospital accommodating more than 200 patients was opened at Lincoln on April 22.

**OFFICERS.** Governor, Charles W. Bryan; Lieutenant-Governor, Theo. W. Metcalfe; Secretary of State, Frank Marsh; Treasurer, T. W. Bass; Auditor, George W. Marsh; Attorney-General, C. A. Sorensen; Superintendent of Public Instruction, C. W. Taylor.

**JUDICIARY.** Supreme Court: Chief Justice, Charles A. Goss; Associate Justices, William B. Rose, James R. Dean, W. H. Thompson, George A. Eberly, Edward E. Good, George A. Day.

**NEBRASKA, UNIVERSITY OF.** A State institution of higher education in Lincoln, Nebr., founded in 1869. The enrollment for the autumn of 1931 was 5945. There were 2713 students enrolled in the summer session of 1931, of whom 1001 were men and 1712 were women. The faculty numbered 366. The total income for the year was \$4,830,966. The library contained 258,416 volumes. Additions during 1931 included the first unit of the new dormitories for women, a heating plant and nurses' home on the medical college campus, and a new mall and swimming pool. Chancellor, Edgar A. Burnett, D.Sc.

**NEBULÆ.** See **ASTRONOMY.**

**NECROLOGY.** The following list contains the names of notable persons who died in 1931. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Abbott, Ernest Hamlin. American editor, died Aug. 8, 1931, in Cornwall-on-Hudson, N. Y., where he was born Apr. 18, 1870. He was graduated from Harvard in 1893 and from the Andover Theological Seminary in 1896. Ordained to the Congregational ministry, he served as pastor of the First Church in Fryeburg, Me., from 1896 to 1902. He then became a member of the editorial staff of the *Outlook*, of which his father, Lyman Abbott, was editor. On the death of his father in 1922 he became editor-in-chief, and was associate editor after the merger of the *Outlook* and the *Independent* in 1928. During the World War he was chairman of the executive committee of the National Service Commission of Congregational Churches. He wrote: *Religious Life in America* (1902); *On the Training of Parents* (1908); and *What They Did with Themselves* (1909).

Aceval, Emilio. Paraguayan statesman, died Apr. 15, 1931, in Asunción where he was born Oct. 16, 1853. Following his graduation from the Colegio Nacional in 1875, he was engaged in business, later serving as Inspector of Banks and as chairman of the board of directors of the National Bank. In 1894 he was made Minister of War and the Navy and during 1896-97 also acted as Minister of Finance. In 1898 he was elected President of Paraguay and completed the full term in office. He also was elected Senator in 1904 and on the expiration of his term was appointed president and manager of the Banco Agrícola. In 1908 he was chosen Ambassador to Argentina. He was a Commander of the French Legion of Honor and a recipient of the Naval Grand Cross of Merit of Spain.

Acheson, Edward Goodrich, died July 6, 1931.

Ackerson, James Lee. American naval constructor, died in Chevy Chase, Md., Sept. 13, 1931. He was born in Lowell, Mich., Aug. 8, 1881, and was graduated from the U. S. Naval Academy in 1901. He became a member of the construction corps of the U. S. Navy in 1903, being assigned to the New York Navy Yard (1906-10), the Bureau of Construction and Repair in Washington (1911-15), and the Mare Island (San Francisco) Navy Yard (1915-17). Promoted to commander in 1917, he acted during the World War as consultant to the U. S. Shipping Board and the Emergency Fleet Corporation. After being associated with the Harriman shipbuilding interests, he resumed connection with the U. S. Shipping Board in 1930 as director of its bureau of construction.

Adams, Edward Dean, died May 20, 1931.

Addicks, Walter Robarte. American public utility executive, died in Greenwich, Conn., Apr. 14, 1931. He was born in Philadelphia, Pa., Apr. 14, 1861, and was graduated from the U. S. Naval Academy in 1882. Resigning from the Navy the following year, he entered the employ of the Pennsylvania Railroad in Altoona, Pa., as draftsman. In 1887 he was appointed construction engineer of the Massachusetts Pipe Line Gas Company and the New England Gas & Coke Co., which position he held until 1908. He then became first vice

president and trustee of the Consolidated Gas Company of New York and director of its many subsidiaries. During the World War he served on technical committees of the Council of National Defense, and was in charge of the Consolidated Gas Company's operation of government plants producing toluol and other war materials.

Agnew, John Lyons. Canadian industrialist, died in Copper Cliff, Ont., July 8, 1931. He was born in Pittsburgh, Pa., July 28, 1884, but migrating to Canada became associated with the Canadian Copper Company in 1904. He was successively made smelter superintendent and general manager, and on the consolidation of various metallurgical concerns as the International Nickel Company, Ltd., in 1929 became vice president. Prior to this consolidation he directed the \$50,000,000 expansion and development programme on which the company embarked in 1924, including the opening of the Frood nickel mine, construction of a new smelter at Copper Cliff, extension of the hydro-electric development of the Spanish River, and enlargement of the refining operations at Port Colborne, Ont. He also was a director of the International Nickel Company, Inc., the operating company in the United States, deputy chairman and director of the Ontario Refining Company, Ltd., and a past president of the Ontario Mining Association.

Agnew, William Henry, died Feb. 13, 1931.

Agramonte, Aristides, died Aug. 17, 1931.

Albert Johann, Duke of Schleswig-Holstein. A German prince, died in Berlin Apr. 27, 1931. He was born at Frogmore House, Windsor, England, Feb. 26, 1869, the son of Prince Christian of Schleswig-Holstein and Princess Helena, a daughter of Queen Victoria, and was educated in England. Prior to succeeding to the title on the death of his cousin, Duke Ernest Gunther, in 1921, he held the rank of lieutenant-colonel in the Prussian Army. During the World War he was assigned, at his request, to the staff of General von Loewenfeld, Military Governor of Berlin, so as not to fight against Great Britain. With him the Schleswig-Holstein-Sonderburg-Angustenburg line, which had held the dukedom since 1863, became extinct, the succession passing to the Schleswig-Holstein-Glücksburg line.

Albright, John Joseph. American capitalist, died in Buffalo, N. Y., Aug. 20, 1931. He was born in Buchanan, Va., Jan. 18, 1848, and was graduated from the Rensselaer Polytechnic Institute in 1868. After being engaged in the wholesale coal business in Washington, D. C., until 1883, he removed to Buffalo, where he became president of the Marine National Bank, director of the Marine Trust Company and of the Lackawanna Steel Company, and a pioneer in the hydraulic development of Niagara Falls. He was donor of the Albright Art Gallery to the city of Buffalo and an incorporator of the American Academy in Rome. In 1929 the Chancellor's Medal of the University of Buffalo was conferred on him.

Alcorta, José Figueroa. Argentine statesman, died in Buenos Aires Dec. 27, 1931, aged 71. After distinguishing himself as a lawyer, he entered the Argentine Congress and in 1904 was elected vice president of the republic. He succeeded to the presidency on the death of President Quintana in March, 1906, holding this office until 1910. During his administration the bonds of friendship between the United States and Argentina were strengthened. Subsequently he was appointed to the Argentine Supreme Court, and in 1931 was designated president of the permanent council of conciliation between Belgium and the United States.

Alderman, Edwin Anderson, died Apr. 29, 1931.

Ali, Maulana Mohamed. Indian Moslem leader, died in London Jan. 4, 1931, while attending the Round-Table Conference. Born in December, 1878, he was educated at the Mohammedan Anglo-Oriental College (later the Moslem University) in Aligarh, and at Lincoln College, Oxford. In 1907 he established and edited the English weekly *Comrade* in Calcutta, and in 1913 the daily *Hamdard* in Delhi. He also took an active part in the establishment of the All-India Moslem League, and with his brother Shaukat Ali was a leader for more than 20 years of the uncompromising section of the Indian Moslems known as the Khalafists. He was prominent in the civil disobedience movement of 1920-21, but after 1923 he abandoned these boycott measures and gradually severed his connection with Mahatma Gandhi and the All-India Congress.

Allen, Francis Richmond, died Nov. 7, 1931.

Allinson, Francis Greenleaf, died June 23, 1931.

Ames, Robert. American actor, died in New York City Nov. 27, 1931. He was born in Hartford, Conn., Mar. 23, 1889, and after obtaining his early stage training in stock companies played with Henry Miller's company in *The Great Divide* and other plays. In 1916, after having appeared with the Municipal Stock Company of Northampton, Mass., he returned to the New York stage to support Ruth Chatterton in *Come Out of the Kitchen*. Subsequent productions in which he played leading roles were: *Nice People* (1921); *Lights Out* (1922); *Icebound* (1923); and *The Desert Flower* (1924). With the advent of the talking pictures he

went to Hollywood, where he was cast with Gloria Swanson in *The Trespasser*. He also appeared in *Confession*, *Behind Open Doors*, *Holiday*, *Marianne*, *Madonna of the Streets*, *Rich People*, and *Tomorrow and Tomorrow*.

Andrieux, Louis. French diplomat and politician, died in Paris Aug. 27, 1931. He was born in Trévoux July 23, 1840, and on graduation from the Sorbonne practiced law in Lyons. Elected a deputy for the Department of Basses-Alpes in 1876, he was a member of the Chamber for nearly 50 years, being at the time of his retirement dean of that body. In 1879 he was appointed Prefect of Police of Paris and in 1882 Ambassador to Spain. He was a Chevalier of the Legion of Honor and the author of *Souvenirs d'un ancien préfet de police* (2 vols., 1885) and *La Révision* (1889).

Anthony, Daniel Reed, Jr. American editor and congressman, died Aug. 4, 1931, in Leavenworth, Kans., where he was born Aug. 22, 1870. He was graduated from the Michigan Military Academy in 1887 and with the LL.B. degree from the University of Michigan in 1891. On the death of his father in 1904, he became editor of the *Leavenworth Times*. He was postmaster of Leavenworth during 1898-1902 and mayor during 1903-05. In 1907 he was elected to the 60th Congress from the 1st Kansas District, and was reelected for each succeeding term until 1929. During the World War he was a member of the House Committee on Military Affairs.

Aosta, Emanuele Filiberto, Duke of, died July 4, 1931.

Arbuckle, Maclyn. American actor, died in Waddington, N. Y., Mar. 31, 1931. He was born in San Antonio, Texas, July 9, 1866, and attended the English and Classical School in West Newton, Mass. Admitted to the Texas bar in 1887, he practiced for a year and then decided to go on the stage, making his début in *The Emigrant* at Shreveport, La. For several years he supported R. D. McLean, and in 1896 appeared as Marc Antony, with Louis James, in *Julius Caesar*. Subsequently he went to London, playing in *Why Smith Left Home*. His first appearance as a star was in *The Sprightly Romance of Marsac*, presented in New York in 1900, and he later created the rôles of the Hon. Jim Hackler in *The County Chairman* (1903-07), "Slim" Hoover, the sheriff, in *The Round Up* (1907), John Tarleton in *Shaw's Mualliances* (1917), and Old Bill in *The Better 'Ole*. In 1918 he organized and became president of the San Antonio Pictures Corporation, producing Maclyn Arbuckle Photo Plays.

Ashby, Thomas. British archaeologist, died near London, May 17, 1931. Born Oct. 14, 1874, he was educated at Christ Church, Oxford, and in 1903 was appointed assistant director of the British School of Archaeology at Rome. Three years later he became director of the school, holding this appointment until his retirement in 1925. The following year he was Norton-Loeb lecturer for the Archaeological Institute of America, and in 1930 was appointed research student at Christ Church, Oxford. He was a Fellow of the British Academy and of the Society of Antiquaries. His works include *Turner's Visions of Rome* (1925); *The Roman Campaigns in Classical Times* (1927); *Roman Architecture* (1927); *Some Italian Scenes and Festivals* (1929); *Rome, the Eternal City* (1929); and *The Aqueducts of Ancient Rome* (1931).

Ashmead-Bartlett, Ellis, died May 4, 1931.

Aswell, James Benjamin. American congressman, died in Washington, D. C., Mar. 16, 1931. He was born in Jackson Parish, La., Dec. 23, 1869, and was graduated from the University of Nashville in 1893. After serving as State institute conductor from 1897 to 1900, he was elected president of the Louisiana Polytechnic Institute, and in 1904 State superintendent of public education. He acted as chancellor of the University of Mississippi in 1907, and the following year was elected president of the Louisiana State Normal College, which office he held until 1911. He was elected to the 63d Congress from the eighth Louisiana District in 1913, and was reelected to each succeeding Congress. He was active in 1929 as a member of the House Committee on Agriculture in framing the McNary-Haugen bill by which the Federal Farm Board was created.

Austerlitz, Friedrich. Austrian editor, died in Vienna, July 6, 1931. He was born in Hochleben Bohm, Apr. 26, 1862. In 1895 he became editor-in-chief of the *Arbeiter-Zeitung*, central organ of the Social Democratic party, and in 1920 was elected a member of the Reichstag. He was the author of *Presserecht und Pressefreiheit* (1902) and *Das Neue Reichswahlrecht* (1907).

Austria, Don José de. Venezuelan diplomat, died in Panama, May 11, 1931. During his long diplomatic career he held the posts of chargé d'affaires in Brazil and Chile, resident Minister in Ecuador, and Envoy Extraordinary and Minister Plenipotentiary to Panama. Noted also as an author, he was a member of the Venezuelan Academy of Letters.

Babcock, Stephen Moulton, died July 2, 1931.

Baer, John Willis. American banker, died in Passa-

dena, Calif., Feb. 8, 1931. He was born near Rochester, Minn., Mar. 2, 1861, and attained prominence in 1890 when he was chosen secretary of the World's Young People's Society of Christian Endeavor. In 1900 he became assistant secretary of the Board of Home Missions of the Presbyterian Church in the United States of America, and in 1906 was elected president of Occidental College, Los Angeles, Calif. On his retirement from the latter office in 1916 he entered banking, acting as vice president of the Union National Bank, Pasadena, Calif., from 1917 to 1920 and of the Security-First National Bank, Pasadena, from 1920 until his death. He was moderator of the Presbyterian Church in the United States of America during 1919-20.

Baer, William S., died Apr. 7, 1931.

Baillie, James. British clergyman and historian, died in Lasswade, Midlothian, Scotland, Feb. 6, 1831. He was born in Bonnyrigg, Midlothian, Nov. 25, 1866, and was educated at the University of Edinburgh. Ordained to the ministry of the United Free Church of Scotland in 1892, he later served as minister of the Wardie Church, Edinburgh (1912-22), and of St. John's Church, Torphichen (1922-31). He was also extension lecturer on Egyptology at Oxford University. Among the popular books on ancient history which he wrote are: *The Story of the Pharaohs* (1908); *The Sea-Kings of Crete* (1910); *Peeps at Ancient Egypt* (1912); *Wonder Tales of the Ancient World* (1915); *Peeps at Ancient Assyria* (1916); *Peeps at Ancient Rome* (1917); *Peeps at Ancient Greece* (1920); *Life of the Ancient East* (1923); and *A History of Egypt* (2 vols., 1929).

Bailey, Henry Turner. American art critic, died in Chicago, Ill., Nov. 26, 1931. He was born in Scituate, Mass., Dec. 9, 1865. On graduation from the State Normal Art School, Boston, in 1887 he was until 1903 agent of the Massachusetts State Board of Education for the promotion of industrial drawing, and until 1917 editor of the *School Arts Magazine*. He also was director of the Chautauqua School of Arts and Crafts during 1908-17. He was then called to the Cleveland School of Art first as dean and then as director, holding the latter position until 1930. In 1915 he was a member of the international jury of awards at the Panama-Pacific Exposition. Among his works are: *A First Year in Drawing* (1894); *The Great Painters' Gospel* (1900); *Nature Drawing* (1910); *Twelve Great Paintings* (1913); *Art Education* (1914); *Symbolism for Artists* (with Ethel Pool, 1923); and *The Magic Realm of the Arts* (1928).

Bailey, Solon Irving, died June 5, 1931.

Baker, George Fisher, died May 2, 1931.

Balfour, Sir Andrew, died Jan. 30, 1931.

Barnard, Ernest Sargent. American baseball administrator, died in Rochester, Minn., Mar. 27, 1931. He was born in West Columbia, W. Va., July 17, 1874, and was graduated with the Ph.B. degree from Otterbein College, Westerville, Ohio, in 1895. After acting as sports editor of the Columbus *Evening Dispatch*, he became in 1903 secretary of the Cleveland Ball Club Company and in 1911 vice president. He was then business manager of the Cleveland "Indians" from 1916 to 1921 and president from 1922 to 1927, when he succeeded Byron Bancroft Johnson (q.v.) as president of the American League of Professional Baseball Clubs.

Barr, Archibald, died Aug. 6, 1931.

Barrington, E. See Beck, L(ily) Adams.

Barrus, Clara, died Apr. 5, 1931.

Barry, Joseph Gayle Hurd. American theologian, died in New Canaan, Conn., May 28, 1931. He was born in Middle Haddam, Conn., Apr. 19, 1858, and after attending Wesleyan University was graduated from the Berkeley Divinity School in 1886. Following his ordination in the Protestant Episcopal Church, he became rector of Calvary Church, Batavia, Ill. (1888-91); instructor in Western Theological Seminary, Chicago (1891-1901); canon of St. Paul's Cathedral, Fond du Lac, Wis. (1901-06); dean of Nashotah House (1906-09); and rector of the Church of St. Mary the Virgin, New York City (1909-29). A distinguished leader of the Anglo-Catholic group, he wrote *Meditations on the Office and Work of the Holy Spirit* (1908); *Holiness* (1915); *The Invitations of Our Lord* (1918); *The Religion of the Prayer Book* (with Selden P. Delany, 1919); and *Meditations on the Communion Office* (1924).

Bass, John Foster. American journalist, died in Tucson, Ariz., Apr. 16, 1931. He was born in Chicago, Ill., in 1866, and was graduated from Harvard in 1891. As war correspondent for the Chicago *Daily News* he was with the British army in Egypt during 1895, and two years later witnessed the Cretan rebellion and the Greco-Turkish War. He continued as correspondent during the Spanish-American War, the Philippine insurrection, the Boxer insurrection in China, and the Russo-Japanese War. During the World War he was with the Russian army in Poland and Galicia (1914-15), with the Allied armies in France, Italy, and the Balkans (1915-17), and with the American army in France (1918). He attended the Paris Peace Conference

and was connected with various government missions following the War. He was the author of *The Peace Tangle* (1920) and *America and the Balance Sheet of Europe* (1921).

Bates, William Horatio. American oculist, died in New York City, July 10, 1931, aged 70. A graduate of the College of Physicians and Surgeons of Columbia University, he originated a method of treating imperfect eyesight by mental relaxation and also discovered the drug suprarenal extract, used in optic surgery. He was the author of *The Prevention of Myopia in School Children* (1911) and *The Cure of Imperfect Sight by Treatment without Glasses* (1920).

Baththany, Theodore, Count. Hungarian statesman, died in Budapest, Feb. 2, 1931, aged 76. He was Minister of the Interior in the cabinet of Count Michael Károlyi, first minister-president of the National Council of the Hungarian People's Republic, which lasted from Oct. 30, 1918, to the proclamation of a Communist Government under Béla Kun on Mar. 22, 1919. For years prior to the revolution he had advocated the separation of Hungary from Austria and the dethronement of the Hapsburg dynasty.

Bayer, Josef. Austrian anthropologist, died in Vienna, July 23, 1931. He was born in Oberhollabrunn, July 10, 1862, and attended the University of Vienna. In 1907 he became a member of the staff of the Vienna Natural History Museum, being appointed director of anthropology in 1924. His most famous discovery was that of the so-called Venus of Willendorf. He was the author of *Der Mensch im Eiszeitalter* (1927).

Beals, Edward Alden. American meteorologist, died in San Francisco, Calif., Dec. 26, 1931. He was born in Troy, N. Y., Apr. 23, 1855, and attended Harvard University. In 1880 he entered the U. S. Signal Corps and was later transferred to the Weather Bureau, being in charge of the offices in New York City (1883), Atlanta, Ga. (1883), Mt. Washington, N. H. (1884-85), Chattanooga, Tenn. (1886-87), La Crosse, Wis. (1887-90), Minneapolis (1891-95), Cleveland (1896-99), Portland, Ore. (1900-17), and San Francisco (1917-24). He was then sent to Honolulu as meteorologist in charge of the Hawaiian weather service, retiring in 1926.

Beauchamp, William Benjamin, died June 28, 1931. Beck, L(ily) Adams, died Jan. 3, 1931.

Beckwith, Clarence Augustine. American theologian, died in Bangor, Me., Apr. 2, 1931. He was born in Chalemont, Mass., July 21, 1849, and was graduated from Olivet (Mich.) College in 1874 and from the Bangor (Me.) Theological Seminary in 1877. Following his ordination to the Congregational ministry, he successively served as pastor in Brewer, Me. (1877-82) and West Roxbury, Mass. (1882-92). He then became professor of Christian theology at the Bangor Theological Seminary, and from 1905 until his retirement in 1927 held the same chair at the Chicago Theological Seminary. He was the author of *Realities of Christian Theology* (1906) and *The Idea of God* (1922).

Bedford, Sir Charles Henry, died July 8, 1931. Bedford, Edward Thomas. American capitalist, died in Greens Farms, Conn., May 21, 1931. He was born in Brooklyn, N. Y., Feb. 19, 1849. Becoming associated with the Standard Oil Company in the late '70s, he was largely responsible for the development of its extensive business in foreign fields, and from 1903 to 1911 was a member of the board of directors and of the executive committee. He was also president of the Corn Products Refining Company which in 1906 had been merged with the New York Glucose Company, organized by him in 1901. Among the other corporations of which he was an officer or director were the Colonial Oil Company of New Jersey, the Thompson-Starrett Company, and the Title Guarantee & Trust Co.

Belasco, David, died May 14, 1931.

Belden, Charles Francis Dorr, died Oct. 24, 1931.

Bell, Sir Hugh. British industrialist, died in London June 28, 1931. He was born at Walker-on-Tyne Feb. 10, 1844, and attended the universities of Paris and Göttingen. On the death of his father, Sir Lothian Bell, in 1904 he succeeded to the baronetcy of Mounton Grange and to the ownership of the coal and iron works founded by his father. He was vice chairman of Dorman, Long & Co., chairman of the Horden Collieries, Ltd., and Pearson and Dorman Long, Ltd., and director of the London & North Eastern Railway Co. and the Yorkshire Insurance Company. He was an authority on all questions connected with the coal and iron industries and an ardent free trade advocate. In 1906 he was appointed Lord Lieutenant of the North Riding, Yorkshire, and in 1918 a Companion of the Bath.

Bellinger, Brig. Gen. John B., U. S. A., died Sept. 22, 1931.

Bennett, (Enoch) Arnold, died May 27, 1931.

Bentley, Wilson Alwyn. American meteorologist, died Dec. 23, 1931, in Jericho, Vt., where he was born Feb. 9, 1865. A student of snow crystals, he developed a special camera capable of high magnification with which

he made thousands of photomicrographs of snow, frost, and ice-crystal formations and also of dew and rain drops. Various monographs which he wrote relating to these studies were published by the U. S. Weather Bureau.

Bergman, Hjalmar. Swedish playwright, died in Berlin, Germany, Jan. 1, 1931. He was born in Örebro, Sweden, Sept. 19, 1883, and attended the University of Upsala. His plays were favorably received in the Scandinavian countries and Germany, his last being *Markurelle i Wadköping* (Eng. trans., *God's Orchid*), which was presented in Stockholm in November, 1930.

Berry, Joseph Flintoft. American clergyman, died in Winter Park, Fla., Feb. 11, 1931. He was born in Aylmer, Ont., Canada, May 13, 1856. Ordained to the Methodist ministry in 1874, he successively held pastorates in Memphis, Algonac, Fort Huron, Caro, and Mt. Clemens, Mich. He also was associate editor of the *Michigan Christian Advocate* from 1884 to 1890 and editor of the *Epworth Herald* from 1890 to 1904. In the latter year he was elected a bishop, being resident for a number of years in Philadelphia, Pa. At the time of his retirement in 1928 he was the active senior bishop of the Methodist Episcopal Church.

Berthelot, Henri-Mathias, died Jan. 28, 1931.

Beyer, Samuel Walker, died June 2, 1931.

Billot, Ludovico (Louis), died Dec. 18, 1931.

Bisset, Sir Murray. South African jurist, died in Salisbury, Rhodesia, Oct. 25, 1931. He was born in Kenilworth, Capetown, Apr. 14, 1876, and attended the Diocesan College, Rondebosch, being admitted as an advocate to the Supreme Court of the Cape of Good Hope in 1899. He was a member of the Legislative Assembly of the Union of South Africa during 1915-24, Acting Governor of Southern Rhodesia during 1926-28, and after 1926 Chief Justice of the High Court of Southern Rhodesia. He was also co-author of Bisset and Smith's *Digest of South African Case Laws* and was knighted in 1928.

Blockson, Maj. Gen. Augustus Perry, U. S. A., Ret. American soldier, died in Miami, Fla., July 26, 1931. He was born in Zanewille, Ohio, Nov. 7, 1854, and was graduated from the United States Military Academy in 1877. Commissioned in the cavalry, he served on the Arizona frontier against the Apache Indians, and during 1890-91 in South Dakota against the Sioux Indians. He also participated in the Spanish-American War, the Boxer rebellion in China, and the Philippine insurrection. On the entry of the United States into the World War he was appointed commander of Camp Cody at Deming, N. Mex. In April, 1918, he was transferred to Honolulu as commander of the Hawaiian Department, where he remained until his retirement in November.

Boldini, Giovanni (Jean). Italian-French painter, died in Paris, France, Jan. 11, 1931. Born in Ferrare, Italy, in 1845, he attended the Academy of Florence and also studied in London and Paris. Spoken of as the Sargent of his country, he was from the turn of the century until the outbreak of the World War one of the most distinguished of portrait painters. Outstanding among his portraits are those of Whistler and Helleu, whose inseparable companion he was, Céline Montaland, Robert de Montesquieu, the Princess von Hohenlohe, the Duchess of Marlborough, Mme. Schneider de Creusot, Mrs. George W. Vanderbilt, and Mrs. Philip Lydig.

Bonser, Frederick Gordon. American educator, died in Pompton Lakes, N. J., June 8, 1931. He was born in Tower Hill, Ill. June 14, 1875, and was graduated from the University of Illinois in 1901. After serving as director of the training school of the Cheney (Wash.) State Normal School from 1902 to 1905 and of the Macomb (Ill.) State Normal School from 1906 to 1910, he became professor of education at Teachers College, Columbia University. He was a member of the Philippine Educational Survey Commission in 1925 and of the Virginia and New Jersey State Educational Surveys in 1927 and 1929, respectively. His works include *The Reasoning Ability of Children* (1911); *Industrial Education* (1914); *Educational Use of Recreation Activities of Children* (1918); *The Elementary School Curriculum* (1920); and *Industrial Arts for Elementary Schools* (1923).

Booth, Ralph Harman, died June 20, 1931.

Bowman, John McEntee. American hotel owner and sportsman, died in New York City Oct. 28, 1931. Born in Toronto, Ont., Canada, July 20, 1875, he was at the time of his death president of the Bowman Biltmore Hotels Corporation, comprising the Hotels Biltmore, Commodore, and Murray Hill in New York City; Bellevue Biltmore, Belleair, Fla., and Sevilla Biltmore, Havana, Cuba. There also were affiliated Biltmore hotels in Atlanta, Ga.; Wilmington, Del.; Phoenix, Ariz.; Providence, R. I.; and Los Angeles, Pasadena, and Santa Barbara, Calif. He was a founder of the United Hunts Racing Association and president of the National Horse Show Association of America, Ltd.

Boyden, Roland William, died Oct. 25, 1931.

Brandes, Carl Edvard Cohen, died Dec. 20, 1931.

Breed, David Biddle, died Dec. 10, 1931.

Brentano, Lujo, died Sept. 9, 1931.

Bristol, Charles Lawrence, died Aug. 27, 1931.

Brooks, Samuel Palmer. American educator, died in Waco, Texas, May 14, 1931. He was born in Milledgeville, Ga., Dec. 4, 1863, and was graduated from Baylor University in 1898. Prior to his election as president of Baylor in 1902, he was professor of history and economics. In 1905 he became corresponding secretary of the Texas Baptist Educational Commission. He also was president of the college section of the Texas State Teachers Association (1901-19), of the Baptist General Convention of Texas (1914-17), and of the Southern Sociological Congress (1915). In 1907 he organized the Texas Peace Congress, the first State organization of its kind in the United States.

Brown, James Roger. American accountant and economist, died in New York City, Sept. 20, 1931. He was born in Mount Forest, Ont., Canada, Aug. 15, 1863. Removing to New York City in 1886, he practiced accounting there until 1910. He was active for many years in the movement for a single tax on land popularized by Henry George during the '80s, lecturing and writing on that and other economic subjects and publishing the journal *Taxation*. After 1915 he was president of the Manhattan Single Tax Club, and he also was a trustee of the Robert Schalkenbach Foundation, established in 1924 for the propagation of the theories of single tax and international free trade. His publications include *The Farmer and the Single Tax* (1915); *Plain Talk on Taxation* (1916); and *An Open Letter to Legislators* (1917).

Brown, Katharine Holland. American author, died in Orlando, Fla., June 2, 1931. Born in Alton, Ill., she attended the University of Michigan. Her first novel, *Diane, a Romance of the Icarian Community*, appeared in 1904. It was followed by *Dawn* (1907); *Philippa at Halcynon* (1910); *The Messenger* (1910); *White Roses* (1910); *Uncertain Irene* (1911); *Hallowell Partnership* (1912); *Wages of Honor* (1917); and *The Touchstone* (1919). In 1927 *The Father* won the prize of \$25,000 offered by the *Woman's Home Companion* and the John Day Company.

Brownell, George Griffin. American educator and agriculturalist, died in Neuilly, France, Aug. 28, 1931. He was born in Fairfield, N. Y., July 2, 1869, and was graduated from Syracuse University in 1893 and with the Ph.D. degree from Johns Hopkins University in 1904. From 1898 to 1925 he was professor of Romance languages at the University of Alabama. He also was an expert in the culture of hardy citrus fruits and had been connected with the U. S. Department of Agriculture in this capacity since 1911. He edited *El Capitán Veneno* (1901); *El Pájar Verde* (1901); and *La Vida de Vasco Núñez de Balboa* (1913) and was the author of *Position of the Attributive Adjective in Don Quixote* (1910).

Bruce, Maj. Gen. Sir David, died Nov. 27, 1931.

Bruce, George, died Aug. 5, 1931.

Bull, Carroll Gideon. American pathologist, died in Baltimore, Md., May 31, 1931. He was born in Knoxville, Tenn., June 22, 1884, and was graduated from Peabody College in 1907 and with the M.D. degree from the University of Nashville in 1910. He was a teacher of bacteriology and pathology at the Lincoln Memorial University during 1910-12, and from 1913 to 1917 was an assistant and associate in pathology at the Rockefeller Institute, New York City, where in collaboration with Ida W. Pritchett he discovered an effective antitoxin for war gangrene. In 1918 he became associate professor and in 1921 professor of immunology in the school of hygiene and public health at the Johns Hopkins University. He specialized in researches in agglutination of bacteria in vivo, toxin and antitoxin for *Bacillus Welchii*, and sources of the common cold.

Burgess, John William, died Jan. 13, 1931.

Butcher, William Lewis. American social worker, died in Brooklyn, N. Y., Jan. 15, 1931. He was born in Holyoke, Mass., Oct. 1, 1886, and attended Columbia University. After being engaged in advertising for several years, he became director of the West Side Boys' House in New York City (1910-13) and of the Brace Memorial Newsboys' House (1913-22). He was also a director of the New York Children's Aid Society; founder and secretary of the International Boys' Week; secretary of the International Boys' Work Council; special field commissioner of the Boy Scouts of America; and director of the Boys' Club Federation. In addition to being a member of the New York State Crime Commission, he was chairman of its Sub-Commission on Causes of Crime and vice chairman of the New York City Advisory Crime Prevention Commission.

Caine, Sir Hall, died Aug. 31, 1931.

Callela, Axel G. Finnish painter, died in Stockholm, Sweden, Mar. 7, 1931, aged 65. Regarded as one of the most original of Scandinavian artists, he was known for his interpretations of old Finnish epics in paintings, etchings, and drawings. During 1928-25 he was in the

United States, painting a number of portraits, and exhibited in San Francisco and Chicago.

Capelle, Admiral Eduard von. German naval officer, died in Wiesbaden Feb. 23, 1931. He was born in Celle, Oct. 10, 1855. Joining the German navy in 1872, he was advanced through the grades to admiral in 1913. In 1904 he was appointed director of management of the fleet, and in 1914 became Under-Secretary of State for Marine. Following the resignation of Admiral von Tirpitz in 1916, he succeeded to the office of Secretary of State for Marine, which he held until the close of the World War. He was charged by the Allies, both during and after the War, with advocating unrestricted submarine warfare.

Caraway, Thaddeus E., died Nov. 6, 1931.

Carr, Herbert Wildon, died July 8, 1931.

Carroll, Henry King, died Jan. 21, 1931.

Carson, Howard Adams, died Oct. 26, 1931.

Carter, Fernando. American painter and art director, died in Syracuse, N. Y., July 16, 1931. Born in Boston, Mass., in 1855, he studied at the Boston Museum School of Art and later achieved success as a landscape painter. Appointed director of the Syracuse Museum of Fine Arts, he built up an important permanent collection of paintings exclusively by American artists.

Carter, W. S. Canadian educator, died in Fredericton, N. B., Jan. 7, 1931. He was born in Kingston, N. B., in July, 1858, and was graduated from the University of New Brunswick in 1881. After teaching in the high schools of St. John, N. B., for several years he became in 1886 inspector of schools in that city, and in 1909 superintendent of education for the Province of New Brunswick. He was president of the Dominion Educational Association in 1918, and at the time of his death was president of the Senate of the University of New Brunswick.

Casey, The Most Rev. Timothy. Roman Catholic Archbishop of Vancouver and Metropolitan of British Columbia, died in Vancouver, B. C., Oct. 5, 1931. He was born in Charlotte Co., N. B., Feb. 20, 1862, and attended the University of St. Joseph, Memramcook, N. B., and Laval University, Quebec. On ordination in 1886 he served successively as curate and rector of St. John's Church, Fredericton, N. B. In 1899 he became Titular Bishop of Utina and in 1901 Bishop of St. John. In 1912 he was elevated to the archbishopric of Vancouver, where he distinguished himself through the extension of diocesan activities and the fostering of educational and charitable institutions.

Chacón, Lázaro. Guatemalan statesman, died in New Orleans, La., Apr. 10, 1931. He was born in Teculután June 27, 1873, and entered the Guatemalan army in 1892, being advanced through the grades to general in 1926. In 1921 he was chosen first designate to the presidency, and on the death of President José María Orellana in September, 1926, assumed the duties of that office. He was inaugurated as President on Dec. 18, 1926, following the national election, and served four years of a six-year term, resigning in December, 1930, on account of ill health.

Chadwick, George Whitefield, died Apr. 4, 1931.

Channing, Edward, died Jan. 7, 1931.

Charles, The Ven. Robert Henry, died Jan. 30, 1931.

Church, Irving Porter. American engineer, died in Ithaca, N. Y., May 8, 1931. He was born in Ansonia, Conn., July 22, 1851, and was graduated from Cornell University in 1873. From 1876 to 1892 he was assistant and associate professor of civil engineering at Cornell, and from 1892 to 1916 professor of applied mechanics and hydraulics, retiring as professor emeritus in the latter year. In 1929 the Lamme gold medal was awarded him by the Society for the Promotion of Engineering Education. He was the author of *The Mechanics of Engineering* (1890); *Notes and Examples in Mechanics* (1892); *Diagrams of Mean Velocity of Water in Open Channels* (1902); *Hydraulic Motors* (1905); and *Mechanics of Internal Work* (1910).

Clarke, Edmund Arthur Stanley. American capitalist, died in Rumson, N. J., May 15, 1931. He was born in Ottawa, Ont., Canada, Jan. 21, 1862, and was graduated from Harvard in 1884. After being associated with the Union Steel Company, the Illinois Steel Company, the Deering Harvester Company, and the International Harvester Company, he became president of the Lackawanna Steel Company in 1904 and of the Consolidated Steel Corporation in 1918. On the dissolution of the latter corporation in 1922, he was elected secretary of the American Iron and Steel Institute.

Clarke, Sir Edward George, died Apr. 26, 1931.

Clarke, Frank Wigglesworth, died May 23, 1931.

Clarke, Selah Merrill. American editor, died July 26, 1931, in Canandaigua, N. Y., where he was born in 1852. On graduation from Amherst College about 1873, he served as reporter on the *New York World*. In 1881 he became night city editor of the *New York Sun*, achieving distinction over a period of 30 years in maintaining the high standard of accuracy and finished style which had been established for that paper by Charles A. Dana. He retired in 1912.

Clayton, Herbert. British actor, playwright, and producer, died Feb. 16, 1931, in London where he was born Dec. 1, 1876. He attended St. Augustine's College, Ramsgate, where he studied to be an architect and surveyor, but abandoned that profession to go on the stage, appearing in the chorus of *The Circus Girl* in 1896. Five years later he played the title-role in *The Toreador*, and after touring the English provinces returned to London to appear in *Miss Hook of Holland* and *The Hon'ble Phil*. He subsequently played in New York in *The Rose of Persia* and toured Australia in *The King of Cadonia* and *The Dollar Princess*. He was the author or co-author of *The Hon'ble Phil*, *Susanna*, *Our Lits*, *You'd Be Surprised*, *Tilly*, *22 Carat*, and *Virginia*. From 1924 until his death he was managing director of Clayton and Waller, Ltd., London producers of musical comedy.

Clift, Albert Earl. American railway official, died in Savannah, Ga., May 30, 1931. He was born in Urbana, Ill., Oct. 15, 1896. Entering the service of the Illinois Central Railroad as a brakeman and conductor in 1888, he was promoted through the ranks to division superintendent in 1905. From 1910 to 1912 he was general superintendent of the company's southern lines, at New Orleans, and from 1912 to 1917 general superintendent of the northern and western lines, at Chicago. In 1917 he assumed the post of general manager, and in 1923 was promoted to vice president in charge of operation. In 1929 he became president of the Central of Georgia Railway, a subsidiary company of the Illinois Central. He also was president of the Ocean Steamship Company of Savannah, the Macon Terminal Company, and the Albany Passenger Terminal Company.

Clinedinst, Benjamin West. American painter, died in Pawling, N. Y., Sept. 12, 1931. He was born in Woodstock, Va., Oct. 14, 1859, and attended the Virginia Military Institute, later studying at the École des Beaux Arts and under Cabanel and Bonnat in Paris. He specialized in genre and portrait painting, his later portraits included Theodore Roosevelt, Rear Admiral Robert E. Peary, Gen. Curtis Lee, Edward Echols, and Gen. E. W. Nichols. He also was noted as an illustrator of the works of Hawthorne, Stevenson, Parkman, Bret Harte, Mark Twain, and others. Among the awards which he received were the Evans prize of the American Water Color Society (1900) and silver medals from the Pan-American Exposition at Buffalo (1901) and the Charleston Exposition (1902). He was elected an associate member of the National Academy of Design in 1894 and was chosen as a member in 1898.

Clyde, William Gray. American industrialist, died in Pittsburgh, Pa., Mar. 23, 1931. He was born in Chester, Pa., July 29, 1868, and was graduated from the Pennsylvania Military Academy in 1888. Until his affiliation with the Carnegie Steel Company in 1902, he was successively superintendent of the plate mills of the Wellman Steel & Iron Co., Thurlow, Pa.; superintendent of the Illinois Steel Company, South Chicago, Ill.; and sales manager for the American Steel Hoop Company, Philadelphia, Pa. He became vice president and general manager of sales of the Carnegie Steel Company in 1918 and president in 1925, holding the latter office until his resignation in 1930.

Cobb, Henry Ives, died Mar. 27, 1931.

Cole, Timothy, died May 17, 1931.

Comiskey, Charles A. American baseball administrator, died in Eagle River, Wis., Oct. 26, 1931. He was born in Chicago, Ill., Aug. 15, 1858, and at the age of 17 joined the Milwaukee Club as third baseman. While manager of the Cincinnati Club during 1892-95, he became associated with Byron Bancroft Johnson (q.v.) in the formation of the American League of Professional Baseball Clubs. After 1900 he was president and owner of the Chicago "White Sox" of the American League, which won the world's championship in 1906 and 1917.

Comstock, John Henry, died Mar. 20, 1931.

Condon, Randall Judson. American educator, died in Greenville, Tenn., Dec. 25, 1931. He was born in Friendship, Mo., July 10, 1862, and was graduated from Colby College in 1886. He was superintendent of schools in Everett, Mass. (1891-1902) and in Helena, Mont. (1902-10), and during the latter period was also secretary of the Montana State Text-Book Commission (1906-10). He held the same position in Providence, R. I. (1910-12) and in Cincinnati, Ohio (1913-29). In addition to serving as a member of the Ohio State Board of Education (1918-21), he was president of the American School Citizenship League (after 1913) and of the department of superintendence of the National Education Association (1926). At the time of his death he was engaged in making illiteracy surveys for the U. S. Department of the Interior. He was editor of the *Atlantic Reader*.

Consolo, Ernesto. Italian pianist, died in Florence, Mar. 21, 1931. He was born in London, England, Sept. 15, 1864, and studied at the Reale Liceo Musicale di Santa Cecilia in Rome under Sgambati and in Leipzig under Reinach. He appeared in concert in the principal cities of Europe and the United States, and for a time was a member of the faculties of the Chicago Musical College and the Institute of Musical Art in New York

City. At the time of his death he was teaching at the Cherubini Royal Institute of Music in Florence.

Cook, Arthur James. British labor leader, died in London Nov. 2, 1931. He was born in Wookey, Somerset, in 1885, and after obtaining an elementary education went to work in the coal mines of South Wales. In 1911 he won a scholarship at the Central Labor College, where he developed into an industrial agitator. He was imprisoned in 1918, and again in 1921, for taking part in strikes and lock-outs and for his sympathies with the Soviet government. In 1924 he was elected secretary of the Miners' Federation of Great Britain and also served during that year as international secretary of the coal conference at Geneva. He fomented the coal miners' strike and the general strike of 1926.

Cooke, Richard Joseph, died Dec. 25, 1931.

Cooke, Walter Platt, died Aug. 4, 1931.

Cornelis, Evert. Dutch conductor and pianist, died in Utrecht Nov. 24, 1931. Born in Amsterdam Dec. 5, 1884, he attended the Amsterdam Conservatory of Music, and in 1910 was engaged as second conductor of the Concertgebouw Orchestra in Amsterdam. He also formed in 1909 the famous Concertgebouw Sextet of wind instruments. In 1922 he became conductor of the Utrechtsch Stedelijk Orchestra. He was also a pianist of international reputation.

Corradini, Enrico. Italian journalist and senator, died en route between Venice and Rome Dec. 10, 1931. Born near Florence in 1868, he became one of Italy's leading journalists, being successively editor of *Idea Nazionale*, *La Tribuna*, and *Il Giornale d'Italia*. He was also prominent as a dramatist, his best-known play being *Carlotta Corday*. He was a leader of the Nationalists but joined the National Fascist party, and in 1923 was appointed to the Senate.

Cotton, Joseph Potter, died Mar. 10, 1931.

Cowley, Sir Arthur Ernest, died Oct. 12, 1931.

Crane, Richard Teller, Jr. American industrialist, died in New York City, Nov. 7, 1931. He was born in Chicago Nov. 7, 1873. On graduation from the Sheffield Scientific School, Yale University, in 1895 he entered the foundries of the Crane Company in Chicago, established by his father in 1855. In 1898 he became second vice president and in 1914, following the death of his father, president. At the time of his death he was reputed to be next to Julius Rosenwald the wealthiest man in Chicago.

Creel, Enrique C. Mexican capitalist and statesman, died in Mexico City Aug. 17, 1931. Born Aug. 31, 1854, he became one of the wealthiest men in Mexico, but lost a large part of his fortune in the revolution of 1913 when his properties in Chihuahua were confiscated by order of Francisco Villa. He was a founder, director, and general manager for 20 years of the *Banco Minero*, or Miners' Bank, in Chihuahua City and a promoter of the railway which was afterwards incorporated as the Kansas City-Mexico & Oriente Railway. He also served as governor of Chihuahua, as Minister of Foreign Affairs during the administration of President Diaz, and as Ambassador to the United States in 1909-12.

Crockett, Walter Hill. American journalist, died in Burlington, Vt., Dec. 8, 1931. Born in Colchester, Vt., June 26, 1870, he was a member of the editorial staff of the *Burlington Free Press* (1895-1901), news editor of the *St. Albans (Vt.) Messenger* (1901-09), managing editor of the *Montpelier Journal* (1909-13), and director of the Vermont State Publicity Bureau after 1913. He was elected a State senator in 1927 and 1929, and had served since 1929 as chairman of the State Constitutional Revision Commission. He was author of *A History of Lake Champlain* (1909) and editor of *Vermonters* (1931).

Crowell, John Franklin, died Aug. 6, 1931.

Curtis, Edward P. American labor leader, died in Kansas City, Mo., May 7, 1931, aged 64. Prior to his election as vice president of the Order of Railway Conductors in 1907, he was a fireman, brakeman, and conductor on the Missouri, Kansas & Texas Railway. In 1923 he became secretary and treasurer of the order, and in 1928 was elected its president.

Curtis, John Jay. American publisher, died July 22, 1931, in Indianapolis, Ind., where he was born Jan. 21, 1857. On graduation from the North Western Christian (later Butler) University in 1879, he became associated with Bowen, Stewart & Co., Indianapolis book publishers. He was successively manager of the retail department, secretary, vice president, and president (after 1926) of this firm which was reorganized as Bobbs-Merrill & Co. He established the New York office in 1898, remaining there until 1920 when he went to Hollywood to establish a branch in connection with the firm's motion-picture interests. He was known as the "dean of modern book advertising," one of his principal innovations being the colored pictorial book jacket.

Da Costa, John. British painter, died in London, May 27, 1931. He was born in Teignmouth, Dec. 28, 1867, and studied at Southampton and in Paris. His early work was influenced by Bastien Le Page and the "plein-air" school of France, and during this period he painted "Pastoral" (1892), "Youth and Age" (1894), "Child-

hood" (1895), and "The Promise of the Spring" (1897). His paintings were shown at almost every important exhibition in Great Britain, including the Royal Academy, Royal Institute of Oil Painters, and Pastel Society, and were found in many of the provincial galleries. He also was represented at exhibitions in Berlin, Munich, Vienna, Rome, Ghent, and in art centres of the United States, including New York, Philadelphia, Pittsburgh, Boston, Detroit, and Baltimore. In 1906 he won honorable mention at the Paris Salon and a medal the following year. During his later years he became noted for his portraits of persons prominent in society.

Dalton, John Neale, British clergyman, died at Windsor, July 28, 1931. He was born in Kent, Sept. 24, 1839, and attended Clare College, Cambridge. Ordained in the Church of England, he was curate of St. Edward's Chapel, Cambridge, during 1866-69 and of Whippingham during 1869-71. He was then appointed tutor to Queen Victoria's grandsons, Prince Albert Victor and Prince George, which post he held until 1879. He was also royal chaplain while the princes were serving as midshipmen on board the *Bacchante* during 1879-82. In 1884 he was appointed canon and steward of St. George's Chapel, Windsor, and served as chaplain-in-ordinary and deputy clerk of the closet to Queen Victoria and King Edward VII and as domestic chaplain to King George V. He was created a Companion of St. Michael and St. George in 1882, a Commander of the Royal Victorian Order in 1901, and a Knight Commander of the Royal Victorian Order in 1911. His writings include *Sermons to Naval Cadets* (1879); *The Cruise of H. M. S. Bacchante* (1886); *Ordinale Exon* (3 vols., 1908, 1926); and *The Book of Common Prayer, Proposals and Suggestions* (1920).

Dana, Richard Henry, died Dec. 16, 1931.

Davenport, Herbert Joseph, American economist, died in New York City, June 17, 1931. He was born in Wilmington, Vt., Aug. 10, 1861, and was graduated from the University of South Dakota in 1894 and with the Ph.D. degree from the University of Chicago in 1898. From 1902 to 1907 he was assistant professor of political economy at the University of Chicago, and during 1907-08, associate professor. He then went to the University of Missouri, where he was head of the department of political economy until 1914 and dean of the school of commerce until 1916. He was professor of economics at Cornell University from 1916 to 1930, and at the time of his death was a member of the Los Angeles faculty of the University of California. His works include *Outlines of Economic Theory* (1896); *Elementary Economic Theory* (1898); *Value and Distribution* (1908); and *Economics of Enterprise* (1913).

Davis, George Samler, American educator, died Jan. 7, 1931, in New York City where he was born Oct. 22, 1858. On graduation from the College of the City of New York in 1880, he became a teacher in the New York public schools, being appointed assistant superintendent of schools in 1887 and associate city superintendent in 1896. In 1908 he was elected president of Hunter College (then known as the Normal College of the City of New York). During his administration he succeeded in raising the standards of the institution and in developing it into the largest of the teacher-training colleges in the United States. He retired as president emeritus in 1928.

Davis, Harry Phillips, died Sept. 10, 1931.

Davis, Ozora Stenrus, American theologian, died Mar. 15, 1931. He was born in Wheelock, Vt., July 30, 1866, and was graduated from Dartmouth College in 1889 and from the Hartford (Conn.) Theological Seminary in 1894. Ordained to the Congregational ministry he was successively, from 1896 to 1908, pastor in Springfield, Vt., Newtonville, Mass., and New Britain, Conn. In 1909 he was elected president of the Chicago Theological Seminary. He also was moderator of the National Council of the Congregational Churches in 1927-29. Among his works are: *John Robinson—the Pilgrim Pastor* (1903); *The Pilgrim Faith* (1913); *Meeting the Master* (1917); *International Aspects of Christianity* (1919); and *Preaching the Social Gospel* (1922).

Davis, Vernon Mansfield, American jurist, died Apr. 17, 1931, in New York City where he was born Jan. 29, 1855. He was graduated from the College of the City of New York in 1876 and from the Columbia law school in 1879. Admitted to the New York bar, he was associated for many years with Davis, Cohen and McWilliam. He also acted as assistant district attorney of New York County from 1885 to 1896 and as district attorney during 1896-97. In 1902 he was elected justice of the Supreme Court of New York, and was re-elected in 1916. He also served as commissioner of education of the City of New York from 1899 to 1902 and as president of the Society for the Prevention of Cruelty to Children from 1901 to 1904.

Deaver, John Blair, died Sept. 25, 1931.

De Forest, Robert Weeks, died May 6, 1931.

De Kalb, Courtenay, died Sept. 2, 1931.

Denning, William Frederick, died June 9, 1931.

Dennis, Alfred Pearce, died Aug. 28, 1931.

Dercum, Francis Xavier, died Apr. 23, 1931.

De Villiers, Sir John Abraham Jacob, died Apr. 2, 1931.

Dewey, Melvil, died Dec. 26, 1931.

Dibelius, Wilhelm, died Jan. 28, 1931.

Dickey, Walter S. American industrialist and publisher, died in Kansas City, Mo., Jan. 22, 1931. Born in Toronto, Ont., Canada, in 1863, he came to Kansas City in 1886, becoming engaged in the manufacture of sewer pipes and later founding the W. S. Dickey Clay Manufacturing Company. He also was publisher, from 1921 to 1929, of the *Kansas City Journal-Post*. For many years he was a member of the Missouri Waterways Commission; served as vice chairman of the Inland Waterways Commission of the U. S. Railway Administration during the World War; and at the time of his death was president and treasurer of the Kansas City Missouri River Navigation Company. He also was active in politics, being chairman of the Republican State Committee of Missouri in 1908 and Republican nominee for the U. S. Senate in 1916.

Dillaye, Blanche, American painter, died in Philadelphia, Pa., Dec. 20, 1931. Born in Syracuse, N. Y., in 1851, she attended the Pennsylvania Academy of Fine Arts and studied etching under Stephan Parrish and painting under Garrido in Paris. She exhibited in the Paris Salons, in British galleries, and in the principal exhibitions of the United States, and was represented in the art collections of the Syracuse Museum of Fine Arts and Syracuse University. In addition to winning silver medals for etchings at the Atlanta Exposition (1895) and the Universal Exposition in Lorient, France (1903), she won the gold medal for water color at the National Conservation Exposition in Knoxville, Tenn. (1913). Among her works are "Still Evening and the Little Street" and "Arrangement in Green."

D'Indy, Vincent. See Indy, Paul Marie Théodore Vincent d'.

Dinkey, Alva Clymer, died Aug. 11, 1931.

Dixon, Walter Ernest, British pharmacologist, died in Cambridge, Aug. 16, 1931. Born at Fern Bank, Darlington, he attended the University of London from which he received the B.S. and M.D. degrees. For some years he was professor of materia medica and pharmacology at King's College, London, and in 1909 was called to Cambridge as university lecturer in pharmacology. In 1919 his post was made that of reader in pharmacology, and he also was appointed assessor to the Regius professor of physics at Cambridge. He was a past president of the physiology section of the British Association for the Advancement of Science. In addition to being a member of the government committees on food preservatives, drug addiction, and ethyl petrol, he served on the League of Nations expert committee on drugs of addiction.

Dodge, Philip Tell, American lawyer and inventor, died in Rye, N. Y., Aug. 9, 1931. He was born in Fond-du-Lac, Wis., July 11, 1851, and was graduated from Columbian (later George Washington) University in 1873. During his 25-year practice as a patent attorney in Washington and New York City, he became interested in many inventions, particularly those related to printing. He perfected the linotype machine through the addition of certain typewriter features, and for 37 years was president of the Mergenthaler Linotype Company, manufacturers of typesetting and composing machines used the world over in 40 languages. His other inventions pertained to firearms and photography. In 1913 he was made president of the International Paper Company and was largely responsible for the expansion of its Canadian mills. He also was a past president of the Royal Typewriter Company and the Columbia Phonograph Company and chairman of Linotype and Machinery, Ltd., London.

Dodson, John E., died Dec. 9, 1931.

Doherty, Charles Joseph, died July 28, 1931.

Dorman, Sir Arthur John, British industrialist, died in Nunthorpe, Yorkshire, Feb. 12, 1931. Born in Ashford, Kent, Aug. 8, 1848, he was apprenticed in 1866 to Richardson, Johnson & Co., ironworkers. In 1876, with Albert de Lande Long, he founded the firm of Dorman, Long & Co., which acquired the West Marsh and Britannic Ironworks. A bridge-building and constructional department were subsequently added. In 1899 this firm joined with Bell Bros., Ltd., in producing open-hearth steel from Cleveland iron, and the success of the enterprise led to the erection of a plant at Redcar and the absorption of numerous iron and steel subsidiaries. He was created a Knight Commander of the Order of the British Empire in 1918 and a baronet in 1923.

D'Orsay, Lawrence, died Sept. 13, 1931.

Dorsey, George Amos, died Mar. 29, 1931.

Douglas, Davison McDowell, American clergyman and educator, died in Columbia, S. C., Aug. 1, 1931. He was born in Blackstock, S. C., June 20, 1869, and was graduated from Davidson College in 1895 and from the Columbia (S. C.) Theological Seminary in 1899. Ordained in the Presbyterian ministry in 1900, he was

pastor in Brevard and Davidsons River, N. C., until 1904 and of the Maryland Avenue Church, Baltimore, until 1911. He was then elected president of the Presbyterian College of South Carolina, and had served since 1927 as president of the University of South Carolina. In 1925 he was moderator of the Synod of South Carolina.

Douglas, Earl. American geologist and paleontologist, died in Salt Lake City, Utah, Jan. 18, 1931. He was born in Medford, Minn., Oct. 28, 1862, and was graduated from the Iowa State College of Agriculture and Mechanic Arts in 1893. In 1902, after teaching geology, physical geography and physics at the University of Montana for several years, he joined the staff of the paleontological department of the Carnegie Museum in Pittsburgh, Pa. In 1909 he discovered an immense deposit of Comanchean dinosaur skeletons near Jensen and Vernal, Utah, a region which was later set aside as the Dinosaur National Monument and in which he continued to work until his resignation from the Carnegie Museum in 1924. He was also interested in the investigation of oil problems, including the origin of oil-shales and asphalts, and made a special study of vein hydrocarbons.

Dowman, Charles Edward. American surgeon, died in Atlanta, Ga., Nov. 14, 1931. He was born in Quincy, Fla., Apr. 1, 1882, and was graduated from Emory University in 1901 and with the M.D. degree from the Johns Hopkins University in 1905. After acting as clinical assistant in Berlin, Breslau, and London, he began practice in Birmingham, Ala., in 1908, becoming in 1911 professor of pathology at the Birmingham Medical College and in 1913 associate in surgery at the University of Alabama. Removing to Atlanta, he was from 1915 to 1924 successively instructor, associate, and assistant professor of surgery at Emory University. In the World War he served at the mobile hospitals in the St. Mihiel and Argonne offensives. As neurological surgeon, he became noted especially for his delicate brain operations.

Draper, Daniel, died Dec. 21, 1931.

Draper, John William. American surgeon, died Jan. 26, 1931, in New York City where he was born Aug. 21, 1871. He was graduated from Harvard in 1895 and with the M.D. degree from New York University in 1898. In addition to his practice in New York City, he was instructor in histology at the New York University medical school (1900-01); in operative surgery at the New York Polyclinic School and Hospital (1900-02); and in the surgical research laboratory of the College of Physicians and Surgeons, Columbia University. In 1909 he was called to the Mayo Clinic in Rochester, Minn., and on his return in 1913 became associate in surgery and director of the laboratory of surgical research at the New York University medical school. He was also attending surgeon at the New Jersey State Hospital for the Insane in Trenton, N. J. At the time of his death he was director of the Andrew Todd McClintock Foundation in New York City.

Dreyer, George Peter. American physician, died in La Grange, Ill., Feb. 27, 1931. He was born in Baltimore, Md., Sept. 22, 1866, and was graduated from Johns Hopkins University in 1887, receiving the Ph.D. degree in 1890. He also attended the College of Physicians and Surgeons, Baltimore, during 1890-91. After teaching in the medical school of Johns Hopkins University from 1893 to 1900, he became professor of physiology and head of the department of physiology and physiological chemistry in the college of medicine of the University of Illinois. During 1913-15 he was also junior dean of the college. His best-known research was the discovery of the secretory nerves of the suprarenal glands and his work on blood proteins and differential respiration.

Druce, Hubert. British actor and producer, died in New York City, Apr. 6, 1931. He was born in Twickenham, May 20, 1870, and attended the University College School, London. He made his debut in 1887 in *The Blue Belles of Scotland*, and in 1889 accompanied Richard Mansfield to the United States, appearing in *Richard III*. In 1893 he joined the first touring company of *The Sign of the Cross* and played the part of Glabrio about 1000 times in England, South Africa, and the United States. He returned to the United States in 1912 to support John Drew in *The Perplexed Husband* and later appeared in *Redemption* (1918), *Deburau* (1920), *The Pigeon* (1922), *Seventh Heaven* (1922), *The School for Scandal* (1925), *The Play's the Thing* (1926), *The Command Performance* (1928), *Topaze* (1930), and *The Admirable Critchton* (1931). He was also prominent as a London manager and producer, his productions since 1901 including *The Night of the Party*, *The Cure*, *The Duffer*, *Billy Rottensford's Descent*, and *The Darling of the Gods*.

Dunlap, Brig. Gen. Robert Henry, U.S.M.C. American marine officer, died at Cinq-Mars-la-Pile, France, May 19, 1931. He was born in Washington, D. C., Dec. 22, 1879. Entering the U. S. Marine Corps in 1898, he served in the Spanish-American War, the Philippine Insurrection, and the Boxer Campaign. He was also in

Panama (1903-04), Cuba (1906), Vera Cruz, Mexico (1914), Haiti (1915), and Santo Domingo (1916). During the latter part of the World War he commanded the 17th Regiment of Field Artillery in France, participating in the Meuse-Argonne offensive and the march to the Rhine. From 1922 to 1924 he commanded the Marine detachment at the American Legation in Peking, China, after which he was assigned to the Marine Corps school in Quantico, Va. He was in Nicaragua during 1928-29 in command of the 11th Regiment and later of the Second Brigade of Marines. In 1930 he commanded the Marine Corps base at San Diego, Calif., and at the time of his death was on detached duty in France, attending the École Supérieure de la Guerre.

Dutton, Brother Joseph, died Mar. 26, 1931.

Dyke, Sir William Hart. British statesman, died in Lullington Castle, Dartford, Kent, July 8, 1931, where he was born Aug. 7, 1837. After attending Harrow and Christ Church, Oxford, he entered Parliament as member for West Kent in 1865. He was reelected in 1868 and continued to represent West Kent until 1885, when he was returned to the House of Commons for the Dartford Division of Kent, representing the latter constituency until 1906. He was a prominent figure during Gladstone's and Disraeli's ministries, serving as Conservative Whip from 1868 to 1874 and as Patronage Secretary to the Treasury from 1874 to 1880. In 1885-86 he was Chief Secretary for Ireland, and from 1887 to 1892 vice president of the Committee of Council on Education. He succeeded to the baronetcy in 1875.

Eakle, Arthur Starr. American mineralogist, died in Honolulu, T. H., July 5, 1931. He was born in Washington, D. C., July 27, 1862, and was graduated from Cornell University in 1892 and with the Ph.D. degree from the University of Munich in 1896. After acting as assistant and instructor in mineralogy at Cornell (1892-94) and Harvard (1897-1900), he became instructor in that subject at the University of California, assistant professor in 1903, associate professor in 1912, and professor in 1919. On his retirement in 1930 he went to the University of Honolulu, where he was also engaged in making a mineral survey of the Hawaiian Islands. He was president of the Mineralogical Society of America in 1925 and was the author of several bulletins on the minerals of California published by the Department of Geology of the University of California and the California Mining Bureau.

Edeson, Robert, died Mar. 24, 1931.

Edison, Thomas A. (Iva), died Oct. 18, 1931.

Edwards, Charles Gordon. American lawyer and congressman, died in Atlanta, Ga., July 13, 1931. He was born in Tattall Co., Ga., July 2, 1878, and attended the Florida State College (later the University of Florida) and the University of Georgia, being graduated from the latter in 1898. He practiced in Savannah, Ga., where he also served for two and a half years as president of the Board of Trade and as a member of the Harbor Commission. In 1906 he was elected to the 60th Congress from the 1st Georgia District and was reelected for each succeeding Congress until the 64th, voluntarily retiring in 1917. He was returned to Congress in 1924, serving in the 69th to 71st Congresses and being reelected to the 72d. In 1927, in view of charges of favoritism in the foreign service, he introduced a resolution requesting a report from the State Department on the whole system of diplomatic appointments.

Edwards, Maj.-Gen. Clarence Ransom, died Feb. 14, 1931.

Edwards, Edward Irving, died Jan. 26, 1931.

Elhot, Sir Charles (Norton Edgecombe), died Mar. 16, 1931.

Elliott, Maj.-Gen. George Frank, U.S.M.C., Ret., died Nov. 4, 1931.

Eltinge, Brig. Gen. LeRoy, U.S.A., died May 14, 1931.

Emerson, Frank Collins. American civil engineer and Governor of Wyoming, died in Cheyenne Feb. 18, 1931. He was born in Saginaw, Mich., May 26, 1862, and was graduated from the University of Michigan in 1904. From 1907 to 1915 he was chief engineer with the Wyoming Land & Irrigation Co. and the Wyoming Irrigation Company; from 1915 to 1919, superintendent of the Big Horn Canal Association and the Lower Hanover Canal Association; and from 1919 to 1927, State Engineer of Wyoming. In addition, he served as the commissioner for Wyoming on the Colorado River Commission, which drafted the Colorado River Compact, and as Wyoming representative on the board of review upon the North Platte cooperative investigations. He was elected Governor of Wyoming in 1926 and was reelected for the term 1930-33.

Emerson, Harrington, died May 23, 1931.

Errázuriz, Orescente. Chilean historian and prelate of the Roman Catholic Church, died June 5, 1931, in Santiago where he was born Nov. 28, 1839. He attended the Seminario Conciliar, and on his ordination in 1863 became editor of the *Revista Católica*. After editing the *Estadante Católico* during 1874-84 he entered a Dominican convent under the name of Fray

Raimundo Errázuriz, where he remained until 1911, serving as librarian and also as prior on several occasions. In 1916 he was appointed by Pope Benedict XV Prothonotary in Chile, and in 1918 Archbishop of Santiago. He also held the chair of Canon Law at the University of Chile. He was elected a member of the Chilean Academy in 1879, and in 1915 was chosen director of that body. Among his works are *Los Orígenes de la Iglesia Chilena* (1873); *Seis Años de la Historia de Chile* (2 vols., 1881-82); *Compendio de Derecho Canónico* (1883); *Historia de Chile* (4 vols., 1902, 1911); and *Don García Hurtado de Mendoza* (1916).

Ewing, Robert, died Apr. 27, 1931.

Fallières, Clément Armand, died June 21, 1931.

Faulkner, John Alfred, died Sept. 6, 1931.

Fiero, J (James) Newton. American lawyer, died in Albany, N. Y., Apr. 13, 1931. He was born in Saugerties, N. Y., May 28, 1847, and was graduated from Union College in 1867. On being admitted to the New York bar in 1869 he practiced in Saugerties, Kingston, and Albany. In 1895 he became dean of the Albany Law School, in which position he continued until 1924. He was a member of the Constitutional Commission of New York State in 1890, and since 1909 had been State reporter. He was also president of the New York State Bar Association during 1892-94 and vice president of the American Bar Association during 1895-1902. He was the author of *Special Actions* (1897, 1908, and 1912); *Special Proceedings* (1899, 1911); and *Torts* (1903).

Figuerola, Emiliano. Chilean statesman and financier, died May 16, 1931, in Santiago where he was born about 1860. He attended the National Institute and the University of Chile and was admitted to the bar in 1889. In 1900 he was elected Deputy for the Department of Melipilla and during 1905-06 was first vice president of the Chamber. He was serving as Minister of Justice and Public Instruction in the cabinet of Pedro Montt in 1910 when the sudden deaths of the President and of the Vice President, Elías Fernández Albano, made him acting President. In 1911 he was appointed Chilean Minister to Argentina. He was elected President of Chile in 1925, assuming office December 23, but resigned 18 months later. During his administration there was considerable political upheaval on account of the Tacna-Arica dispute, but following its settlement in 1929 he was appointed Ambassador to Peru. At the time of his death he was president of the Bank of Chile.

Filler, Mervin Grant. American educator, died in Philadelphia, Pa., Mar. 28, 1931. He was born in Boiling Springs, Pa., Oct. 9, 1873, and was graduated from Dickinson College in 1893. After post-graduate study at the universities of Chicago and Pennsylvania he became professor of Latin at Dickinson College in 1899, dean in 1914, and president in 1928. He was also active in Chautauqua work, and from 1908 to 1912 was chancellor of the Pennsylvania Chautauqua. During the World War he was an associate secretary of the War Personnel Board of the International Y. M. C. A. in Washington.

Fish, Pierre Augustine. American veterinarian, died in Ithaca, N. Y., Feb. 19, 1931. He was born in Chatham, N. Y., Feb. 17, 1865, and was graduated from Cornell University in 1890, receiving the D.Sc. degree in 1894. In 1896 he became assistant professor, and in 1902 professor of comparative physiology and pharmacology in the bureau of animal husbandry of the college of agriculture at Cornell. He was later transferred to the veterinary college, where he was professor of veterinary physiology until his appointment as dean in 1929 on the retirement of Dr. V. A. Moore (q.v.). He was editor of the *Journal of the American Veterinary Medical Association* during 1916-18 and published *The Book of Veterinary Doses, Therapeutic Terms and Prescription Writing* (1904); *Examination of the Urine of the Horse and Man* (1906); and *Exercises in Physiology* (1906).

Fiak, Eugene Lyman, died July 5, 1931.

Fitzpatrick, Sir (James) Percy, died Jan. 25, 1931.

Fleming, David Hay. Scottish historian, died in Edinburgh Nov. 7, 1931. He was born in St. Andrews, May 9, 1849, and attended Madras College, St. Andrews. After being engaged in business for several years, he retired in 1883 to devote himself to the study of Scottish history. Among his works are *Martyrs and Confessors of St. Andrews* (1887); *Scotland after the Union of the Crowns* (1890); *Mary Queen of Scots* (1897); *Scottish History and Life* (1902); *Handbook on the Scottish Reformation* (1903); *The Story of the Scottish Covenants in Outline* (1904); and *The Reformation in Scotland: Causes, Characteristics, Consequences* (the Stone Lectures for 1907-08, 1910).

Fontaine, Victor Arthur Leon. French statesman, died Sept. 2, 1931, in Paris, where he was born Nov. 3, 1860. He attended the École Polytechnique and the École Supérieure des Mines, becoming in 1893 assistant director and in 1899 director of the Labor Office. During the World War he was president of the commission that examined, before their signature by the cabinet minis-

ters, contracts relating to manufactures of artillery, powder, and aviation supplies. As inspector general of mines, he also was president of the council of administration of the mines of the Saar. In 1919 he was French delegate to the International Labor Conference in Washington, and until shortly before his death was president of the governing group of the International Labor Office in Geneva.

Foot, John A., died Apr. 11, 1931.

Forsin, Jean Louis, died July 11, 1931.

Forgan, David Robertson. American banker, died in Evanston, Ill., Dec. 26, 1931. Born in St. Andrews, Scotland, Apr. 16, 1862, he emigrated to Canada at the age of 18, securing employment in the Bank of Nova Scotia in Halifax. He came to the United States in 1888, serving successively as cashier of the American Exchange Bank in Duluth, Minn., and of the Northwestern National Bank in Minneapolis. In 1896 he was made vice president and in 1898 president of the Union National Bank, Chicago. In 1907 he organized the National City Bank of Chicago and was its president until 1925, when it was merged with the National Bank of the Republic. He was vice chairman of that institution and also of the Central Republic Bank and Trust Company, which resulted from the merger in 1931 of the Central Trust Company and the National Bank of the Republic.

Foster, Sir George Eulas, died Dec. 30, 1931.

Foster, Sir Gregory. British educator, died in London Sept. 24, 1931, aged 65. Educated at University College, London, and the University of Strassburg, he became an assistant master at the University College School and served successively as professor of English language and literature at Bedford College, London, and secretary and assistant professor of English language and literature at University College, London. After acting as a member of the Moseley Education Commission to the United States in 1903, he was appointed provost of University College the following year, and during 1928-30 was also vice chancellor of London University. In both these positions he did constructive work at a critical period in the development of higher education in Great Britain. He was knighted in 1917 and created a baronet in 1930.

Frankel, Lee Kauer, died July 25, 1931.

Frederick Augustus, Grand Duke. Former ruler of the German grand duchy of Oldenburg, died in Berlin, Feb. 24, 1931. He was born in Oldenburg, Nov. 16, 1852, and fought in the Franco-Prussian War, being present at the proclamation of the German Empire at Versailles. He was later advanced to the rank of general in the Prussian cavalry. He also was interested in the development of the German mercantile marine, and in recognition of his invention of a steamer screw, known as the "Niki" propeller, was granted honorary degrees by the polytechnic schools of Danzig and Hanover. He succeeded his father, the Grand Duke Peter, in 1900 but abdicated on Nov. 11, 1918, during the revolution.

French, Daniel Chester, died Oct. 7, 1931.

Friedrich Leopold, Prince, of Prussia. German prince of the House of Hohenzollern, died in Flatow, Sept. 14, 1931. He was born in Berlin Nov. 14, 1865, son of Prince Friedrich Karl and grandson of Prince Friedrich Karl Alexander, a brother of Frederick William III. He held the rank of colonel-general in the Prussian Army, but on account of his alleged abuse of his wife, Princess Louise Sophie of Schleswig-Holstein, to whom he was married in 1889, he was ordered dismissed from the army and banished from the German Empire by the Kaiser. After the war he lived most of the time in Switzerland, where he continued his spendthrift career in spite of Germany's bankrupt condition.

Friedsam, Michael. American merchant, died Apr. 7, 1931, in New York City where he was born about 1860. He attended the Weston (Conn.) Military Academy, and at the age of 17 entered the employ of B. Altman & Co., dry goods merchants in New York City. In 1900 he was made a partner and in 1909, on the incorporation of the firm, vice president. He succeeded to the presidency on the death of Benjamin Altman in 1913. He was chairman of the commission appointed in 1927 to study and recommend improvements in financing New York State's public schools; president of the Fifth Avenue Association in New York City; and director of numerous banking and mercantile organizations. He was made a Commander of the French Legion of Honor in recognition of his interest in art and services to the French Government.

Fromkes, Maurice, died Sept. 17, 1931.

Fulton, John Samuel. American physician and public health administrator, died in Baltimore, Md., Aug. 12, 1931. He was born in Fremont, Ohio, Jan. 5, 1859, and was graduated from St. John's College, Annapolis, Md., in 1876 and with the M.D. degree from the University of Maryland in 1881. After being engaged in private practice from 1881 to 1888, he became professor of State medicine at the University of Maryland and lecturer at the School of Hygiene and Public Health of Johns Hopkins University. He was also secretary of the State

Board of Health of Maryland from 1896 to 1906, president of the Conference of State and Provincial Boards of Health of North America in 1905, secretary-general of the 6th International Congress on Tuberculosis in 1908 and of the 15th International Congress on Hygiene and Demography in 1912, and director of the State Board of Health of Maryland from 1923 to 1928.

Furst, Clyde (Bowman). American educator, died in New York City, Mar. 6, 1931. He was born in Williamsport, Pa., Aug. 29, 1873, and was graduated from Dickinson College in 1893. After acting as lecturer for the American Society for the Extension of University Teaching, he became in 1902 secretary of Teachers College, Columbia University. The following year he was made associate professor of English, but resigned from both these posts in 1911 to become secretary of the Carnegie Foundation for the Advancement of Teaching. He was also secretary of the Teachers Insurance and Annuity Association after 1918, and published numerous educational surveys and pension plans for teachers. He was the author of *A Group of Old Authors* (1900); *American Literature* (1911); and *The Efficient College* (1927), and contributed to the *New International Year Book* (1907-10).

Galeazzo, Prince, of Thun and Hohenstein. Grand master of the Order of St. John, commonly called the Order of Malta, died in Rome, Mar. 26, 1931. He was born in Tront, Tirol, Austria, Sept. 24, 1850, and was educated in Innsbruck and Prague. After being engaged in the Austrian civil service for many years he resigned to devote himself to the work of the Order, aiding especially in the expansion of its charitable work. In 1905 he became its 75th grand master. Under his leadership the Order was reorganized and strengthened by the founding of new associations in the Netherlands, Poland, Hungary, and the United States.

Gallipaux, Félix. French actor and dramatist, died in Paris, Dec. 7, 1931. He was born in Bordeaux, Dec. 12, 1860. Among his early works are: *Nos Acteurs dans la rue*; *Monologues et recits*; *Petites Vues sur de grands mots*; and the *Gallipettes* series, consisting of six humorous volumes. He later published *En tournée* (1913); *Un Mariage par procuration* (1922); *Aux autobus de la Trinité* (1924); and *Nous allons passer une bonne soirée* (1928).

Garland, The Rt. Rev. Thomas James Protestant Episcopal bishop of the Diocese of Pennsylvania, died in Philadelphia, Mar. 1, 1931. He was born in Belfast, Ireland, Oct. 25, 1866, and was graduated from St. Bees's College, England, in 1891 and from the Philadelphia Divinity School in 1903. Ordained a deacon in the Protestant Episcopal Church in 1891 and priest in 1892, he served successively as rector of All Saints' Church, Johnstown, Pa. (1892-94); Trinity Church, Coatesville, Pa. (1894-98); St. David's Church, Lorain, Ohio (1898-1900); and St. Paul's Church, Bristol, Pa. (1900-03). After acting as assistant editor of the *Church Standard* from 1903 to 1905, he became secretary of the Diocese of Pennsylvania and was elected bishop suffragan in 1911. He succeeded the Rt. Rev. Philip M. Rhineland as bishop in 1924.

Garretson, Austin Bruce, died Feb. 27, 1931.

Gauthier-Villars, Henry, died Jan. 12, 1931.

Gauvain, Auguste, died Apr. 18, 1931.

Genoa, Tommaso Alberto Vittorio, Duke of Italian prince of the House of Savoy, died Apr. 15, 1931, in Turin where he was born Feb. 6, 1854. His father, Prince Ferdinand, was a brother of Victor Emmanuel II, and his sister Margherita became the consort of Humbert I. He succeeded to the title on the death of his father a year after his birth. After attending Harrow and the Royal Naval Academy in Genoa, he entered the Italian Navy where he was advanced to admiral, retiring in 1904. During the World War he was appointed by King Victor Emmanuel III his lieutenant general.

Gibran, Kahlil. Syrian poet and artist, died in New York City, Apr. 10, 1931. Born in Lebanon, Syria, in 1883, he came to the United States about 1910 and for a time was editor of the Arabic newspaper *al-Mohajer*. He was considered one of the most authoritative poets and artists of modern Arabia, his work being distinctive for its mysticism and imagery. His published works in English include *The Madman* (1918); *The Fore-runner* (1920); *The Prophet* (1923); *Jesus, the Son of Man* (1928); and *The Earth Gods* (1931).

Giddings, Franklin Henry, died June 11, 1931.

Gidley, James Williams. American paleontologist, died in Washington, D. C., Sept. 26, 1931. He was born in Springwater, Iowa, Jan. 7, 1866, and was graduated from Princeton University in 1898, receiving the Ph.D. degree from George Washington University in 1922. From 1899 to 1905 he was associated with the American Museum of Natural History in New York City, and thereafter with the United States National Museum in Washington, where he was appointed assistant curator of fossil mammals in 1911. For both these museums he conducted various expeditions in the fossil localities of the United States, being an authority

on the prehistoric horse of North America and demonstrating through his investigations in Florida that man was contemporaneous with certain extinct animals of the Pleistocene period.

Gifford, Adam. American Salvation Army official, died in San Francisco, Calif., Sept. 27, 1931, aged 67. Born in Scotland, he entered the army's service in Pittsburgh in 1884, and was advanced through the ranks to provincial officer. In 1920 he was chosen territorial commander of the West, with headquarters in San Francisco, and at the time of his death was senior commissioner of the Salvation Army in the United States.

Gimbel, Isaac. American merchant, died in Greenwich, Conn., Apr. 11, 1931. He was born in Vincennes, Ind., Apr. 24, 1856, and began his career in the store which his father, Adam Gimbel, an immigrant from Bavaria, had established there in 1842. In 1887 he and his older brother, Jacob, removed to Milwaukee, Wis., where they established the first Gimbel department store. The expansion of their business began in 1894, when they purchased the Granville B. Hayes store in Philadelphia. They established their New York store, known as Gimbel Brothers, Inc., in 1910, and following the merger of the firm and Saks & Co. in 1923 organized Saks—Fifth Avenue and the Saks store in Chicago. Isaac Gimbel was elected president on the death of his brother in 1922 and became chairman of the board of directors in 1927.

Glenavy, First Baron (James Henry Mussen Campbell), died Mar. 22, 1931.

Goebel, Julius, died Mar. 27, 1931.

Goffe, James) Riddle. American surgeon, died in Bronxville, N. Y., Dec. 24, 1931. He was born in Kenosha, Wis., Aug. 10, 1851, and was graduated from the University of Michigan in 1873 and with the M.D. degree from Bellevue Hospital Medical College, New York City, in 1881. He had lectured at the New York Polyclinic Medical School and Hospital and at the Dartmouth Medical School, and was attending surgeon at the Polyclinic Hospital and the Woman's Hospital, New York City. In 1915 he was president of the International Congress of Obstetricians and Gynecologists.

Gold, Edward E. American inventor, died in New York City, Oct. 30, 1931, aged 84. Born in Waverly, Ill., he entered the employ of the Scovill Manufacturing Company in New York City about 1866, and in 1882 invented the car heating system which was adopted by many railroads in the United States, Canada, and Europe. This system utilized steam from the locomotive by means of a steam hose coupler. Later after the railroads began using electricity as motive power, especially on suburban lines, he developed an electric heater. At the time of his death he was chairman of the board of the Gold Car Heating & Lighting Co.

Goodwyn, Albert Taylor. American soldier, former commander-in-chief of the United Confederate Veterans, died in Birmingham, Ala., July 1, 1931. He was born in Elmore Co., Ala., Dec. 17, 1842, and during the Civil War participated in the bombardment of Fort Sumter and, as a captain of the 58th Alabama Regiment, was taken prisoner by the Union forces at the battle of Missionary Ridge. After the war he attended the University of Virginia. He was twice elected a member of the Alabama Legislature. In 1928 he became commander-in-chief of the United Confederate Veterans, and at the time of his death was vice president of the Robert E. Lee Memorial Foundation.

Gordon, Anna Adams. American temperance worker, died in Castle, N. Y., June 15, 1931. Born in Boston, Mass., July 21, 1853, she attended Mt. Holyoke College, and for 21 years was private secretary to Frances E. Willard during her presidency of the National Woman's Christian Temperance Union. Miss Gordon was elected president of this organization in 1914, holding the office until 1925. She also was president of the World's W. C. T. U. (1922-31), and one of four presidents of the World League against Alcoholism. She was the author of *The Life of Frances E. Willard* (1898) and *What Frances E. Willard Said* (1905).

Gordon, Armistead Churchill. American lawyer and author, died in Staunton, Va., Oct. 21, 1931. He was born in Albemarle Co., Va., Dec. 20, 1855, and attended the University of Virginia, where he served as rector during 1897-98 and 1906-18. Admitted to the Virginia bar in 1879, he practiced in Staunton and was later elected commonwealth attorney. He was noted as a biographer, his works including *William Fitzhugh Gordon, a Virginian of the Old School* (1909); *J. L. M. Curry, a Biography* (with Edwin A. Alderman, 1911); *John Tyler, Tenth President* (1915); *Jefferson Davis* (1918); *Thomas Nelson Page—An Appreciation* (1923); *Men and Events—Chapters of Virginia History* (1923); and *Virginia Portraits—Essays in Biography* (1924). He was also the author of *Bravo de War, Echoes in Negro Dialect* (with Thomas Nelson Page, 1888); *For Truth and Freedom: Poems of Commemoration* (1898); *Envision and Other Tales of Old and*

*New Virginia* (1899); *Ommirandy—Plantation Life at Kingsmill* (1917); and *Allegro—The Story of Byron and Miss Clairmont* (1926).

Gotch, Thomas Cooper. British painter, died May 1, 1931. Born in Kettering Dec. 10, 1854, he attended the Slade School and studied under Jean Paul Laurens in Paris. He was president of the Royal British Colonial Society of Artists from 1918 to 1928. Among his works are "Alleluia," purchased by the Chantry trustees for the Tate Gallery, London; "Destiny" in the National Gallery, Adelaide, South Australia; "My Crown and Sceptre" in the National Gallery, Sydney, New South Wales; "The Awakening" and "A Night in June" in the Bristol Art Gallery; "A Pageant of Childhood," purchased by the Corporation of Liverpool; and "Holy Motherhood" in the Laing Art Gallery, Newcastle-upon-Tyne.

Graca Aranha, José Pereira da, Brazilian jurist, diplomat, and author, died in Rio de Janeiro, Jan. 26, 1931. He was born in Sao Luiz do Maranhao, June 21, 1868, and studied law at Recife. After serving with distinction on the bench, he was appointed during the World War period Minister to Belgium and later served as Ambassador to France. He was also one of the outstanding Brazilian novelists, his works including *Chanaan*, *Malazarte*, *Ethetica da Vida*, *Espirito Moderno*, and *Viagem Maravilhosa*.

Graham, George Scott. American lawyer and congressman, died in Islip, Long Island, N. Y., July 4, 1931. He was born in Philadelphia, Pa., Sept. 13, 1850, and attended the law school of the University of Pennsylvania. Admitted to the Pennsylvania bar in 1870, he was elected district attorney for Philadelphia County in 1880 and was reelected for six consecutive terms, serving until 1899. On his retirement he became a member of the law firm of Graham & Gilfillan in Philadelphia and also of Graham & L'Amoreaux in New York City. He was a professor of criminal law at the University of Pennsylvania for 11 years. In 1913 he was elected to the 63d Congress, and prior to his death was dean of the House of Representatives in the 71st Congress, having been reelected each successive term from the 2d Pennsylvania District. He was chairman of the House Judiciary Committee.

Graves, Alfred Perceval, died Dec. 27, 1931. Graves, The Rt. Rev. Anson Rogers. Former bishop of the Protestant Episcopal Church, died in La Mesa, Calif., Dec. 31, 1931. He was born in Wells, Vt., Apr. 13, 1842, and was graduated from Hobart College in 1866 and from the General Theological Seminary in 1870. On ordination he was chosen assistant at Grace Church, Brooklyn, N. Y. After spending three years as a missionary in New Hampshire, he became in 1880 rector of St. Peter's Church, Bennington, Vt., and in 1883 of Gethsemane Church, Minneapolis, Minn. In 1890 he was consecrated missionary bishop of the Platte (later the district of western Nebraska), resigning in 1910.

Greble, Maj. Gen. Edwin St. John, U. S. A., Ret., died Sept. 30, 1931.

Greenlaw, Edwin, died Sept. 10, 1931.

Gregory, G. Edwin. American banker and investment broker, died in Poland Spring, Me., Aug. 29, 1931. He became associated with the National City Bank of New York in 1890, being appointed assistant cashier in 1907 and cashier in 1914. On the formation of the Federal Reserve Bank of New York in 1915 he was requested to devise a system of operation and for several years served as that bank's cashier. He then resumed his relationship with the National City Bank, becoming vice president and controller, but retired in 1928 to enter the Stock Exchange firm of Campbell, Starring & Co. Prior to his retirement he was also controller for the International Banking Corporation, a subsidiary of the National City Bank, and secretary of the New York Clearing House. At the time of his death he was a member of Baker, Weeks & Harden, investment brokers.

Greifenhagen, Maurice, died Dec. 27, 1931.

Grouard, The Most Rev. Emile Jean Baptiste Marie. Canadian archbishop of the Roman Catholic Church, died in Grouard, Alberta, Mar. 7, 1931. Born in Brulon, France, Feb. 2, 1840, he attended Seminary LeMans, and in 1860 was sent to Canada as a missionary. In 1890 he was named Titular Archbishop of Egipt by Pope Leo XIII and the following year was consecrated as Vicar Apostolic of Grouard. He resigned in 1929.

Grout, Edward Marshall. American lawyer, died in Westport, Conn., Nov. 9, 1931. He was born in New York City, Oct. 27, 1861, and was graduated from Colgate University in 1884. He was admitted to the New York bar and at one time was associated with William J. Gaynor, mayor of New York City (1909-13). He gained prominence during 1892-95 for the contests he conducted against gratuitous gifts of street railway franchises in Brooklyn. In 1898 he began to urge the consolidation of Brooklyn and New York City, and following this step in 1898 was elected first presi-

dent of the borough of Brooklyn, serving until 1901. He also was comptroller of New York City during 1901-05.

Grubb, Sir Howard, died Sept. 16, 1931.

Guist'hau, Gabriel. French lawyer and statesman, died in Paris, Nov. 27, 1931. Born at Saint Pierre, Sept. 22, 1868, he became an advocate at the Court of Appeals in Paris, and was also elected deputy for the Department of Loire-Interior. He was Minister of Public Instruction in the Poincaré cabinet of 1912, Minister of Commerce in the Briand cabinet of 1913, and Minister of Marine in the Briand cabinet of 1921.

Gundelfinger (Gundolf), Friedrich. German literary historian, died in Berlin, July 13, 1931. He was born in Darmstadt, June 26, 1880. In 1920 he became professor of German literary history at the University of Heidelberg. His works, the majority of which were written under the pseudonym Friedrich Gundolf, include *Shakespeare und der deutsche Geist* (1911); *Holderlins Archipelagus* (1911); *Goethe* (1916); *Dichter und Helden* (1921); *Heinrich von Kleist* (1922); and *Caesar, Geschichte seines Ruhms* (1924). He also translated Shakespeare's plays into German under the title *Shakespeare in deutscher Sprache* (10 vols., 1908-18).

Gundolf, Friedrich. See Gundelfinger, Friedrich.

Gunn, Hugh, died Feb. 23, 1931.

Guthrie, Clyde Graeme. American physician, died in Cincinnati, Ohio, Dec. 14, 1931, aged 51. On graduation from the Johns Hopkins Medical School in 1907, he taught there, becoming an associate professor of medicine. During the World War he served for two years in France with the Johns Hopkins hospital unit. The research work on which he was engaged until 1922 dealt principally with chemical infections of the blood and body secretions and parasites in the liver and intestines. He also devoted much study to the matching of blood for transfusion. At the time of his death he was practicing in Cincinnati.

Gwinner, Arthur von. German financier, died in Berlin, Dec. 29, 1931. He was born in Frankfurt-on-Main, Apr. 6, 1856. From 1894 to 1919 he was director of the Deutsche Bank, and thereafter chairman of the board of directors. In 1909 he was appointed a member of the Herrenhaus, the Prussian upper chamber, resigning in 1918. He also was active in international electrical and railroad development, including the Anatolian and Bagdad railroads.

Hadžić, had'jitch, Stevan. Yugoslav soldier and statesman, died in Belgrade, Apr. 23, 1931. Born in 1868, he attended the Military Academy in Belgrade and the General Staff Academy in St. Petersburg. During the World War he commanded the Serbian division which fought against Austria in the Russian offensive, and prior to his death was Minister of War and Marine in the cabinet of Gen. Petar Zivkovich, appointed Jan. 7, 1929. He also held that portfolio on several other occasions.

Halle, Columbus. American railway official, died in St. Louis, Mo., Nov. 14, 1931. He was born in Dallas County, Ala., Sept. 8, 1860, and attended Hampden-Sidney College and the University of Virginia. He began his railroad service as a clerk with the Houston & Texas Central Railroad in 1880. In 1889 he was appointed assistant general freight agent of the Missouri, Kansas & Texas Railway, in 1891 general freight agent, in 1896 freight traffic manager, in 1898 traffic manager, in 1907 vice president in charge of traffic, and in 1926 president. During Federal operation of the railways in the World War he was traffic manager of both the Missouri, Kansas & Texas and the St. Louis-San Francisco Railways. He retired in 1930.

Hale, Frederick Marten. British engineer and inventor, died in London, Feb. 2, 1931. He was born in Bristol, Mar. 22, 1864, and was educated in Brussels. From 1880 to 1894 he specialized in fire and hydraulic engineering, and after 1895 in the manufacture and use of high explosives and in torpedo and artillery development. He developed types of rifle grenades, aircraft bombs, and depth charges for use against submarines, which found extensive application in the British Army and Navy. He also wrote extensively on fire engineering, explosives, and instruments of warfare.

Hale, Philip Leslie. American painter, died Feb. 2, 1931, in Boston, Mass., where he was born May 21, 1865. He studied at the Art Students' League in New York City and the Academy Julian and École des Beaux Arts in Paris. For many years he was an instructor at the Boston Museum of Fine Arts School, and had also taught at the Pennsylvania Academy of Fine Arts in Philadelphia. He was a member of the International Art Jury at the Panama-Pacific Exposition in San Francisco in 1915. Among his works are: "The Crimson Rambler" in the Pennsylvania Academy, Philadelphia; "Spirit of Antique Art," in the Museum of Montevideo, Uruguay; "Girl with

Muff," in the Corcoran Gallery, Washington; and "Girl with Pearls," in the Philadelphia Art Club.

Hamaaguchi, Yuko, died Aug. 25, 1931.

Hamilton, R. G. Count. Swedish politician, died in Stockholm, Jan. 11, 1931, aged 76. He was elected to Parliament in 1892, and served during 1918-23, and again in 1925, as Deputy Speaker of the First Chamber. At the time of his death he was a leader of the People's party, which was formed in 1923 when the United Liberals split on the question of prohibition, the anti-prohibition minority calling themselves the Liberal party.

Hare, Hobart Amory, died June 15, 1931.

Harlan, Richard Davenport. American clergyman and educator, died in Washington, D. C., Jan. 24, 1931. He was born in Evansville, Ind., Nov. 14, 1859, and was graduated from the Princeton Theological Seminary in 1885. On ordination to the Presbyterian ministry, he served as pastor of the First Church, New York City (1886-90) and of the Third Church, Rochester, N. Y. (1894-1901). He then became president of the Lake Forest (Ill.) College where he remained until 1906. He was also in charge of the George Washington University Movement from 1907 to 1910.

Harper, Ida Husted. American feminist and writer, died in Washington, D. C., Mar. 14, 1931. She was born near Brookville, Ind., in 1851, and attended Indiana University. Following her marriage, she resided in Terre Haute, Ind., where for 12 years she conducted "A Woman's Opinions" in the *Terre Haute Saturday Evening Mail*. She also was editorial writer for the *Indianapolis News* and department editor for the *New York Sunday Sun* for several years. From 1899 to 1914 she had been speaker and delegate to various meetings of the International Woman Suffrage Alliance, and was publicity director during the suffrage campaign in the United States. She was the author of *Life and Work of Susan B. Anthony* (3 vols., 1908) and in 1921 brought down to date Miss Anthony's *History of Woman Suffrage to the Close of the Nineteenth Century*.

Harris, Albert Hall. American railway official, died in New York City Nov. 21, 1931. He was born in Rochester, N. Y., July 4, 1861, and was graduated from the University of Rochester in 1881. Later he attended the Columbia University Law School, and on being admitted to the bar practiced in Rochester. In 1905 he entered the service of the New York Central & Hudson River Railroad as general attorney, and the following year was promoted to general counsel, holding this position until 1920. In 1914 he became vice president, in charge of finance and corporate relations, and at the time of his death was also chairman of the finance and executive committees of companies included in the New York Central system.

Harris, Frank, died Aug. 26, 1931.

Harris, Robert E. Canadian jurist, died May 30, 1931, in Annapolis Royal, N. S., where he was born Aug. 18, 1860. After being admitted to the Nova Scotia bar in 1882, he practiced in Yarmouth until 1892 and in Halifax thereafter. He became King's Counsel in 1899, and was appointed a justice of the Supreme Court of Nova Scotia in 1915 and Chief Justice three years later. He was also prominently identified with the financial and industrial development of the Maritime Provinces, serving as president or director of numerous corporations, and was governor of King's College, Windsor, N. S.

Harrison, Mary St. Leger, died Oct. 28, 1931.

Hart, Edward, died June 6, 1931.

Hart, Sir Reginald (Clare). British soldier, died in Bournemouth Oct. 19, 1931. He was born in Scarriff, County Clare, Ireland, June 11, 1848, and attended Marlborough and Cheltenham Colleges and the Royal Military Academy, Woolwich. Commissioned a lieutenant in the Royal Engineers in 1869, he was promoted through the grades to general in 1914. He served in the Afghan War (1879), the Ashantee Expedition (1881), and the Egyptian War (1882). During 1888-96 he was director of military education in India, during 1896-99 commander of the Belgaum District of Madras, taking part in the Tirah campaign, and during 1899-1902 commander of the Quetta District in India. He then returned to England as grand commanding officer of the Thames district, and commandant of the School of Military Engineering. In 1907 he was sent to South Africa as commander of the Cape Colony District, and in 1912 was appointed commander-in-chief of South Africa. Two years later he became Lieutenant-Governor of Guernsey, holding that office until 1918. He received the Victoria Cross in 1879 and was created a Knight Commander of the Bath in 1898 and a Knight Commander of the Royal Victorian Order in 1904.

Hartshorn, Vernon. British labor leader, died in Maesteg, South Wales, Mar. 18, 1931. Born in 1872 in Pontywaan, Monmouthshire, he worked as a boy in the coal mines of that region. He first attained

prominence as leader of the South Wales Miners' Federation, and during the World War served on the Coal Trade Organization Committee and on the Coal Controllers' Advisory Committee. In 1918 he was elected Labor member of Parliament for the Ogmore division of Glamorganshire, and in the first Labor government of 1924 held the position of Postmaster General. He became a member of the Indian Reforms Commission in 1927 and succeeded to the post of Lord Privy Seal in 1930.

Haskin, Brig.-Gen. William Lawrence, U. S. A., Ret. American soldier, died in New London, Conn., Sept. 24, 1931. He was born in Houlton, Me., May 31, 1841, and was graduated from the Rensselaer Polytechnic Institute in 1861. He served during the Civil War with the 1st U. S. Artillery, being brevetted captain in 1863 and major in 1865. After the war he served with the U. S. Army in New York, South Carolina, Maine, California, Oregon, and Connecticut, and was promoted through the grades to brigadier-general in 1903. During the Spanish-American War he commanded a regiment in Cuba, and in 1902 was designated to command the United States troops still remaining there. He retired in 1903. He was the author of *History of the First Regiment of U. S. Artillery*.

Hassler, William C. American physician, died in San Francisco, Calif., Aug. 2, 1931. He had served for more than 30 years as Public Health Officer of San Francisco, leading the campaign for the extermination of waterfront rats, during the rebuilding of the city after the fire of 1906, so as to obviate the menace of bubonic plague. In 1931 he was elected president of the American Public Health Association.

Hatch, Brig.-Gen. Henry James, U. S. A. American soldier, died in New York City Dec. 31, 1931. He was born in Charlotte, Mich., Apr. 28, 1869, and was graduated from the University of Michigan in 1891, later attending the Artillery School and the Army War College. He entered the U. S. Army during the Spanish-American War, and was promoted through the grades to colonel in 1918 and brigadier-general in 1927. During the World War he also was a brigadier-general with the National Army, being in command of the railway artillery of the Second Army. He later became commander of the coast defenses of Los Angeles, Calif., of the harbor defenses of Manila, P. I., and of the 2d Coast Artillery District of New York.

Hatfield, Joshua Alexander. American industrialist, died in New York City July 4, 1931. Born in Philadelphia, Pa., June 11, 1863, he entered the employ of the Pottstown Iron Company as an office boy in 1880, later serving as general sales agent. In 1901 he was chosen president of the American Bridge Company of New York, a subsidiary of the U. S. Steel Corporation. He also was a director of the American Bridge Company of New Jersey, another subsidiary, and when the two companies were consolidated in 1914 he was made vice president. He became president of the American Bridge Company in 1927.

Hattstaedt, John James. American educator, died in Chicago, Ill., Nov. 30, 1931. He was born in Monroe, Mich., Dec. 29, 1851, and attended Concordia College in Fort Wayne, Ind., studying music privately in Boston and in Germany. After teaching piano at the Chicago Musical College, he founded the American Conservatory of Music in 1886, and was its president and director.

Healy, Timothy Michael, died Mar. 26, 1931.

Heger, Franz. Austrian ethnologist, died July 23, 1931. He was born in Brandeis Oct. 4, 1853, and from 1904 to 1919 was director of the natural history division of the State Museum in Vienna. The principal expeditions in which he participated were to southeastern Asia (1902-04), South America and Mexico (1907-10), and Albania (1917). He was the author of *Alle Metallvölkern aus Südostasien* (1902).

Heimke, William. American diplomat, died in Kansas City, Mo., July 14, 1931. Born in France, he was educated in that country and in Germany, and was graduated from the U. S. Military Academy in 1875. After acting as purchasing agent for the Mexican Central Railway during 1881-82 and as general manager of the Chihuahua and Durango (Mexico) telephone companies during 1883-87, he was appointed vice consul at Chihuahua and consul in 1892. He served as second secretary at the American Legation in Mexico City during 1897-1906 and as secretary at the American Legation in Bogotá, Colombia, during 1906-07. In 1908 he was appointed Minister to Guatemala and in 1909 Minister to Salvador, holding the latter post until 1915. He was also chief of the division of Latin-American affairs of the U. S. Department of State in 1914. During the World War he was attorney for various foreign import houses before the governmental bureaus in Washington, and in 1921 represented the United States Government at the centennial celebration of Peruvian independence.

Hemmeter, John Conrad, died Feb. 25, 1931.

Hemphill, Joseph Newton, died July 8, 1931.

Henry, Alfred Judson, died Oct. 6, 1931.

Henry, Sir Edward Richard, died Feb. 20, 1931.

Herrford, Charles Harold, died Apr. 27, 1931.

Herrman, August ("Garry"). American baseball administrator, died Apr. 25, 1931, in Cincinnati, Ohio, where he was born May 3, 1859. He was owner and president of the Cincinnati Club of the National League (the Cincinnati "Reds") from 1903 to 1927, effecting, on assuming the ownership, settlement of a long-standing quarrel between the National and American Leagues of professional baseball clubs. He also was the originator of the world's series, and chairman for 16 years of the National Baseball Commission, resigning in 1920.

Hervey, Alpheus Baker. American clergyman and educator, died in Baldwin, Long Island, N. Y., Mar. 9, 1931. He was born in Triangle, Broome Co., N. Y., Mar. 31, 1839, and was graduated from the theological department of St. Lawrence University in 1861. Entering the Universalist ministry, he served as pastor of churches at several places in New York, Massachusetts, and Maine until his election as president of St. Lawrence University in 1888. During his six-year administration he succeeded in doubling the university's endowment so that it might continue. He was also a specialist in marine algae, publishing *Sea Mosses* (1881) and *The Algae of Bermuda* (1917).

Hewins, William Albert Samuel, died Nov. 16, 1931.

Higginson, Rear Admiral Francis John, U. S. N., Ret., died Sept. 12, 1931.

Hill, Judson Sudborough. American educator, died in Battle Creek, Mich., Sept. 14, 1931. He was born in Trenton, N. J., June 3, 1854, and was graduated from Madison (later Colgate) University in 1874, receiving the B. D. degree from Central Tennessee College in 1893 and the D. D. degree from Walden University in 1897. Ordained to the Methodist Episcopal ministry in 1879, he was pastor in Chattanooga, Tenn., until 1881. He was then elected president of the Morristown (Tenn.) Normal and Industrial College, which office he held at the time of his death. He also served as a supervisor of the United States Census in 1900.

Hill, Samuel, died Feb. 26, 1931.

Hillyer, Virgil Mores. American educator, died in Baltimore, Md., Dec. 20, 1931. He was born in Weymouth, Mass., Sept. 2, 1875, and was graduated from Harvard in 1897. From 1899 until his death he was head master of the Calvert School in Baltimore. He was the author of *Kindergarten at Home* (1911); *Child Training* (1915); *Royal Road to Writing* (1916); *Royal Road to Reading* (1917); *First Writer* (1919); *The Calvert Speller* (1921); *A Child's History of the World* (1924); and *A Child's Geography of the World* (1929).

Hinkson, Katharine Tynan See Tynan, Katharine Hoebiger, Hans. Austrian mechanical engineer and amateur astronomer, died in Vienna Oct. 11, 1931, aged 71. Interested since boyhood in astrophysics, he propounded at the close of the nineteenth century his glacial cosmogony theory.

Hoffding, Harold, died July 2, 1931.

Holt, George Chandler. American jurist, died in Nice, France, Jan. 26, 1931. He was born in Mexico, N. Y., Dec. 31, 1843, and was graduated from Yale in 1866 and from the Columbia law school in 1869. On being admitted to the bar, he practiced in New York City from 1869 to 1898. He then became referee in bankruptcy, and in 1903 was appointed U. S. district judge for the Southern District of New York, serving until 1914. He was a lecturer on Federal jurisprudence at Columbia in 1890, on admiralty law at Cornell in 1906, and on patents at Columbia in 1912.

Hopkins, James Frederick. American art educator, died near Monterey, Calif., Nov. 11, 1931. He was born in Newton, Mass., Feb. 26, 1868, and was graduated from the Massachusetts Normal Art School in 1889. He was successively instructor at Pratt Institute, Brooklyn, N. Y. (1889-96); director of drawing in the Boston public schools (1896-1906); director of the school of art and design, Maryland Institute, Baltimore (1906-12); director of art education for Massachusetts (1912-20); and director of art efficiency surveys after 1920. He was a delegate to several International Congresses for the Promotion of Art Education, a member of the jury of art education at the Louisiana Purchase Exposition held in St. Louis in 1904, and author of *Outlines of Lessons in Drawing* (1897) and *Outlines of Art History* (1900).

Horn, Alfred Aloysius See Smith, Alfred Aloysius.

Howard, John Galen, died July 13, 1931.

Hueffer, Oliver Madox. British author, died in Hammersmith June 21, 1931. A brother of Ford Madox Ford, the critic and poet, he was born in 1877 and attended the University College School and also universities on the continent. During the World War he was a war correspondent. Under the pseudonym of

Jane Wardle he published such novels as *The Artistic Temperament*; *The Lord of Latimer Street*; *Margery Pigeon*; *The Pasque Flower*; *Where Truth Lies*; *Hunt the Skipper*; *Little Petchers*; and *Needles and Pins*. He also published *Love's Disguises* (five one-act plays, 1900); *The Book of Witches* (1908); *A Vagabond in New York* (1913); *French France* (1929); and *Some of the English* (1930).

Hunt, Richard Howland. American architect, died in New York City, July 12, 1931. He was born in Paris, France, Mar. 14, 1862, and attended the Massachusetts Institute of Technology and the École des Beaux Arts in Paris. On the death of his father, Richard Morris Hunt, in 1895, he completed one of the new wings of the Metropolitan Museum of Art in New York City. He also designed Quintard and Hoffman Halls at the University of the South, Kissam Hall at Vanderbilt University, and private residences for William K. and George W. Vanderbilt, Howard Gould, and Mrs. O. H. P. Belmont. He was past president of the Municipal Art Society, the Architectural League of New York, and the New York chapter of the American Institute of Architects.

Hussein Ibn Ali, died June 4, 1931.

Indy, Paul Marie Théodore Vincent d', died Dec. 2, 1931.

Ingalls, George Hoadly. American railway official, died in New York City, June 14, 1931. He was born in Boston, Mass., July 28, 1872, and was graduated from Harvard in 1893. After serving as a clerk in the general superintendent's office of the Chesapeake & Ohio Railway, he was appointed in 1896 assistant to the president of that road. In 1901 he became assistant general freight agent for the Cleveland, Cincinnati, Chicago & St. Louis Railway at Cincinnati, and the following year was advanced to general freight agent for that road and also for the Cincinnati Northern, and Dayton & Union Railroads. He was freight traffic manager (1906-17) and traffic manager (1917-18) for the New York Central lines west of Buffalo, and during the World War was traffic assistant to the regional director of the U. S. Railroad Administration. From 1919 until his death he was vice president in charge of traffic for the New York Central lines.

Ingersoll, Rear Admiral Royal Rodney, died Apr. 21, 1931.

Irvine, Frank. American lawyer, died in Ithaca, N. Y., June 23, 1931. He was born in Sharon, Pa., Sept. 15, 1858, and was graduated from Cornell University in 1880 and from the National University, Washington, D. C., in 1883. On being admitted to the bar, he served for a year as assistant U. S. attorney in the District of Columbia. In 1884 he removed to Omaha, Neb., becoming judge of the 4th Nebraska district in 1891 and supreme court commissioner in 1893, which position he held for six years. He was called to the law college of Cornell University in 1901 as professor of pleading and practice and also acted as dean of the faculty of law from 1907 to 1914. He then became public service commissioner for the 2d New York District, and on the expiration of his term in 1921 was Democratic candidate for Congress from the 37th New York district. At the time of his death he was engaged in private practice in Ithaca.

Irwin, Maj-Gen. George LeRoy, U. S. A. American soldier, died at sea Feb. 19, 1931. He was born at Fort Wayne, Mich., Aug. 26, 1868, and was graduated from the U. S. Military Academy in 1889, the Coast Artillery School in 1894, and the Army War College in 1910. Promoted through the grades, he was made major-general in 1928. During the World War he successively commanded the 66th, 2d, and 57th Field Artillery brigades in France, serving on the Verdun and Alsace fronts and in the Marne-Aisne, Oisne-Aisne, and Meuse-Argonne offensives. After 1923 he was commander of the Field Artillery School at Fort Sill, Okla.

Jadwin, Lt.-Gen. Edgar, U. S. A., Ret., died Mar. 2, 1931.

Jeffer, Meyer Edward. American chemist, died in Berkeley, Calif., June 28, 1931. He was born in Sidney, Australia, Oct. 6, 1857, and was graduated from the University of California in 1877. After serving as assistant chemist for the 10th United States Census in 1879-80 and for the Northern Transcontinental Survey in 1881-83, he was appointed assistant and chemist in the department of viticulture of the University of California. In 1889 he was transferred to the agricultural department of that institution, serving successively as instructor and assistant professor. He became assistant professor of nutrition in 1906 and head of that department in 1908, retiring as professor emeritus in 1925. He was director of the California State Food and Drug Laboratory during 1908-15, and after 1915 was consulting nutrition expert for the California State Board of Health and after 1925 director of the bureau of food and drugs of that board. His contributions in the field of

nutrition include dietary studies with the Chinese and other groups and extensive work on the digestibility of fruit and nuts.

Jaime, Prince of Bourbon, Duke of Madrid, died Oct. 2, 1931.

James, Herbert Armitage, British clergyman and educator, died in London Nov. 15, 1931. He was born in Kirkdale, Liverpool, Aug. 8, 1844, and attended Jesus and Lincoln Colleges, Oxford. With the exception of the deanship of St. Asaph in North Wales, which he held during 1886-89, he was head master or principal of Rossall School (1875-86), Cheltenham College (1889-95), and Rugby School (1895-1909). At the time of his death he was president of St. John's College, Oxford.

Jelks, William Dorsey, American insurance official and politician, died in Eufaula, Ala., Dec. 13, 1931. He was born in Russell County, Ala., Nov. 7, 1855, and was graduated from Mercer University in 1876. After acting for 20 years as editor of the *Eufaula Times*, he entered politics, being elected to the Alabama Senate. In 1901, while president of that body, he became governor of Alabama on the death of Governor W. J. Sanford. He also was elected governor for the ensuing term 1903-07. In 1907 he organized the Protective Life Insurance Company in Birmingham, acting first as president and then as chairman of the board.

Jenkins, Edward Hopkins, died Nov. 7, 1931.

Jibrân, Khalil Jibrân. See Gibran, Kahlil.

Joel, Solomon Barnato, British industrialist, died in Moulton Paddocks, Newmarket, May 22, 1931, aged 65. As a member of the firm of Barnato Bros., he had been a prominent figure since the early '90s in the diamond and gold mining industries of South Africa. He was also chairman of the Johannesburg Consolidated Investment Company and director of the Premier Diamond Mining Company and the Angola Diamond Mining Company which held a virtual monopoly of the European market.

Joffre, Joseph Jacques Césaire, died Jan. 3, 1931.

Johnson, Allen, died Jan. 18, 1931.

Johnson, Byron Bancroft, American baseball promoter, died in St. Louis, Mo., Mar. 28, 1931. He was born in Cincinnati, Ohio, Jan. 6, 1865, and was graduated from Marietta College in 1897. After a brief career as a newspaper sports writer he helped organize the American League of Professional Baseball Clubs, of which he was president from 1900 to 1927.

Johnson, George Ellsworth, American educator, died in Boston, Mass., Aug. 26, 1931. He was born in Springfield, Vt., June 21, 1862, and was graduated from Dartmouth College in 1887, later attending the Hartford Theological Seminary and Clark University. After serving as principal or superintendent of schools in Colebrook, N. H., Springfield, Vt., Andover, Mass., Tewksbury, Mass., and Hyde Park, Mass., he became, in 1907, superintendent of the Pittsburgh Playground Association and professor of play in the school of education at the University of Pittsburgh. He was head of the department of play and recreation at the New York School of Philanthropy during 1913-15, and also lecturer at Teachers College, Columbia University. He then went to Harvard as assistant professor in the division of education, and in 1920 was appointed associate professor in the graduate school of education. His works include *Elementary Rational Speller* (1903); *Contagious Diseases of Children* (1906); *Education by Plays and Games* (1907); *What to Do at Recess* (1910), and *Education through Recreation* (1916).

Johnson, Rossiter, died Oct. 3, 1931.

Johnson, Willis Fletcher, died Mar. 28, 1931.

Johnston, Annie Fellows, died Oct. 5, 1931.

Johnston, Charles, died Oct. 16, 1931.

Jordan, David Starr, died Sept. 19, 1931.

Karlfield, Erik Axel, died Apr. 8, 1931.

Kassiotis, Damianos, died Aug. 14, 1931.

Kauffman, Calvin Henry, American botanist, died in Ann Arbor, Mich., June 14, 1931. He was born in Lebanon, Pa., Mar. 10, 1869, and was graduated from Harvard in 1896 and with the Ph.D. degree from the University of Michigan in 1906. After serving as instructor in botany at the University of Michigan from 1904 to 1908, he became assistant professor in 1908, associate professor and director of the university herbarium in 1920, and professor and director in 1923. During the World War period he was a member of the Federal horticultural board of the U. S. Department of Agriculture. He published *Agaricaceae of Michigan* (2 vols., 1918).

Kay, Edgar Boyd, American civil engineer, died in Washington, D. C., Apr. 21, 1931. He was born in Warriors Mark, Pa., Jan. 15, 1860, and was graduated from the Rensselaer Polytechnic Institute in 1883. After serving as an instructor at Rensselaer, Union College, and Cornell University, he became in 1903 professor of civil engineering at the University of Alabama and in 1907 dean of the college of en-

gineering. He designed the U. S. standard incinerator and several municipal incinerator plants, and in addition to designing and building many water works, sewer, and lighting systems and steam and electric railways was consulting engineer for the water works department of the city of Mobile in 1912 and for the Alabama Railway Commission from 1903 to 1915. During the World War he was chief of the hydraulic and sanitary division in the office of the quartermaster general, War Department, Washington.

Keith, John Alexander Hull, American educator, died in Harrisburg, Pa., Feb. 22, 1931. He was born in Homer, Ill., Nov. 28, 1869, and was graduated from the Illinois State Normal University in 1894 and from Harvard in 1899. After acting as professor of pedagogy and assistant in psychology at the Northern Illinois State Normal School in De Kalb (1899-1906) and head of the training department of the Illinois State Normal University in Normal (1906-07), he became president of the Oakkosh (Wis.) State Normal School in 1907, principal of the Indiana (Pa.) Normal School in 1917, and superintendent of public instruction in Pennsylvania in 1927. In 1931 he was named educational consultant to the Commonwealth of Pennsylvania's department of public instruction. He wrote *Elementary Education, Its Processes and Problems* (1905); *The Nation and the Schools* (with William C. Bagley, 1919); and *An Introduction to Teaching* (1923).

Kelley, Francis Alphonsus, American clergyman, died in Catskill, N. Y., Oct. 15, 1931. He was born in Cohoes, N. Y., Apr. 19, 1888, and attended St. Michael's College, Toronto, Toronto University, and St. Bernard's Seminary, Rochester, N. Y. On taking orders in 1912 he became assistant pastor of St. Joseph's Roman Catholic Church, Albany, N. Y., and served in the same capacity at St. Vincent de Paul's Church, Albany, and St. Mary's Church, Troy. At the time of his death he was pastor of the Church of the Sacred Heart, Cairo, N. Y. During the World War he served in France as chaplain of the 27th Division, where he won the praise of both British and American generals for "gallantry on the field of battle." He was decorated with the Distinguished Service Cross and the British Military Cross. On the formation of the American Legion in 1919 he was chosen the first national chaplain.

King, Edward S(kinner), died Sept. 10, 1931.

Kipp, Theodor, German jurist, died in Italy, Apr. 2, 1931. He was born in Hanover Apr. 10, 1862, and attended the universities of Leipzig and Göttingen. After teaching at universities in Halle, Kiel, and Erlangen, he became professor of jurisprudence at the University of Berlin in 1901. He was an authority on Roman law, publishing *Geschichte und Quellen des römischen Rechts* (8 vols., 1896-1909) and elaborating on the *Pandekten*, or excerpts from the writings of Roman jurists compiled by direction of the emperor Justinian in 529 (3 vols., 1900-06). He also wrote *Die Litudenunziation* (1887) and *Die Beurteilung zur Abgabe von Willenserklärungen und zu Rechtshandlungen* (1892) and collaborated with Ludwig Enneccerus on *Lehrbuch des bürgerlichen Rechts* (1924).

Kitazato, Shibusaburo, died June 13, 1931.

Knutsford, Sydney Holland, Second Viscount, British barrister, died in London July 27, 1931. Born Mar. 19, 1855, he attended Wellington College and Cambridge, and was called to the bar in 1879. He was director of the English, Scottish, and Australian Bank, Underground Electric Railways Company, City and South London Railway, and London and Scottish Life Assurance Company, and was formerly director of the East and West India Dock Company and other companies which were sold to the Port of London Authority. As chairman of the London Hospital, he collected about £6,000,000 for that institution over a period of 35 years. He published *In Black and White* (1926).

Kobbé, Maj.-Gen. William August, U. S. A., Ret. American soldier, died in Pasadena, Calif., Nov. 18, 1931. He was born in New York City May 10, 1840. After serving in the Civil War he remained in the Army and was graduated from the Artillery School in 1873, being promoted through the grades to major-general in 1904 when he was retired. He was an instructor at the Artillery School during 1885-96 and served in the Philippines during the Spanish-American War as a major in command of the Third Artillery, being appointed in 1899 military governor and department commander of Mindanao and Jolo. From 1902 to 1904 he was commander of the Department of Dakota.

Kober, George Martin, died Apr. 24, 1931.

Kunsts, Luigi von, Austrian violinist, composer, and conductor, died in Toronto, Canada, Oct. 8, 1931. He was born in Vienna, July 30, 1870, and attended the University of Vienna and the Vienna Conservatory of Music, studying violin under Krkl and Sevcik

and composition under Bruckner. He came to the United States in 1893 as assistant conductor and concert-master of the Austrian Orchestra at the Columbian Exposition. After teaching in Chicago for three years he went to Pittsburgh as leading violinist of the Pittsburgh Symphony Orchestra and teacher at the Pittsburgh Conservatory. In 1910 he returned to Europe for a two-year concert tour and then was appointed head of the violin department of the Canadian Academy of Music in Toronto, where he also organized the Academy String Quartet. In 1923 he became conductor of the Toronto Symphony Orchestra. His compositions include two violin concertos, string quartet in D minor, violin études, songs and choruses. He was the author of *The Hero as Musician—Beethoven* (1913) and editor of the *Canadian Journal of Music*, which he founded in 1915.

Lacey, Thomas Alexander, died Dec. 7, 1931.

La Follette, Belle Case. The widow of Robert M. La Follette, U. S. Senator from Wisconsin, died in Washington, D. C., Aug. 18, 1931. She was born in Summit, Wis., Apr. 21, 1859, and was graduated from the University of Wisconsin in 1879. Two years later she was married. She studied law in order to enter into her husband's work, and on his election to Congress in 1887 served as his secretary and clerk. She was also active as a speaker and writer, especially in behalf of woman suffrage. After Senator La Follette's death in 1925 she devoted herself to writing his biography. She was also the mother of Robert M. La Follette, Jr., who was appointed to fill his father's unexpired term in the Senate, and of Philip La Follette, Governor of Wisconsin.

Lahn, Frank S. American aviation pioneer, died in Paris, France, Dec. 29, 1931. He was born in Canton, Ohio, Apr. 25, 1846. In 1883 he took up his residence in Paris, and from the early days of the Wright Brothers' experiments was interested in aviation. He persuaded James Gordon Bennett, publisher of the New York *Herald*, to donate the trophy which bears Bennett's name and which was won by his son, then Col. Frank P. Lahn, U. S. A., at the international balloon race in Paris in 1906. He was a director of the Aéro Club of France for 25 years and vice president of the International Aeronautic Federation.

Lane-Poole, Stanley, died Dec. 29, 1931.

Lathrop, Charles Newton. American clergyman, died Jan. 30, 1931, in San Francisco, Calif., where he was born Nov. 16, 1871. Following his graduation from Harvard in 1896 and the Western Theological Seminary in 1899, he was ordained in the Protestant Episcopal Church, being curate of the Church of the Advent, San Francisco, from 1901 to 1904 and rector of the same from 1904 to 1916. During the World War he was a member of the Commission for Relief in Belgium, being assigned to the province of Liège. He became dean of All Saints' Cathedral, Milwaukee, Wis., in 1917 and executive secretary of the department of Christian social service of the National Council of the Protestant Episcopal Church in 1920.

Lauderdale, Frederick Colin Maitland, Fourteenth Earl of, Scottish soldier, died in London, Sept. 14, 1931. Born Apr. 12, 1868, he entered the Royal Scots Fusiliers at the age of 18 and became a lieutenant in the 2d Dragoons the following year. In 1894 he was transferred to the Scots Guards and was later commissioned an ensign in the Royal Company of Archers, the King's body-guard for Scotland. He served in the Boer War with the Imperial Yeomanry, and from 1904 to 1908 was assistant director of auxiliary forces at Headquarters Staff. During the World War he commanded the 3d garrison battalion of the Northumberland Fusiliers. He succeeded to the title on the death of his father in 1924, and in 1929 was elected Scotland's representative peer. He also was made an Officer of the Order of the British Empire in 1919.

Lawrence, Dorset William. See D'Orsay, Lawrence

Learned, Henry Barrett. American historian, died in Palo Alto, Calif., Oct. 13, 1931. He was born in Exeter, N. H., Mar. 21, 1868, and was graduated from Harvard in 1890 and with the Ph.D. degree from Yale in 1909. After teaching in private schools in Plymouth, Mass., and Chicago he was appointed head of the department of history at the Armour Institute of Technology in Chicago in 1894, and in 1897 was called to Harvard as an assistant in history. In 1900 he went to Yale as instructor in history at the Sheffield Scientific School and in 1909 to Wesleyan University as lecturer on history. During the World War he served in the Bureau of Investigation of the Department of Justice, and from 1917 to 1921 was a member of the District of Columbia Board of Education. He then became lecturer and associate professor of European history at Stanford University, with the title of acting professor after 1927. He wrote: *The President's Cabinet* (1912); *Some Aspects of the Cabinet Meeting*

(1915); and "W. L. Marcy" in *American Secretaries of State and Their Diplomacy* (1928).

Leblang, Joseph. American theatrical broker, died in New York City, Apr. 17, 1931. Born in Hungary in 1874, he was brought to the United States in childhood. About 1895 he conceived the idea of a cut-rate theatre ticket system, which was later developed into the Leblang Central Public Service Ticket Agency. This system proved a boon, not only in stabilizing the prices of tickets to theatre-goers, but in enabling producers to keep a new play going during its first critical weeks or to continue the production of a successful play after the first popular interest in it had waned. He was also a backer for many New York plays, including the *Greenwich Village Follies*, and was owner of several theatres in the Broadway district.

Le Bon, Gustave, died Dec. 13, 1931.

Lebrich, Joseph. French aviator, died near Ufa, Soviet Union, Sept. 12, 1931. Born in Brittany in 1900, he entered the French Navy and was decorated for services in air fighting over Morocco. In 1927, with Dieudonné Costes, he established an air route to South America and also made an extended tour of the Latin American countries from October, 1927, to February, 1928. Arriving at New Orleans on February 4, he and his co-pilot proceeded to Washington and from there made a memorable flight across the continent that contributed to the development of good-will between France and the United States. For this exploit Lebrich was made a lieutenant commander in the French Navy. He met his death in an attempted non-stop flight, with Marcel Doret, from Paris to Tokyo. See AERONAUTICS.

Lehmann, Frederick William, died Sept. 12, 1931.

Leitch, Archibald. British physician, died in London Jan. 27, 1931. He was born in Rothesay, June 3, 1878, and was graduated from the medical department of Glasgow University in 1902. He acted successively as assistant to the director of the Middlesex Cancer Research Laboratories, director of the Caird Research Laboratory in Dundee, and pathologist to the Cancer Hospital, London in 1910, having become recognized as an authority in his field, he was made research fellow of St. Andrews University. At the time of his death he was director of the Research Institute of the Cancer Hospital, London, and professor of experimental pathology in the University of London. He was a member of many British and foreign societies engaged in the study of cancer, and in addition to numerous papers on cancer and other pathological subjects edited the report of the International Cancer Conference held in London in 1928.

Leopold Salvator, Archduke. Member of the Toscani line of the Austrian royal house of Hapsburg, died in Vienna Sept. 4, 1931. He was born in Alt-Bunzlau Oct. 15, 1863, son of Archduke Charles Salvator. Entering the Austrian Army, he was advanced to colonel-general and served as inspector general of artillery during the World War. After the war he made his home in Barcelona, Spain, the former residence of his wife, Blanche of Castile, Princess of Bourbon, to whom he was married in 1889. He was patron of the Academy of Science, Literature, and Fine Arts of Prague, and a Knight of the Golden Fleece, St. Hubert, and the Black Eagle.

Le Senne, Camille (pseudonyms, Marcello and Charley). French novelist, poet, dramatist, and critic, died July 7, 1931, in Paris where he was born Dec. 12, 1851. During his journalistic career he was editor of *Ménestrel*, *Le Petit Méridional*, and *La Presse*, and dramatic and music critic for *La Petite République*, literary and art critic for *La France*, and honorary president of the Association of Dramatic and Music Critics. He had also been an instructor at the School of Higher Social Studies, a member of the Commission of Theatres and of the jury on admission to the Conservatoire, an officer of the Legion of Honor, and laureate of the French Academy. Among his novels are *Louise Mengal* (1884), *En Commandite* (1886), *Le Vertige* (1887), *Vera Nicole* (1889), *Chaine mystique* (1896), and *Ober Maître* (1896). He also collaborated with Edmond Texier between 1878 and 1886 in writing 15 other novels, among which are *La Dame du lac*, *L'inconnue*, *Le Mariage de Rosette*, and *Les Mémoires de Cendrillon*. His plays include *L'Étoile de Séville* (1911); *L'Illustre Gaudissart* (1918); and *Le réveil de Corneille* (1916). He also published *Le Théâtre à Paris* (5 vols., 1888-90), and *Rimes tragiques* (1915) and *Poèmes de la grande guerre* (1919).

Lethaby, William Richard. British architect, died in London July 17, 1931, aged 74. He was a former professor of design at the Royal College of Art and former principal of the London County Council Central School of Arts and Crafts. In 1906 he was appointed surveyor of the fabric of Westminster Abbey, in which post he did valuable restoration work for more than 20 years. His works include: *Early Christian Art* (1911); *Architecture* (1912); *Medieval Art* (1912); *Home and Country Arts* (1923); *Londonium Architecto-*

*ture and the Crafts* (1928); and *Westminster Abbey Re-examined* (1925).

Leutze, Rear Admiral Eugene Henry Cozzens, died Sept. 15, 1931.

Lewis, Col. Isaac Newton, U. S. A. Ret., died Nov. 9, 1931.

Lindsay, (Nicholas) Vachel, died Dec. 5, 1931.

Lipton, Sir Thomas Johnstone, died Oct. 2, 1931.

Littmann, Max, died Sept. 21, 1931.

Loebell, Friedrich Wilhelm G. von. German statesman, died in Brandenburg-on-Havel Nov. 21, 1931. Born Sept. 17, 1855, he attended the Universities of Strassburg and Leipzig, and was elected to the Reichstag in 1888. In 1904 he was appointed to the Chancellery, serving as under-secretary during 1907-09. He became Prussian Minister of the Interior in 1914 and held this portfolio throughout the War. In 1925 he organized a bloc which proposed General von Hindenburg as President of the German Republic.

Longueuil, Reginald Grant d'Iverville de Ste. Helene, Eighth Baron of French seignior, died in Pau, Aug. 30, 1931, aged 73. He was holder of the only ancient hereditary Canadian title, which was conferred by Louis XIV in 1700 and recognized by Queen Victoria in 1880.

Longworth, Nicholas, died Apr. 9, 1931.

Loomis, Elmer Howard. American physicist, died in Princeton, N. J., Jan. 22, 1931. He was born in Vermillion, Oswego Co., N. Y., May 24, 1861, and was graduated from Madison (later Colgate) University in 1883, receiving the Ph.D. degree from the University of Strassburg in 1893. After 1894 he served successively as instructor, assistant professor, and professor of physics at Princeton University. He devised important improvements in methods of determining the freezing points of dilute solutions.

Loucheur, Louis, died Nov. 22, 1931.

Louise, Princess, of England, died Jan. 4, 1931.

Lucas, Sir Charles Prestwood. British colonial historian, died in London, May 7, 1931. He was born in Crickhowell Aug. 7, 1853, and attended Balliol College, Oxford. Called to the bar of Lincoln's Inn in 1885, he later abandoned the law in favor of a Colonial Office post. He was made Assistant Under-Secretary of State in 1897, and from 1907 until his retirement in 1911 was head of the Dominions Department. He was created a Knight Commander of St. Michael and St. George in 1907 and Knight Commander of the Bath in 1912. Among his works are *An Historical Geography of the British Colonies* (12 vols. 1887-1920); *A History of Canada, 1763-1812* (1909); *The British Empire* (1915); *The Beginnings of English Overseas Enterprise* (1917); *The Empire at War* (1921-26); *The Partition and Colonization of Africa* (1922); *The Story of the Empire* (1924); and *Religion, Colonizing, and Trade* (1930).

Luigi, Luigi, died Feb. 1, 1931.

Lundborg, Einar-Paál. Swedish aviator, died in Stockholm, Jan. 27, 1931, aged 35. He joined the Swedish Army at the age of 19, but resigned a year later to serve with the German forces in the World War, winning the Iron Cross. He also participated in the Finnish and Latvian wars of independence of 1918 and 1919 against the Soviets. He then rejoined the Swedish Army, becoming a captain in the air corps. On June 23, 1928, he rescued Gen. Umberto Nobile, commander of the dirigible *Italia* which was wrecked, after returning from its flight to the North Pole, on May 25 near Foyen Island.

Lundie, John, died Feb. 9, 1931.

Lutkin, Peter Christian. American pianist and organist, died in Evanston, Ill., Dec. 27, 1931. He was born in Thompsonville, Wis., Mar. 27, 1858, and after studying privately in Chicago attended the Hochschule für Musik in Berlin and the Leschetizky Piano School in Vienna. In 1888 he became director of the theoretical department of the American Conservatory of Music in Chicago, and three years later professor of music at Northwestern University. He also was dean of the school of music at Northwestern from 1897 to 1928, and had been conductor of the Chicago North Shore Festival since 1909. A composer of church music, he lectured on that subject at the Western Theological Seminary. He was a founder of the American Guild of Organists.

Lyttelton, Gen. Sir Neville (Gerald), died July 6, 1931.

McCann, Alfred W. (Atterson). American food expert and author, died in New York City, Jan. 19, 1931. He was born in Pittsburgh, Pa., Jan. 9, 1879, and attended Duquesne University and the University of Chicago. He was director of the Alfred W. McCann Laboratories in New York City and was associated for many years with Dr. Harvey Wiley in his crusade for pure food. He became popular as a writer on this subject in 1912, when he began publishing in the *New York Globe* his findings concerning adulteration. He wrote *Starving America* (1918); *Vital Questions and*

*Answers* (1918); *Thirty-Cent Bread* (1917); *This Famishing World* (later issued under the title, *Science of Eating*, 1919); *God or Gorilla* (1922); *The Science of Keeping Young* (1925); and *The Greatest of Men—Washington* (1927).

MacColl, James Robertson. American industrialist, died in Providence, R. I., Nov. 23, 1931. He was born in Glasgow, Scotland, Apr. 2, 1856, and before coming to the United States was a partner during 1878-82 of Thomson and MacColl, manufacturers of dress goods in Glasgow. He became agent of the Lorraine Company, manufacturers of cotton and worsted goods in Pawtucket, R. I., in 1882, treasurer in 1896, and president in 1920. In 1905 he was elected president of the New England Cotton Manufacturers' Association, which during his administration became the National Association of Cotton Manufacturers. He also presided at the International Conferences of Cotton Growers and Manufacturers in Washington (1906) and Atlanta, Ga. (1907).

McOullough, Ernest, died Oct. 1, 1931.

McCurdy, Stewart LeRoy. American surgeon, died in Pittsburgh, Pa., Sept. 8, 1931. He was born in Bowerton, Ohio, July 15, 1859, and was graduated with the M.D. degree from the Ohio State University in 1881 and from the New York Post Graduate Medical School and Hospital in 1885. Since 1896 he had been professor of anatomy and oral surgery in the dental department of the University of Pittsburgh. He was also assistant professor of surgery in the medical department of that institution, surgeon for the Pennsylvania Railroad, and orthopedic surgeon at the Columbia Hospital, Pittsburgh. In addition to articles on orthopedic surgery in numerous medical journals, he wrote *Manual of Orthopedic Surgery* (1898); *Oral Surgery* (1901); *Arthroscopic Surgery* (1909); and *Oral Surgery* (1912).

McElroy, Rear Admiral George Wightman, U. S. N., Ret. American naval officer, died in Orlando, Fla., Jan. 6, 1931. He was born in Henry, Ill., Mar. 19, 1858, and was graduated from the U. S. Naval Academy in 1878. Appointed an assistant engineer in the Navy in 1880, he was promoted through the grades to rear admiral in 1916. During the Spanish-American War he served on the gunboat *Gloucester*, which played an important part in the destruction of Cervera's squadron in Santiago harbor July 3, 1898. For more than 20 years he was connected with the Navy's engineering department as inspector of machinery or engineering material. During the World War he was inspector of machinery and ordnance for the Fore River Shipbuilding Company, Quincy, Mass., and prior to his retirement in 1922 was inspector of engineering material for the Brooklyn district.

MacGeorge, William Stewart. British painter, died in Edinburgh, Nov. 9, 1931. Born at Castle Douglas, he attended the Royal Institution, Art School in Edinburgh and also studied at the Antwerp Academy under Verlat. He was elected an Associate of the Royal Scottish Academy in 1899 and an Academician in 1910. Among his works are "Hallowe'en" which was exhibited at the Paris Salon, "Border Ballads," at the Paris International Exhibition, and "Kirkcudbright," at the Scottish Modern Arts Association.

McGill, David Frazier. American clergyman, died in Avalon, Pa., Apr. 26, 1931. He was born in West Alexander, Pa., Mar. 22, 1857, and was graduated from Washington and Jefferson College in 1881 and from the Allegheny Theological Seminary in 1884. Ordained to the United Presbyterian ministry, he held pastorates in Allegheny, Pa., from 1885 to 1911 and in Ben Avon, Pa., from 1911 to 1915. At the time of his death he was professor of ecclesiastical history and church government at the Pittsburgh Theological Seminary. He was also associate editor of the *United Presbyterian* from 1891 to 1914, general secretary of the Young People's Christian Union from 1897 to 1900, principal clerk of the General Assembly of the United Presbyterian Church of North America after 1903, and treasurer of the Council of Reformed Churches in America Holding the Presbyterian System.

McGlennon, Cornelius A. American jurist, died in Newark, N. J., June 13, 1931. He was born in East Newark, N. J., Dec. 10, 1878, and was graduated from Seton Hall College, South Orange, N. J., in 1899. After acting as a public-school and high-school principal for 15 years, he was admitted to the New Jersey bar in 1916, and three years later was elected to the 66th Congress (1919-21) from the 8th New Jersey District. He also served as mayor of Newark and as a member of the New Jersey Senate. At the time of his death he was judge of the New Jersey Court of Errors and Appeals, to which he had been appointed in 1924 and reappointed in 1930.

McHenry, Edwin Harrison. American civil engineer, died in Ardmore, Pa., Aug. 21, 1931. He was born in Cincinnati, Ohio, Jan. 25, 1859, and attended the Pennsylvania Military Academy. Entering the employ

of the Northern Pacific Railway as a rodman in 1888, he was advanced to chief engineer in 1893, and was also chief engineer for the Canadian Pacific Railway from 1902 to 1904. He was then elected engineering vice president of the New York, New Haven & Hartford Railroad, and during his term from 1904 to 1911 supervised the electrification of the lines of this railroad from Stamford, Conn., to New York City and through the Hoosac Tunnel. He also assumed the vice presidency of the Boston & Maine Railroad in 1911, being in charge of construction, operation, and maintenance. On his resignation in 1913 he established the consulting engineering firm of McHenry & Murray in New Haven, Conn., but retired from active practice two years later.

McIntosh, William Carmichael, died Apr. 1, 1931. McKechnie, Sir James, British naval architect, died in London, Oct. 14, 1931. He was managing director of Vickers, Ltd., the naval ship and munitions works, which at Barrow-in-Furness produced, under his direction, during the World War every kind of armament for the British Navy. In addition to being a member of the council of the Institution of Naval Architects and a livyerman of the Worshipful Company of Shipwrights, he was a member of the consultative committee of the Marine Department of the Board of Trade and vice president of the Navy League. He was created a Knight Commander of the Order of the British Empire in 1918, and had previously received the Grand Cross of the Royal Order of Isabel the Catholic, of Spain, and the Order of the Rising Sun, of Japan, for services rendered to those countries.

MacKenna, Sir Bertram, died Oct. 10, 1931. MacKenty, John Edmund, died Dec. 11, 1931. MacKenzie, Frederick A. British journalist, died in Zeist, Holland, Apr. 31, 1931. He was born in Quebec, Canada, Sept. 17, 1869. Engaging in journalism in London, he became in 1900 war correspondent of the *Daily Mail*. Ten years later he was appointed editor of the London *Times* weekly edition, and after 1914 served as editor of special numbers of that newspaper. After the Russian Revolution he decided to make a study of the methods of the Soviet Government, and in 1921 was appointed correspondent of the Chicago *Daily News* in Russia and northern Europe. He was president of the Association of Foreign Journalists in Russia in 1923. On his return to England in 1926 he was engaged in an extensive lecture tour, and prior to his death was London correspondent for the *Japan Advertiser* and *Jiji Shimpu* of Tokyo. Among his works are *From Tokyo to Tiflis* (1905); *The Unveiled East* (1907); *The Tragedy of Korea* (1908); *Through the Hindenburg Line* (1919); *Korea's Fight for Freedom* (1920); *Russia before Dawn* (1923); *King George V—In His Own Words* (1929); *The Clash of the Cymbals*; *The Secret History of the Revolt in the Salvation Army* (1929); *Booth-Tucker, Sadhu and Saint* (1930); *The Russian Crucifixion* (1930); and *Beaverbrook* (1931).

MacKenzie, James Cameron, died May 10, 1931. McKibbin, William, American theologian, died in Cincinnati, Ohio, Dec. 20, 1931. He was born in Pittsburgh, Pa., May 24, 1850, and was graduated from Princeton in 1869 and from the Western Theological Seminary in 1873. Ordained to the Presbyterian ministry, he was successively pastor until 1904 of the Seventh Church, Pittsburgh; Central Church, St. Paul, Minn.; Second Church, Pittsburgh; and First Church, Walnut Hills, Cincinnati, Ohio. He then became president, and professor of systematic theology, at the Lane Theological Seminary in Cincinnati, where he remained until 1925.

McLean, William L. American newspaper publisher, died in Germantown, Pa., July 30, 1931. He was born in Mt. Pleasant, Pa., May 4, 1852. After being connected with the business departments of the Pittsburgh *Leader* (1872-78) and the Philadelphia *Press* (1878-95), he purchased the Philadelphia *Bulletin*, of which he was publisher until his death. He was also a director of the Associated Press from 1896 to 1924 and of the American Newspaper Publishers Association from 1899 to 1905.

McMillan, Margaret, died Mar. 29, 1931. McMillan, Sir Robert Furse, British jurist, died in Perth, Australia, Apr. 23, 1931. He was born in London, Jan. 24, 1858, and was educated at Trinity Hall, Cambridge. Called to the bar of the Inner Temple in 1881, he joined the Western Circuit, becoming a judge in 1902. In 1906, having migrated to Australia, he was appointed a puisne judge of the Supreme Court of Western Australia and was advanced to be Chief Justice in 1913. He was elected Lieutenant-Governor of Western Australia in 1921. He also was knighted in 1916, and in 1925 was created a Knight Commander of St. Michael and St. George.

Macnamara, Thomas James, died Dec. 4, 1931. MacVeagh, Charles, died Dec. 4, 1931. Maffi, Pietro, Cardinal, Italian prelate of the Roman Catholic Church, died in Pisa Mar. 17, 1931, aged 73.

Elevated to the archbishopric of Pisa, he was created cardinal priest by Pope Pius X in 1907.

Main, John Hanson Thomas, American educator, died in Grinnell, Iowa, Apr. 1, 1931. He was born in Toledo, Ohio, Apr. 2, 1859, and was graduated from Moores Hill (Ind.) College in 1881 and with the Ph.D. degree from Johns Hopkins University in 1892. After acting as professor of ancient languages at Moores Hill College from 1880 to 1889, he became assistant professor of Greek and Latin at the Woman's College of Baltimore in 1890 and senior fellow in Greek at Johns Hopkins University the following year. He then went to Iowa (later Grinnell) College, where he was Carter professor of Greek language and literature (1892-1900), acting president (1900-02), dean of the faculty (1902-08), and president (after 1906). He was a member of the American Relief Commission to the Near East in 1919 and a trustee of the Carnegie Foundation for the Advancement of Teaching after 1924.

Malet, Lucas. See Harrison, Mary St. Leger. Mann, Louis, died Feb. 15, 1931. Manning, Richard Irvine, died Sept. 11, 1931. Marquis, John Abner, died July 5, 1931. Martinez y Ortiz, Rafael, Cuban diplomat, died in Paris, France, July 9, 1931. He had been Minister to France since 1913, with the exception of 1926-28 when he exchanged his post with Carlos Manuel de Céspedes to become Secretary of State.

Martini, Fausto Maria, Italian novelist, playwright, and critic, died in Rome, Apr. 12, 1931, aged 45. Outstanding among his dramas are *L'Altra Navella*, which was written in the Prandello tradition, *Il Fiore Sotto Gli Occhi*, and *La Sira del Trenta*. His temperament, however, which preferred simplicity in plot and treatment, found a more congenial outlet in such novels as *Virginia* and *Il Cuore che m'ha dato*. His works were translated into several foreign languages.

Matheson, Kenneth Gordon, died Nov. 29, 1931. Matthews, (Joseph) Merritt, American chemist, died in San Diego, Calif., Oct. 12, 1931. He was born in Philadelphia, Pa., June 9, 1874, and was graduated from the University of Pennsylvania in 1895, receiving the Ph.D. degree in 1898. After acting as head of the department of chemistry and dyeing at the Philadelphia Textile School, he became manager of the dyeing department of the New England Cotton Yarn Company in 1907 and in 1910 entered on his own practice as consulting chemist and expert in textile chemistry and dyes. He also was editor of *Color Trade Journal* after 1917, and a member of the National Research Council and a fellow of the American Association for the Advancement of Science. He was the author of "Dye-stuffs" in Allen's *Commercial Organic Analysis* (1900), *Laboratory Manual of Dyeing and Textile Chemistry* (1909); *Application of Dyestuffs* (1920); *Bleaching Technology* (1921); and *Textile Fibres* (1924).

Maudslay, Alfred Percival, British archaeologist, died near Hereford, England, Jan. 23, 1931. Born in 1850, he attended Harrow and Trinity Hall, Cambridge. After acting as private secretary to the governors of Trinidad, Queensland, and Fiji from 1873 to 1880, he became acting colonial secretary of Fiji and in 1881 was promoted to deputy commissioner for Tonga and Samoa and acting consul-general for the Western Pacific. About this time, as the result of a journey through Central America, he became interested in Mayan and Aztec civilization and for more than a quarter of a century devoted himself chiefly to the investigation of sites and the study of sources, reviving through his enthusiasm an interest in Central American archaeology. He was president of the Royal Anthropological Institute during 1911-12. His publications include *Biologia Centrali Americana* (4 vols., 1889-1902); *A Glimpse of Guatemala* (1899); and *Life in the Pacific Fifty Years Ago* (1890).

May, Thomas, British archaeologist, died in Stratford-on-Avon Oct. 28, 1931, aged 90. He was engaged for six years in the excavation of the Roman industrial site at Wilderspool, near Warrington, and another six were spent investigating the site of the Roman fortifications at Templeborough. At the time of his death he was examining the Roman remains at Tiddington, on the outskirts of Stratford-on-Avon. He also was the author and illustrator of two works describing the Roman pottery found at Silchester and Colchester.

Mayer, Emil, American laryngologist, died Oct. 20, 1931 in New York City where he was born May 23, 1854. He attended the College of the City of New York and was graduated from the College of Pharmacy in 1873 and from the University Medical College (New York University) in 1877. During 1893-1904 he was surgeon and chief of clinic in the throat department of the New York Eye and Ear Infirmary, and during 1904-19 attending laryngologist at Mt. Sinai Hospital and chief of clinic in the throat and ear department of the Mt. Sinai Dispensary. He then became consulting laryngologist at that hospital, retiring in 1926. In 1920 he was president of the American Academy of Ophthal-

mology and Oto-Laryngology, and in 1922 of the American Laryngological Association.

Mead, George Herbert, died Apr. 25, 1931.

Meigs, Montgomery. American civil engineer, died in Keokuk, Iowa, Dec. 9, 1931. He was born in Detroit, Mich., Feb. 27, 1847, and attended the Lawrence Scientific School, Harvard, and the Royal Polytechnic School, Stuttgart, Germany. From 1874 until his retirement in 1926 he was engaged, as U. S. engineer, on improvements of the Mississippi River from St. Paul to the mouth of the Missouri River. He was in charge of the Des Moines Rapids canal and during 1910-13 constructed the lock, dry dock, and power developments in the Mississippi River at Keokuk, Iowa. He invented a "canvas cofferdam" for foundation work and like constructions.

Melba, Dame Nellie, died Feb. 23, 1931.

Merriam, William Rush. American banker and former Governor of Minnesota, died in Port Sewall, Fla., Feb. 18, 1931. He was born at Wadham's Mills, Essex Co., N. Y., July 26, 1849, and was graduated from Racine (Wis.) College in 1871. Becoming associated with the Merchants National Bank of St. Paul, he was appointed cashier in 1878, vice president in 1880, and president in 1882. He also was elected a member of the Minnesota Legislature in 1882 and was appointed speaker of the House in 1886. In 1889 he became Governor of Minnesota, serving for two terms until 1893. During 1898-1903 he was director of the United States Census.

Mozes, Sidney Edward, died Sept. 10, 1931.

Michelson, Albert Abraham, died May 9, 1931.

Miller, Leverett Saltonstall. American railroad executive, died Mar. 21, 1931, in New York City where he was born May 23, 1865. On graduation from the Rensselaer Polytechnic Institute in 1885, he was appointed maintenance engineer for the Denver, Utah & Pacific Railroad. Later he was engineer for the Colorado Railroad, chief engineer for the Alabama Eastern Railroad, assistant superintendent of the New York, Providence & Boston Railroad, and chief engineer and later assistant general manager of the St. Paul & Duluth Railroad. He had also served as general manager of the Seattle & International Railroad, of the Tennessee Central Railway, and of the Central New England Railway. In 1909 he became president of the New York, Westchester & Boston Railway, whose construction he had supervised, and was also president of the affiliated companies, the New York & Stamford Railway and the County Transportation Company. He retired in 1930.

Mills, Charles Karsner, died May 28, 1931.

Monash, Gen. Sir John, died Oct. 8, 1931.

Montgomery, J(ohn) Knox. American clergyman and educator, died in Shanesville, Ohio, Dec. 30, 1931. He was born in Belfast, Tenn., Aug. 4, 1861, and attended the Indiana State University and Xenia (Ohio) Theological Seminary. Ordained to the United Presbyterian ministry in 1887, he was pastor in Harshaville, Ohio; Sparta, Ill.; Cincinnati, Ohio; Chicago, Ill.; and Charlotte, N. C., acting also as editor of *The Evangel* during 1894-1902 and as general secretary of young people's work in the South during 1903-04. In 1904 he was elected president of Muskingum College, New Concord, Ohio, and in 1931 moderator of the United Presbyterian Church of North America.

Mooney, Charles A. American congressman, died in Cleveland, Ohio, May 29, 1931. He was born in St. Marys, Ohio, Jan. 5, 1879. He became associated with the Michigan Mutual Life Insurance Company in 1903, acting as district agent at Cleveland from 1909 to 1913, and thereafter as State agent for the National Life Insurance Company. In 1915 he was elected to the Ohio State Senate, and in 1919 became a member of the 66th Congress. He also served in the 68th to 71st Congresses as representative from the 20th Ohio District. He was a member of the Rivers and Harbors Committee, favoring the development of the St. Lawrence waterway project, and was a staunch opponent of child labor and prohibition.

Moór, Emanuel. British composer and inventor, died at Mt. Pélerin, Switzerland, Oct. 21, 1931. Born in Hungary in 1862, he studied music in Budapest and Vienna and toured the United States in 1885 as director of the Concerts Artistiques. He was the inventor of the Duplex-Coupler piano on which recital-demonstrations had been given in New York, London, and other cities by Winifred Christie and Max Pirani since 1921. Its feature was a second keyboard with a duplex-coupler, sounding an octave higher and thereby providing a greater range of sonority. There also was a contrivance which, by pressing a button, converted the instrument into a harpsichord with a fuller tone than its prototype. Moór was the composer of the operas *Die Pompadour* and *Andrea Hofer* produced in Cologne in 1902 and *Hochzeitstücken* produced in Cassel in 1908, seven symphonies, rhapsody for violin and orchestra, piano concerto and piano pieces, and songs.

Moore, Clarence Lemuel Elisha, died Dec. 5, 1931.

Moore, Clifford Herschel, died Aug. 31, 1931.

Moore, Rear Admiral Edwin King, U.S.N., Ret. American naval officer, died in Atlantic City, N. J., Sept. 2, 1931. He was born in Georgetown, Ohio, July 24, 1847, and was graduated from the U. S. Naval Academy in 1868. Promoted through the grades, he became commander in 1899, captain in 1903, and rear admiral in 1908. During 1899-1901 he commanded the *Helena* stationed in the Philippines, and on his return to the United States was appointed commander of the Boston Navy Yard. He was a member of the Naval Examining and Retiring Boards during 1906-07, and prior to his own retirement in 1909 served as commander of the Navy Yard at Portsmouth, N. H.

Moore, Frank Frankfort, died May 11, 1931.

Moore, George Foot, died May 16, 1931.

Moore, Mary (Lady Wyndham), died Apr. 6, 1931.

Moore, Richard Bishop, died Jan. 20, 1931.

Moore, Veranus Alva, died Feb. 11, 1931.

Morrow, Dwight Whitney, died Oct. 5, 1931.

Morrow, William. American publisher, died in New York City Nov. 11, 1931. He was born in Dublin, Ireland, June 15, 1873, and was brought to the United States in childhood. On graduation from Harvard in 1900, he joined the staff of *McClure's Magazine* and later that of *Leslie's Monthly*. From 1906 to 1925 he was associated with Frederick A. Stokes Company, publishers, part of which time he was secretary. In 1926 he organized his own publishing firm.

Morton, Michael, died Jan. 11, 1931.

Müller, Hermann, died Mar. 20, 1931.

Mulliken, Alfred Henry. American industrialist, died in New Canaan, Conn., Sept. 2, 1931. He was born in Augusta, Me., in 1854 and began his business career in 1868 as office boy for Orer, Adams & Co., dealers in railroad equipment, in Chicago. In 1880, with Asa G. Pettibone, he organized the firm of Pettibone and Mulliken, which was incorporated five years later for the manufacture of railway supplies, including the Jenne track-hack and the roller railbender. He acted as secretary and treasurer after 1885, and as president from 1912 until his retirement in 1928. During the World War he was representative at Washington for 14 similar manufacturing companies in their relationship with the Federal Government in its operation of the principal railroads of the United States. He also was chairman of the board and president of Mulliken & Roberts, Inc., investment bankers in New York City.

Munn, John Pixley. American life insurance official, died in New York City, Aug. 15, 1931. He was born at Gates, near Rochester, N. Y., Dec. 11, 1847, and was graduated from the University of Rochester in 1870 and with the M.D. degree from Bellevue Hospital Medical College, New York City, in 1876. After acting as assistant medical director for the United States Life Insurance Company, he became medical director in 1883 and president in 1902. At the time of his death he was chairman of the board of directors. He also was president of the Arlington Refrigerator Company, director of numerous banks and manufacturing concerns, and a member of the Council of New York University.

Munro, John. American publisher, died in New York City, Aug. 2, 1931, aged 64. On graduation from Cornell University in 1888, he became associated with the publishing house of his father, George Munro & Co. He helped promote the paper-back series of classics and standard works, and later of "dime novels," for which this firm became noted. On his retirement in 1906 he became a director in the National Nassau Bank of New York City.

Murdock, Rear Admiral Joseph Ballard, died Mar. 20, 1931.

Mussolini, Arnaldo. Italian editor, died in Milan Dec. 21, 1931, aged 46. A younger brother of Benito Mussolini, he became associated with him in 1915 as business manager of *Il Popolo d'Italia*, assuming the editorship in 1922 when his brother became Premier. He also was president of the National Press Commission. *Il Popolo d'Italia*, with a circulation of about 80,000, was the chief Fascist journal, its editorials being accepted as expressions of the Premier's own opinions.

Myers, George William. American mathematician, died in Chicago, Ill., Nov. 23, 1931. He was born in Champaign Co., Ill., Apr. 30, 1884, and was graduated from the University of Illinois in 1888, receiving the Ph.D. degree from the University of Munich in 1896. After acting as professor of astronomy and applied mathematics at the University of Illinois, he became in 1901 professor of teaching of mathematics and astronomy in the School of Education at the University of Chicago, holding this chair until 1929. He was author and co-author of many books on this subject, among which are *First-Year Mathematics for Secondary Schools* (1907); *Geometric Exercises for Algebraic Solution* (1907); *Second-Year Mathematics for Secondary Schools* (1909); *Teachers' Manual for First-*

*Year Mathematics* (1911); and *Myers' Elementary Algebraic Geometry* (1921).

Nehru, Pandit Motilal, died Feb. 6, 1931.

Neill, Charles Ernest. Canadian banker, died in Montreal, Quebec, Dec. 16, 1931. He was born in Fredericton, N. B., May 27, 1873. Entering the service of the Royal Bank of Canada in 1889, he was promoted to chief inspector in 1903, assistant general manager in 1907, general manager in 1916, vice president in 1927, and managing director in 1929. He was president of the Canadian Bankers' Association in 1926-27. He also was a governor of McGill University.

Nelson, The Rt. Rev. Richard Henry. American clergyman, died in Albany, N. Y., Apr. 25, 1931. He was born in New York City, Nov. 10, 1859, and attended Trinity College, the University of Leipzig, and the Berkeley Divinity School. On ordination to the ministry of the Protestant Episcopal Church, he served as assistant rector of St. John's Church, Stamford, Conn. (1883-84) and as rector of Grace Church, Waterville, N. Y. (1884-87), Christ Church, Norwich, Conn. (1887-97), and St. Peter's Church, Philadelphia, Pa. (1897-1904). He was consecrated bishop coadjutor of Albany May 19, 1904, and succeeded to the bishopric on the death of the Rt. Rev. William Croswell Doane in 1913. He retired in 1929.

Nevin, James Banks. American journalist, died in Atlanta, Ga., Nov. 18, 1931. Born in Rome, Ga., Sept. 9, 1873, he was graduated from the University of Georgia in 1892, and was successively city editor and managing editor of the *Rome Tribune* (1900-06) and associate editor of the *Washington* (D. C.) *Herald* (1906-10). When William Randolph Hearst acquired the *Atlanta Georgian* in 1910, he was engaged as managing editor of that paper and of the *Sunday American*. Two years later he became editor-in-chief of the *Georgian*, in which capacity he was serving at the time of his death.

Newcombe, Edmund Leslie, died Dec. 9, 1931.

Nibley, Charles Wilson. American Mormon leader, died in Salt Lake City, Utah, Dec. 11, 1931. Born in Huntersfield, Midlothian Co., Scotland, Feb. 5, 1849, he was brought to the United States in childhood. From 1907 to 1925 he was presiding bishop of the Church of Jesus Christ of Latter-Day Saints, and from 1925 until his death second counselor in the first presidency. He also was vice president of Brigham Young College.

Nicholson, Brig. Gen. William Jones, U.S.A. Ret. American soldier, died Dec. 20, 1931, in Washington, D. C., where he was born Jan. 16, 1856. Commissioned a 2d lieutenant of cavalry in the U. S. Army in 1876, he was advanced through the grades to colonel in 1912, having served in the Spanish-American War and the Mexican Punitive Expedition. During the World War he was commander of Camp Meade and Camp Upton, and overseas participated in the Meuse-Argonne offensive as commander of the brigade of the 79th division that included the 313th and 314th Infantry. He received the Distinguished Service Cross and the Distinguished Service Medal, and following his retirement in 1920 was promoted to the rank of brigadier general by special act of Congress in 1927.

Nielsen, Carl August. Danish composer, died in Copenhagen, Oct. 8, 1931. He was born near Odense, June 9, 1865, and attended the Royal Conservatory in Copenhagen. During 1889-1905 he was violinist of the Royal Chapel. He also was conductor of the Royal Opera for two years and later became a member of the board of governors of the Royal Conservatory. In 1915 he became director of the *Musikforening* (Music Society). He was one of the foremost of modern Scandinavian composers, but did not ally himself with any special coterie or trend of his five symphonies, No. 3, *Espansiva*, and No. 4, *L'Inestinguibile*, were a sensational success. He also composed the concert overture, *Helios*; the operas, *Saul and David* and *Macarade*, both of which were produced at the Royal Opera; the music to Oehlenschläger's drama, *Aladdin*; four string quartets; two violin sonatas; and many songs and ballads.

Nolens, Mgr. Willem Hubert. Dutch statesman, died at The Hague Aug. 27, 1931. He was born in Benlo Sept. 7, 1860, and took orders in the Roman Catholic Church. In 1896 he was elected to the Second Chamber, where he became parliamentary leader of the Catholic party and its most influential director. After 1909 he was professor of labor legislation at the Municipal University, Amsterdam. He also was president of the High Labor Council and collaborated in international labor legislation at Geneva. In 1923 he was Minister of State.

Normand, Jacques Clary Jean. French dramatist, poet, and novelist, died May 28, 1931, in Paris where he was born Nov. 25, 1848. In 1898 he collaborated with Guy de Maupassant in writing *Musotte*. His other plays include *Le troisième Larron* (1875); *L'Aurélios* (1882); *L'Amiral* (1880); *La Douceur de croire* (1899); *Monieur et Madame Dugazon* (1902); and *On n'oublie pas* (1904), the majority of which were

produced at either the Odéon or the Comédie-Française. Among his poems are *La Muse qui trotte* (1894); *Théâtre de poche* (1907); *Paravents et tréteaux* (1908); *Les moineaux francs* (1909); *La maison d'éclair* (1914); *La loutrie sauplant* (1916); *Les drapeaux déployés* (1919); and *Le caprice des heures* (1927). His fiction includes *Le Monde où nous sommes* (1884); *Contes à Madame* (1890); and *Du triest au gai* (1900). His work was crowned once by the Académie des Inscriptions et Belles-lettres and twice by the Académie française.

Nugent, John F. American lawyer and ex-Senator, died in Silver Spring, Md., Sept. 18, 1931. He was born in La Grande, Ore., June 28, 1868, and was admitted to the Idaho bar in 1898, practicing in Silver City. He served for four terms as prosecuting attorney for Owyhee County, Idaho, and was also chairman of the Democratic Central Committee of that county and of the State Democratic Central Committee for two terms. In 1918 he was appointed by Governor Moses Alexander to fill the vacancy in the United States Senate caused by the death of James H. Brady, and was elected in November of that year for the ensuing term. He resigned in 1921, however, to accept an appointment by President Wilson to the Federal Trade Commission on which he served until 1927. At the time of his death he was senior member of the law firm of Nugent and O'Hara in Washington, D. C. He had also organized in February, 1931, the National Chamber of Associated Merchants to oppose the development of chain stores.

Nyrop, Kristoffer, died Apr. 18, 1931.

Oakes, George Washington Ochs, died Oct. 26, 1931. Oakley, Russell A. American agronomist, died in Monrovia, Calif., Aug. 6, 1931. He was born near Marysville, Kans., Sept. 7, 1880, and was graduated from the Kansas State Agricultural College in 1903. Appointed a scientific aid in the Office of Agrostology of the U. S. Department of Agriculture in 1903, he served continuously in that department until his death. From 1913 to 1926 he was in charge of the Office of Seed Distribution of the Bureau of Plant Industry, and after 1926 was senior agronomist in charge of the Division of Forage Crops and Diseases. He was also for several years assistant chairman of the Federal Horticultural Board and a member of the Advisory Federal Plant Quarantine Board. His researches were confined mostly to investigations of alfalfa and turf grasses.

O'Callaghan, Sir Desmond, Dykes Tynte. British army officer, died in London Mar. 16, 1931. Born Jan. 25, 1843, he attended the Ordnance School at Carshalton and the Royal Military Academy at Woolwich. After serving with the field and garrison artilleries in Canada, Bermuda, and South Africa, he was made major general and commanded the Royal Artillery in Malta during 1900-05. He also served for many years on the staff of the Director of Artillery at the War Office, and was successively secretary and president of the Ordnance Committee and Ordnance Board. In 1905 he received the Distinguished Service Reward, and in 1908 was created Knight Commander of the Royal Victorian Order. He was the author of *Guns, Gunners, and Others* (1925).

O'Connor, Sir James. Irish jurist, died in Dulwich, near London, Dec. 29, 1931. Born in Wexford, Ireland, Apr. 1, 1872, he attended Blackrock College, Dublin, and was admitted to the Irish bar in 1900. In 1908 he was called to the Inner Bar. He was solicitor-general for Ireland during 1914-16, attorney-general during 1916-18, and Lord Justice of Appeal during 1918-25. In 1925 he was made a King's Counsel and was called to the bar of the Middle Temple; on his retirement four years later he was re-admitted to the Irish bar as a solicitor. He was knighted in 1925 and was the author of *History of Ireland* (1925).

Oldenburg, Frederick Augustus, Grand Duke of See Frederick Augustus, Grand Duke.

Olds, George Daniel, died May 11, 1931.

Orpen, Sir William, died Sept. 29, 1931.

Oulahan, Richard Victor, died Dec. 30, 1931.

Page, Alfred Rider. American jurist, died in Southampton, Long Island, N. Y., Feb. 8, 1931. He was born in Carlinville, Ill., Oct. 7, 1859, and was graduated from New York University in 1880. In addition to his private practice in New York City, he was attorney for the board of excise in 1895 and for the State department of excise from 1896 to 1900. In 1905 he was elected to the New York State Senate, where he introduced the public service commission, mortgage tax, eighty-cent gas, and eight-hour child labor laws. In 1910 he was elected to the New York Supreme Court for the term ending Dec. 31, 1923, and in 1916 was assigned to the Appellate Division of the 1st Department.

Pammel, Louis Hermann. American botanist, died Mar. 23, 1931, en route to Ames, Iowa, from California. He was born in La Crosse, Wis., Apr. 19,

1862, and was graduated from the University of Wisconsin in 1885, receiving the Ph.D. degree from Washington University in 1898. In 1889 he became professor of botany, and botanist of the experimental station, at the Iowa State College of Agriculture and Mechanic Arts. He was a pioneer in the study of the flora of the plains and Rocky Mountains, and was also active in the field of conservation, writing the Iowa Conservation Bill and serving during 1918-27 as first president of the Iowa State Board of Conservation. He was an authority on morphology, ecology, and plant pathology and was the author of *Weeds of the Farm and Garden* (1910) and *A Manual of Poisonous Plants* (2 vols., 1910).

Panaretoff, Stephen. Bulgarian diplomat, died in Washington, D. C., Oct. 19, 1931, aged 78. Born in Sliven, Bulgaria, he attended Robert College in Constantinople. After acting as instructor for six years he was made in 1877 professor of Bulgarian and Slavic Languages and Literature at that institution. In 1914 he became the first Bulgarian Minister to the United States, serving until 1925. After his retirement he remained in Washington, lecturing at Georgetown and George Washington Universities.

Parr, Sir Robert (John). British welfare worker, died in London Apr. 11, 1931. He was born in Torquay Apr. 12, 1862. In 1899 he joined the staff of the National Society for the Prevention of Cruelty to Children, serving successively as assistant secretary and assistant director. In 1905 he was made director, which position he retained until his appointment in 1924 as a member of the Home Office committee on assaults on young persons. After 1927 he was consulting director of the society. The Order of the British Empire was conferred on him in 1917, and he was knighted in 1926. He was also editor, from 1905 to 1927, of the *Child's Guardian*.

Parr, Samuel Wilson, died May 16, 1931.

Parsons, Sir Charles Algernon, died Feb. 12, 1931.

Parsons, Payn Bigelow. American bacteriologist, died in New York City, Sept. 19, 1931. He was born in Baldwinville, N. Y., Feb. 12, 1872, and was graduated from Williams College in 1892 and from the Albany Medical College in 1897, later studying at the Cornell Medical College during 1904-06. In 1905 he was appointed bacteriologist in the conduct of the New York subway air investigation, and in 1907 was a member of the Pollution Commission and the Metropolitan Sewerage Commission, directing the laboratories of the latter from 1909 to 1913. He was then appointed chief bacteriologist for the New York laboratory of the U. S. Bureau of Chemistry, and after 1925 was bacteriologist for the New York State Conservation Commission.

Paul, Capt. Henry Martyn, U.S.N., Ret. American astronomer, died in Washington, D. C., Mar. 15, 1931. He was born in Dedham, Mass., June 25, 1851, and was graduated from Dartmouth College in 1873, receiving the C.E. degree in 1875 and A.M. degree in 1876 from that institution. Until 1880 he was assistant astronomer with the United States Naval Observatory, and then went to Japan as professor of astronomy at the Imperial University in Tokyo. He returned to the Naval Observatory in 1893, where he served as astronomer during 1897-99. In 1897 he also was appointed professor of mathematics with the U. S. Navy, being assigned as engineer to the bureau of yards and docks from 1899 to 1905 and as instructor in mathematics at the U. S. Naval Academy from 1905 to 1912. He retired in 1913.

Pawlowna, Anna, died Jan. 23, 1931.

Pensfield, Walter Scott, died Apr. 11, 1931.

Penniman, James Hosmer. American historian, died in Philadelphia, Pa., Apr. 6, 1931. He was born in Alexandria, Va., Nov. 8, 1860, and was graduated from Yale in 1884, after which he taught in Philadelphia. He founded three libraries of education—the Penniman Memorial Library at Brown University; the Maria Hosmer Penniman Memorial Library at the University of Pennsylvania; and the Penniman Memorial Library at Yale. He was also noted as a biographer of George Washington and was the author of the plan to honor the 200th anniversary of Washington's birth in 1932 by the construction and dedication of "The Highway of the Thirteen Original States," 13 miles in length from Washington to Mt. Vernon, each of the original States building one mile. His works include *Books and How to Make the Most of Them* (1910); *George Washington as Commander-in-Chief* (1917); *George Washington as Man of Letters* (1918); *George Washington at Mt. Vernon* (1921); *Our Debt to France* (1921); *What Lafayette Did for America* (1921); and *Philadelphia in the Early Eighteen Hundreds* (1923).

Penrose, Richard Alexander Fullerton, Jr., died July 31, 1931.

Perrin, John. American banker, died in Washington, D. C., Dec. 27, 1931. He was born in Rossville, Ind., Jan. 17, 1857, and was graduated from Yale Uni-

versity in 1879. In 1890 he entered the Perrin National Bank in Lafayette, Ind., which had been founded by his father, and ten years later organized the American National Bank in Indianapolis, of which he was president until its consolidation with the Fletcher National Bank in 1910. He was chairman of the board of the Fletcher-American National Bank during the next two years, and then removing to San Francisco, Calif., served as chairman of the Federal Reserve Bank of the Twelfth District from 1914 to 1926.

Peyton, General Sir William Elliot, died Nov. 14, 1931.

Pieper, Franz August Otto. American theologian, died in St. Louis, Mo., June 8, 1931. He was born in Orwitz, Pomerania, Germany, June 27, 1852, and on coming to the United States in 1870 completed his education at Northwestern University. He was graduated from the Concordia Lutheran Theological Seminary in 1875 and was ordained to the Lutheran ministry in the same year. After serving as pastor in Manitowoc, Wis., he became in 1878 professor of theology and in 1887 president of the Concordia Seminary. He was also president-general of the Evangelical Lutheran Synod of Missouri, Ohio, and Other States from 1899 to 1911, and had acted as editor of *Lehre und Wehre* since 1878. Outstanding among his works are: *Distinctive Doctrines of the Lutheran Church* (1892); *Das Wesen des Christentums* (1908); *Christliche Dogmatik* (1917); *Das Fundament des Christlichen Glaubens* (1925); and *Die Kraft des Evangeliums* (1927).

Plunkett, Rear Admiral Charles Feshall, died Mar. 25, 1931.

Polak, John Osborne. American gynecologist, died June 29, 1931, in Brooklyn, N. Y., where he was born Mar. 12, 1870. He was graduated from the University of Vermont in 1889 and in 1891 secured his medical degree at the Long Island College Hospital. He practiced for several years and then became professor of obstetrics in the medical school at Dartmouth College in 1901. In 1910 he assumed the chair of obstetrics and gynecology at the Long Island College Hospital, and in 1931 was elected president of the board of regents of that institution. He was also consulting gynecologist at the Deaconess, Bushwick, Coney Island, and Williamsburg Hospitals in Brooklyn and the People's Hospital in Manhattan. His works include *Students' Manual of Obstetrics* (1914) and *Students' Manual of Gynecology* (1915).

Pomph, Basilio, Cardinal, died May 5, 1931.

Porter, Charles Allen. American surgeon, died in Boston, Mass., July 3, 1931. He was born in Cambridge, Mass., Sept. 9, 1866, and was graduated from Harvard in 1888, receiving the M.D. degree from that institution in 1892. He practiced in Boston until his retirement in 1927, acting also as surgeon-in-chief at the Massachusetts General Hospital, and was associated with the Harvard Medical School as instructor in surgery (1899-1909), assistant professor (1909-12), associate professor (1912-15), professor of clinical surgery (1918-22), and John Homans professor of surgery (1922-27). He was a past president of the New England Surgical Society.

Porter, James Temple. American physicist and educator, died in Knoxville, Tenn., Aug. 27, 1931. He was born in Bath Co., Va., Sept. 29, 1873, and was graduated from Randolph-Macon College in 1895 and with the Ph.D. degree from Johns Hopkins University in 1905. After acting as instructor at Martha Washington College, Abingdon, Va. (1895-96), Randolph-Macon Academy, Front Royal, Va. (1898-1901), and Williams College (1905-06), he became adjunct professor of physics at Randolph-Macon Woman's College in 1906 and associate professor of physics at the University of Tennessee in 1908. He was appointed professor at the latter institution in 1910, assistant dean of the college of liberal arts in 1919, and dean in 1925. He wrote *Selective Reflection in the Infra-Red Spectrum* (1905).

Potjes, Edouard. Belgian pianist and composer, died in Seattle, Wash., Jan. 4, 1931. He was born in Nimwegen, the Netherlands, in 1862. At one time he was head of the advanced piano department of the Belgium Royal Conservatory of Music in Ghent. His best known works were the operas *Ariane* produced in Ghent in 1903 and *Lorenzo Murano* produced in Antwerp in 1912.

Power, Tyrone, died Dec. 30, 1931.

Prentiss, Robert Riddick. American jurist, died in Richmond, Va., Nov. 25, 1931. He was born in Charlottesville, Va., May 24, 1855, and was graduated from the University of Virginia in 1876. Admitted to the bar, he practiced successively until 1895 in Charlottesville, Norfolk, and Suffolk, Va. He then became a judge of the Virginia Circuit Court (Norfolk Circuit), and on his resignation in 1907 became chairman of the State Corporation Commission. In 1916 he was appointed justice of the Supreme Court of Appeals of Virginia, and in 1925 chief justice. He also was chairman of the Commission on Revision and Amendment

of the Virginia Constitution (1927) and of the Virginia Judicial Council (1929).

Presbrey, Eugene W., died Sept. 9, 1931.

Pretyman, Ernest George, British politician, died in London, Nov. 26, 1931. He was born in Lincoln Nov. 13, 1860. After attending the Royal Military Academy, Woolwich, he entered the Royal Artillery in 1880 but retired nine years later. In 1895 he was elected to the House of Commons as Conservative representative for Suffolk, Woodbridge, holding this seat until 1906. He was returned as Conservative representative of Essex, Chelmsford, in 1908 and served until 1923. He was Civil Lord of the Admiralty (1900-03), secretary to the Admiralty (1903-06), Parliamentary secretary of the Board of Trade (1915-16), and again Civil Lord of the Admiralty (1916-19).

Pritche-Pattison, Andrew Seth, died Sept. 1, 1931.

Pritchard, Frederick J., American agricultural expert, died in Washington, D. C., Jan. 13, 1931. He was born in Camanche, Iowa, Dec. 24, 1874. On graduation from the University of Nebraska in 1904 he served as instructor in botany and bacteriology at the North Dakota Agricultural College, being appointed later assistant professor of botany and pathologist at the North Dakota Agricultural Experiment Station. In 1907 he was made assistant in plant breeding at the New York State Agricultural College at Cornell University, where he also served until 1909 as special agent of the U. S. Department of Agriculture. In 1910 he was transferred to Washington where he was engaged by the Bureau of Plant Industry as plant physiologist in the breeding of sugar beets and disease-resistant tomatoes. At the time of his death he was senior physiologist in the Office of Horticultural Crops and Diseases.

Procter, Joan Beauchamp, British zoologist, died Sept. 20, 1931, in London where she was born Aug. 5, 1897. On being graduated from St. Paul's Girls' School in 1917, she worked with Dr. G. A. Boulenger in the London Natural History Museum on reptilia and batrachia and for a time was temporary assistant there in charge of these collections. In 1923 she was appointed curator of reptiles for the Zoological Society of London, and during the next five years designed and had charge of such installations as the rock-work for the aquarium at the zoological gardens, the monkey hills, and the reptile house. She had also been since 1923 secretary of the World List of Scientific Periodicals Company, and from 1920 to 1924 was recorder for reptilia and batrachia for the annual *Zoological Record*.

Putnam, Ruth, American author, died in Geneva, Switzerland, Feb. 12, 1931. She was born in Yonkers, N. Y., in 1857 and was graduated from Cornell University in 1878. Her works include *William the Silent* (2 vols., 1894); *Annetje Jan's Farm* (1897); *A Medieval Princess* (1904); *Charles the Bold* (1908); *Alace and Lorraine* (1915); *The Name of California* (1916); and *Lucemburg and Her Neighbors* (1918). She also edited the *Life and Letters of Mary Putnam Jacobi* (1925).

Putti, Lya de, Hungarian actress, died in New York City Nov. 27, 1931, aged 32. After being featured in German films, she came to the United States in 1926, appearing in *The Sorrows of Satan*, *God Gave Me Twenty Cents*, *The Prince of Tempters*, *The Heart Thief*, and *The Scarlet Lady*. In 1929 she went to England under contract with the British International Pictures, but returned to the United States the following year to appear on the legitimate stage.

Ragonese, Francesco, Cardinal. Prelate of the Roman Catholic Church, died in Poggia Acaiano, Italy, Sept. 14, 1931. Born in Bagnola in 1850, he had served as Apostolic Delegate to Colombia (1904-12) and as Papal Nuncio to Spain (1912-21). In 1921 Pope Benedict XV created him a Cardinal Priest. He also was Prefect of the Supreme Tribunal of the Apostolic Segnatura.

Rand, William, American lawyer, died in New York City, Feb. 10, 1931. He was born in Chicago, Ill., Jan. 8, 1866, and was graduated from Harvard College in 1888 and from the Harvard Law School in 1891. Engaging in practice in New York City, he was associated with William Travers Jerome both as assistant district attorney (1902-06) and as law partner (1910-29). During the World War he was judge advocate on General Pershing's staff at Chaumont, France.

Rasco, Richmond Austin, American lawyer and educator, died in Coral Gables, Fla., Nov. 15, 1931. He was born in Newton, Miss., July 5, 1871, and was graduated from Dickson (Tenn.) Normal College in 1895 and with the LL.B. degree from the Southern Normal University, Huntington, Tenn., in 1898. After acting as principal or superintendent of schools in Thoraby and Jemison, Ala., he became in 1909 professor of law at Stetson University and dean of the law college in 1913. In 1921 he went to the University of Florida as professor of law, in 1923 to the University of Arizona, and in 1926 to the University of

Miami. After 1927 he was dean of the law school at the latter institution.

Raymond, Walter, British novelist, died in Southampton Apr. 2, 1931. He was born in Yeovil Mar. 13, 1852. His early novels, which were written under the pseudonym Tom Cobbleigh and in which he became noted for his tales of Somersetshire, include *Misterton's Mistake* (1890); *Taken at His Word* (1892); *Gentleman Upcott's Daughter* (1893); and *Young Sam and Sabina* (1894). He later wrote *Tryphena in Love* (1895); *In the Smoke of War* (1895); *Charity's Chance* (1897); *Two Men of Mendip* (1898); *Fortune's Darling* (1901); *School History of Somerset* (1906); *Tales from Gossip-Corner* (1907); *English Country Life* (1910); *The Revenues of the Wicked* (1911); *A Wayfaring Soul* (1913); *Verily Thurston* (1926); and *Under the Spreading Chestnut Tree* (1928).

Read, Carveth, died Dec. 8, 1931.

Reese, The Rt. Rev. Theodore Irving, Protestant Episcopal Bishop of the Diocese of Southern Ohio, died in Cincinnati, Ohio, Oct. 13, 1931. He was born in New York City, Mar. 10, 1873, and was graduated from Columbia University in 1894 and from the Episcopal Theological School in 1897. After ordination he founded St. Michael's Parish, Milton, Mass., where he served as rector until 1907. He was then called to Trinity Church, Columbus, Ohio, and in 1912 was elected bishop coadjutor of the Diocese of Southern Ohio. He succeeded to the bishopric on the retirement of the Rt. Rev. Boyd Vincent in 1929. He was a member of the National Council of the Protestant Episcopal Church from 1919 to 1925, and was also a member of the executive committee of the Church Pension Fund. For some time he served by appointment of Governor Harmon in 1909 as chairman of the Ohio State Board of Arbitration.

Reichert, Edward Tyson, died Dec. 25, 1931.

Reid, Elisabeth Mills (Mrs. Whitelaw Reid), died Apr. 29, 1931.

Reimer, Frederic Adams, American consulting engineer, died May 18, 1931, in East Orange, N. J., where he was born Feb. 1, 1874. Beginning as a surveyor, he was appointed assistant city engineer of East Orange in 1895 and city engineer in 1909. He next became county engineer of Essex County, serving from 1913 to 1922. He had been prominent in the Light Field Artillery of the New Jersey National Guard since 1895, and in 1915 organized a battalion of engineers which on the entrance of the United States into the World War was federalized as the first battalion of the 104th Engineers. He had also been prominent in the good roads movement, being a past president of the American Road Builders' Association, a member of the International Highway Commission, and a delegate to the Second Pan American Congress of Highways held in Rio de Janeiro in 1929.

Revell, Fleming Hewitt, died Oct. 11, 1931.

Richardson, Anna Furetta, American home economics expert, died in Washington, D. C., Feb. 3, 1931. She was born in Charleston, S. C., Sept. 5, 1883, and was graduated from the Peabody College for Teachers in 1903. After teaching in private and public schools, she became in 1911 professor of home economics at the Agnes Scott College for Women, and in 1913 adjunct professor at the University of Texas. From 1917 to 1922 she was chief of the home economics educational service of the Federal Board for Vocational Education in Washington. She then went to Iowa State College as dean of the home economics division, and in 1926 became a field worker for the American Home Economics Association.

Ricketts, Charles, died Oct. 7, 1931.

Riker, Carroll Livingston, American mechanical engineer and inventor, died in Washington, D. C., May 7, 1931. He was born in Staten Island, N. Y., July 31, 1854. In 1874 he designed and built what was alleged to be the first refrigerating warehouse ever built in New York City, and thirteen years later designed and built the most powerful pumping dredge constructed to that time. During the Spanish-American War he designed and presented to the United States Government a new type of torpedo that would float at any desired depth. He also originated a project to control the Gulf Stream by inducing compulsory deposits of sand on the Grand Banks of Newfoundland by the Labrador current, and a plan for the control of the Mississippi River so as to yield a net annual income of \$100,000,000. In 1914 he was a founder of the Volunteers for Peace, an organization which advocated a preliminary continuous conference looking towards the establishment of peace among the belligerent nations of Europe.

Robbins, Sir Alfred (Farthing), died Mar. 10, 1931.

Robertson, Alice Mary, A former American Congresswoman, died in Muskogee, Okla., July 1, 1931. She was born in Tullahassee, Indian Territory (later Oklahoma), Jan. 2, 1854, and attended Elmira College. On graduation she was appointed a clerk in the Indian

Office in Washington, and then returned to Indian Territory as an assistant in mission work there. She established the Nuyaka Mission and had charge of the boarding school for Indian girls at Muskogee, which grew into the Henry Kendall College, a Presbyterian institution, at Tulsa, Okla., in 1894 and was later converted into the University of Tulsa. She was government supervisor of the Creek Indian schools from 1900 to 1905 and postmistress of Muskogee, by personal appointment of President Roosevelt, from 1905 to 1913. In 1920 she was elected to the 67th Congress from the Second Oklahoma District, being the second woman in the United States to serve in the House of Representatives.

Robinson, Edward, died Apr. 18, 1931.

Robinson, Lewis Taylor, American electrical engineer, died in Schenectady, N. Y., Nov. 3, 1931. Born in Springfield, Mass., Oct. 20, 1868, he became associated at the age of 17 with the Thomson-Houston Electric Company in Lynn, Mass. In 1896 he went to Schenectady to take charge of the standardizing laboratory of the General Electric Company, and in 1919, on the consolidation with the consulting engineering laboratory founded by Charles P. Steinmetz, was made engineer in charge of the general engineering laboratory of this company. Under his direction many electrical devices were developed, including the oscillograph, electro-cardiograph, mercury arc rectifier, and photophone for producing sound pictures.

Rockne, Knute Kenneth, American football coach, died in an airplane accident near Bazaar, Kans., Mar. 31, 1931. He was born in Voss, Norway, Mar. 4, 1888, and was brought to the United States in early childhood. On graduation from Notre Dame University in 1914, he became assistant football coach at that institution and in 1917 head coach. He was also engaged as coach at various summer schools, including the Springfield Y. M. C. A. College, Oregon Agricultural College, Utah Agricultural College, University of Southern California, Southern Methodist University, and William and Mary College. He first gained recognition in the football world during the seasons of 1919 and 1920 when the Notre Dame teams won every game. This record was repeated in 1924, 1929, and 1930 by which time he had established what was regarded as the greatest football organization in the history of American colleges.

Rodgers, Rear Admiral Thomas Slidell, U. S. N., Ret. American naval officer, died in New York City, Feb. 28, 1931. He was born in Morristown, N. J., Aug. 18, 1858, and was graduated from the U. S. Naval Academy in 1878. Appointed an ensign in 1881, he was promoted through the grades to rear admiral in 1916. During the Spanish-American War he served on the *Benington* and *Monterey*, and was executive officer of the *Maine* from 1902 to 1905. After acting as commander of the *Dubuque* (1906-08) and of the *New Hampshire* (1909-11), he served successively as supervisor of the New York harbor and as director of Naval Intelligence. He then commanded the *New York* during 1913-15, after which he was called to the Naval War College. In 1916 he was appointed commander of division 7 of the battleship force of the Atlantic Fleet. He retired in 1919.

Rodriguez, José Antonio Salvadorean statesman, died in San Salvador Feb. 16, 1931. He had held the positions of President of the National Assembly, Secretary of State, minister to many Central American republics and Mexico, judge of the Courts of Second and Third Instance, and justice of the Supreme Court.

Rogers, William Allen, American cartoonist, died in Washington, D. C., Oct. 20, 1931. He was born in Springfield, Ohio, May 23, 1854, and attended the Worcester Polytechnic Institute. From 1873 to 1877 he was an illustrator and cartoonist for the *New York Daily Graphic* and later contributed to *Harper's Weekly*, *Harper's Magazine*, *Life*, *St. Nicholas*, *the Century*, and other magazines. For 19 years he was cartoonist for the *New York Herald*, being made a Chevalier of the French Legion of Honor for his drawings which appeared in that paper, and its Paris edition, during the World War. He was a member of the Society of Illustrators and during 1921-22 was a member of the board of directors and an instructor at the School for Disabled Soldiers conducted by that society and the Federal Board for Vocational Education. Published collections of his cartoons include *Hits at Politics* (1899) and *America's Black and White Book* (1917). He also wrote *A World Worth While* (1922); *Danny's Partner* (1923); and *A Miracle Mine* (1925).

Rolvaa, Ole Edvard, died Nov. 5, 1931.

Rondthaler, Edward, American clergyman, died in Winston-Salem, N. C., Jan. 31, 1931. He was born in Northampton Co., Pa., July 24, 1842, and attended the Moravian College and Theological Seminary in Bethlehem, Pa., and the University of Erlangen. Ordained to the Moravian ministry in 1865, he served successively as pastor in Brooklyn, N. Y. (1865-73), Philadelphia, Pa. (1874-77), and Winston-Salem, N. C.

(1877-1908). He was also president of the Moravian Women's College in the South (later the Salem Academy and College for Women) during 1884-87. In 1891 he was elected bishop of the southern province of the Unitas Fratrum branch of the Moravian Church, presiding as president of the Board of Provincial Elders and various other boards. He was the author of *Fifty Years of Annual Papers on World Events* (1928).

Rose, Wickliffe, died Sept. 5, 1931.

Rosenfeld, Sydney, American dramatist, died in New York City, June 18, 1931. He was born in Richmond, Va., Oct. 26, 1855. After acting as reporter on the *New York Sun* and the *New York World* he became the first editor of *Puck*. Among his plays are *A Possible Case* (1888); *Prince Methusalem* (1888); *The Club Friend* (1891); *Imagination* (1892); *The Politician* (1896); *A House of Cards* (1896); *The King's Carnival* (1900); *The Hall of Fame* (1902); *The Aero Club* (1907); *Mrs. Mischief* (1908); *Children of Destiny* (1910); *The Love Drive* (1917); and *Forbidden* (1923). He also adapted from the German *The Black Hussar* (1885), *The Two Escutcheons* (1896), and *At the White Horse Tavern* (1899) and from the French *Nanon* (1885).

Ross, Sir John British solicitor and Carnegie Trust administrator, died Nov. 2, 1931, in Dunfermline, Scotland, where he was born July 28, 1838. A boyhood friend of Andrew Carnegie, he became in 1901 treasurer of the Carnegie Trust for the Universities of Scotland. He also was chairman of the Carnegie Dunfermline Trust after 1903, of the Carnegie Hero Fund Trust after 1908, and of the Carnegie United Kingdom Trust after 1913. He was knighted previous to his retirement from these posts in 1922.

Rouleau, Raymond-Marie, Cardinal, Canadian prelate of the Roman Catholic Church, died in Quebec, May 31, 1931. He was born in Isle-Verte, Quebec, Apr. 6, 1866, and attended the Seminary of Rimouski and the Dominican College of Corbara, Corsica, having entered the Order of the Dominican Fathers in 1886. Ordained a priest in 1892, he was appointed Master of the Novitiate at St. Hyacinthe, Quebec, in 1894 and First Prior of the House of the Dominican Fathers in Ottawa in 1900. In 1919 he became Provincial of the Dominican Province of Canada. He was consecrated Bishop of the Diocese of Valleyfield in May, 1923, was enthroned as Archbishop of Quebec in July, 1926, and was elevated to the Cardinalate in December, 1927.

Royds, Sir Charles William Rawson, Retired British naval officer and Antarctic explorer, died in London, Jan. 5, 1931. He was born in Rochdale, Lancashire, Feb. 1, 1876. Entering the British Navy, he served on the *Discovery* during 1901-04 as first lieutenant under Capt. Robert F. Scott, commander of the Royal Geographical Antarctic expedition. In recognition of his contribution to the success of this expedition Cape Royds, where Sir Ernest Shackleton established his base on a later expedition, was named for him. He was promoted to commander in 1909 (being in command of the battleship *Hercules*), captain in 1914, and rear admiral in 1926. On his retirement from the Navy in 1926 he was appointed deputy commissioner of the metropolitan police of London, and in 1930 received the title of vice admiral, retired. He was created a Companion of St. Michael and St. George in 1919 and a Knight of the British Empire in 1929.

Rubens, Alma, American motion picture actress, died in Los Angeles, Calif., Jan. 21, 1931. She was born in San Francisco, Calif., in 1897 and attended a convent there. After appearing in musical comedy she began her screen career in *The Half Breed* with Douglas Fairbanks. Her greatest rôle was in *Humoresque*. Among the other films in which she had appeared since 1919 were *The Heart of Salome*, *The World and His Wife*, *The Ghost Flower*, *Madame Sphinx*, *The Answer*, *The Guided Butterfly*, *Siberia*, *The Pelican*, *The Marriage of Lucerne*, *The Valley of Silent Men*, *Enemies of Women*, and *Under the Red Robe*. Her third husband was Ricardo Cortez, the actor, to whom she was married in 1926.

Rudge, William Edwin, American printer, died in Mount Vernon, N. Y., June 12, 1931. He was born in Brooklyn, N. Y., Nov. 23, 1876. He had been engaged in the printing business in New York City since 1888, later becoming president of William Edwin Rudge, Inc., a firm which gained prestige through the highly artistic quality of its work. In 1918, and for several years thereafter, he was awarded two gold, two silver, and two bronze medals in annual printing exhibitions in New York City. In 1925 he was appointed by Herbert Hoover, then Secretary of Commerce, to represent the American printing industry at the International Exposition of Modern Decorative and Industrial Art in Paris. He was a member of the advisory board for the course sponsored by the American Institute of Graphic Arts at New York University.

Rudkin, Frank H., American jurist, died in San Francisco, Calif., May 3, 1931. He was born in Vernon,

Ohio, Apr. 23, 1864, and attended Washington and Lee University. Admitted to the bar in 1887, he began his practice in North Yakima, Wash. In 1901 he was elected to the Superior Court of Washington and in 1905 to the Supreme Court, becoming chief justice in 1909. He was made Federal district judge for the Eastern District of Washington in 1911, and in 1928 was elevated to the circuit bench as judge for the ninth circuit.

Rue, Levi Lingo. American banker, died in Chestnut Hill, Philadelphia, Pa., June 7, 1931. He was born in Philadelphia, July 14, 1860, and began his banking career in 1878 with the Philadelphia National Bank, being successively advanced to teller, cashier, vice president, and president in 1907. In 1914 he was elected a member of the Federal Advisory Council for the newly-created Federal Reserve Board, serving in this capacity for several years. Prior to his retirement in 1930 he was chairman of the board of the Philadelphia National Bank, which had been merged in 1926 with the Girard National Bank and in 1928 with the Franklin Fourth Street National Bank. He was also president of the Philadelphia Clearing House Association, and was a director of several banking and industrial institutions and railroads.

Rusiof y Prats, Santiago, died June 13, 1931.

Russell, Isaac Franklin. American lawyer, died in Brooklyn, N. Y., Nov. 20, 1931. He was born in Hamden, Conn., Aug. 25, 1857, and was graduated from New York University in 1875, receiving the LL.B. degree from that institution two years later and the D.O.L. degree from Yale in 1880. He was professor of law at New York University from 1881 until his death, and also taught political science during 1881-95. In 1910 he was appointed for a six-year term chief justice of the Court of Special Sessions of New York City. He retired from practice in 1931. He was the author of *Outline Study of Law* (1894) and *Cases on Measures of Damages* (1909) and contributed to numerous law journals.

Russell, John Francis Stanley Russell, Second Earl. British statesman, died in Marseilles, France, Mar. 3, 1931. Born Aug. 12, 1865, he succeeded to the title on the death of his grandfather, Lord John Russell, in 1878. He was educated at Balliol College, Oxford, and practiced both electrical engineering and law. As a member of the Fabian Society, he early associated himself with the Labor party, and on the advent to power of the second Labor Government in 1929 was made Parliamentary Secretary to the Ministry of Transport. Later in the same year he was transferred to the India Office as Parliamentary Under-Secretary of State. He was a brother of Bertrand Russell, the mathematician and philosopher, while his wife, the former Countess Arnum, was the author of *Elizabeth and Her German Garden* and other novels. He published *My Life and Adventures* (1923).

Rydberg, Per Axel, died July 25, 1931.

Ste. Helene, Reginald Grant d'Iverville de. See Longueuil, Reginald Grant d'Iverville de Ste. Helene, Baron of.

Salandra, Antonio, died Dec. 9, 1931.

Salter, William Mackintire. American Ethical Culture leader and author, died in Silver Lake, N. H., July 13, 1931. He was born in Burlington, Iowa, Jan. 30, 1853, and was graduated with the A.B. degree from Knox College in 1871 and with the B.D. degree from Harvard in 1876. He became associated with Felix Adler, following the organization of the first Society for Ethical Culture in New York City in 1876. He also assisted in the organization of the Chicago Society in 1882 and was its lecturer from 1883 to 1892. He then became lecturer for the Philadelphia Society, returning to Chicago in 1897 where he remained until 1907. He was a special lecturer in the philosophy department at the University of Chicago from 1909 to 1913. His works include *On a Foundation for Religion* (1879); *Ethical Religion* (1889); *First Steps in Philosophy* (1892); *Anarchy or Government? An Inquiry in Fundamental Politics* (1895); *Nietzsche, the Thinker* (1917); and *What Is Americanism?* (1925).

Samson, Charles Rumney, died Feb. 5, 1931.

Saunders, William Lawrence, died June 25, 1931.

Schalk, Franz. Austrian orchestra conductor and former director of the Vienna Opera House, died in Reichenau, Sept. 3, 1931. He was born in Vienna, May 27, 1863, and studied violin under Hellmesberger and composition under Anton Bruckner. After serving as an orchestra leader in Reichenberg (1888), Graz (1889-95), and Prague (1895-98), he was invited to London as guest-conductor at Covent Garden. From there he went to New York City where during the season 1898-99 he conducted Wagnerian and other German operas at the Metropolitan Opera House. In 1900 he was called to the Vienna Opera House as chief conductor, and in 1918 became co-director with Richard Strauss, holding the sole control from 1924 to 1928. He also was director of the *Gesellschaftskonzerte* from

1904 to 1921, and in 1907 and 1911 was again guest-conductor at Covent Garden.

Schiff, Mortimer L. American banker, died at Oyster Bay, Long Island, N. Y., June 4, 1931. He was born in New York City, June 5, 1877, and attended Amherst College. After spending two years in Hamburg and London studying European banking methods, he became a partner in the banking firm of Kuhn, Loeb & Co. in 1900, and at the time of his death was senior member of the firm. He was also a director of numerous banking and industrial enterprises and was prominent in the Boy Scout movement, having been elected to the presidency of the Boy Scouts of America in May, 1931.

Schilling, Hugo Karl. American philologist, died in Berkeley, Calif., July 25, 1931. He was born in Saalfeld, Germany, Mar. 28, 1861. On receiving the Ph.D. degree from the University of Leipzig in 1885, he came to the United States and was professor of modern languages at Wittenberg College, Springfield, Ohio, until 1891, assistant professor of German at Harvard University until 1904, and professor of Germanic languages and literature at the University of California until 1929. In 1907-08 he was president of the Pacific Coast division of the American Philological Association and in 1928 of the Modern Language Association of America. He was also editor of *Modern Language Notes* during 1899-1901 and of the University of California's publications in modern philology after 1909. He wrote *König Alfreds angelsächsische Bearbeitung der Weltgeschichte des Orosius* (1886).

Schleswig-Holstein, Duke of. See Albert Johann, Duke of Schleswig-Holstein.

Schnitzler, Arthur, died Oct. 21, 1931.

Schweinfurth, Julius Adolph. American architect, died in Wellesley Farms, Mass., Sept. 29, 1931. He was born in Auburn, N. Y., Sept. 20, 1858, and studied in Boston under Peabody & Stearns, architects, with whom he was associated for 13 years, and in London, Paris, Rome, and Florence. He had been engaged in private practice in Boston since 1895. Among the buildings which he designed were Pomeroy, Cazenove, Shafer, and Wilder Halls and the Hemenway Gymnasium at Wellesley College; the Tod Memorial at Youngstown, Ohio; Public Library at Champaign, Ill.; Baptist Church, Pierce Grammar School, and Municipal Court House in Brookline, Mass.; and Garden Office Building, High School of Practical Arts, Archbishop Williams Municipal Building, and Lincoln House in Boston, Mass. He was a Fellow of the American Institute of Architects, and published *Sketches Abroad* (1887).

Scott, Fred Newton, died May 29, 1931.

Scudder, Wallace McIlvaine. American publisher, died in Newark, N. J., Feb. 24, 1931. He was born in Trenton, N. J., Dec. 26, 1853, and was graduated from Lehigh University in 1873. He then attended the Harvard law school and was admitted to the New Jersey bar in 1876. In 1883 he founded the *Newark News*, an evening paper of which he was editor for many years and publisher until his death. Although independent, this paper was noted for the fearless stand which it occasionally took to cure political evils.

Seidler, Ernst. Austrian statesman, died in Vienna, Jan. 23, 1931. He was born at Schwechat, near Vienna, June 5, 1862. Appointed Minister of Agriculture in the cabinet of Count Clam-Martinitz June 1, 1917, he became Premier on the fall of that ministry a few weeks later. His government lasted from June 24, 1917, to July 25, 1918, but its tenure was insecure from the beginning on account of the opposition of such nationalist groups as the Czechs, Jugoslavs, and Poles. At the time of his death he was president of the Italo-Wiener Creditbank. He was created Knight of Feuchtenegg in 1916.

Sengoku, Mitsugu. Japanese statesman and railway executive, died in Tokyo, Oct. 30, 1931. Born in Kochi in 1857, he was graduated from the engineering college of Tokyo Imperial University in 1879. He was president of the Kyushu Railway Company until the nationalization of that road in 1911. During 1914-15 he was president of the Imperial Government Railways and during 1924-26 Minister of Railways. At the time of his death he was governor of the South Manchuria Railway Company.

Seth, Andrew. See Pringle-Patterson, Andrew Seth. Severance, Frank Hayward. American journalist and historian, died in Buffalo, N. Y., Jan. 26, 1931. He was born in Manchester, Mass., Nov. 28, 1856, and was graduated from Cornell University in 1879. After acting as reporter and city editor for the *Erie Gazette* (1879-80) and the *Buffalo Express* (1881-86), he became managing editor for the *Illustrated Buffalo Express*, retiring in 1902 to devote himself to writing and lecturing. He was president of the New York State Historical Association during 1923-25, and in 1929 was decorated by the French Academy. He also had served as secretary and treasurer of the Buffalo Historical Society for 28 years. His works include *Old Trails on the Niagara Frontier* (1899); *The Story of Joncaire* (1906); *Studies of the Niagara Frontier*

(1911); *The Picture-Book of Bartter Buffalo* (1912); *Peace Episodes on the Niagara* (1915); and *An Old Frontier of France* (2 vols., 1917).

Sharp, Robert. American educator, died in New Orleans, La., Jan. 28, 1931. He was born in Lawrenceville, Va., Oct. 24, 1851, and was graduated from Randolph-Macon College in 1876 and with the Ph.D. degree from the University of Leipzig in 1879. He was appointed professor of English at the University of Louisiana in 1880 and continued to hold this chair after the institution was renamed the Tulane University of Louisiana in 1884. In 1918 he was elected president of the institution, holding that office five years. He was an authority on Anglo-Saxon literature and edited *Beowulf* (1885).

Shepard, William Orville. American clergyman, died in Neully, France, Nov. 30, 1931. He was born in Sterling, Ill., Apr. 11, 1862, and was graduated from DePaul University in 1885 and from the DePaul School of Theology the following year. Ordained to the ministry of the Methodist Episcopal Church, he held pastorates in Chicago and vicinity until 1909, when he became superintendent of the Chicago northern district. In May, 1912, he was elected bishop and assigned to residence in Kansas City. From 1920 to 1928 he was resident bishop of Portland, Ore. At the time of his death he was bishop of the Mediterranean area, being in charge of the mission work in southern Europe, northern Africa, and Liberia.

Sheppard, John Calhoun. American lawyer and ex-Governor of South Carolina, died in Edgefield, S. C., Oct. 17, 1931. He was born in Edgefield Co., S. C., July 5, 1850, and attended Furman University, Greenville, S. C. Admitted to the bar in 1871, he practiced in Edgefield as a member of the firm of Youmans & Sheppard until 1875 and then for almost 50 years with his brother. During the '70s he also played an important part in the overthrow of "carpet-bag government," and in 1876 was elected to the South Carolina House of Representatives where he was speaker during 1877-82. He was twice elected lieutenant governor, in 1882 and 1884, and in 1886 completed the term of Gen. H. S. Thompson who had resigned. He was a member of the South Carolina Constitutional Convention in 1895 and of the State Senate during 1898-1902, being elected again to that body in 1919 for an unexpired term.

Shibusawa, Ei-ichi, Viscount, died Nov. 10, 1931.

Shortt, Adam, died Jan. 14, 1931.

Siddons, Frederick Lincoln. American jurist, died in Washington, D. C., June 19, 1931. He was born in London, England, Nov. 21, 1864, and was brought to the United States in childhood. On graduation from Columbian (later George Washington) University in 1887 he was admitted to the bar. In 1898 he was appointed professor of law at the National University, and in 1915 was elected associate justice of the Supreme Court of the District of Columbia, attaining national prominence during the trials of Albert B. Fall, Harry Sinclair, and others in the Teapot Dome naval oil reserves litigation. He was also for several years a commissioner on uniform State laws for the District of Columbia and was chairman of the commission on public welfare legislation of the District of Columbia.

Simmons, Edward Alfred. American publisher and transportation expert, died Sept. 30, 1931, in Brooklyn, N. Y., where he was born Mar. 20, 1875. Entering the employ of the Simmons-Boardman Publishing Company in 1889, he became secretary in 1898, director, treasurer, and vice president in 1903, and president after 1911. The trade journals published by this company at the time of his death included *Railway Age* (with which had been previously merged the *Railway Gazette* and *Railway Review*), *Railway Mechanical Engineer*, *Railway Engineering and Maintenance*, *Railway Electrical Engineer*, *Railway Signaling*, *Marine Engineering*, the *Boiler Maker*, *Arway Age*, the *American Builder*, and *House Furnishing Review*. He was also chairman of the board of the American Saw Mill Machinery Company and the American Machine Tool Company and was president of the American Saw Works. During the World War he served with the Construction Division, being commissioned a major in 1918 and later a colonel in the Quartermaster Reserve Corps. In 1930 he was chairman of the United States delegation to the International Railway Congress in Madrid.

Simmons, Edward (Emerson), died Nov. 17, 1931.

Simpson, Sir William John Ritchie, died Sept. 20, 1931.

Skrzynski, Alexander, Count. Polish statesman, died in Ostrow, Sept. 25, 1931. Born in 1882, he entered the diplomatic service in 1906, and in 1910 became secretary to the Ambassador of the Holy See. After acting as Minister to Rumania during 1922-23, he became in March, 1925, Minister of Foreign Affairs in the cabinet of Wladyslaw Grabski. In November, 1925, he was requested to form a government, based on the Christian Democrat, Socialist, and National Democrat parties, but his cabinet was compelled to resign in

April of the following year because of financial difficulties which caused a split in the coalition party in parliament. He was a permanent delegate to the League of Nations. In 1928 he was appointed member of the standing committee on arbitration between the United States and Peru.

Slater, Willis Appleford. American civil engineer, died in Bethlehem, Pa., Oct. 6, 1931. Born in Polo, Ill., Oct. 14, 1878, he was graduated from the University of Illinois in 1906, and until 1917 was engaged in research on structural engineering at that institution. He then became connected with the U. S. Bureau of Standards, being in charge during the World War of the structural laboratory investigations in reinforced concrete for the Emergency Fleet Corporation and receiving in recognition the Wason Medal of the American Concrete Institute (1919). In 1928 he was appointed research professor of engineering material and director of the Fritz Engineering Laboratory at Lehigh University.

Small, Sam (uel) (White). American journalist, died in Atlanta, Ga., Nov. 21, 1931. He was born in Knoxville, Tenn., July 8, 1851, and was graduated from Emory and Henry College, Emory, Va., in 1871. He had been a member of the editorial staff of the *Atlanta Constitution* since 1875, and also helped to found in 1889 the *Oklahoman* in Oklahoma City, Okla. He entered evangelistic work in 1885, being associated for many years with Sam Jones, principally as a prohibition advocate. He was a chaplain in the Spanish-American War, and at the time of his death was national chaplain for the Spanish-American War Veterans.

Smalley, Frank. American classical scholar, died in Syracuse, N. Y., Apr. 8, 1931. He was born in Towanda, Pa., Dec. 10, 1846, and was graduated from Syracuse University in 1874. After acting for several years as instructor in geology, zoology, and botany at Syracuse, he became adjunct professor of Latin in 1877, professor of Latin language and literature in 1881, and Gardner Baker professor of the same in 1893. He was also lecturer on Roman law at the college of law from 1895 to 1902, dean of the college of liberal arts from 1900 to 1917, and acting chancellor in the summer of 1903 and again during 1908-09. On his retirement in 1924 he became historian of the university. His works include *Analysis and Formation of Latin Words* (1879); *Latin Verse* (1884); *Introduction and Notes to the Fifth Book of Cicero's Tusculan Disputations* (1892); *Brief Selections to Illustrate Roman Literature* (1894); and *Syllabus of Lectures in Roman History* (1895).

Smiley, William Brownlee. American clergyman, died in Rochester, Pa., Dec. 9, 1931. He was born in Washington Co., Pa., Dec. 7, 1856, and was graduated from Westminster College, New Wilmington, Pa., in 1879 and from the Pittsburgh Theological Seminary in 1882. Ordained to the United Presbyterian ministry, he was pastor of the Charities Church in Canonsburg, Pa., until 1909. He then served for four years as secretary of the Sunday school work of his denomination, resuming pastoral charges in Oneonta, N. Y., in 1913 and in Rochester, Pa., in 1918. In 1916 he was moderator of the general assembly of the United Presbyterian Church of North America, and represented that body at the World Conference on Faith and Order in Lausanne, Switzerland, in 1927.

Smith, (Horn), Alfred Aloysius. British author and pioneer African trader, died in Tankerton, Kent, England, June 26, 1931. He was born near Glasgow about 1853 and attended St. Edward's College, Liverpool. Sailing for the West Coast of Africa in 1871, he became a trader in ivory and rubber, and his adventures there ranged from perilous feats in big-game hunting to being received as a "blood brother" by the cannibals of the Ogowe River region. After leaving the West Coast he was a prospector for minerals from Abyssinia to South Africa, storekeeper in Rhodesia, tax-collector to the Sultan of Zanzibar, and participant in the Matabele and Boer Wars and the Madagascar Rebellion against the French in 1896. From time to time he lived in the United States, being engaged in sundry occupations, and during the World War served on a mine-sweeper in England. In 1925, while peddling kitchen utensils in Johannesburg, South Africa, he was "discovered" by Mrs. Ethelreda Lewis, the novelist, who encouraged him to write his experiences. The combined result of their efforts was published in England two years later as *The Ivory Coast in the Earliest and in the United States as Trader Horn. Harold the Webbed, or the Young Vikings and The Waters of Africa*, which continued the account of "Trader Horn's" adventures, appeared in 1928 and 1929.

Smith, Frances Stanton. American writer and Civil Service official, died June 30, 1931, in Buffalo, N. Y., where she was born June 21, 1871. From 1895 until her marriage to Charles Bennett Smith in 1902 she was successively music editor for the *Buffalo Express* and *Buffalo Courier* and editor of the woman's page of the *Buffalo Enquirer*. In 1901 she was a member of the

Women's Board of Managers of the Pan-American Exposition and secretary of the committee on publicity and promotion of the same. She was also a pioneer worker for woman suffrage. In 1919 she was appointed the first woman member of the New York State Civil Service Commission and became president of that body in 1923.

Smith, Francis Marion, American capitalist, died in Oakland, Calif., Aug. 27, 1931. He was born in Richmond, Wis., Feb. 2, 1846, and was graduated from Milton (Wis.) College in 1863. In 1872 he discovered Teck's Marsh borax mines in Nevada, which gave him within a few years control of the borax market of the United States. He later became president of the Realty Syndicate in Oakland, Calif.

Smith, Herbert Knox, American lawyer, died in Farmington, Conn., Dec. 17, 1931. He was born in Chester, Mass., Nov. 17, 1869, and was graduated from Yale in 1891, receiving the LL.B. degree in 1895. Admitted to the bar, he practiced in Hartford. He was a member of the Connecticut House of Representatives (1903-05), deputy commissioner of corporations of the U. S. Department of Commerce and Labor (1905-07), and Federal commissioner of corporations (1907-12). In 1912 he ran for governor of Connecticut on the Progressive ticket.

Smith, Hoke, died Nov. 27, 1931.

Smith, James Lorrain, British physician and educator, died in Edinburgh, Apr. 20, 1931. Educated at the University of Edinburgh, he was successively professor of pathology at Queen's College, Belfast, the University of Manchester, and the University of Edinburgh, and at the time of his death was also dean of the faculty of medicine at the University of Edinburgh. During the World War he gained fame for the discovery of a highly effective antiseptic solution known as Eusol, used especially in the treatment of septic gunshot wounds.

Söderblom, Lars Olof Jonathan, died July 12, 1931.

Soto Alfaro, Bernardo, Costa Rican statesman, died in San José, Jan. 28, 1931. He was born in Alajuela, Feb. 12, 1854. His first public office was that of Governor of Alajuela in 1881. The following year he became Secretary of State in the cabinet of President Fernandez, and on the latter's death in 1885 completed his unexpired term. He was elected President of Costa Rica in 1886 for the ensuing four-year term. During his administration a new Civil Code was put into effect, public instruction was reorganized, and many financial and other national reforms were undertaken.

Spencer, Anna Garlin, died Feb. 12, 1931.

Spencer, Robert, died July 11, 1931.

Spillman, William Jasper, died July 11, 1931.

Stamfordham, Arthur John Bigge, First Baron British statesman and private secretary to King George V, died in London, Mar. 31, 1931. He was born in Stamfordham, June 18, 1849. Entering the Royal Artillery in 1869, he served as a lieutenant during the Zulu War of 1878-79. In 1880 he was appointed groom-in-waiting to Queen Victoria and some months later became assistant private secretary, to which post was added that of equerry-in-ordinary in 1881. In 1895 he was made private secretary to the Queen, and on her death in 1901 was retained in the same capacity by the Prince of Wales, later George V. On the latter's ascension to the throne in 1910 he was created Lord Stamfordham, and for more than 20 years was one of the King's most trusted political advisers.

Stanley of Alderley, Arthur Lyolph Stanley, Fifth Baron, British barrister and colonial administrator, died in London, Aug. 22, 1931. Born Sept. 14, 1875, he attended Oxford University and was admitted to the bar of the Inner Temple in 1902. In 1906 he was elected Member of Parliament for the Eddisbury Division of Cheshire, and from 1914 to 1920 was Governor of Victoria, Australia. He succeeded to the title on the death of his father, who was also fourth Baron Sheffield of Roscommon, in 1925. Prior to his death he was chairman of the East Africa Joint Committee, created to study the question of the administrative union of Kenya, Tanganyika, and Uganda.

Stanton, Sir Thomas, British consulting engineer, died near Eastbourne, East Sussex, Aug. 30, 1931. Born Dec. 12, 1865, he attended Owens College, Manchester, where he was demonstrator in the Whitworth laboratory during 1891-96. He then became senior lecturer in engineering at University College, Liverpool, and in 1899 professor of civil and mechanical engineering at University College, Bristol. From 1901 until his retirement in 1931 he was superintendent of the engineering department of the National Physical Laboratory, his last important commission being the restoration of St. Paul's Cathedral, London. He was created a Commander of the Order of the British Empire in 1920 and was knighted in 1928.

Starr, John Edwin, American mechanical engineer, died in Mattatuck, Long Island, N. Y., June 27, 1931. He was born in Litchfield, N. Y., in 1860. Since 1900 he had been constructing and designing engineer ex-

clusively in refrigeration and allied branches, and at the time of his death was president of the Starr Engineering Company in New York City. His inventions included several absorption refrigerating devices, a machine that produced temperatures ranging from 30 to 75 degrees below zero, and an ice coffer dam that was used for the cooling system in the Brooklyn Bridge station of the Interborough Rapid Transit Company. He was a past president of the American Society of Refrigerating Engineers, and a contributor to *Ice and Refrigeration*, *Refrigerating World*, and *Power and Ice*.

Starr, Merritt, American lawyer, died in Chicago, Ill., Aug. 2, 1931. He was born in Ellington, N. Y., in 1856, and was graduated from Oberlin College in 1875 and with the LL.B. degree from Harvard in 1881. Engaging in the practice of law in Chicago in 1882, he was a member of the firm of Hopkins, Starr & Hopkins at the time of his death. He was also active in organizing the Civil Service League and in drafting and promoting the passage of city, county, and State civil service laws. His works include *Starr's Reference Digest of Wisconsin Reports* (1882); *Annotated Statutes of Illinois* (8 vols., 1883-96); *Northeastern Reporter* (Illinois portion, vols. 1-17, 1885-88); *Competition: Legislative and Judicial Treatment of* (1907); *Theodore Roosevelt* (1919); *Lincoln's Linage* (1920); *Dante 600 Years After* (1921); and *Economic Equality and Some New Uses of National Power* (1922).

Steele, Daniel Atkinson King, American surgeon, died in Sarasota, Fla., July 19, 1931. He was born in Eden, Ohio, Mar. 29, 1852, and was graduated from the Chicago Medical College in 1873, engaging in private practice in Chicago two years later. In 1882 he was one of the founders of the College of Physicians and Surgeons of Chicago, at which he was appointed professor of the principles and practice of surgery. He also acted as president from 1894 to 1913, when the college was presented to the University of Illinois as its permanent medical department. Until his retirement in 1917 he was senior dean and professor of surgery. He had also been attending surgeon at the Michael Reese and University Hospitals, acting as president of the latter after 1907. During the World War he was chief surgeon at the U. S. Army General Hospital No. 9, Lakewood, N. J.

Stem, Allen H., American architect, died in St. Paul, Minn., May 19, 1931. He was born in Van Wert, Ohio, Jan. 28, 1856, and attended the Indianapolis Art School. He practiced in Indianapolis from 1878 to 1884 and then removed to St. Paul, where he was a member of the firm of Reed & Stem from 1889 to 1911. He was an associate architect for the New York Central Railroad, collaborating in the designing of the Grand Central Terminal and Palace and the Biltmore Hotel in New York City. He also designed stations for the Michigan Central, Norfolk & Western, Great Northern, and Northern Pacific Railroads, including those at Detroit, Mich., Norfolk, Va., Seattle, Wash., and Tacoma, Wash.; the medical buildings of the University of Minnesota; the Denver (Colo.) Auditorium; and the Auditorium, Athletic Club, and St. Paul Hotel in St. Paul, Minn.

Stephens, Charles Asbury, American writer, died in Norway, Me., Sept. 22, 1931. He was born at Norway Lake, Me., Oct. 21, 1847, and was graduated from Bowdoin College in 1869 and with the M.D. degree from Boston University in 1887. He was on the staff of the *Youth's Companion* from 1870 to 1930, publishing during that period more than 3000 sports stories and 100 eight-chapter serials. Among his juvenile publications are *Camping Out* (1872); *Left on Labrador* (1872); *Off to the Geyers* (1872); *Lunx Hunting* (1873); *On the Amazon* (1874); *The Young Moose Hunters* (1874); *The Knockabout Club* (3 vols., 1883-85); *The Ark of 1803* (1904); *Pioneer Boys Afloat on the Mississippi* (1907); *When Life Was Young on the Old Farm in Maine* (1912); *A Great Year of Our Lives at the Old Squire's* (1912); *Stories of My Home Folks* (1926); and *Katahdin Camps* (1928). He was also noted as a biologist, his works including *Living Matter* (1888); *Pluricellular Man* (1892); *Natural Salvation* (1903); *Salvation by Science* (7th ed., 1913); and *Immortal Life, How It Will Be Achieved* (1920).

Sthamer, Friedrich, German diplomat, died in Hamburg, June 30, 1931. He was born in Gross-Weerden, Nov. 24, 1856, and attended the universities of Kiel, Heidelberg, Göttingen, and Leipzig. Admitted to the bar in 1879, he practiced in Hamburg, where he served on the Council after 1900 and in the Senate after 1904. Following the World War he was Mayor of Hamburg, but in 1920 was appointed chargé d'affaires in London and a few months later German ambassador to the Court of St. James's. On his resignation in 1930 he had won recognition for his services in helping to restore friendly relations between Germany and Great Britain.

Stimming, Carl, German shipping director, died in Hamburg, Nov. 7, 1931. Born in Fürstenwalde, May 15, 1876, he studied law at the Universities of Erlangen

and Berlin, and practiced for a short time in Seelow and Berlin. In 1901 he became associated with the North German Lloyd steamship line, of which he was appointed general director in 1921. The revival of the fortunes of this company, and of the port of Hamburg, after the World War was considered one of the most remarkable features of commercial history and was largely the result of his initiative. Under his direction three fast liners, the *Columbus*, the *Bremen*, and the *Europa*, were constructed.

Stoddard, John Lawson, died June 5, 1931.

Stokes, Rear Admiral Charles Francis, U. S. N., Ret., died Oct. 29, 1931.

Stratton, Samuel Wesley, died Oct. 18, 1931.

Straus, Nathan, died Jan. 11, 1931.

Strong, Walter Ansel, American publisher, died in Winnetka, Ill., May 10, 1931. He was born in Chicago, Ill., Aug. 13, 1883, and was graduated in engineering from the Lewis Institute in Chicago in 1901 and from Beloit College in 1905. He had been associated with the *Chicago Daily News* since 1905 successively as audit clerk, auditor, business manager, and on the death of his uncle, Victor F. Lawson, in 1925, as publisher. In 1929, after the *News* had established itself in its new building, erected at a cost of \$13,000,000, the *Chicago Journal* was merged with it.

Stuart, James Edwards, American soldier and postal authority, died in Chicago, Ill., Mar. 8, 1931. He was born in Forfar, Scotland, July 8, 1842, and was brought to the United States in 1851, his family settling in Oshkosh, Wis. During the Civil War he served with the 21st Wisconsin Volunteers, and after the muster-out acted first as a postal clerk and then as chief clerk for the railway mail service of Iowa. In 1873 he was appointed post office inspector at Chicago for the division comprising Illinois, Michigan, and Wisconsin, holding this position until his retirement in 1920. He served in the Spanish-American War, being placed on detached service after the war as chairman of the military postal committee and establishing the postal service in Porto Rico. On the entry of the United States into the World War he organized the 11th Illinois Infantry at the request of Governor Lowden and commanded it in the United States until the signing of the Armistice. He had also been active for 22 years in the Illinois National Guard, retiring as brigadier general in 1906.

Sullivan, James, died Oct. 8, 1931.

Swain, George Willmore, died July 1, 1931.

Turner, Joseph Robson, died Jan. 15, 1931.

Taylor, Alfred Alexander, American lawyer and former Governor of Tennessee, died in Johnson City, Tenn., Nov. 23, 1931. Born in Happy Valley, Tenn., Aug. 6, 1848, he studied law and was admitted to the bar in 1870. He was a member of the Tennessee House of Representatives during 1875-76 and was also elected to the 51st, 52d, and 53d Congresses (1889-95). In 1880 he was defeated in the Tennessee gubernatorial election by his brother, Robert L. Taylor, the Democratic candidate. He was successful, however, in the 1920 campaign, receiving the largest vote a Republican nominee ever received in the State.

Taylor, J(ohn) Madison, American physician, died in Philadelphia, Pa., Oct. 3, 1931. He was born in Lancaster Co., Pa., July 4, 1855, and was graduated from Princeton University in 1876, receiving the M.D. degree from the University of Pennsylvania in 1878. For 16 years he was assistant to Dr. S. Weir Mitchell, Philadelphia neurologist, and served as chief of clinic at the Infirmary for Nervous Diseases. After 1910 he was professor of physical therapeutics at Temple University. He was co-author of *Diseases of Children* (1898), and contributor of more than 1000 papers in medical and scientific journals.

Temple, John Edgar, American chemist, died in New York City, Mar. 23, 1931. He was born in Kempton, Ill., Jan. 4, 1874, and was graduated from Valparaiso University in 1893 and from Cornell University with the Ph.D. degree in 1903. After acting as instructor in chemistry and physics at Fremont College from 1894 to 1898 and as instructor in organic and physiological chemistry at Cornell University from 1899 to 1904, he became director of the Industrial Laboratories in New York City. In 1908 he established himself as a consulting chemist and chemical engineer, his clientele including the American Potash & Chemical Corp. and the Darco Corporation. He received the Perkin Medal in 1927 in recognition of his contributions to applied chemistry and especially for the development of the American potash industry by reclaiming Searles Lake, Calif. He was the author of *The Industrial Development of Searles Lake Brines* (1929).

Temple, Sir Richard Carnac, died Mar. 5, 1931.

Terry, Benjamin Stites, died Oct. 30, 1931.

Thompson, Robert John, American diplomat, inventor, and author, died in Montreux, Switzerland, Aug. 24, 1931. He was born in La Porte City, Iowa, Oct. 15, 1865. On completing high school he was with the U. S. railway postal service from 1885 to 1891 and subsequently was on the editorial staff of the *Chicago*

*Times*. He then became president of the Automatic Recording Safe Company in Chicago, following his invention of this device. He was also the originator and director of the Lafayette Monument project, which culminated in the presentation of a statue of General Lafayette to France by American school children. For this service he was made an officer of the French Legion of Honor. Entering the diplomatic service, he was American consul at Hanover, Germany (1906-12), Sheffield, England (1912-13), and Aix-la-Chapelle, Germany (1913-15). His writings include *The Proofs of Life after Death—A Twentieth Century Symposium* (1902); *England and Germany in the War* (1915); and *Adequate Brevity—Philosophy of Coolidge* (1924).

Thomson, César, died Aug. 24, 1931.

Thursby, Emma Cecilia, died July 4, 1931.

Tittoni, Tommaso, died Feb. 7, 1931.

Todd, Albert May, American chemist, died in Kalamazoo, Mich., Oct. 6, 1931. He was born near Nottawa, Mich., June 3, 1850, and attended Northwestern University. In 1889 he organized A. M. Todd & Co., chemists. He was Prohibition nominee for governor of Michigan in 1894 and was a member of Congress during 1897-99, having been elected on the Democratic ticket. An advocate of public ownership of public utilities, he was president of the Public Ownership League of America from its foundation in 1916 to 1922. He was the author of *Municipal Ownership in Europe and America* (1918) and *The Relation of Public Ownership to Social Justice and Democracy* (1920).

Tomlinson, Everett Titworth, An American clergyman and author, died in Elizabeth, N. J., Oct. 30, 1931. He was born in Shiloh, N. J., May 23, 1859, and attended Williams College, later receiving the Ph.D. degree from Colgate University in 1888 and the Litt.D. degree from Bucknell University in 1906. After serving as principal of the high school at Auburn, N. Y. (1881-83), and as head master of the preparatory department of Rutgers College (1883-88), he became pastor of the Central Baptist Church in Elizabeth, N. J., where he remained until 1910. As executive secretary of the Ministers and Missionaries Benefit Board of the Northern Baptist Convention from 1911 to 1926, he devised one of the most successful of church pension systems. He was also a writer of popular stories for boys, usually with historical setting. Among these are *The Boy Soldiers of 1812* (1895); *Three Young Continentals* (1896); *Tecumseh's Young Braves* (1897); *Boys with Old Hickory* (1898); *Boys of Old Monmouth* (1898); *A Jersey Boy in the Revolution* (1899); *In the Hands of the Redcoats* (1901); *The Red Chief* (1905); *The Camp-Fire of Mad Anthony* (1907); *Light Hooves Harry's Legion* (1910); *The Young Minute-Man of 1812* (1912); *Scouting with Daniel Boone* (1914); *The Story of General Pershing* (1917); *Young People's History of the American Revolution* (1921), and *Days and Deeds of '76* (1927).

Tompkins, Clementina, American painter, died in New York City, Nov. 9, 1931. Born in Washington, D. C., she attended the Peabody Art Institute in Baltimore, later studying in Brussels and Paris under Leon Bonnat. She exhibited in a number of Paris Salons and in the Corcoran Art Gallery in Washington, and was a medalist at the Centennial Exposition in Philadelphia in 1876. Typical of her work are "Little Musician" (1876) and "Rosa—la fleuse" (1878).

Truppel, Admiral Oscar von, German naval officer, died in Berlin, Aug. 20, 1931. He was born in Katzhütte, May 17, 1854, and in 1871 joined the German Navy, being promoted through the grades to admiral in 1910. As commander of the *Kron-Prinz Wilhelm* during the German naval cruise of 1897-99, he witnessed Dewey's victory over the Spanish squadron in Manila Bay in May, 1898. From 1901 to 1911 he was governor of the German colony, Kiauchau, China.

Tyler, Bardard Henry, American painter, died in Yonkers, N. Y., June 6, 1931. He was born in Oneida, N. Y., Apr. 22, 1855, and attended Syracuse University and the National Academy of Design, New York City, studying under Theodore Kaufmann and William M. Chase. He is represented in the Corcoran Art Gallery, Washington, and the Albright Memorial Library, Scranton, Pa. Among his portraits are those of President Roosevelt, Rear Admiral Willard H. Brownson, the Rt. Rev. James E. Freeman, and Alexander S. Cochran.

Tyler, Henry Mather, American educator, died in Northampton, Mass., Nov. 3, 1931. He was born in Amherst, Mass., Nov. 18, 1843, and was graduated from Amherst College in 1865. After acting as instructor in Latin at Amherst during 1868-69 and as professor of Greek and German at Knox College during 1869-72, he was ordained to the Congregational ministry, serving until 1877 as pastor in Fitchburg, Mass. He then became professor of Greek at Smith College, where he was appointed dean of the faculty in 1900. He retired as professor emeritus in 1912. He was the author of *A Greek Play and Its Presentation* (1891) and edited *Selections from Greek Lyric Poets* (1879).

Tyler, James Gale, American painter, died in Pelham,

N. Y., Jan. 29, 1931. Born in Oswego, N. Y., Feb. 15, 1855, he studied marine painting under A. Oary Smith, and contributed illustrations and marine art studies to *Harper's Century*, and other magazines. He also had painted since 1901 every one of the yacht races for the *America's Cup*. Among his works are "The Abandoning of the Jeanette"; "The Constitution"; "St. Paul's Shipwreck"; and "The Mayflower."

Tyler, The Rt. Rev. John Poynts, Protestant Episcopal Missionary Bishop of North Dakota, died in Fargo, N. D., July 13, 1931. He was born in Hanover Co., Va., June 15, 1862. Following his graduation from the Virginia Theological Seminary in 1888, he was ordained deacon and then priest in the Protestant Episcopal Church and served as rector of Christ's Church, Millwood, Va. (1892-95), St. Paul's Church, Greenville, Ohio (1895-96), and the Church of the Advent, Philadelphia, Pa. (1896-1904). He was made Archdeacon of Virginia in 1904 and Archdeacon of Cumberland (Md.) in 1907, serving also as rector of St. John's Church, Hagerstown, Md., from 1907 to 1913. In 1913 he was elected Bishop of the Missionary District of North Dakota and was consecrated Jan. 6, 1914.

Tynan, Katharine, died Apr. 2, 1931.

Urban, Ignatz, German botanist, died in Berlin, Jan. 7, 1931. He was born in Warburg, Jan. 7, 1848, and attended the Universities of Bonn and Berlin. In 1878 he became an assistant at the Royal Botanical Garden at Dahlem, and from 1889 to 1913 was subdirector. His special field was the flora of the West Indies, which he described in *Symbola Antillana* (9 vols., 1898-1925).

Urueta, Carlos Adolfo, Colombian statesman, died in Bogotá, Sept. 13, 1931. He had served successively as Senator from the department of Bolívar, Representative from Bogotá, member of the permanent commission of the Ministry of Foreign Relations, and Minister to the United States. In 1930 he was appointed by President Hoover member of the permanent commission of conciliation of the United States and Hungary. At the time of his death he was Minister of War in the cabinet headed by Gen. Augustin Morales Olaya as Minister of Government, to which he had been appointed in July, 1931.

Ury, Lesser, German painter, died in Berlin, Oct. 18, 1931. He was born in Birnbaum, Nov. 7, 1862, and was educated in Düsseldorf. He was especially noted for his street and coffee house scenes. His works are found in the National Gallery, Berlin, the Museum of Gatz, and the Henneberg Gallery, Zurich.

Usher, Rear Admiral Nathaniel Reilly, died Jan. 9, 1931.

Van Allen, William Harman, American clergyman, died in Munich, Germany, Aug. 23, 1931. He was born in Cameron, N. Y., Feb. 16, 1870, and was graduated from Syracuse University in 1890, receiving the S.T.D. degree from that institution in 1904, the L.H.D. degree from St. Stephen's College in 1910, the D.C.L. degree from the University of Bishop's College, Quebec, in 1911, and the LL.D. degree from Alfred University in 1912. After acting as head master of St. John's School in New York City and as general secretary of the Church Association for the Advancement of the Interests of Labor, he was ordained in the Protestant Episcopal Church in 1894, and for the next two years was private secretary to the Rt. Rev. Frederic D. Huntington, Bishop of central New York, with charge of St. Luke's and St. Ann's chapels in Syracuse. During 1896-97 he was rector of the Church of the Epiphany in Trumansburg, N. Y., and during 1897-1902 of Grace Parish in Elmira, N. Y. He was then called to the Church of the Advent in Boston, Mass., where he remained until his retirement in 1929. For some time he was a member of the editorial staff of the *Living Church*, writing under the pen name "Presbyter Ignotus." During and after the World War he served with the American Expeditionary Forces in France and Germany. In 1921 he was made a Chevalier of the Order of Leopold II of Belgium, and in 1926 was admitted to the Memorial of Merit of St. Charles the Martyr.

Van Slyke, Lucius Lincoln, American chemist, died in Geneva, N. Y., Sept. 30, 1931. Born in Centerville, N. Y., Jan. 6, 1859, he was graduated from the University of Michigan in 1879, receiving the Ph.D. degree in 1882. In 1885 he became professor of chemistry at Oahu College, Honolulu, and government chemist for the Hawaiian Islands. From 1890 to 1929 he was chief research chemist at the New York Agricultural Experiment Station in Geneva, N. Y., where he made important contributions toward the advancement of the chemistry of milk, cheese, and butter. He also was professor of dairy chemistry at the New York State College of Agriculture, Cornell University, after 1920.

Vendôme and Alençon, Philippe Emmanuel Maximilien Marie Eudes, Duke of Prince of the House of Bourbon-Orléans, died in Cannes, Feb. 1, 1931. He was born at Obermail, near Méran, Jan. 18, 1872, younger son of Ferdinand, Duke of Alençon, who was a grandson of King Louis Philippe of France. In 1896

he married Henriette, Princess of Belgium, a sister of King Albert. During the World War he was associated with the French Red Cross, serving as principal delegate on the Belgian front and as a director of the Franco-Belgian Hospital at Calais. A commission, however, was refused him in the French Army in accordance with the law enacted in 1886 that all princes of the two former sovereign houses of France be barred from service in the army or navy.

Vidal, Paul, French composer and conductor, died in Paris, Apr. 10, 1931. He was born in Toulouse, June 16, 1863, and studied at the Paris Conservatory under Marmontel, Durand, and Massenet, winning in 1888 the *Grand Prix de Rome*. In 1899 he became chorus master at the Opéra and in 1908 first conductor. After 1914 he was first conductor at the Opéra Comique and professor at the Conservatory. He also was honorary president of the Society of Music Editors, Authors and Composers and a chevalier of the Legion of Honor. He composed the incidental music for several plays, such as *La Reine Fiammette*; the operas, *Guernica* (1895), *La Burgonde* (1898), and *Ramona* (1908); and the ballets, *Pierrot Assassin* (1886) and *La Maladetta* (1893). He was particularly happy as a composer of songs, among which were *Le Jeu du Sabot* and *La Menace du Jeu*.

Vincent, H(arry) A(iken), American painter, died in Rockport, Mass., Sept. 27, 1931. He was born in Chicago, Ill., Feb. 14, 1864, and was self-taught in his profession. He exhibited at the National Academy of Design in New York City, the Art Institute of Chicago, the Carnegie Institute in Pittsburgh, and the Pennsylvania Academy of Fine Arts in Philadelphia, and was represented in the permanent exhibition of the Butler Art Institute, Youngstown, Ohio, with "Rockport Harbor." Among the awards which he received were the Shaw and Lidor prizes of the Salmagundi Club of New York in 1907 and 1918, respectively. He was elected an associate member of the National Academy of Design in 1919.

Votey, Josiah William, American civil engineer, died in Burlington, Vt., Sept. 16, 1931. He was born in Ovid, N. Y., July 23, 1860, and was graduated from the University of Vermont in 1884. Remaining at that institution, he was instructor in civil engineering until 1889, assistant professor until 1890, associate professor until 1893, and professor thereafter. He also was dean of the college of engineering after 1901 and sanitary engineer for the Vermont Board of Health after 1908. In 1920 he was president of the Vermont Society of Engineers, and in 1924 of the Land Grant Colleges Engineering Association.

Waddill, Edmund, Jr., American jurist, died in Richmond, Va., Apr. 9, 1931. He was born in Charles City Co., Va., May 22, 1855. Admitted to the Virginia bar in 1877, he successively served as judge for Henrico Co., Va. (1880-83), Federal attorney for the Eastern District of Virginia (1883-85), and member of the State House of Representatives (1885-89). He was elected to the 51st Congress from the 3d Virginia district in 1888, serving until 1891. In 1898 he was appointed Federal district judge for the Eastern District of Virginia, and in 1921 Federal circuit judge for the 4th Judicial Circuit. He had been senior circuit judge since 1925.

Wagner, Samuel Tobias, American civil engineer, died Aug. 7, 1931, in Philadelphia, Pa., where he was born Aug. 30, 1861. He was graduated from the University of Pennsylvania with the B.Sc. degree in 1881 and with the C.E. degree in 1884. After being connected with the Phoenix Iron Company of Phoenixville, Pa., until 1893, he served successively as assistant engineer in charge of the Pennsylvania Avenue Subway and Tunnel for the Bureau of Surveys, Philadelphia, and as assistant engineer in charge of improvement and filtration of the Philadelphia water supply. In 1902 he was appointed by the Philadelphia & Reading Railway Co. assistant engineer in charge of grade-crossing elimination, and during his term as chief engineer from 1915 to 1927 attained national prominence for his part in changing the course of the Schuylkill River, near Port Clinton, Pa., thereby eliminating two long bridges and a long tunnel of the Reading lines. At the time of his death he was consulting engineer for the Philadelphia & Reading Railway Co.; professor of engineering (since 1892) and president of the board of the Wagner Free Institute of Science. He received the James Laurie prize of the American Society of Civil Engineers in 1915.

Walker, John Brisben, died July 7, 1931.

Wallace, Hugh Campbell, died Jan. 1, 1931.

Wallach, Otto, died Mar. 1, 1931.

Walters, Henry, died Nov. 30, 1931.

Warburg, Emil, German physicist, died in Berlin, Aug. 1, 1931. He was born in Altona, Elbe, Mar. 9, 1846, and attended the Universities of Heidelberg and Berlin. He was appointed professor of physics at the University of Strassburg in 1872, at the University of Freiburg in 1876, and at the University of Berlin in 1895. From 1905 to 1922 he was president of the Fed-

eral Physical-Technical Institute. He was also a member of the Prussian Academy of Sciences. His researches pertained to the kinetic gas theory, acoustics, electrolysis, galvanic polarization, capillary electrical phenomena, and oxidation of nitrogen. He published *Lehrbuch der Experimentalphysik* (1893) and *Über die Wärmeinheit* (1900).

Ward, Robert de Courcy, died Nov. 12, 1931.

Warren, Frederick Morris, died Dec. 6, 1931.

Warthin, Alfred Scott, died May 23, 1931.

Waterlow, Sir William (Alfred), British printer, died July 6, 1931, in London where he was born Apr. 23, 1871. After attending Marlborough, he became a solicitor in 1896 and two years later was appointed a director of Waterlow Bros. & Layton, Ltd., printers and stationers. He later became managing director of this firm which had been controlled by his family since 1790 and to which there was awarded in 1914 the contract for printing the British Treasury notes. He was also Lord Mayor of London from 1920 to 1930 and Sheriff of the City during 1928-29. In 1919 he was created a Knight of the British Empire and in 1930 a Baronet.

Wedepohl, Theodor, German painter, died in New York City, Mar. 28, 1931. He was born in Westphalia, Germany, in 1863, and studied at the Imperial Academy of Arts in Berlin and later in Munich, Paris, and Rome. He was established in Berlin until 1926, when he came to the United States. His specialty was portrait painting. Among the 1500 persons who posed were two Emperors, Wilhelm II, and his father, Frederick III, many lesser royalty, famous statesmen, generals, scientists, artists, and financiers. He also painted landscapes, the most notable of which were Icelandic scenes.

Wegener, Alfred Lothar, died November, 1930.

Weidig, Adolf American composer, died in Hinsdale, Ill., Sept. 23, 1931. He was born in Hamburg, Germany, Nov. 28, 1867, and studied violin at the Hamburg Conservatory under Bargheer and at the Munich Academy of Music under Abel. Coming to the United States in 1892, he settled in Chicago where he was a member of the Chicago Orchestra until 1896 and of the Spiering Quartet until 1901. In 1898 he was appointed teacher of harmony and composition and assistant director of the American Conservatory of Music in Chicago. At the time of his death he was associate director of this institution and also vice president of the American Associations of Music. Among his compositions are *Quartettino* and *Serenade* (for string quartet); *Capriccio* and *Three Episodes* (for orchestra), *Italian Suite* (for violin and piano); *O Sing unto the Lord* (motet for mixed voices); *Semiramis* (symphonic poem); also two symphonies and three overtures. He was the author of *Harmonic Material and Its Uses* (1923).

Weiss, Albert Paul, American psychologist, died in Columbus, Ohio, Apr. 3, 1931. He was born in Steingrund, Germany, Sept. 15, 1879, and was brought to the United States in childhood. He was graduated from the University of Missouri in 1910, receiving the Ph.D. degree in 1916. After 1918 he was professor of experimental psychology at Ohio State University. He was the author of *A Theoretical Basis of Human Behavior* (1925). At the time of his death he had completed a study of the *Psychology of the Highway*, having been chairman of a committee of the National Research Council devoted to that problem.

Wetterle, Emile, died July 24, 1931.

Wettstein, Richard, Austrian botanist, died in the Tyrol, Aug. 10, 1931. He was born in Vienna, June 30, 1863. In 1892 he was appointed professor and director of the Botanical Institute and Gardens at the University of Prague and in 1899 was appointed to the same post at the University of Vienna. In 1901 he was leader of an expedition to Brazil, under the auspices of the Austrian Academy of Sciences, to investigate the flora of the country. He had been editor of *Oesterreichischen Botanischen Zeitschrift* since 1899 and *Zeitschrift für induktive Abstammungs- und Vererbungslehre* in 1908-09. His principal work is *Handbuch der systematischen Botanik* (2 vols., 1902-08).

White, Frank Edson, American industrialist, died in Chicago, Ill., Jan. 15, 1931. He was born in Peoria, Ill., Sept. 9, 1873. Beginning in the meat packing business with E. Godel & Sons in Peoria in 1890, he was made department manager for the Western Meat Company, San Francisco, in 1893 and for Armour & Co., Chicago, in 1895. He was elected a director of the Armour Company in 1912, vice president in 1914, and president in 1923. He was also director of numerous banking and industrial enterprises and was active in Chicago civic affairs.

White, Gaylord Starin, American clergyman and sociologist, died in New York City, Nov. 25, 1931. He was born in New Rochelle, N. Y., Mar. 3, 1864, and was graduated from Princeton University in 1886 and from the Union Theological Seminary in 1890. Ordained to the Presbyterian ministry, he served as assistant pastor of the Rutgers Church, New York City,

and in 1898 became pastor of the City Park branch of the First Presbyterian Church, Brooklyn. From 1901 to 1918 he was director of field work of the Union Theological Seminary, and from 1901 to 1923 head worker at the Union Settlement. After 1913 he was professor of applied Christianity at the Union Theological Seminary, and after 1920 director of the department of church and community. At the time of his death he was also dean of students.

Wight, William Ward, American lawyer, died in Milwaukee, Wis., Jan. 2, 1931. He was born in Troy, N. Y., Jan. 14, 1849, and was graduated from Williams College in 1869 and with the LL.B. degree from the Albany Law School in 1873. Removing to Milwaukee two years later, he was engaged in the practice of law there until his death. He was also founder of the Milwaukee Civil Service Reform Association and was secretary and librarian for the Milwaukee Law Library Association more than 50 years. In 1880 he became secretary of Milwaukee (later Milwaukee-Downer) College and in 1907 was elected its president, serving until 1924. His works include *Life of Henry Clay Payne* (1907) and *Louis XVII* (1915).

Wilcox, Reynold Webb, American physician, died in Princeton, N. J., June 6, 1931. He was born in Madison, Conn., Mar. 29, 1856, and was graduated from Yale in 1878 and with the M.D. degree from Harvard in 1881, studying also in Vienna, Heidelberg, Paris, and Edinburgh. Engaging in practice in New York City, he was appointed professor of medicine at the New York Post-Graduate Medical School in 1884, where he remained until 1908. He was also consultant at St. Mark's Hospital, Manhattan, the Ossining (N. Y.) Hospital, the Eastern Long Island Hospital, and the New Jersey State Hospital in Trenton. Among the organizations of which he was president were the American Therapeutic Society (1901-02), the American Association of Medical Jurisprudence (1913-14), the American Congress on Internal Medicine (1915-17), and the American College of Physicians (1915-21). He retired from active practice in 1924. His works include *System of Case Records* (1887); *Materia Medica and Therapeutics* (1892); *Manual of Fever Nursing* (1904); and *Treatment of Diseases* (1907).

Wiley, Andrew J., died Oct. 8, 1931.

Williams, The Most Rev. David, Canadian prelate of the Church of England, died in London, Ont., Oct. 7, 1931. He was born in Silian, Wales, Mar. 14, 1859, and attended St. David's College, Lampeter, and Oxford University. Following his ordination in 1885, he served two years as curate of Festiniog, Wales, and was then sent to Canada to teach in the Huron Theological College. He was special preacher at St. Paul's Cathedral, London, during 1888-92 and, returning to Canada, was rector of St. James's Church, Stratford, Ont., during 1892-1904. In 1903 he was made Archdeacon of Perth, and in 1905 Bishop of Huron. After 1926 he was Metropolitan of the Province of Ontario.

Williams, Gardner Stewart, died Dec. 12, 1931.

Williams, J(ohn) Whitridge, American physician, died Oct. 21, 1931, in Baltimore, Md., where he was born Jan. 26, 1866. He was graduated from Johns Hopkins University in 1886 and with the M.D. degree from the University of Maryland in 1888, later studying at the universities of Berlin, Vienna, Leipzig, Prague, Paris, and Heidelberg. He became connected with the medical school of Johns Hopkins University in 1889 as assistant, and ten years later was appointed professor of obstetrics and obstetrician-in-chief at the Johns Hopkins Hospital. He also served as dean of the school during 1911-23. He was president of the American Gynecological Society during 1913-14, of the American Association for the Study and Prevention of Infant Mortality during 1914-16, and of the Medical and Chirurgical Faculty of Maryland during 1915-16. His publications include *Text-Book of Obstetrics* (1903) and numerous monographs on obstetrical and gynecological subjects.

Williams, William Henry, American railway official, died in St. Louis, Mo., Oct. 14, 1931. He was born in Athens, Ohio, June 25, 1874. From 1890 to 1901 he held various positions as stenographer and cashier with the Pennsylvania and Pittsburgh & Lake Erie Railroads, and then became assistant secretary and assistant to the general manager of the Baltimore & Ohio Railroad. In 1905 he was appointed traffic manager of the Merchants and Manufacturers Association and the Chamber of Commerce of Pittsburgh, Pa., returning to the railroad service two years later as assistant to the president of the Delaware & Hudson Railroad. He became 3d vice president of that line in 1907 and vice president in 1916, serving until 1928. He also was chairman of the board of the Missouri Pacific Railroad and several of its subsidiaries from 1924 to 1930. In 1931 he assumed the presidency of the Wabash Railway, with which he had been connected as chairman of its executive committee since 1915.

Willson, Augustus Everett, American politician and former Governor of Kentucky, died in Louisville, Aug. 24, 1931. He was born in Maysville, Ky., Oct. 13, 1846,

and was graduated from Harvard University in 1869. After studying for a short time at the Harvard Law School he entered the law offices of Lathrop, Bishop & Lincoln in Boston, but returned to Louisville the following year, becoming associated with John M. Harlan. In 1897, after having worked for 25 years to make the Republican party a factor in the State, he was elected Governor of Kentucky, the second Republican to hold that office. During his term (1907-11) he used the militia to put down the tobacco "night-riders" and pardoned the men convicted of the assassination of his Democratic predecessor, William Goebel.

Willy. See Gauthier-Villars, Henry.

Wilson, The Ven. James Maurice. British clergyman and educator, died in Steep, Petersfield, Apr. 15, 1931. Born Nov. 6, 1836, he attended St. John's College, Cambridge, and was natural science and mathematics master at Rugby School during 1859-79 and head master of Clifton College during 1879-90. He then became Archdeacon of Manchester, and in 1905 was made Canon of Worcester, holding that incumbency until 1926. He also was Hulsean lecturer at Cambridge in 1898, Lady Margaret preacher in 1900, and lecturer on pastoral theology in 1903. In 1921 he was president of the British Mathematical Association. He wrote on the relations of religion and science.

Wing, Asa Shove. American insurance official, died June 5, 1931, in Sandwich, Mass., where he was born Jan. 29, 1850. He became associated with the Provident Life & Trust Co. of Philadelphia (later the Provident Mutual Life Insurance Company) in 1867 and was made president in 1906. He was also director in many Philadelphia banking and industrial enterprises.

Wittpenn, H. Otto. American industrialist and politician, died in Hoboken, N. J., July 25, 1931. He was born in Jersey City, N. J., Oct. 23, 1871. After acting as supervisor of Hudson County, he was elected mayor of Jersey City in 1904 and reelected for two succeeding terms thereafter. In 1913 he was appointed by President Wilson naval officer of the Port of New York, serving throughout both Wilson administrations. In 1916, as Democratic candidate, he was defeated for Governor of New Jersey by Walter E. Edge, Republican. At the time of his death he was a member of the New Jersey State Highway Commission. He also served as president of the New Jersey State Board of Children's Guardians and as a member of the Board of Control of the New Jersey State Department of Institutions and Agencies and of the National Prison Association Committee on Delinquent Women. In 1931 he was appointed by President Hoover as American delegate to the International Commission for Criminology and Prison Management. His business interests concerned the brick manufacturing firm of Houghtaling and Wittpenn, the Hoboken Land & Improvement Co., and the presidency or directorship of banks in Hoboken and Jersey City.

Wolheim, Louis. American motion picture actor, died in Los Angeles, Calif., Feb. 18, 1931. He was born in New York City, Mar. 28, 1881, and was graduated from Cornell University in 1906, later becoming an instructor in mathematics at that institution. His first stage appearance was in *The Jest* with John and Lionel Barrymore in 1919. Noted for his grim face and pugnacious personality, he achieved a great success in the title rôle of Eugene O'Neill's *The Iceman* and as Captain Flagg in *What Price Glory?* About 1925 he took up film work, appearing in *Little Old New York*, *What Price Glory?*, *Lovers' Island*, *Two Arabian Knights*, *Sorrell and Son*, *The Tempest*, *Frozen Justice*, *Wolf Song*, *Condemned*, *The Awakening*, *Danger Lights*, *The Racket*, and *All Quiet on the Western Front*.

Wood, Arthur Julius. American engineer and educator, died in State College, Pa., Apr. 18, 1931. He was born in Newark, N. J., Sept. 3, 1874, and was graduated from the Stevens Institute of Technology in 1896. After acting as associate editor of the *Railroad Gazette*, he became instructor in mechanical engineering at the Worcester Polytechnic Institute in 1900, professor of mechanical and electrical engineering at Delaware College in 1902, and professor of mechanical engineering at the Pennsylvania State College in 1904. In 1912 he organized at the latter institution the courses in railway mechanical engineering, and from 1918 to 1922 was in charge of the college's Engineering Experimental Station. At the time of his death he was head of the department of mechanical engineering. He was also an authority on the technique of refrigeration, and was president of the American Society of Refrigerating Engineers during 1928-29. He was the author of *Principles of Locomotive Operation* (1915).

Wood, Commodore Moses Lindley, U. S. N., Ret. American naval officer, died in Washington, D. C., Apr. 3, 1931. He was born in Lexington, Mo., Aug. 12, 1854, and was graduated from the United States Naval Academy in 1875. Promoted through the grades to captain, he commanded the U. S. S. *Eagle* (1902-04), *Dixie* (1906-07), and *Maryland* (1908-09). He re-

tired with the rank of commodore in 1909, but was ordered to active duty on the entry of the United States into the World War, serving as president of the Naval Examining and Retiring Boards for the 8d Naval District and as president of the Special General Courts Martial, New York Navy Yard.

Woodley, Oscar Israel. American educator, died in Clermont, Fla., Nov. 24, 1931. Born in Ontario, Canada, Oct. 19, 1861, he was graduated from the Michigan State Normal College, Ypsilanti, in 1886 and from Albion (Mich.) College in 1901. After acting as superintendent of schools in Sauk Center, Minn., Menominee, Mich., and Passaic, N. J., he became in 1910 president of the State Normal School, Fairmont, W. Va. In 1915 he was elected president of Marshall College, Huntington, W. Va., where he remained five years. He was secretary of the Florida Educational Association during 1923-24, and was the author of *The Profession of Teaching* (1917).

Worthington-Evans, Sir Laming, died, Feb. 14, 1931. Wyllie, William Lionel, died Apr. 6, 1931.

Ysaie, Eugene, died May 12, 1931.

Zesler, Sigmund. American lawyer, died in Chicago, Ill., June 4, 1931. He was born in Bielitz, Silesia, Austria, Apr. 11, 1860, and studied law and political science at the University of Vienna and at Northwestern University, being graduated from the latter in 1884. Admitted to the Illinois bar, he was associate counsel for the defense in the Anarchist cases of 1886-87 and was chief assistant corporation counsel for Chicago during 1893-94. He was also lecturer on Roman law at Northwestern University during 1884-86 and again during 1892-93 and on constitutional law at the John Marshall Law School during 1901-04. In 1904 he became master in chancery for the Circuit Court of Cook Co., which office he held until 1920. He was prominent in the American Free Trade League and the Municipal Voters' League, being president of the latter in 1925.

Zimmermann, Leopold. American banker, died in New York City, Sept. 15, 1931. He was born in Oberseemen, Hessen, Germany, June 3, 1853, coming to the United States in 1869. At the age of 19 he opened his own office as a money broker in Wall Street, and in 1877 organized the firm of Zimmermann and Forshay, of which he was director until his death. In 1893 this firm became a member of the New York Stock Exchange, and for many years before the World War was correspondent for the principal banks of Central Europe and fiscal agent for the German Government.

Zimmern, Heinrich. German Orientalist, died in Leipzig, Feb. 23, 1931. He was born in Graben, July 14, 1862, and attended the universities of Leipzig, Berlin, Erlangen, and Strassburg. He was appointed professor of Assyriology at the University of Leipzig in 1894, and professor of Oriental languages in 1900. His works include *Babylonische Rassepalmen* (1895), *Beiträge zur Kenntnis der babylonischen Religion* (1896-1901), *Vergleichende Grammatik der semitischen Sprachen* (1898), and *Sumerische Kultbilder* (1912-13). With August Fischer he also had edited *Leipziger semitischen Studien* (1903-30) and *Zeitschrift für Assyriologie* (after 1923).

Zorrilla de San Martín, Juan Uruguayan poet, diplomat, and educator, died Nov. 3, 1931, in Montevideo, where he was born, Dec. 28, 1855. He attended the University of Montevideo and the College of the Immaculate Conception of Santa Fé, Argentina. In 1877 he founded *El Bien Público*, a Catholic periodical, and the following year became a judge in the department of Montevideo. After serving as deputy during 1887-90, he was appointed Minister to Spain, and later became professor of aesthetics in the faculty of architecture at the University of Montevideo. Among his poems are: *Notas de un himno* (1876); *La leyenda patria* (1878); *Tabaré* (1888); and *La profecía de Ezequiel* (1921).

**NEGRI SEMBILAN**, nā'grē sēm'hē-līn'. A federation of nine divisions, constituting a state in the Federated Malay States. See **FEDERATED MALAY STATES**.

**NEGRO ACTIVITIES**. See **COMMUNISM**.

**NEGRO IN INDUSTRY**. See **LABOR**.

**NEHRU**, PANDEIT MOTILAL. An Indian Nationalist leader, died in Lucknow Feb. 6, 1931. Born May 6, 1861, he attended Muir College, Allahabad, and began the practice of law in 1883. In 1895 he was enrolled as an advocate of the Allahabad high court, and was for some years a member of the United Provinces legislative conference. In 1919 he became associated with Mahatma Gandhi in the Indian nationalist movement, founding its organ, the *Independent*, and serving as president of the Indian National Congress at Amritsar. In

1922, with C. R. Das, he organized the Swaraj party, was its leader in the Indian Legislative Assembly, and accomplished its fusion four years later with the National Congress party. He also actively promoted the boycott of the Indian Statutory Commission on its appointment in 1927, and was chairman in 1928 of the committee of the All-Parties Conference which framed the Nehru Report, formulating a plan of Dominion status for India. When this scheme was rejected by the Government, he urged all parties in the Indian National Congress, of which he was president, to strive for complete independence, and in 1930 inaugurated the campaign of civil disobedience.

**NEJD.** See **ABAHIA**.

**NEMES SALE.** See **AET SALES**.

**NEPAL**, nē-pōl'. An independent kingdom in the Himalayas between Tibet and British India, under British influence. The area is about 54,000 square miles, the population about 5,000,000. Capital, Kathmandu (80,000 inhabitants); reigning sovereign in 1931, Maharajadhiraja Tribhuvana Bir Bikram. The Government is a military oligarchy, under a partially hereditary Prime Minister. Prime Minister in 1931, Maj.-Gen. Sir Bhim Shamsher Jang Rana, who assumed office Dec. 16, 1929.

**NERVE GROWTH.** See **MEDICINE**, **PROGRESS OF**.

**NETHERLAND EAST INDIES.** A possession of the Netherlands in the East Indies, comprising the group of islands in the Pacific lying between 6° N. and 11° S. latitude, and between 95° and 141° E. longitude. Capital, Batavia.

**AREA AND POPULATION.** The usual method of dividing the colony is as follows: (1) Java and Madoera (Madura); (2) the Outposts, consisting of Sumatra, Borneo, Celebes, a part of New Guinea, the Molukka Islands, Timor Archipelago, Bali, and other small islands. The area is estimated at 733,642 square miles; population, at the preliminary census of 1930, 60,731,024, of whom 41,719,524 were in Java and Madoera. The total population at the 1920 census was 49,350,834. Europeans in Java and Madoera numbered 193,618, natives, 40,890,244; other Orientals (chiefly Chinese), 635,662. The chief cities, with their 1930 populations, were: Batavia in Java, 437,433; Soerabaja (Surabaya), 336,814; Soerakarta, 163,013; Semarang, 217,775; Bandoeng, 166,722; Djokjakarta (Jogjakarta), 136,554; all in Java. Palembang in Sumatra had 109,169 inhabitants.

**PRODUCTION.** Agriculture, mining, and manufacturing are the chief industries, with the former predominating. In 1930, there were 23,810,000 acres under cultivation, of which 2,880,000 acres represented plantations operated by Europeans. Production of the chief crops in 1930 was: Sugar (in Java), 2,969,000 metric tons; rubber, 269,000 metric tons; coffee, 250,955,000 pounds in 1929; tea, 148,050,000 pounds; rice (Java and Madoera), 260,913,000 bushels. Corn, tobacco, cassava roots, copra, cinchona, citronella oil, palm oil, kapok, sisal, and agave are other export products. The islands produce about 95 per cent of the world's quinine output. Tin production for the year ended June 30, 1931, was 34,910 metric tons; for 1931-32 the production was restricted to 29,910 tons under an international agreement reached at London early in 1931. Petroleum output (1930) was 40,150,000 barrels (39,279,000 barrels in 1929). Teak forests

were estimated to cover 1,897,000 acres. Manufacturing is confined to the preparation of rubber, sugar, tea, rice, etc. for export. Agriculture and business were badly depressed in 1931, as a result of poor demand and low prices for the principal export products.

**COMMERCE.** Preliminary trade figures for 1931 showed exports valued at 810,193,000 florins (\$325,700,000) and imports of 548,578,000 florins (\$220,528,000), compared with exports of 1,203,039,000 florins and imports of 833,512,000 florins in 1930. The favorable balance of trade was 261,615,000 florins, compared with 369,527,000 florins in 1930 (1 florin = \$0.4020 at par). Of the 1930 imports, the Netherlands supplied 16.8 per cent; Singapore, 11.2 per cent; the United States, 10.7; and the United Kingdom, 10.5.

**FINANCE.** As a result of the trade decline, government finances showed a deficit of approximately 180,000,000 florins (\$72,360,000) at the close of 1931. A drastic retrenchment policy was introduced in an effort to balance the budget. The 1931 budget estimates placed ordinary receipts at 813,251,000 florins (\$326,927,000) and ordinary expenditures at 824,880,000 florins (\$331,602,000). The public debt, all funded, on Dec. 31, 1930, was provisionally calculated at 986,765,000 florins (\$396,680,000).

**COMMUNICATIONS.** At the end of 1929, there were 2702 miles of state-owned railway lines in operation, gross receipts of which were 81,853,000 florins (\$32,905,000) for the year. Highways (1930) extended 36,175 miles, of which 25,050 miles were macadam. A weekly air service connected Batavia with Amsterdam in the Netherlands. A total of 19,965 vessels, of 12,273,000 net tons, entered the ports during 1930. Belawan, Batavia, Sabang, Samboe, and Soerabaja were the principal ports of call.

**GOVERNMENT.** Executive authority is vested in a governor-general, assisted by an advisory council of five members. Both the Governor-General and members of the Council are nominated by the Queen of the Netherlands. Legislative authority is shared between the Governor-General and the Volksraad, or legislative assembly. The chairman of the Volksraad is appointed by the Crown. Part of the members are appointed by the Government and part are elected by the local councils; the Volksraad must consist of 30 native, 25 Dutch, and not more than 5 foreign-born subjects, such as Chinese. Administration is conducted through 3 provinces in Java and Madoera and through 4 governments and 18 residencies in the other possessions. There is a standing army of 35,000, composed mostly of natives. Governor-General A. C. D. de Graeff was succeeded on Sept. 12, 1931, by B. C. de Jonge. The Volksraad in 1931 passed a bill providing for the gradual abolition of the system of penal sanction, under which contract labor in North Sumatra was recruited. See **NETHERLANDS**. **THE**.

**NETHERLANDS, THE, OR HOLLAND.** A constitutional monarchy of Europe, bounded by the North Sea on the west and north; on the east by Germany, and on the south by Belgium. Capital, The Hague; reigning sovereign in 1931, Queen Wilhelmina Helena Pauline Maria.

**AREA AND POPULATION.** With an area of 13,213 square miles, the Netherlands had a population of 7,920,388 at the census of 1930. The estimated population on Oct. 1, 1931, was 8,006,600; in 1920, the census population was 6,865,314. From 1926 to 1930, births averaged 178,229 an-

nually and deaths 75,936, the excess of births being 102,296. In 1930, the birth rate per 1000 of population was 23.1 and the death rate 9.1. The chief cities, with 1930 census populations, are: Amsterdam, 752,003; Rotterdam, 581,899; 's Gravenhage (The Hague), 436,568; Utrecht, 153,884; Haarlem, 119,859; Groningen, 105,005.

**EDUCATION.** The 1928-29 enrollment in the primary schools was 1,118,025; secondary schools, 31,707; preparatory schools, 10,645; and universities, 8653. The four public universities are at Leiden, Utrecht, Groningen, and Amsterdam.

**PRODUCTION.** The Dutch national economy is based primarily on intensive agriculture and animal husbandry, although manufacturing and mining are important factors. In 1929, there were 2,305,000 acres of arable land, or 27 per cent of the total area; 2,172,000 acres of permanent meadow, and 595,000 acres of woods and forests. The chief crops are cereals, sugar beets and flax. Livestock in 1930 included 2,366,000 cattle, 2,018,000 swine, 485,000 sheep, and 299,000 horses. Butter production in 1930 was 192,241,000 pounds; cheese, 301,810,000 pounds. Coal is the chief mineral produced, the output in 1930 totaling 12,211,083 metric tons, compared with 11,581,201 in 1929. Four of the eight coal mines are government owned.

The important shipbuilding, textile, and machinery industries are dependent upon the Netherland East Indies (q.v.) for a large part of their business. Holland normally ranks third among the shipbuilding nations of the world. In 1930, 74 sea-going vessels of 153,072 gross tons were launched, of which 51, of 128,195 tons, were motor vessels. Diamond cutting, flour milling, and printing are other leading industries.

**COMMERCE.** According to preliminary figures of the Central Bureau of Statistics, imports in 1931 declined to 1,893,000,000 florins, as compared with 2,418,255,000 florins in 1930, while exports decreased to 1,312,000,000 florins, as against 1,718,880,000 florins in the previous year (1 florin, or guilder, equaled \$0.4020 at par). The principal imports, in order of value, in 1930 were iron and steel, textile manufactures, machinery (other than electric); coal, coke and briquets. The chief exports, in order of value, were coal, coke and briquets; cotton piece goods, cheese, wireless apparatus, butter, and eggs. Germany in 1930 furnished 31.8 per cent of all Dutch imports for consumption, as compared with 10.6 per cent by Belgium, 9.4 per cent by Great Britain, and 8.7 per cent by the United States. Of the 1930 exports of Netherland products, Great Britain took 22.3 per cent; Germany, 21.3; Belgium, 11; and France, 8.1.

**FINANCE.** The budget for 1932, as introduced in Parliament by the Finance Minister Sept. 15, 1931, estimated ordinary receipts and expenditures at 544,000,000 florins and 594,000,000 florins, respectively, and capital income and expenditure at 276,000,000 florins and 412,000,000 florins, respectively. The estimates for 1931 anticipated revenues (both ordinary and extraordinary) of 657,306,000 florins and total expenditures of 767,900,000 florins. The deficit in the 1931 ordinary budget was provisionally estimated at 26,000,000 florins. The Treasury remained in a strong financial position during 1930, with no foreign indebtedness and the floating debt largely offset by outstanding collectible claims. The public debt on Jan. 1, 1931, totaled

2,713,730,000 florins, of which 2,386,010,000 florins represented the funded debt.

**COMMUNICATIONS.** There were 2300 miles of railway lines in 1930, owned by two private companies in each of which the government held a controlling interest. Highways extended 15,534 miles, of which 10,563 miles were macadam. Government-subsidized air lines linked Amsterdam with London, Paris, Brussels, Hamburg, Zurich, and Malmö (Sweden). A weekly air service was in operation between Amsterdam and Batavia in the Netherland East Indies. The Dutch merchant marine on June 30, 1930, comprised 1401 vessels (100 tons or over), aggregating 3,086,315 gross tons capacity. About two-thirds of the total tonnage entered and cleared at Dutch ports (64,788,000 tons in 1929) passed through Rotterdam.

**GOVERNMENT.** Executive power is vested in the Sovereign and legislative power conjointly in the Sovereign and the Parliament, which is called the States-General and consists of two houses. The upper House is composed of 50 members, elected by the Provinces, and the lower House of 100 deputies, elected by direct suffrage. There is a consultative State Council of 14 members, appointed by the Sovereign. The Ministry in 1931 was composed as follows: President of the Council of Ministers, Minister of the Interior and of Agriculture, Dr. Ch. J. M. Ruys de Beerenbrouck (Catholic), appointed Aug. 10, 1929; Foreign Affairs, Dr. F. Beelaerts van Blokland; Finance, Dr. D. J. de Geer; Justice, Dr. J. Donner; Colonies, S. de Graaf; Defense, Dr. L. N. Deckers; Public Works, Dr. P. J. Reymer; Labor, Commerce, and Industry, Dr. J. Th. Verschuur; Instruction, Science, and Arts, Dr. J. Terpstra. The Cabinet is independent of Parliament, being appointed directly by the Queen.

**HISTORY.** The Netherlands was one of the few countries of the world which escaped political turmoil and disorder during 1931. The attention of the nation was absorbed in efforts to ward off the effects of the world-wide depression, which seriously reduced productive activity. The Government's strong financial position and the absence of foreign obligations enabled it easily to weather the European financial storm; the exchange value of the florin remained above par throughout most of the year. The Amsterdam Stock Exchange was closed for one day following the abandonment of the gold standard by Great Britain, but the Netherlands Bank on September 27 announced that it would unconditionally maintain the gold standard.

On November 19, the lower Chamber, by a vote of 56 to 36, passed a measure increasing the general import tariff from 8 to 10 per cent ad valorem. The measure was designed to prevent dumping in Holland by Great Britain and other countries with depreciated currencies and to offset the new British tariff. On November 12 a national crisis committee of 52 leading citizens was established to deal with the increasing unemployment problem. Declining revenues forced the Government on September 17 to suspend work on the great Zuider Zee reclamation project, which eventually was to reclaim 550,000 acres, an area equivalent to 7 per cent of the existing land area of Holland. The drainage of a 50,000-acre section was completed early in 1931 and some 9000 acres were distributed to farmers. See **NAVAL PROGRESS.**

**NEVADA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 91,058, in 1920 it was 77,407. The native whites numbered 69,150 (1930), 55,897 (1920). The foreign-born whites, 12,275 (1930), 14,802 (1920). There were, in 1930, 516 Negroes, 4871 Indians and 3090 Mexicans. Of 42,884 persons listed as in gainful occupations in 1930, 4134 were farmers and 4748 were wage workers on farms. Reno, the most populous city, had 18,529 inhabitants (1930), 12,016 (1920). The capital is Carson City.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay .....	1931	177,000	223,000*	\$2,185,000
	1930	222,000	448,000*	4,077,000
Potatoes .....	1931	8,000	800,000	180,000
	1930	8,000	510,000	551,000

\* Tons.

**MINERAL PRODUCTION.** Like other States dependent on the non-ferrous metals for their mineral industry, Nevada underwent a severe decline in mining activity in 1930. There were treated only 4,757,178 short tons of the ores of gold, silver, copper, lead or zinc or their combinations, as against 7,355,500 tons treated in 1929. The value of the recoverable metals in these ores was, for 1930, \$21,455,517; for 1929, \$33,030,237. Though the value of gold in monetary terms is not subject to reduction, there were produced but 149,064 fine ounces of gold; 163,711 ounces had been produced in 1929. The production of silver totaled 4,219,832 fine ounces in 1930; in 1929, 4,923,526. That of copper was 109,203,512 pounds for 1930; for 1929 it had been 140,138,809 pounds, as to quantity and as to value, \$24,664,430, constituting in itself two-thirds of the mineral total for that year. The production of lead rose to 23,058,381 pounds for 1930, from 19,682,568 pounds for 1929; but the value for 1930 was less than the \$1,240,632 of 1929. Zinc production increased sharply to 29,168,117 pounds for 1930, from 16,920,083 for 1929; its value for 1930 was consequently somewhat higher than the \$1,116,725 of 1929. There was a substantial gypsum production, last officially reported for 1929 at 225,514 short tons, in value \$1,290,854. The total value of the State's mineral production was \$36,776,293 for 1929; for 1928, \$34,881,787.

The value of the mine production of gold, silver, copper, lead, and zinc in Nevada decreased from \$21,455,517 in 1930 to about \$10,936,300 in 1931, according to the U. S. Bureau of Mines. Compared with the 1930 production there were decreases in the output and value of all metals. The gold output from mines in Nevada decreased from \$3,081,436 (149,065 fine ounces) in 1930 to about \$2,935,400 (142,000 fine ounces) in 1931. Nevada was widely searched for gold during the year and in districts where silver had predominated gold was found in paying quantity. The silver production from mines in Nevada decreased from 4,219,832 fine ounces in 1930 to about 2,496,000 ounces in 1931 and the value from \$1,624,635 to about \$723,800. The Tonopah district produced about 650,000 ounces, a decrease from 1,931,194 ounces in 1930. The mine production of copper in Nevada in 1931 in terms of marketed and estimated metal was 72,046,400 pounds, valued at about \$5,979,800. This output

compares with 109,203,512 pounds and \$14,196,457 in value in 1930.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 rendered the number of the State's manufacturing establishments as 123. These employed 2201 wage earners (about 9 per cent fewer than had been employed in 1927). Their wages for the year totaled \$3,585,425. Cost of materials, fuel and purchased electricity came to \$13,896,029. The manufactured product was valued at \$33,717,059 (an increase of 25.7 per cent over the total for 1927).

**FINANCE.** State expenditures in the year ended Dec. 31, 1930, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$2,639,117 (of which \$467,568 was for local education); for interest on debt, \$58,540; for permanent improvements, \$1,768,217; total, \$4,465,874 (of which \$2,428,827 was for highways, \$693,108 being for maintenance and \$1,735,719 for construction). Revenues were \$4,426,087. Of these, property and special taxes formed 34 per cent; departmental earnings and remuneration to the State for officers' services, 5.3; sale of licenses, 24.3 (including gasoline sale taxes amounting to \$677,835). The State's funded debt outstanding on Dec. 31, 1930, was \$980,000. Of this amount, \$300,000 had been contracted for highways. Net of sinking-fund assets, debt was \$906,100. On a property valuation of \$207,851,131 were levied in the year taxes of \$1,376,160.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2108.63. A small additional lineage of 0.35 mile had come into operation during the year preceding, while 14.37 miles had been abandoned. In 1931 were built 33.09 miles of additional first track.

**EDUCATION.** For the academic year 1929-30 the total number of those enrolled as pupils in the public schools of the State was 18,041. Of these, 650 were in kindergartens, 13,629 in elementary grades or common schools and 3762 in high schools. There were 337 schools, of which 295 were elementary, these including 185 one-room schoolhouses, while 33 were high schools. The year's expenditure for support and maintenance of elementary public schools was \$1,353,192; for support and maintenance of high schools, it was \$673,136. Yearly salaries of teachers, principals, superintendents and instructors averaged \$1571. The State's central educational organization was altered in 1931 by the enactment of a law creating a new State Board of Education, to which each of the five supervisory districts was, by election, to contribute a member. The Governor and the State Superintendent of Public Instruction were to be members ex-officio.

**LEGISLATION.** The State Legislature held its regular biennial session. Apprehensive of competition through easier divorce laws under consideration in Arkansas and Idaho, the legislators amended the divorce law, which was credited with yielding the State an annual \$3,000,000 in various sorts of public and private revenue. The preliminary period of residence in the State requisite to qualify divorce plaintiffs was reduced to six weeks, and it was rendered unnecessary for the presentation of grounds of divorce action to offer particulars save when the defendant contested. A bill to legalize gambling was also enacted.

**POLITICAL AND OTHER EVENTS.** Work was begun on the Hoover Dam project in the spring, to im-

pound the Colorado River at the Arizona border. Large numbers of workers were brought and settled near Las Vegas, Nevada, and a base for the constructors' activities was set up, adding greatly to business in the State. In August a part of the working force on the project demanded higher wages and improved comforts. The contractors refused the demands and sought to lay off the men. A general strike resulted, in which the workers had the backing of the executive council of the American Federation of Labor.

The new divorce law went into effect on May 2; in the course of May, 321 divorces were granted at Reno under the six-weeks' residence provision, as against 2109 divorces and annulments decreed in the entire year 1929 under the old law.

See MARRIAGE AND DIVORCE.

**OFFICERS.** Governor, Fred B. Balzar; Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; Controller, Edward C. Peterson; Treasurer, George B. Russell; Attorney-General, Gray Washburn; Superintendent of Public Instruction, Walter Anderson.

**JUDICIARY.** Supreme Court: Chief Justice, Ben W. Coleman; Associate Justices, J. A. Sanders and Edward A. Ducker.

**NEVADA, UNIVERSITY OF.** A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 945 students for the autumn term of 1931. The summer session of 1931 had a registration of 118. There were 75 members on the faculty. The productive funds of the university amounted to \$335,437, and the income for the year to \$695,899. The library contained 53,985 volumes. President, Walter E. Clark, Ph.D., LL.D.

**NEWARK MUSEUM.** See ART EXHIBITIONS; SCULPTURE.

**NEW BRITAIN** See BISMARCK ARCHIPELAGO and NEW GUINEA, TERRITORY OF.

**NEW BRUNSWICK** (brünz'wîk). One of the Maritime Provinces of Canada, bounded on the east by the Gulf of St. Lawrence and Nova Scotia, on the north by Quebec, and on the west by the State of Maine. The area is 27,985 square miles and the population at the census of 1931 was 408,219, compared with 387,876 in 1921. The chief cities, with the 1931 census populations (preliminary), are: St. John, 46,640 (47,166 in 1921); Moncton, 20,617 (17,488); and Fredericton, the capital, 8828 (8114). In 1929, there were 10,224 living births, 5213 deaths, and 3117 marriages. Enrollment in the public schools in the same year totaled 93,580 and the average daily attendance was 61,127.

Agriculture, mining, manufacturing, fishing, and lumbering are leading industries. The acreage under field crops in 1930 was 911,490 acres (908,659 in 1929) and the value of production was \$18,554,000 (\$23,835,000 in 1929). About half of the 21,476 square miles of forest is owned by the Province. The production of lumber and other saw-mill products (1929) was valued at \$12,164,604. The fish catch for the same year, valued at \$5,935,635, was the largest in six years. The provisional value of mineral production for 1930 was \$2,270,812, as compared with \$2,439,072 in 1929. Coal, copper, antimony, and gypsum are mined. With 860 manufacturing establishments, 18,517 employees, and a capital investment of \$117,965,970, there were produced in 1929 manufactured produce valued at \$71,433,966 gross and \$30,980,431 net.

Ordinary revenues and expenditures of the

Province for the fiscal year ended Oct. 31, 1930, totaled \$6,513,285 and \$7,357,020, respectively. For the preceding year revenues were \$5,991,375 and expenditures \$6,521,575. The bonded indebtedness in 1929 stood at \$39,525,803. A bond issue of \$5,215,000, bearing interest at 4½ per cent, was sold April 8, 1931, to a Canadian syndicate. The Province in 1931 had 11,836 miles of highway. A daily airplane service between Moncton and Charlottetown, P. E. I., was opened Oct. 10, 1931.

Government is vested in a lieutenant-governor and a legislative assembly of 48 members elected for five years. Lieutenant-Governor in 1931, H. H. McLean. Premier and Attorney-General, J. B. M. Baxter (Conservative), who resigned in May, 1931, to accept a seat on the Supreme Court. He was succeeded May 10 by Charles D. Richards (Conservative).

**HISTORY.** The worst fire in the history of Canada since the Halifax fire of 1917 swept the west side of St. John harbor on June 22, 1931. Shipping, wharves, elevators, warehouses, government buildings, and private residences valued at over \$5,000,000 were destroyed. Most of the property was owned by the St. John Harbor Commission and the Canadian Pacific Railway. Contracts for the reconstruction of six piers were let the following month. See CANADA.

**NEW CALEDONIA**, kâl'ê-dô'n'yâ. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands, lying about 875 miles east of Australia, and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Fotuna and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 8548 square miles. Population, according to the census of 1926, 51,816, of whom 14,983 were free whites, 1281 of convict origin, and 27,490 Melanesians and Polynesians. The native population July 1, 1930, was 27,777; on the same date immigrants included 7000 Javanese and 6000 Tonkinese. Capital, Noumea, with 10,226 inhabitants in 1920. Governor in 1931, M. Guuyon.

**NEWCOMB, H. SOPHIE, COLLEGE FOR WOMEN.** See THE TULANE UNIVERSITY OF LOUISIANA.

**NEWCOMBE, EDMUND LESLIE.** A Canadian jurist, died in Ottawa, Ont., Dec. 9, 1931. He was born in Cornwallis, N. S., Feb. 17, 1859, and was graduated from Dalhousie College, Halifax, in 1878, receiving the LL.B. degree from the University of Halifax in 1881. Called to the Nova Scotia bar in 1883, he was created King's Counsel in 1893. He was associate British agent and leading counsel for Canada in the pecuniary claims arbitration between Great Britain and the United States and counsel for the Canadian Government in the *S.S. Empress of Ireland* inquiry (1914). He also was chairman of the select committee for the revision of the statutes of Canada (1902-06) and chairman of the Military Service Council to administer the Military Service Act (1917-19). In 1924 he was appointed judge of the Supreme Court of Canada, representing the Maritime Provinces.

**NEW DELHI, INDIA.** See CITY AND REGIONAL PLANNING.

**NEWFOUNDLAND**, nüf'ünd-länd'. A large island in the northeastern part of the Gulf of St. Lawrence, forming one of the British dominions. Area, 42,734 square miles; population in

1930, 275,888 (including Labrador), as compared with 263,033 at the census of 1921. Labrador, a dependency of Newfoundland, has an area of 110,000 square miles and a population (1928) of 4086. Capital of Newfoundland, St. John's, with a population in 1930 of 58,500. Other towns, with their populations in 1921, were Bonavista, 4025; Harbor Grace, 3825; Carbonear, 3320. Births for the period 1926 to 1930 averaged 6885 annually and deaths 3811; birth and mortality rates per 1000 inhabitants for the same period were 25.5 and 14.1, respectively.

**PRODUCTION.** Fishing is the basic industry, with farming, mining, manufacturing, and lumbering as supplementary sources of national income. The codfish catch for the 1931 season was estimated at 124,500,000 pounds, compared with 115,360,000 pounds in 1930. Seals caught (1930) numbered 241,236; whales, 319. With prices 50 per cent lower than in 1929 and demand for fish products at a minimum, economic conditions in Newfoundland were severely depressed during 1930 and 1931. Hay, potatoes, turnips, and cabbage are the chief crops, grown on 188,000 acres of arable land. There were (1930) about 9,600,000 acres of forests. Newsprint mills operated at capacity during 1931, exporting 267,420 tons, valued at \$17,134,807. Iron ore production of the Wabana (Bell Island) mines was 530,000 short tons in 1931 (preliminary), compared with 1,319,000 tons in 1930. Lead and zinc concentrates are other mineral products.

**COMMERCE.** According to preliminary returns, exports in 1931 were valued at \$33,537,369, compared with \$40,051,959 in 1930 (figures in Newfoundland dollars). Imports totaled \$25,261,701, as against \$31,871,151 in 1930. Paper and dried codfish are the leading exports. In 1929-30, Canada and the United States each supplied about 38 per cent of Newfoundland's imports and the United States purchased 28.5 per cent of its total exports.

**FINANCE.** The financial position of the Government became desperate in 1931. A surplus of \$144,900 was reported for the fiscal year ended Mar. 31, 1930. In 1930-31, however, there was a deficit of \$1,974,600, expenditures totaling \$11,895,100 and revenue \$9,920,500. The Finance Minister's estimates for 1931-32 placed expenditures at \$10,865,000 and revenues at \$10,010,801, leaving an anticipated deficit of \$854,199. A railway deficit of \$750,000 for 1930-31 also was forecast. The public funded debt on June 30, 1930, amounted to 87,592,000 Newfoundland dollars, compared with 85,477,000 on the same date of 1929. In July, 1930, an additional loan of \$5,000,000 was floated in Montreal and New York. For financial developments in 1931, see *History*.

**COMMUNICATIONS.** In 1930, there were 974 miles of railway line, of which 905 miles were government owned. Highways (1931) extended more than 1000 miles, but only 880 miles were passable for motor cars. A winter air-mail service between St. John's and St. Anthony was opened on Feb. 18, 1931. Vessels in the foreign trade entering the ports in 1929-30 numbered 1700, of 1,722,429 net registered tons capacity.

**GOVERNMENT.** Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power, in a council of not more than 24 members and an elected house of representatives of 40 members. Women have the franchise. Governor and commander-in-chief in 1931, Sir John Middleton, ap-

pointed in August, 1928. The Ministry constituted in November, 1928, was composed in part as follows: Prime Minister and Minister of Justice, Sir R. A. Squires; Colonial Secretary, A. Barnes; Finance and Customs, P. J. Cashin; Posts and Telegraphs, W. W. Halfyard.

**HISTORY.** The Government of Newfoundland was twice saved from default on its debt payments during 1931 by advances secured from a syndicate of Canadian banks. The seriousness of the financial situation became evident in April, 1931, when the Finance Minister's annual budget statement revealed large deficits in the 1930-31 and 1931-32 budgets. In May no tenders were received for an \$8,000,000 loan authorized by the Newfoundland Legislature. Following further loan negotiations in New York and Montreal, the Prime Minister announced (June 20) that a Canadian banking syndicate had agreed to meet interest and sinking fund payments on Newfoundland's debt due June 30 and July 1. Repeated rumors that Newfoundland officials had offered to sell Labrador were substantiated when Prime Minister Bennett announced in the Canadian Parliament that his Government was considering the proposition.

In August, the Government drastically reduced its personnel, salaries, rail and steamer transport services, and work on public roads in an effort to prune expenditures by \$1,000,000. J. H. Penson and Sir Percy Thompson of the British Treasury were asked to reorganize the Dominion's financial structure. Under a plan recommended by the experts and adopted by the Government, effective Dec. 1, 1931, Mr. Penson was placed in charge of the Finance Department, with the widest powers of supervision and control over all Government expenditure. Despite these steps, the Government was again unable to secure a loan. On December 14, a Cabinet Minister announced that the Government had offered to sell Labrador outright to Canada for \$100,000,000. Faced with the alternative of defaulting on Jan. 1, 1932, interest and sinking fund payments, the Government on Dec. 30, 1931, accepted the stringent conditions under which four Canadian banks offered to advance \$2,200,000 at 5½ per cent for six months. The conditions called for the imposition of an embargo on gold export, acceptance of the notes of the Canadian banks as legal tender in Newfoundland, retention of the newly inaugurated system of Treasury supervision, control of the customs revenue, and the floating of a domestic loan to meet the 1931-32 deficit. The banks, in return, agreed to accept a bond issue covering the advances they had made to the Newfoundland Government during the year.

See **LABRADOR**; **CANADA** under *Foreign Relations*. Consult J. R. Smallwood, *The New Newfoundland* (New York, 1931).

**NEW GUINEA**, gín'ē. The name applied to both an island in the East Indies and to those territories in the western Pacific, including a portion of the island, which were transferred from Germany to Australia, under mandate of the League of Nations, by the Treaty of Versailles. The area of the island of New Guinea, which ranks after Australia and Greenland as the third island in size in the world, is estimated at from 310,000 to 335,000 square miles, and the population at slightly below 1,000,000. The northeastern portion, formerly Kaiser Wilhelm Island, is included in the Australian mandated area; the sec-

tion west of 140° E. longitude belongs to the Netherland East Indies; and the southeastern part constitutes the colony of Papua, or British Guinea, also administered by Australia. See NETHERLAND EAST INDIES, PAPUA.

**TERRITORY OF NEW GUINEA.** The Territory of New Guinea, under Australian mandate, consists of that section of the island known as North Eastern New Guinea, the Bismarck Archipelago (New Britain, New Ireland, Lavonagai, and the Admiralty Islands), and part of the Solomon Island group. Area, about 93,000 square miles. The estimated native population was 487,266 and the non-indigenous population on June 30, 1930, numbered about 4155. The territory is administered by an Australian official from the seat of government at Rabaul, New Britain. Administrator in 1931, Brig. Gen. E. A. Wisdom.

**NEW HAMPSHIRE. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 465,293, in 1920 it was 443,083. The native whites numbered 381,690 (1930), 351,098 (1920). The foreign-born whites, 82,660 (1930), 91,233 (1920). There were 790 Negroes (1930). Of 190,666 persons listed as in gainful occupations, 12,006 were farmers, 8972 farm laborers for wages, 44,797 factory operatives, 9665 factory laborers and 6328 retail dealers. Manchester, the most populous city, had 76,834 inhabitants (1930), 78,384 (1920); Nashua, 31,463 (1930), 28,379 (1920); Concord, the capital, 25,228 (1930), 22,167 (1920).

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Hay, tame . . . .	1931	344,000	877,000*	\$4,449,000
	1930	350,000	387,000*	5,302,000
Potatoes . . . . .	1931	9,000	1,485,000	891,000
	1930	9,000	1,665,000	1,748,000
Corn . . . . .	1931	13,000	598,000	412,000
	1930	13,000	685,000	614,000

\* Tons.

**MINERAL PRODUCTION.** The latest totals published by the U. S. Bureau of Mines for the mineral industries of the State covered 1929. They indicated these industries as fairly stable but not as of rising importance. The quantity of stone quarried decreased to 135,640 short tons for 1929, from 166,040 for 1928; the value of the total to \$1,153,465 for 1929, from \$1,423,426 for 1928. The total value of the State's mineral products was \$3,725,951 for 1929; for 1928, \$3,816,065.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 1065 (an excess of about 3.5 per cent over the number of establishments for 1927). In these establishments were employed 65,119 wage earners (slightly fewer than in 1927). The wages paid them amounted to \$70,107,388 (falling below the wage total of 1927 by 3.7 per cent). Materials for manufacture, plus fuel and purchased electricity, cost \$185,375,703. The manufactured product of the year was valued at \$331,366,164 (or 1.2 per cent higher than the figure for 1927). The value added by manufacture was estimated at \$145,990,461. Manchester, the leading manufacturing community, in 1929, had 187 establishments, 19,163 wage earners, a wage total of \$18,308,194, and a manufactured product for the year which was valued at \$85,802,651.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 1165.61.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$9,265,410; for interest on debt, \$207,121; for permanent improvements, \$2,701,017; total, \$12,173,548 (of which \$6,720,392 was for highways, \$4,482,169 being for maintenance and \$2,238,223 for construction). Revenues were \$11,098,473. Funded State debt outstanding on June 30, 1930, totaled \$5,095,636, of which \$1,770,000 was for highways. Net of sinking-fund assets, it was \$5,095,636. On an assessed valuation of \$676,031,023 the State levied in the year ad valorem taxes of \$2,996,687.

**EDUCATION.** For the academic year ended June 30, 1931, the number of persons of school age in the State was reported as 91,061. There were enrolled in the public schools 77,268 pupils. Of these, 59,763 were in elementary schools, 15,353 in high schools, and 2152 in evening schools. The year's current expenditures for public school education totaled \$6,226,310. The teachers' yearly salaries averaged: in elementary schools, \$1513.73 for men and \$1121.74 for women; in high schools, \$2165.64 for men and \$1512 for women.

**LEGISLATION.** A regular session of the State Legislature was held, concluding on May 7. It made provision for the application of receipts from the tax on estates and from a franchise tax on gas and electric utilities to the retirement of the State debt. Costs of investigations of the rates of public utilities by the Public Service Commission, up to the proportion of one-half of 1 per cent of the existing value of the company or companies investigated, were made chargeable to the companies. Further support was given the effort of the State to eradicate tuberculosis from dairy herds. Appropriations were made for institutional construction, to the total of \$300,000. The mothers' aid law was rendered more liberal, and death benefits under the workmen's compensation law were augmented.

An approach to the old age pension system was made by a statute to provide assistance to persons over 70 years old domiciled in homes, instead of the previous form of relief at a county farm (See OLD AGE PENSIONS). The direct State tax for the ensuing two years was reduced by an estimated \$160,000, to \$1,400,000. Among changes made in the banking laws was the establishment of a specific reserve of 5 per cent of savings deposits in cash and public funds of the United States. The maximum that a bank might lend to a single debtor was reduced.

**POLITICAL AND OTHER EVENTS.** A cement-and-steel double-arch bridge spanning the Connecticut River between the New Hampshire shore and Bellows Falls, Vermont, was completed and was dedicated on April 16. It was the third successive bridge at this site, and the site was the first occupied by a bridge over the river in any part of its length. A boundary dispute of long standing, between New Hampshire and Vermont, was submitted during the summer to a Federal Master appointed by the United States Supreme Court. Vermont asserted jurisdiction to the middle of the Connecticut River, while New Hampshire claimed to the western bank. The New Hampshire Gas and Electric Company contracted during the year for the delivery of electric cur-

rent to it from the power ship *Jacona*, on the Piscataqua River, thus creating an innovation in the power industry of the State.

**OFFICERS.** Governor, John G. Winant; Secretary of State, Enoch D. Fuller; State Treasurer, Charles T. Patten; Attorney-General, Ralph W. Davis; Commissioner of Education, James N. Pringle.

**JUDICIARY.** Supreme Court: Chief Justice, Robert J. Peaslee; Associate Justice, Leslie P. Snow, John E. Allen, Thomas L. Marble, Oliver W. Branch.

**NEW HAMPSHIRE, UNIVERSITY OF.** A co-educational State institution of higher learning in Durham, N. H., founded in 1866 in Hanover, N. H., as part of Dartmouth College, transferred to Durham as State College in 1893, and made State university in 1923. It consists of a college of liberal arts, a college of agriculture, a college of technology, a graduate school, an agricultural experiment station, and an extension service in agriculture and home economics. The 1931-32 enrollment was 1662, of whom 1208 were men and 454 women. The summer session had a registration of 410. The faculty and research and extension staffs totaled 207. The endowment amounted to \$1,268,635, and the income for the year was \$1,547,651. Minor changes in the freshman curricula were made in all three colleges of the university, and changes of great importance were effected in the college of liberal arts first-year programmes. Higher standards for admission to the graduate school were established. The degree of master of education was authorized by the board of trustees. The library contained 70,418 volumes. President, Edward Morgan Lewis, A.M., LL.D., Litt.D.

**NEW HEBRIDES,** *hēb'ri-dez*. A group of islands about 1400 miles east of Australia and 700 miles west of the Fiji Islands, including Espiritu Santo, Malekula, Efate or Sandwich Island, Epi, Erromanga, Tanna, and Aneityūm. The group is under the joint administration of France and Great Britain, according to the convention of 1906. Capital, Port Vila. The area is approximately 5700 square miles and the population in 1929 was 64,569, including 1024 whites (700 French and 250 British), and 4945 Asiatics.

**NEW IRELAND.** See BISMARCK ARCHIPELAGO.

**NEW JERSEY. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 4,041,334, in 1920 it was 3,155,900. The native white population increased to 2,984,767 (1930), from 2,298,474 (1920). The foreign-born whites, to 844,442 (1930), from 738,613 (1920). The number of Negroes rose sharply to 208,828 (1930), from 105,899 (1920). The increase among Negroes was largely in the counties of Essex, which contained 60,236 (1930), as against 28,956 (1920), and Union. Of 1,712,125 persons listed as in gainful occupations in 1930, only 64,471 were in agriculture, while 736,285 were in manufacturing and mechanical industries (including 141,464 in the building industry), 329,327 in trade, 178,949 in transportation, 170,492 in domestic or personal service and 125,641 in professional service. Newark had 442,337 inhabitants (1930), 414,524 (1920); Jersey City, 316,715 (1930), 298,103 (1920); Paterson, 138,513 (1930), 135,875 (1920); Trenton, the capital, 123,356 (1930), 119,289 (1920); Elizabeth, 114,589 (1930), 95,783 (1920); Camden, 118,700 (1930), 116,309 (1920); Bayonne, 88,979 (1930), 76,754 (1920).

**AGRICULTURE.** The following table shows the acreage, production and value of the principal crops in 1931 and 1930:

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes . . . . .	1931	41,000	7,831,000	\$4,699,000
	1930	37,000	7,511,000	7,135,000
Hay, tame . . . . .	1931	207,000	852,000*	4,998,000
	1930	205,000	807,000*	6,631,000
Corn . . . . .	1931	170,000	6,970,000	8,624,000
	1930	168,000	6,048,000	5,748,000
Peaches . . . . .	1931	.....	2,200,000	1,430,000
	1930	.....	1,340,000	2,278,000
Sweet potatoes . . . . .	1931	18,000	1,950,000	1,865,000
	1930	12,000	1,440,000	1,728,000
Wheat . . . . .	1931	49,000	1,323,000	754,000
	1930	53,000	1,246,000	1,084,000
Apples . . . . .	1931	.....	3,520,000	2,464,000
	1930	.....	4,242,000	4,030,000

\* Tons.

**MINERAL PRODUCTION.** The clay products of the State, forming regularly the greater part of its yearly mineral total, yielded \$39,417,968, virtually the same total as the \$39,379,278 of 1928. More of the structural products, brick and tile, was produced, the total for 1929 being \$19,112,238, as against \$18,160,009 for 1928. The total for pottery on the other hand diminished to \$20,359,730 for 1929, from \$21,219,269 for 1928. There were produced, in 1929, 2,740,410 short tons of stone, and in 1928, 3,186,940 tons; in value, \$4,219,553 for 1929 and \$4,578,642 for 1928. The greater part of the 336,488,000 pounds representing the mine production of zinc in the Eastern States was attributed to the mines of New Jersey, operated by the New Jersey Zinc Company, but separate figures for the State were not published. In 1930 the iron mines of the State, despite reduced activity elsewhere in this industry, shipped 391,528 long tons of ore, or considerably more than the 285,115 tons of 1929; by value the shipments were \$1,632,827 for 1930 and, for 1929, \$1,157,848. In by-product ovens was produced much coke; 918,814 short tons in 1930 and 897,530 in 1929. It was derived entirely from coal brought in from other States. There was a heavy production of sand and gravel (to the value of \$5,585,285 for 1929) as in other States having extensive construction industries. The total value of the State's mineral production, coke excluded, was \$71,891,861 for 1929; for 1928, \$70,865,363.

**MANUFACTURES.** Federal Census data gathered in 1930 and covering the year 1929 gave the number of the State's manufacturing establishments as 8364 (6 per cent above the number for 1927). These establishments employed 441,105 wage earners (some 10.7 per cent more than had been employed in 1927). Wages paid these earners aggregated \$628,097,520 (about 16 per cent more than had been paid in 1927). Materials for manufacture, plus fuel and purchased electricity, cost \$2,103,042,433 (7.9 per cent more than for 1927).

The manufactured product of the year was valued at \$3,937,656,019 (an excess of 15.2 per cent over the figure for 1927). Value added by manufacture, in 1929, was reckoned as \$1,834,613,586. Newark, the chief manufacturing community, had 1724 establishments, 66,788 employed wage earners, a wage total of \$114,311,834, and a product of \$501,803,091; Paterson had 914 establishments, 32,298 employed wage earners, a wage total of \$43,518,745, and a product of \$196,297,602; Jersey City, 624 establishments, 26,640 wage earners employed, a wage total of \$39,188,406, and a product of \$317,469,167; Camden, 232

establishments, 28,993 wage earners, a wage total of \$35,583,585, and a product of \$231,135,097.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1931, was 2298.82. An addition of 2.45 miles of line had been put in service during the year preceding, and only 0.33 mile had been abandoned.

**FINANCE.** State expenditures in the year ended June 30, 1930, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$57,184,364 (of which \$21,696,988 was for local education); for conducting public-service enterprises, \$1,018,627; for interest on debt, \$3,851,162; for permanent improvements, \$36,584,840; total, \$98,638,993 (of which \$37,186,789 was for highways, \$7,636,813 being for maintenance and \$29,649,976 for construction); \$1,038,928 of expenditure was interdepartmental. Revenues were \$106,550,366. Funded debt outstanding on June 30, 1930, totaled \$98,216,000, of which \$50,000,000 was for highways. Net of sinking-fund assets, it was \$67,900,880. On an assessed valuation of \$6,829,018,324 the State collected in the year ad valorem taxes of \$40,237,980.

**EDUCATION.** There were enrolled in the public day schools of the State, in the academic year 1930-31, 800,221 pupils. Of these, 47,046 were in kindergartens, 592,974 in elementary schools, 37,254 in junior high schools, 19,262 in senior high schools, 95,354 in four-year high schools, and 8331 in special classes. The year's expenditures for public-school education totaled, \$113,622,087, of which \$17,063,467 was for debt service. The total did not include \$16,759,064 of outlay defrayed chiefly by issues of bonds. The salaries of the 27,891 teachers averaged \$2143.54 by the year. According to State Superintendent Elliott, the requirement was made effective during the year, that all obtaining certificates to teach in elementary schools must have two years of training in normal school.

**CHARITIES AND CORRECTIONS.** The State's central agency for the care and custody of persons in 1931 was the Department of Institutions and Agencies.

State institutions under the board, with their populations of Nov. 1, 1931, were: for the insane, hospitals at Greystone Park (3958), Trenton (2679), and Holmdel (815); feeble-minded, a State School at Vineland (1187), State Colonies for Feeble-Minded Males at New Lisbon (631), and Woodbine (476), and North Jersey Training School (females, 511); State Village for Epileptics, Skillman (1213); Sanatorium for Tuberculous Diseases, Glen Gardner (469); State Prison, Trenton (1439) and State prison farms at Leesburg (236) and Bordentown (101); reformatories at Rahway (males, 879), Annandale (males, 333), and Clinton (females, 229); State Home for Boys, Jamesburg (621) and State Home for Girls, Trenton (314); Home for Disabled Soldiers, Kearny (38) and Home for Disabled Soldiers, Sailors, Marines, and their Wives and Widows, Vineland (211). The State Board of Children's Guardians had jurisdiction over 28,649.

**LEGISLATION.** The Legislature sat in regular session until April 23. It enacted much the greater part of the measures of governmental reform known as the Abell programme. Among the alterations in the State government thus effected were: The creation of a centralized State Tax Department; a receivership commission to take

charge of the affairs of any municipality in default on its bonds; provision for a State Purchasing Department; the organizing of a central accounting department. The State House Commission was augmented to include two members of the Legislature, and its hearings were made public. Provision was made for listing all State expenditures and revenues, including dedicated funds, in the preparation of appropriation bills; also, the Governor's approval was required for expenditures on the part of the State Highway Commission. Under the new centralized Tax Department were placed the assessment and collection of virtually all State taxes, those on inheritances, motor vehicles, billboards, corporations, franchisees, banking, insurance, and agriculture. The old State Board of Taxes and Assessment was restricted to dealing with appeals.

The quarterly publication of State bank deposits was required, and the limit of 2 per cent for the deposits of the State in a bank was removed. Appropriations were made to the total of about \$36,000,000 for the fiscal year. They exceeded those for the year previous by some \$5,000,000; the excess was ascribed to appropriations for construction, in line with the need for public work to reduce unemployment. An annual amount equal to 1 per cent of the previous year's road construction expenditures was assigned to work for beautifying State roads. The State gave its permission for the Port of New York Authority to issue bonds for the construction of a vehicular tunnel from Weehawken to Thirty-fourth St., Manhattan.

The sum of \$6,400,000, the State's share of receipts accruing from a refinancing of the Camden Bridge over the Delaware River, was allocated by statute among the municipalities. An old age pension was enacted, to furnish an allowance at the rate of one dollar a day for all persons over the age of 70 years who had been residents of the State for 15 years and who had less than \$3000 in real estate or cash. The system was to be supported by a fund derived from inheritance tax receipts and was to be administered by county boards. See OLD AGE PENSIONS.

The Legislature was recalled in special session by Governor Larson on June 29, and passed, in conformity with Pennsylvania, a measure creating a Delaware River Port Authority. This body, modeled upon the Port of New York Authority, was to develop means of transportation in the region of Camden and Philadelphia. Convening again on October 5, the Legislature passed measures for the relief of the unemployed, appropriating \$9,616,000 and setting up administrative machinery. It provided for matching county and municipal appropriations for special relief of the needy with like amounts of State money. It also passed a resolution petitioning Congress to permit light wines and beer.

Recalled again, the Legislature met on October 26 and passed an act to permit the election on December 1 of a Representative in the Fifth District, to fill a vacancy left by the death of Representative Ackerman; the election could not otherwise have been held in time to fill the place by the convening of Congress. A fourth special session, adjourned on December 15, rushed through a measure for redistricting the State for the election of Representatives, in accordance with the new Federal reapportionment, which gave New Jersey 14 seats in the House, in place of 12. The act was quickly put through by the Repub-
